GARBAGE AND REFUSE DISPOSAL. A new garbage and rubbish incinerator for Baltimore with a daily capacity of 600 tons went into operation Jan. 1, 1933. The contract for this plant provided not only for its construction but also for operating it ten years on a yearly-payment basis, after which it becomes the property of the city. See "Incinerator Contract at Baltimore Results in Economical Garbage Disposal," in *Municipal Sanitation* for April, 1933; also see 1932 YEAR BOOK. Early in the year Detroit requested bids for four incinerators with a combined capacity of 1800 tons a day: two of 600 tons each, one of 400 and one of 200 tons. They were to become the property of the city after the contractor had operated them for seven years and had been paid for the service at the contract rate. No bids were received. Already possessed of two incinerators, which are operated by the city, *Toronto* added a 500-ton high-temperature plant during 1933. On arrival of the collection vehicles on the receiving floor of the incinerator building the refuse is dumped into a pit 124 ft. long, 15 ft. wide, and 18 ft. deep. From this pit the refuse is lifted some 45 ft. in buckets of 2 cu. yds. capacity by traveling electric cranes, and emptied into hoppers located above the charging hoppers that feed the four furnaces. These hoppers discharge onto drying hearths from which the refuse, minus part of its moisture, is discharged onto the furnace grates. There are two radial-brick chimneys, each 175 ft.

high. At the close of the year the authorities of New York City decided to collect and dispose of the garbage and refuse of Brooklyn Borough, which work had been done for the city by private contract for 20 years. The change entailed taking over by the city several large incinerators built by the old contractor. See "German Methods of Refusal Removal and Disposal from the Hygienic and Economic Point of View," by Dr. I. Erhard, in *Municipal Sanitation*, September and October, 1933.

GARBO, GRETA. See MOTION PICTURES.

GAS. The gas utilities in the United States suffered a further decline in revenue during 1933, according to the Statistical Department of the American Gas Association, amounting to a decrease of 5.8 per cent from the 1932 figures. The greater loss was experienced by the manufactured gas companies whose total reported revenue for the year was \$379,841,000 as against \$411,750,300 in 1932, a decrease of 7.7 per cent. Natural gas utilities reported a revenue of \$302,289,000 for 1933, as against \$312,511,000 in 1932, or a decline of 3.3 per cent. These figures, however, represent declines in income due to decreased rates rather than to proportionate decreases in consumption, for the sales of manufactured gas decreased by only 4.7 per cent, while those for natural gas showed an increase of 2.3 per cent over 1932.

MANUFACTURED GAS. Sales of manufactured gas in 1933 amounted to 354,539,300,000 cu. ft., as against 372,208,100,000 cu. ft. in 1932. Improvement in sales in the industry as a whole was found in those for house heating, where a gain of 7.2 per cent was reported, 23,197,600 M. cu. ft. as against 21,640,100 M. cu. ft. in 1932, and in commercial and industrial sales where a slight increase, from 81,270,800 M. cu. ft. to 81,535,400 M. cu. ft. in 1933, was obtained. These gains in consumption, however, were more than offset by lowered prices and did not begin to cover the loss in domestic sales which, amounting to 267,281,500 M. cu. ft. in 1932, dropped by almost 20,000,000 M. cu. ft. to 247,929,200 M. cu. ft. in 1933.

The percentage of decline in sales was not uniform through the regions utilizing manufactured gas. The greatest decline in total sales on the percentage basis occurred in the western States of Arizona, Idaho, Nevada, Oregon, and Washington, in which the ten companies whose sales constitute 95 per cent of the total sales reported a decline in consumption of 13.5 per cent from that of 1932. The least percentage of decline was reported from Illinois, in which the 9 companies whose sales constitute 85 per cent of the total sales reported a drop of but 2.2 per cent below the figures for 1932. In this State the sale of gas for house heating was strongly pushed, with the result that consumption in this line showed an increase of 46.6 per cent and with a slight industrial gain almost offset the drop in domestic consumption.

NATURAL GAS. As with manufactured gas, total sales of natural gas for domestic purposes during 1933 dropped about 6 per cent below the sales for 1932. Although the total number of customers for manufactured and natural gas was substantially unchanged, remaining slightly in excess of fifteen and a half million, the loss in customers for manufactured gas was offset by the gain in users of natural gas. The gains in the latter, each less than 1 per cent were in domestic users, commercial users and industrial users. But whereas domestic and commercial users of natural gas

consumed less by 6 per cent and 4 per cent respectively than in 1932, industrial users gave indication of a large shift from other fuels to this commodity. Main-line industrial consumption increased during the year from 111,016,900 M. cu. ft. in 1932 to 129,409,800 M. cu. ft. in 1933, a gain of 16.6 per cent, and ordinary industrial consumption increased from 345,121,900 M. cu. ft. to 366,237,300 M. cu. ft. in 1933, a gain of 6.1 per cent, or a total gain of more than 39,500,000 M. cu. ft. This increased consumption more than offset the decline in domestic and commercial consumption, and the total sales of 848,652,300,000 cu. ft. for the year showed a gain of 2.3 per cent over the 829,895,000,000 cu. ft. reported for 1932.

The gain in industrial use was reported in all States, with the greatest increase shown in California where main-line industrial rose 15 per cent and industrial advanced 46.8 per cent. Pennsylvania showed an increased industrial use amounting to 18.7 per cent; Ohio showed an increase of 31.9 per cent; New York, 43.8 per cent in industrial and 11 per cent in main-line industrial; Oklahoma, 21.3 per cent in industrial and 28.4 per cent in main-line industrial. But in all of those States, except California, in which domestic use constitutes the main sale, the industrial gains were insufficient to offset the decreases of domestic consumption. In California, where unprecedented inclement weather prevailed during much of the year, there were gains in all sales with an increased number of customers.

GÉMIER, FIRMIN. A French actor and theatrical manager, died in Paris, Nov. 26, 1933. Born at Aubervilliers, Department of the Seine, Feb. 13, 1865, he early displayed his histrionic ability through his portrayal of the characters that frequented his father's tavern and studied for the stage with Saint Germain. After appearing with several provincial touring companies he made his Paris début in 1892 at the Théâtre Libre, where he began a life-long association with André Antoine, the apostle of naturalism. Both Antoine and Gémier sought a rebirth of the French drama through abandoning the artificial plots and acting of the classical school and producing plays of realism, accompanied by natural speech and gesture. They carried out this purpose at the Théâtre National de l'Odéon, of which Antoine was appointed co-director in 1896 and director in 1906, and after 1897 at the Théâtre Antoine, producing the works of such successful French playwrights at Brioux, Cured, Hermant, Donnay, and Porto-Riche, as well as those of foreign playwrights, such as Ibsen, Hauptmann, and Shaw. The Odéon was noted especially for its Shakespearean productions, Gémier's finest rôle being that of Shylock in *The Merchant of Venice*, which he played with an intensity of emotion unsurpassed by that of any other actor. He was also widely acclaimed for his performance in *Antony and Cleopatra* and *The Taming of the Shrew*.

On his appointment in 1922 as director of the Théâtre National de l'Odéon, Gémier continued the tradition which had been established by Antoine. Becoming interested in the contribution which certain American playwrights were making to the theatre, he added to the company's repertoire the works of Eugene O'Neill. In 1924 he was invited by the State Department to appear with his company in New York and other cities; this invitation was in reciprocation for the courtesy extended by the French Ministry of Fine Arts in 1920 in inviting James K. Hackett, the

American actor, to appear at the Odéon in *Macbeth*. Gémier founded the Théâtre Ambulant in 1911 and after 1930 was general manager of the Théâtre National Populaire (Trocadéro), through both of which he attempted to bring art to the masses. In June, 1927, he presided over the first congress of the Universal Society of the Theatre, which he had founded for the purpose of bringing to the drama an international unity. He was also founder of the French Shakespearean Society and a member of the Higher Council of Fine Arts.

GEOGRAPHICAL SOCIETY, AMERICAN. An organization, founded in 1852, to collect and disseminate geographical information by discussion, lectures, and publications; to establish in the chief city of the United States a place where there may be obtained accurate information concerning every part of the globe; and to encourage such exploring expeditions as seem likely to result in valuable discoveries in geography and related sciences.

Within recent years the society has taken an active part in the encouragement of exploration, the scientific work of Sir Hubert Wilkins in the Arctic and Antarctic and of Rear Admiral Richard E. Byrd in the Antarctic having been carried out under its auspices. Contributions to the development of geographical science and explorations are recognized in its elections to honorary and corresponding memberships and in the bestowal of medals. It sponsors also six regular lectures annually by distinguished explorers or geographers. Its periodical is the *Geographical Review*, a quarterly.

In 1933 the society published a four-volume *Catalogue of Maps of Hispanic America*, listing more than 15,000 published maps, covering a period of nearly 400 years, in the collections of the American Geographical Society, the New York Public Library, the Library of Congress, the Pan American Union, and the libraries of Columbia, Yale, and Harvard universities and representing five years of work by an expert map cataloguer. There were also completed two additional sheets of the map of Hispanic America, published in conformity with the International Millionth Map of the World, bringing the total of completed sheets to 44 out of 100. Other publications were *New England's Prospect, 1933*, comprising the results of geographical, social, economic, and governmental studies of New England, carried out by 27 specialists, and *The Discovery of the Amazon*, the first English translation of the only original account of Orellana's famous voyage down that river in 1542.

During the summer of 1933 the Louise A. Boyd expedition to East Greenland, carried out under the auspices of the society, successfully explored the unknown area lying to the west of the heads of Franz Josef Fiord and Ice Fiord. Geological studies were made and photogrammetrical surveys were executed under the direction of O. M. Miller, head of the department of technical training.

The president of the society in 1933 was John H. Finley, LL.D.; and the director, Isaiah Bowman, Ph.D. Headquarters are at Broadway and 156th Street, New York City.

GEOGRAPHIC SOCIETY, NATIONAL. An organization for "the increase and diffusion of geographic knowledge," founded in 1888. During 1933 the society voted a grant of \$10,000 and furnished photographic equipment to the second Antarctic expedition led by Rear Admiral Richard E. Byrd. Postmaster-General Farley appointed Dr. John Oliver La Gorce, vice-president of the National Geographic Society, postmaster of Little America. Dr. La Gorce appointed a deputy to serve for him.

The first award of the Franklin L. Burr Prize was made by the society to Capt. A. W. Stevens, U. S. Army Air Corps, for his contributions in the field of aerial photography on National Geographic Society expeditions, "particularly for his splendid achievement in photographing the total eclipse of the sun on Aug. 31, 1932, showing the moon's shadow on the earth at an altitude of approximately 26,000 feet." Captain Stevens made in the Andes the first photographs showing the curvature of the earth, and worked out a vastly improved technique in high-level aerial photography and in the design of cameras therefor. The Franklin L. Burr Prize was established under the bequest of the late Mary C. Burr, who bequeathed \$35,000 to the National Geographic Society in memory of her father under the condition that it should be known and called the Franklin L. Burr Fund, the income from which should be spent in cash prizes to those members of National Geographic Society expeditions found by the board of trustees to have done especially meritorious work upon said expeditions.

The society cooperated with the Chilean government in commissioning Amos Burg, explorer, to study the Alakalufs, Yahgans, and Onas Indians, the rapidly vanishing tribes in Chilean Patagonia. Ethnological records of these vanishing cultures were preserved by means of photographs. Mr. Burg was also gathering data on the fauna and flora of this little known land and its neighboring waters. Ernest G. Holt, leader of the National Geographic Society's Venezuela-Brazil expedition, published a second paper on his explorations in the Venezuela-Brazil boundary country.

Conclusions based upon the society's Mt. Katmai expeditions were published by Dr. Robert F. Griggs, leader of the expeditions. Daniel Ready collaborated with Dr. Griggs in part of this work. These two scientists found that liverworts would colonize on the Katmai ash, a new and inorganic "soil." The liverworts thus began the work of reestablishing vegetation in the region, for they were followed by mosses, willows, grasses, and other seed plants. The Katmai liverwort of the genus *Cephaloxiella* grew in a culture solution so nearly free from nitrogen that tests did not reveal its presence. Even green algae that require only one or two parts per million of combined nitrogen or nitrates and ammonia would not live in this medium in which the liverworts were able to thrive and develop a nitrogen content at the end of the growth period of approximately 3000-3800 parts per million.

A map of the United States was published and more than a million copies were distributed. The use of the Albers equal area conic projection reduced the maximum distortion of the map from the 7 per cent usual to maps of this country to 1½ per cent. More than 8500 place names were inserted by a special method of photographing handdrawn alphabets, devised by Albert H. Bum-

stead, chief cartographer. The map followed the decisions of the United States Geographic Board.

A second major map made was that for the continent of Asia. Based on the Azimuthal-equidistant projection, which the society's cartographers have found most satisfactory and accurate in the charting of continental areas, this map showed 26½ per cent of the surface of the globe and almost 50 per cent of the land surface of the earth. The latest available information on Asia, Europe, Netherland India, and northeast Africa was collated, making the map both more modern and more authentic than any previous general map of the large area covered.

Maps were made also of the States of New Jersey, New York, and Washington to accompany articles on those States published in the *National Geographic Magazine*. The latter is distributed to the 1,000,000 members of the society.

GEOGRAPHY. See EXPLOATION; POLAR RESEARCH; ANTHROPOLOGY.

GEOLOGY. The outstanding geological event during the year 1933 was the 16th International Geological Congress which convened in the United States. Eleven hundred and eighty-one individuals or organizations enrolled as members and approximately 165 Foreign and 500 American geologists attended the general sessions held in Washington, D. C. from July 22 to July 29. Thirty-four foreign countries were represented by official delegates.

The delegates began to assemble early in July with headquarters in the Geological Society of America House, 419 W. 117th St., New York City. Field excursions to study local and northeastern geology were conducted from this centre. Others, covering phases of the geology exhibited between New York and Washington, D. C., started in New York and ended in Washington in time for the opening of the sessions. The longer, transcontinental excursions followed the sessions.

The following topics were chosen to be discussed by this international gathering: (1) Fossil Man and Contemporaneous Faunas; (2) Batholiths and Related Intrusions; (3) Orogenesis; (4) Measurement of Geologic Time; (5) Geomorphogenic Processes in Arid Regions; (6) Major Divisions of the Paleozoic Era; (7) Geology of Petroleum. The papers read at the sessions and the ensuing discussions will be published in the "Comptes Rendus" of the congress and will be reviewed here at a later date. W. C. Mendenhall of the United States Geological Survey has already published an article in *Science* (Sept. 22, 1933) that outlines the activities of the Congress and abstracts the more important papers.

The immediate value of the Congress is twofold. First, the interchange of ideas between the scientists of many nations on the important topics listed above, and on the many problems encountered in the field during the extended excursions will be reflected in the literature of geology for years to come, and will result, as always, in important advances in our knowledge; second, the publication of 31 guide books covering the geology of the routes followed on all the excursions, and the detailed geology of the mining camps, oil fields, and so forth visited, furnishes a valuable summary of the geology of the United States. These are important additions to geological literature.

The appended list of the guide books emphasizes their wide range and indicates where

information may be obtained on different sections of the United States: 1. Eastern New York and Western New England; 2. Mining Districts of the Eastern States; 3. Southern Appalachian Region; 4. The Paleozoic Stratigraphy of New York; 5. Chesapeake Bay Region; 6. Oklahoma and Texas; 7. Geomorphology of the Central Appalachians; 8. Mineral Deposits of New Jersey and Eastern Pennsylvania; 9. New York City and Vicinity; 9A. The Catskill Region; 10. Southern Pennsylvania and Maryland; 11. Northern Virginia; 12. Southern Maryland; 13. Western Texas and Carlsbad Caverns; 14. Ore Deposits of the Southwest; 15. Southern California; 16. Middle California and Western Nevada; 17. The Salt Lake Region; 18. Colorado Plateau Region; 19. Colorado; 20. Pennsylvanian of the Mid-Continent Region; 21. Central Oregon; 22. The Channeled Scabland; 23. The Butte Mining District; 24. Yellowstone-Beartooth-Bighorn Region; 25. The Black Hills; 26. Glacial Geology of the Central States; 27. Lake Superior Region; 28. An Outline of the Structural Geology of the United States; 29. Stratigraphic Nomenclature in the United States; 30. The Baltimore and Ohio Railroad and Maps.

The numbers as here listed, correspond to the numbers of the guide books. Their varied content is apparent from their titles.

The United States Geological Survey also issued a new geological map of the United States just before the Congress met. This is in four sections, in color, and to the scale of 1:2,500,000 (approximately 1" = 40 m.). It was compiled by G. W. Stose assisted by O. A. Ljungstedt from Federal and State maps, and manuscript maps and information furnished by geologists familiar with various sections of the country. It is the only authoritative and up-to-date map of the whole country now available.

Another valuable publication that appeared in time for use by members of the various excursions is "Airways of America; A Geological and Geographical Description of the Route from New York to Chicago and San Francisco," by A. K. Lobeck, published by the Geographical Press, Columbia University, New York. It is the second publication of the J. F. Kemp Memorial Series. The first part is devoted to the details of the route which are presented by text, diagrams, and photographs. This is followed by chapters on the Physiographic Provinces, Agricultural Areas, and Natural Vegetation Regions of the United States; and Climatic and Seasonal Aspects of the Air Route; Airways, and Aviation, all profusely illustrated. It should be valuable to all who make use of our airways and have any interest in the panorama that unfolds below them.

SOCIETIES. The various Societies met as usual during the year. The Geological Society of America, the Paleontological Society, and the Mineralogical Society held their meetings jointly in Cambridge, Mass., Dec. 26 to 29, 1932. The Society of Economic Geologists had its meeting in Princeton, N. J., July 7 and 8, 1933, immediately preceding the Geological Congress.

The addresses delivered by the Presidents of these Societies and some of the more important topics discussed are outlined below:

R. A. Daly, President of The Geological Society of America, spoke on "The Depths of the Earth." The material of this address has since been published in much more complete form as

a book of 590 pages entitled *Igneous Rocks and the Depths of the Earth* (McGraw-Hill Book Co., New York.) It is impossible to review this work thoroughly here. The address is published in the Bulletin of The Geological Society of America, vol. 44, April, 1933. The book is a brilliant assemblage of hypothesis and fact which first considers the facts needing explanation, then states a general theory of the make up of the earth, with particular emphasis on the outer layers, and on the origin and mode of igneous intrusion and differentiation. The final part sketches the result of applying the theory to the major types of igneous rocks. The book abounds in useful records of facts and bibliographic references and contains two very valuable tables. Pages 298 to 301 list reported cases of assimilation giving locality, assimilating magma, rock assimilated, product, and authority. Pages 334 to 335 give examples of gravitative differentiation. Chapter I is an abstract.

R. S. Bassler, President of The Paleontological Society of America, addressed a joint meeting of the Societies on the "Development of Invertebrate Paleontology in America." This address outlined the march of American paleontology from Colonial days to the present, then took stock of the present state of paleontology, and outlined its field of usefulness in stratigraphy, structural geology, and economic geology.

It ended with a discussion of current problems, including the necessity for further study of the following groups, among others: Radiolaria, sponges, coelenterates, and hydrozoa; and the necessity for further faunal studies in many of the great rock systems. (Published in the Bulletin of the Geological Society of America, vol. 44, April, 1933.)

Dr. A. N. Winchell, President of the Mineralogical Society of America, spoke on "The New Mineralogy." He compared the present state of mineralogy with the state of that science 30 years ago. He showed that the former knowledge of minerals gained from a study of their outward form and chemical analysis could be compared to the knowledge obtained about a house by first studying it outside and then completely wrecking it and determining the total weight of stone, mortar, etc. To-day, by use of the X-ray methods one can learn the precise arrangement of the internal parts, as one can learn the arrangement of the inside of a building by looking into it.

This new research has taught us much concerning the variability of the composition of minerals, once regarded as having a relatively simple and definite chemical formula. These variations may take place in a number of different ways. (1) Atoms of one or more elements may replace each other in a mineral. Such variations result in a gradual change in the physical properties of the mineral, they take place during the formation of the mineral and the resulting range of composition and properties makes a mineral correspond roughly to a genus of plants or animals rather than to a definite species. (2) Other changes result from the loss of or acquisition of new atoms by mineral structures after they have been formed. These result in minerals that cannot be formed directly. Wherever such products are found, it is possible to reach certain conclusions regarding the history of the rock in which they are found. (Published in the *American Mineralogist*, March, 1933.)

During the meetings of the Geological Society

of America, Nelson H. Darton of the United States Geological Survey exhibited a new geological map of Texas. This has been compiled from many different sources and has been circulated among geologists in and near Texas for criticism. The revised map will be published within a year or two and will include all the latest knowledge of this large and important area.

F. A. Melton described some peculiar depressions near the Carolina coast. He said that more than 1500 shallow, elliptical depressions, from a few hundred feet to more than two miles in diameter exist on the Atlantic coastal plain of the Carolinas. No known geologic process is considered adequate to explain them and they are tentatively regarded as the result of the impact of a globular meteoric cluster some 400 miles in diameter which struck sometime during the pleistocene ice age.

At the conclusion of the 45th annual dinner of the geological and affiliated societies, held at the Harvard Union on December 29, the 5th presentation of the Penrose Medal of the Geological Society was made to Dr. Edward Oscar Ulrich of Washington, D. C., one of America's leading paleontologists and stratigraphers.

The American Institute of Mining and Metallurgical Engineers (q.v.) held its annual New York Meeting at the Engineering Societies Building Feb. 20-23, 1933. The section on Mining Geology devoted a considerable part of its meeting to a discussion of the utilization of geology by mining companies. Reno H. Sales and D. H. McLaughlin led off with an informal presentation of the geological work in Butte, Montana, and in the Homestake Mine. This was followed by "Mining Geology in the Cœur d'Alene District, Idaho" by O. H. Hershey (published in *Mining and Metallurgy*, February, 1933) and other papers dealing with the Ducktown, Tenn. deposits, Birmingham, Ala., and Elk City, Idaho. O. H. Hershey showed how the early development of the Cœur d'Alene went forward without geology, but that a recurrent influx of specialists during litigations finally resulted in the more or less continuous employment of geologists.

Harrison Schmidt presented a paper on "Structural Associations of Certain Metalliferous Deposits in Southwestern United States and Northern Mexico" which emphasizes structural features as of first importance in localizing ore deposition. Whatever other factors operate in depositing ore, the previous preparation of the ground by breaking and brecciation is considered essential. (Published as A.I.M.M.E. Contribution no. 38, Class I, February, 1933.)

Another paper by Billingsley and Locke, the "Tectonic Position in Ore Districts in the Rocky Mountain Region" emphasizes the areal relation of mineralized districts to the major structural features of the crust. Their theory is that the position of the zones of mineralization is determined by structural "crossroads" where the Tertiary thrusts cross the anticlinal axes of the Laramide folds and effect a penetration within the crust itself.

W. H. Weed presented a paper on "The Role of Volatiles in Ore Genesis" (Mimeographed and distributed in pamphlet form) which emphasizes the rôle of the magma and its derivatives in ore formation; "... the magma is the vehicle, the volatiles the motive force during the entire

process of igneous intrusion, differentiation and ore genesis."

Among other papers presented before the Non-Metallic Minerals section, the following are important because of their bearing on agriculture. "Potaash Development in Southeastern New Mexico" by H. I. Smith. This outlines the development, under government initiative, of a source of supply which can be depended upon in times of need and greatly reduces America's former utter dependence on a foreign supply.

H. A. Husche spoke on the "Use of Lime and Gypsum in Agriculture." The great importance of lime rests on the fact that the basic salts in the soils of humid climates are rapidly leached out and that the crops use them up rapidly. Liming corrects this soil acidity and also furnishes Calcium and Magnesium as plant foods. Gypsum is not a liming material but is a source of sulphur in sulphur-deficient soils, and when used on black alkali soils, it changes them to the less harmful white alkali.

The Society of Economic Geologists held its annual meeting at Princeton, N. J., July 7 and 8 at the beginning of the International Geological Congress. President B. S. Butler addressed the meeting on the topic "Ore Deposits of the United States in their Relation to Geologic Cycles." The geologic cycle is recognized as having a definite series of events too well known in their broad features to require comment. Metal concentrations during the cycle are grouped into three periods: 1. concentrations from weathering and erosion; 2. concentrations during the period of intrusion and extrusion of basic magma; 3. concentrations following the intrusion of batholithic bodies of granitic and intermediate rocks. The cycles of the different eras are reviewed, and the control over major structural features and igneous activity by the basins of deposition bordering the positive areas, is pointed out. The Canadian Shield, the Piedmont Plateau of eastern United States, the Ozark Plateau, and the Colorado and Columbia plateaus are the centres about which most of the great mineral districts are grouped.

G. W. Bain stated that most of the problems connected with marble as a building material, i.e. differences in grain, color, and silication, are due to thermal metamorphism by hot solutions flowing along the bedding planes of the original rock. He illustrated his point from his experience in the Vermont marble belt.

Arnold Heim of Zurich, Switzerland, described the iron ores of Minas Del Rif, Spanish Morocco. His description and the discussion that followed, indicated a contact metamorphic origin for the ores that were originally sedimentary rocks.

J. W. Peoples described the Stillwater igneous complex along the Beartooth Mountain front in Montana and Edward Sampson called attention to a remarkably constant chromite-bearing band in the ultrabasic zone of the complex. The similarity of this complex and its mineralization to the Bushveld complex of Africa was brought out.

L. W. Currier related the zinc deposits of southwestern Virginia and eastern Tennessee to structural conditions in the limestone. These structures are zones of shattering and fault brecciation. The ores are usually found replacing dolomitized limestone beds, especially at the base of breccia zones.

T. Stadnichenko described studies on the cause of the progressive carbonization of the Lower Kittanning coal bed from west to east. He regarded

the thrust pressure theory as giving the only satisfactory explanation of the facts.

A published paper that should be mentioned here is L. C. Graton's "The Depth Zones in Ore Deposition." This was the subject of his address as retiring President at the meeting of the Society at Tulsa, Okla., December, 1931. It was published in the September number of *Economic Geology*, 1933. This important contribution reviews the accumulated evidence for a deep-seated magmatic source for most types of ores and the great depths to which such ores may persist. The discussion is largely confined to the ore deposits of hydrothermal lineage and it expands Lindgren's classification of these types by introducing a "leptothermal" and a "telethermal" zone. The former comes between and includes neighboring parts of the mesothermal and epithermal zones and includes such ores as the outermost zone at Butte, Mont., some of the San Juan region veins, Casapalca, Peru, the Michigan Copper Deposits, and the veins of Cobalt, Ontario. The latter embraces those deposits that form the very terminus of the hydrothermal lineage, such as the lead-zinc ores of the Mississippi Valley, the "red bed" copper deposits, the Broken Hill lead-zinc deposit of Northern Rhodesia and perhaps the limestone replacement deposits of Kennecott, Alaska, and the Katanga.

The contact metamorphic deposits are bound more closely to the genetic classification by being regarded as representatives of the hypothermal zone in limestones, a type otherwise lacking.

The expanded classification is based upon long field experience, extensive reading and study, and has the attractiveness inherent in any scientific theory that tends toward unification and therefore simplification.

OTHER PAPERS PUBLISHED DURING THE YEAR

Some Theoretical Aspects of Contamination in Acid Magmas, by S. R. Nockolds, the *Journal of Geology*, August-September, 1933.

This paper considers a problem of long standing from a somewhat novel viewpoint. The rôle played by assimilation in the formation of igneous rock types has been discussed many times before, but this author stresses particularly the means by which foreign material is incorporated in the magma. The volatiles which an acid magma contains form a medium of low viscosity through which material can diffuse to and fro. This reciprocal action is a chemical interchange that takes place between the magma and the included fragment. But the magma may also incorporate material from the invaded rock by "mechanical" means. These are I. the solution of certain phases by the magma which sets free those crystals that are in equilibrium with it to be strewn about in the magma. II. minerals from the magma wedge their way into the xenolith or are deposited throughout it and force the component minerals apart. III. injection of granitic material en masse. This usually occurs in rocks with well defined schistosity or many planes of weakness. These three methods, or any two, often work in unison or follow one another.

Petrotectonics by E. B. Knopf, *Am. Jour. Sci.*, June, 1933.

This is the first elaboration in English of the detailed microscopic study of the tectonic history of a rock by determining the orientation of the space lattice of the minerals. Foliation in a rock caused by a definite arrangement of minerals according to shape has long been recognized, but the fact that this orientation also occurs in the equidimensional minerals such as quartz and feldspar can only be proved by special optical investigation. This work was begun by Bruno Sander prior to 1911 and has been continued by him and a number of other European geologists in the intervening years. Its great importance is due to the possibility of ascribing the different sort of orientation patterns revealed by minerals to different types of deformation. Rocks may thus be related directly to the stress conditions that produced them, and repeated foldings may be recognized by a discordant superposition of symmetry even when field evidence for more than one folding is inconclusive.

Ein Wort Zur Mikrotektonik Besonders im Archaischen Grundgebirge, by Th. G. Sahlstein, *Comptes Rendus de la Société Géologique de Finlande*, no. 7, 1933.

This considers the differential motions in the Archeozoic rocks, the relation between micro- and macrotectonics, the symmetry of rock deformation, and the structure of the granulites of Lapland.

Ancestral Rockies and Mesozoic and Late Paleozoic Stratigraphy of Rocky Mountain Region, by R. L. Heaton, *Bull. of American Assoc. of Petroleum Geologists*, February, 1933.

The maximum development of Paleozoic land areas in the present southern Rocky Mountain district was reached in the Pennsylvanian. These mountains coincided with the present ones in only a part of their extent. They were practically base-leveled by the end of the Jurassic and were flooded by marine waters during most of the Upper Cretaceous. Upward movement began before the end of Cretaceous, and culminated in the making of the present Rocky Mountains in the Laramide revolution.

Mechanics of Formation of Salt Domes with Special Reference to Gulf Coast Salt Domes of Texas and Louisiana, by D. C. Barton, *Bull. American Assoc. of Petroleum Geologists*, September, 1933.

Relates the origin of the gulf coast salt domes to the plastic flowage of sedimentary salt intrusive into the overlying sediment. The evidence upon which this conclusion is based comes from the structures revealed in oil field drilling, from algae remains in the salt, and the close similarity to German salt domes. The salt is older than most of the lower Cretaceous. The motive force was the static weight of sediment, but the growth of the domes was largely by downbuilding though some actual upthrusting has occurred.

Tectonic Structure of Northern Andes in Colombia and Venezuela, by H. de Cizancourt, *Bull. American Assoc. of Petroleum Geologist*, March, 1933.

The Andes of Colombia and Venezuela represent in part a folded geosynclinal zone and in part a block faulted foreland with the Maracaibo Lake depression forming a "Median mass" in the folded Cordilleras. The conclusion is reached that the Colombian and Venezuelan Andes do not form an extension of the Peruvian folds.

Depth Changes in Sagami Bay during the Great Japanese Earthquake, by F. P. Shepard, *Journal of Geology*, July-August, 1933.

A critical examination of the evidence in favor of large modifications in Sagami Bay shows that much of it is of uncertain character, but that there is good evidence that the floors of certain submarine valleys in the Bay were deepened. Faulting can hardly be the cause of these changes since they are on an entirely different scale from the faults reported on the bordering land and in earthquakes in general. The alternative explanation relates their origin to submarine landslides.

Origin of the Igneous Rocks of Minnesota, by F. F. Grout, *Journal of Geology*, February-March, 1933.

Reviews the suggestion made in the final report of the Minnesota Geologic and Natural History Survey 30 years ago that igneous magmas in that State were formed almost in place by hydrothermal fusion of older rocks. Concludes that that is not so and that, while most magmas are increased in volume by solutions of the crust, there is very little direct fusion. Most magmas appear to reach the crust from below.

The Basal Regions of Granitic Batholiths, by W. H. Emmons, *Journal of Geology*, January-February, 1933.

A systematic study of granitic batholiths shows that they may be divided into (1) the metallized roof, (2) the metallized hood, and (3) the barren core. Veins without metals are found in this core. The magma is believed to have generated sufficient pressure on cooling to fracture the roof, and thus it furnishes the force to form the veins as well as the materials that fill them.

On the Chrome Minerals of Ontokumpu, by Pentti Eskola, *Extrait des Comptes Rendus de la Société Géologique de Finlande*, no. 7, 1933.

Describes the chrome-bearing minerals that occur in different rocks associated with serpentine rock, itself very poor in chromium, near the Ontokumpu copper mine

in eastern Finland. Concludes that these minerals, including chromite, are in all probability of hydrothermal origin. States that this occurrence illustrates the ability of chromium to migrate and to take part in metasomatic replacement.

On the Differential Anatexis of Rocks, by Pentti Eskola, *Extrait des Comptes Rendus de la Société Géologique de Finlande*, no. 7, 1933.

Divides the earth's crust below the zone of weathering into zones showing a different behavior as far as intrusions and anatexis are concerned. (1) No truly plutonic granite or pegmatitic intrusions but with hydrothermal intrusions, largely quartz veins, derived from crystallizing magmas or dissolved from surrounding rocks. (2) Zone of intrusion and injection and potash metasomatism. Still little if any partial re-fusion. (3) Zone of differential anatexis.

Trends of Differentiation in Basaltic Magmas, by W. Q. Kennedy, *Amer. Jour. Science*, March, 1933.

Relates the contrast between alkaline and calc-alkaline magma types to two distinct primary basalt magmas. The common view to-day regards the alkaline magmas as abnormal derivatives of a primary, parent magma common both to them and to the sub-alkaline magma. According to this view the alkaline type results from fractional crystallization under certain special circumstances, or from desiccation consequent upon assimilation of calcic sediments. Kennedy presents evidence to prove that the olivine-basalt magma with a lime-rich diopsidic augite gives rise to alkaline derivatives, while the tholeiitic magma with a lime-poor enstatite-augite, the common rock of the plateau basalts, results in sub-alkaline derivatives.

The Thermal History of the Earth, by A. Holmes, *Jour. Wash. Acad. of Science*, vol. 23, 1933. (Review by A. Knopf, *Am. Jour. of Science* September, 1933 quoted below.)

"In this paper the author presents in compact form his recently formulated hypothesis of subcrustal convection currents. The time-honored hypothesis of the Earth's contraction as the source of the energy of mountain-building, and Joly's hypothesis of thermal cycles are held to be inadequate. A planetary system of convection currents maintained by radio thermal energy in a liquo-vitreous zone beneath the Earth's rocky shell is envisaged and is held to be consistent with a wide range of geologic and geophysical data."

Greenland; the Advances of a Decade, by W. H. Hobbs, *Michigan Acad. of Science*, vol. xviii, 1932 (1933).

The results of the explorations, surveys, and research investigations carried on during the past 10 years.

The Geological Age of the Glacial Horizon at the Base of the Gondwana System, by Sir Thomas H. Holland, *Quarterly Journal Geol. Soc. of London*, vol. 89, 1933.

Reviews the evidence for the exact age of this formation and aligns himself with those who consider it to be Upper Carboniferous. Believes in more than one glacial horizon in the Gondwana rocks of Australia and South America.

Land and Sea on the Canadian Shield in Pre-Cambrian Time, by H. C. Cooke, *Am. Journal of Science*, October and November, 1933.

Gathers together the known information, which, with some interesting theorizing, allows the author to construct broadly generalized paleogeographic maps.

Alpine Land Forms of Western United States, by R. J. Russell, *Bull. Geol. Soc. America*, October, 1933.

The author disputes the concept that land forms in the alpine portions of western United States are the products of the erosional processes familiar at lower elevations and modified by glaciation. He also questions the emphasis that has been placed on the latter process. He finds the nearest relatives to these forms in the Arctic borderland and ascribes their origin largely to nivation and solifluction.

Contact Metamorphism of the States of Minnesota by Granite and by Gabbro Magmas, by F. F. Grout, *Bull. Geol. Soc. America*, October, 1933.

The slate series is so uniform in character that the changes produced by intrusives can be judged with unusual accuracy. The products are carefully described and

distinguished, the effects and the character of the two types of intrusions are compared.

Mineral Zoning in the New Jersey-Pennsylvania-Virginia Triassic Area, by W. H. Newhouse, *Econ. Geol.*, November, 1933.

Ascribes the contact-metamorphic magnetite deposits of Pennsylvania to solutions that originated at depth along the major faulted portion of the Triassic area. The upper mineralization with varying mineralogy extends northward into New Jersey and southward into Virginia. These variations are ascribed largely to temperature conditions mainly controlled by the Triassic erosion surface, and in part to the influence of ferric oxide in the Triassic red beds.

Report of the Committee on Batholith Problems, by F. F. Grout. A mimeographed pamphlet issued by the Division of Geology and Geography of the National Research Council.

Contains report of the Committee by A. F. Buddington and a discussion of "Partial Miscibility of Magmas" by O. N. Fenner. There is also a separate report of 59 pages on "Problems of the Batholiths."

NEW BOOKS

Mineral Deposits, by Waldemar Lindgren (McGraw-Hill Book Co., New York, 1933). The fourth revised edition of a standard text. It is shortened by over 100 pages, contains new illustrations, brings the references up to date and mineral statistics up to 1930. There is a rearrangement of the treatment of certain deposits within the frame-work of the same genetic classification as that formerly used. For instance, one chapter headed "Sedimentary Iron Ores Regionally Metamorphosed" replaces the "Hematite Deposits of the Lake Superior Region" and "Deposits resulting from Regional Metamorphism." The deposits of native copper are considered after the epithermal deposits instead of before them. The discussions of origin take in the most recent ideas concerning the magmatic ore deposits and the magmatic derivation of the lead-zinc ores in limestones. As in the case of its predecessors, it is a book that every geologist and mining engineer must have available for constant reference.

Historical Geology, by Schuchert and Dunbar (John Wiley & Sons, Inc., New York, 1933). This is part II of "Textbook of Geology" and is the third edition, largely rewritten. Emphasizes the two fold development of the Earth itself and the life upon it, and the principles concerned in geological thinking, avoiding encyclopedic cataloging of facts. It is illustrated with new plates and paleogeographic maps. A greater continuity in the text over that of previous editions is obtained by relegating the descriptive biologic chapters to the appendix. It is again the most comprehensive and up-to-date textbook of Historical Geology.

A Manual of Foraminifera, by J. J. Galloway (Principia Press, Bloomington, Ind., 1933). A study of the phylogeny of the families, sub-families, and genera of foraminifera which presents a more complete and more strictly scientific classification of those organisms than any previous one. It bases the phylogenetic interpretation on the geologic record. It is illustrated by plates and charts.

Ores and Industry in the Far East, by H. Foster Bain (Council of Foreign Relations, New York, 1933). This is the second, revised edition of an important work New data regarding Manchuria and Jehol are included. It is a timely and up-to-date summary.

Tabellen zur Berechnung von Mineral und Gesteinsanalysen, by H. von Philippsborn (Akademische Verlagsgesellschaft M. B. H., Leipzig, 1933). Technical tables for the mineralogist and petrologist more comprehensive and more accurate than any previous ones.

Principles of Historical Geology, by R. M. Field (Princeton University Press, 1933). Attempts to show how Earth history has been deciphered by an elementary description of the geology of various regions, but at the expense of principles and chronologic arrangement. A departure from the ordinary method of presenting Historical Geology which is marred by the carelessness with which it was put together.

Earth Lore, Geology without Jargon, S. J. Shand (Thomas Murby & Co., London, 1933). Geology presented by an expert but in simple fashion. A brief, readable, informative book for the non-specialist.

Early Steps in Human Progress, by H. J. Peake (J. B. Lippincott Co., Philadelphia, 1933). A summary of present day knowledge concerning the development of human culture, making sharp distinctions between what is known and what may be fairly inferred as to the origin of civilization.

The World of Fossils, by O. L. Fenton (D. Appleton-Century Co., New York, 1933). A brief, interesting review of the life of the past. Paleontology for the layman that views fossils as they once were and lived, rather than as traces on a rock that need only to be described.

Mineral Deposits of the Canadian Shield, by E. L. Bruce (The Macmillan Company of Canada, Ltd., Toronto, 1933). The first quarter of the book is devoted to those parts of geology that are most closely allied to mineral deposits. It is a compact summary, critically prepared, and is therefore of value. The rest of the book describes the many and important Canadian mineral deposits.

Textbook of Paleontology, Vol. II, by the late Karl A. von Zittel, translated and edited by C. R. Eastman (Macmillan & Co., Ltd., London, 1932). Volume II deals with the vertebrates from fishes to birds. It is the second English edition, revised and with additions by Sir Arthur S. Woodward. The form of the book remains the same as the original and Zittel's methods have been followed throughout, but the many new discoveries made since 1902 are incorporated, so that the old book, largely rewritten, is considerably enlarged and the references are brought up to date.

An Introduction to the Study of Fossils (revised edition), by H. W. Shimer (The Macmillan Co., New York, 1933). In this second edition the first chapter on "General Considerations" has been enlarged. It summarizes the conditions of preservation, process of fossilization and other important facts introductory to the study of fossils themselves. The various phyla of plants and animals are then studied in detail and the fossil forms interpreted through the related living forms. Summaries of relationship and evolution have been added and the importance of each phylum as a rock-builder is noted.

Mineralogy of Sedimentary Rocks, by P. G. H. Boswell (Thomas Murby & Sons, London, 1933). Consists of 121 pages covering such features as "The Individuality of Sediments," "Minerals as Clues to the Source of Sediments," "Correlation by Means of Minerals," "Deep Sea Sediments," etc., a list of general works, and 135 pages of bibliography and abstracts. This is an exceedingly valuable section and is followed by indices to stratigraphical horizons, localities, minerals, and technique.

The Jurassic System in Great Britain, by W. J. Arkell (Clarendon Press, Oxford, England, 1933). This is a large book of nearly 700 pages, undertaken because of the necessity of coordinating the vast amount of work that has been done on the Jurassic of Great Britain. It is not a summary of everything available, but a general description indicating what has been done and where the information may be obtained. Since the Jurassic system in Great Britain is the standard section for the world, the importance of this book is evident.

Geology of California, by R. D. Reed (Thomas Murby & Co., London, 1933). A general account of the geologic work done in California and of the structure, stratigraphy, and geologic history of the State. Emphasizes some of the still unsolved problems.

Phase Rule Studies, by J. E. W. Rhodes (Oxford University Press, London, 1933). Not a geological book but an excellent guide to knowledge concerning chemical principles that are involved in the formation of minerals and rocks.

Historical Geology, by R. C. Moore, (McGraw-Hill Book Co., New York, 1933). Because of the comprehensiveness of the subject and the almost limitless number of possible methods by which the subject may be presented, there is always room for another textbook on Historical Geology. The discussion of Eras and periods of Earth history is preceded by chapters on the materials of the Earth, the origin and the development of the Earth. Life is treated in separate chapters for each Era in order not to encumber the student with too much biologic detail under each period. The restricted use of paleogeographic maps and the rather poor reproductions of many of the plates and figures are noticeable.

The Story of a Billion Years, by W. O. Hotchkiss (The Williams and Wilkins Co., Baltimore, Md., 1933). One of 20 books in the "Century of Progress Series." Describes widely selected geological subjects in simple language and makes a coherent story out of them. A good book for the non-geologist who wishes to learn something of Earth science in a short time.

Earth Oil, by G. Egloff (The Williams & Wilkins Co., Baltimore, Md., 1933). Another of the "Century of Science Series." An interesting story of petroleum in all its phases. Excellent for the layman and full of unusual bits of information for the specialist.

Conodont Studies Number 1, by E. B. Branson and M. G. Mehl (University of Missouri Studies, Vol. VIII, No. 1, Columbia, Mo., 1933). Discusses the methods of collecting and studying these minute fossils whose uncertain biologic relationship has given rise to much speculation. They are locally abundant in certain Paleozoic formations. This new study and description may lead towards their use in subsurface correlation.

Geologie der Erde, Pt. I Geologie Sudamerikas, by H. Goth (Berlin, 1932). Considers the geology of South America up to the end of the Paleozoic Era. The introduction is concerned with the general orographic and geologic organization of the continent. Chapters I-III deal with the pre-Cambrian, Chapter IV with the older,

and V with the younger Paleozoic, chapter VI with the Gondwana rocks.

College Textbook of Geology, Part I, Second Edition, Geologic Processes and Their Results, by R. T. Chamberlin and Paul MacClintock. This is the latest of a long line of textbooks started by Chamberlin and Salisbury. It is some 60 pages longer than its immediate predecessor but is printed on thinner paper which decreases its size somewhat. Much new material, and a more complete discussion of processes make this a valuable short text.

Minerals Yearbook, 1932-1933, by O. E. Kieseling (U. S. Bureau of Mines, 1933). This is a new publication which takes the place of the "Mineral Resources of the United States" which has been issued annually for 50 years. This single, handy volume will be kept up to date and will be a marked improvement upon the older system. It includes metals and non-metals, gives statistics and a summary of uses and developments during the year.

The Mineral Industry during 1932, edited by G. A. Roush (McGraw-Hill Book Co., New York, 1933). Continues this invaluable series, published yearly, that gives a résumé of conditions in the various mineral industries. *Elements of Optical Mineralogy, Part II, Description of Minerals*, third edition, by A. N. Winchell (John Wiley & Sons, Inc., New York, 1933). Incorporates the advance in knowledge of the composition of complex silicates resulting from X-ray studies and the reexamination of the relations between optical properties and chemical composition. The new classification of silicates based upon the crystallographic relationships revealed by X-ray studies is used.

Thin Section Mineralogy, by A. F. Rogers and P. F. Kerr (McGraw-Hill Book Co., Inc., New York, 1933). A new, comprehensive, introductory text on optical mineralogy which combines an unusual number of clear diagrams and well chosen photographs with new identification tables and descriptions of the common minerals.

History of the Theory of Ore Deposits, by Thomas Crook (Thomas Murby and Co., London, 1933). A readable account of the development of the various theories that have been advanced to explain ore deposits. Emphasizes the recurrence of the relatively few fundamental theories.

NEW MAPS

Geological Map of the United States of America, see under XVIIIth International Geological Congress (this article).

Carte Géologique Internationale de la Terre, published by the Prussische Geologische Landesanstalt, Berlin, 1933. Four sheets covering Africa south of the equator, Madagascar and the oceanic islands to latitude 50° south. Scale at the Equator 1:5,000,000 (beginning of series).

Carte Géologique Internationale de l'Europe, published by the Prussische Geologische Landesanstalt, Berlin, 1933. The first four sheets of the forthcoming geological map of Europe. Scale 1:1,500,000 includes part of central and eastern Europe.

Geological Map of Maryland, Maryland Geological Survey, E. B. Mathews, State Geologist. Scale 1:380,160 or 6 miles to the inch.

Mapa Geologica de Espana, published by the Instituto Geologico y Minero de Espana (Madrid, 1932). Scale 1:1,000,000.

Preliminary Geologic Map of Maine, Maine Geological Survey, by Arthur Keith. Scale 1:1,000,000 on United States Geological Survey base map.

Carte Géologique Murale de l'Alsace et de la Lorraine, under the direction of E. de Margerie. A large wall map in four sheets on the scale 1:200,000 with a contour interval of 100 meters.

Catalogue of Small-scale Geologic Maps (Preliminary Edition), W. H. Bucher, Editor, National Research Council, Washington, D. C., 1933.

A handy reference to locate geologic maps of many scales and types published in the periodicals and the Federal and State Survey Bulletins.

GEORGE, STEFAN. A German poet, died at Lugano, Switzerland, Dec. 4, 1933. He was born at Budesheim, near Bingen, Germany, July 12, 1868, and after attending the Darmstadt gymnasium studied philosophy and the history of art in Paris, Berlin, and Munich. While in Paris he came under the sway of such symbolistic poets as Beaudelaire and Mallarmé, and before returning to Berlin visited London where he was influenced by the Pre-Raphaelites. His poems appeared after 1890 in *Blätter für die Kunst*, the earlier volumes, such as *Hymnen* (1890), *Pilgerfahrten* (1891), and *Algalal* (1892), being published privately. Later appeared *Die Bücher der Hirten und Pre-*

isgedichte, der Sagen und Sänge und der hängen-den Gärten (1895); *Das Jahr der Seele* (1897); *Der Teppich des Lebens und die Lieder von Traum und Tod* (1899); *Die Fibel* (1901); and *Ser siebente Ring* (1907). Of the World War he wrote *Der Stern des Bundes* (1904); *Der Krieg* (1917); and *Drei Gesänge—An die Toten, Der Dichter in Zeiten der Wirren, und Einen jungen Führer im ersten Weltkrieg* (1921).

Das Neue Reich, which George published in 1929, caused the National Socialists on their ascendancy to proclaim him the prophet of the Third Reich. In this work he upheld the vision of the heroic man, collectivism or the citizens' obligations to the state, the power of faith, and the spiritual ideal of the nation. He published also the essays *Tage und Taten* (1903) and *Maximin, Ein Gedenkbuch* (1906) and translated into German Baudelaire's *Flowers of Evil* (1901), Shakespeare's *Sonnets* (1909), Dante's *Divine Comedy* (1912), and the works of Rossetti, Swinburne, Verlaine, Rimbaud, and D'Annunzio.

In 1927 Stefan George received the Goethe prize, awarded by the city of Frankfurt-am-Maine for upholding in his work the dignity and spirit of that poet. Recognized as the leader of the cult of esoteric poetry in Germany, he sought to extol beauty of form through imagery and euphony, in opposition to the tenets of the naturalistic school.

GEORGETOWN UNIVERSITY. A Roman Catholic institution of higher education for men in Washington, D. C., founded in 1789, and conducted by the Society of Jesus. In the autumn of 1933, 2086 students were enrolled. The faculty numbered 410. The Riggs Memorial Library contained 164,547 volumes; the Hirst Library 10,456 volumes, and the individual libraries maintained by the professional schools, many additional volumes. In 1933 the White-Gravenor Building was completed. It contains the executive offices of the college and a number of class and lecture rooms. The fourth floor is devoted to modern chemical laboratories. President, the Rev. Coleman Nevils, S.J., Ph.D., D.D.

GEORGE WASHINGTON UNIVERSITY, THE. A nonsectarian institution of higher learning for men and women in Washington, D. C., founded in 1821. The enrollment for the first semester of 1933-34 was 4778. The faculty numbered 350. Outstanding among the 21 new faculty appointments were those of William John Cooper, former United States Commissioner of Education, as professor of Education; Joseph Quincy Adams, director of research of the Folger Shakespeare Library, as professorial lecturer in English; and Edward Bright Vedder, former director of the Army Medical School, as professor of experimental medicine and executive officer of the department of pathology and experimental medicine. The endowment amounted to \$2,060,000, from which the income for 1932-33 was \$81,164. The total income from all sources was \$1,166,389. The library contained more than 100,000 volumes. President, Cloyd Heck Marvin, Ph.D., LL.D.

GEORGIA. POPULATION. The population of the State on Apr. 1, 1930, was 2,908,506 (Federal Census); in 1920, it was 2,895,832; in 1933 (Federal estimate), 2,911,000. Atlanta, the capital, had (1930) 270,366 inhabitants.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Cotton . . .	1933	2,147,000	1,110,000 ^a	\$52,170,000
	1932	2,651,000 ^a	854,000 ^a	24,766,000
Corn	1933	3,740,000	39,720,000	23,562,000
	1932	3,856,000	38,560,000	12,725,000
Peanuts ..	1933	773,000	456,070,000 ^b	11,858,000
	1932	888,000	398,050,000 ^b	5,175,000
Tobacco ..	1933	66,000	58,124,000 ^b	6,598,000
	1932	23,500	12,565,000 ^b	1,415,000
Sweet potatoes .	1933	95,000	7,600,000	3,800,000
	1932	109,000	8,938,000	3,128,000
Hay (tame)	1933	706,000	358,000 ^c	3,759,000
	1932	826,000	481,000 ^c	3,848,000
Peaches ...	1933	5,440,000	4,080,000
	1932	1,170,000	1,112,000
Oats	1933	295,000	5,810,000	3,717,000
	1932	378,000	6,993,000	2,657,000
Potatoes ..	1933	18,000	1,026,000	1,077,000
	1932	17,000	1,003,000	782,000

^a Bales. ^b Pounds. ^c Tons.

EDUCATION. A public-school code having support of educational groups was prepared in the course of the year for submission at the next session of the Legislature. For the academic year 1932-33 the number of persons of school age in the State was reckoned as 869,744. There were enrolled in the public schools 757,830 pupils. Of these, 642,174 were in common schools or elementary grades; in the ordinary high schools, 107,880; and in evening high schools, 776. The year's current expenditures for public-school education totaled \$15,836,864. Salaries of teachers, for the year, averaged \$603.18.

LEGISLATION. A regular session of the Legislature convened in January, the former time of convening (July) having been altered to conform with the shift to January for the inauguration of governors. The session occasioned disappointment by making appropriations in excess of the expected revenue for the two years ahead. It provided State road payments to counties which had aided in road building, the payments for this purpose being estimated as likely to reach \$25,000,000. No provision was made for a State convention to deal with the proposed Federal Eighteenth Amendment. The Twentieth Amendment to the Federal Constitution was ratified.

POLITICAL AND OTHER EVENTS. In the course of the banking panic the banks of the State were closed on March 3 by the Governor's proclamation of a legal holiday. Prior to the closure, inability to meet payments in cash had led Atlanta to issue a considerable total in scrip, which had been accepted by merchants and some banks as cash at face value. Plans for a large new issue of scrip in Atlanta were abandoned during the period of closure of the banks. The banking institutions under State control reopened on March 12, subject to close restriction by the superintendent of banks under powers accorded by the Legislature.

By the operation of a new system as to terms of office Governor Talmadge was inaugurated, not in June like his predecessors, but on January 10. Upon the Legislature's adjourning without having provided to balance State expenditure with revenue he ordered on March 25 that the governmental departments immediately reduce their budgets by an aggregate of \$1,000,000; this was reported to require reductions of between 20 and 25 per cent. Chairman Barnett of the Highway Board refused in April to obey the Governor's order to dismiss four designated engineers from the Board's employ. Governor Talmadge

thereupon refused to sign warrants for the pay of 1300 employees of the Highway Department. In June he ordered the sequestration of funds in the hands of the Highway Board, totaling by report some \$2,500,000. It was supposed at the time that the order would be made to apply to subsequent highway revenues, running to some \$800,000 a month. The purpose of the order was to provide revenue to meet State obligations, of which some were overdue, notably payments to eleemosynary institutions, Confederate veterans, and public schools. Talmadge called out State troops and put the Highway Department under military law. Under the doctrine of military law he prevented the service of subpoenas on him by those who would have put his course to court test. He ousted two members of the Highway Board, who had sought to bring civil action against him.

In other parts of the State government Talmadge took summary action. He was reported to have directed the activities of the Controller General and of the State Department of Agriculture. By his order the State's ad-valorem tax-rate was cut to 4 mills. Charging the members of the public-service commission with favoring utility companies he removed all five and appointed in their place members who, he declared, would carry out his intention to reduce utility rates. The reorganized commission made lower electric rates, to which companies reportedly agreed, and lower telephone rates, which were fought in the Federal courts.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Eugene Talmadge; Secretary of State, John B. Wilson; Attorney General, M. J. Yeomans; Treasurer, George B. Hamilton; Auditor, Tom Wisdom; Comptroller General, William B. Harrison; Superintendent of Schools, M. D. Collins; Commissioner of Agriculture, G. C. Adams; Commissioner of Commerce and Labor, H. M. Stanley.

Judiciary. Supreme Court: Chief Justice, Richard B. Russell; Assistant Justices, H. Warner Hill, R. C. Bell, Marcus W. Beck, Samuel C. Atkinson, S. Price Gilbert.

GEORGIA (GEORGIAN SOCIALIST SOVIET REPUBLIC). A Soviet republic (area, 26,981 square miles; population, 2,883,200 on Jan. 1, 1931), which in 1922 united with Azerbaijan and Armenia to form the Transcaucasian Socialist Federated Soviet Republic (q.v.).

GEORGIA, UNIVERSITY OF. A State institution of higher education for men and women in Athens, Ga., chartered in 1785 and opened in 1801. The enrollment in the 1933 summer session was 1072 and for the autumn term 2118. The faculty numbered 141. The productive funds of the university amounted to \$425,000, and the income for the year from the State and other sources was \$8,000,000. The library contained 80,000 volumes. The Georgia State College of Agriculture and the Mechanic Arts and the Georgia State Teachers College have been integrated with the university, all three institutions constituting the University of Georgia. President, Steadman V. Sanford, Litt.D.

GERMAN, WILLIAM MANLEY. A Canadian lawyer and legislator, died at Welland, Ont., Mar. 31, 1933. He was born at Hillier, Ont., May 26, 1851, and was educated at Victoria College, Cobourg. Called to the Ontario bar in 1881, he practiced at Welland, being appointed Queen's Counsel in 1899. In 1904 he gained international prominence by appearing before the Privy Coun-

cil, with Lord Haldane, at the instance of the owners of the *Kitty D*, an American fishing schooner which had been seized by Canadian revenue officers. He won his greatest fame, however, as a trial lawyer.

In addition to representing Welland Co. in the Ontario Legislature from 1894 to 1898, Mr. German was a member of the House of Commons of the Dominion Parliament from 1891 to 1892, 1900 to 1917, and 1921 to 1925. He was one of the leaders in the fight of the Conservative party to destroy the American power monopoly at Niagara Falls, which led to the treaty stipulation of 1910 whereby there could be diverted on the American side for power purposes 20,000 cubic feet of water per second and on the Canadian side 36,000 cubic feet per second.

Mr. German was a former president of the Welland Electrical Co., Ltd., and of the International Peace Bridge Co., which constructed during 1926-27 the bridge connecting Buffalo and Fort Erie, Ont., and at the time of his death was president of the General Brock Hotel Co., Ltd., of Niagara Falls, Ont. He was also deeply interested in the promotion of the St. Lawrence waterway project.

GERMAN FILMS. See **MOTION PICTURES.**

GERMAN LITERATURE. The past twelve months have witnessed much excitement, change, and turmoil in Germany. To a very considerable extent published literature reflects this situation, though editors have bravely persisted in issuing much that remains "above the battle" and though some voices have been silenced. Business conditions and political attitudes have likewise altered a great deal that seemed a year ago the relatively permanent façade of German letters. Not a few prominent authors have gone into exile, where their latest works await publication. During the next few years it may be necessary to list separately writings which have been banned in the Fatherland, but which still reflect the energy of the German tongue. At present this is hardly possible, nor is it as yet really necessary.

NOVELS. The four most important novels of the year are probably Thomas Mann's *Die Geschichten Jakobs*, which seems not to equal his earlier masterpieces; Karl B. von Mechow's *Vorsommer*, a somewhat idyllic tale (in the manner of *Silas Marner*) by a writer of unusual promise; Franz Werfel's *Die Vierzig Tagen des Musa Dagh*, which deals with a characteristic theme; and Rudolf Hans Bartsch's *Ein Deutscher*, a romantic-minded attempt to interpret much that has occurred recently. The contemporary soul and its chaos is the theme of Will Kramp's *Die ewige Feindschaft*, while F. Thiess deals more rhetorically and optimistically with the "new Germany" in *Johanna und Esther*. Many well-known names are represented this year: Friedrich Griese's *Das letzte Gesicht*, which many Germans profess to admire; Ina Seidel's *Der Weg ohne Wahl*, another story of happiness achieved through sacrifice; Hermann Steyr's *Die Nachkommen*, readable separately but in fact a sequel to *Nathanael Maechler*; Jakob Schaffner's *Eine deutsche Wanderschaft*; H. Grimm's *Der Oeleucher von Duala*, an old story somewhat revamped; and Ludwig Mathar's *Strasse des Schicksals*, a novel with a political background. Josef Ponten's *Volk auf dem Wege* is the first part of a projected nationalistic trilogy. Several relatively new story-tellers are on the lists, including Otto Bräse, with *Das Mädchen von Utrecht*, Charlotte

Ursina's *Erasmus*, a story with a quaint Rhenish milieu, and the artist Richard Seewald's fantastic *Robinson, der Sohn Robinson's*. The year has witnessed the 70th birthday of Gustav Frensen, author of the once world-famous *Jörn-Uhl*. His latest book is *Meino der Prahler*.

SHORTER FICTION. The *Novelle* has been popular and is, in a sense, the most interesting contemporary German literary form. There is, perhaps, no single distinguishable masterpiece or any collection one would wish to place beside Rudolf Borchardt's *Das hoffnungslose Geschlecht*, but there is much fine work. Elizabeth Langaesser's *Triptychon des Teufels* probes deeply into human nature, mirrored in sombre little dramas of the *Besatzungszeit*. Ruth Schaumann's *Siebenfrauen* offers charming miniatures in a form of great stylistic interest. Joseph Wittig's *Das verlorene Vaterunser* have this author's appealing meditateness. Isolde Kurz's *Die Nacht im Teppichsaal*, which has an Italian setting, is rather a *Novellenband* than anything else. Noteworthy also are Werner Beumelberg's *Wen die Götter lieben*, Georg Britting's *Das treue Eheweib*, and Gertrud von le Fort's *Das Reich des Kindes*. Paul Ernst's *Deutsche Geschichten* offers a selection from the tales of this recently deceased writer, who was a stalwart conservative and has, perhaps, been somewhat unduly neglected.

POETRY AND DRAMA. Lyrical verse decidedly new in content and mood is still in the making, and is in these times frequently circulated in manuscript or mimeograph form. Readers can form some idea of it through small current anthologies, among which *Die Gruppe* (an Austrian publication) is noteworthy. Volumes issued during the past year include Richard von Schaukal's *Gedichte: 1928-1933*, the work of an older Austrian poet, and G. von der Vring's *Das Blumenbuch*. Joachim Ringelnatz's *Gedichte* and Dr. Owlglass's *Stunde um Stunde* are satirical and sententious. Drama is in a state of transition and stagnation. The past year saw the production of *Schlageter*, a patriotic drama by Hans Johst, who is the official poet of the new régime. Gerhart Hauptmann has published *Die Goldene Harfe*, another mystical drama. Richard Strauss' *Arabella*, the new opera of 1933, is the final fruit of the long collaboration between the composer and Hugo von Hoffmannsthal. The production of radio drama has made some progress during the year, and some are attempting to revive the poetic play.

POLITICS AND ECONOMICS. Political literature has appeared in huge quantities, the baffling task of surveying which has become a minor contemporary necessity. There are books and brochures, symposia, and series. Several publishers have taken to issuing dozens of small volumes (e.g. *Maenner und Mächte*) which provide biographies of political leaders, patriotic harangues and theories either constructive or destructive. In addition there are many works of a larger format. The latest edition of *Mein Kampf*, Adolf Hitler's autobiography, carries the story past the threshold of victory. Second and quite as important is Oswald Spengler's *Jahre der Entscheidung*, a book distributed in no end of tens of thousands and definable as a conservative's reaction to the National-Socialist revolution. Aspects of the reigning German mentality may be seen in Joseph Goebbels' *Revolution der Deutschen*, a volume of addresses by the minister of propaganda and an indispensable

source-book; Otto Dietrich's *Mit Hitler in die Macht*, which is a close-up with incense added; R. W. Darré's *Das Bauerntum als Lebensquelle der Nordischen Rasse*, a dull but illuminating discussion of the peasant's title to the sun; Ewald Banse's *Geographie und Wehrwille*, by a famous professor of the martial spirit; K. L. von Oertzen's *Wehrpolitik*, a sound and interesting military treatise which is quite up to date; Wagner and Beck's *Hochschule für Politik der NSDAP*, which outlines what every young German ought to know about civic attitudes and responsibilities; and J. von Puttkammer's *Deutschland's Arbeitsdienst*. Somewhat more critical are Edgar J. Jung's *Sinnbedeutung der deutschen Revolution*, an intelligent and incisive little book by a representative of the younger generation; Walther Gebhart's *UM des Reiches Zukunft*, a brilliant discussion of the ideas, philosophical and otherwise, on the basis of which the new nationalism strove toward power; and Karl Rauch's *Schluss mit "junger Generation!"* which pleads for recognition of the value of experience in the conduct of political affairs. Paul Tillich's *Die Sozialistische Entscheidung*, superficially a little out of date, is worth going back to as the final word of a great Christian-Socialist. Richard Bahr's *Volk jenseits der Grenzen* rediscusses the problem of German minorities in the post-Versailles states. E. Voegelin's *Rasse und Staat* is, perhaps, the most important recent German publication on this much debated question. B. Laum's *Die Geschlossene Wirtschaft* is one of many publications dealing with the closed economic state. Konrad Heiden's valuable *Geschichte des Nationalsozialismus* and A. von Miltenberg's *Wilhelm der Dritte* have been forbidden by the censor.

RELIGION AND PHILOSOPHY. Since the Hitler movement professes to be a *Weltanschauung* as well as a political party, it is natural that religious debate should rage furiously. Most of the publications do not profess to be more than brochures, and the English reader is reminded of Stuart days. Emil Hirsch's *Das kirchliche Wollen der Deutschen Christen* is an indispensable summary of events which led to the unification of the Lutheran church under a National-Socialist bishop. Ernst Bergmann's *Die deutsche Nationalkirche* is a plea for an organized patriotic religion entrusted with assimilating the traditional confessions. Karl Barth's *Theologische Existenz heute!* is a passionate demurrer to recent events, destined to be remembered as a masterpiece of German theological prose. Paul Althaus' *Die deutsche Stunde der Kirche* is a great scholar's attempt to pour oil on troubled waters. More inclined to accept the synthesis of nationalism and religion but relatively individualistic are Friedrich Gogarten's *Einheit von Evangelium und Volkstum* and Wilhelm Stapel's *Die Kirche Christi und der Staat Hitler's*. Franz von Papen's *Appel an das deutsche Gewissen* is the nearest approach to a formulation of Catholic conservatism, while Erik Peterson, in *Die Kirche aus Juden und Heiden*, touches upon a burning question in the manner of a Catholic church historian.

In religious works the great success of the year has been F. M. Willam's *Das Leben Jesu im Lande und Volke Israel*, which deals so skillfully with the Palestine background that the author has been termed a conservative Renan. The first volumes of J. Schmidlin's *Papstgeschichten der neuesten Zeit* point toward the produc-

tion of another monumental historical work. Among the publications which have grown out of the Luther centenary is *Martin Luther, dargestellt von seinen Freunden und Zeitgenossen*, edited by A. S. Cohrs. Martin Grabmann has written *Die Geschichte der katholischen Theologie seit dem Ausgang der Väterzeit*, Karl Adams's *Jesus Christus* and Romano Guardini's *Im Spiegel und Gleichnisse* are widely read new books by Catholic writers.

Philosophy has in a measure wrestled with the problems underlying the present change. The following are among those which have attracted most attention: *Volk, Staat, Erziehung*, by E. Spranger, collected essays by a leading pedagogical writer; *Vom Sinn der Gegenwart*, by Hans Eibl; *Vom Ratsel der Zeit*, by Friedrich Muckermann; *Politische Kulturlehre*, by Gustav Steinboehmer; and *Die Rassenidee in der Geistesgeschichte*, by E. Voegelin.

There is no dearth of general philosophical literature. Some of these books may appeal to an audience outside the specialists: *Selbstdarstellung*, by Nicolai Hartmann, the leading Berlin thinker's interpretation of his work; Max Scheler's *Schriften aus dem Nachlass*, further essays by a deceased philosopher whose influence upon younger men has never been more discernible than it is now; Theodor Haecker's *Was ist der Mensch?*, a powerful essay in anthropological interpretation; and Bernhard Jansen's *Aufstieg zur Metaphysik. Spinoza* (vol. 2), by S. von Dumin-Borkowski, promises to be the most satisfactory biography of this philosopher. *Platon*, by K. von Hildebrandt, represents Plato as the reformer of his people. J. Pieper's *Grundformen sozialer Spielregeln* is an interesting essay in philosophical sociology. Gerhard Menz's *Kulturwirtschaft* deals illuminatingly with the relations between cultural and economic activity.

HISTORY. No notice can be taken of specialized historical monographs here. Among the more widely discussed books are: F. Schnabel's *Deutsche Geschichte im 19. Jahrhundert*, moderately conservative and well-written; E. Czech-Jochberg's *Deutsche Geschichte nationalsozialistisch gesehen*; Konrad Heiden's *Geschichte des Nationalsozialismus*, written early in the year; and Guenther Franz's *Der deutsche Bauernkrieg*. Herder's *Geschichte der führenden Völker* is progressing, new volumes including Hugo Hantsch's *Die Entwicklung Oesterreich-Ungarns zur Grossmacht*.

MEMOIRS. Several important volumes of memoirs have appeared. Gertrud Baumer's *Lebensweg durch eine Zeitenwende* is a prominent woman leader's commentary on several past decades of German political and cultural activity. In *Mein militärischer Werdegang*, Gen. Erich Ludendorff analyses his own soldierly career. Another military autobiography, concerned with events of the Wilhelmian era, is Generaloberst von Einem's *Erinnerungen eines Soldaten*. Carl Duisberg's *Meine Lebenserinnerungen* tells in a straightforward way the life-story of a many-sided chemist of international repute. Maria Weser's *Begegnung am Abend* is a memoir which outlines the author's relation with the psychologist Constantin von Monakow. Max Halle's *Scholle und Schicksal* is a volume of literary reminiscences.

ESSAYS AND LITERARY CRITICISM. The so-called "revolution" in the German conception of literature has as yet found no adequate expression. A symposium entitled *Des deutschen Dichters*

Sendung in die Gegenwart is a collection of brief and rather formless endorsements of the national revolution. Otto Miller's *Der Individualismus als Schicksal* is an essay on the spirit which, in the author's opinion, has characterized modern German literature. *Erinnerungen an Rainer Maria Rilke*, by Marie von Thurn und Taxis, is probably the most valuable of existing contributions to a biography of this poet and throws considerable light upon Rilke's most difficult lyrics. Emil Ermatinger's *Dichtung und Geistesleben der deutschen Schweiz* is a solid treatise on a part of literary history which has long awaited treatment. Christian Dietrich Grabbe, by Ferdinand J. Schneider, is the first adequate life of this South German author. Romano Guardini's *Der Mensch und der Glaube* is an interpretation of Dostoevski's personages from the religious point of view and at the same time an exceptionally instructive evocation of the Russian world view. *Die Dichtung Stefan Georges*, by E. Marwitz, is one more commentary on a poet now in vogue, whose death occurred as the year drew to a close. Friedrich Schreyvogel's *Vom Gluck der deutschen Sprache* is an essay in praise of German speech. *Führung und Geleit*, by Hans Carossa, has been widely hailed as the best essay volume of the year. There are any number of minor theoretical and biographical publications, many of which have political implications.

THE ARTS. Traditionalism is emphasized in the current German interpretation of the arts. Hans Weigert's *Die Kaiserdome am Mittelrhein*, with excellent pictures and an explanatory text, is one of the best of many similar publications. Reproducing works of art is a task which appeals to many, as witness the Vienna *Bruegel* (an extraordinarily fine volume), *Die Hausgalerie berühmter Gemälde* (a new and improved edition of what is almost a classic), and *Die Minnesinger* (an inexpensive Insel-Verlag reproduction of a part of the Manessische Handschrift). Hans Pfitzner's *Gesammelte Schriften* offers a complete edition of this composer's essays. Otto Schmitt's *Reallexicon zur deutschen Kunstgeschichte* has advanced a step further toward completion. Max Deri's *Die Stilarten* is a brief and compact treatise on the evolution of the arts, written in full awareness of modern trends in criticism. *Das Ruth Schaumann Buch* is an illustrated commentary on the plastic and graphic works of this artist. For the Wagner year, Fritz Zalisz and others wrote *Bayreuth im Profil*. A. von Ehrman's *Johannes Brahms* is a tribute to the memory of this composer.

TRAVEL. Important German books of travel are difficult to find. *Das rote Imperium*, by F. A. Kramer, is a journalist's view of life in present-day Russia and is characterized by objectivity and vividness of presentation. Friedrich Leyden's *Gross-Berlin* is a geographical study of this metropolis. Ernst Stolper's *Werkstudent im Wilden Westen* should interest Americans. Walther Penck's *Puna de Atacama* has to do with South American travels and experiences. W. Rammer's *Die Tierwelt der deutschen Landschaft* ought to be very helpful to many a more serious traveler through Germany.

TRANSLATIONS. Despite business and social conditions, foreign authors were very courteously treated by German publishers. Knut Hamsun, Sigrid Undset, Pearl S. Buck, Oliver Lafarge, and Felix Timmermans are among those whose latest works of fiction appeared in German ver-

sions. One of the great successes of the year was A. J. Woinowa's *Falsche Edelsteine*, a novel of Russian life. President Franklin D. Roosevelt was among the widely-read authors of the year, and in general there was, perhaps, even more interest in the United States than usual. Indeed, despite more or less official condemnations of "western democracy," literary concern with the East flagged while attention was riveted upon the western countries.

GERMANY. A republic which was established Nov. 9, 1918, as a federation of constituent republics but which in 1933 was in process of transformation into a unitary state. Capital, Berlin.

AREA AND POPULATION. The area and population of the Reich, by constituent republics, at the censuses of June 16, 1925, and June 16, 1933, are shown in the accompanying table.

GERMANY: AREA AND POPULATION

Constituent States	Area, sq. miles	Population, June 16, 1925	Population, June 16, 1933
Prussia ^a	113,036	38,241,253	39,958,073
Bavaria	29,343	7,411,589	7,703,998
Saxony	5,789	4,981,905	5,196,386
Wurttemberg	7,532	2,595,114	2,713,150
Baden	5,819	2,336,498	2,429,977
Thuringia	4,537	1,626,405	1,676,759
Hesse	2,970	1,358,445	1,426,380
Hamburg	160	1,128,788	1,181,548
Mecklenburg-Schwerin ..	5,066	687,599	708,077
Oldenburg	2,480	553,670	581,296
Brunswick	1,418	508,660	518,736
Anhalt	890	351,692	365,824
Bremen	89	332,547	366,425
Lippe	1,215	166,038	179,905
Lubeck	115	127,540	136,468
Mecklenburg-Strelitz ..	1,131	112,052	112,808
Schaumburg-Lippe ..	131	48,660	50,469
German Republic ^b ..	180,985	62,568,455	65,306,130

^a Including Waldeck, which was absorbed by Prussia Apr. 1, 1929.

^b Excluding the Saar (area, 738 square miles; population, about 770,030 in 1927).

Of the 1933 population, 31,699,487 were men and 33,606,643 women. The increase in population during the census period 1925-33 was 2,737,075, or an average of 4.4 for each 100 inhabitants. The male population increased by 5.0 per 100; the female population by 3.8 per 100. The excess of females resulting from the World War was thus being gradually eliminated. The number of cities of more than 100,000 population increased from 45 in 1925 to 52 in 1933 and the total population of these cities rose from 16,436,594 to 19,662,143. They comprised one-quarter of the population in 1925 and one-third in 1933. Estimated population of the 10 leading cities on Jan. 1, 1933: Berlin, 4,227,000; Hamburg, 1,124,000; Cologne, 741,000; Munich, 736,000; Leipzig, 717,000; Essen, 648,000; Dresden, 629,000; Breslau, 618,000; Frankfurt (on Main), 534,000; Dortmund, 533,000.

The movement of population in 1932, with 1931 figures in parentheses, was: Living births, 978,161 (1,031,770); deaths, 697,895 (725,816); marriages, 509,591 (515,403). The 1932 birth rate was 15.1 per 1000 inhabitants; the death rate, 10.8.

EDUCATION AND RELIGION. Primary education is free and compulsory between the ages of 6 and 14 years. In 1931-32 there were 52,959 public elementary schools, with 190,371 teachers and 7,590,466 pupils, and 661 private schools, with 48,760 pupils. Middle schools (Mittelschule),

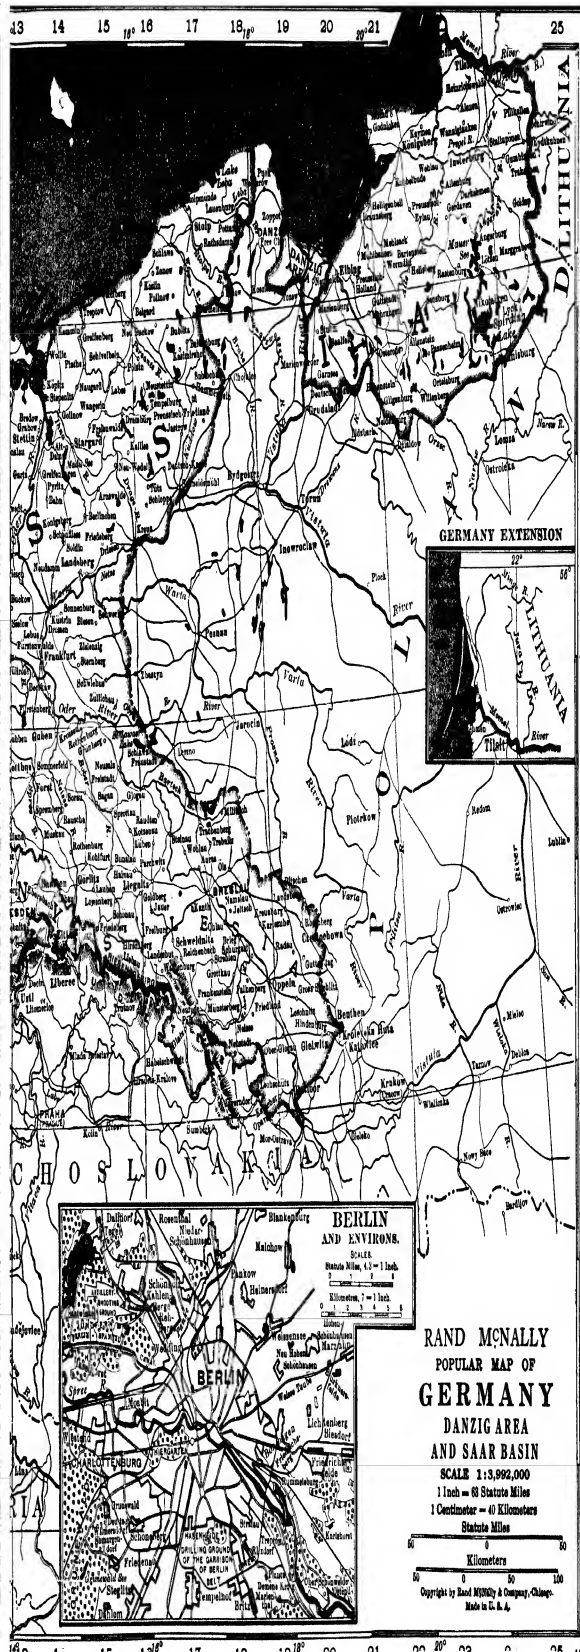

where higher primary education was provided in English and French, numbered 1471, with 229,618 pupils. For secondary education, there were 1365 boys' schools, with 477,383 pupils, and 784 girls' high schools, with 256,077 pupils, besides numerous technical and vocational institutions. The 23 universities had 5876 professors and teachers and 103,585 students in 1931. At the 1925 census, there were 40,014,677 Protestants (64.1 per cent of the total), 20,193,334 Roman Catholics (32.4 per cent), and 564,379 Jews (0.9 per cent).

AGRICULTURE. In June, 1932, there were 73,423,935 acres under cultivation, including 51,206,167 acres of arable land; 20,398,952 acres of grass, meadows and pasture; 206,952 acres of vineyards; and 1,611,867 acres of orchards, truck gardens, etc. Production of the chief crops in 1932, according to provisional figures, was (in metric tons): Wheat, 5,068,934; rye, 8,383,226; barley, 3,221,403; oats, 6,706,359; potatoes, 45,326,603; sugar beets, 7,467,235. Hay production in 1931 was 37,014,693 tons; wine, 68,469,792 gallons; tobacco, 23,180,805 kilos (kilo = 2.66 pounds); hops, 7780 tons; sugar (1931-32), 2,547,451 tons. Livestock on Dec. 1, 1932, included 3,393,000 horses, 19,122,500 cattle, 3,401,000 sheep 22,814,300 swine. Forests in 1932 covered some 31,635,443 acres (state forests, 10,328,563 acres; communal, 4,913,498 acres; private, 15,129,785 acres). The value of agricultural production in 1933 was estimated at 6,570,000,000 marks, compared with 5,840,000,000 marks in 1932 and 9,120,000,000 marks in 1928.

MINING AND METALLURGY. Germany is a leading mineral producer, the chief mining areas being in the districts of Westphalia, Rhenish Prussia, and Silesia (coal and iron), Central Germany (brown coal), the Harz (iron and copper), and the Westerwald (iron). Mineral and metallurgical production showed a steady decline from 1929 to 1932. The output in 1932, with 1931 figures in parentheses, was (in metric tons): Coal, 104,740,000 (118,640,000); lignite, 122,615,000 (133,311,000); coke, 19,128,000 (23,190,000); petroleum, 231,000 (229,000); pig iron, 3,933,026 (6,062,313); raw steel, 5,746,001 (8,291,250); copper ore, 881,000 in 1931; smelter copper, 50,600 (55,500); smelter lead, 95,200 (101,000); smelter zinc, 42,000 (45,300); rock salt, 2,087,000 (2,456,000); brine salt, 491,000 (501,000); potash (pure), 890,000 (1,078,000).

In 1933, the output in tons was steel, 7,585,722; pig iron, 5,266,770; rolling-mill materials, 5,453,230; coal, 109,920,000.

MANUFACTURING. Industrial production reached its lowest point during the world depression (1929-33) in the middle of 1932. The German index for the monthly average of industrial production (1928 = 100) declined from an average of 100.4 in 1929 to 90.1 in 1930, 73.6 in 1931, and 61.2 in 1932. After reaching a low point of 58.5 in August, 1932, the index number increased to 72 in December, 1933. The general industrial output declined some 39 per cent during the period 1929-32, as compared with a decline of 46 per cent in the United States and a world average decline of 30.6 per cent. The industrial decline was reflected in the fall in the national income from 76,100,000,000 Reichsmarks in 1929 to 46,700,000,000 Reichsmarks in 1932. On Jan. 31, 1933, the number of raw cotton-spinning spindles installed was 9,846,000; 85 per cent were

active in 1932. Cement production in 1932 was 2,795,000 metric tons (3,718,000 in 1931); paper and paper boards, 1,968,000 metric tons (2,171,000); wood pulp (dry weight), 1,642,000 metric tons (1,729,000); artificial silk (rayon), 26,760 metric tons (27,760); automobiles, 50,000 (70,000). Textiles, machinery, glass, porcelain, earthenware, clocks, wooden ware, toys, beer, tobacco products, rolling-mill products, musical instruments, and footwear are other leading manufactures. The 1925 census showed 1,852,737 industrial establishments, employing 12,704,135 workers. For economic conditions in 1933, see under *History*.

COMMERCE. Merchandise imports and exports for the period 1930-33 are shown in the accompanying table.

GERMAN IMPORTS AND EXPORTS
[In 1,000 Reichsmarks]

Year	Merchandise imports	Merchandise exports	Surplus of exports
1930	10,393,149	11,328,244	935,095
1931	6,727,078	9,205,918	2,478,840
1932	4,666,500	5,739,168	1,072,668
1933 *	4,203,600	4,880,000	676,400

NOTE.—Reichsmark = \$0.2382 at par; average exchange rate, \$0.2375 in 1932 and \$0.2363 in 1931.

* Preliminary.

Bullion and specie imports in 1932 were 368,493,000 Reichsmarks; exports, 450,974,000 Reichsmarks. Leading export items, in order of value, in 1932 were (in 1000 Reichsmarks): Iron and steel, 835,138; chemicals, 360,144; coal, 236,453; dyes, varnishes, etc., 204,763; paper, 199,581; copper, 144,256; cotton goods 134,572 glass and glassware, 123,371; woolen goods, 101,252. Among the chief import items were (in 1000 Reichsmarks): Raw cotton, 291,266; wool, 230,384; coffee, 145,335; mineral oil, 143,637; wheat, 109,084; butter, 106,551. The leading export markets in 1932, with the value of the goods shipped, were (in million Reichsmarks): the Netherlands, 632.8 (954.6 in 1931); France, 482.5 (834.1); United Kingdom, 446.0 (1133.6); Belgium and Luxemburg, 301.5 (463.5); United States, 281.2 (487.5); Czechoslovakia, 250.0 (423.9). The principal sources of imports in 1932 were (in million Reichsmarks): United States, 591.8 (791.4 in 1931); the Netherlands, 273.1 (383.6); United Kingdom, 258.5 (453.3); France, 189.9 (341.6); Italy, 181.3 (268.4); Belgium and Luxemburg, 146.3 (222.1).

FINANCE. The national budget for the fiscal year ended Mar. 31, 1932, closed with a deficit of 1,530,000,000 Reichsmarks, with expenditures of 9,509,000,000 and revenues of 8,906,000,000 Reichsmarks. The 1932-33 budget closed with a deficit of about 610,000,000 marks, giving an accumulated deficit on Mar. 31, 1933, of 1,880,000,000 marks. The budget for the fiscal year 1933-34, as passed by the Reichstag, called for a balanced account of 5,927,499,050 marks, compared with estimates balancing at 8,219,245,100 marks for the preceding year. The apparent 2,000,000,000-mark decrease in the 1933-34 budget was due chiefly to a new system of accounting. Preliminary returns on the 1933-34 budget indicated that it was maintained in approximate balance.

The national debt on Dec. 31, 1932, amounted to 12,247,000,000 Reichsmarks (foreign, 3,065,300,000 Reichsmarks; domestic, 9,181,700,000 Reichsmarks), compared with 12,137,300,000 Reichsmarks on Mar. 31, 1932. At the end of

1933, the total foreign debt (public and private) was placed at about 19,000,000,000 Reichsmarks, a decline of 13,000,000,000 from the high point of 32,000,000,000 Reichsmarks reached at the end of 1930.

COMMUNICATIONS. At the beginning of 1932, railway lines extended 36,257 miles, of which 33,447 miles were state owned and operated. In 1932, the state lines carried 243,120,000 metric tons of freight (excluding goods transported without charge), compared with 288,600,000 tons in 1931. Passengers transported (including military) in 1931 numbered 1,578,000,000. There were in 1931, 7689 miles of inland waterways, with a fleet of 18,931 vessels of 6,688,189 tons, which carried 86,893,000 tons of goods during the year. The German air lines in 1931 carried 98,167 passengers and 2230.8 tons of freight, the number of miles flown being 6,424,068. Highways totaled 217,479 miles, of which 74,564 miles were macadam. A programme for a comprehensive network of automobile highways coördinated with railways was adopted in 1933.

SHIPPING. The German merchant marine on June 30, 1932, aggregated 4,164,000 gross tons (steam, 3,502,000 tons; motor, 640,000; sailing, 22,000). Idle steam and motor shipping tonnage on July 1, 1933, aggregated 703,000 gross tons (1,103,000 gross tons on July 1, 1932). According to provisional figures, 24,000,000 gross tons of shipping entered German ports during 1932 with cargo and in ballast (27,384,000 in 1931) and 20,000,000 gross tons cleared (23,269,000 in 1931). See *SHIPPING, MERCHANT*.

GOVERNMENT. The Weimar (republican) Constitution of July 31, 1919, while not formally cancelled, was actually abolished after the advent of the Hitler government in 1933. The Reichstag on Mar. 4, 1933, amended the Constitution so as to give the government complete power over all machinery of state (see *History*). For provisions of the Weimar Constitution, see the 1932 YEAR BOOK. President in 1933, Field-Marshal Paul von Hindenburg, who was reelected Apr. 10, 1932, for a seven-year term. Chancellor at the beginning of 1933, Gen. Kurt von Schleicher, who headed a nonpartisan cabinet appointed Dec. 4, 1932.

HISTORY

Riding the irresistible tide of German nationalism and economic discontent, Adolf Hitler swept into power early in 1933. With great political acumen and ruthless energy he won the bulk of the German people to his cause, crushed his opponents, and established a highly centralized Fascist state upon the ruins of the Republic. His war upon the Jews and anti-Fascists provoked numerous foreign protests and boycotts of German goods. His aggressive foreign policy brought Europe closer to the brink of war and caused the most profound realignment of a decade in European international politics. The foreign diplomatic and moral support which the German Republic had won were alienated almost completely. Hitler's Third Reich faced a ring of enemies more extensive and more powerful than that which confronted Germany at the outbreak of the World War.

COLLAPSE OF VON SCHEICHER'S MINISTRY. The situation in Germany at the beginning of 1933 was relatively encouraging. Under the conciliatory régime of Chancellor von Schleicher, political passions appeared to have subsided and there

were some signs of economic improvement. The government's position was basically insecure, however. Five major elections in less than a year had failed to end the parliamentary and governmental deadlock, but had increased the general impatience with the parliamentary system. Coalition government in many of the states of the Reich had become impossible and previous Cabinets, without majorities in their respective Diets, were provisionally administering these states. The Schleicher presidential Cabinet, like the Papen Ministry before it, was opposed by the overwhelming majority of the Reichstag. It was responsible directly to the aged President of the Republic, and depended for its support upon the Reichswehr, of which General von Schleicher retained control as Minister of Defense.

The unexpected resignation of the Schleicher Ministry on Jan. 28, 1933, 57 days after it assumed office, was directly attributed to Colonel von Papen, the previous Chancellor. Von Papen succeeded in winning the support of the German Nationalist leader Hugenberg, the reactionary agrarians, and part of the great industrialists for a coalition government headed by Hitler. He then convinced President von Hindenburg that the Schleicher government did not deserve his continued confidence. The President accordingly forced von Schleicher to give way to Hitler's National Socialist-German Nationalist coalition by the expedient of refusing to dissolve the hostile Reichstag.

HITLER WINS THE CHANCELLORSHIP. The resignation of von Schleicher represented a defeat for most of the industrialists, who counted upon him to hold Hitler's National Socialists in check until a revival of prosperity undermined the Nazi power. It was an apparent victory for von Papen and his Nationalist associates. Despite Hitler's repeated demands for complete control of the government, von Papen had induced him to enter a cabinet in which the three Nazi members were counter-balanced by six Nationalists and conservatives. The line-up of the cabinet formed by Hitler on January 30 was: Chancellor, Adolf Hitler; Vice-Chancellor and Reich Commissioner for Prussia, Franz von Papen; Aviation and Acting Prussian Minister of the Interior, Hermann Goering (Nazi); Interior, Wilhelm Frick (Nazi); Agriculture and Commerce, Alfred Hugenberg (Nationalist); Labor, Franz Seldte (Nationalist); Defense, General von Blomberg; Posts and Communications, Count von Eltz-Rubenach; Foreign Affairs, Baron von Neurath; Finance, Count Schwerin von Krosigk; Commissioner for Re-employment, Dr. Gereke. All except the Nazi and Nationalist members were nominally non-party men, but with the exception of General von Blomberg, who had close personal ties with the Nazis, the other non-party members were in sympathy with Hugenberg's Nationalist party. Von Papen and his associates undoubtedly believed that with their majority in the Cabinet they would be able to control Hitler and his party in the interests of a conservative policy.

THE REICHSTAG ELECTION. Hitler's cabinet, controlling definitely only 247 votes in the Reichstag, was dependent upon the toleration or support of the Catholic parties for a majority. Hitler made overtures to the Centrist leader, Monsignor Kaas, on January 31. The Centrists attempted to extract definite pledges from Hitler regarding observance of the Constitution, economic and financial policy, and social legislation.

The Nazi leader immediately broke off negotiations and on February 1 announced the dissolution of the Reichstag, with new elections on March 5. The Prussian Diet was dissolved on February 6, after President von Hindenburg had appointed von Papen head of the State government in place of the Social Democratic-Centrist government headed by Otto Braun. The Prussian elections also were scheduled for March 5.

Ruthless suppression of the opposition combined with effective Nazi propaganda gave the government a decisive victory at the polls, 52.5 per cent of the electorate voting for the coalition ministry. The Nazis, polling about 44 per cent of the total vote, increased their representation in the Reichstag by 92 and their popular vote by more than 400,000. The standing of the parties in the Reichstag following the election, with the previous standing in parentheses, was: National Socialists, 288 (196); Hugenberg Nationalists, 52 (51); Catholic Centre, 73 (69); Bavarian People's party, 19 (20); State party, 5 (2); Social Democrats, 120 (121); Communists, 81 (100); scattered, 7 (24); total, 647 (583). The Nazis made small gains at the expense of the other parties; their great increase in strength was due chiefly to the large number of first voters, especially German youth for whom Hitler had become the leader who was to revitalize Germany and break her chains. The government coalition also won a majority in Prussia.

During the campaign the government parties retained the national radio system for their exclusive use, worked up a great Communist scare, and attributed all of Germany's difficulties to the Republican governments. On February 28, an incendiary fire partially destroyed the Reichstag building. The government, accusing five alleged Communists of the crime, utilized the incident to inaugurate a virtual reign of terror against opposition parties. An emergency decree was promulgated suspending all constitutional guarantees. By jailing hundreds of Communist leaders, banning all Communist and Socialist papers, and suspending many liberal publications which questioned the Communists' responsibility for the fire, the government silenced the opposition forces during the last week of the campaign. In Prussia and other Socialist-controlled States there was wholesale ousting of Socialist local and provincial officials and their replacement by Nazis and Nationalists. The actual voting, however, took place in an orderly manner.

The Reichstag fire had much the same effect upon the German electorate as the Zinoviev letter had in the British general election of 1925. It was widely charged that the fire was set by the Nazi leaders for political purposes. The incident was investigated by an unofficial international legal commission in London, which reported September 20 that the available evidence exonerated the four Communists held by the German police and strongly implicated "leading personalities of the National Socialist party." The fifth of the accused prisoners, Marinus van der Lubbe, was 1.04 a Communist, the report stated. The trial of the five prisoners opened in Leipzig September 21.

After hearing some 250 witnesses, the justices of the Reich Supreme Court on December 23 convicted van der Lubbe, who had admitted his guilt. The four Communists were acquitted. The identity of van der Lubbe's accomplices remained a mystery. Expert testimony had been introduced

to show that he could not possibly have started the fire single-handed.

THE "TOTALITARIAN STATE." The election had left Hitler still dependent upon the German Nationalists for a majority in the Reichstag. But with his power and prestige greatly increased, he proceeded ruthlessly toward his goal of a one-party state, a dictatorship in which liberalism, class-strife, and Jewish influence were to be eradicated, individualism subordinated, women relegated to the home, and the nation welded into a unified whole. The eventual aim was to restore Germany's position as a leading world power and to regain the territory and population lost as a result of the World War.

Hitler's first move was to terminate his parliamentary dependence upon his Nationalist allies by excluding the Communists from their seats in the Reichstag. Recognizing the futility of opposition, the Centrists and other moderate parties now joined the government groups in granting Hitler dictatorial powers for four years. This legislation, in the form of five constitutional amendments, was rushed through the newly convened Reichstag on March 23 by a vote of 441 to 94. The opposing votes were all cast by Social Democrats. The Reichstag was then permanently adjourned. The sole restrictions which it imposed upon the Chancellor were (1) that the remaining rights of the President might not be diminished, and (2) that the Reichstag and Reichsrat must not be abolished as "institutions," an indication that the Nazis had no intention of restoring the monarchy.

From this time Hitler carried forward his reorganization and "coördination" of Germany without regard for the wishes or protests of the non-Nazi members of the cabinet. Controlling the Reichswehr through Minister of Defense Blomberg, the Prussian police through Goering, and his own Nazi Storm Troops, he possessed an armed force which no other German group could hope to oppose. The *Stahlhelm* veterans' organization, or Nationalist private army, was merged with the Nazi Storm Troops partly by persuasion and partly by force. Herr Hugenberg's Nationalist "Green Shirt" private army was forcibly dissolved and the leaders arrested. The Socialist *Reichsbanner*, the Boy Scouts, and innumerable semi-military organizations met a similar fate, their funds and headquarters being confiscated. Every organization capable of taking part in civil war which did not fully accept the Nazi programme was eradicated and great prison camps established for the incarceration of their recalcitrant leaders and members. A Nazi secret police, modeled on the Soviet OGPU, was established under Goering.

Much the same procedure was followed in "co-ordinating" the other political parties, the labor unions, industry, the press, the churches, fraternal organizations, the schools and all cultural institutions and societies. A law of April 8 abolished parliamentary government in the various states and placed them under regents appointed by the Chancellor. The century-old German particularism was scrapped over night. In Prussia, a back-stage struggle for control took place between the Nazis and Nationalists. It was decided on April 11 when Hitler appointed his lieutenant, Goering, as Premier of Prussia in place of von Papen. Bavaria, long noted for its opposition to Federal domination, was forced to yield by an

ultimatum and the action of Nazi Storm Troopers.

Hitler's allies among the political parties as well as his opponents capitulated one after another with scarcely a show of resistance. Communists had been proscribed since the fire in the Reichstag building. The powerful Social Democratic party was dissolved by the government June 22 on grounds of high treason. On June 27, Herr Hugenberg resigned from the Cabinet and his Nationalist party "voluntarily" dissolved. Early in July the State, or Democratic, party, the Bavarian People's party, and the German People's party—the latter once led by Gustav Stresemann—were liquidated. Former Chancellor Brüning signed the decree dissolving his Catholic Centre party on July 5, thus leaving the National Socialists the sole political party.

A Nazi "committee of action" occupied the buildings and offices of the Socialist trade unions on May 2. The trade union leaders were arrested, the bank accounts of unions and their leaders impounded, and Nazis placed in control of the union banks and cooperatives. The Catholic and republican trade unions unconditionally capitulated to the Nazis the same day. Merged in one great Nazi union, these organizations were effectively "harmonized" with the government. To end conflicts between employers and employees and establish the principle of authority in the labor movement, Nazi district "trustees" were appointed to establish wage rates in their respective districts. Besides the original trade unions, organizations were established to include all persons, except Jews, engaged in any form of economic activity. These were to be incorporated within the general state structure.

Industry and agriculture were similarly assimilated. Hitler's adherents ousted the Nationalist leaders from control of the agricultural associations. The powerful Reich Federation of Industry and the *Langsamerverein*, representing the great iron and steel interests, were obliged to reorganize their executive boards so as to give Hitler's representatives a controlling voice. The press was brought under Nazi domination by the drastic censorship laws and the suspension for long terms of journals which dared to criticize the government.

PROTESTANTS RESIST HITLER. Hitler moved somewhat more cautiously, but no less vigorously, in assaulting another Nationalist stronghold—the Lutheran Church. Hoping to retain their freedom in spiritual matters, the Lutherans and other Protestant denominations voluntarily merged their 29 separate church organizations into a single German Evangelical Church. They elected the Rev. Frederick von Bodelschwingh, a non-political clergyman and welfare worker, as their Bishop. Nazi elements in the church, headed by the Rev. Ludwig Mueller, a Nazi army chaplain, and Dr. Joachim Hossenfelder, immediately contested Dr. von Bodelschwingh's election. They were supported by Hitler's lieutenant, Goering, who announced that as Premier of Prussia he exercised the powers of the former King of Prussia as supreme Bishop of the Prussian state. Goering appointed August Jaeger as Reich Church Commissioner for Prussia and the latter immediately began to fill the leading subordinate ecclesiastical posts with Nazi German Christians.

No longer able to exercise his functions as Bishop, Dr. von Bodelschwingh resigned. Dr. Mueller proclaimed himself head of the Evangeli-

cal Church Federation and virtual dictator of the Prussian churches. The church was deeply stirred by this threat to its spiritual independence and numerous appeals to President von Hindenburg caused his intervention in the dispute. After a conference with Hitler at Neudeck, the President wrote the Chancellor an open letter expressing his concern at the dissension within the church and expressing confidence in Hitler's wise statesmanship to negotiate a peaceful settlement. The Chancellor called a halt upon his over-zealous disciples. Herr Jaeger was dismissed, non-Nazi pastors and church officials whom he had ousted were restored, and it was agreed that a new church constitution should be drafted and church elections held on July 23.

The new constitution granted the demand that the Reich Bishop should be elected by the National Synod rather than appointed by the Chancellor. The Bishop, who must be a Lutheran, was to be assisted by a cabinet of three, each representing one of the three leading non-Lutheran Protestant groups. These representatives were to have jurisdiction over matters of faith in their respective denominations. The constitution envisaged an independent, self-governing church, having no official connection with the Prussian or Reich governments, and capable of maintaining close relations with German Protestants throughout the world. The coördination of the new church with the Nazi régime was effected by the election of a Nazi majority in the National Synod on July 23. The delegates then elected Dr. Mueller as Reich Bishop. The church election was marked by the same kind of Nazi pressure as that applied in the national election. Various restrictions were placed upon the adherents of Dr. von Bodelschwingh and Hitler, himself a Roman Catholic, urged the election of those who were "ready to stake themselves for the nation's freedom."

The election of July 23 revealed strong opposition to the Nazi plans within the Protestant churches. This opposition crystallized in a manifesto issued on September 27 coincident with the inauguration of Dr. Mueller at Wittenberg. Signed by 22 pastors, representing 2000 Lutheran clergymen, the manifesto protested vigorously against the methods and programme of the German Christians. A League of Opposition Clergy was formed, which won increasing support as the Nazi radicals revealed their plans for reorganization of the church. The Nazis first introduced the so-called Aryan clause, expelling all persons of Jewish blood from church offices. On November 13 they adopted resolutions urging elimination of the Old Testament, revision of the New Testament, abolition of the Crucifix, and exclusion of non-Aryans not only from clerical positions but from church membership. On this programme the German Christians themselves were divided into an extreme radical and moderate wing—the latter under Bishop Mueller.

The opposition clergy displayed such determination and strength in opposing the Nazi programme that an irreparable schism in the Lutheran church appeared imminent. To avoid this Chancellor Hitler forced his adherents to moderate their demands. Dr. Mueller's consecration as Bishop was indefinitely postponed and he relinquished his office as "protector" of the German Christians. The German Christians were dissolved as a political party and reconstituted (December 8) as an organization for reform of the

church along "Aryan-Nordic" lines. Throughout the struggle the dissenting pastors had affirmed their acceptance and support of Hitler's régime in the political field. But by their successful resistance to his plans for coördinating the church with the state, the Lutheran pastors administered the first check to the "nazification" of Germany.

CONCORDAT WITH ROME. Hitler triumphed where Bismarck had been defeated in the struggle between the state and political Catholicism. The powerful Catholic Centrist party, with its associate, the Bavarian People's party, was dissolved on July 5. A concordat between the Reich and the Vatican fixing the status of the Catholic Church in Germany was initiated in Rome July 8 by Cardinal Pacelli and Vice-Chancellor von Papen, signed on July 20, and ratified September 10. The agreement combined the substance of previous concordats between the Church and the state governments of Prussia, Baden, and Bavaria. The Church pledged itself to refrain from political activities, while the Reich agreed to permit Catholic lay and clerical associations, provided they confined themselves to religious activities. An interpretative agreement, drawn up by the Pope in an effort to demarcate the dividing line between politics and Catholic faith and morals, was submitted to the Hitler government, but not acted upon, previous to ratification.

The dissolution of the Centre party and the signing of the concordat followed serious clashes between Nazis and Catholics. The Catholic bishops in a pastoral letter of June 9 opposed the suggested "coördination" of German Catholicism with the state, and criticized the Nazis' racial discrimination and violation of individual liberty. A great national convention of Roman Catholic mechanics, held early in June in Munich, was broken up by the Nazi police, a number of Catholic priests and delegates were roughly handled by Nazi Storm Troopers, and the Archbishop of Munich was forcibly prevented from holding mass in the convention hall. In a speech at Erfurt June 18, Hitler warned non-Nazi Catholics and others that if they resisted his programme their children would be taken away from them and reared "as needful for the Fatherland."

As the year drew to a close, friction between the German Catholics and the Hitler Government again became acute. The Pope and the German bishops charged the government with failure to apply the concordat. In November Hitler sent two successive representatives—the latter Herr Goering—to Rome in an effort to reach an agreement on the interpretation of the concordat. They returned unsuccessful. Heartened by the Pope's support and by the Protestant opposition to Nazi attempts at coördination, Catholic spokesmen renewed their attacks upon the Nazi racial and religious principles. Cardinal Faulhaber on December 4 called upon the Protestants to make common cause with the Catholics in defending Christianity against paganism and exclusive nationalism. In his Christmas message (December 23) Pope Pius denounced the Nazi programme for sterilization of the unfit. His words were reiterated by Cardinal Faulhaber and other German prelates in their Christmas sermons. The cardinal attacked the Nordic racial doctrine of the Nazis as a "myth."

ANTI-JEWISH MEASURES. Anti-Semitism had been a basic part of the Nazi programme for more than a decade before Hitler's triumph. A

THE CLOSE OF THE NAZI CONGRESS

Adolf Hitler (left) standing before the Memorial to the Dead at the closing of the Nazi Congress at Nuremberg, Aug. 30-Sept 1, 1933

racial and not a religious prejudice, it was based on the theory that no Jew is a German and therefore no Jew could be a German citizen or hold public office. Throughout their long struggle for power, Hitler and his lieutenants placed particular stress upon anti-Jewish propaganda. They accused the Jews of lack of patriotism, war profiteering, of joining with Communists and Socialists in "stabbing in the back" the German army in 1918, of monopolizing the professions, of ruthlessly extracting money from poor people through their control of the great banks, newspapers, and department stores.

With Hitler's victory in the election of March 5, the Nazis commenced the systematic eradication of all Jewish influences in Germany. The details of Hitler's anti-Semitic programme are given in the article JEWS.

HITLER'S ECONOMIC PROGRAMME. The reorganization of German industry commenced soon after Hitler had received dictatorial powers from the Reichstag. He appointed an Economic Commissar for the Reich who supervised the coordination of the Federation of German Industries with the National Socialist régime. A Nazi representative assumed the responsibility of eliminating hostile elements and filling key positions with trusted men. Agricultural, commercial, shipping, banking and mining associations were "cleansed" in the same fashion. The individual or corporate businesses comprising these associations were then brought into line by the appointment of Nazi managers or commissars. Nazi labor organizations frequently seized control of a business without asking the permission of their party officials. When the entire business and industrial structure of the Reich had been brought under Nazi control, the party leaders gradually reasserted their authority over the radical Nazi "labor cells." The authority of the old trade unions, now under Nazi control, was partially restored. The appointment of Dr. Hjalmar Schacht as president of the Reichsbank placed that institution under conservative leadership.

Chancellor Hitler outlined his economic programme in an address during a huge Nazi labor demonstration held in Berlin May 1. He proposed the introduction of a year's compulsory manual labor for male citizens; agricultural relief through reforms calculated to restore agriculture to its primary place in the nation's economic system; unemployment relief through a huge public works programme; reduction of interest rates; and the stimulation of private industrial initiative by relaxation of rigid union wage scales and revision of existing cartel commitments. The agricultural programme was inaugurated by excluding imports of agricultural products, a moratorium on the agricultural indebtedness, and a reduction of the interest rate charged to farmers.

An unemployment relief measure promulgated May 31 called for the issuance of a billion marks in Treasury notes, the proceeds to be used in public works, the settlement of more people on the land, and river improvements. To remove women from industry and revive Germany's declining birth rate, the law provided loans of 1000 marks to newly married couples, repayable without interest at the rate of 1 per cent a month. A special tax on bachelors and spinsters was levied to defray the costs of this scheme.

The Nazi economists strongly hoped that a fundamental improvement of economic conditions

would result from the elimination of non-Nazi elements in business enterprises and the operation of industries with the national interest in view. The improvement failed to develop, however. While a steady reduction in unemployment was reported, this was due partly to the non-profitable public works and the replacement of Jews and other non-Nazis in industry. The Berlin Bourse, after an optimistic advance following Hitler's installation as Chancellor, suffered a gradual recession. By September, Bourse securities had declined 40 to 50 per cent below the level reached in April and the government was forced to intervene to check the development of a financial crisis.

Toward the end of June the government determined to check the trend toward socialism manifest among the Nazi "labor cells." Dr. Kurt Schmitt, a leading insurance magnate, was appointed Reich Minister of Economics to succeed Dr. Hugenberg. In a series of pronouncements issued by Hitler and his economic advisers early in July it was declared that in commerce and industry only individual initiative could be relied on to revive and reconstruct Germany economically. Hitler's compulsory labor plan was abandoned in favor of a voluntary system under which some 250,000 young men were enlisted in "labor battalions." Except for a few special cases Nazi commissars were withdrawn from the various business enterprises of which they had assumed control. A general economic council to advise the government on all economic problems was appointed July 15, its members including such leading industrialists as Krupp von Hohen, von Siemens, Voegler, Bosch, and Thyssen. Five days later the Reich Minister of Agriculture assured the large Junker landowners that the government would not subdivide their estates so long as these were economically healthy. On August 24, however, the Junkers voted to subdivide part of their estates, particularly in East Prussia, to increase the German population on the land.

At the first formal session of the Grand Economic Council September 19-21, it was announced that the government's primary economic aims were to stimulate consumption and productive investments. Immediate steps envisaged, according to Dr. Schmitt, were the energetic promotion of employment-creating projects, the increase of credit fluidity, and the reorganization of communal finance, particularly the reduction of the debt service. The Minister of Economics announced that from January to the middle of September about 2,000,000 unemployed had been put back to work. Part of the funds for the prosecution of the government's programme were obtained as a result of the partial moratorium declared June 8 upon interest and amortization payments on Germany's long-term foreign debt. The surplus of exports over imports, which, with foreign loans, had previously enabled Germany to meet these payments, decreased about 40 per cent for the year 1933. The "standstill agreements" of 1931 and 1932 on the foreign short-term debt was extended, with slight modifications, on February 28, for another year.

One aspect of the German economic recovery programme aroused vigorous protests from foreign holders of German government bonds. At the end of September, Dr. Schacht announced the conditions under which the partial moratorium on its long-term foreign debt would go into effect. The

German government agreed to pay 50 per cent of the service on its bonds in cash. The remainder was paid in scrip, which was redeemable at only half its value at the Gold Discount Bank. The Gold Discount Bank in turn sold the scrip to German exporters at 55 per cent of its face value. Within Germany the scrip had full value in the purchase of goods or payment of wages. On the basis of the 45 per cent profit made through the purchase of scrip, the German exporters were able to reduce their prices and compete more effectively abroad. In short, German goods were dumped abroad at the expense of foreigners holding German public bonds. This arrangement continued in force to the end of December, 1933. On December 19, Dr. Schacht announced that the interest payments abroad would be further reduced to 30 per cent of the amount due, the remaining 70 per cent to be paid in scrip redeemable at half its value. Meanwhile the German government had been steadily buying up its bonds abroad at the bargain prices resulting from its partial default. It was estimated that during 1933 Germany repatriated from the United States alone bonds worth \$250,000,000 at par for a cash payment of about \$60,000,000.

On September 21 the government attacked the problem of communal finances with a law for the refunding of short-term domestic communal debts. Creditors were given the alternative of accepting a five-year moratorium or a substantial reduction in interest. The communes ran up a deficit estimated at some 200,000,000 reichsmarks during the fiscal year 1932-33 and the accumulated deficit at the end of 1933 was about 1,000,000,000 reichsmarks. Another economic measure passed by the Cabinet Dec. 15, 1933, established a government oil and fat monopoly. Later a central agency was created for fixing prices and controlling the distribution of both domestic and imported butter, cheese, and eggs. At the same time the government followed a cautious policy in introducing innovations in the economic system. The dismissal of women job holders was checked in certain occupations when this policy was shown to have had adverse effects upon domestic trade. In the effort to stimulate business activity main reliance was placed upon the spreading of work and the government's extensive public works programme. A survey at the end of the year indicated that business in general was better. The general wage level had gone down, but the number of unemployed had been reduced to 4,057,000 from 5,773,000 on Dec. 31, 1932. The estimated national production in 1933 was from 2,000,000,000 to 2,500,000,000 marks higher than in 1932.

UNREST IN NAZI RANKS. The distinct trend away from socialism and the collaboration with the great industrialists revealed in Hitler's economic programme caused much unrest in the radical wing of the National Socialist party. Open demonstrations of dissatisfaction among sections of the Storm Troops and the radical Nazi "labor cells" caused Hitler to imprison hundreds of his followers in the prison camps established for Communists, Socialists and other non-Nazis. It was estimated in August that 35,000 persons were confined in concentration camps. The discontent in the Nazi ranks was quickly stamped out by their leader's drastic action. Hitler's warning that the Nazi revolution was over and that any attempt at a second revolution would be "ruthlessly suppressed," was supplemented by a series of great Nazi rallies and demonstra-

tions designed to solidify the Nazi ranks and direct the attention of the German people to the necessity of unity against the nation's foreign foes. Gigantic demonstrations were held at Düsseldorf May 28 and at Nuremberg August 30, in addition to constant local parades and rallies which kept the populace in a high pitch of nationalistic fervor. Dr. Paul Joseph Goebbels was appointed head of a new Ministry of Propaganda and Popular Enlightenment. An able organizer and publicity expert, who had done much to build up the Nazi power in Prussia, he used the full resources of the government to flood Germany with Nazi propaganda. At the end of the year, the general opinion of foreign correspondents in Germany was that Hitler was firmly seated in power and that the Nazi régime would prove as stable as had the revolutionary governments in Russia and Italy.

OTHER LEGISLATION. By a number of laws and decrees issued during the last part of the year, Hitler's government sought to give permanent form to its plans for the Third Reich. A law of October 1 provided for the creation of a "peasant aristocracy" based on inalienable ownership of the ancestral estate and its inheritance by one principal heir. Cultural activities in Germany were placed upon a national basis by the organization in November of a Chamber of Culture, embracing seven sub-Chambers, including music, graphic arts, letters, etc. The Chambers were given the status of public corporations and all intellectual workers were expected to join them and submit to the guidance of the Reich Minister of Propaganda in adopting "an attitude of responsibility for the nation. . . ."

All vestiges of democratic government in Prussia were eliminated by six laws promulgated December 18, which were to serve as a basis for similar reforms in the other states. The laws centralized governmental functions and introduced the Nazi principle of leadership into the smallest local units. The sterilization of persons afflicted with any one of nine hereditary diseases was decreed in another law, effective Jan. 1, 1934. It was estimated that 400,000 feeble-minded and diseased persons would be sterilized under the law. A decree of December 28 restricted to 15,000 the number of students matriculating in universities in 1934 (matriculations in 1932 numbered 24,700). Admission was to be on a strictly selective basis after examination by advisory bodies and one woman was to be admitted for every ten men.

The principle of the one-party state was formally incorporated in German law by a decree of Dec. 1, 1933. Simultaneously, Hitler's Brown Shirts lost their private status and became part of the military forces of the Reich. This change was formalized by the appointment of Col. Ernst Roehm, commander-in-chief of the Storm Troops, and Rudolf Hess, deputy leader of the National Socialist party, as Cabinet members without portfolios. The Storm Troops numbered 2,500,000 on Dec. 7, 1933, according to Colonel Roehm. Hitler's determination to make the Third Reich entirely Nazi was demonstrated by the dissolution on November 23 of two monarchist organizations working for the restoration of the Hohenzollerns.

NAZI FOREIGN POLICY. The foreign policy of the Nazi régime, as stated in the official programme (Twenty-Five Points) of the party, called for the union of all Germans in one great Germany, abrogation of the Versailles and St. Germain treaties, and "land and territory (col-

onies) sufficient for the feeding of our people and for settlement by our surplus population." As interpreted by Hitler in his autobiography and by other authorized Nazi spokesmen, the fulfillment of the party's foreign policy meant a great Germanic state, including not only Germany and Austria but territories populated by Germanic minorities in Denmark, Poland, Danzig, Czechoslovakia, Belgium, Italy, and France. It meant the restoration of former German colonies distributed among France, Great Britain, Japan, the Union of South Africa, Australia, and New Zealand. Hitler's book envisaged wars against France and the Soviet Union, with the aid of Great Britain and Italy, in order to crush Germany's arch-enemy (France) and to provide room for Germany's surplus population to the east. The Nazis also sought the restoration of Germany's 1914 status as the world's leading commercial nation and a great military and naval power.

REACTIONS TO HITLER'S TRIUMPH. The triumph of a government in Germany with avowed policies menacing the security of every neighboring state resulted in a profound readjustment of European diplomatic alignments. Preceding years had witnessed the gradual evolution of the European states toward two opposing combinations, with France, Poland, and the Little Entente supporting, and Germany, Italy, the Soviet Union, Austria, Hungary, and Bulgaria opposing, the European structure erected by the peace treaties. With the triumph of Hitlerism, the anti-Versailles bloc abruptly disintegrated. While remaining on fairly friendly terms with Berlin, Mussolini was forced to oppose the Nazi effort to capture Austria. He had no desire to see a greater Germany fronting Italy on the north, demanding the cession of German-speaking sections of the Italian Tirol, and competing with Italy for predominance in the Balkans. Sentiment in Austria (q.v.), which had previously favored union with Germany, was alienated by Nazi tactics and terrorism in Germany. Hungary, like Italy, disliked the prospect of a greater Germany on its borders which sought the incorporation of nearly 500,000 German-speaking Hungarians.

Czechoslovakia, Yugoslavia, and Rumania, which were threatened with extinction or mutilation by Hitler's programme, formed a closer alliance and prepared to resist Nazi domination of Austria. The Soviet Union, aroused by the anti-Communist drive in Germany and fearful that a German war of territorial aggression was impending, effected a rapprochement with France and Poland and formed friendlier relations with the Little Entente. Poland, suspicious of Nazi designs upon Upper Silesia and the Corridor, landed troops in Danzig following the German election of March 5. The French, who saw their security as well as their hegemony in Europe menaced by resurgent Germany, drew tighter their bonds with Poland and the Little Entente, pushed to completion a great line of fortifications along the Franco-German border, and called a halt to further concessions to Germany. Belgium likewise undertook the fortification of its German border.

Nazi activities and demonstrations along the Swiss border, their effort to enlist German-speaking Swiss in the cause of a greater Germany, and the revelation of an alleged Hitlerite plan for the invasion of France by way of Swit-

zerland, aroused much alarm in the latter republic. Similar Nazi activities along the Dutch and Danish borders forced the governments of Holland and Denmark to forbid the wearing of Nazi uniforms and emblems and to take various measures calculated to check Nazi propaganda. In many other countries of Europe and in the United States, the methods and aims of the Hitler régime alienated much of the sympathy which the German Republic had won in the struggle to free Germany of the Versailles restrictions. A debate in the British House of Commons April 13 reflected the hostility of British opinion. Sir Austen Chamberlain, former Conservative Foreign Minister, was applauded from both sides of the House when he said that the new German spirit was "the worst of the old Prussianism with the added savagery of national pride and exclusiveness." Alfred Rosenberg, Hitler's adviser in foreign affairs, failed dismally in his effort to soften British antagonism during a visit to London in May.

The resentment aroused in the United States by the Hitler régime's illiberal treatment of Jews, Socialists, and other anti-Fascists was increased by the numerous attacks made upon American citizens in Germany. Many were assaulted on the streets for failing to give the Hitler salute. Others, chiefly American Jews, were beaten in their homes. The American Consul General in Berlin on Oct. 12, 1933, issued a list of 29 cases in which Americans had been attacked by Nazis. In response to representations by Ambassador Dodd in Berlin, Chancellor Hitler in October was reported to have issued strict orders prohibiting assaults on foreigners. The anti-Nazi sentiment aroused in the United States was reflected in the boycott of German-made goods and services declared by the American Federation of Labor on October 13. On November 20 the Amateur Athletic Union of the United States voted almost unanimously to boycott the 1936 Olympic games at Berlin if the Hitler government persisted in excluding Jews from sports. Charges that the German Ministry of Propaganda had sent agents to the United States to spread Nazi doctrines among Americans of German blood were investigated by Samuel Dickstein, chairman of the Committee on Immigration of the House of Representatives. Nazi organizers, headed by Heinz Spanknoebel, gained control of the United German Societies in New York City following the withdrawal of 10 of the 70 odd organizations. Later a warrant was issued for Herr Spanknoebel's arrest on the charge of representing a foreign government without notifying the American State Department. He disappeared before the warrant could be served.

DANZIG, THE SAAR, ETC. European alarm at the Hitler sweep in Germany was increased when the Nazis, by much the same electoral tactics they had used in Germany, gained control of the Danzig government in the elections for the Volkstag on May 28. The Nazis displaced the Nationalists by capturing 51 per cent of the votes. While close cooperation between the governments of the Reich and of the supposedly independent régime in Danzig was thus established, the surprising result was temporarily more friendly relations between Danzig and Poland (see **POLAND** and **DANZIG** under *History*). In the Saar, whose return to Germany or retention by France was to be determined by plebiscite in 1935, Nazi terrorism directed at officials and others hostile to the Hitler régime in Germany caused the League of

Nations governing commission to actively suppress it. It was reported that the overwhelming majority of the population had gone over to the Nazi cause.

GERMANY AND DISARMAMENT. The aggressive, uncompromising leadership of the new Germany stiffened the attitude of the German delegation to the Geneva Disarmament Conference when that body reassembled April 25. This attitude led to a crisis early in May when Germany's objection to counting the Storm Troops or Steel Helmets as military effectives led to an impasse in the conference. Foreign Minister von Neurath intimated that Germany intended to rearm regardless of the outcome of the conference. Lord Hailsham, the British War Minister, replied that Germany would be liable to sanctions under the Versailles treaty if she withdrew from the conference. In this tense atmosphere Hitler announced that the Reichstag had been summoned for May 17 to hear his statement on foreign policy. It was widely feared that the Chancellor would seize the occasion to defy the powers and proclaim Germany's intention to rearm. President Roosevelt forestalled the Chancellor by his appeal of May 16 to the rulers of the world asking peace, urging the abolition of offensive weapons, and skillfully bringing pressure upon Germany to moderate her aims.

The Chancellor's speech before the Reichstag the next day was surprisingly moderate. He cordially approved President Roosevelt's proposal for a world non-aggression pact, denied that Germany wished to change the map of Europe by force or to "Germanize" alien peoples, and accepted the principle of international supervision of armaments. While the Chancellor's exposition of Germany's pacific intentions was received with skepticism in European diplomatic circles, his moderate tone and the more cooperative attitude adopted by the German delegate to the Disarmament Conference served to postpone the crisis.

The German delegation, however, continued to insist upon arms equality with the other powers, a demand which was consistently refused by France. Efforts to reach a compromise formula continued throughout the summer. Early in October the representatives of France, Britain, Italy, and the United States submitted new proposals to Germany which went only part way in meeting Hitler's demand for equality. On October 6 the German government officially requested samples of all weapons allowed to other powers under the disarmament proposals but denied to Germany in the Treaty of Versailles. The four other powers united in opposing this demand for German rearmament. Reporting on their conversations to the Bureau of the Disarmament Conference on October 14, the British Foreign Secretary suggested revision of the draft disarmament convention along lines which gave Germany a contingent promise of arms equality at the end of eight years. The German demand for a limited number of "defensive" weapons immediately was rejected.

On the same day (October 14) the German government unexpectedly announced its withdrawal from the Disarmament Conference and from the League of Nations. The refusal of the Allied powers and the United States to concede arms equality or to materially reduce their own armaments was given as the reason for this action. A plebiscite was called for November 12 to obtain popular approval of this policy. Chancellor Hit-

ler, in a speech explaining his government's action, declared Germany did not want rearmament but equality with the other powers. He denied that his régime contemplated war against neighboring countries and expressed the hope that France and Germany might "ban force from their common life." But he insisted that Germany could not accept "the perpetuation of a discrimination unbearable to us. . . ."

The plebiscite held on November 12 on the issue of Germany's withdrawal from the Disarmament Conference and the League gave Hitler an overwhelming vote of confidence. Out of 43,525,529 votes counted, 40,583,430 approved the government's course, 2,952,100 opposed it, and 789,999 ballots were defective. At the same time the electorate voted into office a solidly Nazi Reichstag. All candidates were selected by the government and no opposition candidates appeared on the ballots. The vote for the government list was 39,621,437; defective ballots, equivalent in many cases to negative votes, numbered 3,348,125; total, 42,969,562. The new Reichstag met, organized and adjourned on December 12, the entire procedure taking seven and one-half minutes. There were no speeches. General Goering was reelected President and immediately adjourned the Reichstag subject to his call.

HITLER GROWS CONCILIATORY. Having convincingly demonstrated the determination of the German people to attain arms equality, with or without the consent of the powers, Hitler now sought to calm the fears which his policies had aroused in neighboring countries. Negotiations were opened with Poland for a non-aggression pact and the Nazis demonstrated that they had no plans for an immediate war to recover the Polish Corridor. In an interview with a representative of *Le Matin* on November 21, the Chancellor stated that Germany did not desire the reconquest of Alsace-Lorraine and that the question of the Saar alone divided France and Germany. On November 24 he reiterated to the French Ambassador in Berlin his willingness to undertake negotiations for a settlement of the arms question and other issues with France. On December 19 it was announced that the French government had received full written German proposals for a settlement of their common difficulties. They included the offer of a ten-year non-aggression pact. Up to the end of 1933 these moves had failed to eradicate the deep-seated suspicion of the ultimate aims of the Hitler régime held in France.

THE AUSTRIAN CRISIS. While the threat to Europe's peace at Geneva was arousing alarm, a new crisis was developing in Austria as a result of a vigorous drive by German and Austrian Nazis to seize political control. The effort encountered a stubborn obstacle in the person of the Austrian Chancellor, Dr. Engelbert Dollfuss. Supported by the Catholics, Socialists, and Jews in Austria and by Italy, France, and Great Britain, Dr. Dollfuss expelled prominent German Nazi propagandists from Austria and banned the Nazi movement within the country.

On August 6, France and Great Britain jointly protested to the Berlin government against its efforts to overthrow the existing Austrian government. Italy had already made a "private" and "friendly" remonstrance to the Reich concerning Hitlerite propaganda in Austria. The Anglo-French protest was based upon Germany's alleged violation of the Four-Power Pact (see *ITALY under History*) and Article 80 of the Versailles

Treaty, both of which guaranteed Austria's independence. On August 7, Germany curtly denied their charges and declared that their interference in Austro-German affairs was "inadmissible." Two days later Mussolini informed the French and British governments that they need make no further representations to Berlin, as Hitler had promised him to end the anti-Dollfuss propaganda emanating from Germany. The propaganda thereafter was somewhat modified, but not ended. To withstand the steady pressure from the Nazis and their sympathizers, Chancellor Dollfuss was forced into closer political and economic relations with Italy and to establish a dictatorship in Austria. Temporarily, however, he inflicted a serious check upon the expansion of Nazi power and prestige (see AUSTRIA under *History*).

GEX AND UPPER SAVOY. See SWITZERLAND under *History*.

GIBRALTAR. A crown colony of Great Britain consisting of a peninsula (3 miles long and $\frac{3}{4}$ mile wide) joined to the south coast of Spain by a sandy isthmus. The "Rock" of Gibraltar (1396 feet high) commands the entrance to the Mediterranean Sea. Total area, $1\frac{1}{8}$ square miles; total population (1931 census), 21,372, of whom 3218 belonged to the military and 541 to the naval forces. The estimated civil population on Jan. 1, 1933 was 16,609 of whom 15,143 are fixed residents. These figures do not include some 1500 British subjects and 4500 aliens living in the nearby Spanish town of La Linea who enter Gibraltar every day. In 1932, civil population births numbered 346; deaths, 245. There were 13 government aided schools for primary education with a total of 2627 students registered in 1932-33. There are four secondary schools and several private English schools.

The commerce of the port is chiefly the supply of coal, fuel oil, and stores to ships and transit of cargo to Spain and Morocco. During 1932, 4091 vessels aggregating 8,674,558 tons entered the port which is a British naval base. Cables connect with the Continent, Tangier, eastern Mediterranean ports, and England. Government revenue for 1932 amounted to £239,209; expendi-

ture, £151,038; public debt, nil. The colony is administered by a governor, who is also the general officer commanding the garrison. He is assisted by an executive council of four official and three unofficial members. General Sir C. Harington succeeded Gen. Sir A. J. Godley as governor during October, 1933.

GILMORE, GEORGE WILLIAM. An American theologian, died at Mere Point, near Brunswick, Me., Aug. 22, 1933. Born in London, England, May 12, 1858, he was brought to the United States in childhood, attending Princeton University from which he received the A.B. degree in 1883. On his graduation from the Union Theological Seminary in 1886 he was sent to Korea by the United States Commissioner of Education, at the request of the King of Korea, to found at Seoul the Royal Korean College. After teaching in that institution for three years he returned to the United States, settling in Brooklyn, N. Y., where he was engaged in literary work and taught at the Brooklyn Polytechnic Institute.

Called to the Bangor Theological Seminary in 1893, Dr. Gilmore served as instructor of the English Bible until 1895 and as professor of Biblical history and lecturer on comparative religion until 1899. He next held the chair of Old Testament language and literature and the history of religion at the Meadville Theological School. In 1905 he was appointed associate editor of the *New Schaff-Herzog Encyclopedia of Religious Knowledge* (12 vols.), and managing-editor of the last six volumes, and from 1911 to 1923 held a similar position with the *Homiletic Review*, a magazine for Protestant ministers discussing from the standpoint of religion, theology, and philosophy every phase of the minister's work. He resigned the position of editor three months previous to his death.

Besides contributing to the *Dictionary of Religion and Ethics* Dr. Gilmore wrote *Korea from Its Capital* (1892); *The Johannean Problem* (1895-96); *Literature of Theology* (1896); *Animism—Thought Currents of Primitive Peoples* (1919); and *Sketch of Recent Exploration in Bible Lands* (1923). Among his translations from the German were *Jesus as Problem, Teacher, Personality, and Force*, by Bornemann, Veit, Schuster, and Forster (1910) and *The Apostles Creed and the New Testament*, by Johannes Kunze (1912). He prepared *Bibliography of Missions* (with Samuel Macauley Jackson, 1891) and edited *The Church, the People, and the Age* (with Robert Scott, 1913); *Selections from the Classics of Devotion* (1916); and Coburn's *Archaeological Discoveries* (1922-24).

GIRL SCOUTS. A nonsectarian movement for girls from 10 to 18, started in Savannah, Ga., in 1912 by Mrs. Juliette Low and adapted from the Scouting programme begun in England in 1907 by Lord Baden-Powell. For a description of the programme of this organization see THE NEW INTERNATIONAL YEAR BOOK for 1932.

The active, paid-up memberships in the Girl Scouts as of Oct. 31, 1933, totaled 307,360, inclusive of Brownies (girls between 7 and 10) and leaders. In 1933, 70 training courses for leaders were given in 19 approved camps. About 100 were given in colleges and universities.

The official organ for girls is *The American Girl Magazine*, and for leaders, *The Girl Scout Leader*, each a monthly publication. The officers

elected at the national convention held in Milwaukee, Wis., Oct. 11-13, 1933 were: Honorary president, Mrs. Franklin D. Roosevelt; chairman of the board of directors, Mrs. Nicholas F. Brady; president, Mrs. Frederick Edey; secretary, Mrs. Julius H. Barnes; treasurer, Mrs. Edgar Rickard. Miss Josephine Schain is national director. National headquarters are at 570 Lexington Avenue, New York City.

GOFF, GUY DESPARD. An American lawyer and senator, died at Thomasville, Ga., Jan. 7, 1933. He was born at Clarksburg, W. Va., Sept. 13, 1867, and after attending the Kenyon Military Academy (later Kenyon College) was graduated from Harvard University with the LL.B. degree in 1891. After practicing law in Boston for a short time he moved to Milwaukee, Wis. There his successful prosecution of several graft cases, while prosecuting attorney for Milwaukee Co., secured his appointment in 1911 as United States Attorney for the Eastern District of Wisconsin. In 1915 President Wilson appointed him a special assistant to the United States Attorney General for the prosecution of special cases in the Northwest. During the World War he served as an assistant, in the administration of the draft act, to Gen. Enoch H. Crowder, Judge Advocate General of the United States Army, holding the rank of colonel while representing General Crowder at the staff headquarters of the American Expeditionary Forces in France. He also accompanied the American Forces in Germany.

On his return to the United States Mr. Goff became general counsel to the United States Shipping Board. President Harding, on taking office in 1921, persuaded him to become assistant to Attorney General Harry M. Daugherty a post he held for 14 months. His special duty was handling cases submitted by the War Department, the Bureau of Internal Revenue, and the Shipping Board. In 1924, having transferred his legal residence to his native State, West Virginia, he was elected to the United States Senate on the Republican ticket. His committee assignments included foreign relations, territories and insular possessions, interstate commerce, judiciary, privileges and elections, claims, and mines and mining. In 1928 he was West Virginia's "favorite son" for the presidency at the Republican National Convention in Kansas City, Mo.

GOLD. Thirteen Western States in 1933 yielded in recovered metal 1,799,597 fine ounces of gold compared with 1,835,103 ounces in 1932, according to an advance summary of the U. S. Bureau of Mines. These figures indicate a decrease of 35,506 ounces of gold. Alaska in 1933 yielded 520,418 ounces of gold as compared with 493,860 ounces in 1932. Production of gold in 1933 in the 13 western states and Alaska came mainly from well-established and well-developed mines in old districts.

Although Great Britain went off the gold standard in September, 1931, and was followed within a year by 41 other countries, the United States remained on the gold standard to April, 1933. As long as the United States remained on the gold standard, no matter how many extra shillings over 85 per cent fine ounce were paid in the foreign

market, gold would bring in United States money only \$20.67 per fine ounce, less commission, insurance, and freight. When the United States went off the gold standard and the value of the dollar dropped, sales of gold on the foreign market, if not prohibited, would have brought more of our depreciated dollars than \$20.67. Gold producers protested, therefore, and the Empire Star Mines, Inc., of California, made a test case by attempting to ship via the New York custom house. This led to an announcement by the newspapers on July 27, 1933, of a decision by the Attorney-General, that gold in ore, concentrates, unretorted gold amalgam, and unrefined cyanide precipitates could be shipped abroad, whereupon within the next several weeks some gold in unrefined form from the Empire North Star of California and the Homestake of South Dakota was exported.

The Attorney General's decision allowed 75 per cent of the United States gold mine production to be shipped to foreign markets and forced 25 per cent to remain here at the old price; the President on August 29 issued an order, coupled with an anti-hoarding clause, that the United States government would act as agent through the United States Mint to obtain the world price for newly-mined gold. This arrangement continued until October 25 when the Reconstruction Finance Corporation began buying United States newly-mined gold at prices above the world price; the purchase of foreign gold began at a later date. This price reached \$34.06 on December 18 and so remained to the end of the year. The gradually increasing price for gold after August, 1933, resulted principally in increased production of marginal ore in California and Colorado, slightly increased the output of the already profitable Homestake mine, and added a dredge-boat each in Idaho and Montana. The extra price, received in notes payable on Feb. 1, 1934, not only encouraged the established gold producer but brought rather handsome extra returns. The increased value over the \$47,958,973 (calculated at the legal coinage value of \$20.671835 per fine ounce), represented by the 2,320,015 fine ounces produced by the 13 States and Alaska, amounted between August and December 31 to approximately \$9,000,000. On Jan. 1, 1934, the Reconstruction Finance Corporation announced that it had to that date set aside \$100,000,000 for gold buying and had spent less than \$20,000,000 absorbing domestic newly-mined supplies.

The production from the thirteen western States

* Based on legal coinage value of \$20.671835 per fine ounce.

is shown in the table on page 320. Eastern States are omitted from the tabulation: in 1932 their combined output was about 1100 ounces, almost half of it produced in North Carolina.

World gold production for the year, according to preliminary estimates of *American Metal Market*, New York (Feb. 2, 1934), amounted to 24,282,000 ounces as against 24,226,000 in 1932. In the accompanying table this authority tentatively places Russian output on the basis of the previous year, but has received intimations that Russian production in 1933 may have reached 2,400,000 ounces. Hence the total for the year may be ultimately raised by almost 500,000 ounces.

Estimated at average rate of 1932. * Includes West Indies, Central America, Europe, and Asiatic and African lands not separately reported. * Principal mines only, but nearly complete. † Revised estimate for year not allocated monthly. ‡ Conjectural

GOLD COAST. British territory in West Africa between the French Ivory Coast and Togoland on the Gulf of Guinea; comprising the Gold Coast colony (23,937 sq. miles), Ashanti (24,379 sq. miles), Northern Territories (30,486 sq. miles), and the British mandate of Togoland (13,041 sq. miles). Total area, including British Togoland, 91,843 square miles; total population, including British Togoland, 3,163,560 (1931 census) of whom 3182 were non-Africans. The distribution of the African population in 1931 was Gold Coast Colony, 1,571,362; Ashanti, 578,078; Northern Territories, 717,275; Togoland (British mandate), 293,671. The chief towns are Accra, the capital, with 59,895 inhabitants in 1931; Kumasi, 36,284; Koforidua, 19,634; Cape Coast, 17,685; Tamale, 12,941; Winniba, 10,990; Saltpond, 6396; Keta, 6392.

In 1931-32, the Colony, Ashanti, New Territories, and British Togoland had 29 government schools, and 340 assisted schools (including 2 secondary schools and 6 training colleges) which are controlled by the various missions, and a college at Achimota. There were 42,743 enrolled pupils in the government and assisted schools in 1931-32. In addition there are a large number of non-assisted schools under control of different religious bodies.

Agricultural and mineral products and chief exports are cacao, kola nuts, palm kernels, timber, rubber, manganese, gold, and diamonds. Including bullion and specie, imports for 1932 totaled £5,605,219 and exports £7,892,905. In 1932, cacao shipments were valued at £5,511,360; gold, (raw), £1,236,591; diamonds, £536,946; manga-

nese, £123,627; timber, £37,389; copra, £20,077; palm kernels, £80,283. Shipping entered and cleared in the foreign trade aggregated 3,547,905 tons in 1932. The port of Takoradi has the only harbor providing complete shelter for ships of over 30-feet draft between Nigeria and Sierra Leone. Livestock (1932) in the Gold Coast colony, Ashanti, and Northern Territories numbered 684,200 sheep and goats, 156,500 cattle, 86,810 pigs, 17,030 donkeys, and 4340 horses. Along the coast fishing is carried on by many of the coast inhabitants and a large amount of dried fish is shipped by rail into the interior. There were 500 miles of railway open to traffic on Mar. 31, 1932. Roads suitable for automobiles in the Gold Coast colony, Ashanti, and New Territories total 6264 miles.

For the fiscal year ending Mar. 31, 1933, actual revenue amounted to £2,670,786; actual expenditure, £2,673,482; public debt, £12,961,000; sinking fund, £2,017,875. The Gold Coast is administered by a governor assisted by an executive, and a legislative council. Ashanti and the Northern Territories are each locally administered by a chief commissioner. Togoland is under the administration of the governor of the Gold Coast, and the various statistical figures are included in the general total for the Gold Coast. Governor of the Gold Coast in 1933, Sir T. S. W. Thomas.

GOLF. Without exception every major masculine golf title changed hands in 1933. Gene Sarazen, United States and British open champion of the year previous, lost both crowns and captured another one. He lost his national title to Johnny Goodman. Omaha amateur, more famous as the youth who eliminated Bobby Jones from the national amateur in 1929 at Pebble Beach, and his British one to a fellow American, Densmore Shute of Philadelphia. Playing over the difficult North Shore Country Club links at Chicago in June, Goodman scored a fine 287, one stroke above the record and led Ralph Guldahl, St. Louis professional, by a lone shot. Craig Wood was two strokes back of Guldahl. In the British championship Sarazen failed to match the pace set by two other members of the Ryder Cup team, which had lost to the British professionals a few days previous, Shute and Wood. Shute beat Wood in the play-off.

The sensation of the season was George T. Dunlap, Jr., former Hill School and Princeton University star, and former holder of the Intercollegiate title. Dunlap threw over his Metropolitan amateur title and journeyed to England in June to try for the British amateur crown. He played beautiful golf at ancient Hoylake and in the fifth round eliminated C. Ross Somerville, Canadian and 1932 winner of the United States amateur champion. In the semi-final Dunlap was put out by the Hon. Michael Scott, fifty-five year old veteran Englishman, who eventually succeeded John de Forest as titleholder. Upon his return to the United States Dunlap kept in trim and in early September ran through a fine field at Kenwood Country Club, Cincinnati, to capture the national amateur, succeeding Somerville by downing Max Marston, former champion, in the final, 6 and 5. The amateur presented the fiercest

competition of the season with Goodman, open champion and consequently heavy favorite for the amateur championship, bowing to H. Chandler Egan, who won the amateur in 1904 and 1905, in the first round. Somerville defending champion, was eliminated in the third round by W. Lawson Little of California, 2 and 1.

Sarazen regained a bit of his glory by downing Willie Goggin, of San Francisco, in the final of the P.G.A. in Chicago in the fall. Charles Ferrara, San Francisco ironworker, won the national public links title at Portland, Ore., in August and two other United States players lifted the Canadian titles. Joe Kirkwood won the Canadian open and the amateur crown went to Scotty Campbell, another of the growing army of good golfers from San Francisco.

Yale's forces won their third consecutive intercollegiate team title, in the June tournament at Buffalo, but were unable to furnish the individual winner. Walter Emery, sophomore from the University of Oklahoma won the title, downing Rodney Bliss of Cornell in the final, 2 and 1.

Macdonald Smith, veteran, won the Western open and Jack Westland, 1931 runner-up for national amateur honors, took the Western amateur crown. Mark Stuart, of Fox Hills, had an easy time in conquering the field in the Metropolitan amateur, at Pomonok, and Willie Macfarlane, former national open champion, nipped Paul Runyan by one stroke at Winged Foot to take the Metropolitan open.

In the women's ranks titles stayed in the possession of the 1932 winners. Miss Enid Wilson inaugurated the title retaining habit by winning the British championship for the third successive season and Miss Virginia Van Wie followed suit by retaining her 1932-won national women's title in September at Exmoor, Chicago. In the final Miss Van Wie eliminated Miss Helen Hicks, of New York. Miss Hicks previously had played truly remarkable golf in winning the Metropolitan women's and New York State women's titles. In the New York State, played at Plandome, L. I., she had posted two rounds, one match and the other medal, of 71 and 70 respectively. Miss Lucille Robinson, won the women's Western title, defeating Miss Van Wie in the final round.

GOUCHER COLLEGE. A nonsectarian college for women in Baltimore, Md., founded in 1885. The enrollment for the first semester of the year 1933-34 was 665. The faculty had 91 members. The endowment funds of the college amounted to \$2,448,390. The library contained 60,700 volumes. President, David Allan Robertson.

GRAHAM LAND. See FALKLAND ISLANDS.

GRAND ARMY OF THE REPUBLIC, THE. A patriotic order formed in 1866 at Decatur, Ill., among a number of former soldiers who had served in the Civil War. Its purpose is to "enjoy a companionship made sacred by common sufferings and sacrifices." Its corner stones, "Fraternity, Charity, and Loyalty," demand the care and protection of sick and helpless comrades and their widows and orphans, the upholding of all comrades in their worthy endeavors, and loyalty to the flag and laws of the Republic. Affiliated with the Grand Army of the Republic are its auxiliary, the Woman's Relief Corps, and the allied bodies, the Ladies of the G. A. R., Daughters of Union Veterans of the Civil War, Sons of Union Vet-

erans of the Civil War, and the auxiliary to Sons of Union Veterans.

The maximum strength of the organization was in 1890 when it had a membership of 409,487. On Jan. 1, 1933, there were 1651 active local posts with a membership of 10,138. The sixty-seventh national encampment was held in St. Paul, Minn., Sept. 17-22, 1933, while Rochester, N. Y., was selected for the encampment in 1934. The officers elected for 1933-34 were: Commander-in-chief, Russell C. Martin; senior vice commander-in-chief, Thomas H. Peacock; junior vice commander-in-chief, Edwin H. Lincoln; surgeon-general, E. B. Garrett; chaplain-in-chief, the Rev. J. King Gibson; quarter-master-general, Samuel P. Town; and adjutant-general, D. B. Wolcott. National headquarters are at 1816 South Figueroa Street, Los Angeles, Calif.

GREAT BRITAIN. Official designation for the political union embracing England, Scotland, and Wales. In conjunction with Northern Ireland, the Isle of Man, and the Channel Islands, it forms the United Kingdom of Great Britain and Northern Ireland. For statistical purposes, the Isle of Man, the Channel Islands, and in some cases Northern Ireland are included under Great Britain. See BRITISH EMPIRE; IRELAND, NORTHERN.

AREA AND POPULATION. The estimated population of Great Britain proper on June 30, 1932, was 45,084,000, compared with 44,791,000 estimated for June 30, 1931. The area and census population as of 1921 and Apr. 27, 1931, are shown in the accompanying table.

AREA AND POPULATION OF GREAT BRITAIN

Divisions	Area in sq miles	Population	
		1921	1931
England (including Monmouthshire) .	50,874	35,681,019	37,789,738
Wales	7,466	2,205,680	2,158,193
Scotland	30,405	4,882,497	4,842,554
Isle of Man	221	60,284	49,338
Channel Islands . .	75	90,230	93,061
Total	89,041	43,176,521*	44,932,884

* Including 256,811 persons in the Army, Navy, and Merchant Marine abroad.

In 1931, the population of England and Wales was 80 per cent urban and 20 per cent rural; that of Scotland, 77.3 per cent urban and 22.7 per cent rural. Live births in England and Wales during 1932 numbered 613,972; deaths, 484,083; marriages, 306,132; for Scotland the respective totals were 91,001, 66,045, and 33,177. The 1932 birth rate per 1000 inhabitants in England and Wales was 15.3; in Scotland, 18.6. Death rates were 12 and 13.5, respectively. Permanent British emigrants to non-European countries in 1932 numbered 26,988 (34,310 in 1931); immigrants of British nationality into Great Britain numbered 75,595 in 1932 and 71,382 in 1931. Destinations of British emigrants in 1932 were: United States, 23,731 (27,320 in 1931); Canada and Newfoundland, 33,911 (38,003 in 1931); Australia, 9174 (9014 in 1931); British South Africa, 16,707 (19,491); and India and Ceylon, 11,263 (10,430). The 1933 birth rate of 14.4 per 1000 was the lowest on record; death rate, 12.3.

At the 1931 census, Greater London had an

area of 443,455 acres and a population of 8,203,942, of which 74,850 acres with a population of 4,397,003 comprised the registration City or municipal and parliamentary City of London. Populations of the other leading cities in 1931, with 1921 figures in parentheses, were: Glasgow, 1,088,417 (1,034,174); Birmingham, 1,002,413 (922,167); Liverpool, 855,539 (805,046); Manchester, 766,333 (735,774); Sheffield, 511,742 (511,096); Edinburgh, 438,998 (420,264).

EDUCATION. Ordinary public elementary schools in 1931 numbered 20,869 for England and Wales, with an average attendance of 4,930,076. These included 9677 Church of England schools and 1177 Roman Catholic schools. In Scotland, there were (1930-31) 2924 primary schools with an average attendance of 504,066. The enrollment in secondary and technical schools in 1930-31 was 492,578 for England and Wales (1957 schools) and 155,389 for Scotland (251 schools). The 11 English universities had 37,166 students in 1931-32; the four Scottish universities, 11,453 students; and the University of Wales, 3512 students.

AGRICULTURE. Only 7 per cent of the British working population gains a livelihood from agriculture. In 1932 the cultivated area in England and Wales was 25,200,082 acres; in Scotland, 4,022,217 acres. In the same year there were 12,493,000 acres of arable land, 17,448,000 acres of permanent pasture, and 15,764,000 acres of rough grazing land. Production of the chief crops in 1932, with 1931 figures in parentheses, was: Wheat, 42,208,000 bushels (37,128,000); barley, 34,016,000 bushels (35,608,000); oats, 109,696,000 bushels (104,856,000); beans, 4,216,000 bushels (4,336,000); peas, 1,584,000 bushels (1,888,000); potatoes, 4,450,000 tons (3,154,000); turnips and Swedes, 13,322,000 tons (12,416,000); mangold, 4,358,000 tons (4,549,000); hay, 7,755,000 tons (8,918,000). The figures are in Canadian bushels of 34 pounds and British tons of 2240 lbs. Large increases in the wheat and sugar beet acreages were shown in the 1933 returns of the Ministry of Agriculture. Livestock in Great Britain in June, 1932, included 1,067,170 horses, 7,591,278 cattle, 26,411,842 sheep, and 3,349,883 swine. The 1931 census showed 460,319 farm holdings in Great Britain of 1 acre and more. Holdings of from 1 to 5 acres numbered 87,452; 5 to 50 acres, 212,385; 50 to 300 acres, 152,041; and over 300 acres, 14,441.

MINING AND INDUSTRY. The output (in 1000 units) of the principal mining and metallurgical industries in 1932 (1931 figures in parentheses) was: Coal, 209,244 long tons (219,459); pig iron, 3576 long tons (3773); steel ingots and castings, 5256 long tons (5203); cotton deliveries to spinners (years ended July 31), 2598 bales (2010); new vessels launched, 188 gross tons (502). The 1931 production of other minerals was (in 1000 long tons): Iron ore, 7626; salt, 1889; China clay and related clays, 763; oil shale, 1733; limestone, 13,761; sandstone, except silica stone, 3529; slate, 243; igneous stone, 11,112. The 1931 output of alcoholic spirits was 42,616,000 proof gallons; of beer, 16,377,000 barrels. Board of Trade index numbers, based on volume of production, with 1924 as 100, were as follows for 1932 and 1931, respectively: Iron and steel and their manufactures, 66.2 (65.9); nonferrous metals, 96.3 (100.1); engineering and shipbuilding, 88.6 (94.9); textiles, 95.1 (77.0); chemical and allied trades, 98.1 (95.2); leather and boots and shoes,

96.4 (99.3); food, drink, and tobacco, 97.6 (103.7); gas and electricity, 147.0 (142.4); all manufacturing groups, 97.2 (96.7); mines and quarries, 77.5 (81.6).

Pig iron production in 1933 totaled 4,123,600 tons; steel, 7,006,500 tons. The number of blast furnaces in operation increased steadily from 62 in January to 81 on December 31.

Comparative statistics of the industrial censuses of 1930 and 1924 showed the following (1924 figures in parentheses): Gross industrial output, £3,160,000,000 (£3,587,100,000); value created by industrial processes, £1,431,800,000 (£1,526,200,000); average number of employees, 6,784,100 (7,140,600); net output per person employed, £211 (£214); mechanical power available, 26,521,700 horse power (20,512,400). For industrial developments in 1933, see *History*.

FISHERIES. The catch of the British fisheries in 1932 was 975,550 tons, valued at £15,061,758, according to provisional figures. This compared with 989,678 tons, valued at £15,904,316, in 1931. Shellfish, not included in the total, were valued at £432,905 in 1932. For the entire United Kingdom, there were 14,079 fishing boats (5390 sailing and 8689 steam and motor), aggregating 278,551 net tons, registered on Dec. 31, 1931. Regular fishermen employed in sea fishing were estimated at 52,443.

COMMERCE. As shown in the accompanying table, British foreign trade during 1932 continued the decline in evidence since 1929. Toward the end of 1933, a distinct recovery was recorded.

BRITISH FOREIGN TRADE, 1929 TO 1933*
[In thousands of pounds sterling]

Calendar Year	Imports ^b	Reexports		Total exports ^c	Excess of imports
		Exports of British products ^d	Imports of foreign products ^d		
1929 ..	1,220,765	729,349	109,702	839,051	381,714
1930 ..	1,043,975	570,755	86,835	657,590	286,385

* Not including bullion and specie movements. ^b C. i. f. value. ^c F. o. b. value. ^d Provisional figures.

The distribution of British imports and exports among the chief countries trading with Great Britain and Northern Ireland is shown in the accompanying table compiled from the *Statesman's Year Book* for 1933. The 1932 figures are provisional.

UNITED KINGDOM: IMPORTS AND EXPORTS
[In thousands of pounds sterling]

Countries	British imports from		British produce exported to	
	1931	1932	1931	1932
United States	104,009	83,672	18,246	15,098
Germany	64,163	30,410	18,412	14,581
Argentine Republic ..	52,744	50,870	14,785	10,663
Australia	45,679	46,192	14,528	20,025
France	40,922	19,023	22,552	18,460
Irish Free State	36,547	26,531	30,511	25,774
Denmark and Faroe Islands	46,696	40,556	8,661	9,864
Netherlands	35,199	22,001	13,702	12,108
Belgium	33,190	15,990	10,026	8,745
Canada	32,841	43,146	20,551	16,409
British India	36,711	32,315	32,289	34,091
New Zealand	37,775	37,485	11,196	10,360
Sweden	17,342	13,425	7,744	6,887
Italy	15,149	10,825	9,917	8,637
South Africa	13,120	15,580	21,857	18,109

The principal import items in 1932 were: Meat, £81,885,000; grain and flour, £58,046,000; wool and woolen rags, £33,578,000; raw cotton and

cotton waste, £31,111,000; wood and timber, £25,602,000; oil seeds, oils, fats, gums, etc., £22,570,000; manufactures of oils, fats, and resins, £31,050,000; paper and cardboard, £13,089,000; non-ferrous metals and manufactures, £14,702,000. All imports of food, drink, and tobacco were valued at £374,680,000; raw materials, etc., at £164,462; and manufactured articles at £157,076,000. Cotton yarns and manufactures, valued at £62,845,000 in 1932, were the chief export item. Others were: Coal, £31,634,000; machinery, £29,529,000; iron and steel manufactures, £28,045,000; woolen, worsted yarns and manufactures, £24,004,000; ships, aircraft, and other vehicles, £20,744,000; chemicals, drugs, and dyes, £17,378,000; apparel, £11,830,000. The value of domestic manufactured articles exported in 1932 was £275,602,000; of raw materials, etc., £43,626,000; and of food, drink, and tobacco, £32,328,000.

The Board of Trade estimated that Great Britain, which had a credit balance of payments of £28,000,000 in 1930 with relation to other countries, had a debit balance of £104,000,000 in 1931 and of £59,000,000 in 1932. Gold imports in 1932 were valued at £152,179,014 and exports at £134,309,408. In 1933 the debit balance declined to £4,000,000, partly due to the reduction in debt payments to America. The estimated income from overseas investments was £155,000,000 and the income from shipping services to foreigners £65,000,000.

FINANCE. Ordinary revenue for the fiscal year ended Mar. 31, 1933, totaled £744,791,000, or £22,009,000 less than the budget estimate. Including £17,239,000 for sinking fund but excluding the war debt payment to the United States, ordinary expenditures were £748,114,000, leaving a deficit of £3,323,000. The payment to the United States amounted to £28,950,349, of which £19,864,874 was for interest and £9,091,475 for repayment of capital, increasing the apparent deficit to £32,279,000. However, if net sinking fund payments of £23,674,000 were deducted from this deficit, the real deficit amounted to £8,605,000. All receipts into the Exchequer, including ordinary and extraordinary items, totaled £827,031,000 and all expenditures from the Exchequer £859,310,000. The income-tax and surtax yielded £13,750,000 less than anticipated in 1932-33, the Customs and Excise nearly £12,000,000 less. Estate Duties, however, produced £77,140,000 or £1,140,000 more than estimated. There was a saving in interest on the national debt of £13,695,000 due to conversion operations.

In the budget for 1933-34, total revenue was estimated at £782,316,000 (£848,898,000 estimated for 1932-33); total expenditure, £781,025,000 (£848,102,000 estimated for 1932-33). The other chief items in the 1933-34 budget, with 1932-33 estimates in parentheses, were: Total taxation £676,147,000 (£754,910,000); Customs duties, £107,965,000 (£174,570,000); income tax, £228,750,000 (£260,000,000); debt service, £224,000,000 (£308,500,000); defense expenditure, £108,946,000 (£104,364,000); health, labor, and insurance, £155,045,000 (£141,294,000). No war debt or sinking fund payments were budgeted in 1933-34.

The British national debt stood at £7,642,000,000 on Mar. 31, 1933, as compared with £7,433,000,000 one year earlier. Of the increase of £209,000,000 during the year, £150,000,000 represented borrowing for the exchange-stabilization fund in the form of gold, gold exchange, or ster-

ling and was not a real increase in the debt. The actual increase of £59,000,000 was incurred through (1) repayment of £33,798,000 representing the balance of franc and dollar credits obtained by the British government during the financial crisis of Sept., 1931; (2) the payment of £23,175,000 in the form of a 1-per cent bonus to holders of the 5-per cent internal war loan who converted their bonds into the new 3½-per cent war loan; and (3) payment of £2,666,000 in interest on national savings certificates, in excess of the provision in the permanent debt charge.

SHIPPING. Vessels registered as belonging to the United Kingdom on Jan. 1, 1932, numbered 17,972, of 12,274,157 net tons, compared with 18,064 vessels, of 12,453,887 net tons, registered a year earlier. Of the 1932 total, 13,012 vessels, of 11,812,335 tons, were steam and motor vessels. Idle shipping tonnage in the ports of Great Britain and Ireland on July 1, 1933, aggregated 3,207,000 gross tons, compared with 3,470,000 gross tons on July 1, 1932. The net tonnage of all vessels entering ports of the United Kingdom with cargoes during 1932 totaled 56,060,000, while the net tonnage of vessels clearing was 53,389,948. London, Liverpool, Hull, Manchester, Southampton, Glasgow, and Harwich, in the order named, were the busiest ports in 1930.

RAILWAYS. The railways of Great Britain, which had 20,408 miles of line at the beginning of 1932, are divided into four main systems as follows: London, Midland and Scottish, 8464 miles; London and North-Eastern, 6464 miles; Great Western, 3765 miles; and the Southern, 2129 miles. During 1931 all four systems carried 1,156,300,000 passengers (excluding season ticket holders), and 268,400,000 tons of freight. Passengers carried in 1932 numbered 1,119,198,000. In 1932, the gross receipts of the four systems (£140,992,000) declined by £15,292,414 as compared with 1931, a decline partially offset by economies aggregating £8,725,358.

OTHER COMMUNICATIONS. Public highways in 1932 extended 177,256 miles (151,807 miles in England and Wales, and 25,449 miles in Scotland). Planes of civil airlines in 1931 flew 1,604,000 miles, carrying 25,211 passengers and 774 tons of cargo. In 1932 the total in and out traffic at Croydon Airport, serving London, was 70,162 passengers (44,944 in 1931). Radiotelephone service between Great Britain and India was inaugurated at the end of April, 1933, thus completing the last important link in Imperial telephone communications. There are more than 3650 miles of canals in England and Wales.

ARMY AND NAVY. See **MILITARY PROGRESS**; **NAVAL PROGRESS**.

GOVERNMENT. The United Kingdom is a limited monarchy, with an unwritten constitution, under which final legislative, judicial, and administrative authority is vested in a Parliament of two houses, acting through a cabinet drawn from its members. The House of Commons consists of 615 members, elected by male and female suffrage on the basis of one member for every 70,000 of the population. The House of Lords, with a voting strength of about 740 members, consists of peers who hold seats (1) by hereditary right; (2) by creation of the sovereign; (3) by virtue of office; (4) by election for life, as with Irish peers; or (5) by election for the duration of Parliament, as with Scottish peers.

The composition of the House of Lords in 1933

was: Conservative, 488; Liberals, 80; National Liberals, 4; Labor, 12; National Labor, 8; Bishops, 26; Royal Peers, 36; politics not stated, 115; total, 769. In the House of Commons the government groups controlled 521 out of 615 members. The government parties were: Conservative (Stanley Baldwin), 470; National Liberal (Sir John Simon), 35; National Labor (Ramsay MacDonald), 13; Independent Nationals, 3. Opposition groups, with 61 seats, included: Labor (George Lansbury), 49; Independent Labor (Maxton), 5; Independent Liberals (Lloyd George), 4; and Independents, 3. Another Liberal faction of 33 members, headed by Sir Herbert Samuel, occupied a neutral position.

The National government, appointed Nov. 5, 1931, and reconstructed in November, 1931, and October, 1932, was composed as follows: Prime Minister and First Lord of the Treasury, J. Ramsay MacDonald (National Labor); Lord Privy Seal and Lord President of the Council, Stanley Baldwin (Conservative); Chancellor of the Exchequer, Neville Chamberlain (Conservative); Home Affairs, Agriculture and Fisheries, Sir John Gilmour (Conservative); Lord Chancellor, Lord Sankey (National Labor); War, Viscount Hailsham (Conservative); Foreign Affairs, Sir John Simon (National Liberal); Secretary of State for India, Sir Samuel Hoare (Conservative); Dominion Affairs, J. H. Thomas (National Labor); Colonies, Sir Philip Cunliffe-Lister (Conservative); Air, Marquis of Londonderry (Conservative); Scotland, Sir Archibald Sinclair (Liberal); Health, Sir Edward Hilton Young (Conservative); President of the Board of Trade, Walter Runciman (Liberal); First Lord of the Admiralty, Sir Bolton M. Eyres-Monsell (Conservative); Education, Lord Irwin (Conservative); Labor, Sir Henry Betterton (Conservative); Works, W. Ormsby-Gore (Conservative).

HISTORY

THE ECONOMIC REVIVAL. Definite improvement in British business and economic conditions during 1933 gave encouragement and added prestige to the National government and its conservative policies. The coalition Ministry headed by Ramsay MacDonald had been formed in August, 1931, to check an acute financial crisis and to reverse the course of the steadily deepening economic depression. To do so, it broke sharply with Britain's previous policies. Protection replaced free trade. A system of tariff preference within the Empire was established at the Ottawa Conference of 1932. The budget was brought into approximate balance by strict economies, a reduction of social services, and further increases in taxation. Exports were stimulated by controlled depreciation of the pound. Negotiations were opened for reciprocal tariff agreements between Britain and its leading customers. In general, the National government embarked upon a policy of modified economic nationalism, convinced that the traditional policy of free trade and internationalism was no longer feasible in a world of rising tariffs and other restrictions upon commercial intercourse.

The economic revival of 1933 was believed by the National government and its adherents to be the direct result of these policies. The budget for the fiscal year ended Mar. 31, 1933, showed a real deficit of only £8,605,000, while a surplus was estimated for 1933-1934. In the first nine months of 1933-34 ending December 31, the treas-

ury statement showed the country in the soundest financial position in many years. Expenditures were the lowest in a decade as a result of economies and the decline in unemployment insurance payments. On the other hand, increased business activity and higher tariffs had substantially increased the revenue. On Oct. 11, 1933, Walter Runciman, president of the Board of Trade, declared that Britain had regained its former position as the leading financial country of the world.

During the first half of 1933, British exports declined 11.2 per cent and exports 7.3 per cent from the 1932 levels. In the latter part of the year, both imports and exports showed a definite gain. The upturn in British industries became evident during the spring and summer. Industrial production in the second quarter advanced to 90.1 per cent of the 1928 output, compared to 82.7 per cent in the third quarter of 1932. By September, 1933, the average price of securities on the London Stock Exchange was 25 per cent higher than in September, 1932. The number of unemployed was reduced by nearly 500,000 during the year. After operating at 10 per cent of capacity most of the year, the shipyards on the Clyde received a rush of orders in November and December. The gold reserve of the Bank of England increased from £120,500,000 in January to nearly £192,000,000 in December. Almost all statistics at the year end showed business activity increasing and buying power expanding.

TARIFF AGREEMENTS. In pursuance of its tariff policy, the government concluded commercial treaties during the year with Denmark, Sweden, Norway, Finland, Estonia, Germany, and Argentina. Negotiations for similar treaties were under way with Lithuania, Latvia, Poland, and Uruguay. In the agreements signed, the British government went beyond tariff protection and laid the basis for a system of rigid controls over foreign trade. Provision was made for the future restriction of agricultural imports into Britain, it being stipulated in each treaty that if such restrictions were placed in effect specified quotas would be assigned to each country. Similar provisions were included in the Scandinavian agreements with respect to fish imports.

Typical of these agreements was the Danish treaty, signed April 24, for a period of three years. In it Great Britain undertook not to impose a tariff on Danish bacon, promised Denmark a percentage of all foreign bacon imported, and agreed not to raise the existing tariff on Danish butter and eggs. In return for these negative benefits, Denmark agreed to take 80 per cent, instead of 60 per cent, of its total coal imports from Great Britain; to take 75,000 tons of steel and iron goods annually from Great Britain, instead of the normal 50,000 tons; to take its jute and salt from Great Britain; not to raise its tariff on a long list of articles imported from Britain, etc.

The German treaty provided for larger German purchases of British coal in return for lower British duties on German toys, pianos, clocks, etc. The treaty with Sweden, signed May 15, went into effect July 7 for three years. The British agreed to leave certain Swedish exports on their free list and to reduce their tariff on others. In return, Sweden promised to buy 47 per cent of her coal in Great Britain, to reduce duties on a long list of British produce, and not to impose new duties on others. The Norwegian agreement,

effective July 7, contained similar provisions and gave Britain the right to supply 70 per cent of Norway's annual coal imports. The Anglo-Argentine convention, signed at London May 1, was followed by a commercial treaty concluded at Buenos Aires September 26. Argentina extended Britain preferential treatment in the matter of remittances, promising that the full amount of sterling exchanged obtained from the sale of Argentine products in the United Kingdom would, after certain deductions, be made available for the payment of British exporters to Argentina. As a result of this series of treaties, an increase of 4,000,000 tons annually in British coal exports was anticipated, besides other benefits.

About 1000 American branch factories in Canada were affected when Great Britain on Jan. 30, 1933, announced that after April 1 Dominion products would be required to have a 50 per cent Empire content, instead of 25 per cent, to receive the British imperial preference.

MONETARY POLICY. The government during 1933 made no move toward returning to the gold standard, which it was forced to abandon during the financial crisis of September, 1931. A sudden increase in the gold holdings of the Bank of England made a return to gold possible, if the government had so desired. On Jan. 20, 1933, the Bank's reserves stood at £120,544,000, the lowest since 1920. Ten weeks later they had increased to £186,857,000, the highest recorded. Despite this abundance of gold, the government sought to keep the pound depreciated with reference to the dollar, franc, and other gold currencies, both as an aid to British exports and as a stimulus to prices in the country. During the first months of the year, the British employed the Exchequer's exchange equalization fund to stabilize the pound sterling at \$3.40 to \$3.45. The abandonment of the gold standard by the United States on April 19 and the subsequent depreciation of the dollar, made it impossible to maintain this ratio, despite an increase in the equalization fund from £150,000,000 to £350,000,000 at the end of May. By July 19, the pound was quoted at \$4.865, or approximately the same ratio as obtained previous to September, 1931. The average exchange rate for August was \$4.5027; for December, \$4.075; for the year 1933, \$4.2197 (paper dollars).

To prevent the disturbance to trade caused by fluctuations in the exchange ratio between the pound and the French franc, the Chancellor of the Exchequer announced April 28 that a £30,000,000 loan floated in London, would be advanced to the French Treasury and converted into French currency "when and as it needs francs and in accord with the Bank of England." The loan was designed both to prevent the rise of sterling with relation to foreign currencies and to check the drain on the French gold supply caused by the conversion of franc credits into gold by the British equalization fund. The attempt to "peg" the pound at 85 gold francs encountered increasing difficulties during July and August, owing largely to the fluctuations of the dollar. At the end of August the pound again depreciated to 82 francs.

OTHER ECONOMIC POLICIES. Despite the rise of exports in the second half of 1933, attributed to the government's international economic policies, the Cabinet in September agreed that world conditions made it difficult to reabsorb all of Britain's unemployed in the export trades. The fail-

ure of the World Economic Conference (see ECONOMIC CONFERENCE, WORLD), and the trend toward economic nationalism in America, France, Germany, and other countries blocked the restoration of international trade on a pre-depression scale. Accordingly the Ministry undertook to stimulate employment in domestic industries. The principal measures adopted with this end in view were (1) the agricultural marketing act, (2) slum clearance, and (3) subsidization of a new industry for the extraction of oil and gasoline from coal.

The agricultural marketing bill, passed by Parliament in July, 1933, supplemented a similar measure passed in 1931. It was designed to permit the organization and development of marketing schemes for British agricultural products. In order to regulate the supply of products offered on the British market, the act conferred on the government broad authority to control imports of agricultural products and the sale of domestic production. Provision was also made for the establishment of development boards to promote the cultivation of secondary agricultural crops. Through diversification and the improvement of the basic position of agriculture, it was hoped to induce part of Britain's army of unemployed to return to the land. However, the desperate strait of the farmers was evidenced by a widespread agitation against payment of the tithe.

Another law effected a fundamental change in the government's housing policy in England and Wales. It ended the Exchequer subsidies granted to aid in the construction of working-class houses, except those to which the government was already committed. Over the 13-year period ended Mar. 31, 1932, these subsidies aggregated £100,951,000. The government explained the abandonment of the housing policy by saying that cheaper money and lower building costs now made it possible for the small wage earner to buy a home without government aid. In place of housing, the government concentrated on slum clearance, with the aim of eliminating all slum areas from England and Wales by the end of 1938. The demolition of 210,000 houses and new quarters for more than 1,000,000 persons, costing £95,000,000, were contemplated.

On November 8 the government introduced a bill which drastically reorganized the unemployment insurance system and evoked widespread protests among the working classes. The measure increased the rate of weekly contributions from the worker and lowered the weekly payment to the unemployed. On the other hand an additional 4,000,000 workers were to be brought within the system and the benefit period was extended from six months to a year. It was expected that these changes would produce an annual surplus of £5,500,000 for the reduction of the insurance fund's £115,000,000 indebtedness. In addition, a new board was provided to give vocational training to the uninsured unemployed and to administer relief.

Compulsory rationalization of the West Yorkshire coal fields, with the closing of unprofitable pits, was begun under the auspices of the Coal Mines Reorganization Commission in December, 1933. Similar action was planned in other fields. The merger under government auspices of the White Star and Cunard shipping lines was under way toward the end of the year. The ministry announced December 13 that negotiations had advanced sufficiently to justify a £6,000,000 gov-

ernment loan for the completion of the super-liner *Princess Elisabeth*, the Cunard Line's great vessel, work on which had been halted by the depression.

The completion on September 5 of the great electric grid built by the Central Electricity Board as part of its national transmission scheme ended a 5½ year project costing £27,000,000, which had given direct or indirect employment to some 200,000 workers. The project involved the construction of 26,265 towers and 4000 miles of transmission lines connecting the major electric generating plants in England, Scotland, and Wales.

DOMESTIC POLITICS. While by-elections during the year showed a continued falling off in the Conservative party's popularity, that party and its policies more than ever dominated the National government. Serious divisions within the party ranks were revealed on a number of occasions, at times reflecting the conflict of interest between the industrial and banking elements and at others the division on the issues of India, defense, and disarmament. At the annual Conservative party conference held at Birmingham in the first week of October, a resolution voicing "grave anxiety over the inadequacy of imperial defense" was unanimously adopted. Pacifism, internationalism, and the League of Nations were violently assailed. A serious split developed over the National government's policy of granting extensive reforms to India. The die-hard opposition to this policy, led by Winston Churchill and Lord Lloyd, was defeated (737 to 344) only after Neville Chamberlain announced that the government would regard the result as a vote of confidence. As in previous years, the moderate group, led by Stanley Baldwin and Mr. Chamberlain, retained control of the party.

In contrast to the growing nationalism evidenced in the Conservative party was the attitude of Labor. This party, which normally controls some 8,000,000 voters, voted at the annual conference at Hastings October 4 to take no part in any future war. If necessary, it was decided to declare a general strike to prevent Britain from entering any war unless her territory was actually invaded. Upon the party's return to power, it promised to pass legislation legalizing pacifism. Fervent demands for peace and disarmament were heard in the debates. The conference followed the example of the Trades Union Congress in voting to boycott the Hitler régime in Germany, offering sanctuary to Jews and other refugees from the Reich, and placing itself on record as unalterably opposed to all dictatorships, whether of the Right or Left.

A by-election in East Fulham, fought on the issue of "peace or war," resulted in a decisive Labor victory. The Conservative defeat reflected the popular belief that the government's policies would eventually drag the country into another European war. In the municipal elections held in 257 boroughs on November 1, the Laborites registered a net gain of 206 seats, compared with a loss of 241 seats in the municipal elections of 1931.

Like the Conservatives and Liberals, the Laborites were faced with deepening internal schisms precipitated by the stress of the times. A radical wing of the Parliamentary Labor party continued to demand that Labor seize dictatorial control if and when it again was voted into power. Meanwhile the Left wing of the Inde-

pendent Labor party, which withdrew from the Parliamentary (majority) party, was split into two new factions on the issue of establishing a working agreement with the Communist International of Moscow.

The Liberals remained split into three separate groups under the leadership of Sir John Simon, Sir Herbert Samuel, and David Lloyd George, respectively. The Simon and Samuel groups joined forces with the Conservatives and MacDonald Laborites in 1931 to form the National government. On Sept. 28, 1932, Sir Herbert Samuel resigned from the National government in protest against the Ottawa agreements. On Nov. 16, 1933, he made the long-expected announcement that his 33 followers in the House of Commons would desert the government benches and "resume the fullest independence." Dissatisfaction with the government's disarmament, unemployment, and housing policies were given as the reason for the Liberals' switch to the Opposition ranks. The defection of the Liberals, which coincided with the opening of a new session of Parliament, had little significance except as a reflection of the government's increasing popularity. The government retained a majority of 514 votes out of the 615 seats in the Commons.

FOREIGN RELATIONS. The contradictory policies on war and defense espoused by the Conservative and Labor parties were significant in view of developments on the Continent. The withdrawal of Japan and Germany from the League of Nations, and that of Germany from the Disarmament Conference, coupled with the failure of the World Economic Conference, convinced a large section of British opinion that the effort to establish peace on a permanent basis had definitely failed. The prospect of war between Germany and France in the near future led to a searching consideration of British policy in the event of a crisis similar to that of 1914. The advent of the Hitler régime in Germany and its subsequent policies led to a general revulsion of sentiment in Great Britain, which previously had been inclined to support the German demand for modification of the terms of the Versailles Treaty. There was general denunciation of Hitler's policies from all classes and parties, but a sharp division of opinion as to whether Britain should intervene in support of the Locarno treaty if a conflict occurred.

The policy adopted by the Labor party flatly rejected such intervention. Mr. Baldwin, however, speaking for the government, declared unequivocally before the Conservative party conference October 6 that Great Britain would fulfill her pledge under the Locarno pact. Similarly, during the disarmament crisis of March, 1933, the Minister of War, Lord Hailsham, threatened Germany with the application of the military sanctions if she rearmend in defiance of the Versailles Treaty. The debate on the German situation in the British House of Commons April 13 aroused an official protest from Berlin against "unwarranted meddling in the internal affairs of the Reich."

The developments of 1933 in Germany strengthened the entente between Britain and France which had been renewed in a tenuous form at the Lausanne Conference in 1932. The British government joined France in opposing Hitler's policy in Austria (q.v.) and worked in close coöperation with France and the United States in attempting to reach an agreement at the Disarmament Conference. Following Germany's with-

drawal from the conference on October 14, the German Foreign Minister, Baron von Neurath, denounced the British Foreign Minister, Sir John Simon, for "casting suspicion on Germany" in the preceding negotiations. He said that with the assent of France and the United States, Sir John had scrapped the MacDonald disarmament plan and in its place submitted a new one discriminating exclusively against Germany. These accusations the British Minister emphatically denied.

While the British assumed an attitude more and more openly opposed to Hitler's international policies, as the latter were revealed, they had earlier in the year joined with Italy in attempting to bridge the gulf between Germany and France on the disarmament and other questions. The fruit of this effort was the MacDonald disarmament plan, presented at Geneva March 16, and the Four-Power pact formulated by Mussolini, with Prime Minister MacDonald's approval, during conversations between the two statesmen in Rome on March 18 and 19. For summaries of these two proposals, see DISARMAMENT and ITALY under *History*, respectively.

ANGLO-AMERICAN RELATIONS. Anglo-American relations remained cordial during 1933, despite the irritations of the war debt issue and the adverse effects upon British economy of the depreciation and wide fluctuations of the dollar. In response to President Roosevelt's invitation, Prime Minister MacDonald paid a second official visit to the United States, arriving in New York April 21 and leaving April 26. He was the President's guest at the White House while the two discussed the whole range of British-American problems. The war debts were discussed on April 25 and an unsuccessful effort made to negotiate a final settlement. In a joint statement issued April 26, they announced their agreement on general measures for world economic recovery. As a result of their conversations and those subsequently held by President Roosevelt with the representatives of other nations, the World Economic Conference was convened for June 12.

Against the desires of Mr. Roosevelt and the American delegation to the Economic Conference, Mr. MacDonald mentioned the war debt issue in his opening address. He said that while the issue could not be dealt with in the conference itself, it "must be dealt with before every obstacle to general recovery has been removed, and it must be taken up without delay by the nations concerned."

In place of the semi-annual payment of \$75,950,000 due the United States June 15, Great Britain made a payment June 13 of \$10,000,000 "as an acknowledgement of the debt, pending a final settlement." Suggesting that further war debt negotiations be postponed until after the close of the conference, President Roosevelt announced on June 14 that he did not consider the British action as a default. The negotiations for a war debt settlement were reopened in Washington October 10 by a British financial mission headed by Sir Frederick Leith-Ross, economic adviser to the British government. An agreement proved impossible and the discussions were adjourned indefinitely in November. On Dec. 15, 1933, Britain made another "token" payment of \$7,500,000 in place of \$117,070,765. See REPARATIONS AND WAR DEBTS.

Throughout the disarmament negotiations at Geneva and in the European capitals during

1933, the American government gave its wholehearted support to the MacDonald disarmament plan. It acted in close cooperation with the British and French governments at the Disarmament Conference during the weeks that preceded Germany's withdrawal from the conference and the League on October 14. In the meantime the British government showed concern at the naval building programme inaugurated by President Roosevelt. While admitting that the United States had a legal right to build up to the quotas fixed in the Washington and London naval treaties, the British pointed out that the construction of four 10,000-ton 6-inch-gun cruisers contracted for might prevent a reduction in the size of cruisers at the 1935 naval conference. They suggested that the construction of these new types of ships be postponed during the life of the Disarmament Conference or pending further discussions. The American government announced September 26 that it could not consider this suggestion.

ECONOMIC CONFLICT WITH JAPAN. The British were not unsympathetic with the basic reason for the increase in the American fleet. Japan's withdrawal from the League of Nations, the growing truculence of her militarists, and the announcement that Japan would seek parity with Great Britain and the United States at the 1935 naval conference alarmed the British as well as the Americans. Moreover, the British awoke with a start during the year to find that their hold on the cotton textile and rayon markets throughout India, Malaya, and Africa was being seriously shaken by a flood of cheaper competitive products from Japanese factories. Barred from the Chinese market by the boycott, Japanese textiles and other goods were forced into other Oriental, African, and even South American markets at an accelerated pace. The British manufacturers, with their relatively high wage scales, were unable to compete with the Japanese products, made with poorly paid but efficient labor and marketed with the aid of a greatly depreciated currency.

The British moved by tariffs and other devices to protect their markets. India and British West Africa abrogated their commercial treaties with Japan and raised their tariffs. New duties on imports from Japan were imposed by the Straits Settlements, Egypt, Kenya, Australia, and Zanzibar, at British instigation. The Japanese retaliated by boycotting Indian cotton, threatening to boycott Australian wool, and encouraging the anti-British political movements in India and other dependencies with Pan-Asiatic propaganda. Violent denunciations of the British tariff policy by high military, naval, and government officials appeared in the Japanese press and periodicals.

Major Cyril Fullard Entwistle, stating the British view in the House of Commons, said that if Japan's aggressive trade policy was not checked it meant the collapse of the industrial structures of Great Britain and other exporting nations. "Either Japan must be compelled to foot up to the standard of living maintained by Western nations or the importation of Japanese manufactures must be totally prohibited," he asserted.

In an effort to reach an economic understanding on the trade war issue, British and Japanese representatives conferred at Simla, India, commencing in September. These negotiations, later transferred to Delhi, were approaching completion at the end of the year.

RELATIONS WITH THE SOVIET UNION. The National government on Oct. 17, 1932, had given the required six months' notice for the abrogation of the Anglo-Russian trade treaty concluded by the Labor government in 1930. Negotiations for a new treaty were under way between the two governments when on Mar. 11 and 12, 1933, the Soviet government arrested six British engineers of the Metropolitan-Vickers Company on charges of espionage, bribery, and sabotage of the Soviet electrical industry. On March 16, the British Ambassador in Moscow demanded the immediate and unconditional release of the prisoners on the ground of insufficient evidence. When the Soviet government proceeded with arrangements to try the accused the British suspended negotiations for the new trade treaty March 20 and on April 5 a law authorizing an embargo on all Soviet goods was rushed through the House of Commons.

On April 19 a Soviet court convicted five of the engineers. Three of them were deported from the Soviet Union for five years and two were sentenced to three and two years in prison, respectively. The British people, who had been aroused to a high pitch of excitement at the prospect of the execution of the engineers, greeted the verdict with relief. The same day the British government prohibited, as of April 26, the importation of Soviet petroleum, timber, raw cotton, grain, and butter, amounting to about 80 per cent of the British imports from the Soviet Union. The Soviet government replied (April 20) by prohibiting all purchases of British goods and all chartering of British vessels.

In announcing the embargo, the British Foreign Minister stated in Parliament that it would be removed whenever the two British engineers—William H. Thornton and William L. MacDonald—were released. The rift was healed on this basis July 1, after several conversations in London between Maxim Litvinov, the Soviet Foreign Minister, and Sir John Simon. Great Britain raised its embargo on Soviet goods and the Soviet government released the two British engineers and cancelled its counter-embargo. Negotiations for a trade agreement were then renewed.

THE PERSIAN SETTLEMENT. Another threatening dispute was peacefully settled when on Apr. 29, 1933, the Anglo-Persian Oil Company and the Persian government agreed upon a new petroleum concession replacing the D'Arcy concession of 1901. The abrogation of the D'Arcy concession by Persia on Nov. 27, 1932, precipitated a serious conflict between the two governments. The matter was submitted to the League of Nations by Great Britain and on Feb. 3, 1933, it was agreed that the oil company and the Persian government should enter direct negotiations for a new concession. See *PERSIA*.

IMPERIAL AFFAIRS. The process of forging new and closer economic links among the mother country and the Dominions, inaugurated at the Ottawa Conference of 1932, was further developed during 1933, despite the obstacles encountered. There was much dissatisfaction with the Ottawa Agreements, particularly in Great Britain, where the Labor party and a section of the Liberal party were prepared to denounce these treaties if they returned to power. The British complained because in the year ended Mar. 31, 1933, Canadian exports to Britain increased by more than \$10,000,000, as compared with the previous year, while Canadian imports from Britain decreased by \$20,000,000. Canada, how-

ever, continued to press the National government for further preferences, such as the exclusion of Soviet timber and other raw materials in favor of similar Canadian products. The Dominions likewise sided with the United States at the World Economic Conference, urging Great Britain to follow the Roosevelt economic programme for raising commodity prices.

While the Conservatives dominating the National government considered the American programme too ambitious to emulate, they did reach an agreement with the Dominions on general policy, issued in a declaration of July 27. The declaration approved a joint policy of price-raising without monetary manipulation and envisaged the ultimate restoration of the gold standard. It called for cooperation in maintaining stable exchange rates within the empire and with such other countries as might decide to join the sterling bloc. Each government was left free to decide whether or not it would undertake public works programmes to stimulate industrial activity.

Meanwhile there had been published on June 8 the report of the Imperial Committee on Economic Consultation and Cooperation. It recommended the integration of various imperial economic organizations and their reorganization to include representatives of the Dominions as well as of Great Britain. In accordance with the committee's recommendation, the British government abolished the Empire Marketing Board on September 30 and transferred its functions to the permanent Imperial Economic Committee. The latter body was made independent of any one government and was empowered to deal with the Dominion governments directly.

The field of Imperial political relations also was explored by the first British Commonwealth Relations Conference, which met at Toronto, Canada, commencing September 10. This unofficial body, composed of eminent representatives of the various units of the empire, considered the general principles of the Commonwealth's foreign policy. A nine-point statement submitted by the chairman, Sir Robert Borden, former Prime Minister of Canada, emphasized close coöperation with the United States as a vital element in foreign policy. Support of international agencies, such as the League of Nations, and efforts to limit armaments, eliminate war, maintain justice and liberty in every country, etc., were recommended. The status of the Dominions in the event of a declaration of war by Great Britain was discussed, the general view being that war could not be made without the consent of all units of the Commonwealth. Plans were discussed for improving inter-Imperial and particularly inter-Dominion communications.

The Anglo-Irish trade war continued to inflict serious damage upon both countries (see *IRISH FREE STATE*, under *History*). Progress was made toward the enactment of the promised political reforms for India (see *INDIA* under *History*). The mother country made additional efforts to help Newfoundland (q.v.) out of its financial morass. See *SOUTH AFRICA*, *CANADA*, *AUSTRALIA*, *NEW ZEALAND*, and the various colonies and dependencies for their relations with Great Britain. Also see *LEAGUE OF NATIONS*, *DISARMAMENT*, *REPARATIONS AND WAR DEBTS*, and *GERMANY*, *FRANCE*, *ITALY*, *UNITED STATES* under *History* for other aspects of Great Britain's international relations.

GREAT LAKES-TO-GULF WATERWAY.

See CANALS.

GREECE. A Balkan republic. Capital, Athens. The area is 50,270 square miles and the population on Dec. 31, 1931 was estimated at 6,483,000 (6,204,684 at census of 1928). The urban population in 1928 was 2,058,510 (in towns over 5000). The estimated population of Athens in 1931 was 468,000. In 1928 Piraeus (Peiraievs) had 251,328 inhabitants, Saloniki, 236,524; Patras, 61,278. In 1928-29 the elementary schools enrolled 684,424 pupils, secondary schools 104,789, and universities 7135. The 1928 census showed 1,962,330 illiterates over 10 years of age.

PRODUCTION. Greece is a predominantly agricultural country, specializing in the production of tobacco and currants for export. Arable land in 1931 totaled 4,206,000 acres (13 per cent of the total); meadow and pasture, 2,877,000 acres; forests, 5,946,000 acres. Production of the chief crops in 1932 (thousands of units, bushels except as specified), with 1931 crops in parentheses, was: Wheat, 16,941 (11,228); rye, 2438 (1800); barley, 9862 (7146); oats, 6910 (5274); corn, 7370 (6248); potatoes, 2849 (2306); currants and raisins (pounds), 425,660 (222,225); figs (pounds), 44,092 (34,856); grape must (gallons), 78,601 (51,391); olive oil (gallons, 1932-33 season), 34,643 (30,042); tobacco (pounds), 57,987 (95,274). Livestock in 1931 included 868,000 cattle, 423,000 swine, 7,072,000 sheep, 838,000 horses, mules, and asses.

Mineral production (metric tons) in 1932 was: Crude chromite, 12,500; emery, 25,000; iron ore, 150,000; iron pyrites, 80,500; crude magnesite, 70,000; lignite, 200,000; smelted lead, 7200. Industrial production in 1932 was valued at 6,080,000,000 drachmas (\$78,432,000). Cotton yarn, wool fabrics, soap, leather, and cigarettes were the leading manufactured articles.

COMMERCE. Greek imports and exports during 1930-32 are shown in the accompanying table from the 1933 *Commerce Yearbook*.

GREECE: IMPORTS AND EXPORTS

	Thousands of drachmas		Thousands of dollars *	
	Imports	Exports	Imports	Exports
1930	10,525,245	5,985,686	136,828	77,814
1931	8,759,191	4,203,591	112,994	54,226
1932	7,867,867	4,759,218	65,303	39,502

* Dollars converted at average exchange rates, viz., \$0.0180 in 1930, \$0.0129 in 1931, and \$0.0083 in 1932.

The chief imports in 1932 were: Fish, \$12,113,000; chemical and allied products, \$3,859,000; machinery, \$3,677,000; iron and steel, \$3,447,000; coal, \$2,974,000; cotton piece goods, \$2,778,000; sugar, \$2,090,000. Leading exports were: Leaf tobacco, \$15,121,000; currants, \$8,566,000; olive oil, \$4,230,000; raisins, \$2,212,000; wine, \$1,350,000. The United States furnished 13.8 per cent of the 1932 imports (9.6 in 1931); United Kingdom, 13.6 per cent (13.2); Germany, 9.6 (12.2).

The United Kingdom took 23.4 per cent of the total 1932 exports (15.0 in 1931); Italy, 16.5 per cent (16.5); Germany, 14.5 (14.0); and the United States, 10.2 per cent (17.2).

FINANCE. Provisional returns for the fiscal year ended Mar. 31, 1933, showed a deficit of 600,000,000 drachmas on expenditures of 9,621,000,000 drachmas. In 1931-32 actual receipts were 11,071,000,000 drachmas, against total obligations incurred of 11,865,000,000 drachmas. The provisional 1933-34 budget estimated receipts at 7,967,000,000 drachmas, and expenditure at 8,292,000,000, with a deficit of 325,000,000 drachmas. The public debt on Dec. 31, 1932, including the railway debt, totaled 43,164,170,000 drachmas (\$561,134,000 at the stabilization rate of \$0.012977).

COMMUNICATIONS. In 1932 there were 825 miles of State railways and about 775 miles of private lines. During the year ended Mar. 31, 1932, all lines carried 7,000,000 passengers and 1,600,000 metric tons of freight. Highways extended about 8610 miles. The Greek merchant marine on Dec. 31, 1932 comprised 558 vessels (of 30 or more tons) aggregating 1,430,418 gross tons. During 1932, 2983 ships of 5,104,066 net registered tons entered the ports. Regular air service between Athens and Saloniki was inaugurated July 10, 1931, and between Athens, Agrinion, and Jannina on Nov. 23, 1931. Up to the end of 1932, these lines carried 10,950 passengers, 222,500 pounds of baggage, 235,700 pounds of freight, and 17,550 pounds of mail.

GOVERNMENT. The Constitution of June 3, 1927, provided that the President should be elected for five years by the Chamber and Senate. The Chamber in 1933 comprised 250 members elected for four years by universal suffrage. Of the 120 Senators, 92 were elected by direct suffrage, 10 by the Senate and Chamber conjointly, and 18 by trade, industrial and scientific organizations. President in 1933, Alexander Zaimis, elected Dec. 14, 1929. The Ministry formed Nov. 4, 1932, was headed by Pantagiotis Tsaldaris (Popular party). For changes in 1933, see *History*.

HISTORY

DOMESTIC POLITICS. The political stability of the Greek government had been impaired by the election of Sept. 25, 1932, in which the Liberals (Venizelists) defeated the Popular (Royalist) party of Pantagiotis Tsaldaris, but failed to secure a majority in the Lower Chamber. A coalition cabinet formed by Tsaldaris lasted only ten weeks (to Jan. 13, 1933) and then the veteran political leader, Eleutherios Venizelos, formed a new cabinet, which secured a majority of only two. Unable to carry on the government with such a narrow margin of safety, Premier Venizelos on January 24 secured the Senate's consent to call new elections for March 5. Contrary to expectations, the Premier's six-party government coalition was defeated by the three-party Opposition bloc, headed by Tsaldaris, the Opposition winning a majority of 135 out of the 248 seats.

Announcement of the results was followed by an attempted *coup d'état* by Gen. Nicholas Plastiras, leader of a similar military coup which forced the abdication of King Constantine in 1922. Plastiras arrested Tsaldaris, General Kondylis and other Opposition leaders, forbade newspapers to publish the election returns, and proclaimed a dictatorship. Failing to win the support of the public or of the army, General Plastiras fled on

March 6 and a temporary emergency cabinet under General Othonos assumed power at the instance of President Zaimis. Constitutional government was restored and on March 10 the Othonos group resigned in favor of a cabinet formed by Tsaldaris. Ex-Premier Venizelos, who interceded with President Zaimis in an effort to secure amnesty for the participants in the Plastiras coup, was charged with inciting the coup in a bill of impeachment introduced in the Chamber by Gen. John Metaxas on May 12. Impeachment proceedings were opposed by Premier Tsaldaris, however, and were dropped.

Constant friction and recrimination between Venizelos and his political opponents continued, making constructive action by the government to meet the economic crisis almost impossible. This friction culminated on June 6 in an attempt to assassinate Venizelos. The aged statesman, who had been seven times Premier of Greece during the previous 23 years, escaped, although his wife and his chauffeur were wounded. Venizelos capitalized this incident in connection with a by-election in Saloniki district held July 2. Regarded as a test of strength, the election resulted in the victory of the Venizelos candidate over the government's nominee.

While the political parties engaged in partisan warfare, the economic depression deepened, due to the restriction of foreign markets for Greek currants, raisins, wines, and tobacco. The growing unrest due to economic hardship was reflected in strikes and riots, usually attributed to Communists. Discontent was rife among many government employees, whose salaries were in arrears. The Minister of Finance on April 22 announced that during 1933, as in 1932, Greece would pay not more than 30 per cent of the service charges on its foreign debts. After extensive negotiations the British Council of Foreign Bondholders and the League Loans Committee (London) accepted the Greek offer to pay 27½ per cent of the interest for the fiscal year 1933-34 and 35 per cent in 1934-35.

FOREIGN AFFAIRS. The rapprochement between Greece and Turkey inaugurated by Premier Venizelos in 1930 bore fruit during 1933 in the signing at Ankara September 14 of a ten-year non-aggression pact. The pact pledged both countries (1) to mutually guarantee the inviolability of their common frontiers; (2) to follow a common line of action in international questions, and (3) to defend the common and individual interests of each other at international meetings. The hope was officially expressed that the other Balkan countries would sign the pact, thus promoting peace in the Near East. Premier Tsaldaris and Foreign Minister Maximos received enthusiastic receptions at Istanbul and at Ankara, where they signed the pact. They also reached an agreement with the Turkish representatives on all outstanding questions with respect to the exchange of populations and the minorities in Istanbul and Thrace. It was decided to appoint a special mixed commission to coordinate the economic policies of the two countries, and seek common markets abroad.

With the help of the Turks, Premier Tsaldaris attempted unsuccessfully to secure Bulgaria's inclusion in a general Balkan pact (see *BULGARIA* under *History*). The proposal for a customs union of the Balkan states headed the agenda of the Fourth Balkan Conference held in Saloniki early in November. It was reported that prelimi-

nary conversations were held looking toward a four-power Balkan pact to include Greece, Turkey, Rumania, and Yugoslavia. A temporary trade agreement with the Soviet Union was signed in Athens, Sept. 8, 1933.

Following two unsuccessful efforts to extradite Samuel Insull, Chicago utilities operator, to stand trial on Illinois and Federal charges, the United States government on Nov. 4, 1933, denounced the five-year extradition treaty with Greece which entered into effect Nov. 1, 1932 (for background, see the article *LAW* in 1932 under *Extradition* in the 1932 *NEW INTERNATIONAL YEAR BOOK*). The American note expressed astonishment at the Greek Appeal Court's verdict in rejecting the State Department's request for Insull's extradition. While defending the action of the Greek courts, the Athens government sought to appease American displeasure by ordering Insull to leave Greece at the expiration of his police permit on Dec. 31, 1933.

OTHER EVENTS. A severe earthquake devastated the island of Kos, one of the Dodecanese group in the Aegean Sea, on April 23. Most of the houses on the island were destroyed and preliminary reports placed the dead at 200 and injured at 600.

GREENLAND. A colonial possession of Denmark, second in size among the islands of the world. The estimated area, covered for the most part with a thick layer of ice, is 839,782 square miles; the settled area under Danish administration is 46,740 square miles and the population (Jan. 1, 1931) numbered 16,819 (16,495 natives and 324 Europeans, mostly Danes). The settled area along the southern coasts is divided into the administrative districts of North, South, and East Greenland, with 7238, 8489, and 883 inhabitants, respectively. Julianehaab, with 3532 inhabitants, is the chief settlement. Godthaab and Godhavn on the west coast are the administrative centres for South and North Greenland, respectively. In East Greenland, Angmagssalik is the chief post. Trade, which is chiefly in cryolite, furs, skins, and oil, is a monopoly of the Danish government. Exports to Denmark (1931). 5,747,000 crowns; imports from Denmark, 2,672,000 crowns (crown equals \$0.2680 at par). Budget estimates for 1930-31 balanced at 4,457,000 crowns. Administrative authority rests with a director residing in Copenhagen. Director in 1933, J. Daugaard-Jensen.

HISTORY. The controversy between Denmark and Norway over the possession of parts of Eastern Greenland was settled by a decision of the World Court on Apr. 5, 1933. The Court ruled in Denmark's favor, holding that Norway's declaration of sovereignty, issued July 10, 1931, was illegal and in violation of Norway's treaty obligations to Denmark. Norway then withdrew the five representatives which had been sent to administer "Eric the Red's Land." See *NORWAY* and *DENMARK* under *History*; also *POLAR RESEARCH*; *AERONAUTICS*.

GREGORY, THOMAS WATT. An American lawyer and cabinet official, died in New York City, Feb. 25, 1933. He was born at Crawfordsville, Miss., Nov. 6, 1861, and was graduated from the Southwestern Presbyterian University at Clarks-ville, Tenn., in 1883. On receiving the LL.B. degree from the University of Texas in 1885 he was admitted to the Texas bar and practiced in Austin where during 1891-94 he was assistant city attorney. From 1900 to 1908 he was a member of the firm of Gregory and Batts and from 1908 to

1914 of Gregory, Batts and Brooks. He also acted during 1899-1907 as a member of the board of regents of the University of Texas and in 1904 and 1912 was a delegate to the Democratic National Conventions.

With his partner, Robert L. Batts, Mr. Gregory achieved national prominence for his success in prosecuting violators of the Sherman Anti-Trust Act. In 1909 he was counsel for the State of Texas in its case against the Waters-Pierce Oil Co., a subsidiary of the Standard Oil Co. The decision of the Texas tribunal that the old company was to be fined \$1,900,000 and was to be dissolved under its then existing form was upheld by the United States Supreme Court after the case had been carried from court to court. In 1913 he acted as special assistant to the United States Attorney-General in the investigation and prosecution of the New York, New Haven and Hartford Railroad Co., charged with monopolizing the transportation facilities of New England in its absorption of competing lines. Under the agreement which was reached with the Federal government the company relinquished control of the Boston and Maine Railroad and surrendered the interests of its Boston and Albany subsidiary in trolley lines and coastwise shipping.

In 1914 President Wilson appointed Mr. Gregory United States Attorney-General, succeeding James C. McReynolds who was made an associate justice of the United States Supreme Court. He distinguished himself during the World War by the successful methods which he adopted in prosecuting violators of the Espionage Act, especially in preventing or suppressing propaganda by German and Austrian agents. There was also entrusted to the Department of Justice the enforcement of the Sedition, Sabotage, Trading-with-the-Enemy, and Selective Service Acts, the seizure of enemy property valued at \$800,000,000, and the superintendence of the American Protective League with branch organizations in nearly every city. On his resignation in 1919 Mr. Gregory resumed his law practice, first in Washington as a member of the firm of Gregory and Todd and then in Houston, Texas. He was a member of President Wilson's Second Industrial Conference during 1919-20.

GRENADA, grê-nâ'dâ. A British insular possession 70 miles north of Trinidad, forming, with the islands of St. Lucia, St. Vincent, and the Grenadines, the Windward Islands group of the British West Indies. Area, including the island of Carriacou, 133 square miles; population (Jan. 1, 1933 estimate), 78,662. The capital is St. George's. In 1932, there were 60 primary schools with 13,330 students enrolled and 4 secondary schools with an average attendance of 259 students.

The chief products are cacao, spices, lime juice, and cotton. For 1932, imports were valued at £259,743 and exports at £198,130. Cacao represented £101,231 of the exports; nutmegs and mace, £59,949; lime oil, £10,720. Total revenue was £201,480 and total expenditure £155,343 for the year 1932. The net indebtedness on Jan. 1, 1933 amounted to £169,955. Grenada is under the Governor of the Windward Islands, whose headquarters are at St. George's, Grenada, but it has its own legislative council. Half of the Grenadine Islands are included with Grenada, and half with St. Vincent.

GREY OF FALLODON, EDWARD GREY, 1ST VISCOUNT. A British statesman, died at Christon

Bank, Northumberland, Sept. 7, 1933. Born at Oxford, Apr. 25, 1862, he was educated at Winchester and at Balliol College, Oxford, and on the death of his grandfather, Sir George Grey, in 1882 succeeded to the baronetcy. Three years later he was elected Liberal member for the Berwick-on-Tweed division of Northumberland, representing that constituency in the House of Commons until 1916. When Lord Rosebery became Foreign Secretary in Gladstone's cabinet in 1892 he was selected as Under-Secretary for Foreign Affairs and representative of the Foreign Office in the House of Commons. After the fall of the Liberal government in 1895 he continued as a follower of Lord Rosebery, supporting the national cause during the Boer War and opposing a continuance of the alliance between the Liberals and the Irish Nationalists. Also, he served during this period on a commission to investigate the condition of the colonies of the British West Indies. In 1902 he was admitted to the Privy Council.

Lord Grey was appointed in 1905 Secretary of State for Foreign Affairs in the cabinet of Sir Henry Campbell-Bannerman. At this post he rapidly rose to be one of the most commanding figures in European diplomacy, dominating the councils of the Powers more completely than had been done by any British Secretary subsequent to the Crimean War. He strengthened the Anglo-French *entente* through the Algeiras Conference of 1906 which, in accordance with his instructions to the British representatives, decided that France should be granted certain customs rights on Morocco's Algerian frontier, and Spain similar privileges in the Riff country. There were held also at this time the secret conversations between French and British military and naval experts for cooperative action in case of war with Germany, which he countenanced on the understanding that they should not bind the British government. In 1907 he reached two important agreements with Spain and Russia. In accordance with the first Great Britain and Spain pledged themselves to maintain the *status quo* in the region of the Strait of Gibraltar. In accordance with the second there was concluded with Russia a convention for the economic partition of Persia, Great Britain recognizing Russia's influence in the northern zone and Russia recognizing that of Great Britain in the southern zone. His appointment of James Bryce as Ambassador to the United States in 1907 proved a happy move toward cementing Anglo-American friendship.

On Asquith's appointment as Prime Minister in 1908 Lord Grey continued as Foreign Secretary, having to deal, after that date, with a more aggressive foreign policy on the part of the Central Powers. When Austria-Hungary formally annexed the provinces of Bosnia and Herzegovina, which she had administered since the Treaty of Berlin of 1878, he demanded that the matter be submitted to a conference of the Powers for approval, but found himself powerless to enforce this demand on account of Germany's readiness to support her ally with arms. In 1911 a Moroccan crisis threatened when the German cruiser *Panther* was sent to Agadir on the pretext of protecting German interests against the menace of French influence in Morocco. He firmly opposed Germany's expansion in that part of Africa through obtaining from France unwarrantable concessions and in November of that year brought about the Franco-German accord by which France ceded to Germany, as compensation

for recognition of her right to establish a protectorate in Morocco, about 100,000 square miles in northern French Congo, touching the German Kameruns. In recognition of this service, which had narrowly averted a European war, he was made the following year a Knight of the Garter, the first commoner to be so honored since the distinction was conferred on Sir Robert Walpole in 1726.

Lord Grey rendered another important service in connection with the Balkan Wars of 1912-13, instituting, in an attempted mediation of the clashing interests of Bulgaria, Greece, Montenegro, and Serbia, the London conference of representatives of the Great Powers. In July, 1914, however, when a quarrel arose between Austria and Serbia, occasioned by the assassination at Sarajevo of the heir to the throne of Austria-Hungary, his appeals to Germany and Austria to submit the matter to arbitration were of no avail. The outcome of the Balkan Wars had been a bitter disappointment to those countries. Not only had their protégée Turkey been practically driven from Europe, but the creation of a greater Serbia and the strengthening of Greece and Bulgaria checked the plans of Austria to reach the Ægean Sea at Saloniki. In conjunction with Russia and Italy, though, Great Britain successfully persuaded Serbia to go as far as possible to conciliate Austria, but as Serbia would not agree to complete submission Austria, on the expiration of the 48-hour time limit, declared war against that country. Grey also proposed a conference in London of the Ambassadors of the Powers, similar to the conference on Balkan affairs of the previous year, but Germany objected to this method of settlement. Likewise she temporized when asked if she would respect Belgium's neutrality and made no response to his last desperate effort for peace when he offered to promote some arrangement by which Germany and Austria would be assured against any aggression on the part of France, Russia, or Great Britain.

Following Germany's declaration of war against France on August 3 Lord Grey delivered in the House of Commons one of the most important speeches in English history, setting forth the reasons for Great Britain's entry into the World War. During the early part of the war he exerted his efforts to cementing the bonds between the Allies, which he accomplished largely through the secret treaties of 1915-16. He also facilitated the entry of Italy on the side of the Allies, and refuted with authority the intermittent assertions of the German Chancellor that responsibility both for the origin and for the continuance of the war rested with England, not Germany.

In 1916 failing eyesight and the succession of Lloyd George as Premier caused Lord Grey to tender his resignation after 11 years in office, the longest consecutive period that any Secretary had held the portfolio of foreign affairs. He was created a viscount the same year. By 1919 his condition was sufficiently improved to enable him to act as temporary Ambassador to the United States in connection with the peace settlement. He was prominent among the founders of the Royal Institute of International Affairs in 1920 and served, with Viscount Cecil, as joint president of the League of Nations Union. From 1922 to 1924 he was leader of the Liberal party in the House of Lords, and in 1927 was chosen president of the Liberal Council. Also, he achieved eminence in educational circles, being elected president of

Armstrong College, Newcastle, in 1918, and chancellor of Oxford University in 1928. After his retirement he wrote *Twenty-Five Years, 1892-1916* (2 vols., 1925), an account of his years in the public service; *Falloodon Papers* (essays, 1926); and *The Charm of Birds* (1927), with woodcuts by Robert Gibbings.

GRIFFIN, REAR ADMIRAL ROBERT STANISLAUS, U.S.N., RET. An American naval officer, died in Washington, D. C., Feb. 21, 1933. Born at Fredericksburg, Va., Sept. 27, 1857, he entered the United States Naval Academy as a cadet engineer in 1874, graduating in 1878. Successively promoted from assistant engineer to chief engineer, he was transferred, after serving during the Spanish-American War on the gunboat *Mayflower*, to the line as a lieutenant. In 1904 he became fleet engineer of the North Atlantic fleet, and the following year was assigned to the bureau of steam engineering of the Navy Department, where he was made assistant chief in 1908. In 1913 he was appointed chief of the bureau and three years later engineer-in-chief of the Navy, with the rank of rear admiral.

During the period of expansion of the Navy Admiral Griffin was responsible for most of the improvements in naval engineering matériel and practice. There were also reconditioned under his direction during the World War the seized German liners, such as the *Vaterland* (*Leviathan*), whose engines had been damaged by their crews. Several of these were utilized as transports for troops and supplies of the American Expeditionary Forces. For his services he was decorated with the Distinguished Service Medal and was made a commander of the French Legion of Honor. He retired in 1921.

In 1908, 1912, and 1913 Admiral Griffin was president of the American Society of Naval Engineers. He was also the author of numerous articles on technical subjects connected with marine engineering.

GRINNELL COLLEGE. A coeducational, nonsectarian institution of higher learning in Grinnell, Iowa, founded in 1846. The enrollment for the autumn of 1933 was 550, while that for the summer session was 50. There were 55 faculty members. The productive funds amounted to \$2,063,000. The library contained 95,000 volumes. President, John Scholte Nollen, Ph.D., LL.D.

GUADELOUPE, gə'de-lōp' (French gwà'dlōp'). A French West Indian colony in the lesser Antilles, comprising the main islands of Guadeloupe proper (Basse-Terre) and Grande-Terre separated by a narrow channel named Rivière Salée, and the five dependent islands of Les Saintes, Désirade, St. Barthélemy, St. Martin, and Marie Galante. Total area, 688 square miles; total population (1931), 267,407. Basse-Terre, the capital on the island of Guadeloupe proper, had 9268 inhabitants in 1931; Pointe-a-Pitre, the chief town and port, had 30,465.

The chief products are bananas, sugar, cacao, rum, and vanilla. In 1931, imports were valued at 188,933,000 francs (franc equaled \$0.0392 at par); exports, 138,814,000 francs. The budget for 1932 was estimated to balance at 66,220,864 francs. The outstanding debt on Jan. 1, 1933 was 3,812,282 francs. There were, in 1931, 344 miles of roads. A governor is at the head of the government, assisted by an elected council. The colony is represented in the parliament of France by a sena-

tor and two deputies. Governor in 1933, M. Choteau.

GUAM. An insular possession of the United States; the largest and most populous island in the Mariana group in mid-Pacific. Area, 210 square miles; population on June 30, 1933, 19,770, including 18,477 natives, the U. S. naval personnel of 559, and non-natives residing in Guam numbering 764. The native population increased 180 during the preceding year. Capital, Agaña, with about 8500 inhabitants.

Enrollment in the 30 schools of all types on June 30, 1933, was 3764. There were 152 native teachers. On Jan. 1, 1933, a new policy providing for replacement of all American teachers with native teachers was adopted. Education is compulsory for children from 7 to 12. English, Spanish, and Chamorro are the languages spoken. Cacao, coffee, copra, corn, rice, sugar, sweet potatoes, fruit, and kapok are produced and some copra and coconut oil are exported. Trade is chiefly with the United States and the Philippines. During the fiscal year 1932-33 imports were \$379,120 and exports \$52,196. A total of 55 vessels entered and cleared Apra Harbor during the year.

An epidemic of measles, with 3063 known cases, raged from June, 1932, to January, 1933, causing 152 deaths. A new set of civil and criminal codes and procedure in the judiciary system was completed during 1933, to become effective in 1934. The Guam Museum, containing relics of the ancient Chamorro civilization and of Spanish days, was formally opened Nov. 1, 1932. The island suffered little from the economic depression. Guam is a U. S. naval station, of which the governor, who is appointed by the President, is commandant. There is a native Congress, with advisory powers. Commandant Edmund S. Root, U. S. Navy, served as Governor until June 21, 1933, when he was relieved by Capt. George A. Alexander, U. S. Navy.

GUATEMALA, gwä'tä-mä'eä. A Central American republic. Capital, Guatemala City.

AREA AND POPULATION. With an area of 42,364 square miles, Guatemala had a population estimated at 2,095,242 in 1932 (2,004,900 at the 1921 census). About 27 per cent of the people live in incorporated towns. In 1931 births numbered about 100,300; deaths, 46,600. Populations of the chief towns (1921 census) were: Guatemala, 115,447 (1932 estimate, 141,482); Quezaltenango, 18,684; Zacapa, 5087; Cobán, 4643; Mazatenango, 4609; Escuintla, 4595. The elementary school enrollment was 88,219 in 1932; secondary, 674; university, 619. About 80 per cent of the people are illiterate.

PRODUCTION. Agriculture is the principal occupation. Coffee, the chief crop, comprised 70 per cent of the total exports in 1932; bananas, about 24 per cent. Sugar is the other export crop. Corn, wheat, rice, and potatoes are raised for domestic consumption. Coffee production in 1932-33 was 98,390,000 pounds (96,211,000 in 1931-32). Live-stock in 1931 included 387,000 cattle, 147,000 sheep, 16,000 goats, 87,000 swine, and 91,000 horses, mules, and asses. The forests produce hardwoods and chicle. Mineral production was: Gold, 10,332 ounces in 1932 (13,146 in 1931); lead, 368,000 pounds in 1932 (373,000 in 1931); salt, 20,000,000 pounds in 1931. Industrial establishments are confined chiefly to coffee-cleaning plants and sugar mills.

COMMERCE. Including the value of parcel-post

trade, general imports in 1932 were valued at \$7,468,000 (\$12,971,000 in 1931) and exports at \$10,661,000 (\$15,167,000 in 1931). The principal overseas imports in 1932 were cotton fabrics, wheat flour, cotton yarn and thread, gasoline and naphtha, machinery and tools. The chief exports of domestic products, by quantity and value, were (1932): Coffee, clean, 97,407,000 pounds, \$7,203,000; coffee, in shell, 3,093,000 pounds, \$183,000; bananas 5,248,000 bunches, \$2,624,000; gold, \$155,000; chicle, 651,000 pounds, \$141,000; cattle hides, 805,557, \$109,000. Exports in 1932 were distributed as follows: United States, 37.2 per cent (35.4 in 1931); Germany, 28.3 (33.1); United Kingdom, 4.9 (2.1). Of the 1932 overseas imports, the United States supplied 51.7 per cent (54.9 in 1931); Germany, 12.2 (12.7); the United Kingdom, 10.7 (8.9).

FINANCE. Government financial reports, which omit a number of small transactions, showed actual receipts in the fiscal year ended June 30, 1932 of 9,220,000 quetzales and expenditures of 9,876,000 quetzales (excluding obligations incurred but not paid of 1,086,087 quetzales). The 1932-33 budget estimates balanced at 7,980,000 quetzales. The public debt on Dec. 31, 1932, totaled 19,136,000 quetzales (external, 11,477,000; internal, 4,171,000; floating, 4,488,000). The government suspended amortization payments on the public debt early in 1932, but continued to make interest payments. The unit of currency is the quetzal (par value, \$1).

COMMUNICATIONS. Guatemala in 1932 had about 790 miles of railway line, of which 509 miles were operated by the International Railways of Central America. There were 1396 miles of highway in 1929. Air services linked Guatemala City with most of the chief cities of the Americas. In 1932, 1000 vessels of 2,175,700 net registered tons entered the ports of Guatemala.

GOVERNMENT. The Constitution of Jan. 1, 1928, vests executive power in a president elected for six years and ineligible for reelection for 12 years. Legislative power rests in the National Assembly of 69 members, elected for four years by universal suffrage. A council of state of seven members, three elected by the National Assembly and four appointed by the President, has large advisory powers besides supervising public contracts and concessions. President in 1933, Gen. Jorge Ubico, who assumed office Feb. 14, 1931.

HISTORY. The principal event in Guatemalan history during 1933 was the peaceful and definite settlement of the century-old boundary dispute with Honduras. Guatemala and Honduras agreed to arbitrate this dispute by a treaty signed in Washington, July 16, 1930. A Special Boundary Tribunal was established under the treaty, with Charles Evan Hughes, Chief Justice of the United States, as president. The other two members were Dr. Luis Castro Urefia of Costa Rica and Dr. Emilio Bello Codesido of Chile. Guatemala and Honduras were represented before the tribunal by Dr. Carlos Salazar and Dr. Mariano Vasquez, respectively. The decision of the tribunal was announced Jan. 23, 1933, at a public session of the Pan American Union in Washington. The boundary, as fixed, runs from the summit of Cerro Montecristo on the Salvadorean boundary to the point where the Motagua River enters the Gulf of Honduras, the disputed area being divided essentially on the basis of the status quo of actual occupation. For a discussion of legal points involved in the tribunal's decision, see the *Bulletin*

of the Pan American Union, April, 1933, p. 311-314.

Guatemala's judicial and civil codes were revised and modernized during 1933, the new codes going into effect June 30. The judicial code was revised by the decree law of May 19; the civil code by the decree law of May 21. One provision of the civil code required foreign companies and partnerships doing business in Guatemala to establish a branch or agency with a duly employed agent, to keep books of accounts in Spanish in Guatemala, and to submit to the courts and laws of that country in all controversies arising out of such business.

GUIANA. See **BRITISH GUIANA**; **FRENCH GUIANA**; **SURINAM**.

GYDNIA. See **POLAND**.

GYMNASTICS. Alfred Jochim, of the Swiss Turn Verein, Jersey City, had things his own way in 1933 gymnastic circles, winning several Metropolitan titles and then taking the national all-around championship at Chicago. In the nationals he won four individual titles,—calisthenics, parallel bars, side horse, and long horse—to succeed Frank Haubold as champion. Out of a possible 390 points, Jochim scored 347. Edward Henning of the Germania Turn Verein of Baltimore captured the national club swinging; Randall Brydan of Southern California, the rope climb; Arthur Gilmore of Long Island City the flying rings; and Jack Hoest of Los Angeles the title on the horizontal bar.

Miss Consuelo Caruccia of the Germania Turn Verein of Baltimore captured the women's national all-around, taking the individual calisthenics title and amassing a total in the all-around of 188.5 out of a possible 210. Miss Vera Steppich of the New York Turn Verein took both the parallel bars and flying rings individuals and Miss Roberta Franck of the Philadelphia Turn Verein, took side horse honors.

For the second time in a row the United States Naval Academy won the intercollegiate title.

HADRAMAUT, THE. See under **ARABIA**.

HAITI, ha'ti. A republic in the West Indies, occupying the western third of the island of Haiti or Hispaniola. Capital, Port-au-Prince. The Dominican Republic or Santo Domingo comprises the remainder of the island. See **DOMINICAN REPUBLIC**.

AREA AND POPULATION. Haiti has an area of 10,204 square miles. The population (1929) was estimated at 2,550,000, or about 250 per square mile. The population is largely Negro, but there are large numbers of mulattoes, descended from former French settlers, and some 3000 white foreigners. The estimated population of Port-au-Prince in 1929 was about 80,000; 1927 estimates gave the towns of Cape Haitien and Aux Cayes 12,500 each, Gonaives, 10,000, St. Marc 8000, and Jacmel 7500. The language of the educated classes is French and that of the masses a dialect known as Creole French.

EDUCATION. The bulk of the population is illiterate. In 1930-31, there were 1129 schools of all descriptions, with 92,355 pupils.

PRODUCTION. Agriculture is almost the sole support of the island's population and coffee is the crop on which the prosperity of the people largely depends. The shrinkage in coffee exports from 90,712,000 pounds, valued at \$17,916,000, in 1927-28 to 51,050,771 pounds, valued at \$5,267,045, in 1931-32, greatly depressed the already low standard of living of the masses. In

1932-33 exports rose to 91,840,700 pounds, valued at \$7,250,430. Cotton, sugar, and cacao are other important crops, while the cultivation of sisal and pineapples is increasing. Logwood, cashew nuts, and bananas also are exported. For exports of the other leading products in 1932-33, see *Commerce*. Mining is commercially unimportant and manufacturing is confined to the production of sugar, alcohol, rum, and molasses, tobacco products, vegetable lard compounds, canned fruit, etc. Agricultural labor is obtainable at from 20 to 40 cents per day.

COMMERCE. For the fiscal year ended Sept. 30, 1933, exports amounted to 46,650,366 gourdes (\$9,330,000), as against 36,106,394 gourdes (\$7,221,279) in the previous year, or an increase of 29 per cent. Imports were valued at 38,333,943 gourdes (\$7,666,788), compared with 37,305,551 gourdes (\$7,461,110) in 1931-32, an increase of 3 per cent. The 1932-33 exports of coffee increased 80 per cent in quantity and 38 per cent in value over the 1931-32 exports. The other chief export items in 1932-33 were: Cotton, 12,862,262 pounds valued at \$926,972; sugar, 66,467,136 pounds, \$444,219; sisal, 8,221,525 pounds, \$228,150; logwood, 31,084,185 pounds valued at \$130,712. France took 54.18 per cent of the value of all exports in 1932-33, the United Kingdom 11.48 per cent, and the United States 6.26 per cent. The United States supplied 62.22 per cent of the imports and the United Kingdom 12.70 per cent.

FINANCE. Revenues during the 1932-33 fiscal year amounted to 37,305,299 gourdes (1 gourde equals \$0.20), against 28,024,000 gourdes in 1931-32, an increase of 33.1 per cent. The 1932-33 revenues were greater than in any years of the present century, except for the period 1925 to 1930. In spite of an extensive public works programme, financed entirely from revenue, expenditures from revenue in 1932-33 were but 33,258,808 gourdes, compared with 32,888,112 gourdes in 1931-32. The 1932-33 surplus of 4,046,491 gourdes nearly equaled the 1931-32 deficit of 4,864,370 gourdes. The unobligated treasury surplus as of Sept. 30, 1933, amounted to 15,180,000 gourdes. The gross public debt on Sept. 30, 1933, stood at 66,901,000 gourdes, as against 72,626,000 gourdes a year earlier.

COMMUNICATIONS. The two privately-owned railway systems have a total of 158 miles of line. Communication is mainly by highways, which extended 1072 miles in 1931. Motor highways had a length of 935 miles in 1932. A total of 595 vessels of 1,296,000 net tons entered the ports in 1931-32.

GOVERNMENT. The Constitution of July 21, 1932 provided for a two-chambered national legislature elected for four years and a president, elected for six years and ineligible for reelection. The President in 1933 was Sténio Vincent, elected Nov. 18, 1931, by the 36 Deputies and 15 Senators sitting as a National Assembly. The 1932 Constitution provides for 20 Senators. Under the American-Haitian treaty concluded Sept. 16, 1915, to expire in 1936, the constabulary, finances, public health, public works, and agriculture of Haiti were placed under the supervision of American advisers appointed by the President of Haiti on recommendation of the President of the United States. The administration of public health, public works, and agriculture was turned over to Haitian officials in 1931, the United States retaining control of finances and the con-

stabulary. American Minister in 1933, Norman Armour, appointed Aug. 13, 1932.

HISTORY. A new agreement for the withdrawal of American control in Haiti was signed in Port-au-Prince Aug. 7, 1933 by Foreign Minister Blanchet and the American Minister. It replaced the treaty of Sept. 3, 1932, which was negotiated by the government of President Vincent but unanimously rejected by the National Assembly Sept. 21, 1932. Taking the form of an executive agreement, the new understanding did not require ratification by the Haitian National Assembly. It provided for the complete Haitianization of the local constabulary by Oct. 1, 1934, and for the unconditional withdrawal of the American marines within the following 30 days. In the previous agreement, withdrawal of the American marines was provided for at the end of 1934, but only on condition that serious disturbances did not previously arise. The new convention provided also that the President of Haiti might ask an American military mission to remain in Haiti, subject to much greater native control than was contemplated in the 1932 agreement. The mission was to be limited to seven officers, with powers defined by the Haitian President. Either party might request its withdrawal, upon 60 days' notice.

The financial provisions of the 1933 agreement differed little from those in the previous agreement, and consequently evoked hostility in some Haitian circles. An American fiscal representative was authorized to collect the Customs and to inspect the Internal Revenue Service until the outstanding foreign bonds are paid off, probably in 1944. Regulations which some observers considered more stringent than those already in existence were imposed upon the financial administration of the Haitian government by the agreement. Under the financial arrangement, also effective Oct. 1, 1934, the present American Financial Adviser-General Receiver and his deputy were to be replaced by a fiscal representative and a deputy to be appointed by the President of Haiti, on nomination of the American President. Haitians were to take over full control of the Internal Revenue Service, but the Fiscal Representative was to continue in control of the Customs. The agreement was made possible largely through the efficient administration of Haiti by the Vincent government, Secretary of State Hull announced on August 8.

Haitian objections to the financial clauses of the agreement were voiced by Dantes Bellegarde, Haitian Minister to the United States, in his farewell address before a meeting of the governing board of the Pan American Union in Washington Nov. 2, 1933. Alluding to the United States, he said that "the financial aggressor is he who administers, by his functionaries, the finances of another independent state." M. Bellegarde, who had on previous occasions openly attacked American policies in Haiti, was recalled and replaced at Washington by Albert Blanchet, previously Foreign Minister.

On November 16 President Vincent wrote to President Roosevelt asking the immediate termination of the American financial administration. He declared Haiti's intention to carry out the agreement of August 7, but stated that the financial clauses infringed on Haitian sovereignty. He expressed the hope that the United States "will be able to renounce a useless financial control in Haiti by a spontaneous act which would

be the most eloquent affirmation of a common will toward friendship . . ." President Roosevelt replied early in December that unescapable treaty obligations prevented the withdrawal of the American financial administration, unless a refunding arrangement satisfactory to American holders of \$12,600,000 in Haitian bonds could be worked out. The President said the United States would welcome an arrangement which would permit the early withdrawal of the financing administration. At the Pan American Conference (q.v.) in December, 1933, the Haitian delegation attempted unsuccessfully to secure the adoption of a non-intervention resolution in such form that it would compel the United States to end its financial control in Haiti.

FRAUD BY AMERICAN OFFICIAL. On Apr. 13, 1933, the U. S. Department of State made public a confession in which David P. Johnson, American Collector of Customs at Port-au-Prince, admitted accepting bribes from local merchants and importers. Following his confession, the State Department on April 11 waived Johnson's immunity as a treaty official and surrendered him to the jurisdiction of the Haitian courts.

HALE, LOUISE CLOSSER. An American actress and author, died in Hollywood, Calif., July 26, 1933. Born in Chicago, Ill., Oct. 13, 1872, she received her training for the stage at the American Academy of Dramatic Arts, making her debut in Detroit in 1894 in *In Old Kentucky*. Five years later, appearing in several minor rôles, she was married to Walter Hale, the painter and etcher. She scored a success during 1903-04 in Shaw's *Candida* and then went to London where during 1907-09 she played the part of Miss Hazy in *Mrs. Wiggs of the Cabbage Patch*. Her next important rôle was that of the Fairy Berylune in the New York production of Maeterlinck's *Blue Bird* in 1910. After appearing in *The Rainbow* (1912-13), *The Marriage of Columbine* (1914), *The Clever Ones* (1915), *His Bridal Night* (1917), and *For the Defense* (1919), she created in 1920 the part of Mrs. Atkins in *Beyond the Horizon*, Eugene O'Neill's first successful Broadway production. Later that year she appeared as "Grandma" Bett in the dramatization of Zona Gale's *Miss Lulu Bett*, the first of a series of successful characterizations of elderly women. Among the others were Asa in Ibsen's *Peer Gynt* (1923), Mrs. Smith in *Expressing Willie* (1924), Anna in *The Ivory Door* (1927), and Cora Sabot in *Paris* (1928).

In 1929 Mrs. Hale went to Hollywood where she was cast in *The White Sister*, *Letty Lynton*, *Shanghai Express*, *Another Language*, *Dinner at Eight*, and other outstanding motion pictures. Besides numerous short stories and magazine articles she published the novels *A Motor Car Divorce* (1906); *The Actress* (1909); *The Married Miss Worth* (1911); and *Her Soul and Her Body* (1912). Among her travel books were *We Discover New England* (1915); *We Discover the Old Dominion* (1916); and *An American's London* (1920). She wrote also *Home Talent* (1926) and *The Canal Boat Fracas* (1926).

HAMBURG, STATE AND FREE CITY OF. A state of the German Reich on the River Elbe and between the Prussian provinces of Hanover and Schleswig-Holstein. Total area, 160 square miles; total population (June 16, 1933), 1,181,548. The estimated population on Oct. 10, 1929 of each of the two divisions of the state was: City of Hamburg, 1,143,079; Landgebiet, 83,032. In 1932

there were 315 elementary schools with 113,129 pupils; 33 higher schools with 14,451 pupils; and 3777 matriculated students at the University of Hamburg.

Hamburg is the chief seaport of Germany. In 1931, 19,871 ships aggregating 20,774,510 tons entered the port and 21,758 ships aggregating 20,642,139 tons cleared. The ordinary budget for 1932 was balanced at 362,924,000 reichsmarks, and the public debt on Mar. 31, 1932 was 410,860,000 reichsmarks. Starting on April 8, 1933 the parliamentary system of government was abolished by Chancellor Hitler who appointed a regent to govern the state. See GERMANY under *History*.

HAMILTON COLLEGE. A non-sectarian institution for the higher education of men in Clinton, N. Y., founded in 1812. A total of 469 students was registered for the 1933 autumn session. There were 43 members of the faculty for the year 1933-34. The productive funds of the college were approximately \$4,190,000 and the income for the year 1932-33 was \$368,000. The library contained 153,426 volumes, and 32,600 pamphlets. President, Frederick C. Ferry, Ph.D., Sc.D., LL.D.

HAMPTON INSTITUTE. An institution founded in 1868 at Hampton, Va., for the education of Negroes. The enrollment for the autumn term of 1933 was 989, while that for the summer school was 702. The faculty numbered 157. The endowment for the fiscal year ending June 30, 1933, was \$9,889,615, from which the income was \$596,856. Gifts to the endowment and investment funds amounted to \$33,531. There were 83,914 volumes in the library. Kelsey Hall, a new women's dormitory, was completed during the year. President, Arthur Howe.

HANDBALL. The amazing increase in interest in the game of handball throughout the United States, and the defeat of the 1932 national champion, were the high spots in the 1933 season. In every section of the country, and in a marked degree in the schools, the game grew and brought new experts to the firing line for the various championships. At the end of the year petitions were being raised in almost every city for more and more handball courts and the clubs and recreation centres with courts were beset with anxious crowds of players.

Angelo Trulio of the New York Athletic Club, who held six four-wall titles at the close of 1932, lost half of his possessions in 1933. He dropped out of the national championship at Detroit in the semi-final round, falling before Sam Atcheson, of Memphis, 1932 finalist, eventual 1933 champion. Atcheson, after a dozen years of striving for the honors, took the championship, defeating Sam Hobelman, of Cleveland, in the final, 21-11, 21-6. Joe Godreau and Jack Endsavick of Cleveland captured the doubles.

Trulio retained both his singles and doubles crowns in the New York State championships, beating Edward Hahn, of the Pastime A.C. in the singles and pairing with Maynard Laaswell to take the doubles. He also took the metropolitan singles but the doubles went to Hahn and John Dunwoody of the Pastime A.C. Charley Mentz, of Cleveland won the national four-wall junior singles and the New York A.C. team of Ray Ruddy and Frank Coyle took the doubles.

In one-wall competition, limited mainly to the New York City district, Irving Jacobs won the national A.A.U. title and Jack London and Cy

Alexander of the Trinity Club the doubles. Lou Lubin was crowned Metropolitan singles champion and the doubles was won by Harry Dolinger and Dan Levinson.

HANSBROUGH, HENRY CLAY. An American publisher and legislator, died in Washington, D. C., Nov. 16, 1933. Born at Prairie du Rocher, Randolph Co., Ill., Jan. 30, 1848, he received a common school education and then went to California to seek his fortune. After learning the printing trade he published a daily newspaper at San José during 1869-70 and then became associated with the San Francisco *Chronicle*, of which he was managing editor until 1879. Following another publishing venture at Baraboo, Wis., he removed in 1882 to the Territory of Dakota, establishing at Grand Forks a daily newspaper and two years later a weekly at Devils Lake. He thereafter made his permanent residence at Devils Lake, his initial step in politics being as its mayor for two terms.

Mr. Hansbrough sponsored the movement to divide the Territory of Dakota and admit it to the Union as two States, and in 1889, on the ratification of North Dakota's constitution, he was elected the State's first representative to the 51st Congress. As a member of the United States Senate during the next three terms (1891-1909) he fostered the Reclamation Act of 1902 and in 1907 secured passage of the law permitting small distillers to manufacture alcohol without payment of a tax for denaturation. He aided also in abolishing the Louisiana State Lottery through his support in 1894 of the bill prohibiting the use of the United States mails for the transmission of lottery tickets or advertisements.

Mr. Hansbrough was a delegate to the Republican National Conventions of 1888, 1892, 1900, and 1904 and was also a member during 1888-96 of the Republican National Committee. In the 1916 and 1928 presidential campaigns, however, he supported the Democratic candidate and in 1932 was a member of the board of the National Progressive League. He wrote *The Wreck* (1913) and *War and Woman* (1915).

HARBORS. See PORTS AND HARBORS.

HARDINGE, SIR ARTHUR HENRY. A British diplomat, died at East Sheen, Surrey, England, Dec. 29, 1933. Born Oct. 12, 1859, he was graduated from Balliol College, Oxford, and then entered on his career with the Foreign Office, serving in 1885 as second secretary and précis writer to Lord Salisbury when the latter became Prime Minister and Secretary of State for Foreign Affairs. In 1888 he was attached to the British Embassy in St. Petersburg (later Leningrad) as second secretary and two years later accompanied the Czarevitch (later Nicholas II) on a tour of India. He was acting chargé d'affaires at Bucharest in 1890 and acting consul-general at Cairo in 1891 and in Zanzibar in 1894. From 1896 to 1900 he served as commissioner and consul-general in the British East Africa Protectorate.

Sir Arthur's first ministerial post was at Teheran where he served from 1900 to 1905. He was then transferred to Brussels where during the days of pre-war tension it was his duty to keep the Foreign Office informed of the probable attitude of Belgium in the event of war between France and Germany. After serving as Minister to Portugal during 1911-13, he was appointed Ambassador to Spain and throughout the War carefully guarded the interests of Great Britain in that country. For his action in 1916 in forestalling the German government by buying the

stock control of two Spanish railroads, traversing a section in which there were British-owned mines, he was warmly commended.

Following his retirement from the diplomatic service in 1920, Sir Arthur wrote *A Diplomatist in Europe* (1927) and *A Diplomatist in the East* (1928). He was created a Companion of the Bath in 1895, Knight Commander of St. Michael and St. George in 1897, Knight Commander of the Bath in 1904, and Knight of the Grand Cross of St. Michael and St. George in 1910.

HARMSWORTH TROPHY. See MOTORBOATING.

HARNESS RACING. See HORSE RACING.

HARVARD UNIVERSITY. A nonsectarian institution of higher education for men in Cambridge, Mass., founded in 1636. The number of students enrolled for the year 1933-34 was 7938, distributed as follows: College, 3450, including 650 seniors, 718 juniors, 988 sophomores, 1052 freshmen, and 42 out-of-course. Graduate schools: arts and sciences, 915; business administration, 811; education, 261. Professional schools: engineering (undergraduate and graduate), 173; divinity, 63; law, 1462; medicine, 516; dentistry, 132; public health, 24; architecture, 60; landscape architecture, 33; city planning, 11; special students 27. For the summer session of 1933, the registration was 1506. The officers of instruction and administration for 1933-34 numbered 1692, of whom 268 were professors, 99 associate professors, and 155 assistant professors.

Visiting professors and lecturers during the year included: Georges Valiron, member of the faculty of sciences at the Sorbonne, who came as exchange professor from France for the first half-year; Miles Lawrence Hanley, associate professor of English at the University of Wisconsin, who came as lecturer on English for the academic year; James Blaine Hedges, George L. Littlefield professor of American history at Brown University, who came as a lecturer on history for the first half-year; Raymond Leslie Buell, research director of the Foreign Policy Association, who came as lecturer on government for the first half-year; Norman Alexander Robertson, under-secretary, Department of External Affairs of Canada, who came as lecturer on government for the academic year; Eugen Rosenstock, professor of applied law at the University of Breslau, who came as a visiting lecturer on government for the academic year; Hugo Leichtentritt, a teacher of composition and history of music in Berlin, who came as lecturer on music for the first half-year under the Horatio Appleton Lamb Foundation; Laurence Binyon, Deputy Keeper of the British Museum, who came as Charles Eliot Norton professor of poetry for the academic year; and Wilhelm Köhler, director of the Weimar State art collection, who returned as Kuno Francke professor of German art and culture for the first half-year.

The book value of endowment funds of the university in June, 1933, exclusive of land and buildings used for educational purposes, was \$126,126,368. The total expenses for the year was \$12,986,242. Building activity included the completion of the group of buildings comprising the new Oak Ridge Astronomical Observing Station at Harvard, Mass., and also of Gregory S. Bryant Hall, a new residential unit of Kirkland House. The library contained 3,471,934 volumes and pamphlets. President, James Bryant Conant,

Ph.D., who succeeded Abbott Lawrence Lowell on his resignation in June, 1933.

HAVERFORD COLLEGE. An institution of higher education under the control of the Society of Friends in Haverford, Pa., founded in 1833. Registration for the autumn term of 1933 totaled 319 students. There were 45 members on the faculty. The productive funds of the institution amounted to \$4,020,387 (book value). The library contained 120,648 volumes. President, William Wistar Comfort, Ph.D., Litt.D., LL.D.

HAWAII, hä-wŭ'ē. A territory of the United States, consisting of a group of islands in the Pacific Ocean 2809 miles southwest of San Francisco. Capital, Honolulu.

AREA AND POPULATION. Hawaii has an area of 6407 square miles and a population estimated on June 30, 1933, at 380,211 (368,336 at the census of 1930). The population of the nine inhabited islands at the 1930 census was: Oahu, 202,887; Hawaii, 73,325; Maui, 48,756; Kauai, 35,806; Molokai, 5032; Lanai, 2356; Niihau, 136; Midway, 36; and Kahoolawe, 2. The estimated population, by racial descent, as of June 30, 1932, was: Japanese, 146,189; Filipino, 65,515; Chinese, 27,235; Hawaiian, 22,230; Caucasian-Hawaiian, 17,056; Asiatic-Hawaiian, 14,459; Portuguese, 28,595; Puerto Rican, 7000; Spanish, 1253; other Caucasian, 43,517; Korean, 6653; all others, 805; total, 380,507. Of the 1930 census population, 81.4 per cent were native born (65.9 per cent in 1920). The estimated population of the chief cities on June 30, 1932, was: Honolulu, 144,018; Hilo, 15,450.

EDUCATION. Public-school enrollment for the 1932-33 term was: Elementary, 52,825; intermediate, 10,906; high schools, 6366; total, 80,097, or an increase of 1863 over the preceding year. On June 30, 1933, there were 184 public schools, with 2636 teachers and 80,161 pupils; and 79 private schools with 580 teachers and 12,589 pupils. Japanese comprised 54.40 per cent of all children enrolled in public schools. The total expenditure on public instruction for the fiscal year ended June 30, 1933, was \$5,341,253. The University of Hawaii at Honolulu had 2206 students of all classes in 1930-31 (1369 regular undergraduates).

PRODUCTION. The chief crops are sugar and pineapples, produced largely on plantations operated by corporations. Coffee, bananas, rice, sisal, tobacco, cotton, and meat are other products. Production of raw sugar for the year ended Sept. 30, 1932, was 1,025,354 short tons, the largest ever recorded; it was harvested from 139,744 acres. In 1932-33, the sugar crop was 1,008,000 short tons. The pineapple pack in 1931 was 12,726,000 cases (of 24 cans each). Shipments of canned pineapple to the United States in 1932 totaled 388,068,857 pounds, valued at \$20,591,503 (434,884,057 pounds, valued at \$23,925,003, in 1933). Coffee shipments to the United States were 7,759,695 pounds, valued at \$925,677, in 1932 (4,158,135 pounds, valued at \$536,379, in 1933). There were 21,028 persons engaged in mining and manufacturing industries in 1930, most of them in sugar refining and pineapple canning. The tourist trade is an important source of income. In 1932 10,370 tourists visited the islands (15,780 in 1931).

COMMERCE. For the calendar year 1932 imports were valued at \$63,556,022, of which \$58,504,394 were imports from the United States, and exports totaled \$83,448,296, of which \$82,688,205 were exports to the United States. This compared with the 1931 imports of \$86,956,768 (\$79,092,387 from

the United States) and exports of \$102,737,835 (\$101,548,555 to the United States). In the calendar year 1933, imports from the United States were valued at \$57,894,488 and exports to the United States at \$93,641,887. The chief 1933 exports to the mainland, in order of value, were: Sugar, \$65,495,134 (raw sugar, \$63,454,273); pineapples, \$23,979,253 (canned pineapples, \$23,925,003); coffee, \$536,379; paper and paper manufactures, \$371,414; dried and canned fish, \$303,533; molasses, \$201,002.

FINANCE. For the fiscal year ended June 30, 1933, total receipts of the Territorial government from revenue were \$11,116,180 and total payments for governmental costs were \$11,755,210. Total revenue and non revenue receipts, including loans for the Territory and its counties, aggregated \$21,107,905, while total governmental and nongovernmental payments were \$22,569,011. The net cash available for the ensuing year on June 30, 1933, was \$378,833, as compared with \$1,850,743 on June 30, 1932. The bonded debt on June 30, 1932, was \$32,405,000. The U. S. Internal Revenue Service collected \$3,067,249 in Hawaii in 1932-33 (\$3,785,879 in 1931-32).

COMMUNICATIONS. Hawaii had 276.97 miles of steam railways in 1933, exclusive of plantation railroads. In 1932-33 the railways carried 1,579,195 tons of freight and 474,253 passengers. The inter-island steamship service in 1932-33 carried 103,312 passengers and 220,836 tons of freight. An inter-island airplane service was maintained.

GOVERNMENT. The Governor and Secretary of the Territory are appointed for four years by the President of the United States. There is a legislature of two houses, the Senate of 15 members elected for four years, and the House of Representatives of 30 members, elected for two years. A delegate, elected biennially, represents the Territory in the United States Congress. Governor in 1933, Lawrence M. Judd; Secretary, Raymond C. Brown; delegate to Congress, Lincoln Loy McCandless. The House of Representatives elected in 1932 consisted of 31 Republicans and 14 Democrats.

HISTORY. Hawaiian officials during 1933 continued their efforts to eliminate the laxity in law enforcement and in the administration of justice revealed by the Massie case in 1931 and 1932. Under authority conferred upon him by the 1932 Legislature, Governor Judd secured a complete reorganization of the police department in Hawaii county, which includes the city of Honolulu. Rules and regulations governing the administration of the prison also were revised. Officers or employees of the prison were forbidden to engage in political activities and the examinations for appointment as officers and employees were made more strict.

The islanders were aroused by a bill introduced into the U. S. Congress which would enable the President to appoint a resident of the mainland as Governor. A commission consisting of Judge S. A. G. M. Robertson, William H. Heen, and Samuel W. King was sent to Washington in October, 1933, to oppose the bill.

The 17th regular session of the Legislature convened on Feb. 15, 1933. At the end of the 60-day period the session was extended for 30 days by executive order of the Governor, ending on June 1, 1933. On the last day of the session the Legislature passed an unemployment relief measure, levying a tax of one-half of 1 per cent upon salaries, wages, and dividends. An unemployment work relief commission of 10 members was provided for to

replace the temporary Governor's Commission on Unemployment Relief. During the period from Mar. 1, 1932, to June 30, 1933, the Governor's temporary relief organization had provided continuous or intermittent work relief for 4391 individuals, upon whom some 25,000 persons were dependent.

Another law passed by the Legislature provided for the appointment of commissions in the various counties to regulate the sale of beer and other malt and vinous beverages. Following the repeal of the Eighteenth Amendment a difference of opinion developed between the Department of Justice at Washington, which held that the Volstead Act was still in force in Hawaii inasmuch as Congress had not annulled it, and the local Federal officials, who held that the Territory was wet. The local authorities refused to intervene when a shipment of hard liquor was landed at Honolulu December 14 and distributed.

The greatest eruption of Mauna Loa volcano since 1903 was reported by the Kilauea Observatory on Dec. 2, 1933. Three columns of fumes rose 4000 feet above the peak, which itself rises 13,675 feet above sea level.

HAWKINS, SIR ANTHONY HOPE (Pen name, ANTHONY HOPE). A British novelist and playwright, died at Walton, Surrey, July 8, 1933. Born in London Feb. 9, 1863, he was educated at Marlborough and at Balliol College, Oxford, and was admitted to the bar of the Middle Temple in 1887. On discovering his literary bent, however, he devoted his energies after 1890 to fiction writing. His earliest publications were *A Man of Mark* (1890); *Father Stafford* (1891); *Mr. Witt's Widow* (1892); and *Sport Royal*, a collection of short stories (1893). In 1894 appeared *The Prisoner of Zenda*, the first of many novels of the "Ruritania" school whose scene, laid in an imaginary principality of southern Europe, afforded a happy combination of romanticism and modernity. It was followed by the delightful and brilliant *Dolly Dialogues* 1894 and the gayly-colored *God in the Car* (1894); *The Chronicles of Count Antonio* (1895); *The Heart of Princess Osra* (1896); *Phroso* (1897); *Simon Dale* (1898); and *Rupert of Hentzau* (1898), the latter being a sequel to *The Prisoner of Zenda*. *The King's Mirror* (1899) was considered by Sir Anthony to be his best romantic novel. Other notable novels of this period were *Quisante* (1900); *Tristram of Blent* (1901); *The Intrusions of Peggy* (1902); *The Indiscretion of the Duchess* (1904); *Double Harness* (1904); *A Servant of the Public* (1905); and *Sophy of Kronovia* (1906).

In *The Great Miss Driver* (1908) and *Mrs. Maxon Protests* (1910) Sir Anthony embarked on a type of society novel noted not only for its glamour of setting but for its deftness of dialogue. He developed this style further in *A Young Man's Year* (1915); *Captain Dieppe* (1918); *Baumaroy Home from the Wars* (1919); *Lucinda* (1920); and *Little Tiger* (1925); He also wrote several plays, of which the more successful were *The Adventure of Lady Ursula* and *Pilkerton's Peerage*. In 1927 he published his memoirs under the title of *Memories and Notes*. He was knighted in 1918.

HAY. Estimates published by the Department of Agriculture placed the hay crop of the United States in 1933 at 74,485,000 short tons, the area harvested at 66,144,000 acres and the average yield per acre at 1.13 tons. This crop, the fourth

successive short crop harvested, was 9.6 per cent below the crop in 1932 and 11.5 per cent below the average of 84,166,000 tons for the five years 1926-30. The 1933 production consisted of 65,852,000 tons of tame hay and 8,633,000 tons of wild hay. The tame production comprised 25,159,000 tons of clover and timothy hay, 24,899,000 tons alfalfa hay (see (see ALFALFA), 3,974,000 tons annual legume hays, and 4,531,000 tons grain hays. Larger acreages of clover and timothy, alfalfa, and grain hays were harvested in 1933 than in 1932 but this increase in acreage was offset by lower yields. The acreage of wild hay harvested in 1933 was only 86 per cent of the harvested acreage in 1932 and the production only 71 per cent of the 1932 crop. The yields of hay crop seeds were reported as follows: alfalfa seed 922,900 bu., red and alsike clover seed 1,399,600 bu., sweet clover seed 689,800 bu., and timothy seed 907,800 bu.

The leading tame hay producing states and their yields in 1933 were reported as follows: New York 4,576,000 tons, Iowa 4,141,000 tons, California 3,937,000 tons, Wisconsin 3,685,000 tons, and Minnesota 3,130,000 tons. These States produced over one-fourth of the tame hay crop of the country. The estimates of wild hay production in the leading States were as follows: Nebraska 1,760,000 tons, Minnesota, 1,240,000 tons, and North Dakota 1,028,000 tons. The low yields of these States as compared with 1932 were due mainly to drought. Over 75 per cent of the clover and timothy hay was produced in the section of the country from Missouri, Iowa, and Minnesota eastward. The crops of the leading States were estimated as follows: New York 3,422,000 tons, Pennsylvania 2,671,000 tons, Iowa 2,320,000 tons, and Wisconsin 2,103,000 tons. The largest production of hay from grains cut green was recorded for California, North Dakota, and South Dakota and of sweet sorghums for forage and hay for Texas, Kansas, Oklahoma, and Nebraska mentioned in decreasing order of yield. The production of sweet clover hay in 16 reporting States was estimated at 690,000 tons of which 270,000 tons were reported for North Dakota and Minnesota.

During the fiscal year ended June 30, 1933 the United States imported 9000 short tons and exported 2000 long tons of hay.

HERR, HERBERT THACKER. An American mechanical engineer, died in Philadelphia, Pa., Dec. 19, 1933. Born in Denver, Colo., Mar. 19, 1876, he was graduated from the Sheffield Scientific School of Yale University in 1899, and for the next two years served as a machinist and draftsman for the Denver and Rio Grande Railroad. He then became associated with the Chicago, Great Western Railroad as master mechanic at Des Moines and served in the same capacity with the Chicago division of the Atchinson, Topeka, and Santa Fe Railroad and the eastern division of the Norfolk and Western Railroad. In 1906 he returned to the Denver and Rio Grande as general superin-

tendent but retired shortly thereafter to become vice-president and general manager of the Duquesne (Ariz.) Mining and Reduction Co. In 1908 he began his long association with the Westinghouse Machine Co. as general manager and later vice-president. Upon the merger of the Westinghouse Machine Co. with the Westinghouse Electric and Manufacturing Co. in 1917, he was made vice-president of the latter, being given supervision of its South Philadelphia works where steam power apparatus of various kinds is designed and manufactured. He was also chosen vice-president of the Westinghouse Gear and Dynamometer Co.

Among Mr. Herr's inventions were a locomotive air brake equipment, a double-heading device for two or more locomotives, a load brake device, a remote control for marine steam turbines, as well as many improvements in turbines and oil and gas engines so as to increase their efficiency. The Franklin Institute awarded him the Longstreth medal in 1914 for his treatise on *Steam Turbines*, while the board of directors of City Trusts, Philadelphia, presented him the John Scott medal in 1931 for his various inventions and improvements in mechanical apparatus.

HESS, ALFRED FABIAN. An American physician, died Dec. 5, 1933, in New York City, where he was born Oct. 19, 1875. After graduating from Harvard University in 1897, he attended the College of Physicians and Surgeons of Columbia University, from which he received the M.D. degree in 1901, and later took post-graduate studies at the Universities of Prague, Vienna, and Berlin. His specialty was diseases of children. From 1915 to 1931 he was clinical professor in pediatrics at the University and Bellevue Hospital Medical College, and at the time of his death was a member of the department of pathology of the College of Physicians and Surgeons.

Dr. Hess's research experiments pertained especially to rickets, scurvy, tuberculosis, hæmophilia, and gastro-intestinal disorders. In 1927 the Franklin Institute awarded him the John Scott Medal in recognition of his discovery of the antirachitic properties of irradiated cod liver oil and milk. Due to the activation of ergosterol, certain inert substances in these foods, on suitable exposure to ultra-violet rays, are transformed into vitamin D, the principal preventive and cure of mild forms of rickets. The discovery, a coöperative enterprise, was announced simultaneously by Windaus in Germany and Rosenheim and Webster in England.

For the prevention and cure of infantile scurvy Dr. Hess was the first to prescribe tomato juice, containing vitamin C. The plan for the purification of New York City's milk supply, which he advocated in 1911 on account of the danger, especially to children, of infection from tubercle bacilli, was carried out through the pasteurization plants established by his wife's uncle, Nathan Straus. He discovered also thromboplastin, a substance which caused the blood to coagulate, and invented a special duodenal tube for intestinal investigations. In addition to many papers on pediatrics and experimental pathology he published the monographs *Scurvy, Past and Present* and *Rickets, Including Osteomalacia and Tetany*.

HIBBEN, JOHN GRIER. An American educator, killed in an automobile accident near Wood-

bridge, N. J., May 16, 1933. He was born at Peoria, Ill., Apr. 19, 1861, and was graduated in 1882 from Princeton University. He studied also at the University of Berlin (1882-83) and at the Princeton Theological Seminary (1883-86). Ordained to the Presbyterian ministry in 1887, he was pastor of the Falling Spring Church at Chambersburg, Pa., until 1891. He then took up the teaching of logic at Princeton, where after receiving his Ph.D. degree in 1893 he was assistant professor until 1897 and professor until 1912. On Woodrow Wilson's election as president of the United States he was chosen president of the institution.

During the early part of his administration Dr. Hibben introduced in the curricula of the academic and science schools at Princeton the four-department plan of study, covering philosophy, art and archæology, language and literature, mathematics and science. A secondary feature of the plan was that, after electing about half of their courses in some one department, the upper classmen might engage in independent research. The success of the experiment was considered one of the most progressive steps in modern education. Dr. Hibben also distinguished himself, on the entry of the United States into the World War, by being one of the first college administrators to establish Reserved Officers' Training Corps, supplemented by a naval unit in connection with the graduate school and research in sound ranging. In recognition of this service he was made an officer of the French Legion of Honor, a commander of the Belgian Order of the Crown, and a grand officer of the Order of St. Sava of Serbia. He retired on June 21, 1932, the fiftieth anniversary of his graduation.

Dr. Hibben edited the *Epochs of Philosophy* (12 vols., 1909) and wrote *Inductive Logic* (1896); *The Problems of Philosophy* (1898); *Hegel's Logic* (1902); *Deductive Logic* (1905); *The Philosophy of Enlightenment* (in *Epochs of Philosophy* series, 1909); *A Defense of Prejudice and Other Essays* (1911); and *The Higher Patriotism* (1915). He was a member of the National Institute of Arts and Letters.

HICKSITE FRIENDS. See FRIENDS, RELIGIOUS SOCIETY OF.

HILLQUIT, MORRIS. An American lawyer and Socialist leader, died in New York City, Oct. 7, 1933. He was born in Riga, Latvia, Aug. 1, 1869, where until 1886 he attended the Alexander Gymnasium. He then emigrated with his parents to the United States and two years later joined the Socialist party, his ability as a speaker and debater gaining him recognition from the first. On his graduation from the law school of New York University in 1893 he was admitted to the New York bar and practiced thereafter in New York City. He took a prominent part in the settlement of several strikes of the garment trade unions in New York City and in 1919 defended before the Legislative Committee the five Socialist members who had been expelled from the New York State Legislature on account of their political allegiance.

As a delegate to various national conventions of the Socialist party, Morris Hillquit played an important part in shaping its policies. He served as national committeeman from New York during 1902-06 and as a member of the party's National Council during 1907-17, being chosen chairman in 1917 when the council was superseded by the National Executive Committee. He

was also delegate to several international Socialist congresses and after 1904 represented the American party on the executive committee of the International Socialist Bureau in Brussels. In 1917 and again in 1932 he was Socialist candidate for mayor of New York City, polling on each occasion the largest Socialist vote in the history of the city. His writings included *History of Socialism in the United States* (1903); *Socialism in Theory and Practice* (1909); *Socialism Summed Up* (1912); *Socialism—Promise or Menace?* (a series of debates with the Rev. John Augustine Ryan, 1914); and *From Marx to Lenin* (1921). He was preparing his *Memoirs* at the time of his death.

HINKLER, HERBERT JOHN LOUIS. A British aviator, died in an aeroplane crash in the Apennines, northwest of Arezzo, Italy. He had been missing for three months when his body was found in the early part of May, 1933. He was born at Bundaberg, Queensland, Australia, Dec. 8, 1892. During 1911-12 he experimented with gliders, but it was not until the World War that he went seriously into aviation. During that period he was in the Royal Naval Air Service and the Royal Flying Corps. In 1920 he became associated with A. V. Roe, Ltd., remaining with this company for seven years, during which time he won several prizes in competition, and in 1925 accompanied, as a pilot, the British team that participated in the Schneider trophy seaplane race in Baltimore. In February, 1928, on his flight from Croydon Airport, England, to Port Darwin, Australia, in an Avro Avian light aeroplane, he broke the then-existing record of 28 days by making the flight in 15½ days. It was the longest solo flight that up to that time had been made.

The greatest feat performed by Hinkler was his flight in December, 1931, from New York to London by way of Brazil and Africa. The 2000 miles of flight across the Atlantic were made through a cloud bank nearly all the way. In 22 hours of blind flying he drifted only about 100 miles off his course, reaching the west coast of Africa at Bathurst instead of Dakar, which was his aim. This was the first west-to-east flight across the southern Atlantic Ocean and the first solo ocean crossing since Lindbergh's flight to Paris in 1927. On Jan. 7, 1933, Hinkler took off on a fast flight to Australia, which ended in his death in northern Italy.

HISPANIC SOCIETY OF AMERICA, THE. An international organization founded in New York City in 1904 to establish a public library and museum designed to be a link between the English-, Spanish-, and Portuguese-speaking peoples, and to advance the study of the Spanish and Portuguese languages, literature, and history, and the study of the countries wherein Spanish and Portuguese are or have been spoken languages. Since 1904, when a collection of paintings, manuscripts, maps, and coins, and a library of about 40,000 volumes were placed in charge of the society, valuable additions have been made to this collection, and a number of temporary exhibitions have been held of the works of noted Hispanic artists. Membership of the society is limited to 100, is honorary, and includes specialists and scholars of all nationalities distinguished in the Hispanic field. The society has published more than 300 catalogues, reprints of old manuscripts, and monographs. The president is Archer M. Huntington and the

secretary, George Bird Grinnell. The museum and headquarters of the society are at 156th Street, West of Broadway, New York City.

HISPANIOLA. Name adopted by the United States Geographic Board in 1933 for the island commonly known as Haiti. See **HAITI**; **DOMINICAN REPUBLIC**.

HISTORICAL ASSOCIATION, AMERICAN. A society for the promotion of historical studies and writings, formed in 1884 by a group of American scholars and chartered by Congress in 1889. Its membership in 1933 numbered 3047.

The association's forty-eighth annual meeting was held at the University of Illinois, Urbana, Ill., Dec. 27-29, 1933. Meeting concurrently were the Mississippi Valley Historical Association, Conference of State and Local Historical Societies, Agricultural History Society, National Council for the Social Studies, and American Society of Church History. Of timely interest were the discussions on economic depressions and recoveries, dictators and dictatorships, public opinion and foreign policies of Europe, foreign interests in the Caribbean, and governmental economic enterprise in Russia. The Jusserand Medal was awarded to Prof. Gilbert Chinard of the Johns Hopkins University for several works, especially *L'Amérique et le Rêve Éotique* and *Thomas Jefferson, Apostle of Americanism*; the George Louis Beer Prize, to Prof. Robert T. Pollard of the University of Washington for *China's Foreign Relations, 1917-1931*; and the John H. Dunning Prize, to Dr. Amos A. Ettinger of Allentown, Pa., for his monograph entitled *The Mission to Spain of Pierre Soule*.

The official organ of the association is the *American Historical Review*, a quarterly. The officers for 1933 were: president, Charles A. Beard, New Milford, Conn.; first vice-president, William E. Dodd, American Embassy, Berlin, Germany; second vice-president, Michael Rostovtzeff, Yale University; secretary, Dexter Perkins, University of Rochester; treasurer, Constantine E. McGuire, Washington, D. C.; executive secretary, Conyers Read, Philadelphia, Pa.; and assistant secretary-treasurer, Patty W. Washington. Headquarters are at 40 B Street, S.W., Washington, D. C.

HOBART COLLEGE. An institution for the higher education of men in Geneva, N. Y., founded chiefly under the auspices of the Protestant Episcopal Church in 1822 and permanently chartered by the Regents of the University of the State of New York in 1825. William Smith College, a coördinate institution for the separate instruction of women, administered by the Hobart College corporation, and with instruction given by the Hobart College faculty, was established in 1908. The student enrollment in Hobart College for the autumn of 1933 was 289, while the enrollment in William Smith College was 129. The combined faculty of the two colleges numbered 40. The library contains approximately 100,000 volumes and 25,000 unbound pamphlets. The endowment amounted to 1,200,000, and the income for the year was approximately \$362,638. President, Murray Bartlett, D.D., S.T.D., LL.D.

HOCKEY. ICE HOCKEY. The New York Rangers captured the highest honors in hockey—the Stanley Cup, emblematic of the world's professional championship—in 1933. After finishing third in the regular National League race, they swept through the play-offs and conquered the defending champions, the brilliant Toronto Maple Leafs, in the final. In the first round, the 1928 Stanley Cup winners eliminated the Montreal Canadiens on total goals, 8 to 5, and in the second round topped the Detroit Red Wings, 6 to 3. Meanwhile the Maple Leafs had reached the final by downing the Boston Bruins in three out of five games, taking the last of that series after a world's record over-time of 104 minutes, 46 seconds.

Bill Cook, captain of the Rangers led the league in individual scoring with twenty-eight goals and fifty points. Harvey Jackson of Toronto was second with a total of forty-four points.

A finish similar to that of the Rangers was staged by the Boston Cubs, who won the post-season series of the Canadian-American League after finishing third in the regular campaign. Boston downed the second-place Providence Reds in two straight games and then took the final from the Philadelphia Arrows, league leaders. London, which led the International League through the season, was pushed back into a tie for second place with Syracuse in the post-season series, the title going to Buffalo by an eight point margin.

Kansas City won the American Hockey Association play-offs, St. Louis finishing second and Tulsa third.

The world's amateur championship was won by the Massachusetts Rangers, who defeated the Toronto Nationals in an over-time game at Prague, Czechoslovakia, 2 to 1. The Atlantic City Sea Gulls won the United States amateur title for the second successive season by taking all six of their games in the A.A.U. round robin tournament. The Sea Gulls furnished a great attraction for amateur hockey and their games were well attended. In an exhibition game at Atlantic City they set a world's record for hockey attendance, when 22,157 watched them play.

The historic Allan Cup, symbolic of the amateur championship of Canada, went to the Moncton Hawks of New Brunswick, who brought the trophy to the Maritime provinces for the first time in history. Harvard and the University of Minnesota turned out the best college sixes, Harvard winning in the east and the Minnesotans proving impregnable in mid-western company.

FIELD HOCKEY. For the first time in nine years a women's field hockey team from the United States invaded Europe and also competed in the international tournament at Copenhagen, in which the touring Americans did well, taking all five of their games, a record equaled only by England, which played only three games.

After the Copenhagen tourney, the players toured Germany, Holland, England, Ireland, Scotland, and Wales, capturing eleven of the twenty-three matches on the tour. This was in marked contrast with the 1924 trip when the United States players won only one match. Upon its return to this country, the all-America team swept the national tournament at Chicago.

HOLLICK, CHARLES ARTHUR. An American geologist and botanist, died in New York City, Mar. 11, 1933. Born at New Brighton, Staten Is-

land, N. Y., Feb. 6, 1857, he was graduated from the Columbia School of Mines in 1879 and received his Ph.D. degree from Columbian (now George Washington) University in 1897. In 1881 he joined the United States Geological Survey, of which he was senior geologist at the time of his death. He was also curator of the department of fossil botany of the New York Botanical Garden, 1900-13; honorary curator, 1914-21; and paleobotanist after 1921. In 1914 he became director of the Public Museum of the Staten Island Institute of Arts and Sciences, which post he held until 1919. He served as commissioner and president of the Richmond County (N. Y.) park commission (1897-1904) and as a member of the New York City Board of Education (1907-10).

Dr. Hollick's writings dealt with the fossil botany and geology of the eastern United States, especially New York, New Jersey, and Maryland, and include *The Flora of the Amboy Clays*; *The Later Extinct Floras of North America* (edited from MS. notes of the late John Strong Newberry); and *The Cretaceous Flora of Southern New York and New England* (monograph No. 50, U. S. Geological Survey). He was a contributor to the NEW INTERNATIONAL ENCYCLOPEDIA.

HOLMES, WILLIAM HENRY. An American anthropologist and archaeologist, died at Royal Oak, Mich., Apr. 20, 1933. He was born in Harrison Co., Ohio, Dec. 1, 1846. After graduating from the McNeely Normal College in 1870, he was assistant to the United States Geological Survey (1872-80), during which period he participated in Dr. Ferdinand V. Hayden's explorations in the Rocky Mountain region and superintended the survey of the San Juan territory. On the reorganization of the Survey in 1880 he was appointed geologist in charge of the department of illustrations, serving until 1889. In 1882 he became curator in the department of aboriginal pottery of the United States National Museum and in 1889 archaeologist with the Bureau of American Ethnology, in charge of explorations. He served from 1894 to 1897 as professor of anthropic geology at the University of Chicago and as curator of anthropology with the Field Museum of Natural History, and from 1898 to 1902 as head curator of the department of anthropology at that museum.

Returning to Washington, Dr. Holmes held the offices of chief of the Bureau of American Ethnology (1902-09); head curator of anthropology with the United States National Museum and curator of the National Gallery of Art (1910-20); and director of the National Gallery (1920-32). He was president of the National Society of Fine Arts in 1909 and at the time of his death of the American Anthropological Association. He published *Archæological Studies among the Ancient Cities of Mexico* (1895); *Stone Implements of the Potomac Chesapeake Tidewater Province* (1897); and *Handbook of Aboriginal American Antiquities* (1918).

HOLY CROSS, COLLEGE OF THE. A Roman Catholic College for men, under the Society of Jesus, in Worcester, Mass., founded in 1843. The enrollment for the autumn of 1933 totaled 1134, with distribution as follows: Arts course, 749; Science course, 146; Philosophy course, 235; and graduate school of chemistry, 4. The faculty numbered 80. The library contained 115,000 volumes. President, the Rev. Francis J. Dolan, S.J.

HONDURAS, hõn-dõo'rás. A Central American republic. Capital, Tegucigalpa.

AREA AND POPULATION. With an area of 46,250 square miles, Honduras had a population of 854,154 at the 1930 census. The people are mostly Indians, with a strain of Spanish blood. The population of the chief towns in 1930 was: Tegucigalpa, 34,374; San Pedro Sula, 24,425; La Ceiba, 13,073; Comayagüela, 12,703; Choluteca, 12,248; Juticalpa, 10,990; El Progreso, 10,920; Santa Rosa de Copán, 10,807; Nacaome, 10,302; Danli, 10,232; Tela, 9,935.

EDUCATION. Education is nominally free and compulsory. Of 138,256 children of school age in 1931-32, 47,210 were in actual attendance at school. The National University at Tegucigalpa had 179 students in 1930-31.

PRODUCTION. Stock raising and agriculture are the main occupations. Honduras is one of the world's largest producers of bananas, the other leading crops being sugar, coffee, and coconuts. (For exports in 1932, see *Commerce*). The banana industry, upon which some 30 per cent of the population was dependent, was largely controlled by the United Fruit and other foreign companies. The country is reported to be highly mineralized, but actual working in 1933 was confined to one large silver mine and several small gold workings. The chief manufactures are straw hats and cigars.

COMMERCE. Converted into United States currency at the par value of the lempira (\$0.50), imports in the year ended July 31, 1932, were valued at \$8,368,000 (\$10,291,000 in 1930-31) and exports at \$17,581,000 (\$20,028,000 in 1930-31). The quantity and value of the chief exports in 1931-32 was: bananas, 27,896,000 bunches, \$13,950,000; gold and silver (excluding specie), \$2,742,000; coffee, 3,386,000 pounds, \$287,000; sugar, 8,187,000 pounds, \$105,000; tobacco, leaf, 1,347,000 pounds, \$103,000; coconuts, 6,851,000 coconuts, \$97,000. The chief import items are petroleum products, iron and steel, machinery and tools, and medicines. Imports from the United States in 1931-32 were valued at \$6,376,000 (76.2 per cent of the total) and exports to the United States were \$11,881,000 (67.6 per cent). The United Kingdom, Germany and the Netherlands were the other principal export markets.

FINANCE. The revised budget for the fiscal year ended July 31, 1934, estimated revenues at 15,222,204 lempiras and expenditures at 10,727,282 lempiras. Corresponding estimates for 1932-33 balanced at 15,400,000 lempiras. In 1931-32, actual revenues were 10,944,000 lempiras and expenditures were 10,890,000 (excluding 1,631,373 lempiras unpaid); in 1930-31, actual revenues were 11,819,000 lempiras and expenditures were 12,751,000 lempiras (excluding 1,639,360 unpaid). The public debt on July 31, 1932, totaled 26,961,503 lempiras, divided as follows: Internal, 10,739,642; external, 9,386,964; floating, 6,834,897 lempiras. The government was in partial default on the internal debt on July 31, 1932.

COMMUNICATIONS. Honduras in 1932 had 1149 miles of railway lines, most of them operated by fruit companies on the north coast. Motor high-

ways extended about 361 miles. Air lines connected the principal cities and were linked with the international American air systems. The chief ports are Amapala on the Pacific and Puerto Cortez, La Ceiba, Trujillo, Tela, and Amoa on the Caribbean.

GOVERNMENT. The Constitution, as amended in 1924, vested executive power in a President, elected by popular vote for four years. Legislative power rested in a single chamber of 43 members, elected by popular vote for four years. The chamber meets for 60 days on Jan. 1 of each year. While Congress is not in session, its functions are performed by a permanent commission of five members. President, Dr. Tiburcio Carías Andino, who succeeded Dr. Vincente Mejía Colindres on Feb. 1, 1933. Vice President, Gen. Abraham Williams.

HISTORY. The serious revolt which broke out in November, 1932, following the victory of Gen. Tiburcio Carías Andino in the Presidential election of Oct. 30, 1932, was crushed by government forces early in 1933. With the recapture from the rebels of the port of Amapala on Dec. 30, 1932, the insurrectionists menacing the capital retreated southward. Amapala was reopened to international navigation on January 4 and the following day the rebel leader, Gen. José María Reina, and a group of officers crossed into Nicaragua and delivered their arms to the Nicaraguan National Guard. The remaining rebel force under Gen. José Antonio Sánchez was defeated by government forces January 14 and General Sánchez in turn fled into Nicaragua.

Minor activities by bandits and revolutionary bands were reported from Tegucigalpa in November, 1933. Political unrest had been fostered during the year by a further decline in the standard of living. The prices of imported commodities rose rather sharply due to price increases in the United States and the high cost of European exchange. On the other hand wages in Honduras were again reduced and Honduran producers continued to receive low prices for their exports.

The century-old boundary dispute between Honduras and Guatemala was settled on Jan. 23, 1933, when the arbitral tribunal headed by Chief Justice Charles Evans Hughes rendered its decision dividing the territory under dispute on the general basis of the status quo of actual occupation.

HONG KONG. A British crown colony at the estuary of the Canton River in South China, comprising the island of Hong Kong (32 sq. miles); Old Kowloon on the mainland (3 sq. miles); and the New Territories (Kowloon Extension) leased from China (356 sq. miles including islands). Total population of Hong Kong colony according to the 1931 census and exclusive of the naval and military establishments was 840,743, of whom 821,104 were Chinese. The estimated total population on June 30, 1933 was 900,796, divided as follows: Non-Chinese, 19,984; Chinese in Victoria, 364,279; Chinese in Hong Kong villages, 43,513; Chinese in Kowloon and New Kowloon, 273,244; Chinese in junks and sampans, 100,000; Chinese in New Territories, 99,776. During 1932, the number of registered births, excluding the New Territories, was 13,697; deaths, 19,829. The capital, Victoria, had a population of 410,921 in 1931. In 1932 there were 1063 schools (English and vernacular) including primary, secondary, and vocational, and they had a total of 71,233 enrolled students.

The University of Hong Kong includes faculties of medicine, engineering, and arts.

Hong Kong is noted for its immense transit trade, the free port of Victoria being the distributing centre for that part of China and French Indo-China situated south of Foochow and north of Saigon. Exports of some local manufactures in 1932 were valued as follows: Preserved ginger, 1,400,000 Hong Kong dollars (Hong Kong silver dollar averaged \$0.2346 for 1932); knitted goods, \$7,400,000; flashlights (torches and batteries), \$2,200,000; rubber shoes, \$2,000,000. Other local industries are sugar refining, tin refining, rice polishing, furniture-making, shipbuilding, and tobacco manufacture. Sugar refining was greatly curtailed by the dealers because China increased the duty on sugar to 130 per cent of the c.i.f. value. For 1932, merchandise imports were valued at \$41,000,000; merchandise exports, \$31,000,000. Bullion and specie imports were valued at \$85,272,403 and exports of bullion and specie were \$140,013,831 for 1932.

The colony is the headquarters for the China squadron of the British navy. During 1932 a total of 104,115 vessels aggregating 43,824,900 tons entered and cleared the port, of which 52,859 vessels aggregating 41,794,005 tons were engaged in the foreign trade. Roads totaled 311 miles of which 161 miles were on Hong Kong island and 150 miles were in Kowloon and the New Territories. In 1932 actual government revenue amounted to 33,549,716 Hong Kong dollars; actual expenditure, \$32,050,283. The public debt on Jan. 1, 1933 was £1,485,733 and the sinking fund amounted to £832,751; there is also the Public Works Loan (1927) of 4,927,000 Hong Kong dollars with a sinking fund of £125,792 on Jan. 1, 1933. The colony is administered by a governor, assisted by an executive council of 9 members, and a legislative council of 17 members. Governor and Commander-in-Chief in 1933, Sir William Peel.

HOOGWERFF, REAR ADMIRAL JOHN ADRIAN, U.S.N., RET. An American naval officer, died in Honolulu, T. H., Feb. 13, 1933. He was born in Howard Co., Md., Nov. 27, 1860, and was graduated from the United States Naval Academy in 1881. On receiving his commission as ensign in 1883, he was attached to the United States Naval Observatory where he served under Asaph Hall, the observatory's distinguished professor of mathematics. He had charge of the Magnetic Observatory during 1889-92, and was then transferred to the Naval Academy as instructor in electricity during 1895-98 and again during 1901-04. He served on the *Cincinnati* during the Spanish-American War, participating in the engagement at Matanzas. During 1908-09 he was head of the Academy's department of ordnance and gunnery. He commanded the *Kansas* from 1911 to 1913 but the following year returned to shore duty as superintendent of the U. S. Naval Observatories.

On the entry of the United States into the World War in 1917 Hoogwerff was made commander of the *Pennsylvania*. In November of that year, after serving as commander of the mine force of the Atlantic Fleet, he assumed command of the first battleship division of the fleet, which acted principally as naval patrol, coöperating with the British and French fleets in curbing the German submarine menace. He resumed the post of superintendent of the U. S. Naval Observatories in 1919, and from 1921 until his retirement in 1924

was commandant of the navy yard at Puget Sound, Wash. Following his promotion to the permanent rank of rear admiral in 1918, he received the Victory Medal and the Navy Cross. He wrote *Magnetic Observations* (1891).

HOOVER, HERBERT. See UNITED STATES under *Administration*.

HOPE, ANTHONY. See HAWKINS, SIR ANTHONY HOPE.

HOPS. The hop production of six countries reporting to the International Institute of Agriculture was estimated at 95,217,000 pounds, an increase of 25.5 per cent above the production in 1932 but 20.3 per cent below the average yield for the five years 1927-1931. The total acreage in these countries reported as 100,000 acres was 10.8 per cent above that of the preceding year and 19.6 per cent below the average for the five-year period. The production of the European countries was reported as follows: England and Wales 24,192,000 pounds, Germany 14,977,000 pounds, Czechoslovakia 12,914,000 pounds, France 3,045,000 pounds, and Belgium 1,765,000 pounds. Poland for the five years 1927-1931 produced an average of 3,812,000 pounds, and Hungary 265,000 pounds. Yugoslavia produces some 2,000,000 pounds annually. The combined production of Canada and Australia during recent years has averaged above 3,000,000 pounds.

In the United States according to estimates published by the Department of Agriculture the 1933 hop production amounted to 30,440,000 pounds harvested from 26,500 acres at an average yield of 1775 pounds per acre as compared with a production of 24,058,000 an area of 22,000 acres and average yield per acre of 1094 pounds in 1932. The average farm value of hops on Dec. 1, 1933 was reported as 30.3 cents per pound making the total farm value of the crop \$11,059,000. The corresponding values the year before were 17.5 cents and \$4,199,000 respectively. The hop production in 1933 by States was reported as follows: Oregon, 19,556,000 pounds, California 10,560,000 pounds and Washington 6,324,000 pounds. The acreage in these States was 17,000; 6400; and 3100 respectively.

During the fiscal year ended June 30, 1933 the United States exported 2,431,000 pounds of hops and imported 4,572,000 pounds. In the preceding fiscal year the exports were 3,817,000 pounds and the imports 1,253,000 pounds. Prior to 1918 the consumption of hops by brewers in the United States was about 40,000,000 pounds annually and in addition the exports ranged from about 10,000,000 to 20,000,000 pounds.

HORMONES. See CHEMISTRY.

HORSE RACING. The 1933 thoroughbred turf season was one of the most unique on record for several reasons. First of all, the depression which had curtailed purses and racing activities in 1932 to a great extent, proved a boon to the game in almost every State except New York State. Legislatures, moved by the exigencies of furnishing new revenues to carry on public works and other programmes, fashioned betting laws and allowed racing. To the amazement of onlookers such previously hidebound States as New Hampshire, West Virginia, California, Washington, Indiana, Montana, Ohio, Oregon, and Texas joined in the general movement to unfetter personal liberty and legalized pari-mutuel horse racing. At one time in mid-summer no less than fourteen tracks were running throughout the United States. Only New York failed to adopt the revenue scheme,

which, as an example, netted the State of Maryland \$66,000,000 in 1933, and the New York bill died in committee. As the year came to a close the Jockey Club, hitherto almighty, had found itself impotent against dreadful losses and concerted moves were being made to push through a racing bill in New York.

Next to the liberality shown by the voters and lawgivers in the various States, the feats of Equipoise, Cornelius Vanderbilt Whitney's five-year-old handicap horse, stood out. In a year when the competition was so keen that no standout appeared in any other rank, the performance of Equipoise usurps more note. The grandson of Pennant-Swinging, who had been deprived of a rich harvest in his three-year-old year by a blind quarter crack discovered the morning of the 1931 Kentucky Derby, won seven of his nine 1933 starts and added \$55,700 to his winnings, bringing his total to \$322,970, back of Sun Beau, Phar Lap, and Gallant Fox in the all time list of thoroughbred money winners. Equipoise won seven major stakes, the Philadelphia, Metropolitan, Suburban, and Arlington Handicaps, the Wilson Stakes, the Hawthorne Gold Cup, and the Saratoga Cup. He was third to Dark Secret and Gusto in the Jockey Club Gold Cup of two miles, and second to Osculator in the Havre de Grace Cup Handicap, in which he conceded a twenty-eight pound advantage to W. R. Coe's horse. Dark Secret, winner nine times in seventeen starts, was the second best handicap horse.

In the two-year-old and three-year-old divisions at the end of the season championship ratings were much the same matter of guesswork as at the beginning of the year. Three juveniles stood out: Mrs. Payne Whitney's First Minstrel, winner of the Sanford Memorial and the Junior Champion; Mrs. Dodge Sloane's Cavalcade, Hyde Park winner at Arlington Park; and Mrs. John Hay Whitney's Singing Wood, winner of the rich Futurity. The three-year-olds were as disappointing as the juveniles. The richest and most coveted race for that age of the entire year was won by a colt that in his previous start had raced as a \$4500 plater. This was J. E. Widener's Hurryoff in the historic Belmont Stakes of a mile and a half. The Kentucky Derby (May 6, 1933), most glamorous of 3-year old stakes, went to Col. Edward R. Bradley's stable for the second successive year. His Broker's Tip, Don Meade up, beat Head Play, purchased by Mrs. Silas B. Mason the day before the race, by a nose. Meade, on Broker's Tip and Harry Fisher on Head Play battled down the stretch pulling at each other's saddle cloths. Mrs. Mason filed a protest but the stewards let the finish stand, blaming both jockeys equally. Mrs. Dodge Sloane's Inlander, a superior muddler but strictly a mudder, was the leading three-year-old money winner, by victories in the Arlington Classic and the Travers. War Glory had the best record for his age, for he won, among other stakes, the Dwyer, the Saranac Handicap, the Kenner, and the Lawrence Realization. Among the leading three-year-old fillies no real championship line could be drawn either. Edelweiss beat Barn Swallow in the Coaching Club American Oaks after her stablemate, Iseult, succumbed to the killing pace she set. Iseult and Edelweiss ran one-two in the Acorn, but Barn Swallow won the Alabama at Saratoga, in which Iseult did not start, beating Edelweiss among others.

Jackie Westrope, who rode his first winner at Oriental Park, Havana, in February, far surpassed

all jockeys, riding more than 300 winners in the year.

American sportsmen and sportswomen gained signal triumphs in the richest classics of the English and French turf. Mrs. F. Ambrose Clark's Kellsboro Jack won the arduous Grand National at Aintree; William Woodward's three-year-old filly, Brown Betty, triumphed in the Thousand Guineas; J. E. Widener's Seminole took the Cesarewitch. Lord Derby's Hyperion captured the English Derby at Epsom Downs in June. Lady Granard's Capiello won the Grand Prix de Paris.

Steeplechasing and Hunt Racing enjoyed a prosperous season. John Sanford's Best Play, on his third trial through the field, won the Grand National Steeplechase handicap. J. E. Widener's Azucar took the Charles L. Appleton Memorial Handicap Steeplechase. Thomas Hitchcock not only took the Brook with the venerable Chenango, but also the coveted Harbor Hill for three-year-olds, in which his Yandanch and Nesconsit, making their first appearance under silks, finished one-three. Captain Kettle won the famed Maryland Cup.

HARNESS RACING. Mary Reynolds, 2:03¾, owned by W. N. Reynolds of Winston-Salem, N. C., was the sensational three-year-old trotter of the season and the largest money winner of the season for all ages. She took the \$11,405 Championship Stallion Stake at Cleveland, a \$2500 stake at Toledo on the Grand Circuit, a purse of \$4874 at Salem, for winning the National Stake, and the \$40,462 Hambletonian Stake, richest trotting race. Mary Reynolds made her record in the Hambletonian at Goshen, N. Y. in August, beating Brown Berry in two of three heats. Brown Berry stumbled when leading in the third heat and reinsmen were divided in opinion whether she would have beaten Mary Reynolds if there had been no mishap. Later in the summer Brown Berry beat Mary Reynolds in the Western Horsemen's Futurity at Syracuse in 2:03¾. In five meetings, on the Grand Circuit, however, Mary Reynolds beat Brown Berry three times.

Vansandt and Calumet Crusader were the fastest four-year-olds, the former trotting a mile in 2:01 in a night race at Toledo in July, the fastest recorded by a four-year-old, and Calumet Crusader winning three heats at Goshen in 2:01¾, 2:01¾, 2:02½.

The outstanding two-year-old trotter of the season was Sturdy, a colt by Guy Axworthy, 2:08¾, which won eleven consecutive races within ten months after he had been sold for \$160 at the New York auction as an unbroken yearling. Filling all his engagements, beating the best of his age, winning with ease in 2:04¾ on a mile track and in 2:06½ on a half-mile ring, his campaign seldom, if ever, has been equaled.

Among the notable performances by pacers was a mile in 1:59½ by Dick Reynolds in winning the American Pacing Classic at Springfield, Ill. in August. Laurel Hanover won the two-year-old stake, the Fox, at Syracuse, gained \$3325. Angus Peter set a five mile pacing record at Quebec in September of 11:54.

HORSE SHOWS. Despite the abolition of the champion of champions class at the National Show at Madison Square Garden New York, and the retirement of Seaton Pippin, the horse shows of the year produced many excellent winners. It is impossible to name one great champion, but among the hunters who dominated the show game were Dilwyne Farm's King Vulture, Mrs. John Hay

Whitney's The Gray Knight, Mrs. Bernard Gimbel's His Elegance, and Mrs. John V. Bouvier's Danseuse. Locke Brown's Danum Woodbine stood out in the harness division.

Horse shows profited in the year, the National attracting total crowds of 100,000. The Century of Progress show at Chicago, which took over the Boston dates when the Boston authorities decided not to run a show, was a huge success in every way.

HORSE SHOWS. See HORSE RACING.

HORTICULTURE. Although marketing conditions were far from favorable for most horticultural crops in 1933, there were many hopeful signs. Prices per farm unit, as reported by the United States Bureau of Agricultural Economics, were considerably higher than in 1932 for many crops, including apples, peaches, pears, grapes, dried prunes, grapefruit, pecans, cabbage, sweet corn, onions, and watermelons. A factor in the better apple prices was the stronger demand for export apples of prime quality. In certain sections, notably western New York and western Pennsylvania, the approach of national repeal had a very stimulating effect on grape prices. At one time Delaware grapes sold as high as \$150 a ton in western New York. At the same time, strangely enough, the demand in eastern centres for California wine grapes fell off very sharply.

Hurricanes in September sharply reduced the grapefruit crop in Texas and the grapefruit and orange crops in Florida. As reported in the *Packer* of September 23, the loss in Texas approximated 88 per cent of the potential citrus crop and in Florida 25 per cent.

Hops, of which approximately 20,000,000 pounds were harvested in Oregon alone, sold readily at more than double their 1932 value.

Home gardening continued to be of great popular interest as was attested by the numerous books and magazine articles relating to this fascinating and productive avocation.

The formulation of marketing agreements under the authority of the Agricultural Adjustment Act promised much for the welfare of commercial horticulturists. The first of these agreements to be formally approved, namely the California Cling Peach Agreement, limited the total pack of California peaches to 10,000,000 cases and the minimum price to the grower at \$20 a ton. Other completed agreements covered apple and tree fruits in the Northwest, the California deciduous fruits, the California Tokay grapes; and the citrus fruits of California, Arizona, Texas, Florida, and Puerto Rico.

These and other prospective agreements, according to the annual report of Secretary of Agriculture Henry C. Wallace, are designed to prevent seasonal surpluses, level the flow of supply to market and to coördinate shipments so as to keep them moving to markets as needed.

PRODUCTION IN 1933. Figures released on December 19 by the United States Department of Agriculture show a downward trend in production for practically all important fruit crops. The commercial production of apples was estimated at 25,739,000 barrels in 1933 as compared with 28,592,000 in 1932; pears 21,192,000 bushels in 1933, 22,050,000 in 1932; peaches 45,326,000 bushels in 1933, 42,443,000 in 1932; grapes 1,808,584 and 2,203,758 tons; cherries 112,498 and 127,118 tons; dried prunes 196,750 and 195,000 tons; oranges 48,216,000 and 50,930,000 boxes; grapefruit 12,689,000 and 15,326,000 boxes;

lemons 6,800,000 and 6,715,000 boxes; cranberries 667,700 barrels in 1933 and 504,836 barrels in 1932 and pecans 61,210,000 and 53,560,000 pounds.

The trend toward lower yields in 1933 is noticeable also in vegetables. For example, cabbage yields were 723,200 tons in 1933 as compared with 987,100 in 1932; cantaloupes 12,762,000 and 17,021,000 crates; carrots 10,565,000 and 10,815,000 bushels; cauliflower 7,162,000 and 7,730,000 crates; celery 8,624,000 and 9,894,000 crates; sweet corn for canning 393,000 and 386,900 tons; lettuce 17,149,000 and 17,820,000 crates; onions 20,802,000 and 27,906,000 bushels; strawberries 12,718,000 and 13,369,000 crates.

Analyzing the data, the Crop Reporting Board asserts that the combined production of the 10 more important fruit crops in the United States in 1933 was 12 per cent less than the average of the preceding five years. Peaches were notably low due to belated spring freezes following unseasonably warm weather in certain producing areas. Grapes were estimated at 26 per cent less than the average crop for the five years 1926 to 1930. Grapefruit yields were cut by September Florida and Texas hurricanes.

THE WORLD SITUATION. As reported by the Dominion Bureau of Statistics, the Canadian commercial apple crop totaled 14,676,000 bushels in 1933, a 23 per cent increase above 1932. The pear yield, 466,000 bushels, was approximately equal to 1932 whereas peaches, plums, and grapes showed respective declines of 3, 23 and 17 per cent from 1932. The large increase in apples resulted from a bumper Nova Scotia crop. Fortunately for the export trade, the European late apple crop was decidedly short.

The European Persian walnut crop, estimated at 1,336,000 bags of unshelled nuts, was considerably larger than in 1932. The North China walnut crop was from 20 to 30 per cent larger than in 1932. Italy and Spain produced 25 per cent more almonds than in 1932. The Palestine citrus crop, more than 700,000 boxes larger in 1932-33 than the preceding year, became an increasingly important factor in the world markets. Argentina supplied 8,574,000 pounds of table grapes to the United States in early 1933. The export of United States apples to France in 1932-33 was about one million bushels as compared with two million the preceding period. The Mediterranean Basin raisin crop was estimated at 95,000 tons in 1933 as compared with 118,000 tons in 1932.

FOREIGN COMMERCE. The total value of horticultural products, including fruits, nuts, vegetables, and vegetable preparations exported from the United States in the first 10 months of 1933 was, according to the United States Department of Commerce, \$57,316,732. This total was exceeded by that of the corresponding period of 1932 by \$13,803,671. The total value of imports of the same category was \$42,312,286 in 1933 as compared with \$51,514,393 in 1932. These declines, obviously manifestations of the depressed business conditions, were, nevertheless, sufficiently smaller than those of the preceding two years to offer an encouraging outlook.

Among export items, apples led with a value of \$8,558,986. Dried prunes and oranges followed with values of \$5,840,061 and \$5,827,187, respectively. Better prospects for apples and pears in 1934 were forecast in marketing agreements reached in late December with France which permit larger consignments of these fruits in ex-

change for larger importations of French wines and liquors.

Bananas, allowed to enter the United States duty free, were again the outstanding import item, \$17,342,013 in value. Olives ranked next with an estimated worth of \$2,164,785, followed by coconut meats, \$1,319,199. Cashew nuts were a popular import, value \$960,104.

PLANT QUARANTINES. Among important changes in the plant quarantine programme of the United States Department of Agriculture was the revocation of the European corn borer and peach quarantines, the former on account of a lack of funds for prosecuting the control work and the second because of the discovery of the wide distribution of the disease and the belief that it might be more successfully controlled by nursery inspections. In the port inspection service, there were intercepted more than 20,000 insect and plant pests, including many dangerous enemies of fruits, vegetables, and forest trees. In carrying out the mandate of the quarantine on movement of domestic narcissus, a total of over 300,000,000 bulbs were examined for nematodes and eel worms and other pests.

The so-called Dutch elm bark disease, first reported two years ago in Ohio, was found rather widely distributed in the vicinity of New York City. Active measures were instituted by the Federal and State Departments of Agriculture to bring about an early control of this potentially serious pest.

That other nations are also quarantine conscious was manifest in an edict issued by the British Ministry of Agriculture, prohibiting the importation of live elm trees and various conifers, including *Abies*, *Larix*, *Picea*, *Pinus*, *Sequoia*, *Pseudotsuga*, *Thuja*, and *Tsuga*. All other living plants are forbidden entrance except when properly certified as free of pests.

RESEARCH ACTIVITIES. Perhaps no better indication of the present day status of horticultural research is needed than a study of the Proceedings of the 1932 meeting of the American Society for Horticultural Science, held at Atlantic City in late December. A total of 154 papers relating to studies with fruits, vegetables, and flowers are included in this report. The extent to which chemical, cytological, and statistical methods are utilized in this productive field of research betokens their fundamental nature. Among papers of note are "Effects of Irrigation on the Quality of Prunes" by A. H. Hendrickson and F. J. Veihmeyer of the University of California; "Factors Affecting the Breaking Strength of Apple Tree Crotches" by L. H. MacDaniels of Cornell University; "Dichogamy—An Important Factor Affecting Production in the Persian Walnut" by M. N. Wood of the United States Department of Agriculture; "Transpiration Rates and Suction Forces of Fruiting Canes and Current Season Shoots of the Black Raspberry" by R. E. Marshall of Michigan State College; "The Influence of Drying on the After-Ripening and Germination of Fruit Tree Seeds" by I. C. Haut of the University of Maryland; "The Effect of Potassium Deficiency Upon the Structure and Composition of the Sweet Potato" by W. R. Robbins of Rutgers University and "The Influence of Aluminum on the Flower Color of Hydrangea" by R. C. Allen of Boyce Thompson Institute.

The 1933 meeting of the American Society for Horticultural Science was held at Boston, Mass.,

on December 26-30 in connection with American Association for the Advancement of Science.

MISCELLANEOUS. H. P. Stuckey, director of the Georgia Experiment Station and research horticulturist of note, was on July 1, 1933 appointed also dean of the College of Agriculture at Athens, Ga.

The New York Agricultural Experiment Station was awarded the gold medal of the Massachusetts Horticultural Society for a display of station seedling fruits.

Bellmar, Southland, Redheart, Dorsett, Fairfax, and Narcissa strawberries originated by the United States Department of Agriculture received high commendation from growers.

NECROLOGY. The death of the following horticultural leaders was recorded during the year:

Dr. W. T. Macoun, chief horticulturist for the Dominion of Canada, died August 13. He was a past president of the American Society for Horticultural Science and was well known as a breeder of hardy fruits.

J. D. Eisele, commercial horticulturist and president of Henry A. Dreer, Inc., died Sept. 3, 1933.

J. W. Crow, formerly professor of horticulture at the Ontario Agricultural College and a past president of the American Society for Horticultural Science, died March 8. He was well known as an originator of gladiolus, particularly the varieties Hercules, Sultan, and Mrs. T. E. Longford.

W. G. Bixby, past president of the Northern Nut Growers Association and a prolific writer on nut culture, passed away during the year.

BIBLIOGRAPHY. Many interesting and valuable books on gardens and garden plants were published in 1933, for example:

Bailey, L. H., *How Plants Get Their Names*, New York, 1933; Grieve, Maud, *Culinary Herbs and Condiments*, London, 1933; Hall, Sir A. D. and Crane, M. B., *The Apple*, London, 1933; Harding, Alice, *Lilacs in My Garden*, New York, 1933; Higgins, Vera, *The Study of Cacti*, London, 1933; Orloff, H. S., *Informal Gardens*, New York, 1933; Putz, Alfred, *The Garden Notebook*, Garden City, N. Y., 1933; Phillips, G. A., *Delphiniums*, London, 1933; Stevens, G. A., *Climbing Roses*, New York, 1933; Louise B. Wilder, *The Rock Garden*, New York, 1933; Aiken, George D., *Pioneering with Wild Flowers*, New York, 1933; Wright, Richardson, *Another Gardeners Bed Book*, New York, 1933.

HOUSING. See ARCHITECTURE.

HOWARD UNIVERSITY. A nonsectarian coeducational institution in Washington, D. C., open to students without regard to race but principally for the education of Negroes. The registration for the first semester of 1933 was 1449. The faculty numbered 229. The total endowment amounted to \$857,240. The total appropriation of the United States government for 1933-34 was \$1,018,811. The university also received during 1932-33, \$42,627 from private sources in addition to \$5000 for endowment. The library contained 66,551 volumes. President, Mordecai Wyatt Johnson. T.S.M., D.D.

HOWELL, ROBERT BEECHER. A United States Senator, died in Washington, D. C., Mar. 11, 1933. He was born at Adrian, Mich., Jan. 21, 1864, and was graduated from the United States Naval Academy in 1885. On resigning his commission two years later, he entered the employ of the American Water Works Co. in Omaha,

Neb., as a civil engineer and also attended the Detroit (Mich.) School of Law for a brief period. In 1895 he received the appointment of State engineer of Nebraska, and in 1896 that of city engineer of Omaha. He served as a lieutenant in the Navy during the Spanish-American War and on his discharge returned to Omaha to conduct an insurance, real estate, and investment business.

While a member of the Nebraska State Senate (1903-05), Mr. Howell secured legislation that resulted in the public ownership of Omaha's water system and in the creation of the water board of which he was a member from 1904 to 1910. In 1913, after serving as water commissioner, he became director and general manager of the Metropolitan Utilities District (including Omaha and adjacent municipalities) and was active in establishing municipal ice and gas plants. During 1912-24 he was a member of the Republican National Committee and in 1921 was chairman of the Radio Service Commission of the United States Post Office and Agricultural Departments.

As a member of the United States Senate, to which he was elected for the terms 1923-29 and 1929-35, Mr. Howell was a staunch advocate of prohibition and a bitter opponent of any reduction in the war debts owed by foreign governments. At the time of his death he was chairman of the special campaign funds committee appointed to investigate the Broussard-Overton contest in connection with the Louisiana Senatorial Democratic primary of 1932.

HULBERT, ARCHER BUTLER. An American educator and historian, died in Colorado Springs, Colo., Dec. 24, 1933. Born in Bennington, Vt., Jan. 26, 1873, he was graduated from Marietta College in 1895, and two years later went to Seoul where he edited the Korean *Independent* and for the ensuing six years was engaged in literary work. On his return to the United States in 1904 he accepted the chair of American history at Marietta College where he remained until his appointment as lecturer on American history at Clark University in 1918. In 1919 he was called to Colorado College as associate professor of American history, being made full professor the following year and in 1925 director also of the Stewart Commission on Western History. He had previously served from 1912 to 1916 as an archivist for the Harvard Commission on Western History. The best known of his works was *Forty Niners*, a chronicle of the California gold rush, which was awarded the *Atlantic Monthly* prize of \$5000 in 1931.

In addition to being a member of the board of editors of the *Mississippi Valley Historical Review*, Dr. Hulbert was greatly interested in the economics of good roads, lecturing on that subject for the Office of Public Roads of the U. S. Department of Agriculture during 1905-14 and serving as vice-president of the Inter-State Good Roads Association. He was also chairman of the historic highways division of the National Highway Association.

HUMANISM. A religious movement emphasizing faith in the supreme value and self-improvability of human personality, instead of belief in the supernatural. In the United States it has arisen largely from and in the left wing of Unitarianism, although it is now spreading in other liberal religious groups, including the Universalists and Congregationalists. A careful con-

servative estimate would indicate at least 10,000 avowed Humanists in the United States. There are yet but four definitely Humanist local societies—in Hollywood and Berkeley, Calif., Kansas City, Mo., and New York City—but some 40 or more Unitarian churches are led by ministers who have openly announced their belief in Humanism. The Unitarian policy of no creedal restrictions permits these men to remain in full Unitarian fellowship.

The tendency in Humanist societies and in churches led by Humanist ministers is toward the minimizing or abolition of prayer, worship, and Bible reading and the maintaining of an agnostic attitude on the questions of immortality and the existence of God. Groups avowing beliefs identical with Humanism or essentially the same have been reported in Canada, Australia, England, Germany, Turkey, and India. Publications include *The Humanist*, monthly, Hollywood; *The New Humanist*, bi-monthly, Chicago; and *Morrow: The Human Outlook*, monthly, New York City. The latter is edited by Charles Francis Potter, founder and leader of the First Humanist Society of New York, Inc.

HUNGARY. A kingdom of central Europe. Capital, Budapest. Regent in 1933, Nicholas Horthy de Nagybánya (elected Mar. 1, 1920).

AREA AND POPULATION. With an area of 35,875 square miles, Hungary had an estimated population in 1932 of 8,780,909 (8,688,349 at census of Dec. 31, 1930). Of the 1932 total, 2,887,660 resided in towns of 10,000 or over. The 1930 population was 92.1 per cent Hungarian (Magyar), 5.5 per cent German, and 1.2 per cent Slovak. Living births during 1932 numbered 205,529; deaths, 157,106; marriages, 71,202. The birth rate per 1000 inhabitants was 23.0 and the death rate 17.8. The population of the chief cities in 1932 was: Budapest, 1,019,907; Szeged, 136,544; Debrecen, 119,918; Kecskemét, 80,086; Pésterzsébet, 72,919; Újpest, 69,570; Kispeszt, 67,826.

EDUCATION AND RELIGION. About 9.6 per cent of the population over six years of age were illiterate in 1930. In 1931-32 there were 6802 elementary schools, with 1,004,369 pupils; 5689 continuation schools, with 172,853 pupils; 380 primary schools, with 84,769 pupils; 60 training colleges for infant and elementary schools; 174 middle schools, with 65,567 pupils; 665 special and occupational schools, with 64,581 pupils; four universities and one technical high school, with 12,408 students; 31 colleges, with 3594 students. The universities are at Budapest, Szeged, Pécs, and Debrecen. In 1930, Roman Catholics comprised 64.9 per cent of the population; Helvetian Evangelicals, 20.9 per cent; Augsburg Evangelicals, 6.1 per cent; Jews, 5.1 per cent; Greek Catholics, 2.3 per cent.

PRODUCTION. Agriculture is the main support of the people. In 1931 there were 13,821,000 acres of arable land, 797,000 acres of vineyards and gardens, 4,124,000 acres of meadow and pasture, and 2,706,000 acres of forests. The chief crops in 1932 (thousands of units, bushels except as specified), with 1931 figures in parentheses, were: Wheat, 64,462 (72,550); rye, 30,301 (21,672); barley, 33,030 (21,867); oats, 21,756 (13,368); potatoes, 57,226 (53,185); corn, 95,740 (59,749); sugar beets (metric tons), 849 (906); beet sugar (metric tons, seasons ended following year), 105 (125); fodder beets (metric tons), 2688 (2062); grape must (gallons), 90,821 (103,019); tobacco (pounds), 80,958 (80,403).

Production of the chief crops in 1933 (in metric quintals except as indicated) was: Wheat, 24,534,000; rye, 9,264,407; barley, 7,561,716; oats, 3,162,579; corn, 17,668,061; potatoes, 19,448,192; sugar beets, 9,416,751; beet sugar, 1,033,790; wine, 2,976,698 hectolitres. Livestock in 1933 included 1,696,615 cattle, 819,871 horses, 1,056,218 sheep, and 1,899,479 swine.

The value of manufactured production in 1932 was 2,053,000,000 pengos (\$359,162,000), compared with 2,492,000,000 pengos (\$435,828,000) in 1931. Mineral and metallurgical output (1932) was (in 1000 metric tons): Coal, 895 (776 in 1931); lignite, 5932 (6110); iron ore, 53 (84); pig iron, 66 (160); steel ingots and castings, 180 (316); cement, 280 in 1931; alcohol (1000 gallons), 6234 (7133). Output of the chief manufacturing lines in 1931 (1000 dollars, converted at par) was: Food products and tobacco, \$126,029; iron, metal, and machinery, \$64,856; textiles, \$55,218; chemicals, \$32,268; stone and glass, \$15,351.

COMMERCE. Hungarian imports for consumption in 1932 were equivalent to \$58,637,000 (\$94,334,000 in 1931), while exports of Hungarian products totaled \$57,791,000 (\$99,761,000 in 1931). Chemicals and allied products (\$5,078,000), hewn or sawn wood (\$3,954,000), raw cotton (\$3,449,000), and paper and cardboard (\$2,641,000) were the principal 1932 imports. The chief exports were: Electric machinery (\$4,237,000), wheat (\$3,654,000), cattle (\$3,269,000), swine (\$3,233,000), wheat flour (\$2,300,000). Austria in 1932 took 31.1 per cent of Hungary's exports by value, Germany 14.8 per cent, Italy 8.2 per cent, and Czechoslovakia 6.8 per cent. Imports came mainly from Germany (22.4 per cent), Austria (15.9), Rumania (12.3), and Czechoslovakia (10.4).

FINANCE. For the fiscal year ended June 30, 1933, provisional returns showed a deficit of 87,800,000 pengos in the budget. To this must be added 50,200,000 pengos—the equivalent of the defaulted service of the foreign debt—and also a 60,400,000-pengo deficit in state undertakings covered by internal borrowing. The 1931-32 deficit was 185,000,000 pengos. The 1933-34 budget estimates (in millions of pengos), with 1932-33 estimates in parentheses, were: Expenditure, 1173.2 (1207); revenue, 1097.0 (1207); debt service, 101.2 (101.6); defense, 87.7 (96.2).

The public debt on Mar. 1, 1933, totaled 1,995,300,000 pengos (\$348,978,000), compared with 1,767,500,000 pengos (\$309,136,000) on Mar. 31, 1932. The pengo exchanged at par (\$0.1749) in 1930 and at an average of \$0.1745 in both 1931 and 1932.

COMMUNICATIONS. The total railway mileage on July 1, 1932, was 5384 (state lines, 4816 miles). In the year ended June 30, 1932, state and private lines carried 111,000,000 passengers (121,000,000 in 1930-31) and 32,300,000 metric tons of freight (38,100,000 in 1930-31). In 1932 there were 38,551 miles of highways of all descriptions, including 12,712 miles of hard-surfaced roads. The five air lines carried 6439 passengers and 669,096 pounds of freight in 1932.

GOVERNMENT. Technically, Hungary is a constitutional monarchy with the throne vacant, power being exercised by the Regent pending the selection of a monarch. The Legislature has two houses, the Lower House of 245 members elected for five years and the Upper House of 244 elected or appointed representatives of various social,

economic, and political groups. The composition of the Lower Chamber following the election of June 28, 1931, was: United (Bethlen) party, 148; Independent Small Farmers, 27; Christian Social Economic, 27; Social Democrats, 14; other groups, 29. Premier in 1933, Gen. Julius Gömbös (United party), who assumed office Oct. 1, 1932.

HISTORY

ECONOMIC CONDITIONS. The disastrous decline in economic activity and in agricultural prices which marked the world depression in Hungary was checked to some extent during 1933. But suffering remained acute, especially among the peasants. There were few signs of economic revival as the year closed. The grain harvest surpassed all expectations, but both foreign and domestic grain prices fell to still lower levels, increasing the disparity between the prices farmers received for their produce and those they paid for manufactured articles. In August, 1933, the index for prices (Base: 1925-27 equals 100) stood at 47 for agricultural produce and at 79 for industrial products. The low purchasing power of the masses was reflected in the decline of the index of industrial production, which stood at 68.5 on June 30, 1933, compared with 77.7 on June 30, 1932.

There were a few encouraging economic developments. While imports again declined in 1933, amounting to little more than one-fourth the value of 1929 imports, export values registered an increase over the 1932 figure. The financial condition of the government improved, due to higher taxes imposed on Jan. 1, 1933, and government economies. The League of Nations committee supervising Hungarian finances had reported on Jan. 25, 1933, that its budgetary position had grown worse. The prospect of further defaults on foreign bonds was announced by government officials (the government, municipalities, banks, and corporations of Hungary were already in default on \$68,652,700 of dollar bonds). On Sept. 26, 1933, the League's committee reported that the financial condition of Hungary had improved since January. The deficit for the year ended June 30, 1933, had been reduced to 137,000,000 pengos, compared with 160,000,000 pengos in 1931-32, and the 1933-34 deficit was estimated at 76,000,000 pengos. Meanwhile the government sought to ease the condition of the peasants by extending to Nov. 1, 1933, the moratorium on agricultural debts.

DOMESTIC POLITICS. Hungarian politics during 1933 were marked by the increasing isolation of Premier Gömbös, a growing movement to place Prince Otto upon the throne, and the development of rival Fascist organizations, modeled on the German Nazis. Always an enemy of the Legitimists, who sought a Hapsburg restoration, the Premier strengthened their hostility by countenancing violent attacks upon their leaders. He was even accused of instigating anti-Legitimist terrorism. His tacit approval of the resurgence of anti-Semitism in Hungary further antagonized the Liberals, Jews, and Democrats. Still more significant was the report that the Premier's independent policies and self-confident speeches had offended the Regent, Admiral Horthy, who feared that he was being relegated to the background.

Meanwhile Count Bethlen, whose ten-year régime as the semi-dictatorial Premier of Hungary was ended in 1931 by a financial crisis resulting from the world depression, made notable headway in undermining the prestige and position of his

rival, Premier Gömbös. Count Bethlen advanced Hungary's claim to territorial revision of the peace treaties by an active campaign in England. He sought to convince the British that the creation of a larger and more powerful Hungary was the best way to block the southward expansion of Nazi Germany.

FOREIGN RELATIONS. Hungarian foreign policies, like those of all European countries, were vitally affected by the advent of Hitler's dictatorship in Germany. Hungary strongly opposed the absorption of Austria by Germany, fearing that this would pave the way for the incorporation in a greater Germany of the German-speaking minority in Hungary. Yet the restoration of territory taken from Hungary by the peace treaties remained the dominant aim of all Hungarian parties. Premier Gömbös despite his close sympathy with Italy and Premier Mussolini, clung to the hope that Hungary could advance its revisionist cause by coöperation with Hitler. He conferred with Hitler in Berlin on June 17, with Chancellor Dollfuss in Vienna July 9, and with Mussolini in Rome on June 25. He announced that all outstanding problems between Austria and Hungary were settled by his conference with Dollfuss. Both agreed, he said, that revision of the post-war treaties was the price which the Little Entente and the Allies must pay to secure Austro-Hungarian coöperation in the economic rehabilitation of the Danubian area. A few days after his conference with Gömbös, Mussolini reiterated his support of Hungarian territorial claims in a telegram to the Mayor of Budapest. By the Four-Power Pact, however, Mussolini was committed to territorial revision by peaceful means, in collaboration with France, Britain, and Germany. And France was not ready to give her consent to any policies which her allies in Eastern Europe opposed.

In September Foreign Minister de Kanya of Hungary visited Paris and conferred with Premier Daladier and Foreign Minister Paul-Boncour on Danubian economic problems. The French let it be known that they were willing to assist financially and otherwise in the economic rehabilitation of Hungary and other Danubian countries, provided the economic plan adopted was not linked up with the movement for revision of the peace treaties. In October, Premier Gömbös and Foreign Minister de Kanya continued their diplomatic negotiations by a conference with President Mustafa Kemal of Turkey at Ankara. Further conferences between Premier Gömbös and Chancellor Dollfuss toward the end of the year indicated a trend toward closer collaboration among Hungary, Austria, and Italy.

OTHER EVENTS. Other events of the year included the Fourth World Boy Scout Jamboree, held at Gödöllő, Hungary, during August, with some 10,000 foreign and 12,000 Hungarian Boy Scouts in attendance. Count Albert Apponyi (q.v.), Hungary's "grand old man" and long one of the most colorful figures in European diplomacy, died at Geneva February 7. For Hungary's part in the Hirtenberg arms affair, early in 1933, see AUSTRIA and ITALY under *History*.

HUNTER COLLEGE OF THE CITY OF NEW YORK. An institution founded in 1870 for the training of women teachers and supported by public funds administered by the Board of Higher Education. The enrollment for the autumn of 1933 included 6000 day session students and 4258 evening and extension session students. The 1933 summer session had an attendance of 2638.

There were 553 faculty members. The library contained 67,835 volumes. President, Eugene A. Coligan, Ph.D., LL.D.

HURLEY, EDWARD NASH. An American manufacturer and public official, died in Chicago, Ill., Nov. 14, 1933. After receiving a public school education he entered the employ of the Chicago, Burlington, and Quincy Railroad at the age of 14, serving as a repair shop assistant and later as a locomotive engineer. In 1888 he removed to Philadelphia, where he was successively a traveling salesman and manager for the United States Metallic Packing Co. Becoming associated with Henry J. Kimman in the development of the portable piston air drill and the portable pneumatic hammer, he served from 1896 to 1902 as president and treasurer of the Standard Pneumatic Tool Co. of Chicago.

In 1906 Mr. Hurley organized the Hurley Machine Co., manufacturers of washing machines, irons, vacuum cleaners, and other electric labor saving devices for the home, serving as its president until 1915 and thereafter as chairman of its board of directors. He was also president of the First National Bank of Wheaton, Ill., from 1909 to 1919, director of numerous Middle-Western public utilities, banks, railroads, and manufacturing concerns, and in 1932 co-receiver with Samuel Insull of the Middle West Utilities Co. At the time of his death he was president of the American Manufacturers Export Association and director of the National Foreign Trade Council.

Mr. Hurley's public service began in 1913 when he was appointed United States trade commissioner to the Latin American republics. He served also during 1916-17 as chairman of the Federal Trade Commission, and on the entry of the United States into the World War was appointed a member of the War Council of the American Red Cross, helping to organize its first campaign for the raising of \$100,000,000. In July, 1917, he was appointed chairman of the United States Shipping Board and president of the Emergency Fleet Corporation. In this post he directed the expansion of the shipbuilding industry of the United States for the purpose of creating a naval auxiliary and merchant marine. The amount of tonnage of merchant vessels launched was increased from 997,900 in 1917 to 4,075,300 in 1919; the number of shipyards from 61 to 341; and the number of men employed from 50,000 to 385,000. Of the 2543 vessels of 14,706,217 dead weight tonnage acquired by the Emergency Fleet Corporation, 2314 were built, 103 were purchased, 105 were seized enemy vessels, and the remainder were transferred from other government departments.

On his resignation of the Shipping Board post in July, 1919, Mr. Hurley received the Distinguished Service Medal. The French government honored him by making him a commander of the Legion of Honor, and the Italian by making him a grand officer of the Order of the Crown of Italy. After 1924 he was a member of the World War Funding Commission. President Hoover appointed him a member of the Advisory Shipping Commission and President Roosevelt of the Industrial Advisory Council of the NRA. He was also one of the principal sponsors of Chicago's Century of Progress Exposition in 1933. Among the other honors accorded him was the Lætare Medal, bestowed by the University of Notre Dame on distinguished Roman Catholic laymen. He wrote: *The Awakening of Business* (1916); *The New*

Merchant Marine (1920); and *The Bridge to France* (1927).

IBÁÑEZ, MAXIMILIANO. A Chilean statesman, died in Santiago, Dec. 27, 1933. Born at Linares, in 1868, he attended the University of Chile and on his graduation in 1889 was admitted to the bar. While attending the School of Political Sciences in Paris, he served in 1891 as secretary to the European delegation of the revolutionary junta, publishing in the *Revue des Deux Mondes* and other French journals, articles explaining the aims of that government. On his return to Chile in 1892 he was appointed professor of commercial law at the University of Chile, and a year later became editor of *La Libertad Electoral*. In 1894 he was elected Deputy for the Department of Linares, representing that district through reelection until 1906. In 1909 and again in 1916 he was elected representative for Santiago.

Dr. Ibañez held the portfolio of Finance in 1904, later becoming Minister of Justice and Public Instruction. He twice served as premier, under President Barros Luco in 1910 and under President Sanfuentes in 1916. In 1917 he was appointed Minister to France.

ICE HOCKEY. See HOCKEY.

ICELAND. An island state in the North Atlantic Ocean to the northwest of Great Britain and with its northern coast touching the Arctic Circle. Total area, 39,709 square miles; total population was estimated to be 109,719 on Jan. 1, 1932 as compared with 108,870 at the census of 1930. Reykjavik, the capital, had 28,847 inhabitants in 1931; Akureyri, 4001; Hafnarfjörður, 3568; and Vestmannaeyjar, 3345. In 1931, living births numbered 2794; deaths, 1277; marriages, 681.

Fisheries are the chief support of the population as only about one-seventh of the total land area is suitable for cultivation. In 1930 the sea fisheries amounted to 253,100 metric tons valued at 42,700,000 kroner (kroner equals \$0.268 at par) of which the cod fisheries were valued at 39,530,000 kroner. Agricultural production for 1930 in metric tons was potatoes, 3600; turnips, 1250; hay, 162,750. Livestock (1930): Horses, 49,000; cattle, 30,100; sheep, 68,200; goats, 3000. Imports in 1930 amounted to 71,956,000 kroner; exports 60,096 kroner. The budget for 1933 estimated revenue at 10,530,095 kroner and expenditure at 10,726,631 kroner. The public debt on Jan. 1, 1932 was 39,393,482 kroner; state assets were 65,018,834 kroner. On June 28, 1933 the commercial agreement signed with Great Britain on May 19, 1933 came into force. It is similar to the commercial agreements concluded with the Scandinavian countries by Great Britain (see GREAT BRITAIN under *History*).

Executive power is vested in the King of Denmark who acts through a responsible ministry; and legislative power in the King and Althing (Icelandic Parliament) which consists of 42 members of whom 6 are elected for 8 years by proportional representation for the whole country, and 36 for 4 years by universal suffrage. The Althing is divided into an upper house of 14 members and a lower house of 28 members. Men and women over the age of 25 years have the right to vote. King in 1933, Christian X. Presi-

dent of the Council and Minister of Finance, A. Asgeirsson.

In a referendum on Iceland's Prohibition law held Nov. 13, 1933, the vote was approximately 15,000 to 11,000 in favor of repeal. Repeal legislation was to be considered by the Althing in 1934.

IDAHO. POPULATION. The population of the State on April 1, 1930, was 445,032 (Fifteenth Census); in 1920 it was 431,866; in 1933, 447,000 (Federal estimate). Boise, the capital, had (1930) 21,544 inhabitants.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame) .	1933	1,086,000	2,329,000*	\$14,678,000
	1932	1,102,000	2,673,000*	11,227,000
Wheat	1933	1,075,000	19,385,000	10,263,000
	1932	1,192,000	30,656,000	8,121,000
Potatoes ...	1933	92,000	19,504,000	7,997,000
	1932	99,000	19,800,000	3,366,000
Dry beans ..	1933	121,000	1,670,000*	3,340,000
	1932	93,000	1,060,000*	1,166,000
Apples	1933	5,244,000	2,622,000
	1932	4,200,000	1,470,000
Barley	1933	143,000	4,147,000	1,451,000
	1932	163,000	5,868,000	1,408,000
Sugar beets .	1933	76,000	862,000*
	1932	53,000	709,000*	3,618,000
Oats	1933	142,000	4,544,000	1,272,000
	1932	148,000	5,476,000	1,095,000

* Tons. † 100-lb bags.

MINERAL PRODUCTION. The mines' production of gold, silver, copper, lead, and zinc fell to a total value for 1932 less than one-fourth that for 1929. It attained (1932) \$7,501,151, as against \$11,418,013 for 1931. Production declined in every case save that of gold. The value of gold mined rose to \$936,434 (1932), from \$379,563 (1931), chiefly by reason of initial or increased operation of two or three mines. Mines brought into production by the St. Joseph Lead Company furnished about 42 per cent of the year's output of gold.

Production of silver fell in quantity to 6,700,000 fine ounces (1932) from 7,220,923 (1931); that of copper, to 1,097,000 pounds, from 1,144,915; lead, to 142,000,000 pounds, from 198,729,228; zinc, to 20,400,000 pounds, from 39,137,212. In terms of value, the chief decline was that of the production of lead, to \$3,976,000 (1932), from \$7,352,981 (1931).

For 1933, the estimated value of the mines' output of gold, silver, copper, lead, and zinc, was \$11,211,718. Of this total, 61,208 ounces of gold (reckoned at \$20.67 an ounce) furnished \$1,265,282; 7202 ounces of silver, \$2,484,690; lead, 149,761,000 pounds, \$5,541,157; and 42,485,000 pounds of zinc, \$1,820,855.

CHARITIES AND CORRECTIONS. Through its Department of Public Welfare the State conducted approximately the functions of a State board of health. This department also held jurisdiction over the State's mental hospitals, its Soldiers' Home, work to combat tuberculosis, and the administration of the old-age pension. The State's institutions for the mentally afflicted were: Northern Idaho Sanatorium, Orofino; State School and Colony, Nampa. The State Penitentiary, at Boise, was directed by a board composed of the Governor, Attorney General, and Secretary of State.

LEGISLATION. Meeting in regular session on January 2, the Legislature passed a law authorizing the Governor to call a special election, at which should be chosen delegates to a State

convention that was to act for the State with regard to the proposed repeal of the Federal Eighteenth Amendment. The Governor was authorized on March 1, at the height of the Nationwide financial crisis, to suspend foreclosures and bank runs by declaring legal holidays.

POLITICAL AND OTHER EVENTS. Governor Ross issued a proclamation on March 24 suspending proceedings for the foreclosure of mortgages for 60 days. At an election on September 19 were chosen, by a vote in the approximate proportion of 4 to 3, delegates favorable to the repeal of the Federal Eighteenth Amendment. They met in State convention on October 17 and voted the State's ratification of repeal as proposed by Congress in the superseding amendment.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, C. Ben Ross; Lieutenant-Governor, George E. Hill, Secretary of State, Franklin Girard; Auditor, Harry C. Parsons; State Treasurer, Myrtle P. Enking; Attorney General, Bert H. Miller; Superintendent of Public Instruction, John W. Condie; Inspector of Mines, W. H. Simons.

Judiciary. Supreme Court: Chief Justice, Alfred Budge; Associate Justices, Raymond L. Givens, William M. Morgan, Edwin M. Holden, N. D. Wernette.

IDAHO, UNIVERSITY OF. A coeducational State institution of higher learning in Moscow, Idaho, founded in 1889, with a southern branch in Pocatello, established by Act of the State Legislature which converted the Idaho Technical Institute into a division of the State University; the change became effective in the autumn of 1927. The total enrollment at Moscow in the autumn of 1933 was 1995. Total enrollment at Pocatello was 808. The enrollment for the 1933 summer session was 537. The faculty numbered approximately 180. The physical plant at the university was valued at approximately \$2,150,000 and that at the southern branch at approximately \$765,000, making a total of about \$2,915,000. The productive funds of the university amounted to \$2,078,950, and the income for 1932-33 was approximately \$1,114,139. The library now approaches 100,000 volumes. President, Mervin Gordon Neale, Ph.D.

ILLINOIS. POPULATION. The population of the State on Apr. 1, 1930, was 7,030,654 (Fifteenth Census); in 1920 it was 6,485,280; in 1933, 7,826,000 (Federal estimate). Chicago, the chief city, had (1930) 3,376,438 inhabitants; Peoria, 104,909; Springfield, the capital, 71,864.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1933	8,324,000	224,748,000	\$78,662,000
	1932	9,353,000	404,179,000	60,327,000
Hay (tame) .	1933	2,340,000	2,824,000*	21,462,000
	1932	2,313,000	3,088,000*	16,058,000
Oats	1933	4,039,000	78,760,000	21,265,000
	1932	4,439,000	166,462,000	16,646,000
Wheat	1933	1,721,000	27,418,000	20,289,000
	1932	1,652,000	24,978,000	8,759,000
Potatoes ..	1933	46,000	1,584,000	1,505,000
	1932	54,000	4,860,000	2,430,000
Barley	1933	319,000	4,785,000	2,201,000
	1932	371,000	10,574,000	2,749,000

* Tons.

MINERAL PRODUCTION. The mines' production of coal was further sharply reduced, to 32,360,000 net tons (1932), from 44,303,295 tons for

1931. The decline from 1931, proportionately, was 27 per cent; that from 1929, 46.7 per cent. There was produced in 1932, from 2,151,004 net tons of coal, 1,428,334 net tons of coke; in value, \$6,870,191. It was entirely the output of by-product ovens. The output of petroleum attained for 1932, 4,661,000 barrels, as against 5,039,000 for 1931; it was the lowest year's output subsequent to that of 1906. Low prices for the product, though somewhat improved in the course of the year, discouraged exploration for new wells.

FINANCE. State expenditures in the year ended June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$62,139,744 (of which \$4,296,745 was for local education); for interest on debt, \$8,262,918; for permanent improvements, \$37,375,323; total, \$107,804,844 (of which \$36,586,756 was for highways, \$5,315,317 being for maintenance and \$31,271,439 for construction). Revenues were \$88,998,551. Of these, property and special taxes furnished 32.5 per cent; departmental earnings and compensation to the State for officers' services, 4.1; sale of licenses, 50.5 (in which was included a gasoline sale tax that produced \$18,760,020). Funded debt outstanding on June 30, 1932, totaled \$190,960,920, of which \$149,544,000 was for highways. Net of sinking-fund assets, the debt was \$189,628,756. (On an assessed valuation of \$7,875,676,804 the State levied in the year ad-valorem taxes of \$30,-715.139.

The State tax board, by action on Dec. 27, 1933, eliminated the direct State tax on realty, which would otherwise have been payable in 1934 (or later in Cook Co.) on a levy covering 1933.

EDUCATION. Statistics for the public-school system as a whole were obtainable only for the academic year 1931-32. For that year the number of persons of school age (from 6 years to 21 years) in the State was reckoned as 2,056,473. There were enrolled in the public schools 1,415,553 pupils. Of these, 1,077,755 were in common schools or elementary grades. Those in high schools numbered 337,798. The current expenditures of the year for public-school education totaled \$122,322,601. Salaries of teachers, for the year, averaged \$1648. Both the latter figures were moderately lower than the corresponding ones for the year before.

CHARITIES AND CORRECTIONS. The central administrative authority for the care and custody of persons rested in 1933 in the Department of Public Welfare, as created by the civil administrative code of 1917. It had as its head a director (A. L. Bowen), who also acted as superintendent of charities in the administration of the State's charitable institutions. A superintendent of prisons supervised the penal institutions. Among other subordinates was a supervisor of paroles, an alienist, and a criminologist. A division of child welfare dealt with dependent children. The department maintained a psychopathic institute, schools of psychopathic nursing, an institute for juvenile research, supervision over a system of mothers' pensions, and means for the education of crippled children, and inspected many private and (local) public institutions.

The State institutions under the direction of the department, with their populations of Nov. 1, 1933, were: mental hospitals at Elgin, Chicago, Kankakee, Manteno, Peoria, Jacksonville, East Moline, Alton, Anna, and Chester, 25,262 inmates; penitentiaries at Joliet and Menard, a

boys' reformatory at Pontiac, State Farm (for misdemeanants) at Vandalia, and women's reformatory at Dwight, with an aggregate of 11,424; institutions for the feeble-minded, at Dixon and Lincoln, 6570; Illinois School for the Deaf, at Jacksonville, 617; Illinois School for the Blind, at Jacksonville, 232; Industrial Home for the Blind, at Chicago, 92; Illinois Soldiers' and Sailors' Home, at Quincy, 769; Soldiers' Widows' Home, Wilmington, 107; Illinois Eye and Ear Infirmary, at Chicago, 197; Soldiers' and Sailors' Children's School, at Normal, 712; Research and Educational Hospitals, Chicago, 352; School for Boys (delinquent), St. Charles, 518; State Training School for Girls (delinquent), Geneva, 344. There were under parole, on June 30, 1933, 4913 persons.

LEGISLATION. The Legislature met on January 4 in regular session. It repealed the State act for the enforcement of prohibition and created a State convention, to consist of 50 delegates at large, elected by popular vote on June 5, to act for the State with regard to the Federally proposed repeal of the Eighteenth Amendment. The Legislature itself ratified the proposed Federal constitutional amendment to prohibit child labor. Among acts passed with relation to the banking crisis of March was one to enable depositors in closed State banks outside of the Chicago area to bring about the reopening of such banks by waiving withdrawal of 75 per cent of their deposits. There was imposed on retail sales, with specified exceptions, a tax of 3 per cent of the price. This tax being declared unconstitutional by the courts, the Legislature later enacted a substitute measure levying a general sale tax of 2 per cent. On oleomargarine containing coconut oil was imposed a tax of 10 cents a pound, similar to taxes imposed in the home agricultural interest in a number of other States; this tax, however was vetoed. "Yellow dog" labor contracts, by which the worker bound himself not to join a union, were made invalid by law. A board was created to fix standards of wages for women and children.

A special session, convened on November 22 to enact State control over trade in alcoholic drink, was still at work at the end of the year.

POLITICAL AND OTHER EVENTS. Henry Horner was inaugurated as Governor on January 9. In the midst of the country-wide banking panic the Governor closed banks by declaring a series of legal holidays on March 4, after banks in some sections of the State had limited depositors' withdrawals on their own initiative. Scarcity of money had been acute in some communities some time before the crisis, and an association of retail merchants at Evanston had issued in February a form of self-liquidating stamp-money. The tax on merchants' sales first enacted by the Legislature was contested in the courts and was declared to be unconstitutional by the State Supreme Court on May 10. The Legislature's second measure, imposing a 2-per cent tax on sales was sustained by the State Supreme Court in August, but other litigation on the subject was pending, and the authorities gained only in December sufficient confidence in the next tax to prompt them to do away with the State's ad-valorem levy on property (see *Finance* above).

On June 5 were elected by popular vote, in the approximate proportion of 3½ to 1, delegates favorable to the repeal of the Eighteenth Amendment, who met in State convention on July 10

and voted the State's ratification of repeal by the superseding amendment proposed by Congress.

The milk business centring in Chicago was placed under regulation by an agreement reached on May 19 between the majority of the producers and dealers, in conference with Federal Agricultural Adjustment Administrator Peek, at which prices to producers and to consumers were set. Opposition to foreclosure sales in the farming areas was carried on early in the year, by farmers, and resulted in frequent inability to realize through sales, in the face of hostile gatherings. Circuit Judge Fisher, in a Chicago foreclosure case, rendered an order on April 1 allowing the owners of a large building to remain in possession as though they were receivers, subject to the orders of the Court. Troubles occurred in the coal mining districts in January, among unemployed miners, and again in October, in connection with the efforts of the National Recovery Administration to put the industry under regulation.

Mayor Cermak of Chicago died at Miami, Florida, on March 6 of a wound inflicted by the assassin Zangara in an attempt to kill President-elect Roosevelt (see CERMAK and FLORIDA, *Events*). The Chicago city council elected Edward J. Kelly mayor to serve the balance of Cermak's term, expiring in April, 1935. Chicago having failed to carry out the requirements of the Federal Supreme Court as to building plants for the disposal of sewage, the Court refused in October to reconsider its ruling rendering the State liable for the cost of this work.

The Century-of-Progress Exposition, a world's fair to mark the centennial of Chicago, opened in that city on May 27 and continued into November. (See CENTURY OF PROGRESS EXPOSITION.)

Some progress was made toward improving Chicago's finances. Pay checks were delivered on May 18 for a total of \$12,468,447, representing the pay of some 18,000 employees of the Board of Education for the final quarter of 1932; banks in the city had agreed to lend the city the money on the security of its warrants, after a series of demonstrations carried on by teachers and pupils. Provision was made for a year's disbursements for the schools by an act of the Legislature authorizing the city to issue \$40,000,000 of bonds for that purpose without sanction of a referendum. The school year was shortened by two weeks at either end, in order to save expense of some \$4,000,000, and welfare work connected with the schools was dropped in order to save another \$1,000,000. The governmental bodies of Cook County owed in April, besides some \$400,000,000 in bonds, about \$335,000,000 of floating debt, including \$54,000,000 of back pay to employees, of which one-half was to teachers. Uncollected taxes for the years 1928-30 totaled \$219,000,000; taxes for 1931, billed in 1933, \$220,000,000.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Henry Horner; Lieutenant-Governor, Thomas F. Donovan; Secretary of State, Edward J. Hughes; Auditor, Edward J. Barrett; Treasurer, John C. Martin; Superintendent of Public Instruction; Francis G. Blair; Attorney General, Otto Kerner.

Judiciary. Supreme Court: Chief Justice, Warren H. Orr; Associate Justices, Norman L. Jones, Paul Farthing, Frederic R. de Young, Lott R. Herrick, Clyde E. Stone, Elwyn R. Shaw.

ILLINOIS, UNIVERSITY OF. A coeducational

State institution of higher learning in Urbana-Champaign, Ill., founded in 1867. The enrollment in the autumn of 1933 was 9996, of whom 7440 were men and 2556 were women. The summer-session enrollment was 2382, of whom 1448 were men and 934 were women. The number of persons on the teaching staff above the rank of assistant was 703. In the grade of assistant or lower there were 332, and the administrative officers and assistants (including Library assistants) totaled 145. The income for the year 1932-33 was \$5,822,273, of which \$3,920,871 was from the State. The productive funds from Federal endowment totaled \$649,013 and from private gifts, \$369,313. The library contained 947,043 volumes, and 243,000 pamphlets. Acting President, Arthur Hill Daniels, Ph.D.

"I'M ALONE" CASE. See ARBITRATION, INTERNATIONAL.

IMMIGRATION. As a result of the sharp reduction in the number of alien immigrants entering the United States in recent years, the activities of the Department of Labor under Secretary Perkins have undergone almost a complete metamorphosis. When Miss Perkins entered upon her duties, the Immigration Service of the Department alone absorbed 3659 of the 5113 employees and nearly \$10,000,000 of the Department's entire appropriation of \$13,500,000. As a result of the radical changes made by the new Secretary, out of the former 13 division heads reporting directly to the Commissioner General of Immigration and 9 to the Commissioner of Naturalization, there were created 6 main branches with responsible officials at their heads. Further, the immigration and naturalization districts were reduced from 58 to 22. Secretary Perkins indicated that it was her intention to terminate the extra-legal administrative methods that were formerly so commonly associated with the work of the immigration and naturalization services. Every effort was going to be made to terminate raids on assemblages of peaceful citizens, unfeeling and unnecessary separation of families, arrests and searches without warrant, unduly long jail detention, demands for excessive bail, and persecution of labor leaders. It was recognized, as a result of Miss Perkins' activities that within less than half a year much had been done to make less harsh and more consistent with the American notions of justice and fair play the treatment of aliens. Miss Perkins quietly dropped the order promulgated by Secretary of Labor Doak two days before his departure from office which required the finger-printing of all aliens arriving in the country for permanent residence. Despite the fact that Congress had consistently refused to authorize measures requiring the registration of immigrants, Secretary Doak handed down a departmental order which was considered the most radical change in the immigration regulations in recent years. This regulation required immigrants to be finger-printed in the public lounges of incoming liners on their first arrival and also made aliens who had lived in the country as permanent residents undergo the same procedure on their return from visits abroad.

During the fiscal year ended June 30, 1933, there were admitted but 23,068 aliens for permanent residence, constituting the lowest number of admissions for over 100 years. The annual average number of admissions of the four fiscal years ending June 30, 1929, was 306,649; for the four years of world-wide depression, that is 1929-33,

the annual average was but 99,371. The following were the official reasons cited by the Commissioner General of Immigration for the decreases: 1. Circumspection exercised by American consuls selecting immigrants. 2. Realization by aliens abroad of lack of work and employment here. 3. Financial inability of husbands and fathers to bring their families to the United States, or for other relatives to assure aid or support. 4. Reconciliation of aliens in these times to remain in their own countries.

Non-immigrants admitted during the past fiscal year numbered 127,660, about 8 per cent less than in the preceding year. These are aliens admitted as visitors or in transit through the country and aliens returning to an acquired residence in the United States. These admissions also show heavy decreases from normal times. They are the smallest since distinctions have been maintained, that is, since 1924. Alien recorded departures in the year, both emigrant and non-emigrant, were 243,802, the first class numbering 80,081 and the second 163,721. Assuming that all of the non-emigrants going abroad for a visit will return and that all the immigrants admitted will remain, there is a net loss of 57,013 in the alien population in the year, the difference between the immigrants and emigrants. The disparity between the statistical classes of immigrants and non-immigrants and the emigrants and non-emigrants is 93,074, an excess of departures. Departures still exceed admissions. The movement of Mexican nationals to their own country has slackened during the latter part of the year, although not definitely reflected in the outgoing figures of this service, as the greater number of departures to that country are unrecorded, there being so many places of easy egress. Destitute Mexican families have been repatriated by States, towns, and welfare organizations. For instance, several counties in southern California removed about 6700 persons to Mexico, continuing a movement started two years ago.

Many now are attempting to return, and such attempts will increase as times improve in this country. The fear of arrest for illegal entry does not seem to be much of a deterring factor. A considerable but much smaller movement of Canadians, altogether voluntary, from the large centres of population is noted. To prevent and detect illegal entries, the first line of defense is the immigration border patrol, a force organized in 1924 as a complement to the Immigration Service proper. Apprehensions fell off but slightly from the preceding year, there being 21,066 as against 22,884 in 1932. The number of aliens intercepted on both borders in the act of entering illegally, or shortly thereafter, was 20,358, together with 117 of their smugglers, the comparable figures for the preceding year being 21,579 and 149. Illegal entries have not greatly decreased on the Mexican border, but there has been a considerable reduction on the northern frontier, likely attributable to a better appreciation of prevailing conditions in the United States.

Of the 23,068 immigrant aliens admitted during the year, 8220 were aliens charged to the quotas of their respective countries; 7475 were aliens with visas from non-quota countries (Western Hemisphere), most of these, however, being natives of Canada; and 7373 were non-quota immigrants from any country, such as the husbands, wives, and unmarried children of American citizens (who numbered 6658), ministers and professors, and their families, etc. Total number of Mexican immigrants admitted during the fiscal year was 1876, the smallest number yet, decreasing from 2058 in the preceding fiscal year. Non-immigrants recorded amounted to 2249. Table I gives the annual quota allotted to various countries and subdivisions in accordance with the national-origins plan, and admissions thereunder in the past and preceding fiscal years.

The number of aliens finally denied admissions in the fiscal year (the debarred or excluded

TABLE I.—ANNUAL QUOTAS UNDER THE NATIONAL-ORIGINS PLAN, AND THE NUMBER OF QUOTA IMMIGRANTS ADMITTED, YEARS ENDED JUNE 30, 1930, 1931, 1932, AND 1933

* Including colonies, dependencies, or protectorates of European countries.

classes) was 5527, persons of the English, French, and Mexican races accounting for about one-half, and the English and French being mostly natives of Canada. A total of 6285 were excluded by the boards of special inquiry at ports of entry, and appeals to the Department were taken in 2165 cases, of which 758 were sustained and 1407 denied. At the close of the year, 190 appeals were pending in the Department and 22 in Federal courts in habeas corpus proceedings after the Department's adverse decision had been rendered. The final exclusion of 3946 aliens applying for admission along the Canadian border is roughly two-thirds of the total number, and these were mostly aliens who applied without the proper documents under the Immigration Act of 1924. On the Mexican border, 681 of the 4806 applicants for temporary or permanent admission were excluded, about 14 per cent, a very high proportion. This may be contrasted with exclusions at the port of New York of only 547 aliens, out of 102,766 immigrants and non-immigrants examined, or about five of every thousand. The reasons for the wide disparity in proportional rejections between seaports and land border stations are the facts that arrivals from overseas must be provided with documents before being permitted to sail, and that most European aliens have had the combined and thorough examination of consuls and immigration officers officiating as technical advisers, and have undergone intensive medical examination by public-health surgeons detailed to the consulates for that purpose. Of the 5527 final rejections, less than 100 were for causes other than the lack of consular documents required by the present law, this reason accounting for 5435 of the total. Only eight aliens were refused admission as criminals; because, when applying for visa, it is usually necessary to have a clear police record, evidenced by an official statement to that effect. Only one alien was denied admission as a person who had been deported.

Nineteen thousand eight hundred and sixty-five aliens were deported or left the country under their own arrangements consequent upon an order of deportation, 439 more than in the preceding fiscal year, and is the greatest number expelled from the country in its history. Of this number 17,952 were sent out at the expense of the Bureau's appropriation, and 1163 at the expense of steamship companies that had brought the aliens to the United States or Canada within the statutory periods. Fifty-seven deportees were permitted to ship as seamen on a one-way voyage to foreign ports; and 693 were granted permission to depart at their own expense and under their own arrangements. Under a procedure long in effect 10,347 aliens subject to deportation were permitted to leave the country after being interviewed, either without warrant proceedings at all or prior to their conclusion. Most of this number departed over the borders. The Service was responsible for the removal or departure of 30,212 deportable aliens. Also for the voluntary removal or repatriation of 1645 aliens under section 23 of the act of 1917, who became destitute and applied for return to their native country, a decrease of 992 from the preceding year. The decrease was occasioned by the lesser number of destitute aliens repatriated at their own request, 2637 having been so removed in the fiscal year 1932. Of the 19,865 deportations, 5904 aliens were sent to Europe, 2642 to China (mostly the refugees from Mexico along the Arizona border), 2216 to

Canada, 7760 to Mexico, 593 to other portions of this hemisphere, 658 to Asiatic countries other than China, and 102 to Africa, Australia, and the Pacific Islands.

The following table classifies reasons for deportation:

Illiteracy	1,893
Without proper visa	9,099
Overstaying permit	3,148
Diseased	1,056
Criminals	1,770
Anarchists and kindred classes	74
Drug violators	167
Immoral persons	785
Entered after deportation or exclusion	1,010
Miscellaneous	1,368

IMPEACHMENT. See LAW under *Judiciary*.

IMPORTS. See articles on various countries; and especially articles AGRICULTURE; CORN; IRON AND STEEL, ETC.

INCOME TAX. See TAXATION.

INDIA. A dependency of the British Empire, divided into British India, or the territory subject to British law and directly administered by British officials, and the Indian States, ruled by native princes but subject to the control of the British Parliament. Capital, New Delhi.

AREA AND POPULATION. The area and population of the British Provinces and the Native States and Agencies at the census of 1931 are shown in the accompanying table. The total population of 352,837,778 in 1931 compared with 318,-

NOTE.—Figures for the Provinces include those of the States attached to them except in the case of Madras, where they exclude Cochin and Travancore.

942,480 in 1921, or an increase for the decade of 33,895,298 (10.6 per cent). In 1931, there were 181,828,923 males and 171,008,855 females, or 940 females per 1000 males. The mean density of population per square mile for all India was 195, the maximum density being 814 in Cochin

State and the minimum 5 in the Baluchistan States. Eleven per cent of the population was urban.

The number of Europeans in India in 1931 was 168,134 (males 117,336; females 50,798) and of Anglo-Indians, 138,395 (males 71,247; females 67,148). The populations of the chief cities in 1931 were: Calcutta (with suburbs and Howrah), 1,485,582; Bombay, 1,161,383; Madras, 647,230; Hyderabad, 466,894; Delhi, 447,442; Lahore, 429,747; Rangoon, 400,415; Ahmedabad, 313,789; Bangalore, 306,470; Lucknow, 274,659; Amritsar, 204,840; Karachi, 263,565; Poona, 250,187. In 1930 births numbered 8,690,714; deaths, 6,483,449. The birth rate per 1000 inhabitants was 35.99; death rate, 26.85. Emigrants in 1931 numbered 32,424. At the 1931 census 46.7 per cent of the males and 49.3 per cent of the females were married, while 5.4 per cent and 15.4 per cent respectively were widowed. The brief average span of Indian life was indicated by the statistics showing that 39.0 per cent of the population was under 15 years, 50.5 per cent between 15 and 50, and 9.6 per cent 50 and over.

RELIGION. Out of each 1000 inhabitants in 1931 there were 682 Hindus, 222 Moslems, 36 Buddhists, 24 adherents of tribal religions, 18 Christians, and 18 members of other faiths. During the decade 1921-31 the actual number adhering to tribal religions declined 15.3 per cent. All of the other major religious groups increased in numbers, as follows: Hindus, 10.4 per cent; Moslems, 13 per cent; Buddhists, 10.5 per cent; Christians, 32.5 per cent; other religions, 38 per cent. There were approximately 2300 different castes, the largest, in the order named, being the Sheikh, Brahman, Chamar, Rajput, Ahir, Burmese, Jat, and Maratha. The so-called "untouchables" or members of the scavenger caste comprised 30 per cent of the Hindu population.

EDUCATION. The literate population of India in 1931, including children, was 28,131,315 (23,962,279 males and 4,169,036 females); the illiterate population, 321,628,003 (156,243,305 males and 165,384,698 females). Out of each 1000 inhabitants, aged five and over, 156 males and 29 females could read and write in some language, as compared with 122 males and 18 females out of every 1000 inhabitants in 1921, and 81 males and 3 females out of every 1000 in 1881. About 2,500,000 persons had a knowledge of English. In 1930-31, there were 262,068 educational institutions in British India, with 12,689,086 pupils. There were eight federal, six unitary, and two denominational universities, besides two universities in the Indian States of Mysore and Hyderabad.

PRODUCTION. Of the total working population in 1931, 66.4 per cent were engaged in agriculture, 5.13 per cent in trade, 9.95 per cent in industry, and 1.52 per cent in transportation. There were 25,005,280 persons engaged in mines, industry, and transport in 1931 (23,236,099 in 1921). The area sown to crops in British India in 1930-31 was 229,087,103 acres. India is one of the world's largest producers of sugar cane, ranks second to the United States in the output of cotton, and has a monopoly of the world's jute supply. Provisional production of the chief crops in the 1932-33 crop year, with 1931-32 figures in parentheses, was (in 1000 quintals of 220.46 pounds): Jute, 10,605 (10,099); wheat, 91,708 (94,543); rough rice (excluding several Indian States), 479,662 (516,167); cane sugar, 42,180

(39,423); linseed, 4176 (3831); cotton, 8194 (7303). Barley production in 1931-32 was 24,304,000 quintals; tea, 1,787,000 quintals (1931); sesamun, 4,836,000 quintals (1931-32); ground nuts, 27,403,000 quintals (1931-32).

Production of coal in British India in 1932 was 18,971,000 metric tons (21,026,000 in 1931). Salt production in all India (1931) was 1,869,000 metric tons; petroleum (1931), 1,197,000 metric tons; iron ore, 1,651,000 metric tons; manganese ore, 546,500 metric tons; pig iron and ferro-alloys, 1,090,000 metric tons; steel, 635,000 metric tons (580,000 in 1932); copper content of ores mined, 11,600 metric tons; lead, 90,400 metric tons; zinc, 46,000 metric tons; chrome ore, 20,200 metric tons; gold, 10,280 kilogrammes (10,000 in 1932); silver, 184,226 kilogrammes (186,700 in 1932). The value of mineral output in 1931 was £17,739,994 (\$80,451,000).

Industrially, India is one of the seven leading countries of the world. The principal manufactured products are cotton textiles, jute, iron and steel, and sugar. On Mar. 31, 1933, the number of raw cotton-spinning spindles installed in India was 9,506,000 (9,312,000 on July 31, 1932). In 1931 there were 17 wool mills, with 72,691 spindles and 1389 looms; 98 jute mills, with 53,900 looms; and 46 sugar mills, with a rated output of 99,100 tons per annum.

COMMERCE. The decline in India's foreign trade during the period 1930-32 is shown in the accompanying table.

INDIA: IMPORTS AND EXPORTS
[In thousands of rupees *]

Year	Imports for consumption	Exports of Indian produce	Excess of exports
1930	1,879,383	2,525,876	646,493
1931	1,361,594	1,651,894	290,300
1932	1,328,189	1,352,831	24,642

* The rupee, par value \$0.3650, exchanged at an average of \$0.3607 in 1930, \$0.3369 in 1931, and \$0.2635 in 1932.

Exports of bullion and specie in 1932 amounted to 800,313,000 rupees (413,239,000 in 1931) and imports were 31,594,000 rupees (126,197,000 in 1931). The chief loss in merchandise exports in 1932 was in the raw materials group, which declined 32 per cent in value, due chiefly to price declines. As compared with 1931, the 1932 exports to all foreign markets declined in value—to Japan, 34 per cent; to the United States, 31 per cent; the United Kingdom, 15 per cent; and the British Empire, 4 per cent. The United Kingdom (including the Irish Free State) in 1932 took 27.9 per cent of India's exports (375,400,000 rupees), against 26.8 per cent (440,300,000 rupees) in 1931. Japan took 8.7 per cent (116,800,000 rupees), against 10.8 per cent (177,200,000 rupees) in 1931. The United States, 7.5 per cent (101,500,000 rupees), against 9 per cent (147,400,000 rupees) in 1931. Germany took 6.2 per cent in 1932 (6.6 in 1931); France, 5.6 per cent (4.8).

Imports from all principal sources, except the United Kingdom and Japan, declined in 1932. The United Kingdom supplied 36.4 per cent of the value of all imports (486,300,000 rupees), against 34.2 per cent (463,600,000 rupees) in 1931; Japan, 14.4 per cent (192,800,000 rupees) against 10.2 per cent (138,600,000 rupees) in 1931; the United States, 8.5 per cent (114,200,000 rupees) against 10.6 per cent (143,900,000 rupees); and Germany, 7.8 per cent (104,700,

000 rupees) against 8.3 per cent (113,000,000 rupees) in 1931.

The chief export items in 1932 were (in rupees): Gold coin and bullion, 758,800,000; rice, 174,800,000; tea, 168,900,000; raw cotton, 160,300,000; jute bags, 116,700,000; jute gunny cloth, 102,700,000. Leading import items in 1932 were (in rupees): Cotton manufactures, 221,600,000; machinery, 104,700,000; raw cotton, 79,200,000; mineral oils, 77,700,000.

FINANCE. Closed accounts of the Indian budget for the fiscal year ended Mar. 31, 1932, showed a deficit, after providing nearly 70,000,000 rupees for debt reduction, of 110,750,000 rupees. Revised estimates for the fiscal year 1932-33 showed an actual surplus of 21,700,000 rupees, after providing nearly 70,000,000 rupees for debt reduction. For the two years from Apr. 1, 1931, to Mar. 31, 1933, there was a total budgetary deficit of 95,800,000 rupees, after 137,300,000 rupees had been used for reduction of debt. The net debt reduction for the period was thus 41,500,000 rupees. The budget for the fiscal year 1933-34 estimated revenue at 1,245,200,000 rupees and expenditure at 1,241,000,000 rupees. On Mar. 31, 1933, the total interest-bearing debt of the Imperial government amounted to 12,108,600,000 rupees (12,136,300,000 on Mar. 31, 1932). Against the Mar. 31, 1933, total were placed 9,688,700,000 rupees of interest-bearing assets and 350,700,000 rupees of cash, bullion, and securities held on Treasury account. The balance of interest-bearing obligations not covered by assets was 2,069,200,000 rupees.

COMMUNICATIONS. On Mar. 31, 1932, there were 42,753 miles of railway lines in operation (including 31,709 miles of Imperial State lines and 6396 miles of Indian State lines); 586 miles of new line had been opened in the previous year. During the fiscal year ended Mar. 31, 1933, the Imperial State lines carried the fewest passengers in a decade and incurred a deficit of 100,000,000 rupees. Gross receipts were 845,000,000 rupees and operating expenses (including appropriation for depreciation) were 615,000,000 rupees, the net receipts being insufficient to meet interest charges. Highways in British India and the Punjab extended 225,280 miles. Air lines connected India with London and intermediate points, with Australia, with Netherland India, and with French Indo-China. Vessels entered with cargoes in the interportal trade in 1931-32 aggregated 20,659,402 tons; cleared, 20,576,105 tons. The new port of Vizagapatam on the east coast of the Indian peninsula, about midway between Madras and Calcutta, was opened to traffic in October, 1933.

GOVERNMENT. Direction and control of the civil and military government were vested in the Governor-General in Council, or government of India. The Governor-General, or Viceroy, is appointed by the British government, usually for five years. The Legislature in 1933 consisted of the Viceroy and two chambers—the Council of State of 60 members (33 elected and 27 nominated) and the Legislative Assembly of 145 members (41 nominated and 104 elected). Viceroy in 1933, the Earl of Willingdon (assumed office, April, 1931). Members of the Executive Council, appointed by the Crown, were: Home Affairs, Harry Graham Haig; Finance, Sir George Schuster; Education, Health and Lands, Sir Fraz-i-Husain Law, Sir Gajendra Lal Mitter; Railways and Commerce, Sir Joseph Bhore; Indus-

tries and Labor, Sir Frank Noyce. The Foreign and Political Department was directly under the Governor-General.

HISTORY

The work of framing a new and more liberal constitutional government for India, inaugurated with the appointment of the Indian Statutory (Simon) Commission on Nov. 26, 1927, made further progress in 1933. The broad outlines of a new federal government for India had been drafted in three successive Round-Table Conferences in London (see 1930, 1931, and 1932 YEAR BOOKS). Details of the new constitutional scheme were elaborated in a British Government White Paper (*Proposals for Indian Constitutional Reform*, Cmd. 4268), submitted to Parliament Mar. 17, 1933. The House of Commons on March 29 voted to set up a joint parliamentary committee to consider these proposals, in consultation with Indian representatives appointed by the Viceroy. This committee, known as the Joint Select Committee, conducted hearings throughout the remainder of the year, with several recesses. Toward the end of November both Houses of Parliament voted to reappoint the committee to permit further examination of the White Paper. It was expected that the constitutional proposals, as revised by the committee, would be submitted to Parliament for its approval some time in 1934 and that the new Constitution would go into effect in 1935.

THE WHITE PAPER. The proposals of the White Paper offered a considerable degree of self-government to the provinces of British India. The electorate for the Provincial Legislatures included some 38,000,000 men and women, or 27 per cent of the population, and the provinces were entrusted with most of the burden of domestic administration. However the Federal Executive was made subordinate to the British Governor-General and the proposed setup for the Federal Legislature insured its domination by a conservative bloc opposed to the aims of the Indian nationalists. The lower house of the Federal Legislature, the House of Assembly, was to consist of 125 members appointed by the Princes of the native States and 250 elected directly by 6,000,000 voters, or 4 per cent of the population. The upper house (Council of State) was to have 100 members appointed by the Princes, 10 appointed by the Governor-General, and 150 indirectly elected by the Provincial Legislatures. There was to be an Indian Prime Minister, with a cabinet responsible to the Federal Legislature.

The Viceroy retained exclusive power over the Indian Army and India's foreign relations. He was authorized to override the Indian Cabinet (1) in case of a national emergency; (2) to safeguard the rights of minorities; (3) to maintain the financial stability and credit of the federation; (4) to protect the position of the Indian Princes; and (5) to prevent commercial discrimination against British or other goods. On a wide range of subjects, the Viceroy's approval was required before bills could be introduced. Finally, it was stipulated that the constitutional reorganization should not become effective until the Princes ruling half the aggregate population of the native States agreed to enter the federation and a central bank, free of political influence, had been established.

The proposals aroused opposition on all sides and but little support. In India, the nationalists

and liberals attacked them as a pitifully inadequate step toward self-government, while the Princes denounced them as a capitulation to democracy. The Legislative Assembly at Delhi on March 31 passed a resolution declaring that peace and order in India could not be secured unless the proposals were substantially amended. In Great Britain, the proposals were violently denounced by the Laborites, who declared them a sham, and by the reactionary wing of the Conservatives, who were indignant at the alleged abdication of British authority.

The British government stood by its guns, despite the growing strength of the Conservative elements opposed to further concessions to India. At Conservative party conferences in June and in October, 1933, the government's India policy was approved. On the latter occasion the Chancellor of the Exchequer, Neville Chamberlain, said the government would make the issue a question of confidence. The government won the contest (737 to 344). But the opposition, under Winston Churchill, had gained strength since the Cabinet's India policy was reaffirmed at the July conference.

INDIAN DISSENSIONS. While the British pledge of ultimate Dominion status for India was meeting increased opposition at home, dissensions in the ranks of the Indian nationalists raised another obstacle to the early fulfillment of that promise. Mahatma Gandhi's civil disobedience campaign collapsed early in the year under the weight of the Imperial government's extra-constitutional emergency decrees and repressive measures. The prestige of the Hindu leader was further impaired by his subsequent eccentric moves. Revolt against his leadership became widespread. Some of the dominant figures in the All-India National Congress, led by V. J. Patel and Subhas Chandra Bose, demanded that passive resistance to the British Raj be abandoned in favor of militant direct action. On the other hand, majority sentiment among the Congress leaders at a conference held in Poona July 12-14 appeared to favor a return to constitutional methods. The latter faction gained in influence during the year, due to the fear that continued noncooperation with the British government would strengthen the hands of the British reactionaries and prevent any advance toward self-government.

The Viceroy continued his policy of refusing to negotiate with the Congress leaders until it renounced civil disobedience. Gandhi remained in the now-famous Yeravda Prison at Poona, where he had been incarcerated on Jan. 3, 1932, because of his announced determination to resume leadership of the civil disobedience movement if he were released. On Feb. 4, 1933, his wife was arrested and sentenced to six months' imprisonment for illegal political activities. The government of India forbade the scheduled meeting of the All-India National Congress at Calcutta on April 2 and arrested hundreds of delegates when they assembled in defiance of its orders.

Shortly afterward Mahatma Gandhi weakened the civil disobedience campaign further by placing his major emphasis upon the campaign for the abolition of Untouchability. He called attention to the deplorable position of the Untouchables by a 21-day fast (May 8 to May 29). At the commencement of his fast, the government released him from prison, not wishing to incur responsibility for his expected death. Gandhi then

made overtures toward the government by securing the discontinuance of civil disobedience and of the boycott against British goods for one month. The government, however, rejected his request for the release of political prisoners.

At the Poona meeting Gandhi exerted his personal influence to prevent the Congress leaders from capitulating to the government. He was authorized to order the resumption of civil disobedience in any form he desired in case an "honorable settlement" with the Viceroy was not reached before August 1. Lord Willingdon on July 17 reaffirmed his determination not to negotiate with Gandhi until civil disobedience was unequivocally disavowed. Gandhi then proclaimed a new programme of symbolical, individual civil disobedience in place of mass action. He was rearrested August 1 when he was about to start on a new pilgrimage, released with an order restricting his movements, and sentenced to one year in prison when he defied the order. Deprived of the special privileges he had formerly enjoyed, the Mahatma threatened to fast to death unless given facilities to conduct his campaign against Untouchability from prison. The government consented, but Gandhi nevertheless commenced his fast and on August 23 secured his unconditional release. On September 14, he announced a year's truce with the British government. He promised not to engage in civil disobedience or other defiance of the authorities until Aug. 3, 1934, and that in the meantime he would devote all his energies to his campaign against Untouchability.

Gandhi's vacillations had aroused extensive criticism of his leadership within the Congress ranks, which seemed on the point of dissolution. There was conflict between the orthodox Hindus and Gandhi's followers over his effort to redeem the depressed classes. Another schism occurred between the radicals, lead by Jawaharlal Nehru, and the moderates in Congress over Nehru's proposal for immediate confiscation of the properties of the wealthy classes. The Congress was thus disunited and undecided upon its future course as the year ended. Meanwhile the terrorist movement continued, particularly in Bengal, and a number of daring raids on railway stations and British clubs were staged.

TEXTILE MARKET WAR. India during 1933 was the main battle ground of a bitter competition between the cotton textile manufactures of Great Britain and Japan. The Indian market absorbed annually about 5,000,000,000 yards of cotton cloth. Of this total, the expanding cotton mill industry in India supplied about 3,000,000,000 yards and India's 2,500,000 hand looms contributed another 1,000,000,000 yards. Notwithstanding the huge domestic production, the country imported 1,126,652,000 yards of cotton piece goods (excluding fents or remnants) in 1932, compared with 720,022,000 in 1931 and 1,874,000,000 in 1929. Owing to Japan's depreciated currency and low labor costs and the tariff preference accorded goods from the United Kingdom, these two countries together supplied 98 per cent of the total 1932 imports of cotton cloth. For the first time Japan displaced Great Britain as the chief source of supply, furnishing 569,893,000 yards against 541,854,000 from Britain. In 1931, imports from Japan were 336,387,000 yards and from Great Britain 350,775,000 yards.

During the first half of 1933, the Japanese not only gained a commanding lead over British

textiles but forced a number of large Indian mills to close down. An increase in the Indian tariff on textiles, with a greater preferential for British goods, failed to check the inflow from Japan, but resulted in a Japanese boycott of Indian raw cotton exports. On August 31 a measure to permit still higher tariffs or to prohibit the importation of foreign textiles was introduced into the Indian Legislative Assembly. It was held in reserve pending the outcome of negotiations between British, Indian, and Japanese government representatives which opened in Simla, India, on September 22. Coincident with the official negotiations, conferences were held between Indian and Japanese trade delegations, between Indian and British trade delegations, and between British and Japanese trade delegations. The conferences were still under way at the end of the year. It was reported that an agreement had been tentatively reached under which Japanese textile exports to India and Indian raw cotton exports to Japan would both be placed upon a quota basis. Meanwhile the British and Indians had reached an agreement for greater preferential tariffs on British cotton goods in return for increased British purchases of Indian raw cotton. See JAPAN and GREAT BRITAIN under *History*.

Consult T. A. Bisson, "Constitutional Developments in India," *Foreign Policy Reports*, Sept. 13, 1933; D. N. Bannerjee, "India's Case for Independence," *Current History*, May, 1933.

INDIANA. POPULATION. The population of the State on Apr. 1, 1930, was 3,238,503 (Fifteenth Census); in 1920 it was 2,930,390; in 1933, 3,291,000 (Federal estimate). Indianapolis, the capital, had (1930) 364,161 inhabitants.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1933	4,268,000	125,906,000	\$41,549,000
	1932	4,639,000	173,962,000	26,094,000
Hay (tame)	1933	1,703,000	1,813,000*	13,598,000
	1932	1,764,000	2,208,000*	11,040,000
Wheat	1933	1,551,000	22,484,000	16,415,000
	1932	1,468,000	23,502,000	8,696,000
Oats	1933	1,651,000	28,067,000	7,859,000
	1932	1,965,000	58,950,000	7,074,000
Potatoes . .	1933	57,000	3,192,000	2,713,000
	1932	61,000	5,490,000	2,361,000
Tobacco . .	1933	17,000	12,920,000*	988,000
	1932	13,700	10,057,000*	993,000

* Tons. ♢ Pounds.

MINERAL PRODUCTION. The production of coal was again reduced in 1932, though not so sharply, in proportion, as that of the adjoining State of Illinois. The quantity of coal mined fell to 12,400,000 net tons (1932), from 14,295,165 (1931). The total coke, produced entirely in by-product plants, was 1,435,385 net tons (1932), in value \$7,894,902. Drilling for oil wells was more active in 1932, 54 wells being completed, as against 35 for 1931. However, the production of petroleum declined to 804,000 barrels (1932), from 840,000 (1931). The Lima pool in the northeastern part of the State was reported near exhaustion; most of the output of 1932 came from southwestern Indiana. The cut-limestone industry, in which Indiana normally produced four-fifths or more of the domestic total of building stone, produced some 26 per cent less as to quantity and 38 per cent less as to value in 1932 than in 1931.

EDUCATION. Decline in the service of the public schools, due to the shrinkage of public ven-

ues in many States, was checked in Indiana by the State's action in assuring salaries of \$800 and \$1000 by the year to trained teachers for conducting classes for at least eight months of the year. It was reported in the *Journal* of the National Education Association that by Jan. 10, 1934, the State's funds would have disbursed at the rate of \$313 for every school corporation.

For the academic year 1932-33 the number of persons of school age in the State was reckoned as 876,982. There were enrolled in the public schools 751,893 pupils. Of these, 573,520 were in common schools or elementary grades; in high schools, 178,373. These figures indicated an increase of enrollment by approximately 10 per cent over the totals of the year before, in both groups. The year's expenditures for public-school education, on the contrary, fell by some \$10,000,000 from those of the year before, to \$55,148,554. The salaries of teachers averaged, for the year, \$1186.36.

CHARITIES AND CORRECTIONS. By an act of 1933 the Legislature did away with the Board of State Charities and created eight governmental units among which at his discretion the Governor was directed to assign or transfer the duties of the former board. Under this arrangement the duties of the board were taken over by a Department of Public Welfare, functioning directly under the Governor. These duties included: investigating and examining all public charities and correctional institutions in the State; advisory planning for divers public institutions; supervision of foster-homes and of institutions for dependent, neglected, or delinquent children; licensing maternity hospitals, boarding homes for infants, and infant-placing agencies; endorsing proposed adoptions; aiding in a yearly enumeration of problem children and children mentally retarded.

The State maintained 20 charitable and correctional institutions. These were: for mental affections, the Central State Hospital (Indianapolis), Logansport State Hospital (Logansport), Richmond State Hospital (Richmond), Evansville State Hospital (Evansville), Madison State Hospital (North Madison), Fort Wayne State School (at Fort Wayne, for the feeble-minded), and Muscatatuck Colony (feeble-minded, Butlerville); the Village for Epileptics, Newcastle; Soldiers' Home, Lafayette; Soldiers' and Sailors' Children's Home, Knightstown; State Sanatorium (tuberculosis), Rockville; Indiana University Hospitals, Indianapolis; State School for the Deaf, Indianapolis; State School for the Blind, Indianapolis; State Prison, Michigan City; Reformatory, Pendleton; State Farm for Misdemeanants, Greencastle; Women's Prison, Indianapolis; Indiana Girls' School, Indianapolis; Indiana Boys' School, Plainfield.

LEGISLATION. The regular session of the Legislature (January 5 to March 6) effected substantial reduction of State expenditures from the general fund. It was estimated that measures enacted reduced the total of such expenditures for the ensuing fiscal year to \$11,000,000, approximately, from \$14,000,000 for 1932. These totals did not cover expenditures of the State highway commission out of special State revenues and Federal grants. The fiscal year was changed, so as to terminate with June 30 in 1934 and after, instead of September 30. Legislation gave effect to the proposals of a budget committee appointed by the Governor. This committee had called for reductions in State salaries of \$1200 and over on

a sliding scale of from 4 to 26 per cent; also for elimination of some State activities and a sweeping consolidation of State administrative bodies, which combined 168 such bodies into 8 departments. The 8 consolidated departments were those of State, of the executive, law, audit and control, treasury, education, public works, and commerce and industries. The existing public service commission of five members was abolished and was replaced with another, having three members and maintaining a special public prosecutor to handle rate cases.

To act for the State with regard to the proposed repeal of the Federal Eighteenth Amendment of the Constitution, there was created a State convention of 329 delegates, one to be elected by popular vote on June 6 in each county, plus one for every additional 10,000 of each county's population. The prohibition laws of the State were repealed, and a measure was enacted to permit and regulate the sale of beer having not over 3.2 per cent in content of alcohol.

A system of old-age pensions was created. It provided assistance of not over \$180 a year for indigent resident citizens of the State who had attained the age of 70. It was to go into effect on Jan. 1, 1934. Banks were authorized by law, late in February, to limit depositors' withdrawals as emergency might dictate. Regulation of the trade in alcoholic drink was left to local authority.

POLITICAL AND OTHER EVENTS. During the banking panic that culminated early in March no general suspension of banks was decreed by the State, as the Legislature had enabled banks individually to limit withdrawals. On June 6 were elected by popular vote, by counties, 329 delegates, of whom 243 were favorable to the repeal of the Eighteenth Amendment to the Federal Constitution and 83 were for retaining the amendment. The popular vote was light and gave a majority for repeal in the approximate proportion of 5 to 3. The elected delegates met in State convention on June 27 and voted the State's adoption of the superseding amendment proposed by Congress to repeal the Eighteenth.

Paul V. McNutt, Democrat, inaugurated Governor in January, wielded great influence over the Legislature and was credited with having dictated the passage of the acts forming his programme for reordering the governmental and financial organization of the State. Old dormant taxes were revived and again levied on brokers and on railroad equipment not owned by companies using it.

An inter-state bridge at Vincennes, spanning the Wabash River, was dedicated on September 3, and on the same day was sealed the corner stone of the George Rogers Clark memorial, at the Indiana approach to the bridge.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Paul V. McNutt; Lieutenant-Governor, M. Clifford Townsend; Secretary of State, Frank Mayr; Auditor, Floyd E. Williamson; Treasurer, William Storen; Attorney General, Philip Lutz, Jr.; Superintendent of Public Instruction, George C. Cole.

Judiciary. Supreme Court: Judges James P. Hughes, Michael Fansler, David A. Myers, Curtis W. Roll, and Walter E. Treanor.

INDIANA UNIVERSITY. A coeducational State institution of higher learning in Bloomington, Ind., founded in 1820. For the first semester of the academic year 1933-34 the registration aggregated 4265 students (2753 men and 1512

women). The faculty had 320 members. The endowment funds amounted to \$1,784,939, and the total income for the year, from State and private sources, was \$2,194,850. The library contained 258,875 volumes. President, William Lowe Bryan, Ph.D., LL.D.

INDIANS. The total estimated and enumerated number of Indians was 320,454 according to the annual report of the U. S. Commissioner of Indian Affairs, John Collier, for the fiscal year ending June 30, 1933, from which this review is taken. This number consists of 231,754 actually enumerated and 88,700 Indians taken from earlier or special censuses and estimates based on records. The aggregate estimated and enumerated number of Indians reported by Federal agencies on Apr. 1, 1933, represents an increase over the corresponding figure for the previous year of 3220 or 1 per cent. Of the number actually enumerated 118,076 were males and 113,672 were females.

EMERGENCY CONSERVATION WORK. Under the Act of Mar. 31, 1933, President Roosevelt created a Civilian Conservation Corps composed of some 1400 camps, each of 200 men enrolled for 6 months' service. Of the funds made available by that act, \$5,875,200 were placed at the disposal of the Indian Office, subject to the Director of Emergency Conservation Work, by Executive order of May 12, as amended on May 26 and June 7. Due to delays in perfecting accountancy arrangements, however, no part of that sum actually became available until June 20.

Because the "Indian country" is proverbially a land of great distances, many of the reservations have no important forests, and there could be but few urgently needed work projects, in those sparsely settled regions, large enough to employ 200 men for anything like a 6-months' stretch. Many Indians would sacrifice needlessly in contracting for a half year's continuous residence in remote camps, where they would be unable to get away for a few days at a time to attend to the seasonal needs of their crops or livestock. The President, therefore, authorized that Indians be mobilized into small work groups and that, in most instances, they live at home or—as experienced campers—maintain their own camps near "the job." In those cases the allowances to workers for "commutation of quarters and subsistence" would probably cost the government less—in both cash and man-days—than the constructing and maintaining of large camps.

The Indian programme was given still further individuality by Director Fechner, who authorized the Indian Office to appoint its own erosion experts, engineers, and foresters, and to do its own disbursing. And he liberalized the age limits of enrolled Indians. Enrollment in the Indian branch was opened to "persons over 18 years of age who are able to perform ordinary labor without injury to themselves," and who are free from communicable disease.

Work projects of wide variety were approved before June 30. Under prevention of forest fires, approved projects include: fire lanes, lookout towers, telephone lines, trails and bridges, roadside clearing, and the removal of fire hazards elsewhere. Other forestry projects include nursery work, seed collection, planting, insect pest control, land improvement, and in some instances landscaping. Under erosion control (largely through prevention of excessive grazing), work projects include erosion dams, range revegeta-

tion, boundary surveys, fences, driveways, corrals, springs and reservoirs, rodent control, eradication of poisonous plants, and elimination of useless range stock. Minor flood-control work has been authorized, notably in New Mexico. Improvement of public camp grounds will be a rather important item in most States.

APPROPRIATIONS. The appropriations for this year aggregated \$22,140,098 from the Federal Treasury. This is a decrease of nearly \$5,000,000 under the amount allowed for the previous year. From last year, 1932, to the coming year, 1934, beginning July, the Federal expenditures for the Indian service have been cut from \$27,030,047 to \$16,586,059. The reduction is \$10,443,988, or 39 per cent. The Indian tribal trust funds available for Indian Bureau costs have been reduced from \$3,385,934 to a sum approximating \$2,450,000—about a \$930,000 diminution. And the tribal trust funds available for payment in cash to the Indians have been reduced from \$3,289,160 to about \$2,000,000. A grand total appropriation of \$33,704,000 for 1932 is cut to approximately \$21,246,000 for 1934, and the total reduction is approximately \$12,458,000.

EDUCATION. Substitution of Federal day schools and public-school facilities for government Indian boarding schools, a policy now well established in the Indian Service, gained considerable momentum during the last year from budgetary changes made necessary by the government's economy programme.

Experience proved unusually satisfactory in the instances where change from boarding school to day school was accomplished. In enacting the 1933 appropriation bill Congress directed that \$500,000 be shifted from boarding schools to day schools. This shift was carried out with the effect of providing for twice as many Indian children a schooling of a better quality than had been employed by the number transferred from boarding schools. School officials who hesitated to take the step, because of the poor condition of many of the Indian homes, were surprised to find out how much some of these homes have improved during the short period that has elapsed since the closing of boarding schools, and with what quick responsibility the Indian parents have resumed the care of their children. It is expected that during the school term 1933-34, from 4000 to 5000 of the 22,000 children formerly attending Federal boarding schools will be in attendance at local day schools or public schools. Nearly 60,000 Indian children will be attending public schools and Federal day schools.

LAND. After a struggle of several years' duration, Congress, by the act of Mar. 1, 1933, returned to the Navajo Reservation a tract of land commonly known as the "Paiute Strip" and added a smaller tract known as the "Montezuma Creek Area." These lands lie in southeastern Utah and comprise approximately 554,000 acres. Legislation was introduced during the past session of Congress to extend the Navajo boundary lines in New Mexico and Arizona. The lines proposed merely to "cover into" the reservation lands which the Navajo Indians have been using for generations; especially is this true in New Mexico, where the proposed boundaries would embrace about 4000 individual Indian allotments on the public domain together with certain areas purchased for the Indians with their own tribal funds and lands exchanged for the Indians with the Santa Fe Railroad Co.

INDIAN RELIEF. General economic conditions among the bulk of the Indian population continued unfavorable during 1933. In common with the general trend throughout the country, the extent of Indian relief has increased many-fold during the past few years.

Generally unfavorable economic conditions, particularly in the farming and livestock industries from which the greater part of the normal Indian income is directly or indirectly derived, and the difficulty—even impossibility—of securing outside employment have naturally reacted to the serious disadvantage of the Indian. In the vicinity of many of the reservations, work for Indians, able-bodied and willing, was simply not to be had. The market for Indian handicraft and other products had dwindled. The traders are overstocked with such goods; the volume of credit which these merchants could extend the Indians has been greatly curtailed.

Some sections witnessed a recurrence during 1933 of serious drought conditions and grasshopper infestations, though the Indians' crops, particularly their subsistence gardens, showed considerable improvement over the previous year. More than 40 carloads of clothing was secured for issue to needy Indians from surplus stocks of the War Department. Among the items included were 35,000 pairs of breeches, 123,000 suits of woolen underwear, 6000 coats, 40,000 overcoats, 33,000 shirts, 24,000 pairs of shoes, 176,000 pairs of socks, 25,000 caps, 10,000 pairs of leggings, and 1000 mufflers.

The Indians continued to share in the distribution of flour and of cotton goods and garments through the Red Cross. Approximately 5,000,000 pounds of flour were secured from this source, together with many thousands of yards of prints, gingham, muslin, outing flannel, shirting, and other kinds of cloth, and a large quantity of underwear, hose, outer garments, sweaters, comforters, and blankets. In the distribution of these garments special attention was given the need of the women and children, the clothing received from the War Department surplus being almost entirely for the men.

INGENHOHL, ADMIRAL FRIEDRICH VON. A German naval officer, died in Berlin, Dec. 19, 1933. He was born at Neuwied, June 30, 1857. Beginning his naval career in 1874, he was soon afterwards assigned to service in the Far East where he remained for a number of years. He was placed in command of a gunboat during the Chino-Japanese War of 1895 and it was under his direction that the Germans fired on certain Chinese forts for shelling one of their boats. He served also on several African punitive expeditions. He was at the Admiralty in Berlin from 1897 to 1901

in the capacity of supervisor of fighting equipment. In 1904 he received the appointment of commander of the royal yacht *Hohenzollern*, becoming intimate with the Kaiser during the latter's trip to confer with the Czar in 1905 and again during the same year on his trip to Tangier. Two years after his promotion in 1906 as naval aide-de-camp to the Kaiser he was made admiral of the High Seas Fleet, and at the outbreak of the World War was commander-in-chief.

Admiral von Ingenohl commanded a squadron in the battle of Helgoland, Aug. 28, 1914. After this and other reverses he ordered a series of raids on the British coast, the most important of which was that of December 16 when the Yorkshire towns of Hartlepool, Whitby, and Scarborough were bombarded and nearly 100 non-combatants were killed and 500 wounded. These raids, however, did not meet with the approval of all of the German naval officials. He was removed from his command in February, 1915. The Allies demanded his extradition as one of the "war culprits" after the Armistice, but Germany refused to comply with such a request.

INNES, ROBERT THORBURN AXTON. A British astronomer, died at Surbiton, England, Mar. 13, 1933. Born in Edinburgh, Nov. 10, 1861, he emigrated in early manhood to Sydney, Australia, where as an amateur he became interested in astronomy. In 1896 he was appointed secretary of the Royal Observatory at Cape Town, South Africa, and in 1903 became director of meteorology for the Transvaal. As Union Astronomer at the Johannesburg Observatory during 1911-27, he won recognition for his discoveries and records of more than 1200 binary or double stars, inaugurating thereby a new epoch in their study. In 1931 at the London meeting of the British Association for the Advancement of Science, Dr. Innes described the method of stereoscopic projection which he had devised for showing figures and scenes in relief. At the time of his death he was chairman of the Innes Film Projection Co., Ltd. The University of Leyden conferred upon him the honorary degree of Doctor of Science. Among his monographs were *Discovery of the Nearest Star, Proxima Centauri and Proof of Oscillations in the Length of the Day*. He prepared also a catalogue of the double stars which he had discovered in the Southern hemisphere.

INSURANCE. Production of new life insurance and premium income in fire and casualty insurance continued to decrease as compared with corresponding months in 1932, but the decreases grew less and apparently were at the point of ceasing as the year closed. Underwriting of fire and life insurance did not present very serious new problems as companies had adapted themselves to depression, but in casualty insurance and suretyship extreme caution was necessary in underwriting classes most affected by the general financial conditions. Progress was made in bringing harmony among different interests in the business, notably between the fire and casualty companies and the inland marine companies whose invasion of the fire and casualty field had caused trouble. Several casualty com-

panies which had disturbed that branch of the business failed.

General banking and financial conditions created very serious problems for insurance. Collection of premiums, already slow, became very difficult when the bank moratorium in March tied up the funds of both assured and agents and, as many banks failed to reopen, this condition continued. As premiums in course of collection, more than 90 days due, are not admitted by State insurance departments as assets of fire and casualty-surety companies, insurance commissioners of more than 20 States notified companies of these classes to report to them the names of all agents in their respective States who owed balances more than 90 days due on October 1.

When the bank moratorium was declared life insurance companies faced a crisis, which was averted only by the prompt action of the States in declaring a moratorium on granting of policy loans and payment of cash surrender values exceeding \$100. These restrictions were lightened as the banking situation grew easier and were removed before the end of the year. Fire insurance companies, with their cash in closed banks and little money coming in, availed themselves of their right to withhold payment of losses until the expiration of 60 days (in a few States 30 or 45 days) from receipt of proof of loss, as provided in the standard policies of the various States. Previously they had usually paid immediately upon receipt of proof. Casualty and surety companies were called upon to pay not only current losses but millions of dollars in old losses, payable in installments as provided by workmen's compensation laws or when liability should be determined by the courts. As these losses had occurred they had set up reserves to meet them when they should become due, but the reserves were invested and to sell securities on a depressed market would have meant a loss which some companies were in no condition to stand. Inability to get cash income enough to meet outgo was one factor in the failure of several companies.

Approximately 40 companies of all classes ceased business as the result of failure, voluntary retirement or merger. Among the failures were those of several life and casualty companies of considerable size. A number of companies reduced capital to create surplus, and the surplus of a few casualty companies was strengthened by contributions from the fire insurance companies which own them. Through the aid of the Reconstruction Finance Corporation a few companies were able to meet in part certain pressing obligations and defer the balance to a future time when changed conditions may relieve the companies of liability without loss to the creditors.

The Rehabilitation Law of New York State, enacted in 1932, was called into use for the first time when a court, on application of the Superintendent of Insurance, ordered him to take over a large New York City fire insurance company for rehabilitation. Because of excessive losses by depreciation of securities this company was unable to meet its obligations. Under the old law it would have been ordered liquidated, but, as it appeared that it might be saved, the new law was invoked. The rehabilitation order restrained creditors from bringing suit for claims and kept the corporation alive although it did no new business. As the stock market improved its secu-

rities increased in value and it became technically solvent and before the end of the year it appeared that the court would soon order it restored to its directors to resume business. Later a large surety company was taken over for rehabilitation. Part of its assets and business were immediately transferred to a new corporation which proceeded to write business of profitable classes, using the agency organization of the old company. All the stock of the new corporation is held by the Superintendent of Insurance in trust for the benefit of creditors of the old company. By this plan a very valuable agency plant is salvaged to earn money for creditors, while in case of liquidation or receivership the value of the producing organization is usually lost.

LIFE INSURANCE. No surprise was occasioned by a considerable falling off in production of new life insurance as compared with 1932. The industrial branch made a better showing than the ordinary while the amount of group insurance written was only a little more than half that of the previous year. Remarkable growth of annuity business, reported by a number of companies, appears to indicate that many persons have concluded that the most satisfactory method of providing for their declining years is through the purchase of annuities from institutions which have proved themselves sound investors.

In December the Association of Life Insurance Presidents gave out the following approximate figures for the year, based upon data contributed by 204 companies which have in force about 98 per cent of the business of all United States legal reserve companies: Life insurance in force, Dec. 31, 1933, approximately \$95,000,000,000, or 5 per cent less than a year ago; number of policyholders, 63,000,000; new insurance paid for during the year, \$13,000,000,000, or 10.4 per cent less than in 1932. During 1933 the companies disbursed to policyholders and beneficiaries (exclusive of loans) \$3,100,000,000, of which \$2,175,000,000 went to living policyholders as matured endowments, annuities, surrender values and disability benefits, and \$925,000,000 to beneficiaries as death claims. At the end of the year legal reserve companies had assets estimated at \$21,135,000,000, an increase of \$340,000,000 for the year. The mortality experience was not quite as favorable as in 1932 but better than for any previous year except 1931 and 1932. More than half the increase in 1933 resulted from heavier mortality from organic heart disease. Suicides, however, decreased from 39.9 per 100,000 to 34.8.

When the moratorium was declared to save the banks the life insurance companies were threatened with disaster. With millions of outstanding policies containing guaranteed cash and loan value provisions and with most of the companies' own cash locked up in the closed banks, they faced a demand from policyholders for cash which they could not supply. Yet to default on their contracts might have exposed them to suits for receiverships and it certainly would have affected the public's faith in the soundness of life insurance. While this danger was averted by the prompt declaration by the States of moratoria on payment of cash values and granting of loans, the perilous position in which life insurance had been placed made thoughtful men consider the possibilities of the future. A committee of one of the leading actuarial societies made an elaborate report, in which it pointed out the danger in guaranteeing such

large cash and loan values and the ill effects this practice has upon both companies and their persistent policyholders. However, the laws of numerous States require these liberal guarantees and only by the slow process of amending statutes can a change be made.

Most of the leading life insurance companies which had not reduced their dividends to holders of participating policies at the beginning of 1933 announced reductions for 1934. Neither earnings of interest in excess of reserve requirements nor savings from mortality appear likely to be as large for some time to come as they were for a number of past years, and these are the chief sources of dividends to policyholders. Interest rates are lower. Life insurance companies are obliged to carry abnormal bank balances to be prepared for demands for policy loans and cash values. An unusual portion of their assets is unproductive due to interest being in arrears and the necessity of taking over large amounts of real estate by foreclosure. The mortality among holders of ordinary policies is not as favorable as formerly, due in part to deaths among heavily insured men from suicide or heart disease. Among industrial policyholders, however, the death rate continues low.

When legislatures met at the beginning of the year their attention was largely directed to efforts to relieve the plight of debtors. Numerous mortgage moratorium laws were the result. Some prohibited foreclosures under certain conditions for specified periods. Others gave the courts wider discretion in dealing with foreclosure cases. This legislation looked rather threatening to life insurance companies. However, they had no desire to foreclose mortgages if they could reasonably avoid doing so, and later the Federal government set up machinery to assist by loans home owners and farmers threatened with loss of their property.

FIRE INSURANCE. Companies writing fire insurance and allied lines were confronted with unusual problems, largely financial. Failure of an important casualty-surety company in January created fears as to the solvency of other insurance institutions known to be financially weak. In March thousands of policies in the Globe & Rutgers Fire Insurance Co. of New York were cancelled and the company was unable to pay the return premiums. Its surplus of nearly \$50,000,000 at the end of 1929 had been virtually wiped out by depreciation of securities, largely common stocks. It became necessary for the New York Insurance Department to take the company over for rehabilitation and it kept charge of it for the rest of the year, the company alternating between solvency and insolvency as stock prices rose or fell.

Collection of premiums, long difficult, became temporarily impossible when the bank moratorium was declared. The unusually large cash balances many companies had been carrying also were tied up, and most of the companies decided to withhold payment of losses for the period provided in their policies, usually 60 days. This plan, ameliorated from time to time, was followed during the remainder of the year. Companies also decided not to recognize as losses under their policies damage resulting from "scorches," chiefly caused by cigarettes, where no actual fire occurs. Whatever the cause, fire losses suddenly dropped in March and continued very low for the remainder of the year. Although

premium income continued to decline somewhat, with a resultant higher expense ratio, the loss ratio was low and companies generally made an underwriting profit.

One of the most constructive efforts of the year was the demarcation of the fields of marine insurance companies on the one hand and of fire and casualty companies on the other. Inland marine insurance companies had written much business previously written by fire or burglary companies. Most of the companies of these classes had reached an agreement, but it was not binding upon those not parties to it. The Superintendent of Insurance of New York promulgated a definition of marine insurance, clearly setting out the classes of risks companies of each class may write and commissioners of many other States promulgated it for their jurisdictions. Then the companies of the three interested classes set up a joint committee to interpret the ruling and decide doubtful cases. Its decisions, when approved by the insurance commissioners, will be as binding as the definition itself.

When the National Industrial Recovery Administration decided that insurance companies must file codes (although insurance has never been under federal supervision) fire, marine and casualty-surety companies, agents, and brokers filed codes containing the minimum requirements. The National Association of Insurance Agents, however, reserved the right to file a supplemental code of fair practices for the production branch of the business. In October it prepared a draft which created some consternation among companies, as its filing, if followed by approval, would have compelled them to abandon many established practices and to revamp organizations built up at great expense for the production of business. The companies, other than life, and the agents opened negotiations in an effort to correct by voluntary action by the companies practices to which the agents object and, if possible, avoid the filing of a code. Conferences produced no results and just before the end of the year the agents' code was filed.

Other classes of insurance written by fire companies presented no very unusual conditions. The volume of automobile fire and theft insurance decreased with the diminishing insurable value of old cars, not replaced as usual by new ones. Notwithstanding some destructive storms along the Gulf coast it is doubtful if losses under wind-storm policies varied much from normal. Depressed farming conditions reduced purchase of hail insurance on growing crops.

Only about a dozen fire insurance companies, chiefly small ones, ceased operation through failure, voluntary liquidation, reinsurance or merger.

CASUALTY-SURETY. Companies engaged in the casualty and surety business had a peculiarly trying year. Not only was the loss experienced in most of the major classes bad but the financial difficulties were severe. Premium income was reduced and collections were hard, but losses had to be paid as they became due. About a dozen of the weaker companies failed. A few were merged. Over \$3,000,000 was paid into the capital of casualty companies by fire companies which owned them, and a few increased capital and secured necessary cash by selling first preferred stock to the R.F.C. and junior issues to stockholders and outsiders.

The chief failures were those of the Union In-

demnity Company of New Orleans, the International Re-Insurance Corporation of Los Angeles and Lloyds Insurance Co. of America, New York. The Union Indemnity was one of a group of companies owned by a holding company which was unable to supply any more money. The other two had each absorbed a number of companies which, with few exceptions, had operated in an unorthodox way and were actually or nearly insolvent when merged. Their failure, which caused no surprise, considerably cleared the field of institutions which were writing at less than the usual rates, paying excess commissions or accepting business with too little discrimination and made it easier for the remaining companies to operate on sound lines. The National Surety Company in April, though technically solvent, had not cash to meet current demands and was taken over by the New York Insurance Department for rehabilitation. This action was attacked in court and the constitutionality of the law under which it was taken was questioned. Both in the Supreme Court and in the Appellate Division the law was upheld, as was also the financing of the National Surety Corporation out of the assets of the National Surety Company to continue part of the business of the old company and earn money for its creditors. The old company is still in rehabilitation.

Several surety companies which had guaranteed mortgages continued to be hard pressed. In a number of instances it was possible to induce holders of mortgage certificates to take part cash, furnished by the R.F.C., and to take new certificates for the balance at a lower interest rate. This reduces the surety companies' disbursements for interest and a normal rise in real estate values within a few years may relieve them of any loss. Closing of many banks created demands upon surety companies under depository bonds and was one cause of the crisis in the affairs of a few of them.

Workmen's compensation insurance continued to cause casualty companies heavy losses. New methods of rating were studied in the hope of enabling the companies to reduce these losses, but they have not yet become effective. Many companies were obliged to restrict their writings of this class. In December two prominent companies announced that they had ceased writing it altogether. There appears to be no way in which this class can be made profitable unless the States which control the rates will permit insurance companies to charge rates which experience shows to be necessary. States generally, through their own officials or boards, decide what workmen's compensation insurance carriers must pay. The difference between premiums collected under State controlled rates and losses paid by direction of representatives of the States is insufficient to meet operating expenses and taxes. States which do not want their employers burdened too heavily in paying for workmen's compensation insurance have been able to protect them by refusing to permit adequate rates to be charged. Insurance companies have made good the deficit out of profits in other States or on other classes of business, hoping that conditions would improve. As the companies generally have suffered an underwriting loss on this class of \$141,000,000 during the decade closing with 1932, they have about reached the limit of endurance.

Automobile liability insurance, the class of casualty business involving the largest premium

income, has ceased to be dependable as a source of profit. While the number of accidents is reduced because fewer cars are on the roads, a great number of cars are dangerous because old and worn out, and in some territories damage case lawyers are very active and juries award heavy damages for personal injuries. The great reduction in premium income from automobile liability insurance has left it very doubtful whether any profit will accrue after losses, expenses and taxes are paid. Automobile property damage insurance has continued quite generally to be profitable but it is a mere item compared with automobile liability insurance.

In the other branches of casualty insurance conditions have not been extraordinary. In some territories it has been necessary to advance rates for plate glass insurance and for bank robbery insurance.

INTERNAL COMBUSTION ENGINES. By far the outstanding Diesel installation of the year was the 35,000-horsepower municipal plant for the city of Vernon, Calif., an industrial centre adjacent to Los Angeles. This installation, comprising five 7000-horsepower, two-cycle, double-acting Diesels, went into service on June 19, 1933 and has the distinction of being the largest Diesel plant in the United States. It is outranked in size only by the Diesel station at Shanghai, China.

Aside from its size, the Vernon plant is notable in that it contains all the latest refinements, such as waste-heat boilers to recover much of the heat of the exhaust for evaporative purposes; and all the air, before being sucked into the cylinders for combustion, is first washed and filtered.

Another municipal plant, that at Rockwell Center, Long Island, N. Y., installed a 2800-horsepower Diesel as an addition to its existing units, thus bringing its total capacity up to 7200 horsepower in Diesel power.

In general, however, 1933 saw more activity in the field of small Diesels, both as to output and development. The number of orders placed for such units was about twice that of 1932, but only half that of 1929. The United States Navy contracted for about 50,000 horsepower capacity in units for submarines, launches and auxiliary drive. The present naval programme calls for about 150,000 horsepower of this type of power.

Development during the year was directed toward the small light-weight Diesel for application to trucks, tractors, small manufacturing plants and rail-car service. The stream-line train of the Union Pacific is propelled by a Diesel unit and a ten-car train is said to be under consideration.

The Public Works Administration at Washington has received many applications from small and medium-sized towns for loans to construct municipal power plants. It is anticipated that among those that have already been granted, and among those which the government may deem advisable to grant, the Diesel engine will play an important rôle.

INTERNATIONAL BANKING. The idea of an international control over banking; and, if possible, of an international adjustment of mone-

tary questions and systems, had long occupied the attention of the financial markets of the world, prior to the year 1933, and at times some approach to progress had been made in such a direction. At the same time, there had been a practical effort, on the part of bankers in the chief trading nations, during the years before 1929, to bring about a closer international use of funds, and to induce the borrowers in the various parts of the world to avail themselves indifferently of the respective markets, in the thought that such unification and competition would tend to bring about standard conditions of credit extension, and would thus make it practicable to shift funds readily between markets. The establishment of the Bank for International Settlements in 1930 had been an earnest of this intent, and represented the general belief that joint control of money and investment systems by the central banks of the major countries was a possibility of the early future.

The year 1933 brought a rude shock to such expectations, even in the form entertained at the outset of the year. Great Britain's departure from the gold standard in the summer of 1931 and Germany's moratorium in the middle of the same year, had already made it evident that the idea of international treatment of banking would encounter some serious difficulties. Still, it was believed possible that joint action among the nations might restore community of interest and harmonize financial conditions. There were still some optimists who believed that the conference of Lausanne in 1932 had laid the foundation for a general international accord; and that, if the United States would, in collaboration with the other nations at the London Economic Conference of June, 1932, exert its influence toward harmonization of financial systems the result would possibly produce a further forward step greater than any as yet taken. This expectation, moreover, was to a certain extent, supported by the constant statements issued from the White House in Washington during the spring months of 1933, after conferences with the visiting delegates who had been invited as a preliminary to the London conference. These were to the effect that harmonious action in stabilizing currencies was to be considered a necessary step in the restoration of prosperity and the "saving of the world" from economic disaster. The outcome of the London conference was, accordingly, a severe disappointment, especially in view of the American declaration, on July 4, that acceptance of any stabilization scheme by the United States would be out of the question, owing to the unsettlement of conditions at home, and the desire that they should be more nearly fixed, before any new commitments should be undertaken.

This attitude undoubtedly dealt a severe blow to international monetary action or any early prospect of it; and, in so doing, afforded a decisive defeat to any plans of immediate international banking progress. The situation became the more evident in the course of the visit of the governor of the Bank of England to the United States during September, 1933. The governor had one or more consultations with the President of the United States; and, while no official statement of results was issued, it became definitely known that the discussions had had no practical result, either as to stabilization of currency or joint action for the control of central bank policy,

or financial operations, in the different markets of the world.

To this disappointing record in the matter of general currency action, internationally considered, should also be added the international debt situation, as developed during the year. It was a phase of the situation which had a great indirect influence upon banking, owing to the fact that, in the absence of some satisfactory settlement of the international debts, there could be no expectation of resumption of international financing on a confident basis. This was not only because of the numerous questions of a financial nature necessarily left open pending the adjustment of the debts, but also because of the fact that failure to effect settlement gave a set-back to confidence internationally speaking, and hence rendered international operations of any banking sort less certain and more open to suspicion, than for many years preceding. The fact that, even with Great Britain, in spite of two long periods of negotiation, one in March, the other in October, 1933, it was finally necessary to leave the whole subject in abeyance (with only a token payment on the part of Britain by way of technical recognition of her debt to the United States) spoke eloquently of the real conditions surrounding the debt negotiations.

The result of this decadence in international banking and credit arrangements has been reflected in a variety of ways. One—perhaps the most striking—has been the development of a large body of migratory capital—roughly and popularly estimated at some ten billions of dollars—and certainly amounting to a large figure, which is being carried by investors in the banks of the world financial centres and which takes flight from any given market whenever it sees what are believed to be symptoms of instability or danger. Lord Robert Cecil, in speaking at the Canadian financial conference of July, 1933 referred to this as “unwanted money,”—so far as the London market was concerned—because of its instability; and most other markets of the world have about the same attitude of mind with respect to it. The migratory character of these foreign holdings—a large part of them carried abroad by central and other banks in various countries because of lack of confidence in their own home conditions—has been demonstrated so far as the United States is concerned, by the great variations in the foreign balances carried with American banks by institutions located elsewhere. Secretary Mellon had estimated the total of such balances in 1927 at about \$2,000,000,000, but during the past season they fell to not over \$250,000,000 to \$500,000,000 according to the best estimates.

Such uncertainty of safety for deposits was also made manifest by the steady decadence of international borrowing and lending and of financing generally. So far as long-term bonds were concerned, the year 1933 witnessed what amounted to a practical termination of any foreign lending whatever, and while the London market appeared to show some recovery in this respect, during the period, it was apparent that such recovery was largely due to the decadence of other markets, and consisted to a large extent, in the refinancing of obligations which had to be cared for in some way in order to avoid larger loss on the part of existing holders. Short-term financing of international trade assumed a more definitely secured or very short-term basis, and

American institutions often thought it needful to inform even their best customers—some of long years' standing—in various South American countries, that it would be possible to provide for financing their products only against documents, their overdraft facilities being definitely terminated for the time. Somewhat the same position, in a less acute form, was accepted by not a few of the foreign institutions and in finance, as in business and manufacturing, the year showed a definite trend toward a distinctly local type of operation, with dependence upon outside aid or accompanied by foreign participation confessedly brought to a close.

It was not strange that, in such circumstances, there should be a reduction in the amount of facilities for foreign or international banking at the service of the world in general. American banks, which had built up a total of branches which after various vicissitudes had reached a level about equal to the highest figure of past years, now began to rescind their commitments in this regard. One of the best known of American institutions closed its Paris offices, and similar action was taken by others. British banks were less disposed to give up their long established foreign branches, but they tended to cut down the quantity of accommodation there extended. Military disturbances in various countries, such as Cuba, forced like action on the part of all foreign financial establishments. The year must undoubtedly be reckoned a period of general retrogression, not only in the total amount of international banking operations both long and short term, but also in the total number of establishments open for business. Reductions of staff in the foreign exchange departments of not a few American banks likewise reflected the tendency toward reduction of facilities available to the public.

The Bank for International Settlements, established at Basle, Switzerland, during the year 1930 had, soon after its organization, determined to conduct operations only in gold or gold-convertible currencies. The moratorium of Germany was a blow to the Bank not only because of the lessening of profitable business involved (German reparations having been one of the main reasons for the establishment of the Bank), but also in consequence of the elimination of German currency as a satisfactory medium for its operations. Abandonment of the gold standard was a still more severe disappointment. When the United States gave up gold in March, 1933, the Bank for International Settlements found its sphere of international transactions closely circumscribed while the growing doubt about the reliability and safety of international finance was tending more and more to restrict its field of activity. As a result, the Bank thought best to cut down its staff, and reduce salaries, while some were inclined to predict that the institution would not be able to find the business upon which to subsist, unless a distinct change of outlook, internationally, should be brought about, and at no distant date. Belief in the possibility of an international currency had, from time to time, been voiced, even during the year 1933, and unquestionably has still some academic advocates, but generally speaking, any step of the sort is to-day admitted to be less within the range of feasibility than at any time in the past fifteen years. It must depend largely upon the possibility of bringing about a disposition on the part of

the principal countries to agree upon some means of stabilization. From that to an international currency, or the holding of central bank balances in an internationally-organized institution is seen to be a still longer step in advance;—far beyond anything now reasonably to be forecast. It is, however, worthy of note that, during the year 1933, a Federal representative on the Board of Directors of the Bank for International Settlements was arranged for, and permission granted by the government at Washington. This represented a reversal of the policy in the matter which had been pursued by President Hoover.

The problem of international banking was more and more generally admitted, at the close of the year 1933, to be actually a problem of the restoration of world trade, and the readjustment of world indebtedness. As for the former, it was itself in turn recognized as dependent upon the pursuit of a less "nationalistic" policy by the nations of the world, chiefly interested in trade. The adherence of the United States to an obvious policy of nationalism, and the creation of the British empire trade coalition are possibly the two events most discouraging from the standpoint of commercial internationalism. The readjustment of world debts and the arrangement of resources to meet interest and amortization on such debts, is in its turn, a problem dependent upon the restoration of trade. With a declining volume of trade, restoration of the debt payments, whether public or private, to a live and collectible basis will be out of the question. The debt payments, whether of interest or principal on the scale proposed in 1928-1929 are obviously far above any probable level of settlement in existing circumstances.

Pending the formal readjustment of these obligations, they remain as a source of friction and possible military conflict; and, as such, a definite impediment of almost insuperable character to the reinstallation of international banking and financing in anything like the position it possessed, much less contemplated, a few years ago. Much will depend for the early future, both as to the collection of present debt, and the financing of trade, upon the early settlement of the monetary question and the abandonment of the idea of currency and banking warfare which has had so dangerous a growth during the past year. The whole system of international banking is thus, with the close of 1933, definitely at a turning-point in its development.

INTERNATIONAL EXHIBITION, FIRST.
See SCULPTURE.

INTERNATIONALISM. UNIVERSAL CHRISTIAN COUNCIL. The year 1933 was a momentous one in the life of the Christian world, and it seems especially significant that in this time of great strain and of testing in Germany there existed a point of definite and official contact between the German churches and the churches in other lands through the Universal Christian Council. Most of the events of the year which are worthy of permanent record relate in one way or another to this German Church situation.

To begin with, a special conference called by the Council to consider the problem of unemployment, with special reference to the Christian ethic in economic life under the different forms of government, was in session at Rengsdorf at the time of the revolution in Germany. Its leaders, men of distinction from the churches of various lands, were therefore brought into immediate con-

tact with the developing problem of the Church and state, just after they had authorized a special study of that subject in the Research Department of the Council. In the months immediately following a number of emissaries went to Germany under the auspices of the Council for conference with Christian leaders. Secretary Henri L. Henriod and Research Director Hans Schönfeld went from the central office in Geneva; the Dean of Chichester was sent as the personal representative of the Archbishop of Canterbury and the Bishop of Chichester, President of the Council. Dr. William Adams Brown of New York, Chairman of the Administrative Committee, made several visits to Berlin, and these were followed by Dr. Samuel McCrea Cavert, General Secretary of the Federal Council of Churches, who was the special representative of the American Section of the Universal Christian Council.

This trip by Dr. Cavert was chronologically related to the holding of the first informal inter-organizational council of the five chief ecumenical movements in the non-Roman Church world, which met under the chairmanship of the Archbishop of York at Bishopthorpe, York, England. A second similar meeting was held at Paris in mid-summer likewise under the Archbishop's leadership and representatives of the International Missionary Council, the World Alliance for International Friendship Through the Churches, the World Conference on Faith and Order, the World Student Christian Federation, and the Universal Christian Council, discussed points of coöperation, relationships of programmes, and the general bearing upon church life of the German situation.

Reichsbishop-elect Müller, finding that he could not personally attend the meeting of the Universal Christian Council at Novi Sad, sent seven representatives. At this conference, held under the auspices of the Eastern Orthodox Church and assembled in the palace of the Bishop of Novi Sad, representatives of Anglicanism, Protestantism, and Eastern Orthodoxy, as well as the Old Catholic Church on the Continent, joined in a series of negotiations. While a good many items of business were attended to, the most important matter was the decision to remain in fellowship with the German Church while sending to the leaders of that Church, through the medium of a personal letter from the Bishop of Chichester, a frank statement of the concern felt by churchmen everywhere over the racializing and nationalizing tendencies manifest in German Church life.

At this meeting there was reported the result of a world-wide study of the desire of the churches with respect to the Fixation of Easter and the possibilities of calendar reform. This question had been referred to the Council by the League of Nations and the report of the Research Department in this field while significant in itself is even more significant because it represents the most comprehensive compilation of church views with respect to a common problem that has ever been made.

Another important action at the meeting in question was the creation of an international Christian press organization at Geneva to expand the work of the Press Commission of the Council which had been functioning for some years through Berlin.

When the Disarmament Conference reassembled for its short and ill-fated session in Geneva, the Council took the lead in reviving the activities of the International Christian Committee on Coöperation with the Disarmament Conference,

through which the many Christian bodies centering in Geneva functioned as a unit with relation to this conference.

The representatives of the American Section in connection with these various European undertakings of the summer included Dr. S. Parkes Cadman, chairman; Dr. Henry A. Atkinson, Dr. William Adams Brown, and the Rev. Henry Smith Leiper, secretary. During the fall months two meetings of the Administrative Committee were held: one in London, the other in Paris. Among other important matters the committees dealt with the question of German refugees, since the Council had been placed on the advisory body created by the High Commissioner for German Refugees, James G. McDonald.

The American Section held two meetings in New York City: one at Riverside Church in conjunction with the Federal Council's Department of International Justice and Goodwill for a discussion of the German Church situation and the other at the George Washington Hotel, where a very comprehensive résumé of the Church situation, both in Orient and Occident, was given by experts.

WORLD ALLIANCE FOR INTERNATIONAL FRIENDSHIP THROUGH THE CHURCHES. The 18th annual meeting of the World Alliance for International Friendship through the Churches, with which was combined the International Goodwill Congress, was held in Philadelphia, Nov. 10 and 11, 1933. A statement was issued containing these declarations:

The World Alliance reaffirms its confidence in the Pact of Paris, commonly known as the Briand-Kellogg Treaty, binding the signatory nations to renounce war and never to seek the settlements of disputes between them except by pacific means. This pact is the charter of a new international order and will put an end to international war, provided each of the governments signatory thereto keeps its word.

We recommend that the government of the United States, in the name of the people, propose an amendment to the Pact of Paris through which all the signatory nations will pledge themselves in the event of hostilities in the violation of the Pact, or the threat of such hostilities, promptly to consult together to determine upon such joint measures as will help to maintain peace.

We heartily endorse and approve the action of the government of the United States in refusing to recognize new governments or jurisdictions, or territorial accessions made without regard to the terms of the Pact of Paris and the Covenant of the League of Nations.

Shaping up its programme for 1934, the Congress adopted resolutions requesting the government to declare it would not send armed forces beyond the borders of the United States and to announce its purpose of abandoning all weapons of offensive warfare whenever other nations do likewise.

WORLD FEDERATION OF EDUCATION ASSOCIATIONS. A meeting of the World Federation of Education Associations was held in Dublin, Ireland, during August, 1933. Questions of international interest were discussed concerning understanding and coöperation and the various subjects which came under the departments of the Federation, such as: health, work of parent-teachers' associations, higher education, and procedures in the various school levels. The dual-language problem was also considered.

COMMITTEE ON WORLD FRIENDSHIP AMONG CHILDREN. This committee, whose slogan is "We who desire peace must write it in the hearts of children," inaugurated an educational campaign, beginning in October, 1933, and culminating on World Goodwill Day, May 18, 1934. Its chief features were the sending of picture postcards

with friendly greetings from American children to those of foreign countries, and good will messages, the best to be selected from each school or group, and the writing of compositions on world peace. The secretary of this committee was Sidney L. Gulick, 287 Fourth Avenue, New York City.

CONGRESS OF INTERNATIONAL RADICAL AND DEMOCRATIC PARTIES. At the Ninth Congress of International Radical and Democratic parties held in Sofia, Bulgaria, France sent a notable delegation headed by M. Edouard Herriot. Besides England, Holland, Sweden, Denmark, and Poland, the Eastern countries, Turkey, Greece, and Bulgaria were prominent. M. Herriot's speech at the public opening meeting was very significant from the point of world peace advocacy. The delegates of all the nine countries emphasized the necessity of working for reconciliation among the peoples. Three things were postulated as necessary for this in the papers read and conclusions arrived at—arbitration, security, and disarmament.

INTERNATIONAL STUDENT SERVICE. A conference was held July 25–28, 1933, at Kloster Ettal in Bavaria, by the International Student Service. The Nazi authorities and Nazi Student Movement gave every facility for the Conference, and it was opened by Captain Ernst Röhm, head of the Nazi Storm Troop organization, and Herr Schemm, Minister of Education in Bavaria. The delegations included 20 Indians and delegates from South Africa, Canada, and Australia. The conditions of the Conference made possible some extremely frank speaking for and against Nazism. A continuation of the Conference was held at Luziensteig, in Switzerland.

INTERNATIONAL RELATIONS CLUBS. There were in 1933; 443 International Relations Clubs, a gain of 128 over the previous year. They were organized in every State of the United States; in China and Japan, in Uruguay, South Africa, etc. There were 17 in the British Isles in charge of Norman Poole, who, through special arrangement between the Carnegie Endowment for International Peace and the *Centre European* of the Endowment, was representative for the clubs in that territory.

The second annual mid-west Institute of International Relations was held at Northwestern University, Evanston, June 19–30, 1933, under the auspices of the American Friends Service Committee (Quakers). It brought together clergymen, religious leaders, and teachers from many States.

Fifty-six graduate students from British universities were in the United States in 1933 as holders of Commonwealth Fund Fellowships. Twenty-five were new appointees, and the others were spending their second or third year there.

INTERNATIONAL JUSTICE, PERMANENT COURT OF. See **WORLD COURT.**

INTERNATIONAL LAW. *Awards.* On February 16 at Lausanne, an arbitral tribunal, constituted pursuant to articles 297 and 298 of the Versailles treaty, rejected the claim of Portugal against Germany on account of acts committed by the latter, prior to the former's entrance into the World War; on the ground that all such claims were included in the "new plan" of the Hague Agreement of Jan. 20, 1930. Seventeen reasons were assigned by the tribunal of which George W. Wickersham was President, with four associates.

On April 5, at The Hague, the Permanent Court of International Justice decided on its merits the

East Greenland case (*Norway v. Denmark*, 1932 YEAR BOOK 436) awarding to the latter the disputed territory by a vote of 12 to 2, the dissenters being Vogt, Norway's Judge *ad hoc*, and Anzilotti of Italy. The basis of the majority opinion was Denmark's 1000 year exercise of sovereignty, unchallenged by any other power up to 1921, and followed by certain overtures between the two countries. The court made no order as to costs. Disappointment was felt in Norway; but King Haakon dispatched congratulations to King Christian (his brother) expressing the hope that "time will heal all wounds and thus that good collaboration will be established again to the advantage of fellow feeling in Scandinavia." But far beyond the results to the immediate parties is the significance of the judgment as the first, rendered under the compulsory jurisdiction clause (now accepted by 42 sovereignties) of the court statute; and as affecting "national honor and vital interests"—formerly considered outside the pale of arbitral negotiation. (See articles by C. C. Hyde, *Am. J. of Int. Law*, xxvii, 733 and M. O. Hudson, *Am. Bar. Ass'n J.*, xix, 423.)

Claims. In December, the oft repeated announcement from Mexico City of a prospective "lump sum" settlement of claims between the United States and Mexico, was again made; a later dispatch indicated that Ambassador Daniels was finding the subject more complicated than it first appeared and that difficulty was experienced in reaching a basis of agreement. No further steps appear to have been taken toward reconstituting the international commission which, for about five years had been considering these claims but which broke up in 1931 (see 1932 YEAR BOOK 440).

On December 18, the principality of Monaco appeared by counsel in the United States Supreme Court and asked leave to sue the State of Mississippi to recover the proceeds of bonds issued by the latter in the 1830's and presented by their one time owners to the applicant. This is said to be the first attempt to invoke the jurisdiction conferred by Fed. Const. III, 2 over "controversies . . . between a State . . . and foreign states." The sequel will be watched with great interest; for the Attorney General of Mississippi (whose present constitution expressly prohibits the payment of these bonds) announces that "every means will be employed to fight the action." These are the same bonds whose repudiation Jefferson Davis defended, even in England, where many of them were held, but of which Judah P. Benjamin wrote in 1868,

The Mississippi bonds were signed and sealed in the name of the State. Foreigners had a right to consider the faith of the State as pledged; and if the legislature or the Governor or the Secretary of State did wrong, the people of the State ought to have made them responsible and not to have punished innocent third holders of the bonds.

Conferences, Congress, etc. The American Society of International Law opened its 27th annual meeting at the Willard Hotel in Washington on April 27. The Manchurian situation seems to have suggested the subject-matter of the programme and the presidential address, as well as the several papers presented, dealt mainly with the sanctions of international law. Charles C. Hyde's paper was on "The Boycott as a Sanction of International Law"; "Non-Recognition as a Sanction" was the theme of Prof. F. A. Middelbush of Missouri State University; "Embargo as a Sanction" was discussed by Joseph P. Cham-

berlain of Columbia University; while "Intervention as a Sanction" was the subject of a paper read by Miss Ellen Ellis, a professor at Mt. Holyoke College. These papers were followed by general discussions from the floor and the whole afforded a contribution of no slight importance to the literature of a very practical branch of international law. At the annual dinner on the evening of April 29, Senator Thomas of Utah, a former resident of Japan, quoted from a Japanese poem

"There are many trails which lead to the top of the mountain,

But once the summit is gained the same moon is seen,"

and asked,

Are there not in other nations and in other countries those who are climbing up their various trails attempting to attain the heights of true appreciation, who will meet with us at the top and enjoy with us the . . . view of our accomplishment?

Aside from the Disarmament Conference (see DISARMAMENT) the chief gathering of the year for international law was the 7th Pan-American Conference, which opened at Montevideo on December 3 and remained continuously in session for over three weeks. All of the sovereign nations of the western hemisphere (21 in number) were represented and the proceedings appear to have been quite harmonious and fruitful. The conference approved three draft treaties, and a declaration on the rights and duties of states, which condemned intervention, made recognition unconditional and irrevocable and outlawed the acquisition of territory by force. There were also five resolutions and 12 recommendations. One of the latter was for a study of the unification of civil codes and submission of the results of the 8th Pan-American Conference, for use by a commission of jurists to draft a uniform American code. Various labor measures were recommended, including the establishment of an American Institute of Labor. Memorials to Columbus and Bolivar were approved and steps were taken which resulted in a brief armistice between Bolivia and Paraguay, whose representatives participated actively in the work of the conference. Those of Bolivia advanced a proposal to connect the Amazon, Orinoco, and La Plata rivers, the details to be worked out at a geographic conference to be held at Rio Janeiro in 1934. A resolution asking the participating nations to relax those sanitary regulations which interfere with trade, was approved in committee.

Extradition (see also LAW). "The principles of international law recognize no right to extradition apart from treaty," said Justice Stone in *Factor v. Laubenheimer*, 290 U. S. 276, on Dec. 4, 1933 when he upheld Factor's (Jake the Barber) extradition on the charge of receiving money "knowing the same to have been fraudulently obtained." Factor's counsel, Newton D. Baker, had argued that the act thus charged was not a crime under the laws of Illinois, where his client then resided, and that

it is a general principle of international law that an offense for which extradition may be had must be a crime both in the demanding country and in the place where the fugitive is found.

Incidentally it may be noted that this is the rule proposed by the recent Montevideo Conference for adoption by all of the American nations. But the treaty between Britain and the United States included specifically, as an extraditable offense, "receiving any money . . . knowing the same to have been fraudulently obtained"; and

Justice Stone, writing the majority opinion, considered that this language

evidenced an intention to dispense with the restriction, applied to other treaty offenses, that they must be crimes "by the laws of both countries."

Here, in other words, we find recognized the doctrine announced a decade earlier by the United States Court for China, that crimes may be created and penalized by treaty, independent of the domestic legislation. (See *U. S. v. Kearney*, 2 Extra-territorial Cases, 671.) Justices Butler, Brandeis, and Roberts dissented. The United States government renewed its request (1932 YEAR BOOK 435) upon that of Greece, for the extradition of Samuel Insull and, after another hearing before the Greek Court of Appeal, that tribunal, on October 31, in a decision said to have been rendered by three only of the five judges, one of the dissenters being President Panegerikis, decided against the request. An opinion from Dean Wigmore was produced by Insull's counsel who claimed that it supported his contention that the court might hear the case on its merits and inquire into the guilt or innocence of Insull. That, however, is contrary to the prevailing rule which is no different from the one governing interstate extradition, where, as recently stated in *South Carolina v. Bailey*, 289 U. S. 420, "the sole point for decision related to his absence from the State" (of his domicile). Nevertheless, the Greek court not only proceeded to retry the case on its merits, but rejected the affidavit presented by the American representative, quoted Insull to the effect that the bankruptcy laws (which he was charged with violating by using the assets of his various corporations as collateral for bank loans) were unconstitutional; and took into account the alleged facts that he was "old and seriously ill," had been a friend of Thomas A. Edison, had founded 52 corporations "still active"—and other quite irrelevant matters—although it conceded that some of Insull's acts were "obviously unethical but not unusual in the management of corporations." Both the manner of conducting the proceeding and its outcome seemed so indefensible that, four days after its announcement in the United States, the Department of State peremptorily denounced the treaty, recently negotiated, under which extradition had been sought and which had been in force only since November, 1932, but which provided for its own termination one year after either of "the high contracting parties" might denounce it. The American minister, MacVeigh, was instructed so to inform the Greek government.

The Greek reply maintained that the courts had the right to pass upon the merits of such charges and stated that Greek justice, according to the constitution, was entirely independent of the political branch; nevertheless the Greek government seemed to have awakened to the seriousness of the situation, for about a month later it announced that it would not renew Insull's permit for residence within the country and that he must leave it by January 31. Subsequent attempts by the accused to have the time extended finally succeeded. Meanwhile his brother, Martin J. Insull, who had taken refuge in Canada, had been ordered extradited but on December 19, for the second time had applied for a discharge from custody on the ground of insufficient evidence. But while the normal course of international justice was encountering obstacles in these jurisdictions, the highest tribunal of Italy was promoting it; for the latter, on November 3, ordered the re-

turn to Pittsburgh for trial, of Giuseppe ("Big Mike") Spinelli, charged with the "gangster" murder of the three Volpe brothers. His counsel had sought to prevent extradition on the ground that when Spinelli had applied for his first American citizenship papers, he had failed to file a declaration of relinquishment with the Italian consul. A draft treaty on extradition was one of the achievements of the 7th Pan-American Conference at Montevideo in December.

Extraterritoriality. Less was heard during the year, than in some recent ones, of the proposal to abolish the jurisdiction which certain foreign powers, including the United States, exercise over their nationals in China. In view of its government's difficulties, occasioned by the Japanese invasion, as well as by the prolongation of internal strife, it may have become less confident of its ability to protect foreigners in case their national protection should be withdrawn. Nevertheless the foreign friends of China have not been inactive in attempting to relieve the situation arising out of extraterritoriality. Undoubtedly its greatest evil is the conflict and confusion of legal systems. With 17 or more nations each applying its own laws, any approach to legal uniformity is impossible. The situation is bad enough in civil matters; but it is infinitely worse in police and criminal jurisdiction. Clearly such conditions can be relieved only by substituting one legal system for all China and subjecting all of its inhabitants, native and foreign, thereto. Clearly, too, the natural and logical substitute system would be the Chinese. It was with this purpose in view that Senator Thomas of Utah who spent five years in the Far East and knows conditions there first hand, introduced on May 15, a bill (S. 1784) to require the United States Court for China to apply the new Chinese codes instead of as heretofore, "the laws of the United States." The bill is now before the Foreign Relations Committee of the United States Senate and an article by Charles S. Lobingier, former Judge of the Court, appeared in the summer number of *Case & Comment*, explaining the purposes and probable effects of the measure.

The extent to which extraterritorial jurisdiction is exercised by the United States independently of treaty, is well illustrated in *U. S. v. Flores*, 289 U. S. 137, where defendant was charged with murder committed on an American merchant vessel, attached by cables to the shore at the Port of Matadi in the Belgian Congo. The Federal Judicial Code, sec. 102, provides that

the trial of all offenses committed upon the high seas or elsewhere out of the jurisdiction of any particular state, or district, shall be in the district where the offender is found or into which he is first brought.

Under this provision the accused was indicted in the eastern district of Pennsylvania but the indictment was dismissed by the United States District Court there for the supposed want of jurisdiction. This judgment of dismissal was reversed by the Supreme Court which held that the constitutional extension of judicial power "to all cases of admiralty and maritime jurisdiction" (art. III, sec. 2) authorized Congress to define and penalize such an offense and that

the language of the statute making it applicable to offenses committed on an American vessel outside the jurisdiction of a state "within the admiralty and maritime jurisdiction of the United States" is broad enough to include crimes in the territorial waters of a foreign sovereignty, and that a merchant vessel . . . for purposes of the jurisdiction of the courts of the sovereignty whose flag it flies, to punish crimes committed upon it, is deemed

to be a part of the territory of that sovereignty and not to lose that character when in navigable waters within the territorial limits of another sovereignty.

The opinion is by Justice Stone who learnedly reviews the history of the constitutional clause involved and most of the Supreme Court's prior decisions relating to the subject. He does not cite *In re Ross*, 140 U. S. 453, where the murder was committed on board an American vessel in Yokohama harbor and the offender was convicted by the American consul stationed there.

Narcotics. The international treaty restricting the manufacture of, and traffic in, narcotics, formulated at Geneva in 1931 and signed on July 13 of that year, came into force on July 9, 1933, by virtue of its terms, having been ratified by 30 nations and proclaimed in the United States on the following day. It provides for an international control agency to restrict narcotic manufacture to medicinal and scientific uses and meanwhile much will depend upon the effectiveness of that agency. The rapidity and extent of the treaty's ratification indicate a general desire among the nations to make the plan workable. On December 15 the League of Nations Secretariat at Geneva announced the limitations, effective Jan. 1, 1934, in every part of the world and the quantity of every dangerous narcotic drug, numbering 15, allowed each nation for medicinal purposes during the next year. The burden of proof rests upon the government of any country exceeding the limitations to overcome the presumption that its excess resulted from illicit traffic and the breach of international obligations. Similar in purpose is the opium convention, likewise formulated at Geneva, of Feb. 19, 1925. Chile deposited its ratification on Apr. 1, 1933. Turkey adhered on January 14 and gave its formal accession on April 3. The latter, apparently genuine, should prove especially helpful because much of the opium traffic has been carried on by Turkish subjects and their exclusion therefrom will go far to make the restrictions effective. Here we find international law applied to suppress a great international evil and it noticeably proceeds along the lines of the discarded 18th amendment of the Federal Constitution.

Nationality. Another subject which, by recent events and legislation has been projected into the field of international law, is nationality, especially that of married women. The 7th Pan-American Conference which met at Montevideo in December, unanimously approved a draft treaty based on the principle that nationality is an inherent right and that "neither marriage nor divorce affects the nationality of husband, wife, or children." A new British Act of Parliament, effective at the end of the year, provides that the wife of a newly naturalized British subject, retains her former nationality unless she makes formal declaration within a year after his naturalization, that she desires to take that of her husband. A new law in Mexico declares all those born of Mexican parents anywhere, and of alien parents in that country, to be Mexicans.

Non-Aggression Pacts. One of the hopeful auguries for the effective acceptance of international law among the nations, is found in the pacts and conventions of particular groups, usually those of geographical propinquity. On July 3, at the Soviet embassy in London, an "aggression definition pact" was signed by Afghanistan, Estonia, Latvia, Persia, Poland, Rumania, Russia, and Turkey. On the following day at the same

place, a similar pact was signed by Russia and Turkey with the "Little Entente" (Czechoslovakia, Rumania, and Yugoslavia). A non-aggression treaty between France and Russia was also ratified and in August, negotiations for a treaty of non-aggression and neutrality were concluded between Soviet Russia and Italy. On October 10, six Latin-American states—Argentina, Brazil, Chile, Mexico, Paraguay, and Uruguay—signed at Rio Janeiro a treaty condemning aggressive war and pledging themselves to recognize no territorial acquisitions by force. Italian adherence to this pact was announced at Rome on December 8, and it is expected that the other Latin-American states will eventually adhere; indeed the unanimity displayed at Montevideo, where the anti-war pact was on the agenda at the instance of Argentina, points to no other outcome. On November 29, representatives of Peru and Chile signed a special protocol for the erection of a statue of Christ on the heights of Morro de Arica, symbolizing the new era of peace between them.

Following three Balkan conferences, a pact of enormous significance to world peace was negotiated between their various participants—Albania, Bulgaria, Greece, Yugoslavia, Rumania, and Turkey. For that part of the world has heretofore been a breeding place of wars—as in June, 1914. On November 27, following a visit of King Alexander to Turkey, the pact was signed at Belgrade between the latter country and Yugoslavia. On December 10, King Boris and Queen Joanna of Bulgaria arrived in Belgrade for a three-day visit which was marked by extraordinary manifestations of good will on the part of the hosts—monarch and people—and is expected to pave the way for the two Balkan nations which have been most estranged to join in the pact. King Boris later visited King Carol at Bucharest.

Other Treaties. Legislation by treaty has been quite extensive during the year, all told. On Jan. 1, 1933 the "International Convention for the Safety of Life at Sea" came into force by virtue of its art. 65 which provides that it shall do so three months after deposit of the 5th ratification. By the date named the following nations had ratified: America (United States of), British Empire, Canada, Denmark, Finland, France, Germany, Italy, Netherlands, Norway, Spain, and Sweden. By March, ratifications had been deposited by Brazil, Danzig, Hungary, Iceland, and Portugal. By April, China had ratified.

Ratifications were exchanged between the United States and Mexico of the treaty for the rectification of the Rio Grande boundary, and the improvement of the river with a special view to flood prevention, of which the former country undertakes to defray 88 per cent of the cost. Most of the work is needed in the Juarez-El Paso region.

Opposition to the St. Lawrence Waterway treaty seemed to be growing as the year closed. No attempt seemed to be planned to bring to a vote in the Senate, the World Court protocol, although the State Bar Association of Idaho, home of the protocol's chief opponent, adopted a resolution in favor of it. Some interesting decisions relative to treaties were rendered during the year. We have already noted (ante p. 371) that which recognizes the treaty as a proper source of penal law. In *Cook v. U. S.*, 288 U. S., 102, the treaty of 1924 between the United States and Great Britain was construed in the light of its history, in a lengthy opinion by Justice Brandeis and was found to reaffirm

the principle that 3 marine leagues extending from the coast line outwards and measured from low water mark, constitute the proper limits of territorial waters

But the treaty also authorized the seizure of suspected vessels at a distance no greater "from the coast of the United States . . . than can be traversed in one hour by the vessel suspected." This was construed to modify an earlier customs law provision authorizing the seizure of vessels within four leagues of the coast. It was also found that "in a strict sense the treaty was self-executing, in that no legislation was necessary to authorize executive action pursuant to its provisions." Here two important principles governing treaties are announced in the same decision.

Taxation. In *Burnet v. Brooks*, 288 U. S. 378, the court dealt with the fiscal relations between a government and aliens domiciled within their own territory, holding inapplicable to the latter the domestic "rule of immunity from taxation by more than one State"; and, reversing the Board of Tax Appeals, and the Circuit Court of Appeals, upheld the collector of internal revenue in taxing securities, deposited in New York Banks, of a non-resident British subject. The court cited *Winans v. Attorney General*, (1910) A. C. 27, where the House of Lords held taxable in England securities of an American citizen domiciled in his own country, and where Lord Atkinson said:

There does not appear, *a priori*, to be anything contrary to the principles of international law, or hurtful to the polity of nations, in a State's taxing property, physically situated within its borders, wherever the owner may have been domiciled at the time of his death.

INTERPARLIAMENTARY UNION.
Amidst particularly unfavorable circumstances, the Interparliamentary Union once again proved its vitality. A few months after the German Revolution, at the close of a summer marked by the continual delays of the Disarmament Conference and the failure of the World Economic Conference, the Madrid meetings, Oct. 4-10, 1933, might well have taken place in an atmosphere of skepticism and limp resignation. On the contrary, the discussions have rarely been of such continued interest, interpreting as they did the unanimous desire of all the delegates to increase the prestige and the authority of the Union as the mouthpiece of the elected representatives of free nations.

There were more than 150 delegates from the following 26 Parliaments or Groups: United States of America, Belgium, Bolivia, Bulgaria, Colombia, Czechoslovakia, Denmark, Egypt, Finland, France, Great Britain, Guatemala, Hungary, Japan, Latvia, Mexico, the Netherlands, Norway, Panama, Poland, Rumania, Spain, Sweden, Switzerland, Turkey, Venezuela. The Congress of the Argentine Republic announced its accession to the Union.

The Head of the State, President Alcala Zamora, extended the delegates a personal greeting and welcome. Señor Zamora, who was a former member of the Union, had participated actively in its work. Julian Besteiro, President of the Constituent Cortes in Madrid and of the Spanish Interparliamentary Group, was elected president of the conference by unanimous vote.

Influenced by the failure of the London Con-

ference and events in Germany, most of the speakers insisted upon the necessity of the Union's defending the principles which are its very *raison d'être*—the reestablishment of normal cultural and economic relations between the nations and the free play of parliamentary institutions.

The Conference decided, on the advice of the Economic and Financial Committee, to make a fresh study of the conclusions which had been presented to it by M. Mylonas (Greece) on the subject of demographic questions. Colonial problems were placed before the Conference in the form of a long draft resolution, of which the first part referred to certain ethical and social problems, and the second part to colonial mandates. The latter underwent some alteration before being adopted. Speakers laid special stress on the importance of improving the material and moral conditions of African negroes by a better supervision of working conditions and by encouraging the creation of small native holdings.

The debate on security and disarmament expressed the clearly-defined conviction of members of the Conference. The governments must, in spite of the difficulties with which the Geneva Conference was continually confronted, set up a Convention in conformity with the spirit of the League of Nations which would permit a substantial diminution of armaments within a short space of time.

The last day of the Conference, October 10, was devoted to the evolution of the representative system. The debate had been impatiently awaited and twenty-five delegates had put their names down to speak. There followed one of the most vigorous debates which had taken place within the Union for many years. Conservatives, Liberals, and Socialists in turn affirmed their faith in the future of the parliamentary system. The draft resolution to this effect was unanimously adopted amidst loud applause.

The Conference noted with regret that slavery and the slave-traffic still existed, and asked that every form of slavery, whether direct, indirect, or masked, be abolished. The Conference urged the National Groups to recommend that the 1926 Convention relating to slavery be ratified and trusted that the decision of the 13th Ordinary Assembly of the League of Nations in favor of the creation of a Consultative Committee of Experts would be put into execution as soon as possible.

Recalling the resolution adopted by the Conference in 1924 and considering that the time had come for the immediate prohibition in the colonies of forced labor to the profit of private persons or enterprises, and that forced labor, still exceptionally countenanced in the case of public utility works, should be abolished as early as possible, the Conference invited the National Groups of the Union to take action in favor of the immediate ratification of the Convention relating to forced or compulsory labor adopted in 1930 by the International Labor Conference at its 14th Session.

The Conference was of opinion that in future no penal clauses should be introduced or renewed in the labor contracts concluded with natives. It asked the Groups to use their influence for that purpose within their respective Parliaments, and expressed the belief that the governments should instruct colonial administrators not to neglect any means of making the natives better acquainted with the provisions of colonial labor legislation.

The American Interparliamentary Group held its 30th Annual General Assembly on Jan. 16, 1933. Governor Andrew J. Montague was reelected President of the Group. Vice-President: Hon. Sam D. McReynolds, in the place of Hon. Henry W. Temple; Treasurer: Hon. Sol Bloom; Secretary: Hon. Charles A. Eaton, in the place of Hon. Burton L. French; Members of the Executive Committee of the Group: Hon. Lewis W. Douglas and Albert E. Carter, in the place of Hon. Carl R. Chindblom and the late Hon. J. Charles Linthicum.

INTERSTATE COMMERCE COMMISSION. See RAILWAYS.

INTERVENTION. For changes in the intervention policy of the United States in Latin America see PAN-AMERICAN CONFERENCE; CUBA, HAITI, NICARAGUA and SALVADOR under *History*.

IOWA. POPULATION. The population of the State on Apr. 1, 1930, was 2,470,939 (Federal Census); in 1920 it was 2,404,021; in 1933, 2,482,000 (Federal estimate). Des Moines, the capital, had (1930) 142,559 inhabitants.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1933	11,138,000	439,951,000	\$136,385,000
	1932	11,849,000	509,507,000	61,141,000
	1933	6,119,000	134,618,000	35,001,000
Oats	1933	6,181,000	219,426,000	21,943,000
	1933	3,172,000	4,141,000 *	25,260,000
	1932	2,929,000	4,645,000 *	26,941,000
Potatoes .	1933	75,000	5,100,000	4,080,000
	1932	74,000	8,140,000	2,930,000
	1933	532,000	8,512,000	3,660,000
Barley ...	1932	604,000	15,100,000	2,869,000
	1933	255,000	4,159,000	2,864,000
	1932	273,000	4,350,000	1,441,000

* Tons.

MINERAL PRODUCTION. A slight estimated increase in the production of coal was reported, to 3,430,000 net tons for 1932, from 3,388,355 for 1931. Gypsum was produced to the quantity of 178,087 short tons (1932), in value \$1,468,414.

FINANCE. State expenditures in the year ended June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$23,580,324 (of which \$1,053,924 was for local education); for interest on debt, \$677,935; for permanent improvements, \$25,207,453; total, \$49,465,712 (of which \$27,042,368 was for highways, \$3,383,921 being for maintenance and \$23,658,447 for construction). Revenues were \$43,027,599. Of these, property and special taxes furnished 25.1 per cent; departmental earnings and compensation to the State for officers' services, 12.4; sale of licenses, 50.4 (in which was included a gasoline sale tax that produced \$6,064,834). Funded debt outstanding on June 30, 1932, totaled \$15,761,282. Net of sinking-fund assets, the debt was \$14,720,762. On an assessed valuation of \$1,466,741,054 the State levied in the year ad-valorem taxes of \$9,110,730.

EDUCATION. Though the difficulty in meeting the financial obligations, in some of the school districts, was severe, it was reported that no schools, in the course of the academic year 1932-33, had been obliged to close altogether for lack of money. A new law for the certification of teachers was enacted. One half of all the teachers in the public schools were stated in December to be receiving pay at the yearly rate of \$750 or less.

CHARITIES AND CORRECTIONS. The statutory

Board of Control of State Institutions was in 1933 the body holding the centralized authority to control and govern the institutions of the State for the care and custody of persons. It was composed of three members, serving six year terms expiring in rotation. It appointed officers governing State institutions and fixed the number and compensation of their subordinates. It also functioned as the institutional purchasing agent and conducted institutional industries. These produced the State's automobile-license plates and road markers; also, for institutions' requirements, clothing, bedding, soap, shoes, brooms, and utensils. Institutional farms furnished vegetables and much milk and butter for the institutions' use.

These State institutions, with their populations of Dec. 1, 1933, were: State hospitals for the insane at Cherokee, 1649; Clarinda, 1690; Independence, 1665; and Mount Pleasant, 1568; Men's Reformatory, Anamosa, 348; State Penitentiary, Fort Madison, 1554; Women's Reformatory, Rockwell City, 101; Training School for Boys, Eldora, 518; Training School for Girls, Mitchellville, 169; State Sanatorium for Tuberculosis, Oakdale, 351; Soldiers' Home, Marshalltown, 481; Soldiers' Orphans' Home, Davenport, 688; Juvenile Home, Toledo, 346; Institution for the Feeble-Minded, Glenwood, 1735; Hospital for Epileptics and School for the Feeble-Minded, Woodward, 1175. The total institutional population was 15,038.

LEGISLATION. The regular session of the forty-fifth General Assembly, convening on January 9, followed the guidance of Governor Herring in dealing with a broad programme of relief to taxpayers, governmental economies, and measures relating to the financial emergency of March. A reorganization of the State government was proposed, on the basis of recommendations resulting from a survey conducted by the Brookings Institution, but action on most of the details of this plan was left for a later special session. There was enacted, however, a financial-control measure, embodying some of the Institution's recommendations. It abolished the offices of budget director and State board of audit and put control of State expenditure in the hands of a controller directly under the authority of the Governor. It required the State's spending agencies to submit to the Governor quarterly estimates of their coming expenditures, which he might cut down whenever revenues gave signs of falling below appropriations.

A sweeping programme of relief for taxpayers, embodied in a large number of bills, was carried to the statute books in chief part. The millage tax rate was reduced by one fifth; the time at which non-payment of tax bills on property should cause delinquency was put off to July 1; a moratorium was provided for foreclosures on farms, the courts being authorized to continue suits for foreclosure until Mar. 1, 1935.

To act for the State with regard to the proposed repeal of the Federal Eighteenth Amendment there was created a State convention to be composed of 99 delegates elected at large on June 20 but nominated, one each, in the several counties. A measure was passed to legalize the sale of beer containing not over 3.2 per cent of alcohol.

A special session convened on November 6; it enabled banks to sell proposed stock to the Reconstruction Finance Corporation. Liquor laws

were still under consideration at the year's end. The proposed Federal child-labor amendment was ratified by the Legislature.

POLITICAL AND OTHER EVENTS. Reversing a record of popular sentiment against liquor that extended over some 20 years, the voters elected, on June 20, 99 delegates in favor of repealing the Federal Eighteenth Amendment. Meeting on July 10 in State convention the delegates voted the State's adoption of repeal by the superseding amendment proposed by Congress. The popular vote was reported as 376,661 for repeal and 249,534 for retaining the amendment.

An act authorizing the State to borrow \$20,000,000 through issuance of its bonds, and intended to provide \$17,000,000 to make up State deposits and sinking funds in closed banks and to redeem State warrants, was held unconstitutional in June, by decision of a State district judge, and appeal to the State Supreme Court was prepared. The Brookings Institute rendered in September a report on the situation of the State government, recommending taxes on incomes, business, tobacco, and theatres and a reduction of 10 per cent in the State's direct tax on property.

Fiscal and commercial conditions in the State were greatly impaired throughout the year by the general inability to meet farm mortgages. Efforts in many localities early in the year to effect public sales under foreclosure were defeated by threatening or violent mobs. Governor Herring issued on January 19 a proclamation urging mortgagees to refrain from foreclosing. At the end of January a number of great Eastern insurance companies adopted the policy of suspending foreclosure for the time being in Iowa and certain other States, but some mortgagees still tried to foreclose. On April 27 Judge Charles C. Bradley, at Lemars, was dragged from the bench by a crowd of several hundred farmers, taken out of town, beaten and partly choked with a rope in efforts to make him swear to sign no more orders of foreclosure. State troops were sent to Lemars. Suspected anti-foreclosure rioters in several counties were seized by soldiers, and a number were convicted.

Governor Herring later, on October 20, issued a proclamation directing the postponement of all county sales of property for delinquent taxes, until January, 1934.

The State was the centre of a farmers' strike declared on October 23 by the Farmers' Holiday Association as a protest against the refusal of President Roosevelt to adopt proposals for a great issue of greenbacks and a guarantee of a fixed price for agricultural products. Strikers broke into freight cars, and several railroad bridges were burned down and dynamited.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Clyde L. Herring; Lieutenant-Governor, Nelson G. Kraschel; Secretary of State, Mrs. Alex Miller; Treasurer, Leo J. Wegman; Auditor, C. W. Storms; Attorney General, Edward L. O'Connor; Secretary of Agriculture, Ray Murray; Superintendent of Public Instruction, Agnes Samuelson.

Judiciary. Supreme Court Justices, Maurice F. Donegan, John W. Kitzinger, John W. Anderson, Richard F. Mitchell, Hubert Utterback, William D. Evans, Truman S. Stevens, J. W. Kindig, E. G. Albert.

IOWA, THE STATE UNIVERSITY OF. A codeucational State institution of higher learning in Iowa City, founded in 1847. The enrollment for

1932-33 was 8877. For the autumn of 1933 the enrollment was 6176, including 1064 correspondence students not also registered in residence. The summer session registration totaled 3533. There were approximately 570 members on the faculty in the autumn of 1933. The income for 1932-33 was \$5,019,082. The libraries contained 435,800 volumes. President, Walter Albert Jessup, Ph.D., LL.D.

IOWA STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS. A State institution for the higher education of men and women in Ames, Iowa, founded in 1868. The enrollment for the autumn term of 1933 was 3302. The registration for the first half of the 1933 summer session was 899, and for the second half, 408. The faculty numbered 480 members. The endowment funds amounted to \$695,000 and the income for the year was \$3,120,000. The library contained approximately 220,000 volumes. President, Raymond Mollyneaux Hughes, LL.D.

IRAQ (IRAK). A kingdom occupying the basin of the Tigris and Euphrates rivers in Mesopotamia. Capital, Baghdad. Feisal, king of Iraq, died Sept. 8, 1933, and was succeeded by his eldest son, Ghazi.

AREA AND POPULATION. With an area of 177,148 square miles, Iraq had a population estimated at 3,300,000 in 1928 (2,849,282 at the 1920 census). The inhabitants are mainly Mohammedans of the Sunnite and Shiite sects; there were in 1920 87,488 Jews and 78,792 Christians. The chief cities, with their approximate populations, are: Baghdad, 300,000; Mosul, 60,000; and Basra, the chief seaport, 50,000. In 1930-31, government and private schools enrolled 50,000 pupils, the public schools showing a 20 per cent increase over 1929-30.

PRODUCTION. Agriculture is the main occupation, dates being the chief export crop. Other leading products are wheat, barley, rice, cotton, oats, linseed, flax, fruits, wool, and sheep casings. Petroleum production in 1931 totaled 900,000 barrels (of 42 U. S. gallons), as against 1,200,000 in 1932. Manufacturing is on a small scale. Besides petroleum, the only mineral produced in commercial quantities is asphalt.

COMMERCE. In the fiscal year ended Mar. 31, 1932, imports totaled 63,978,175 rupees and exports 46,223,767 rupees (1 rupee equaled \$0.3650 U. S. gold). In the preceding year imports were 71,381,615 rupees and exports 40,712,642 rupees. There was a considerable transit trade with Persia (30,767,262 in 1931-32). Exports in order of value in 1930-31 were dates, wheat, barley, wool. Exports to the United States in 1933 were valued at \$2,229,963 (\$1,905,488 in 1932) and imports from the United States at \$1,267,634 (\$1,124,394 in 1932).

FINANCE. The budget for the fiscal year ended Mar. 31, 1933, showed receipts equivalent to £4,188,770 and total expenditures of £3,881,416; in 1931-32, receipts totaled £4,289,741 and expenditures were £3,729,974. The 1932-33 Customs revenues were £1,926,769 (£1,854,297 in 1931-32). The Iraq public debt consists solely of a share of the Ottoman Debt, accepted in 1927. The government purchased bonds to the amount of £1,228,000 (\$5,976,000 at par) and agreed to pay the balance of the debt, about £383,000 (\$1,864,000), with interest in seven equal annual installments. The unit of currency adopted Apr. 1, 1932, is the dinar (equivalent to the pound sterling).

COMMUNICATIONS. A meter-gauge railway line

runs from Basra to Baghdad, a distance of 354 miles. Other lines bring the total mileage to 753 miles, all government operated. There are some 5000 miles of improved highways, mostly earthen. A survey for a motor road between Baghdad and Medina in Saudi Arabia was undertaken jointly by the two governments in 1933. When completed, the road was expected to become an important route for pilgrims to the Moslem holy cities in Saudi Arabia. The British Imperial Airways operated air services linking Baghdad with India, Egypt, and Europe.

GOVERNMENT. The Constitution of August, 1924, provided for a limited monarchy and a responsible government. There is a Senate of 20 nominated members and a Lower House of 88 elected deputies. The Cabinet formed Mar. 20, 1933, was headed by Rashid Ali Beg el Ailani.

HISTORY

DEATH OF KING FEISAL. Feisal, first king of Iraq and during the World War leader of the anti-Turkish "Revolt in the Desert" chronicled by Col. T. E. Lawrence, died somewhat unexpectedly Sept. 8, 1933, in Berne, Switzerland, where he had gone to restore his failing health. His body was returned to Baghdad and buried in a new royal tomb there on September 15, amid the lamentations of his countrymen. His son, Crown Prince Ghazi, a 21-year-old youth educated at Harrow, in England, was sworn in as the new king before Parliament on September 10. A few days later King Ghazi was married by proxy to his cousin, Princess Aliyah, daughter of former King Ali of the Hejaz. The Queen, who had been in Turkey at the time of her marriage, arrived in Baghdad Dec. 1, 1933, and saw her husband for the first time.

THE ASSYRIAN OUTBREAK. Feisal's death came at an inopportune time for his country. Iraq had been called before the bar of the League of Nations to explain the alleged massacre of members of the Assyrian Christian minority and to justify the action of the League and of Great Britain in terminating Iraq's mandatory status in 1932 (see 1932 YEAR BOOK). The Assyrians, driven out of Turkey after the World War, had settled in Northern Iraq among the Kurds. Safe under the British mandatory régime, they became alarmed when Iraq was granted independence and petitioned the League to intervene with the Iraqi government to secure for them the autonomous rights they had enjoyed under the Turkish Sultan. The Iraqi government rejected the plea for autonomy, asserting that their pledge to guarantee minority rights was sufficient protection. They did consent to the concentration of the Assyrians in their own communities, but the efforts to reach a settlement along this line failed.

The Assyrian Patriarch, Mar Shimun, having refused to sign a declaration of loyalty to King Feisal or to cooperate with the League's scheme for settlement of the Assyrians, was deported from Baghdad to Cyprus. These events led to an uprising by some 1300 armed Assyrians late in July. Forced across the Syrian border by Iraqi troops, they were disarmed by the French authorities in Syria. The Iraqi government agreed to permit the return of the Assyrians, provided they surrendered their arms. Some 500 Assyrians, accepting these terms, received their arms from the Syrian authorities and recrossed the border into Iraq. Instead of surrendering their arms they clashed with a small Iraqi detachment, destroyed it, and fled to the mountains, some of them return-

ing into Syria. In retaliation, the Iraqi commander in the district, a Kurd named Bekir Sidkey Bey, enlisted Kurdish irregulars who seized the opportunity to destroy the villages of their hereditary enemies. Several hundred Assyrians were killed, many of them innocent villagers unconnected with the Assyrian force from Syria.

The British government and the League brought pressure upon King Feisal to end the disorders and punish the guilty. The League Council appointed a committee of three to investigate the question and the issue was still pending when Feisal died. The problem came before the League Council on October 14. The Council provisionally accepted the Iraqi suggestion that those Assyrians who did not wish to remain in Iraq should be settled in some other country under League auspices. The possibility of transporting them to Brazil was under consideration at the end of the year. In the meantime, some 5000 Assyrians had gathered in Mosul waiting for the League to act.

IRAQI POLITICS. That the ministry of Rashid Ali Bey el Ailani would be faced with a critical Opposition was demonstrated when Parliament convened early in 1933 for its first real session under the new independent régime. The Anglo-Iraqi treaty of Dec. 14, 1927, was vigorously attacked by Yasin Pasha, who demanded that the government secure amendments designed to prevent a dual administration of the country. A downward revision of the British debt, contracted for the reconstruction of Iraq, also was demanded. King Feisal was understood to have discussed these subjects with British officials during his state visit to England in June.

While attacks upon Britain's predominant rôle in Iraq were common among Iraqi politicians and in the press, there was a general realization among leading officials of the dangers that might beset Iraq if British protection were withdrawn. The cabinet resigned as a matter of form upon the death of King Feisal and was reappointed in its entirety by the new king. At the first meeting of the newly constituted cabinet on September 11, Premier Rashid Ali Bey declared that its guiding motive would be the maintenance of the alliance and friendship with Great Britain.

Despite the criticism aroused in Great Britain by the Iraqi government's handling of the Assyrian problem, the cabinet decided upon a stronger policy toward the minorities. A few weeks after King Ghazi ascended the throne the Premier asked him to dissolve Parliament and call new elections in order to secure a popular vote on the cabinet's policies. The King unexpectedly ignored the request and immediately accepted the cabinet's resignation when it was offered to him October 29. A new cabinet was formed on November 9, with Jamil Bey Midfai as Premier. Former president of the Chamber of Deputies, the new Premier had a large following in both houses of Parliament. The Nationalist party, which was influential in the preceding ministry, was not represented in Premier Jamil Bey's cabinet.

COMPLETION OF PETROLEUM PIPE-LINE. Both branches of the petroleum pipe-line from the Iraq oil-fields centre at Kirkuk to the Mediterranean were practically completed at the end of 1933 and oil was expected to flow early in 1934. The northern branch, built by the French, ran 531 miles from Kirkuk to Tripoli on the coast of Syria. The southern branch, under British control, extended from Kirkuk to the port of Haifa in Palestine, a distance of 617 miles. The French share in

the Iraq oil fields was to be exploited by a state monopoly and completion of the pipe-line was expected to materially reduce American exports of petroleum products to France.

Consult William C. Bagley, "Iraq's Rise to Nationhood," *Current History*, April, 1933. See **ARCHAEOLOGY**.

IRELAND. The second in size of the British Isles lying west of Great Britain. Total area, 32,586 square miles; total population (1931 census), 4,228,553. It is politically divided into Northern Ireland and the Irish Free State. See **IRELAND, NORTHERN**; **IRISH FREE STATE**.

IRELAND, NORTHERN. A constituent part of the United Kingdom, comprising six counties and two parliamentary boroughs in northern Ireland, Capital, Belfast.

AREA AND POPULATION. Northern Ireland has an area of 3,351,444 statute acres (exclusive of water) and a population estimated on June 30, 1932, at 1,250,000 (1,256,561 at census of 1926). In 1931 births numbered 25,673; deaths, 18,049; marriages, 7369. About one-third of the population is Roman Catholic. Education statistics showed 1868 public elementary schools with 204,399 pupils; 73 secondary schools, with 12,267 pupils; 62 technical schools, and 63 other vocational centres, with 24,073 students. Queen's University of Belfast had 1475 students in 1932-33.

PRODUCTION. Agriculture and manufacturing are the chief occupations. There were 843,231 acres under cultivation in 1932. Production of the chief crops in 1932 was (in tons): Potatoes, 1,125,824; oats, 288,582; flax, 1145; hay, 784,628; turnips, 640,670. Wheat, barley, beans, peas, and roots are other crops. Livestock (1932) included 714,757 cattle, 791,932 sheep, 219,767 swine, 44,445 goats, and 103,555 horses. Linen manufacturing and shipbuilding, both concentrated in Belfast, are the chief industries. Tobacco products, ropes, twine, soaps, spirits, hosiery, and underwear, and biscuits are other products. Quarrying, mining, and fishing are secondary industries. Commerce statistics are included in those given for Great Britain.

FINANCE. Actual receipts and expenditures of the Northern Irish Exchequer for the fiscal year ended Mar. 31, 1933, were £10,093,951 and £10,087,246, respectively. These returns excluded the cost of Imperial defense and of Northern Irish services reserved to the British Parliament. Including these sums, revenues were £12,114,000 and expenditures £12,109,000. The budget for 1933-34, as introduced into Parliament, called for revenues of £11,407,000 and expenditures of £11,754,000.

COMMUNICATIONS. Besides 769 miles of railway lines (1932), Northern Ireland had 180 miles of canals, and about 13,000 miles of highways. The chief seaports are Belfast, Londonderry, Newry, and Larne. A new dock and channel, constructed by the Belfast Harbor Commission on the County Antrim side of Belfast harbor at a cost of £400,000, were formally opened early in November. Regular air service between Belfast and Glasgow, Scotland, was opened May 30, 1933, with a twice-daily trip in each direction.

GOVERNMENT. Northern Ireland has autonomous control of its local affairs but forms an integral part of the United Kingdom, sending 13 representatives to the British House of Commons. The local Parliament consists of a Senate of 24 elected and 2 *ex-officio* members and a House of Commons of 52 elected members. Governor in 1933, the

Duke of Abercorn. The ministry in 1933 was headed by Viscount Craigavon.

HISTORY. The Unionist government formed in 1921 under Viscount Craigavon was assured of another five-year term in office as a result of the elections to the Northern Ireland Parliament held Nov. 30, 1933. The Unionists, pledged to maintain the separation of Ulster from the Irish Free State and to preserve the Imperial connection, won 37 of the 52 seats. The standing of the parties in the new parliament, with the former standing in parentheses, was: Unionists, 37 (37); Nationalists, 9 (11); Independent, 2 (3); Labor, 2 (1); Fianna Fail, 1 (0); Irish Republican Army, 1 (1). The two seats lost by the Nationalists went to President Eamon de Valera of the Irish Free State, who was elected from South Down, and to an I. R. A. Republican in South Armagh. Both of the new deputies had announced that they would not take their seats.

The election hinged mainly on the issue of union with Great Britain as against union or coöperation with the Irish Free State. Lord Craigavon in his campaign called attention to the intensification of Nationalist and Republican activities in Northern Ireland, calculated to force Ulster into the Free State, and asked the electors to frustrate "such a calamity." Previous to dissolution the government had been aroused by the shooting of a constable guarding the home of a Belfast resident against Republican terrorists. Immediately afterwards Belfast police rounded up 34 alleged Republicans and detained them under the Civil Powers Act. Fourteen were surprised while drilling in a shed. Following Mr. de Valera's nomination as candidate for Parliament, the Northern Ireland government reimposed the ban upon his presence in Ulster which had been revoked following his election as President of the Free State. The Belfast authorities were equally suspicious of Gen. Owen O'Duffy's National Guard, organized in the Free State during 1933. A proclamation declaring the organization unlawful in Northern Ireland was issued July 22.

Northern Ireland experienced some of the economic improvement which characterized the year in Great Britain, but many industries remained badly depressed. On Nov. 20, 1933, there were about 187,450 registered unemployed, or 9850 more than on Nov. 20, 1932. Toward the end of the year, however, definite improvement was reported in shipbuilding, distilling, and other industries, and farm prices registered an increase. See **GREAT BRITAIN**; **IRISH FREE STATE**.

IRIGOYEN, HIPÓLITO. An Argentine statesman, died July 3, 1933, in Buenos Aires where he was born July 13, 1850. He was educated at the College of San José (later the University of Buenos Aires) and early evinced a keen interest in politics, being elected in 1878 to the provincial legislature and in 1880 to the national Congress. After the political upheaval of 1890 he became the leader of the Radical party in its struggle to wrest power from the wealthy landowners. His efforts were crowned with success through the passage in 1911 of a law which provided for free, universal, and compulsory suffrage, including the secret ballot. In the first election held under this law in 1916 he was elected president, receiving, despite the fact that he had refused to campaign for himself, 152 out of 298 electoral votes. His elevation to the presidency, however, caused no change in his unostentatious mode of living; he refused to occupy the presi-

dential palace and gave his salary to charity. During the latter part of the World War he successfully maintained Argentina's neutrality, after receiving from Germany a promise to abstain from further torpedoing of Argentine vessels. He won also the loyalty of the working classes through the introduction of a minimum wage to save them from a devalorized currency and was popular throughout the country for his stand in upholding the national and provincial constitutions. On the expiration of his term of office in 1922 he retired, as the constitution of Argentina forbade a president to succeed himself.

Re-elected in 1928 for a second six-year term, President Irigoyen incurred considerable criticism on account of the arbitrary methods of government which he adopted. But his fall in popular esteem was due principally to the economic crisis, the business elements being angered by his refusal to secure higher tariff protection for the textile, packing, and yerba maté (tea) industries, and the labor elements being equally discontented because of widespread unemployment and want. After threats of impeachment he was deposed by an army junta, headed by Gen. José Francisco Uriburu, on Sept. 6, 1930, and went into exile on the island of Martin Garcia. He was pardoned by General Uriburu and allowed to return to Buenos Aires at the end of the *de facto* régime in January, 1932, but was exiled again in December for his alleged participation in a plot to overthrow the conservative government of Gen. Augustín P. Justo.

IRISH FREE STATE. A self-governing unit of the British Commonwealth of Nations, established under the Irish Free State Government Act of Dec. 5, 1922, which embodied the terms of the Anglo-Irish Treaty of Dec. 6, 1921. Capital, Dublin.

AREA AND POPULATION. Comprising the southern five-sixths of Ireland (q.v.), the Free State has an area of 26,601 square miles and a population estimated in 1933 at 2,992,000 (2,971,992 at the census of 1926). In 1931 births numbered 37,103; deaths, 42,957; marriages, 13,236; overseas emigrants, 1462 (811 in 1932); overseas immigrants, 3407 (4059 in 1932). The 1932 birth rate per 1000 inhabitants was 18.89; death rate, 14.44. There were 2,751,260 Roman Catholics in 1926.

EDUCATION. There is free and compulsory elementary education for children under 14 years. Study of the Irish language is compulsory in all national schools and its use as a medium of instruction is increasing. In 1931-32 there were 417,017 pupils in 5361 national elementary schools, 26,082 in 306 recognized secondary schools, and 4639 in colleges and universities. In 1932-33, Trinity College, Dublin, had 1477 students; the National University, Dublin, had 1714; and the Cork and Galway branches of the National University had 750 and 525 students, respectively. There were 63,426 students enrolled for vocational education in 1931-32.

PRODUCTION. Primarily an agricultural and stock raising country, the Free State in 1932 had 3,705,736 acres under crops, 7,956,879 acres of pasture, and 237,170 acres of woods and plantations. Until the tariff placed on Irish cattle by Great Britain in 1932, the cattle export trade was the principal source of agricultural income. Livestock in 1932 included 4,025,080 cattle, 446,064 horses and ponies, 3,460,856 sheep, and 1,108,048 swine. Poultry numbered 22,536,120. Esti-

mated production of the chief grain crops in 1932 and 1931 (in cwt. of 112 pounds) was: Wheat, 445,000 (418,000 in 1931); oats, 12,544,000 (10,416,000); barley, 2,132,000 (2,109,000); rye, 47,000 (55,000). Production of other crops in long tons was: Potatoes, 3,015,000 in 1932 (1,932,000 in 1931); turnips, 3,384,000 (3,303,000); mangels, 1,638,000 (1,540,000); and hay, 4,792,000 (5,116,000). On June 1, 1932, there were 558,920 males engaged in farm work. Wool production in 1932 was 19,559,000 pounds (15,513,000 pounds of shorn wool); creamery butter, 610,370 cwt.

The fisheries in 1931 employed 1913 boats and 3889 men regularly and 1299 boats and 8037 men irregularly. The value of the fish catch in 1931, including shell fish, £223,074 (£128,783 in 1932).

The net value of industrial output in 1929 was £24,932,139, of which £18,311,451 represented the value added in process of production of transportable goods. The gross value of output of the leading industries, including cost of material, fuel, light and power, was: Butter, cheese, condensed milk, and margarine, £8,420,148; grain milling, £7,577,782; brewing £6,928,979; bacon curing £5,392,039; tobacco, £5,215,746; bread, flour, confectionery, and biscuits, £4,559,969. The number of registered unemployed in December, 1932, was 102,619.

COMMERCE. The decline in imports and exports, partially attributed to the trade war with Great Britain inaugurated in 1932, is shown in the accompanying table from the official *Statistical Abstract* for 1933.

IRISH FREE STATE: IMPORTS AND EXPORTS
[In pounds sterling]

Year	Imports for consumption	Exports of domestic products	Excess of imports
1929	£60,249,930	£46,804,561	£13,445,369
1930	55,598,660	44,567,584	11,031,076
1931	49,666,102	36,276,118	13,389,984
1932	41,436,918	25,802,924	15,633,994
1933 * . . .	35,789,153	19,069,219	16,719,934

* Preliminary figures, not in *Statistical Abstract*.

Imports from Great Britain were £28,869,206 in 1932, compared with £35,735,217 in 1931; from Northern Ireland, £3,759,270 in 1932 (£5,037,208 in 1931); from all other countries, £9,945,746 (£9,688,455 in 1931). Exports to Great Britain declined to £22,846,814 in 1932 from £31,787,287 in 1931; to Northern Ireland, £3,104,479 in 1932 (£3,928,498 in 1931); to all other countries, £988,935 in 1932 (£1,355,111 in 1931). The 1932 imports from the United States were £1,320,211; exports to the United States, £106,100. Thus the United Kingdom (Great Britain and Northern Ireland) in 1932 supplied 76.6 per cent of all imports (80.8 per cent in 1931) and purchased 96.3 per cent of all exports (96.3 in 1931).

The chief export items in 1932 were: Cattle, £8,746,674 (£12,669,504 in 1931); porter, beer, and ale, £3,952,894 (£4,087,370); eggs, £1,673,910 (£2,227,452); butter, £1,546,162 (£1,496,291); horses, £1,295,141 (£1,960,595). The principal imports in 1932 and 1931, respectively, were: Coal, £2,732,734 (£3,072,924); corn, £2,557,842 (£2,153,652); wheat, £1,914,076 (£1,572,700); tea, £1,618,174 (£2,119,995); wheat flour, £1,559,296 (£1,662,402); boots and shoes, £1,032,276 (£1,458,820).

FINANCE. For the fiscal year ended Mar. 31, 1933, ordinary governmental revenues amounted to £29,990,935 (£25,496,000 in 1931-32) and

ordinary expenditures were £28,851,189 (£26,139,653 in 1931-32), leaving a surplus of £1,139,746 as against a deficit of £643,053 in 1931-32. Total receipts into the Treasury, including ordinary revenues, £6,464,501 raised by the creation of debt, etc., amounted to £36,916,493 in 1932-33. Total expenditures, including ordinary expenses, capital issues of £1,605,754, and repayment of borrowings, etc., amounting to £6,461,000, aggregated £36,916,493. Customs receipts totaled £9,331,000, excise £5,443,000, and the property and income tax, £5,194,000.

The budget estimates for the fiscal year 1933-34 balanced at £35,334,220. The principal revenue estimates were: Tax revenue, £21,906,000; non-tax revenue, £4,534,000; repayment of capital issues, £82,000; additional funds to be raised by borrowing or otherwise, £8,737,220. The increase in expenditures was largely due to provision for export bounty payments for the full year. These bounties were inaugurated in June, 1932.

COMMUNICATIONS. At the beginning of 1933, there were 2069 miles of first track railway line in the Irish Free State, linked with 356 miles in Northern Ireland. The two main railway systems in the Free State reported total receipts of £1,174,583 and expenditures of £1,106,411 during 1932. Highways extended 46,656 miles in 1931. There were 650 miles of inland waterways and canals. The telegraph and telephone systems are government owned. In 1932, 12,455 vessels of 8,761,207 tons entered the ports of the Irish Free State and 12,488 of 8,750,188 tons cleared.

GOVERNMENT. The Constitution of Dec. 6, 1922, declares the Irish Free State a coequal member of the British Commonwealth of Nations. Irish and English are both official languages. The Legislature (Oireachtas) consists of the King, represented by the Governor-General, the Chamber of Deputies (Dáil Eireann) of 153 members elected by popular suffrage under a system of proportional representation, and the Senate (Seanad Eireann) of 60 members elected for nine years by the members of both houses of parliament. The President of the Council is nominated by the Dáil and in turn nominates the other members of the Council, or ministry, who must be approved by the Dáil. The members of the Executive Council as reorganized Feb. 10, 1933, were: President and Minister for External Affairs, Eamon de Valera; Vice President and Minister for Local Government and Public Health, Sean T. O'Kelly; Lands and Forestry, Joseph Connolly; Industry and Commerce, Sean Lemass; Finance, Sean MacEntee; Agriculture, Dr. James Ryan; Defense, Frank Aiken; Education, Thomas Derrig; Justice, Patrick J. Rutledge; Posts and Telegraphs, Gerald Boland. The Governor General in 1933 was Domhnall Ua Buachalla (Donal Buckley).

HISTORY

DE VALERA WINS ELECTION. The parliamentary position of the Fianna Fáil government, headed by President Eamon de Valera, became somewhat precarious toward the end of December, 1932. It was dependent for a majority in the Dáil Eireann upon the seven Labor votes, with the help of which de Valera had replaced President Cosgrave following the election of February, 1932. On December 30, the Labor party threatened to desert the government when the President persisted in his plan to reduce civil service salaries. Nevertheless the civil service pay cut went into effect Jan. 1, 1933, causing William Norton, leader of

the Laborites, to announce that he would fight the government's policy "by every means at my disposal."

The prospect of President de Valera's defeat in the Dáil on this issue coincided with efforts of former President Cosgrave to unite all anti-Republican elements in his Cumann na nGaedhael party. This movement was inaugurated on Dec. 29, 1932, when Lord Mayor Alfred Byrne of Dublin presided at a meeting of business and professional men. A resolution was passed appealing to "all believers in peace by negotiation" to combine to end the economic war with Great Britain.

President de Valera met the challenge to his power from these divergent sources by dissolving the Dáil on January 3 and calling new elections for January 24. He appealed to the electorate to give him a safe majority in the Dáil and to end his dependence upon the Labor party, which he said was preventing the development of the country under his policy of protection. The campaign was marked by serious rioting in Dublin January 8. A Republican crowd of several thousands broke up a large Cosgrave political meeting, despite the efforts of 700 members of the Army Comrades' Association to preserve order. Another development was the appearance of the new Centre party, representing chiefly the larger farmers and stock raisers, and headed by Frank McDermott. The election gave de Valera's party a majority of one in the Dáil. Fianna Fáil secured 77 seats, as against 72 in the old Dáil. The standing of the other parties, with the previous standing in parentheses, was: Cumann na nGaedhael (Cosgrave), 48 (57); Centre party, 11 (4); Independents, 9 (13); Labor, 8 (7). Since Labor promised to continue its support of de Valera's general programme, particularly on the issues in dispute with Great Britain, the President now had a working majority of 17.

THE PRESIDENT'S PROGRAMME. Mr. de Valera, after reorganizing his cabinet on February 10 (see *Government* for cabinet list), proceeded vigorously to carry out his political and economic programme. The political programme called for the severance of all ties with Great Britain which were considered evidences of Irish inequality. The President asserted, however, that he still considered the Free State to be a member of the British Commonwealth and that his policy would be compatible with the Commonwealth "constitution." He further demanded the reorganization of the Senate, which had consistently opposed and delayed the enactment of his policies into legislation. He proposed that the membership be reduced from 60 to 30 and that it be made representative of various economic interests in the Free State.

Mr. de Valera's economic programme called for the reorganization of the Free State into an economically self-contained state, which would no longer be dependent upon the British market. The large farms in the east and centre of Ireland, devoted chiefly to raising cattle for export to Britain, were to be broken up and distributed among small farmers. By high protective tariffs he sought to foster Irish industry, and by internal taxation, graduated according to the size and capital of economic units, to decentralize industry and encourage ruralization.

The government's political programme met with decreasing resistance following the election, which demonstrated that he had captured a majority of the Free State electorate. On March 3

the British government was informed that the land annuities, held in a suspense account since June, 1932, would be used to finance normal requirements of the Free State exchequer. (For background of the land annuities dispute, see 1932 YEAR BOOK.) The land annuities in default amounted to £4,660,000. This compared with £2,123,000 collected by the British government on Irish imports between July 15, 1932, and Mar. 7, 1933. On May 3 the Dáil, by a vote of 76 to 56, re-passed the bill to abolish the oath of allegiance to King George. The measure thus became a law over the veto of the Senate. In a speech following adoption of this law, Mr. de Valera rejected the demand of the Irish Republican Army for immediate proclamation of the republic. He said his policy called for gradual elimination of the forms obstructing republican status. Reunion of Ulster with the Free State, he had stated earlier in the year, was "the essential basis of a lasting peace with Britain."

Before the Dáil rose for the summer recess three more bills amending the Constitution in this direction were introduced. One provided for the transfer from the Governor General to the Executive Council of the function of recommending the purpose of the appropriation of money. The second sought to eliminate sections of the Constitution which required the Governor General's assent to bills and "the reservation of bills for the signification of the King's pleasure." The third proposed to terminate the right of appeal to the Privy Council. These three measures were all passed by the Free State Parliament before the end of 1933.

The rift between the Free State and Great Britain widened perceptibly during the year as the result of these developments. Informal negotiations with a view to ending the tariff war took place during the London Economic Conference but to no avail. An effort to mediate the tariff dispute was made by three members of the South African delegation to the London Conference, who went to Dublin in August. It was reported that de Valera rejected their proposal for submission of the dispute to arbitration by a board headed by Tielmann Roos of South Africa. De Valera previously had insisted that the chairman must be some one outside of the British Empire. On November 14, J. H. Thomas, the British Secretary of State for Dominions, said in the House of Commons that the amendments to the Free State Constitution violated the Anglo-Irish treaty of 1921 and that the Free State was in danger of losing its place in the British Commonwealth. President de Valera replied by challenging the British government to let the Irish people choose between a republic and membership in the British Commonwealth.

Receiving no reply to his challenge, President de Valera on November 29 dispatched a note to J. H. Thomas, asking for "a direct and unequivocal statement" whether the British government would "treat as a cause of war or other aggressive action a decision of the Irish people to sever their connection with the Commonwealth." He declared the treaty of 1921 had been imposed upon Ireland by the threat of force. The British government, replying through Mr. Thomas, declined to accept this as a true description of the relations between the two countries. It pointed out that the treaty settlement was accepted by the elected representatives of the people of the Free State and resulted in "the progressive development of

friendly relations" between 1921 and 1932. Rejecting President de Valera's assumption "that lasting friendship cannot be attained on the basis of the present relationship," the British did not see "any ground for answering a (Mr. de Valera's) question founded on that assumption."

While the President's anti-British and most of his domestic political policies were approved by the bulk of the electorate, his economic programme aroused the fierce opposition of the larger landowners and farmers, and the business and professional elements. They were called upon to furnish the tax revenues needed to meet the cost of economic reorganization and of the economic warfare with Britain. The cattle farmers and large landowners, especially, saw that they were doomed if de Valera's policy was carried through. They watched with apprehension as the government pushed through the Dáil in July a bill for the expropriation and subdivision of large estates. Many new import duties and increases in existing rates were provided in the 1933-1934 budget resolutions, effective May 11. The Free State tariff undermined the economic position of the commercial classes, while the British tariff was forcing the cattle growers and the few exporting industries to the wall. But de Valera gained supporters among the peasants and small farmers more than sufficient to offset the antagonism of the comparatively well-to-do classes.

GROWTH OF OPPOSITION. The President had proved himself relatively immune to attack on the economic and political front. Nevertheless early in July, 1933, the disunited forces of the opposition combined, found a weak spot in his armor, and launched a formidable drive to unseat him. They found a new leader in General Eoin O'Duffy, former head of the Free State police, and rallied the growing forces of discontent about a programme calling for the equitable administration of justice and the elimination of the sinister influence of the Irish Republican Army from the government.

The Opposition dwelt effectively upon the President's apparent indifference toward the I. R. A.'s increasing terrorism and defiance of his government. Ignoring the government's ban on illegal armed bodies, the I. R. A. openly drilled, imported arms, and paraded. They were charged with the wave of political terrorism in Ireland, marked by the beating, kidnaping, and even murder of their opponents. To their influence over the President, who had fought with them during the civil war a decade before, was attributed the dismissal of General O'Duffy as head of the police early in 1933. In July, General O'Duffy accepted the leadership of the Army Comrades' Association, a semi-military organization formed the previous year for protection against republican terrorism. He at once reorganized the movement, renamed it the National Guard, adopted a semi-Fascist political, educational, and physical training programme, and began recruiting throughout the country.

The government, in obvious alarm, recalled all the licenses to carry firearms. It made no attempt, however, to disarm the I. R. A., which had no licenses. The government refused permission for a National Guard parade in Dublin on August 13 in commemoration of the death of Collins, Griffith, and O'Higgins. On August 20 the mobilization of National Guard units throughout the country in defiance of the government's orders led de Valera to outlaw the organization and to

revive the Public Safety Act, which the Cosgrave government had invoked against the I. R. A.

The result of the ban placed on the National Guard, was the fusion of all Opposition groups—the National Guard, Cumann na nGaedheal, Independents, and the Centre party—into a new political group called the United Ireland party, with General O'Duffy as president. The party programme called for reconciliation with Ulster to form a single Irish government, a settlement with Britain, and the crushing of the I. R. A. The union of the Opposition groups again forced President de Valera into dependence upon the Labor party. Labor exacted as the price of its support new provisions for old age pensions, sickness and unemployment insurance, workmen's compensation, and housing. Meanwhile a taxpayers' strike began to spread among farmers and traders. The government sought to check this movement by arresting a number of delinquent taxpayers, and arraigning them before the Military Tribunal set up under the Public Safety Act on charges of conspiracy against the State. This use of the Safety Act, while violent republican attacks upon General O'Duffy's meetings went unpunished, further undermined Mr. de Valera's prestige and popularity.

On November 30 the police made extensive raids in various cities on leaders of the United Ireland party, seeking evidences of treasonable activities. Attacked for the raids in the Dáil, the government replied that it had discovered evidence that the National Guard still continued, although outlawed in August. The following day the Blue Shirts again flouted the government's ban by holding a great parade at Kenmare, County Kerry. On December 8 the government issued a new edict suppressing the Young Ireland Association of the United Ireland party. This was the organization General O'Duffy created to evade the ban against his National Guards. Raids and arrests of persons wearing Blue Shirts followed. On December 14, General O'Duffy again evaded the government's decree by dissolving the Young Ireland Association and organizing in its place the League of Youth. Blue Shirt rallies continued and on December 17, amid great excitement, police arrested General O'Duffy while he was trying to address an outdoor meeting at Westport in County Mayo. His attorneys immediately obtained a writ of habeas corpus and on December 21 the Free State High Court at Dublin ordered his immediate release.

Balked in this move, the de Valera government now attempted to check O'Duffy's activities by charging him with inciting his adherents to murder President de Valera. General O'Duffy immediately denied the charge, which was scheduled for a hearing before a military tribunal on Jan. 2, 1934. Meanwhile the government's prestige had suffered and numerous accessions to the ranks of the United Ireland party were reported.

IRON AND STEEL. Getting off to a very poor start during the first three months of the year, during which the production of raw steel in America dropped almost 30 per cent below that of the same period in the preceding year, the iron and steel industry staged an amazing upturn throughout the balance of the year reaching a total of almost 23,000,000 tons of raw steel, or an

increase of 71 per cent above the total of 13,464,000 tons for 1932. This output although far below the peak production of 54,850,000 tons in 1929, compares very favorably with the annual output for the ten years prior to 1914. The end of the year, however, found the industry quite conservative because two of the three major channels of consumption—railroads, automobile industry, and construction, normally accounting for about 50 per cent of the total output—had contributed almost negligibly toward the increase. Although automobile output rose 43 per cent over that of the preceding year, construction work declined, and railroad buying was inconsequential. Apparently then, the bulk of the steel demand was for the replenishing of stocks which, with falling prices, consumers had permitted to dwindle to low levels. The prospects of increased prices stimulated the replacement of stocks and thus, presumably, made up the difference in volume.

Distribution of finished steel over the past three years is more clearly shown by the accompanying table prepared by *The Iron Age*, Philadelphia, in its annual review number from which this article is based. The figures were compiled from returns from 41 companies that represent about 89 per cent of the entire capacity of the United States. According to the companies embraced in this report, there were sharp rises in the total tonnage used in automobile production and in that for the manufacture of metal containers, the two consuming almost one-third of the total output and advancing the importance of the market for making metal containers from fifth place to second in the three year period. Structural steel for buildings in the same period dropped from leading position to third in volume of consumption, and steel for railroad purposes, formerly consuming more than a quarter of the entire output, dropped to fourth place.

DISTRIBUTION OF FINISHED STEEL
[Thousands of gross tons] (*The Iron Age*)

	1931		1932		1933	
	M. tons	%	M. tons	%	M. tons	%
Buildings . . .	3,500	18.5	1,650	16.0	1,950	11.5
Railroads . . .	2,550	13.5	1,250	12.0	1,500	9.0
Automotive . .	3,050	16.0	1,750	17.0	3,250	19.0
Oil, Gas, Mining	2,100	11.0	900	8.5	1,000	6.0
Metal Containers	1,700	9.0	1,200	11.5	2,800	13.5
Agriculture . .	850	4.5	350	3.5	700	4.0
Shipbuilding . .	100	0.5	100	1.0	200	1.0
Machinery . . .	600	3.0	300	3.0	500	3.0
Exports	750	4.0	300	3.0	500	3.0
Highways . . .	100	0.5	400	4.0	750	4.5
Miscellaneous .	3,900	20.5	2,100	20.5	4,350	25.5
Total . . .	19,000		10,300		17,000	

Several factors points to a continuance of the 1933 level of production and operated in part upon the recovery for the year. These, as listed by *The Iron Age*, are the revival of brewing and distilling, involving not only new equipment but also a growing industry in steel barrels and cases; the government agricultural relief programme which late in the year resulted in an upward demand for wire products and hardware items; the placing of contracts for 21 naval vessels with a combined displacement of more than 100,000 tons and further orders for 16 additional vessels in navy yards, and the steady increase, thanks to dollar depression, of export trade. Whereas in 1932 steel exports showed an unfavorable balance, reports for the first 10 months of 1933 showed total exports of 1,008,507 as against 484,482 tons for the

same period of 1932. A large part of the gain was in the shipment of scrap which in 1932 was 168,166 tons, rising to 595,763 tons.

The price level remained low throughout the year. According to *The Iron Age* price composite, the low of the past four years was reached on April 18, when the figure was 1.867 cents a pound. At the close of the year the composite price was 2.028 cents. The actual gain is somewhat better than is reflected by these figures for under the steel code of fair competition the waiving of extras is prohibited. The prices of scrap fluctuated widely during the year. The low composite price of \$6.75 in January rose to \$12.25 a ton in August, dropping to \$9.94 in November and closing the year at \$11.08.

Although American production of steel ingots has shown a greater net gain than has British production since the low point of the latter in August, 1932, the one has shown wild fluctuations while the other, except for seasonal declines, has been a steady growth. This is shown in the accompanying comparative table in which the production in each country for August, 1932, has the index value of 100.

STEEL INGOT PRODUCTION

1933	British monthly ^a		American monthly ^b	
	Totals (tons)	Index no.	Totals (tons)	Index no.

PIG IRON. Inclusive of blast furnace ferro-alloys but excluding charcoal iron, the year's production of pig iron is estimated at 13,200,000 tons, a gain of 4½ million tons over the production of 1932, but 5 million tons less than was produced in 1931. The lowest output of the year was recorded in March with 17,484 tons daily, and the peak was in August with 59,142 tons daily, declining through September, October, and November, and gaining slightly in December. Composite prices of *The Iron Age* remained at \$13.56 a gross ton during the first three months of the year, below the cost of production, except in the Birmingham district. Thereafter, with increasing demand, prices steadily improved to \$16.90 a ton in December.

CODE OF FAIR COMPETITION. Under the National Industrial Recovery Act, the American Iron and Steel Institute acting for the steel industry submitted a tentative code of fair competition on July 15. As submitted, the code contained declarations on the principles of the open shop which, meeting objections at the hearing on July 31 at Washington, were withdrawn. In the next three weeks a number of debatable issues in the code were with difficulty adjusted and the revised code was approved by President Roosevelt on August 19. The main issues upon which agreement was ultimately met, according to a statement made by Gen. Hugh S. Johnson, were:

Hours—Average 40-hour week over three months' period with maximum per employe of 48 hours and 6 days per week. On or after Nov. 1, 1933, as soon as production reaches 60 per cent capacity, the 8-hour day for

all employes, except supervisory, technical, and emergency employes.

Wages—General increase of 15 per cent has been made since July 1.

Minimum wages fixed in code are estimated by steel companies to exceed an average of 40 cents per hour. (This results from fact that higher minimum wages than those fixed in the code are paid to large groups of common labor.)

Code to be effective for 90 days as a trial period to determine effect.

Provision for three representatives of NRA to receive full information, with access to necessary records, to meet with board of directors of Iron and Steel Institute upon administration of code and advise the President so as to provide assurance that code operation is in full compliance with the law, providing adequate protection of public interests and furnishing the basis for recommendations to the President as to continuation or modification of code after 90 days' period of trial and determination of results.

Although operation of the code showed that its major benefits went to labor, with an increased monthly payroll of \$9,000,000 and an addition of 92,000 employees, the directors of the American Iron and Steel Institute on November 21 petitioned the President to extend the steel code to May 31, 1934. From a commercial standpoint, according to T. H. Gerken in *The Iron Age*, perhaps the most important feature is "the requirement that minimum base prices for all its products be filed by each member within 10 days after the effective date of the code. It is further provided that such a list of base prices must be kept on file at all times with the secretary of the institute and that reductions in such quotations cannot become effective until 10 days after they are filed. These price lists, at all times, are open to the inspection of all members of the code, as well as of other interested parties. Under the penalty of violation of the code, no member may quote a base price lower than that which he has on file with the secretary of the institute without giving 10 days' notice during which time all of his competitors will likely have advised themselves of his intentions. In the case of an advance in base price, the competitor may use his discretion. However, it may readily be seen that if the price level reached a point at which buying was being hindered, the situation would be recognized by members of the code, who would either fail to meet the higher prices or even file reduced quotations, thus maintaining the price structure at a level which best served the interests of both consumer and producer."

ITALIAN LITERATURE. Viewed objectively, the 1933 literary season in Italy threw into relief two matters of grave importance: continuance of theatrical crisis and the demise of that excellent literary journal, *Pegaso*. It would be of some moment, therefore, to discuss these two matters before delving into our criticism proper.

Again, that theatrical crisis! Where in the wide world is not echoed and reëchoed the agony of what appears to be a moribund art? In Italy the public remains rather apathetic to things theatrical (whatever little is offered on the legitimate stage). It would be a futile task here to enumerate all the factors that have contributed to the decline of the theatre. The World Crisis explains a lot; but since it is at the moment a common denominator in the theatres of the world, one must look to another factor to diagnose the main source of ailment in the Italian theatre. If we look back about a decade we shall see that the Italian theatre was monopolized by two genres: Pirandello's

Theatre of the Paradox and Chiarelli's *Theatre of the Grotesque*. We could conveniently combine the two genres and call them the *Theatre of Mental Process*. This dramatic formula, the cerebral formula, was nothing short of a sensation in Italy and everywhere else in the world. When we say sensation, no inference is made to the loose use of the term. Who does not remember the stir created by Pirandello's *Six Characters in Search of an Author*, and Chiarelli's *The Mask and the Face*? But to come to the point, let us say that the dazzling heyday of this theatre was to be, perforce, ephemeral. Obviously the genre was to interest, as time has proven, the theatrical aristocracy; it remained essentially the theatre of the *exclusivistes*. The public in general, the non-specialized, but supporting element of the theatre, was merely caught in the enthusiasm that carried the movement. Let us concede that the non-specialized patron frequents the theatre principally for amusement. In Italy what was done for this class of patron? He sought pleasure, but he got problems. He wanted drama depicting reality, life itself, with red-blooded characters; he got, instead, philosophy, poetry, metaphysics. Small wonder then that foreign successes were favored. Why should not the cinema, with its varied entertainment, be preferred? These, in short, were the ills felt in and about the theatre, last season as well as a few others previous.

A ray of hope was injected into the picture last season when the Fascist state took up the ideas of Silvio D'Amico for a National Institute of Drama. It is to be recalled that D'Amico, keen dramatic critic and man of letters, espoused the idea of a National Theatre and worked tirelessly to bring about its reason of being. In the fall of 1932 D'Amico gave definite information (see *Italia Letteraria*, September, 1932) that the government had found subsidy, at least in bulk, for the Institute of Drama. The Institute, be it recalled, was to have various experimental centres for theatrical productions. These centres were to exchange their stock companies, and periodically, too, the companies were to make tours of the country. The major premise of the National Institute was to build on a more realistic theatre, a theatre more for the people rather than for the academic. But what has happened to the project? Thus far no official or extensive function has been in evidence. In a recent speech, in which the Duce outlined the ills of the theatre, no mention was made of the future of the Institute. Italy needs such an Institute; may we hope that the government has not shelved the plan?

Regrettable, indeed, was the news of the discontinuance in June of the *Pègaso*, a magazine which, through quality of its contributors and contributions, attained superb taste, versatility, and vitality. Why did not some modern Maecenas save the publication? As a tribute, may we record here a few facts relative to its short but useful polemic life. The *Pègaso* was launched (Florence, 1929) with material of polemic nature as an attack against the spirit or domination of criticism on literary production (spirit of Croce). It was of interest to note that the vitality and freshness that characterized the first issues of this monthly suffered no subsequent dilution. The pre-eminence of its staff and collaborators pushed the magazine immediately to the fore. It was favored as representative of Italy's intellectuals and men of letters. Much of its success was due, as we have stated in previous discussions, to the

eclectic personality of its editor and founder, Ugo Ojetti.

FICTION. Less than a decade ago literary prizes in Italy hardly existed. Now there are prizes for every field of professional writing. Perhaps too many exist for any one of them to cast the sought-for influence. Obviously, the prizes have come into being parallelly with the Fascist movement. In this case it has been the stimulation of national talent, as against inactivity and apathy; it has been the exhortation of a more intense consciousness in the cult of national literature, as against over-enthusiasm for foreign creations. Literary prizes, at best, focus but fleeting attention on contemporary publications. What works prepared under the spirit of competition have ever attained transcending permanency? Few, if any. How many books, of late, not prepared with this aim in view, but which have been singled out by literary prizes, have retained their appraised values? In Italy in the last ten years two or three only of these prize novels are still read with favor and respect. For such works as Francesco Chiesa's *Villadorna* (Mondadori Academy Prize, 1927-28), we can say with conviction that, commendably composed, it was bound to be cherished in spite of the prize awarded. (For a discussion of *Villadorna* see *THE NEW INTERNATIONAL YEAR BOOK*, p. 367, 1928.) This, however, is not a plea for the abolition or drastic curtailment of literary prizes. It is merely our belief that if they are to be taken seriously in the future, greater reserve must be practiced regarding their distribution. It is true that they provide literary speculation and comment, and no end of lively topics for literary weeklies. They also furnish interesting effervescing qualities, whatever be the residual after-taste. But reverting to our previous point: why so many prizes? In indiscriminate numbers they will, perforce, detract from those set up along serious and dignified standards. The prizes awarded by such bodies as the "Mondadori Academy," "Fracchia" ("Italia Letteraria"), "Viareggio," among others, have been, on the whole, commendable.

While speaking of prizes, we noted that the "Viareggio" made a first award to Antonio Foschino for his *Adventures of Villon*. Incidentally, the same prize was further split among Erico Pea for his *Il servitore del diavolo* (*The Devil's Servant*), Masala for *Uno fra la folla* (*One in the Crowd*), and Frateili for *Capogiro* (*Dizziness*). Here again we must disagree with the practice of spreading the award over three or four works. Either a creation has merits presumably far above others and is deserving of a signal honor, or else it is to be set aside along with the others of less sturdy composition. Withholding awards from time to time would be, indeed, a judicious practice.

Mario Puccini won the Bologna Prize for his novel, *La prigioniera* (*The Prison*; Milan). It is a story suggestive of morbidity rather than dripping with it; it has also its moments of amusement, yet never jarring the serious undertone of the composition. Amelio, the young hero of the novel, moves from a small community to a large city after having passed a competitive examination for the position of accountant in the municipal prison. Endowed with a certain amount of sensibility and rectitude he pirouettes about no little squalor and vulgarity without becoming actually contaminated. His gentility of character and his credulity draw him, innocently and unwittingly,

into awkward and pitiful situations. A chap such as this must suffer from maladjustment. Yet he has the making of the universal type. For, is he not representative of most intelligent youths, who learn very early the seriousness of living and the responsibility attached thereto? It is the type whose very intelligence is synonymous with ideals, a type that lends facile belief in the goodness that people have or should have. The young man creates in his own mind the sober morality which he subsequently attaches to people about him,—particularly women, ever suggestive of beauty and ethereal qualities. The novel ends with the youth's first disillusionment. What becomes of this delicate character after a series of delusions smite it? Had the author continued here, perhaps he would have developed a work of sturdy structure worthy of greater consideration. Then, again, this may be merely conjectural. However, as the novel stands, one can say that it constitutes a forceful episode, but not a complete finality.

Whatever has been said regarding the good or evil of literary prizes, none the less, it was through one of these competitions that a new writer was discovered in Marise Ferro. That Marise Ferro (indeed, a very young woman) has talent beyond the ordinary is attested by her first volume, *Disordine* (*Disorder*), launched by the publishers, Mondadori of Milan. Let us recall briefly that Miss Ferro submitted her manuscript for the Mondadori Academy Prize. It was awarded special mention, if not a prize,—a fact which, subsequently, influenced its publication. This novel has dimensions and structure. The first part especially gains the attention of the reader; the composition shows predispositions of artistry and experience. This might have been maintained throughout, had the *materia prima* been more evenly and judiciously distributed. Lack of a central, motivating theme seems to account for the failure. In point of fact, there are three themes focused on one type of problem: three women, a mother and two daughters, by mockery of fate (call it a pathological one, if you will), experience the same disaster,—all three, following the instincts of a delicate romantic nature bestow their love on men who come degrees short of understanding their feminine souls. All three recoil at the thought of living under conditions non-conformable to their idyllic aspirations. This is the point that the author, we believe, wanted to throw into relief. But sentiment in this regard is not clearly defined in the work. Neither is there much idyll, for, upon close analysis, we must say that the three women are more concerned with attitudes: in fact they are bitterly disappointed in the non-fulfillment of the dictates of their vanities. We question whether the author has succeeded in conveying to us the deep and tragic feelings experienced by feminine hearts in the bestowal of their affection upon arid soil. If the novel is somewhat autobiographical, which we think it is, there is this to be said, that it makes interesting reading. As a novel, however, it comes short of being comparable with other novels written by Italy's young authors,—such as, for example, Alberto Moravia's *Gli Indifferenti* (*The Indifferent*), which *Disordine* dimly echoes. Yet there are sufficient good points about this *coup d'essai* to justify Miss Ferro's continuing in the literary profession. And, by way of tribute, none greater could have been paid than that of Miss Ferro's distinguished Ligurian colleague and compatriot, Alessandro Varaldo:

"Read *Disordine* and follow its author in the future. You will not regret. . . . She has been born to narrate according to our beautiful tradition."

The next volume to be recorded, with its handsome jacket of vermilion (a Mondadori publication to be sure!), with its title *I gonfalon di Lucifero* (*The Devil's Banners*) seemed to announce a medieval tale. But not so, for a glance at the name of the author banished at once that expectation. Virgilio Brocchi, be it recalled, deals in contemporary society, with its problems of triangles and quadrangles. In this case, a double triangle is consonant with Brocchi's specialty. *I gonfalon di Lucifero* constitutes the second volume of the trilogy, of which *Il volo nuziale* (*A Nuptial Flight*), is the first volume already published, and the third, *La nuvola fulgente* (*The Splendid Cloud*), should be, by this time, off the press. Virgilio Vernazzi, in *The Devil's Banners*, is the unhappy protagonist, who after succumbing helplessly to a love affair which is not exactly within the compass of the social code, finds himself in a state of mental collapse. Losing fast his grip on life, apathetic, he is given to philosophical musing, which, in essence, is for him the intensification of the pain of living. An automaton, he makes his rounds without conviction, without goal. One can sympathize with all of the characters depicted in this trilogy: they are helplessly auto-propelled, destination unknown except toward the eternal. Hence the title to the trilogy: *A Longing for Eternity* (*L'ansia dell'eterno*). Two innocent children are the fruits of two illicit love affairs. Are we to place these love affairs beyond the morality of religion, of the social standard? Intellectually motivated, are they to receive, *ipso facto*, our special consideration? The author refrains from drawing decisive conclusions: there is neither judgment against, nor justification for Vernazzi's morality. The children remain; somehow they must expiate the sins of the father. That the novel was inspiringly developed is not to be denied. The Italian naval exploit (World War) at the Adriatic base of the Austrian fleet was narrated with excitement and suspense. The various transitional parts of the composition were so smoothly handled (Brocchi is something of a master in this regard) that dull moments are relegated to a minimum. All these merits could not be discounted, and yet the novel does not touch the sublime.

For a novel built along simple lines we had Delfino Cinelli's *Lucia* (Milan), a story of mountain folk that never leaves its place of birth unless it be for America. The gist of the story follows in this wise: Vincenzo, an *émigré*, revisits his native mountains in Italy. He returns to America, leaving behind Maria, whom he has wronged. Maria becomes subsequently the mother of a girl, Lucia. Vincenzo, who is not devoid of moral feeling, exhorts Maria to find a way of entering America outside the quota. By cross-inquiries and roundabout ways, an agent is found who works out an ingenious plan for Maria and her child to slip by the immigration authorities. Maria suffers no little ignominy at the hands of this cruel agent. She even pays the price of adultery, all for the sake of her infant girl. And, when she is within one step of liberty, this man, this libertine, as well as mental sadist, for fear, perhaps, that his prey had not suffered enough anguish, steps in and exposes Maria's plot. She is taken to Ellis Island and her infant, Lucia, de-

ported. (This point is not clear in the novel. It seems incredible that immigration authorities here would separate mother and child so ruthlessly. Could Mr. Cinelli be somewhat vaguely informed about immigration laws here? On the other hand, had the author followed a more human treatment of this point, he would have eliminated, *a priori*, the climactic moment of the story. But let us leave this speculation in the realms of fiction.) To go on with the last episode of the story, we find Maria locked up in a cell, a victim of insufferable agony. Of what good has she been to any one, to her child especially? The morbid thought of suffocating herself seizes her. She finds a way. Here, the author succeeds in injecting a heartache in the reader, for that abject body, dangling from the window-grating of the cell. Thus ends the story and the vicissitudes of that mountain maid who has innate grace and a heart of gold. One can trust Cinelli for a story, stirringly told, but is there enough in 173 pages of text to form a meaty, well-proportioned novel? It seems that a different architectonic structure should have accompanied the plot to render the whole a novel of full length and import. Technically speaking, as a novel, it must be rejected; as a novelette, if abridged, it may be a gem.

In *Pozzo Rubino* (Milan), Giuseppe Colucci drew his theme from a throbbing township in the Puglie. There pass in review before us, country, people, business people, and people of leisure. There is intrigue, rivalry, festivity, suffering. The author prefers, in the main, to describe objectively, faithfully, with no preoccupation in creating a synthetic atmosphere other than a plausible one moving in stride with the narration. Townships in Italy, which have retained their regional aspects for centuries, have made eventful strides of late toward cosmopolitanism. It would be useless to try to enumerate various influences that enhance this activity toward culture in general, but the radio, the improved railroad and autobus communications, are among important factors. We may say, incidentally, that Fascism, which is in essence, a politico-literary hegemony, with its taste for culture in ample ramifications, forms a central, motivating power from which the four corners of Italy draw. *Pozzo Rubino*, when final appraisal is cast, finds its reason of being, as well as its death, within a local geographic radius.

At this moment we should like to turn our attention to a collection of historical novels, *Romanzi Storici Italiani*, published jointly by Ravagnati of Milan, and Italian publishers of New York. In launching the series the editors and publishers have proposed to substitute good historical literature for current literature of adventure, which, on the whole, is in bad taste. Specifically the series has been launched also to oppose influences (realism, surrealism, etc.) emanating from beyond the Alps, and propagated by some young writers in the controversy between the national and the cosmopolitan sentiment, as represented in the "strapaese" and the "stracittà" movements of recent date. Likewise, the series, is meant to check, if not supplant to a considerable degree, the widely diffused "detective" and mystery stories. The volumes published were Valentino Piccoli's *Il giglio tra le fiamme* (*The Lily Among the Flames*), and Giuseppe Fanciulli's *La spada di Eleonora* (*Eleonor's Sword*). The first is a novel touching on historical and legendary episodes revolving about the powerful Donati

family of late XIIIth century Florence. More specifically, it deals with Piccarda dei Donati, the "lily" among so much violence, and her brother Messer Corso, of inflexible will. The author's chief sources of information and inspiration are drawn from Dino Compagni's *Cronaca Fiorentina*, and from Dante's *Divine Comedy*. The other novel, *La spada di Eleonora*, shifts to Sardinia of the XIVth century, when, under Pisan domination, the island was divided into four judiciary centres. It was in 1381 that Eleonora of Alborea succeeded to the judgeship of her district, after her brother, Hugo IV, was assassinated. The author gives this remarkable woman an excellent evaluation. She was, it may be recalled, a woman of moral strength, and of action, worthy of any patriot. She possessed above all a mind of consummate intelligence. Centuries upon centuries have failed to destroy the usefulness and practicability in Sardinia of her law code and handbook, *Carta de Logu*. Fanciulli has built up an historical novel of distinction. Yet its purpose of being palpably adventurous, according to the premise of the series, falls short of furnishing intense interest to the non-specialized reader. This same shortcoming must be registered against the first volume also.

SHORT STORY. Two qualities, sincerity and unpretentiousness not only single out Eurialo de Michelis' volume of short stories, *Bugie* (*Lies*; Vicenza), but advance it, perforce, to the fore of the list. The ten stories are couched in an analytical treatment, with themes in sober composition. Michelis, who gained some fame through his novel, *Adamo* (1931), and his volume of poetry, *Aver vent'anni* (1927), continues in these stories the introspective mood. This mood, to begin with, invites difficulty and danger. Fortunately, the author's keen sensibility and poetic nature keep the stories from falling into "slow-motion,"—or better, let us call it the general ennui which is wont to identify itself with the intricacies of subjective reasoning. We were afraid of this pitfall especially as the first story, *Sirio*, with outward signs of meandering, length, tediousness, gave omens of ill-fate to the whole volume. But this proved to be an insignificant hazard, for, further reading was accompanied with enjoyment, which was intensified to the point of ecstasy in *Ragazzo* (*The Boy*). This story, marked by delicate consideration and refinement, evolves a bit of drama between a son, rounding into manhood, and a father, helpless against the dangers that accompany the metamorphosis. It is that critical age when the father, by an attitude, by a misunderstood mood, may forever alienate the affections of the boy, and spoil a comradeship, so essential, when the mother is dead. The last story of the collection, *Pace* (*Peace*), attains a loftiness of sentiment that adds a touch of finality to the whole volume. In this tale, a man stricken with a fatal illness struggles to make his exit from this life without fuss or fastidiousness. The author makes him attain this end with grace, and, one might say, with poetry.

Giuseppe Fanciulli is, for Italian readers, the children's writer *par excellence*. *Le meglio ore se ne vanno* (*The Best Hours Vanish*; Milan-Rome), is a story of episodes in a boy's life: hours spent gazing at the window, a visit to the theatre, excursions, and other events of no import, but none the less dear to adolescence. "The best hours pass all too quickly"—such is the motto as well

as the title to the book. "Up children, up. The best hours are vanishing." This was a cry born of winter-time when the sunlit hours disappear all too soon beyond that bleak horizon." Of course, we witness the ephemeral ambitions of the boy,—a boy approaching the universal type, not merely the Italian boy. We see him overcome with religious emotion when, in cassock, he sees himself combating the evils of the world. Next arises the inevitable desire to become a doctor. Then, with the awakening of the esthetic sense, we see him seized with the ambition of being a great artist of the brush; and, of becoming, immediately thereafter, a great musician. All summed up, however, these sketches offer speculation in the mind of the reviewer as to how far the book can hold the attention of children? There is little composite story, and, indeed, too little action to captivate their fancy. The book, as it goes, with its abundant humor and moods, is for a highly reflective type of child, or better still, it is for the adult.

Periferia (Periphery; Milan), awarded the "Viareggio Prize," has the shortcoming of the one above, in that it is a book of sketches more suited to adult reading, though it was meant for children. We must say that the children taking part in it are all of the hyper-precocious type. There are those who plan the perfect murder; there are those with mental problems *à la* Pirandello; there are those, who saturated in Shakespeare, produce Hamlet. This book, as the previous one, is destined to be read extensively by mature people who need all their intelligence to understand the subtle humor; the book is destined for adults endowed with no little sensibility to appreciate the delicate touch of poetry that permeates the atmosphere. The book in many ways is one of the outstanding publications of the year.

An anthology entitled *Italian Short Stories*, edited with an introduction and bibliography by Decio Pettoello, was published in the *Everyman's Library Series* by E. P. Dutton & Co. (New York). The selection of stories spans the XIIIth to the XXth centuries.

THEATRE. The season has been vastly more interesting from the point of view of polemics, problems, discussions, rather than from the production *per se*, which has been scant. Continuing, therefore where we left off (see introductory paragraph to this article), let us present Premier Mussolini's views on the theatrical crisis in Italy. "Mussolini believes (Associated Press release of the Duce's speech, in May, before the Società degli Autori) that the Italian theatre is suffering from too many introspective, moody, and unrealistic dramatic offerings, and that the modern dramatist is forgetting how to write anything else. . . . The so-called crisis would end quickly if they would look beyond themselves to the great driving force of modern and ancient Italy. The theatre should agitate the great collective passions, should be inspired by a live and profound sense of humanity, should reproduce that which genuinely counts in the spirit and in the conquest of man." . . . Echoing this sentiment, the Fascist press declared the crisis in the Italian theatre world was directly due to public indigestion of pawky, moody, unreal, somnambulant theatrical meanderings which are about as appealing to the public appetite as the enigmatic and capricious doings of creatures of another world. Playwrights should hearken to Il

Duce's words, forget their inner subtleties and torments and look to the great human canvas before them for their subjects. "In our history," said one editorial writer, "in our existence, our character, there is a vast store of dramatic, vigorous, beautiful and multiform inspiration for plays and dramas." It is rather obvious that these invectives are hurled against the theatre of paradox and philosophical subtlety (Pirandello) which has dominated the theatre for a decade. And this leads us to the recording of the latest offering by the distinguished Sicilian dramatist, Luigi Pirandello.

The play he put out was *Trovarsi (To Find One's Self; Milan)*. Though Pirandello here approaches the problem from a slightly different angle, the play is still consonant with the paradox of self-identity. The author develops his thesis through the medium of an actress, who after having created many characters with definite identity, let us say, the "fixed universal character," ends up by not being able to establish her own identity. She is at the mercy of the infinite twists of destiny, as we all are (the Pirandello idea),—this variable factor in life that changes one's character not once a day, but a thousand times. From this point of view, what fixity could there be for a human being? If we accept this Pirandellian principle, and if we like the *drame à thèse* variety of theatre, then we can accept this play with enthusiasm. But in the usual conception of what drama should be for the theatre, then this play must definitely be relegated to the department of philosophy. It is poetry, it is thought, it is humor, it is all that,—and still it is not drama!

The "Edizioni Littoria," publishers of Pesaro have prepared a novel year book in the *Almanacco Internazionale del Cinema e del Teatro*, profusely illustrated, and handsomely gotten up. The plans call for translations in the principal languages of the world. It is to have a wide and extensive circulation. There are to be found essays, articles, biographies, bibliographies, on any one and anything of any importance in the theatrical and moving picture world.

POETRY. Apparently, poetry held its own during the season, if not in quantity, at least, in quality. Our poets, of late, have found it opportune to gather their scattered journal and periodical contributions into graceful volumes. These volumes, in the main, show judicious and careful preparations: wise rejections, retouchings, and sublimations of poems,—all of which factors contribute much to impart a tone of seriousness and good taste. Let it suffice to call attention to a few of these "series," among others, Giulio Preda's excellent "collections," launched several seasons back, *The "Mondadori,"* and the "Eroica." A decorous volume of poetry is to be found in Ulrico Arnaldi's *La gioia di pensare (Joy of Thinking; Milan-Rome)*, in which the author does not mince his idiom. Neither style nor technique hampers a sincerity of expression. In point of fact, the volume is marked by a certain absence of style. Thought was tantamount in the poet's mind. Still, poetry must call upon a certain delicacy of expression, if it is to rise to the emotional pitch. The author, as much as has been his purpose to disregard this essential, has not escaped a lurking danger: the danger of writing prose instead of poetry. However, this fault does not appear often; and when it does, there is always a redeeming feature,—that of

genuineness and sincerity. The following lines best illustrate these points:

Se mi volgo alle spalle
non vedo che ragioni di rimorso
per il tempo perduto,
non vedo che ragioni di rimpianto
per il bene non fatto, . . .
(*I consigli*)

Benign Francesco Chiesa, poet and man of letters who hails from Ticino, offered for the season poems of meditation and reverie in *La stellata sera* (*Starlit Night*; Milan). Francesco Chiesa's poems, in fact all his creations, are synonymous with sobriety; and, if they lack certain freshness and vigor, they possess by contrast autumnal reflection and coloring. F. T. Marinetti, better known to us as the first and foremost exponent of the futurist movement, composed poems on Egypt, his birthplace. *Il fascino dell'Egitto* (*The Fascination of Egypt*; Milan) presents a canvas of pictorial impressions couched in "reality and life."

LITERARY CRITICISM, PHILOSOPHY, VARIA. Among the studies on Dante, two easily head the list. The first, Giovanni Papini's *Dante Vivo* (*Dante Alive*; Florence), a study of the life and appraisal of various phases of his creation. The study touches rather the human side of the great Florentine. Papini purposely avoids the erudite and the superman aspect of the poet. We must classify the work as belonging rather to the current, popularized type of biography built on wit, irony, and entertainment. The other work (one which Mr. Papini has thumbed as reference to his own life of Dante), is along a more scholarly plan. It consists of the life of the poet and various other essays which Michele Barbi, the distinguished Dantist has gathered, from his contributions to learned journals and publications (*Enciclopedia italiana*, *Pègaso*, *Studi danteschi*, etc.). *Dante, vita, opere e fortuna* (Florence) is indeed a useful text embracing within two covers the various essays of so excellent a scholar as Michele Barbi. Umberto Moricca published the second volume on *Storia della letteratura latina-cristiana* (Turin) spanning the fifth and sixth centuries from Saint Augustine to Gregory the Great. Polemics and discussions on the dialogues of Plato are to be had in Luigi Stefanini's *Platone* (Padova). Giuseppe Rensi translated and annotated Frederick Jodl's excellent work on criticism of idealism, *Critica dell'idealismo* (Rome). Ettore Romagnoli translated into prose the Odes of Horace, *Odi* (Milan), in two volumes, with a preface and esthetic appreciation. The work is facile and penetrating, and up to date. Two works in English which we recommend are Ralph Roeder's *The Man of the Renaissance* (New York) and Luigi Pirandello's famous novel, *One, None and a Hundred Thousand* (New York) translated by Samuel Putnam. Lastly let us call attention to the indispensable handbooks on information on all authors, *Almanacco degli scrittori* (Naples) and Bompiani's *Almanacco letterario*. Both of these year books are profusely illustrated and handsomely prepared.

ITALIAN SOMALILAND, sô-mâ'lê-lând'. A colony of Italy on the east coast of Africa reaching from the Gulf of Aden to Kenya. Total area about 194,000 square miles; total population (1931), 1,010,815 of whom 1658 were Europeans. Mogadiscio, the capital and chief port had 29,562 inhabitants (675 Europeans) in 1931. Agriculture and cattle raising are the principal occupa-

tions of the people. In 1931, imports were valued at 128,789,227 lire (lira equals \$0.0526 at par); exports, 78,823,060 lire. Highways extended 6200 miles in 1931; railway, open to traffic, 71 miles. The total budget for 1932-33 was estimated to balance at 71,640,000 lire. For the year 1932 the military force numbered 3047 including a detachment of the flying corps. The colony is administered by a governor. Governor in 1933, Murice Rava.

ITALY. A constitutional monarchy of southern Europe, upon which a Fascist dictatorship was superimposed. Capital, Rome. Ruler in 1933, King Victor Emanuel III, who ascended the throne July 29, 1900.

AREA AND POPULATION. With an area of 119,713 square miles, Italy had an estimated population of 41,806,000 on Jan. 1, 1933, as compared with 41,176,671 at the census of Apr. 21, 1931. The number of Italians living abroad in 1932 was estimated at 9,600,000. In that year emigrants numbered 83,309 (165,864 in 1931) and the number of Italians returning to Italy was 73,213. The movement of population in 1932 was: Living births, 983,276 (1,027,638 in 1931); deaths (excluding still-births), 603,313 (606,489 in 1931); marriages, 283,408 (276,740 in 1931 and 303,214 in 1930). The birth rate per 1000 inhabitants in 1932 was 17.3 (17.4 in 1931) and the death rate 15.8 (16.3 in 1931). Populations of the chief cities at the census of 1931 were: Rome, 1,008,083; Milan, 992,036; Naples, 839,390; Genoa, 608,096; Turin, 597,260; Palermo, 389,699; Florence, 316,386; Venice, 260,247; Trieste, 249,574; Bologna, 246,280; Catania, 227,765. In the 1931 census, 99.6 per cent of the population were classified as Roman Catholics; there were 82,481 Protestants, 47,435 Jews, and 17,474 atheists.

EDUCATION. Primary education is free and compulsory for children under 14 years. In 1930-31, there were 9425 infant schools, with 745,933 pupils; 92,204 public elementary schools, with 4,382,185 pupils; and 1172 private elementary schools, with 167,999 pupils. For secondary education, there were 1223 government schools of various types, with 230,847 pupils, and 612 private schools, with 46,127 pupils. The 21 state and four free universities had 30,101 students and 4474 teachers in 1930-31.

PRODUCTION. Agriculture and its related industries is the main support of the population. Of the 76,637,877 acres in Italy, 17,887,438 acres were devoted to cereals in 1932, 2,255,351 acres to leguminous plants, 554,384 to industrial crops, 1,138,974 to vegetables, 1,954,974 to vines, 1,499,466 to olive trees, 12,306,125 to woods and forests, and 12,220,603 to forage and pasture. A 1930 agricultural census showed 6,088,088 males and 2,704,349 females whose main occupation was agriculture. For 1,207,850 males and 2,938,912 females farming was a secondary occupation. The chief crops in 1932, with 1931 figures in parentheses, were (in 1000 metric quintals of 220.46 pounds): Wheat, 75,151 (66,220); barley, 2512 (2408); oats, 6068 (5729); rye, 1626 (1656); corn, 28,080 (19,332); rice, 6566 (6622); beans, 5912 (4874); potatoes, 28,237 (19,646); sugar beets, 24,943 (24,732). The 1933 wheat crop attained the record figure of 81,003,200 metric quintals, a crop sufficient to meet Italy's total wheat requirements for the ensuing year. It compared with a 1909-14 average of 49,300,000 quintals and a 1920-25 average of 51,300,000 quintals. The grape yield in 1932 was

74,450,000 metric quintals; olives (1931), 13,599,000 metric quintals.

Italy has relatively small mineral resources, but hydro-electric power production has expanded rapidly, reducing the need for coal imports. Mineral and metallurgical output in 1932, with 1931 figures in parentheses, was (in metric tons): Pig iron, 460,538 (509,174); raw steel, 1,391,357 (1,452,694); rolled steel, 1,355,447 (1,637,480); coal, 252,000 (236,000); lignite, 372,000 (304,000); coke, 672,000 (740,000); petroleum, 27,000 (16,000); iron ore, 473,000 (575,000); pyrites, 515,000 (646,000); lead, 31,000 (24,900); zinc, smelter production, 16,600 (16,900); aluminum, smelter production, 13,300 (11,100); superphosphates of lime, 667,000 (792,000); sulphur, 374,000 (374,000); marine salt, 758,000 (518,000); copper, 437 (721); mercury, 858 (1189); antimony, 238 (267).

Cotton textiles constitute the leading manufacturing industry. There were 5,357,000 cotton-spinning spindles installed on Jan. 31, 1933, of which 75 per cent were active during 1932. Silk culture is an important industry, the output in 1931 totaling 5393 metric tons. The output of artificial silk (1932) was 32,071 metric tons (34,585 in 1931). Beet sugar production (1932-33) was about 3,231,000 metric quintals. The production of electric energy in 1932 was approximately 11,185,000,000 kilowatts (10,627,000,000 in 1931). The number of unemployed was 905,000 in June, 1932, rose to 1,229,000 in February, 1933, and then declined to 824,000 in July, 1933, after which it again increased. Most of the economic indices showed gradual improvement during 1933, as compared with 1932.

COMMERCE. The decline in Italian imports and exports, excluding gold bullion and specie, during the years 1930-32 is shown in the accompanying table.

ITALY. IMPORTS AND EXPORTS
[In 1,000 lire, worth \$0.0526 at par]

Year	Imports	Exports	Excess of imports
1930	17,346,624	12,119,181	5,227,443
1931	11,643,059	10,209,503	1,433,556
1932	8,257,437	6,811,226	1,446,211
1933*	7,882,000	5,939,000	1,443,000

* Preliminary.

Imports of gold bullion and specie in 1932 were valued at 90,242,000 lire (261,038,000 lire in 1931) and exports at 14,874,000 lire (17,521,000 lire in 1931). The chief import items, in order of value in 1932, with 1931 figures in parentheses, were (in 1,000,000 lire): Raw cotton, 738 (772); coal and coke, excluding Reparation deliveries, 686 (1085); wheat, 505 (836); machinery and parts, 365 (487); raw wool, 302 (318); cereals other than wheat, 335 (417); timber, 285 (397). Leading export items in 1932 and 1931, respectively, were (in millions of lire): Cotton manufactures, 512 (732); silk manufactures, 350 (544); citrus fruits, 329 (402); artificial silk, 318 (417); machinery and apparatus, 293 (312); thrown silk, 252 (597); cheese, 241 (332).

Germany took 11.4 per cent of all Italy's exports, by value, in 1932 (10.8 per cent in 1931); Great Britain, 10.8 per cent (11.8); United States, 9.4 per cent (13.5); Switzerland, 8.5 per cent (3.8); France, 7.6 per cent (5.9). The chief sources of Italian imports in 1932 were the United States, which supplied 13.5 per cent (11.4 in 1931); Germany, 13.4 per cent (13.2); Great

Britain, 8.9 per cent (9.4); France, 5.9 per cent (7.1); Argentina, 5.8 per cent (4.8).

In 1933 Italy's imports from the United States were valued at \$61,239,586 and exports to the United States were \$38,571,390, compared with \$49,135,439 and \$42,402,603, respectively, in 1932.

FINANCE. Closed accounts of the national budget for the fiscal year ended June 30, 1933, showed revenues of 17,965,900,000 lire and expenditures of 21,903,600,000 lire, leaving a deficit of 3,937,700,000 lire. This compared with a deficit of 4,274,000,000 lire in the 1931-32 budget and one of 503,000,000 lire in 1930-31. The budget for 1933-34 provided for receipts of 20,064,900,000 lire and expenditures of 23,152,800,000 lire, the anticipated deficit being 3,087,900,000 lire. The 1934-35 budget, as approved by the Council of Ministers Dec. 9, 1933, placed receipts at 17,662,000,000 lire and expenditures at 20,636,000,000 lire, the expected deficit being 2,974,000,000 lire. The budget for the Ministries of War, Navy, and Air was cut 260,000,000 lire.

The national debt as of Mar. 31, 1933, stood at 98,125,400,000 lire, compared with 93,178,100,000 lire on June 30, 1931. Of the 1933 total, 1,653,400,000 lire represented the foreign debt (exclusive of war debts) and 96,472,000,000 lire the domestic debt. Of the latter, 88,374,000,000 lire comprised the funded debt and 8,098,000,000 lire the floating debt.

COMMUNICATIONS. Railways at the beginning of 1932 extended 13,983 miles, of which 10,495 miles were state railways. Goods carried by the railways on trade account in 1932 aggregated 37,055,000 metric tons (44,192,000 in 1931). The state lines carried 88,000,000 passengers in 1931. National highways in 1931 extended 12,860 miles. Air lines, which extended 11,608 miles, carried 33,650 passengers in 1931. The mercantile marine on July 1, 1932, consisted of 1091 steam and motor ships of 3,331,304 gross tons and 232 sailing vessels of 56,268 gross tons. On July 1, 1933, 512,000 gross tons of steam and motor shipping were idle (847,000 tons on July 1, 1932). In August, 1933, the new Italian liner *Rex* established a new speed record for the Atlantic crossing, covering the 3188 miles from Gibraltar to New York in 4 days 13 hours 58 minutes, or an average speed of 28.92 knots. The previous speed record, set by the *Bremen* in June, 1933, was an average of 28.51 knots for the 3199 miles from New York to Cherbourg.

GOVERNMENT. All political parties except the Fascist party were declared illegal by the law of Nov. 25, 1926, and all opposition periodicals and newspapers were suppressed or transformed into Fascist organs. The law of Dec. 9, 1928, made the Fascist Grand Council the "supreme organ coordinating and uniting all the activities of the régime." The Grand Council designated the Deputies for the Lower Chamber and passed on all constitutional questions. Under the laws of Dec. 9, 1928 and Dec. 14, 1929, the Council consists of three classes of members: (1) The Quadrumvirs of the March on Rome, who hold office for life; (2) *Ex-officio* members, such as the Presidents of the Senate and Chambers of Deputies, Cabinet Ministers, President of the Italian Academy, the Secretary and two Vice-Secretaries of the Fascist party, the presidents of Fascist confederations and syndicates, etc.; and (3) extraordinary members, appointed for three years for special services to the nation and the Fascist party. The Fascist party in 1932 consisted of

1,007,231 adult male "Fasci," 608,669 youths in "Fasci" combat units, 50,996 Fascist students, and 145,210 female "Fasci."

The Senate at the beginning of 1933 had 374 members, including 9 princes of the royal house and 365 members nominated for life by the King for distinguished services. The Chamber of Deputies consisted of 400 members selected by the Fascist Grand Council from a list of some 1000 names proposed by the National Syndicate Confederations and other associations. The Council submitted the 400 candidates to the nation as a single electoral constituency. If the list was rejected new elections were to be held. In the election of Mar. 24, 1929, 98.3 per cent of the voters approved the national list. The term of Deputies was five years.

The Cabinet, as reconstituted July 20, 1932, was composed as follows: Prime Minister, Chief of the Government, and Minister of Interior, Foreign Affairs, and Corporations, Benito Mussolini; War, Gen. Pietro Gazzera; Navy, Admiral Giuseppe Sirianni; Air, Gen. Italo Balbo; Public Works, Araldo di Crollanza; National Education, Francesco Ercole; Agriculture and Forests, Giacomo Acerbo; Colonies, Gen. Emilio de Bono; Finance, Guido Jung; Justice, Pietro de Francisci; Communications, Admiral Costanzo Ciano. For changes in 1933, see *History*.

HISTORY

The year 1933 opened the second decade of the Fascist régime in Italy. There was, however, none of the increased conservatism and the decline of initiative anticipated after 10 years of intense revolutionary activity. On the contrary, Premier Mussolini launched the nation upon a bold and largely experimental modification of the capitalist economic system. At the same time, the Fascist party underwent a thorough house cleaning. There was another important reorganization of the Cabinet. Plans were formulated for the abolition of the Chamber of Deputies and for other changes in the structure of the Fascist government. No less sweeping were the changes in Italian foreign policies during the year. The feud with France was to a large extent liquidated. Mussolini, who had assumed leadership of the powers seeking revision of the Peace Treaties, emerged as the chief opponent of Hitler in the latter's effort to absorb Austria.

THE ECONOMIC PROGRAMME. At the beginning of 1933, the Fascist leaders announced that in the second decade of fascism they expected to rehabilitate and reorganize Italian industry as thoroughly as they had succeeded in doing with agriculture during the first decade. During the course of the world economic depression, the government had been forced increasingly to intervene to prevent the collapse of normally sound industrial enterprises. In 1933 Mussolini completely discarded *laissez-faire* capitalism. While retaining private capitalism, he carried through measures for regulating it within the corporative state.

The first of these measures (Royal Decree No. 590 of May 15, 1933) forbade the construction of new factories or the expansion of old ones without the consent of the Technical Board. The board used its far-reaching powers to divert capital from over-expanded or speculative industries into others in which surveys indicated a prospect of legitimate profit or whose development was

considered essential to the national welfare. This action was based on the concept that the nation existed as a result of productive effort and that all productive effort must therefore be "disciplined" for the benefit of the nation as a whole.

This principle was carried out in the reorganization in March of the Banca Commerciale Italiana, Italy's largest bank, which early in the depression had been rescued from insolvency by the state's intervention. In accordance with Mussolini's demand for concentration of responsibility, the board of directors was reduced from 25 to 11 and new managing directors were installed. On November 9, the government blazed a new path in Italian finance by inviting the public to subscribe to a state-guaranteed loan for the relief of private companies forced to the wall by the depression. The loans were to be administered by the Institute for Industrial Reconstruction, created the previous January. The state thereafter became a leading channel for public investments in business. One of the Institute's largest salvage operations involved the Societa Hydroelettrica Piemontese, one of the greatest Italian electric companies, which was on the verge of collapse. Through pre-depression speculation and manipulation the company had gained control over a variety of other industrial enterprises and forced its shares of an original nominal value of 125 lire each up to 250. With the depression the value of the shares fell to less than 20. The Institute refinanced the Societa Hydroelettrica, split it into three separate and independent companies, and reduced the nominal share value from 125 to 50 lire. The share reduction involved a theoretical loss of more than 500,000,000 lire to stockholders. The actual value of their shares was more than doubled and the moribund industry was placed on its feet. The 400,000,000 lire of state-guaranteed bonds issued to refinance one of the new companies bore 4 per cent interest and were payable in 20 years. The bondholders were to receive 80 per cent of any profit earned by the company in excess of 4 per cent on the share capital.

A further step in the Fascist new economic programme was Mussolini's announcement on November 13 that legislation affecting economic matters was to be entrusted to the National Council of Corporations under a new and powerful guild system. The following day, Il Duce defined the proposed corporations as "instruments which, under the ægis of the state, effect the integral, organic, and unitarian discipline of the productive forces with a view to the development of the wealth, political power, and welfare of the Italian people." His corporative system, still in process of evolution at the end of the year, appeared to stand midway between communism and economic liberalism. On December 30, Mussolini announced the appointment of 13 commissioners to assume control of the confederations and centralize them under the Premier.

The corporations, through which the State regulated industry, were to consist of guilds representing the employing and employed classes in the divisions of agriculture, trade, industry, and other fields. The functions of the corporations were defined in the *New York Times* of Dec. 10, 1933, as follows:

The corporation must be an organization to link up masters and men, to settle disputes, to lay down general rules for the firms and undertakings with which it is concerned. It must express its views within its special

sphere regarding all questions brought before it by the State departments, and promote, encourage, and help all enterprises aiming at the coordination and better organization of production as well as establishing labor exchanges and regulating apprenticeship. The corporations would have the faculty, through the National Council of Corporations, of promulgating laws. This is the most important point and the really revolutionary change.

The government supplemented these economic measures by others of a more conventional nature. In June the tariff was drastically increased—25 per cent on raw materials, 30 per cent on foodstuffs, 40 per cent on finished goods, and 20 per cent on goods formerly on the free list. An extensive new programme of public works was adopted, including a 10-year plan for the electrification of some 4000 miles of railway line. The government announced a continuance of its policy of guaranteeing export credits. The maximum for the fiscal year ending June 30, 1934, was fixed at about \$10,500,000. On November 21, Mussolini prohibited further imports of foreign wheat for domestic use, since the record-breaking 1933 domestic crop was sufficient for all requirements. He held tenaciously to the gold standard, despite the handicap which the depreciation of numerous other currencies placed upon Italian export industries. Rather than abandon gold, he chose to continue the deflationary policy followed throughout the depression. On December 11 plans were announced for a nation-wide and simultaneous reduction in salaries, wages, and the cost of living in order to stimulate exports. This was a repetition of the deflationary scheme adopted in October, 1930, when the government ordered a 10 to 12 per cent reduction in all salaries, wages, and charges for light, heat, food, and transport.

At the end of 1933, the trend of a number of economic indices was encouraging. Italian securities had steadily appreciated in value. Unemployment was relatively less prevalent than in most of the other great European nations. Depositors and deposits in savings banks showed a substantial increase. On the other hand, the budget remained considerably out of balance and there was an increasingly unfavorable trade balance.

POLITICAL REORGANIZATION. The decision to abolish the Chamber of Deputies and transfer its functions to the National Council of Corporations was the most far-reaching political change in 1933. This step was complementary to the decision to permanently abandon economic liberalism and to establish the corporative state in the economic as well as the political field. Premier Mussolini stated in a speech before the National Council of Corporations November 14 that the Chamber of Deputies would be elected as usual in the spring of 1934, but that the new chamber would be called upon to legislate itself out of existence. It was, he said, "an institution which we have found to be extraneous to our mentality and to our fashion as Fascists." Details of the new governmental set-up remained to be worked out.

The reorganization of the Cabinet commenced on July 20, when Mussolini assumed the portfolio of War, held by Gen. Pietro Gazzera for the preceding five years. On November 6, Admiral Siriani, Minister of Marine, and Air Marshal Balbo, Minister of Aeronautics, handed in their resignations. The two departments were to be merged with the Ministry of War into a single Ministry of National Defense, administered by Il Duce. Marshal Balbo was appointed Governor

of Libia, replacing Marshal Badoglio, who retained his post as chief of staff of the Italian Army. This reorganization left Mussolini in charge of 6 of the 13 Cabinet posts.

In January, the Fascist party directorate carried out one of the periodical "cleansings" of the party. More than 5000 local leaders were demoted and replaced by younger men. The membership rolls were opened to outsiders, some 200,000 out of the 600,000 applicants for membership being admitted. During the summer, the secretary general of the party issued new instructions to the provincial and regional leaders to observe and enforce stricter discipline. He forbade ostentation or display in dress or living and urged more intimate and sympathetic contact with the masses. On August 1, enrollment in the party from without ceased, admission thereafter being obtainable only through the Fascist youth organizations.

Dissension within the Fascist ranks was indicated by the resignation of Deputy Leandro Arpinati, Under-Secretary of State for Home Affairs, after a disagreement with the secretary general of the Fascist party. During the summer 24 students at the University of Rome were arrested on charges of entertaining anti-Fascist sympathies. The special military tribunal for the defense of the state on November 10 sentenced 13 men to a total of 74 years in prison for membership in an illegal political party. On October 17, the government announced that three men arrested in connection with the bombing of the basilica of St. Peter's on June 25 had confessed that the outrage was part of an anti-Fascist plot.

FOREIGN RELATIONS. The advent of the Hitler régime in Germany and the Reich's subsequent withdrawal from the Disarmament Conference and the League of Nations was the primary factor in the disintegration of the European peace structure during 1933. The accelerated drift toward war was signaled by feverish diplomatic activity in all the capitals of Europe. Italy occupied the key position in these diplomatic negotiations, due chiefly to Mussolini's foresightedness and careful groundwork during the preceding years. Assuming the rôle of "honest broker," Il Duce attempted to prevent the division of Europe into two hostile camps, while claiming concessions from his neighbors for his services.

Hitler's appointment as Chancellor in January was greeted with enthusiasm by the Italian press and he responded with expressions of friendship and sympathy for Italian Fascism. It appeared more than likely that Germany, Italy, Hungary, and Bulgaria, with the possible support of Austria, would form a closer bloc for revision of the territorial clauses of the peace treaties. The fears of the pro-treaty bloc—France, Poland, and the Little Entente—were increased by Mussolini's coolness toward the new French Ambassador in Rome, M. de Jouvenel. Also, there was alarm at Italy's attempt to force a customs union upon Albania (q.v.) and at the discovery that arms were being shipped from Italy to Austria and Hungary, in violation of the Versailles Treaty (see AUSTRIA under *History* for the so-called Hirttenberg Arms Affair). The Italian press violently denounced the Franco-British note of Feb. 10, 1933, demanding that Austria return the arms to Italy or destroy them.

These menacing developments led to the closer union of the Little Entente states in the convention of February 16 (see LITTLE ENTENTE) and

to their negotiations for a military agreement with Poland. At this juncture, Prime Minister MacDonald of Great Britain presented a new disarmament plan before the Geneva Disarmament Conference (March 16). Immediately thereafter he visited Rome to enlist Mussolini's support for his proposals.

THE FOUR-POWER PACT. Mussolini seized the opportunity to launch his project for an agreement among France, Great Britain, Germany, and Italy designed to safeguard the peace of Europe for 10 years. He secured the British Prime Minister's support of the project, in return for Italian support of the MacDonald Disarmament Plan (see **DISARMAMENT**). The Four-Power Pact originally provided: (1) for an effective policy of cooperation among the four powers with a view to the maintenance of peace, (2) for "revision of the peace treaties in accordance with the League of Nations Covenant in case a situation susceptible of leading to a conflict among states should arise," (3) that if the Disarmament Conference failed, Germany, Austria, Hungary, and Bulgaria would be permitted to achieve equality of armaments "by stages which will be fixed by successive understandings" among the four powers, (4) that the four powers would adopt, in so far as possible, a common line of conduct on all questions.

The British and German governments immediately accepted the Four-Power Pact in principle and the French Cabinet on March 29 accepted it subject to further study. However, the project was violently attacked by France's allies and by many of the smaller League powers. They considered it an attempt to revise the peace treaties without consulting the smaller European powers and to sabotage the League in order to permit the control of European affairs by the four great powers. Under pressure of its allies and of criticism within France, the French government secured extensive alterations in the pact before it was finally signed in Rome on June 7 by representatives of the four powers. In the new pact the signatories reiterated their support of the League Covenant, the Locarno treaties, and the Kellogg-Briand pact and stated that the rights of every state remained inviolable except with that state's consent. They undertook, within the framework of the League, to pursue a policy of effective cooperation for the maintenance of peace, and to consult regarding all economic questions of European interest. No provision was made for German rearmament in case the Disarmament Conference failed. The signatories merely agreed to make every effort to secure the Conference's success and to reexamine those questions which remained unsettled by the conference. Finally, they agreed to examine all proposals calculated to give effect not only to Article XIX of the Covenant, providing for treaty revision, but also to Articles X and XVI, which provided for preservation of the territorial integrity of all League members and for sanctions against an aggressor. Any territorial revision could be undertaken only with the consent of the states involved.

Franco-Italian Rapprochement. The months of negotiation previous to the signing of the pact were marked by a growing estrangement between Germany and Italy and a rapprochement between France and Italy. The Nazi attempt to incorporate Austria in the Third Reich aroused the opposition of Mussolini, who did not desire a

greater Germany on his own frontier, eager to reclaim the German-speaking population of the Italian Tirol. Meanwhile France and Italy found common ground in opposing the policy of non-gold countries at the World Economic Conference as well as in supporting Chancellor Dollfuss of Austria.

The Hitlerite propaganda in Austria led to the first test of the Four-Power Pact, and emphasized its obvious weaknesses. Italy, France, and Britain chose to register their opposition to Hitler's policy under the pact rather than through the medium of the League. Mussolini, by "private" and "friendly" admonitions, secured Hitler's promise that his propaganda in Austria would be discontinued. The British and French, however, were openly rebuked for their oral protest. The Nazi propaganda in Austria continued, despite Hitler's promise. Accordingly Mussolini set about isolating Germany through the establishment of a Danubian economic confederation. He conferred with Chancellor Dollfuss in Rome in August. Their joint communiqué of August 20 announced that independent Austria would follow "a policy of peace and collaboration with all neighbors, in a particular manner with Italy and Hungary, and also Germany as soon as possible."

Later Mussolini advanced a plan for Danubian economic collaboration which won the support of France and was accepted in principle by Germany. As outlined by the *New York Times* of November 14, the project called for (1) bilateral accords among the Danubian countries, (2) preferential treatment for agricultural products of these states and for the industrial products of Austria, (3) the waiving by outside nations of their most-favored-nation rights if they had favorable trade balances with the Danubian states, and concessions by the Danubian states of part of their markets to other nations if the latter granted them preferential duties. A trade pact embodying some of these principles was signed between Italy and Austria on August 31. Among other things, Italy agreed to concede a free zone in Trieste for Austrian overseas trade.

Meanwhile the Italo-German rift continued to widen. The Nazi economic programme, and particularly the high tariff placed on agricultural imports, aroused charges in Italy of discrimination against Italian products. The Italians resented also the new Nazi laws against foreign workmen, which resulted in the expulsion from Germany of thousands of Italian laborers. The Italian press displayed marked coolness toward Hitler's victory in the election of November 12. Mussolini, however, continued his efforts to find a basis of collaboration between France and Germany on the disarmament problem. He gave warning through the Italian press that Europe was faced with the alternatives of "conciliation or a grave and final rupture of the European accord."

Attack Upon the League. The conviction that the League of Nations no longer offered a basis for European collaboration was expressed by the Fascist Grand Council on December 5. It announced that Italy's further participation in the League depended upon "radical changes in that organization to be brought about within the shortest possible time, which changes must affect the League in its constitution, in its methods, and in its objectives." It was reported that Mussolini wished to divorce the League Covenant from the Treaty of Versailles, to bring the United States,

the Soviet Union, Germany, and Japan into the League, and to superimpose a "committee" of great powers on the League structure. At the end of 1933 there was no evidence that the Italian ultimatum would result in any changes in the League structure (see LEAGUE OF NATIONS).

Soviet-Italian Developments. Dissatisfied with the results of the trade agreement concluded Aug. 2, 1930, and implemented on Apr. 27, 1931, the Italian government on Jan. 18, 1933, denounced the treaty. A new trade agreement and a tariff convention were signed May 6, 1933. The trade agreement provided that the Italian government would continue to guarantee 75 per cent of the credits for Soviet purchases in Italy up to 200,000,000 lire annually. Under the customs accord, each country granted to the other general most-favored-nation treatment. Both treaties entered into force immediately through an exchange of notes. A protocol providing for the continuation of the trade agreement during 1934 was signed at Rome Dec. 5, 1933.

On Sept. 2, 1933, a Soviet-Italian treaty of friendship, non-aggression, and neutrality was signed in Rome. Its provisions were similar to those of a series of non-aggression pacts which the Soviet Union had concluded with European countries during 1933 and preceding years. The pact was ratified by the Italian Council of Ministers September 16.

OTHER EVENTS. Unsuccessful in his attempt to establish a united front among the European nations to withhold war debts to the United States government, Mussolini during 1933 followed the British example of making "token" payments on debt installments. Thus Italy paid \$1,000,000 on account of \$13,545,438 on June 15 and \$1,000,000 on account of \$2,133,906 on December 15. A friendly gesture toward the United States, which increased Fascist prestige in Italy as well, was the dramatic flight of Italo Balbo's armada of 24 seaplanes from Rome to the Century of Progress Exposition in Chicago and return.

IVORY COAST. See FRENCH WEST AFRICA.

JAMAICA, ja-ma'ka. A British West Indian colony south of Cuba, comprising the island of Jamaica (4450 sq. miles; population, 1931 estimate, 1,050,667) and the dependencies of Turks and Caicos Islands (166 sq. miles; pop. 5300), Cayman Islands (100 sq. miles; pop., 6182) and the Morant Cays and Pedro Cays. The principal towns are Kingston, the capital, 62,707 inhabitants in 1921; Spanish Town, 8694; Montego Bay, 6580; Port Antonio, 6272.

Agriculture is the chief industry of the people, the area under cultivation in 1931-32 totaled 951,546 acres. Livestock (1931-32); 109,859 cattle; 7830 sheep; 11,171 horses, mules, and asses. Chief exports (1932) were: Bananas, £1,869,111; sugar, £342,909; coffee, £224,057; pimento, £61,687; cacao, £48,102. In 1932, total imports amounted to £4,754,152; total exports, £3,271,357.

For the fiscal year 1932-33, revenue totaled £2,169,301; expenditure, £2,081,635; public debt, £5,725,099. A governor administers the colony assisted by an executive council and a legislative council of 5 *ex-officio*, 10 nominated, and 14 elected

members. Governor-in-Chief and Captain-General in 1933, Sir A. R. Slater.

HISTORY. On Aug. 16, 1933 Jamaica suffered from a tropical storm and flood in which some 30 people lost their lives and damage to property was estimated at \$500,000. The hurricane of Oct. 28, 1933 destroyed approximately 7,500,000 banana trees.

JAPAN. A Far Eastern empire, comprising (1) the four principal islands of Honshu (mainland), Kyushu, Shikoku, and Hokkaido, which with some 600 smaller islands and island groups form Japan proper; (2) Formosa (Taiwan); (3) Korea (Chosen); and (4) Karafuto (southern half of Sakhalin Island). In addition Japan controlled the leased territory of Kwantung and the South Manchuria Railway Zone in Manchuria and mandated territories in the North Pacific. During 1931-33, it established a protectorate over Manchuria and Jehol in North China. Capital, Tokyo; sovereign in 1933, Emperor Hirohito, who ascended the throne Dec. 25, 1926.

AREA AND POPULATION. The area of the Empire and the population in 1932 and 1930 are shown in the accompanying table.

JAPANESE EMPIRE: AREA AND POPULATION

Island	Area, sq. miles	Population, 1932 esti- mates	Population, 1930 census
Japan proper . . .	147,593	66,296,000	64,450,005
Korea	85,288	20,262,958*	21,058,305
Formosa	18,889	4,932,433	4,592,537
Karafuto	18,934	287,377*	295,196

* 1931 figures. ^b Including South Manchuria Railway Zone. ^c 1930 figure.

The estimated population of Japan proper on Oct. 1, 1932, included 32,321,000 males and 32,975,000 females. In Japan proper 55.8 per cent of the population was concentrated in towns and cities of 5000 and over. Japanese residing abroad in 1930 numbered 634,913, of whom 269,881 were in the Americas. The number of foreigners resident in Japan at the end of December, 1930, was 40,290, including 30,836 Chinese and 2026 Americans. The movement of population in 1931 was: Births, 2,102,784; deaths, 1,240,891; marriages, 496,574; divorces, 50,609. The birth rate per 1000 of population in 1931 was 32.17; death rate, 18.98. The census population of the chief cities in 1930 was: Tokyo, 2,070,529 (2,100,418 on Oct. 1, 1932); Osaka, 2,453,573; Nagoya, 907,404; Kobe, 787,616; Kyoto, 765,142; Yokohama, 620,306.

EDUCATION. Primary education is compulsory and less than 1 per cent of the adult population is illiterate. In 1930-31 there were 9,832,000 pupils attending elementary schools, 687,149 in secondary schools, and 57,328 in the five Imperial universities and 32 other institutions of university rank.

PRODUCTION. Agriculture supports directly about half the population of Japan proper. Rice is the chief crop and principal diet of the people. The area sown to rice was 7,952,000 acres in 1931 and the production in 1932-33 was estimated at 328,000,000 bushels, only 37,000,000 bushels less than the normal consumption. This bumper crop further depressed farm prices and added to the agricultural depression. The 1933 wheat crop of 39,879,700 bushels was 21.6 per cent higher than in 1932 and 25 per cent over the

average for the previous five years. The output of silk cocoons in 1932 was 740,252,000 pounds (802,533,000 in 1931); rice (rough), 535,020,000 bushels (489,174,000 in 1931); wheat, 31,336,000 bushels (30,892,000); barley, 77,744,000 bushels (76,522,000); oats, 7,653,000 bushels (11,081,000); tobacco, 138,230,000 pounds (155,757,000). The 1933 cocoon crop was 837,039,579 pounds. Fish ranks second to rice as an article of diet. The value of the chief marine raw products in 1931 was 147,806,000 yen, and that of manufactured fish products, 130,708,000 yen.

Copper is the only mineral found in quantities more than sufficient for domestic requirements. The mineral production in 1932, with 1931 figures in parentheses, was: Copper, 156,227,045 pounds (166,805,998); coal, 26,081,727 metric tons (27,987,271); sulphur, 77,085 metric tons (81,499); kerosene, 2,496,754 hectoliters, of 26.42 U. S. gallons (3,057,602); silver, 163,035,355 grammes (173,765,205); gold, 12,334,390 grammes (13,373,333). Metallurgical production, in metric tons, in 1932 and 1931, respectively, was: Pig iron, including Korea and Manchuria, 1,542,054 (1,405,869); steel ingots and blooms, in Japan proper, 2,360,492 (1,883,125); steel products, 1,945,373 (1,601,800).

Japanese industries manufacturing for export enjoyed a boom during the latter half of 1932 and the year 1933, due chiefly to the depreciation of the yen. In 1933, Japan took second place in rayon production, displacing Great Britain, and flooded the world markets with cheap cotton and wool textiles (see under *History*). Production of leading manufactured commodities in 1932 and 1931 are shown in the accompanying table, compiled by the U. S. Department of Commerce.

JAPAN. MANUFACTURED PRODUCTION

Manufactured products	1931	1932
Raw silk (semi-) . . 1,000 lbs.	96,585	Y424,756 ^b
Silk fabrics value . . 1,000 yen	Y475,540 ^b	(Y232,303)
Cotton yarn " 1,000 lbs.	1,028,800	1,123,600
Cotton textiles " . 1,000 sq. yds.	1,405,000	1,658,000
Rayon " 1,000 lbs.	46,764	64,400
Wool fabrics " . . . 1,000 yds.	201,439	139,029 ^b

Printing paper " . . 1,000 lbs.	1,224,861 ^b	1,198,031 ^b

^a Figures for cotton yarn and textiles are those of the Japan Cotton Spinners' Association, representing about 97 per cent of the total power looms in Japan. ^b Eleven months ending November.

Both cotton and yarn production in 1932 established a new record for the industry. Exports of cotton yarn in 1932 were 89,470 bales, or three times the 1931 exports; exports of cotton cloth, totaling 2,031,722,000 square yards, were about 44 per cent larger than in 1931. The number of unemployed industrial workers in May, 1933, was 429,295 (483,109 in May, 1932).

COMMERCE. Developments in Japan's foreign trade during the course of the world depression are shown in the accompanying table. The divergence in the yen and dollar values of imports and exports during this period is due to the abandonment of the gold standard by Japan on Dec. 13, 1931, and the yen's subsequent rapid depreciation. Conversions from yen to dollars were made at average exchange rates, which were \$0.4610 in 1929, \$0.4939 in 1930, \$0.4936 in 1931, \$0.2811 in 1932, and \$0.2554 in 1933.

Including Japan proper and Karafuto, Korea, Formosa, and the Mandated Territories, exports of the Japanese Empire in 1932 were valued at

1,457,296,000 yen or \$409,645,000, as compared with 1,179,211,000 yen (\$582,058,000) in 1931. Imports were valued at 1,524,529,000 yen (\$428,545,000), as against 1,319,406,000 yen (\$651,259,000) in 1931. In 1933 exports of Japan proper increased 32.4 per cent over 1932 and imports increased 33.8 per cent. The total unfavorable trade balance, including the trade of Korea and Formosa, amounted to 78,664,000 yen, an increase of 17 per cent over 1932.

JAPAN PROPER: VALUE OF FOREIGN TRADE

Year	Thousands of yen General imports	Thousands of yen General exports	Thousands of dollars General imports	Thousands of dollars General exports
1929	2,216,240	2,148,619	1,021,687	990,513
1930	1,546,051	1,469,852	763,595	725,960
1931	1,235,675	1,146,981	609,928	566,150
1932	1,431,461	1,409,992	402,384	396,849
1933	1,863,399	1,814,046	475,912	463,307

The quantity and dollar value of the leading imports in 1932 were: Raw cotton, 1,685,140,000 lbs. (\$125,765,000); crude and heavy oils, 708,309,100 gals. (\$27,051,000); wool, 204,224,000 lbs. (\$24,613,000); drugs, chemicals, medicine, and explosives, \$22,767,000; iron and its manufactures, 2,766,980,000 lbs. (\$18,293,000); machinery and parts, \$16,534,000. The quantity and dollar value of the chief export items were: Raw silk, 72,297,000 lbs. (\$107,483,000); cotton textiles, 2,021,722,000 sq. yds. (\$81,157,000); clothing and accessories, \$25,309,000; rayon textiles, \$17,018,000; silk textiles, \$14,136,000. Of Japan's 1932 imports, 58.6 per cent consisted of raw materials for industrial purposes; 15.3 per cent of articles fully manufactured; 14.1 per cent of semi-manufactures; and 11.2 per cent of food, drink, and tobacco. Of the exports, 49.7 per cent were fully manufactured articles, 34.5 per cent raw silk and other semi-manufactures, 7.4 per cent food, drink, and tobacco, and 3.6 per cent raw materials.

The United States was the principal factor in Japan's 1932 trade, taking 31.6 per cent of all her exports (37 per cent in 1931) and furnishing 35.6 per cent of all imports (27.7 in 1931). British India in 1932 took 13.7 per cent of the exports (9.6 in 1931); China, including Hong Kong, 11.3 per cent (16.8); Kwantung and Manchuria 9.6 per cent (5.7); and Netherland India, 7.1 per cent (5.5). Imports from Australia in 1932 were 9.4 per cent of the total (9.2 per cent in 1931); from British India, 8.2 per cent (10.8); Kwantung and Manchuria, 7.2 per cent (7.3); China, including Hong Kong, 7.2 per cent (11.8). The decline in trade with China in 1932 was due largely to the Chinese boycott. Especially noteworthy was the increase in exports to India, consisting mainly of cotton textiles, which continued during 1933 and served as a severe irritant to Anglo-Japanese relations. In 1932 Japan had an unfavorable balance of trade with the United States for the first time in history; it amounted to \$528,000, as compared with a favorable balance of \$156,634,000 in 1931 and \$172,745,000 in 1929.

FINANCE. Baron Seinosuke Goh, president of the Tokyo Chamber of Commerce and Industry, writing on Japan's economic and financial situation in the New York *Times* of Oct. 8, 1933, placed the deficit in the Japanese budget for the fiscal year ended Mar. 31, 1932, at 680,000,000 yen and the deficit in 1932-33 at 950,000,000 yen. These deficits he attributed to (1) military ex-

penditures in Manchuria and replenishment of armaments; (2) the abandonment of retrenchment after Japan went off gold; (3) relief expenditure; and (4) the fall in revenue. Between September, 1932, and June, 1933, the national government floated internal loans of 1,055,000,000 yen with which to balance the budget. Including these loans, the closed budget for 1932-33 showed revenue of 2,045,275,000 yen and expenditure of 1,950,140,000 yen, leaving a nominal surplus of 95,135,000 yen. Final accounts for 1931-32 showed revenue of 1,531,082,000 yen (including loans) and expenditure of 1,476,875,000 yen. The budget for 1933-34, as approved by the Diet, balanced at 2,309,414,000 yen. Of this sum, 1,381,330,000 yen was to be raised from usual revenue sources and 948,084,000 yen from the issue of public loans.

The national debt on Aug. 31, 1933, totaled 7,104,834,000 yen (6,333,241,000 yen on Aug. 31, 1932). Of the 1933 figure, 5,683,622,000 yen represented internal loans and 1,421,211,000 yen external loans.

COMMUNICATIONS. On Mar. 31, 1931, there were 13,363 miles of railway lines in Japan proper, of which 9002 miles were state and 4361 miles private railways. For the year ended Mar. 31, 1931, all lines carried 1,252,523,158 passengers and 87,036,976 tons of freight, with a gross income of 520,299,825 yen and an operating expenditure of 337,297,415 yen. Highways extended 585,449 miles. In March, 1931, there were 100,734 motor vehicles in the country, including 57,547 passenger cars. At the same time there were 32,210 miles of telegraph lines, 3,277,739 miles of telephone wire, and 913,157 telephone instruments. Statistics of civil air lines in 1930-31 show 30,018 flights, 15,459 hours flown, and 2,356,052 kilometers covered. The registered merchant marine of Japan proper on Jan. 1, 1931, consisted of 3351 steamers, of 3,907,908 tons, and 15,379 native sailing vessels of 896,321 tons. A total of 17,887 steamers, of 56,807,994 tons, and 43 sailing vessels, of 4824 tons, entered the ports during 1931. Idle Japanese shipping on July 1, 1933, totaled 147,000 tons, as compared with 226,000 tons on July 1, 1932.

ARMY AND NAVY. Service in the army or navy is compulsory for all Japanese men between the ages of 17 and 40. Conscripts are normally called to the colors at 20 and serve two years in the army and then five years and four months in the reserve. In 1932 the strength of the active army and of the first and second reserves was 17,343 officers and 259,304 of other ranks. The army air corps personnel numbered 6944. See MILITARY PROGRESS.

The accompanying table from the *Statesman's Year Book* for 1933 shows the classification of the Japanese Fleet for the three years ending with 1932. Also see NAVAL PROGRESS.

JAPANESE FLEET

^a Including 67 first-class and 34 second-class.

^b Including 27 first-class and 35 second-class.

GOVERNMENT. Executive power is vested in the Emperor who acts with the advice and aid of a ministry appointed by, and responsible to, himself; legislative power is in the Emperor and the Imperial Diet of two chambers, namely, the Upper House or House of Peers, composed of membership based on rank, wealth, and other qualifications, and numbering 404 members; and the Lower House or House of Representatives, elected for four years, unless sooner dissolved, and numbering 466 members. There is a Privy Council, consulted by the Emperor on important national problems. The Cabinet in office during 1933 was appointed May 26, 1932. It was a coalition group, composed of representatives of the Seiyukai and Minseito parties, the military, and non-party men. The members were: Prime Minister, Makoto Saito; Foreign Affairs, Count Yasuya Uchida (replaced Sept. 14, 1933, by Koki Hirota); Home Affairs, Tatsuo Yamamoto; Finance, Korekiyo Takahashi; War, Lieut.-Gen. Sadao Araki; Marine, Admiral Keisuke Okada; Justice, Matsukichi Koyama; Education, Ichiro Hatoyama; Agriculture and Forestry, Fumio Goto; Commerce and Industry, Kumakichi Nakajima; Communications, Hiroshi Minami; Railways, Chuzo Mitsuchi; Overseas Affairs, Ryutaro Nagai.

HISTORY

Continuing its defiance of the Powers and of the League of Nations, Japan in 1933 aggressively developed the policy of imperialistic expansion upon which it had embarked in September, 1931. Early in the year Japanese military forces conquered the Chinese province of Jehol and incorporated it in the puppet state of Manchoukuo (q.v.). Carrying their drive into China proper, they forced the Chinese to conclude a truce in which China tacitly accepted the independence of Manchoukuo and agreed to the establishment of a demilitarized area extending south from the Great Wall. The Japanese government countered efforts of the League of Nations to curb Japan's military expansion in North China by announcing its withdrawal from the League, effective in two years. It proceeded rapidly to consolidate its military and economic position in China and launched a vigorous diplomatic campaign to secure recognition by the Powers of Japan's paramountcy in the Far East. Meanwhile the military elements dominating the government prepared for a possible conflict by the rapid expansion of military and naval expenditures.

THE CONQUEST OF JEHOI. In a series of military operations carried out in sub-zero weather during the three weeks beginning Jan. 1, 1933, Japanese forces captured the strategically located town of Shanhaikwan south of the Great Wall, occupied adjacent passes in the Wall, and advanced some 50 miles westward into Jehol. The main offensive against Jehol was launched from these positions on February 21, three days after Chinese officials had ignored an ultimatum to evacuate the province.

Marshal Chang Hsiao-liang, the young Chinese war lord who had been ousted from Manchuria by the Japanese in 1931, sent about 100,000 troops from the Peiping area into Jehol to aid the forces of Gov. Tang Yu-lin in defending the province. Although outnumbering the Japanese and occupying strong positions in the mountains along the eastern border, they offered no effective resistance. RULERS IN THE NEAR EAST

Suichung, Chaoyang, Suitung, and Kailu, the invaders smashed through the Chinese lines, their airplanes and artillery inflicting heavy losses upon their poorly equipped opponents. The Japanese occupied Jehol City (Chengteh), capital of the province, without firing a shot on March 4, six days ahead of their own schedule. Governor Tang fled from the capital after commandeering 242 badly needed army trucks to remove his personal effects.

Continuing their rapid advance to the Great Wall, the Japanese met a more determined resistance from Marshal Chang's troops at the Kupei Pass but captured that strategic point on March 10. Marshal Chang resigned his command on the same day, turning over some 150,000 disorganized troops to Gen. Ho Ying-ching, Nanking's Minister of War. While the Japanese consolidated their position along the Great Wall, General Ho strove to organize a more effective resistance. Sporadic Chinese attacks along the Great Wall caused the Japanese to renew their offensive on April 1. One column pushed northward across the border of Chahar province and broke up a Chinese concentration in Dolon Nor (Tolunnoerh). Four others debouched into the triangle in North China formed by the Great Wall, the Lwan River and the sea. Meeting stiffer Chinese resistance than in Jehol, the Japanese required until April 22 to clear the Lwan triangle of Chinese troops. Meanwhile they had captured Chinwangtao, summer camp of the 15th U. S. Infantry stationed at Tientsin, and bombed Tungchow and Miyun, towns near Peiping with long established American mission stations. After hurriedly withdrawing from their advanced positions on April 25, the Japanese resumed their offensive on April 30, charging that truces concluded with individual Chinese generals had been violated. After heavy fighting in which the Chinese lost from 15,000 to 30,000 killed besides uncounted wounded, the Chinese concluded a truce at Tangku May 31 to avoid Japanese occupation of Peiping.

By the terms of the truce, a demilitarized area, policed by Chinese more or less friendly to Japan, was established between the Great Wall and a line drawn roughly between Peiping and Tientsin. The Japanese evacuation proceeded slowly until the conclusion of an agreement at Dairen July 7 among Chinese, Manchoukuo, and Japanese representatives for the administration of the demilitarized area. An effort of the Chinese general, Feng Yu-hsiang, to continue the struggle against Japan from the province of Chahar was frustrated by the refusal of other Chinese leaders to join him and by a Japanese expedition which drove him from Kalgan.

The Nanking government, in signing the Tangku truce, had tacitly accepted the loss of Manchuria and Jehol. Thereafter, by a combination of diplomatic and military pressure, the Japanese strove to secure Nanking's formal recognition of Manchoukuo. This policy, which promised to nullify the effect of the non-recognition policy toward Manchoukuo adopted by the United States and the League powers, met with considerable success. It was reported that only the Fukien revolt prevented the formal recognition of Manchoukuo by Gen. Chiang Kai-shek's régime before the end of 1933. See *CHINA under History*.

WITHDRAWAL FROM THE LEAGUE. The effort to restrain Japan in Manchuria through the peace machinery of the League of Nations reached a

climax early in 1933. The Lytton Report, adopted by the League in 1932, had condemned Japan's course (see *LEAGUE OF NATIONS and JAPAN in 1932 YEAR BOOK*). At the beginning of 1933, the League's Committee of Nineteen, attempting to mediate between Japan and China, submitted draft resolutions for the approval of the two powers which would have authorized a settlement favorable to China. They called for Japan's withdrawal from Manchuria, supervision of Chinese-Japanese negotiations by the Committee, and the enlargement of the Committee to include the United States and the Soviet Union. The Japanese representatives, led by Yosuke Matsuoka, rejected all efforts to reach a settlement on this basis. Accordingly the failure of the League's efforts to mediate the dispute was announced before the Assembly February 21. On February 24, the Assembly adopted the draft report of the Committee of Nineteen, thus passing unprecedented censure upon Japan. With Japan casting the sole vote in the negative, 42 of the 57 League members voted in the affirmative. Representatives of 13 small countries were absent and Siam abstained from voting.

The Committee's report reaffirmed Chinese sovereignty over Manchuria, approved the Chinese boycott, rejected Japan's plea of self-defense, condemned its failure to seek a pacific settlement of its dispute with China, denied the Japanese contention that Manchoukuo was established by the spontaneous action of the Chinese population, and denied Chinese responsibility for the armed conflict. It recommended withdrawal of Japan's troops to the South Manchuria Railway Zone, non-recognition of Manchoukuo, and the establishment in Manchuria of an autonomous régime under Chinese sovereignty in accordance with the suggestions made in the Lytton Report.

Following the Assembly's momentous action, Mr. Matsuoka arose, declared that Japan had now reached the limit of its "endeavors to cooperate with the League regarding the Sino-Japanese differences," and strode from the Assembly hall, followed by the other members of the Japanese delegation. The League continued its efforts toward an international settlement through the Advisory Committee, on which the United States was represented. On June 7 this committee adopted a report proposing a detailed plan for the application of the Stimson non-recognition doctrine to Manchoukuo.

In the meantime Japan had notified the Secretary-General of the League (March 27) of its intention to withdraw from that organization. The decision was based on the belief that "further coöperation" was rendered impossible by "the existence of an irreconcilable divergence of views, dividing Japan and the League on policies of peace, and especially as regards the fundamental principles to be followed in the establishment of a durable peace in the Far East." Japan's resignation, under the League Covenant, would become effective two years later (Mar. 27, 1935). In repudiating the good offices of the League, the Japanese contended that as China was not an organized state, the treaties and machinery governing relations between ordinary countries required modification in their application to China.

THE JAPANESE MANDATED ISLANDS. Japan's decision to quit the League raised the question whether it could legally retain the Caroline, Marshall, and Marianne (Ladrone) islands in the Pacific which were captured from Germany

during the World War and administered under a mandate from the League. In statements issued to the press and transmitted to Japanese envoys in foreign capitals, the Tokyo government gave notice that it would forcibly oppose any effort to dispossess it in these islands. It was asserted that the mandate was conferred on Japan by the Allied Supreme Council before the League existed, in accordance with the secret treaties regulating the disposition of the German colonies. Recalling that an Armenian mandate had been offered to the United States after that country refused to join the League, the government held that mandates might be held by other than League members.

As one of the victors in the World War, the United States government had always insisted upon its right to be consulted in connection with the disposition of mandates. The Japanese statement was accordingly studied with care by the American State Department, particularly in view of harbor improvements undertaken in some of the islands during 1932. Charges that these expenditures were not justified from a commercial standpoint were aired before the Mandates Commission of the League in 1932. Situated near Guam and between the Hawaiian and Philippine Islands, the harbors would have naval value as bases for seaplanes and submarines in the event of war between Japan and the United States.

JAPAN'S MONROE DOCTRINE. Japan's stand on the mandated islands was in line with the aggressive revival of the policy of Japanese domination of the Far East. The Japanese Monroe Doctrine, as it was called, was first formulated after the Russo-Japanese War, found wide application during and immediately after the World War, and was then superseded by a "friendship" policy toward China. As developed in 1931-33, the Japanese policy (1) forbade the acquisition of further territory in the Far East by European or American powers, (2) opposed independent action by other Powers in China without previous approval of the Tokyo government, (3) demanded the right to exploit Chinese natural resources, with or without Chinese consent, and (4) envisaged Japanese guardianship and control over China.

This doctrine was set forth in part in Foreign Minister Uchida's address on foreign policy before the House of Peers Jan. 20, 1933. Asserting that Japan was the "mainstay of tranquillity in this part of the world," Count Uchida indicated that Japan would not permit the intervention of the League or of separate powers in her controversy with China. He hinted that the high tariff policy of the Powers made the principle of the Open Door no longer applicable to China. On September 15 the New York *Times* revealed that Japanese envoys to the United States, Great Britain, France, Italy, Germany, and Switzerland had warned these governments against giving economic aid to China. Objection was raised to such aid on the ground that it strengthened China's power to oppose Manchoukuo and defy Japan. All the governments were reported to have replied that they would conduct their economic relations with China in any way they saw fit.

The extension of the Japanese Monroe Doctrine to distant parts of the Far East was indicated by the protest made to France by the Tokyo Foreign Office August 21 against the annexation of a group of small islands in the China Sea. The islands, whose sheltered waters might be used as seaplane or submarine bases, are situated some

2500 miles from the Japanese mainland between the Philippines and French Indo-China. While not claiming sovereignty over the islands, the Japanese contended that France had no right to annex the islands without previously consulting them.

Another move toward the maintenance of Japanese domination of the Far East was the announcement of the Foreign Office in May that at the 1935 naval conference, Japan would demand parity with the United States and Great Britain. This move led the United States government to launch a large programme of naval construction. Due to a voluntary naval building holiday, the American fleet was only about 65 per cent of its quota strength. The Japanese, whose navy was about 95 per cent of quota strength, responded to the American construction programme with a plan for additional construction which would bring their navy up to the maximum strength permitted under the Washington and London naval treaties. These treaties fixed the ratios for Great Britain, the United States, and Japan at 5-5-3, respectively, for battleships and at 10-10-7, respectively, for other categories. See **NAVAL PROGRESS.** The revival of Port Arthur as a Japanese naval base was announced during June.

The American naval programme, the continued presence of the entire American fleet in the Pacific, the \$50,000,000 United States wheat and cotton loan to China, and American plans to develop Chinese aviation aroused much hostility and suspicion in Japan. General Sadao Araki predicted a crisis in Japanese-American relations within two or three years. The military party in control of the government, by repeatedly calling attention to Japan's diplomatic isolation and America's alleged hostility, aroused the nation to a state of feverish nationalism and won public support for the largest defense programme in Japanese history. Military and naval appropriations for the 1934-35 fiscal year were 45 per cent higher than those for 1933-34.

The plan of Secretary of the Navy Swanson for a fleet capable of defending the Philippines was in open conflict with Japan's determination to maintain a navy capable of defeating either the United States or Great Britain in the Western Pacific. The Roosevelt Administration showed some disposition to moderate the anti-Japanese policy followed by the Hoover Administration. In his conversations with Viscount Ishii in Washington May 25, President Roosevelt was said to have recognized "Japan's special position in Manchuria." The move in the U. S. Congress for repeal of the Japanese exclusion act had a favorable effect in Japan. But up to the end of 1933, the basic policies of the United States and Japan with regard to the Japanese Monroe Doctrine appeared irreconcilable.

RELATIONS WITH OTHER POWERS. Japan's relations with the other Powers were equally unpromising. The Soviet Union maintained a conciliatory attitude toward Japan despite considerable provocation, but the conviction was expressed by Japanese military leaders that the Soviet policy would change when internal conditions in the Soviet Union improved and the development of heavy industry had made further progress. Japanese military operations in Manchuria had left Vladivostok and the Soviet Pacific provinces at Japan's mercy. The completion in 1933 of a new railway route into North Manchuria via Rashin on the Korean coast and of another strategic line

from Hailun northward to make possible the cutting of the Trans-Siberian railway near Blagoveshchensk further consolidated the Japanese military position. The Soviet Union protested sharply at attempts by Manchoukuo authorities to oust it from its half-share in the management of the Chinese Eastern Railway. Under Japanese pressure and the interruption of traffic on the line, the Russians finally entered into negotiations for the sale of their share of the railway to Manchoukuo. The procedure for the negotiations fixed by the Japanese Cabinet May 23 provided for Japanese guidance of the Manchoukuo negotiators and the purchase of mining and timber concessions held by Russia, "thus eliminating Soviet influence in North Manchuria." The negotiations opened in Tokyo June 26. Progress was hindered by repeated Russo-Japanese clashes over fishing rights along the Siberian coast and by the alleged maltreatment of Soviet officials on the Chinese Eastern. On October 8 the Soviet government published four alleged Japanese official documents containing detailed plans for seizing the railway and imprisoning the Soviet railway officials. Immediately before publication of the documents in Moscow, the Manchoukuo authorities arrested seven Soviet railway officials marked out for arrest in one of the documents.

Convinced that Japan was determined upon war, the Soviet government abandoned attempts to appease the Japanese by concessions and began to concentrate large military forces and supplies in eastern Siberia. The Soviet leaders, from Stalin down, gave frequent forceful warnings that Moscow had reached the limits of compromise in Manchuria. The Soviet position had been strengthened by a good harvest, the conclusion of non-aggression pacts with its western and southern neighbors, and recognition by the United States. In the face of Soviet determination, the Japanese attitude was modified. Foreign Minister Hirota on November 10 went part way toward meeting the Soviet proposal for a non-aggression treaty. He suggested the extension to the Siberian-Manchoukuo border of those provisions of the Portsmouth Treaty whereby Russia and Japan agreed to refrain from military measures along their mutual frontiers. At the end of 1933, however, both countries were actively preparing for war. Meanwhile the Soviet government on December 7 had withdrawn its representatives sent to Tokyo to negotiate the sale of the Soviet share in the Chinese Eastern railway. Manchoukuo authorities offered only \$14,000,000, whereas the lowest price acceptable to Moscow was \$103,000,000.

The long friendship between Great Britain and Japan appeared during 1933 to be drawing definitely to a close. The Japanese Monroe Doctrine was no more palatable to Great Britain, with its long established investments and trade in China and the Far East, than it was to the United States. The problem of defending British possessions in Malaya and the Orient was made difficult by Japan's naval expansion. Japanese merchant ships were actively competing with British ships all over the world for the carrying trade. The competition between British and Japan cotton goods and other manufactures developed into an open trade war following the depreciation of the yen in 1932. British manufactures were being gradually driven from large markets, not only in Manchuria and China, but also in Malaya, India, and Africa by cheap Japanese products made by poorly paid, efficient labor working long hours.

The British defended their position in their own colonial markets by imposing additional duties on Japanese imports into West Africa, India, and the Federated Malay States. Japanese cotton spinners proposed a boycott on Indian cotton. To protests at the British tariff increases and threats of retaliation from the Japanese Economic Federation, the Federation of British Industries and associated groups warned the Japanese that retaliation "might lead to a series of measures having disastrous results on the relations between the two countries in both economic and political fields." An Indo-Japanese conference was called in Simla, India, in September to negotiate a new Indian-Japanese commercial treaty. An agreement under which India would admit 400,000,000 yards of cotton piece goods annually from Japan, which in turn would purchase 1,500,000 bales of India raw cotton, was reported ready for signature at the end of December.

The Dutch also viewed developments in the Far East during 1933 with disquiet, particularly because the preceding years had witnessed a steady increase in Japan's interest in Netherland India. Japanese colonies and plantations had been established in New Guinea and other unsettled parts of Holland's rich colonial empire. In 1932 a party of Japanese scientists studied the possibilities of growing cotton in New Guinea and reported that suitable areas were available. Netherland India supplied over 75 per cent of the fuel oil used by the Japanese navy. New Japanese shipping lines to points in the islands had been established and adjacent ports in Japanese mandated territories developed. Dutch fears that the Japanese were casting covetous eyes on Netherland India were increased when in March, 1933, Yosuke Matsuoka, chief of the Japanese delegation which withdrew from the League of Nations, suggested to Dutch newspapermen at The Hague that Holland and Japan conclude a non-aggression treaty. He further urged that more Japanese colonists be sent to undeveloped parts of Dutch New Guinea. The non-aggression treaty was opposed at The Hague on the ground that it would make it more difficult for Holland to maintain its neutrality in the event of war between Japan and another power. Oil from Netherland India was declared vital to the prosecution of a war by Japan.

DOMESTIC POLITICS. Premier Saito's coalition cabinet, while it served to check the movement for a military dictatorship, came increasingly under the dominance of Gen. Sadao Araki, the Minister of War, and other military leaders. A few courageous criticisms of Japan's foreign policy in the Diet produced no apparent effect, while the resignation of Minister of Justice Koyama on April 6 and of Foreign Minister Uchida on September 14 permitted the appointment of new members more in sympathy with the War Minister's aggressive policies. Count Uchida was succeeded by Koki Hirota, former Ambassador to Moscow.

The strength of reactionary, Fascist, and anti-parliamentary sentiment in Japan was demonstrated during the court martials of the young army and navy officers charged with the assassination of Premier Ki Inukai on May 15, 1932. The defendants boldly admitted their guilt, offering as their sole defense their patriotic desire to eradicate political corruption, purify the state, improve the status of the oppressed farmers, and

register their protest at the inferior naval ratio allotted to Japan under the London Naval Treaty. Widespread sympathy with their point of view was indicated by the petitions for clemency addressed to the War and Naval Offices. The naval court martial received more than 1,000,000 such appeals, 1022 of which were signed in blood. Deferring to public sentiment the army court martial sentenced 11 army cadets to four years' imprisonment instead of the eight-year terms demanded by the prosecution. On November 9, the chief assassins and conspirators received 15-year sentences from the naval court martial, instead of the death sentences asked. The militarists skillfully utilized the evidence presented at the trials to discredit parliamentary government and justify a strong foreign policy.

Despite more open criticism of the extremist military policies on the part of Baron Wakatsuki, negotiator of the London Naval Treaty, and other civilians and business leaders, the militarists remained in practically complete control of the government. Regulations issued for the Naval General Staff, September 27, increased its independence of the Cabinet. Finance Minister Takahashi, the spokesman for business, Baron Wakatsuki, and others of liberal views agreed with the military that national preparedness should take precedence over "sound finance." The army and navy secured most of their demands in the budget finally approved by the Cabinet Dec. 2, 1933, for the fiscal year 1934-35. Total expenditures were fixed at 2,112,000,000 yen, of which the navy was to receive 487,000,000 yen and the army 449,000,000 yen. Loans of 780,000,000 yen were to be raised to balance the budget. The combined army and navy budget required 44 per cent of all expenditures.

CROWN PRINCE BORN. The long-awaited birth of a Crown Prince of Japan occurred on December 23, when the first son of Emperor Hirohito and Empress Nagako was born. On December 29 he was named Akihito, meaning "enlightened benevolence."

JAY, PETER AUGUSTUS. An American diplomat, died in Washington, D. C., Oct. 18, 1933. Born in Newport, R. I., Aug. 23, 1877, he was graduated from Harvard University in 1900 and two years later entered the diplomatic service as third secretary of the American embassy in Paris. In 1903 he was transferred to the American legation in Constantinople as second secretary and in 1906 when it was changed to an embassy was made its secretary. From 1907 to 1909 he was attached to the American embassy in Tokyo in the same capacity, and from 1909 to 1913 was diplomatic agent and consul general in Cairo. His next appointment as secretary of the Amer-

ican embassy in Rome was followed by that of counselor at that embassy during the World War.

In 1920 Mr. Jay was elevated to the ministerial rank, serving first as Minister to Salvador (1920-21) and then as Minister to Rumania (1921-25). During his residence in Bucharest he investigated the restrictions imposed upon American oil companies by the Rumanian government after 1920 so as to prevent foreign monopolization and in 1924 presented a strong note from the United States government demanding that discriminations against the rights of these companies under the new mining measure be stopped immediately. This measure had been designed to prohibit after a certain period foreign concessionaries from acquiring additional oil fields, unless 60 per cent of the capital were in Rumanian bonds.

Mr. Jay's last diplomatic post was that of Ambassador to Argentina during 1925-27. In 1928 he was appointed American member of the Permanent International Commission established under the Treaty of 1914 between the United States and Spain.

JEHOL. See JAPAN under *History*.

JERRAM, ADMIRAL SIR (THOMAS HENRY) MARTYN. A British naval officer, died at Alverstoke, Hampshire, England, Mar. 19, 1933. Born Sept. 6, 1858, he received his naval training aboard the *Britannica* and joined the navy in 1871. His first distinguished exploit was in 1884 when he commanded the torpedo boat *Childers* on her maiden trip to Melbourne, Australia. In the Vitu expedition of 1890 he commanded, as first lieutenant of the *Conquest*, a battalion of seamen, and the following year acted as vice-consul at Beira and Mapondas during the crisis which led to the fixing of the boundary of Portuguese East Africa. As a result of the successful training ideas which he introduced as commander of the *Northampton* and the *Curacao* during 1894-99 he received his captaincy, serving thereafter as commander of the *Boscawen*, *Albion*, *Russell*, and the Royal Naval Engineering College at Devonport. In 1908 Sir Martyn was promoted to the rank of rear admiral, commanding the third division of the Home Fleet. From 1910 to 1912 he was second in command of the Mediterranean Fleet, and on his promotion in 1913 to the rank of vice-admiral was made commander-in-chief of the China station.

Recalled to England in 1915 as commander of the second battle squadron of the Grand Fleet, Sir Martyn led this squadron, which consisted of the battleships *King George V*, *Ajax*, *Centurion*, *Erin*, *Orion*, *Monarch*, *Conqueror*, and *Thunderer*, into action at the battle of Jutland, May 31, 1916. He became an admiral in 1917 and after the war served as chairman of the Committee on Naval Pay and Allowances, more commonly known as the Jerram Committee. He was created a Companion of the Bath in 1911, a Knight Commander of the Bath in 1914, a Knight Commander of St. Michael and St. George in 1916, and a Knight of the Grand Cross of St. Michael and St. George in 1919. Among the other honors which he received were the Queen's Jubilee medal in 1897, the Coronation medal in 1911, and the War and Victory medals in 1918. The French government made him a commander of the Legion of Honor; the Japanese, a member of the Order of the Rising Sun; and the Chinese, a member of the Order of the Striped Tiger.

JEWS. GERMANY. As early as February, 1933, even before Adolf Hitler's seizure of

power had been confirmed by the election of March 5, there were plain indications that the National Socialists meant to inaugurate a reign of terror not only against Marxists but also against Jews. From the middle of February until the middle of March open atrocities were being committed throughout Germany and this despite Hitler's order to the Storm Troopers to end acts of political terror. On March 26, as a result of the strong representations made by Americans and following inquiries that had been addressed to American diplomatic and consular representatives in Germany, Secretary of State Hull issued a statement which, among other things, declared that "whereas there was for a short time considerable mistreatment of Jews, this phase may be considered virtually terminated. There was some picketing of Jewish merchandising stores and instances of professional discrimination. These manifestations were viewed with serious concern by the German government." Nevertheless the American and English press continued to be filled with alarming tales of terrorization, commercial discrimination and the like. Before March was over the National Socialists had set up concentration camps for political prisoners, and here there were lodged as many so-called enemies of the Third Reich as could be apprehended. Jews, of course, were included. All the time, however, the German government insisted that atrocities had ceased and in order to still the clamor of the foreign press and the growing massing of opinion abroad against Germany, it announced officially that German Jews would be used as hostages to force the cessation of these activities and that it would also take drastic legal counter measures against those Jews who it insisted were responsible for the spreading of atrocity stories outside the country. It was also announced that Nazi "Committees of Action" would be organized in retaliation for the purpose of boycotting Jewish business men in Germany and introducing restrictions on the continuance in practice of Jewish doctors and lawyers. On March 28 the Nazi party headquarters issued a manifesto establishing a national boycott of Jewish goods and Jews in the professions to commence on April 1. Also pressure was brought to bear on Jews resident in Germany to compel the circularization of their kinspeople abroad for the purpose of denying the continuance of atrocities. On March 31, declaring that foreign agitation had to a large extent ceased, the Nazi government ordered the boycott against Jewish merchants and Jewish professional people to be carried out for the single day, April 1. On this day all Jewish concerns with the exception of banks and newspapers were placed under guard by Storm Troopers who sought to keep out all persons endeavoring to enter the boycotted establishments, posted on windows signs announcing that "no German buys from Jews," scrawled the word "Jew" over windows and doors, and disfigured the name plates of doctors and lawyers. This boycott was merely the first step in a long series of official measures against all Jews resident in the Reich. Not only were the 564,379 persons in the total population of Germany on July 16, 1925 who were listed as Jews the victims of this terror but the measures were also applied against the so-called "non-Aryans" who included persons one of whose parents or grandparents was Jewish. It was estimated that in this non-Aryan group there were at least 2,000,000

Germans, making a total of 2,500,000 persons against whom the terror was being applied. The first act in the terror against Jews, or, as it became to be known, the "cold pogrom," was the Civil Service Law, promulgated on Apr. 7, 1933, whose purpose was the "restoration of the professional civil service." This law and the decrees which were promulgated by the Ministers of Finance and Interior in order to carry it out, applied to all officials of the Reich, the states and the municipalities, employees in the social services having the rights and duties of officials, judges, all court officials, notaries, teachers in schools, professors, officials of the old and new army, members of the police force of the states, elected municipal officials, office employees and workers in public enterprises. This law provided that all officials who were of non-Aryan descent were to be retired. Every official was required to fill out a detailed questionnaire giving information as to the names, professions, addresses, places and dates of birth, religion, and places and dates of death and marriage of himself, his wife and their respective parents and grandparents. The ruling was to apply equally to all Aryan officials who were married to non-Aryans; such persons, too, were to be dismissed. Exceptions were made in the cases of non-Aryan officials who held office on or before Aug. 1, 1914, or who fought in the World War at the front for the German Reich or its allies, or whose fathers or sons fell in the war. However, the civil service law provided that officials who lacked requisite education and training might be dismissed, and that an official might be transferred to a post lower in rank and salary. This meant simply that non-Aryan officials who had been permitted to continue their jobs because of war service and the like could be demoted in rank. Also the law either eliminated or reduced the pension allowances of retired officials who had fallen under the ban.

At the time of the boycott Jewish judges and lawyers had been excluded generally from the courts of the Reich. On April 7 a decree was promulgated barring all non-Aryan lawyers from practice up to Sept. 30, 1933 with the same exceptions as to persons who had seen service and the like that were laid down in the civil service law. On May 13, the Prussian Ministry of Justice presented the following statistics as relating to lawyers in that state. Before the application of the cold pogrom there had been 11,814 lawyers in Prussia, of whom 3515 were Jews. Of these, 1383 had been admitted to the bar before 1914 and 735 had been at the front during the war. Nine hundred and twenty-three Jews and 118 communists were dropped, leaving a total of 2158 Jewish lawyers with the right to practice in Prussia, the number in Berlin thus being allowed totaling 1203. However, unofficial measures were utilized which succeeded in contracting the number of Jewish lawyers still further. In July the Berlin Federation of Lawyers prohibited Aryan lawyers from becoming partners of or of sharing offices with Jewish lawyers as well as ordering the dissolution of such partnerships which had been entered into since September, 1930. At the same time the press was reporting that a boycott was being carried out against Jewish lawyers who theoretically were being permitted to continue their practice. The doctors fell under similar disabilities. The cold pogrom against Jewish physicians and dentists was particularly severe in view of the fact that from 80 per cent

to 90 per cent of German practitioners derived their income from membership in the panels of the health insurance offices. These health insurance offices were closed to Jews as a result of the operations of the Civil Service Law. It was reported that in the health insurance clinics of Berlin alone 1500 Jewish physicians had been expelled, and that at least 6000 Jewish physicians had been dropped from such offices throughout Prussia. As in the case of the lawyers, unofficial measures similarly contracted opportunities for practice among Jewish physicians. The medical association issued an order forbidding German and non-Aryan physicians to substitute for each other; German physicians were not permitted to send patients to non-Aryan physicians, call non-Aryans into consultation or form partnerships with them.

In the field of education, if anything, the measures aimed at the Jews were even more serious. The Civil Service Law applied directly to professors, instructors, and teachers. The exemptions allowed in the cases of persons who had seen service and the like in effect do not hold because non-Aryan teachers have been compelled to relinquish their posts by Nazi students who organized demonstrations and made the continuance of their activities impossible. Similar restrictions and coercion were applied toward Jewish students. On April 25 a law was promulgated "against the overcrowding of the German universities" and under this Jewish students are practically barred from institutions of higher learning. Under it only 1½ per cent of the students in a given institution of learning may be of non-Aryan descent. If the percentage of non-Aryans already in attendance is in excess of 5 per cent of the total, it must be lowered to that percentage by dismissal. The law does not apply to students whose fathers fought at the front during the war, or to children one of whose parents or both of whose grandparents were Aryan if the marriage took place before the promulgation of the law. Non-Aryans were not to be admitted to the inner student life of the universities, thus making the Jews in education definitely a race apart.

In order to further purify German life a law was promulgated ousting all Jewish actors, directors, producers, camera men, authors, and conductors from the German film industry and the theatre. Most non-Aryans were expelled from orchestras and no non-Aryan soloists were to appear in concerts or on the radio. Because journalism became a state monopoly, German-Jewish writers were, of course, dismissed from their positions and during the process of consolidation of the non-Aryan press, Jewish directors and editors of newspapers and publishing houses were removed from their jobs. The national press law, promulgated on October 5, provided that every working newspaper man was to be regarded as a servant of the state and was to be held morally and legally responsible for his professional activities. The Aryan provisions of the civil service law were incorporated into the code governing the press.

While in the fields of private enterprise the cold pogrom against Jews did not have the official sanction that underwrote its application against civil servants, professional men, students, and journalists, it was apparent that the Nazis meant to cleanse commerce and industry of their Jewish influences also. In small towns, particularly,

the boycott of April 1 continued to have its effect in its refusal to trade with Jewish merchants or utilize the services of Jewish technicians. In Berlin the municipal authorities have excluded Jewish merchants from the public market; in Munich the city fathers refused to allow Jewish merchants in the auction room of the city pawnshop or to participate in the October Fairs; in Hamburg non-Aryans were not to have public telephone booths in their shops. On Sept. 30, 1933, the government rescinded the permits of Jews to trade on the stock exchange. The article on GERMANY has pointed out that during the first weeks of the Nazi revolution many important German firms and trade associations were coordinated. During this process many Jewish industrialists were ousted from their positions and a purification of business went on under the direction of Nazi cells operating in the particular industries. In July, with the completion of the revolution, Hitler urged his followers to cease these activities. On July 7 he went so far as to say that "an industrial leader cannot be removed if he is a good business man merely because he is not yet a National Socialist, especially if the National Socialist being put in his place knows nothing about industry." Despite this on July 14 the Cabinet ordered that no government contracts were to be awarded to non-Aryan firms if bids submitted by Aryan firms were the same. While Jewish business men were not specifically banned from continuing their activities and certainly while no efforts were directed against large industrialists and financiers merely because there were Jews, the position of Jewish white collar and factory workers was less anomalous. Jewish labor was excluded from the government trade union organization called the German Labor Front. While trade unions were still accepting dues from Jewish members, it apparently became a rule not to represent Jews before the labor courts with the result that these non-Aryans were without legal protection. Apparently, too, the Nazi government meant definitely to exclude Jewish workers from the land. On October 2 the hereditary homestead law created a peasant aristocracy consisting only of Aryans. Under this law Aryans were defined as those whose families had been free of Jewish blood since 1800.

What the status of the Jews as citizens will be, has not yet been determined at the time of this writing. It is significant that the official pogrom of the National Socialist party declares that no Jew may be regarded as a member of the German race and that, therefore, those who were not citizens might live in Germany only as guests and must be governed by laws regulating foreigners. On July 14 the government decided to withdraw German citizenship at its discretion from "undesirables," naturalized between Nov. 9, 1918 and Jan. 20, 1933. Citizenship also was to be withdrawn from Germans who had fled abroad if they conducted anti-German propaganda or if they did not return to the Reich if so ordered. In conclusion we may quote the dispassionate remarks of Miss Mildred S. Wertheimer, writing in the "Foreign Policy Reports" of the Foreign Policy Association for Oct. 11, 1933:

... the position of all "non-Aryans" in the Reich is uncertain and precarious for, aside from the humanitarian and social aspects of the situation, their economic future appears black. The younger generation of "non-Aryans" will not only be unable to earn a livelihood, but the educational opportunities open to them even now are strictly limited.

It was apparent that the Nazis meant to eliminate root and branch the Jewish influence from national German life, certainly as far as the public services and the fields of law, medicine, education, and general culture were concerned. Jewish small business men and workers were finding it increasingly difficult to locate opportunities for employment; the cultivation of the land was closed to them; because of restrictions for opportunity in professional training the sphere of Jewish participation in the German national life was being increasingly contracted for future generations. Flight remained—into an uncertain world everywhere hedged around by immigration restriction decrees—for those who still had small financial means. For the Jews who were compelled to remain in Germany a return to the medieval ghetto seemed the only future prospect. Those still exempt were the great industrialists and financiers who apparently still maintained their important places in the heavy industries and in banking. But how long these would remain untouched one could not, as the year 1933 closed, foretell.

The problem of Jewish refugees became increasingly one that took on international aspects, not only because Jews were seeking to flee from Germany but also because German exchange restrictions which forbade the exportation of currency out of the country practically made such refugees who had succeeded in getting out of the country penniless and dependent upon public and private support. The matter came before the attention of the Assembly of the League of Nations when on September 29 the Dutch Foreign Minister, Jonkheer de Graeff, presented a resolution asking the League Council "to consider as soon as possible methods for bringing about a practical arrangement" for solving "the economic, financial, and social problems raised by refugees from Germany." The resolution was referred to a subcommittee of the Assembly's Economic Commission, which on October 6 adopted a resolution providing for the creation of a High Commissioner to be named by the League of Nations Council, and the establishment of an autonomous governing board, on which non-members of the League and private organizations might be represented and to which the High Commissioner was to report. On October 26, Mr. James G. McDonald, chairman of the Foreign Policy Association of New York, was named High Commissioner for German Refugees. The League's secretariat on the same day indicated that Secretary of State Hull accepted the League's invitation to the United States to be represented on the autonomous governing body to which Mr. McDonald was to be responsible. On October 7, Germany had warned the League that it would oppose the adoption of the refugee resolution if relief was administered by a League agency; and this as well as the quarrel over rearmament was an important factor in Germany's withdrawal from the League during the same month. (See LEAGUE OF NATIONS.)

On December 5, when the governing board met for its first meeting at Lausanne, Switzerland, Mr. McDonald reported that 60,000 persons had fled from Germany since Adolf Hitler's accession to power. Of these, 51,065, or 86 per cent, were Jews by religion, 16,520 of these persons being non-Germans or Polish citizens. Nearly one-half of the refugees, or 25,000, had sought havens in France, 6500 had fled to Palestine, 6000 to

Poland, 5000 each to Czechoslovakia and Holland, 3000 to England, 2500 each to Belgium and Switzerland, 1500 to Scandinavian countries, 8000 to Austria and 1500 to other countries, including the United States. According to Mr. McDonald, one-fifth of the Jewish refugees were temporarily dependent upon assistance. Thirty-four thousand Jews were seeking work. One-half of this number were industrialists, merchants, and mercantile employees, one-fifth were intellectuals, one-fifth were artisans and working men, and the remainder were without an occupation. Mr. McDonald reported to the governing board that direct relief should properly be delegated to private organizations but that the functions of the international body should consist of coordination and negotiations with governments. As regards the latter, these would largely involve refugee passports and property rights with particular emphasis on the lowering of immigration bars so that refugees might be absorbed into new countries. Viscount Cecil of Chelwood was elected president of the governing board. Its permanent headquarters were established at Lausanne. Speaking for the Jewish Agency Dr. Chaim Weizmann expressed the hope that most of the refugees might be absorbed in the United States, the British Dominions, particularly South Africa and Australia, in French dependencies and mandates, in some South American Republics, and in Palestine. Dr. Weizmann said further: "We are unfortunately driven to the melancholy conclusion that a wave of anti-Semitism is sweeping over the world" with the result that the "peculiar social and economic structure of Jewry—forced on us by centuries of history during which we were merely in the rôle of passive sufferers—cannot be maintained in the face of a changing world."

Immediately after the beginning of the cold pogrom, Jewish forces throughout the world were mobilized for the purpose of bringing aid to distressed German Jews. Early in the spring the Joint Distribution Committee of the United States, in cooperation with the Jewish Colonization Association and the Alliance Israelite Universelle, set up what was known as the Provisional Central Committee to handle immediate German emergency problems. A total of \$95,000 was expended during the first stages of the emergency. Almost immediately following, the Joint Distribution Committee, on the basis of consultation with the British Central Committee of Relief and important German-Jewish leaders, decided to allot an additional \$254,000 for the relief and rehabilitation of German Jews. These moneys have been expended for the following purposes; to the German Central Committee of Relief for the maintenance of Jewish institutions of philanthropy and welfare service; for the continuance of education of children denied schooling; for the promotion of vocational training of older people who have to be readjusted; for the training of German-Jewish young people for agriculture and manual work; for the aid of emigration activities. Outside Germany allotments were being given through national and local refugee aid committees for actual housing, food, and other reconstruction aid through free loan bureaus and employment exchanges. Also emigration aid societies outside of Germany were given grants; special allotments were given for child care in Palestine in behalf of German-Jewish children; to the Hebrew University of

Palestine to place a number of German-Jewish professors; to the Emergency Committee in Aid of Displaced German Scholars, and the like. Before the year had closed there had been allotted close to \$450,000 or more than one-half of the sum collected for these various activities. Under the direction of the Joint Distribution Committee there was organized in Germany the Central Committee known as the Zentral Ausschuss der Deutschen Juden fuer Hilfe und Aufbau for the purpose of carrying on the relief programme in Germany. There were also established consultation offices for Jewish physicians and Jewish lawyers, a special committee on education, and a chain of loan and credit unions to advance small sums to persons engaged in small businesses and the handicrafts. The Hebrew Sheltering and Immigrant Aid Society directly and through its affiliates was actively assisting more than 10,000 Jewish refugees in various countries. These refugees were either sent to new countries or repatriated.

More spectacular than these relief activities was the decision taken by the American League for the Defense of Jewish Rights in May to enforce an economic boycott of Germany. The American movement was led by Mr. Samuel Untermyer and it had the close coöperation of a similar committee of Jews in England headed by Lord Melchett, as well as comparable groups in France, Poland, and other countries. It was the purpose of these bodies not only to make the boycott of German goods nation wide among the 4,000,000 Jews in the United States but also to enlist all Americans sympathizing with the movement. A powerful impetus was given to the boycott when the American Federation of Labor at its convention in October voted to refuse to have any economic intercourse with Germany as long as the terror continued. The American League for the Defense of Jewish Rights, in order to make the boycott effective, organized district and trade committees and carried on its activities in an effort to affect all branches of German trade, industry and shipping. Mr. Untermyer at a general meeting of the League on May 15 declared: "This boycott can and must be made so effective that it will strike at the very foundations of the campaign that is being waged against the Jews in Germany."

Mr. Untermyer was particularly severe on those groups in the Jewish community who opposed the boycott and yet could offer no other programme of defense. He said in part:

If not a boycott, what are you going to do? Are you going to sit idly by while your brethren in Germany are humiliated, degraded, deprived of their rights of citizenship, and kicked out of their professions and employment and left to starve . . . ? That is not my conception of your right and duty. You are no more peace-loving than the rest of us. The only difference between us is that you lack the will and courage to fight. It is so easy to counsel "peace" when there is no peace. What you recommend is virtually a counsel of despair and surrender to the most inhuman forces that have dominated government in centuries.

Certainly as far as the utilization of German shipping and the purchase of German goods in retail establishments went, the boycott was beginning to show evidences of real strength. Large department stores were reporting a willingness to leave unreplaced depleted stocks of German goods and to seek substitutes of equal quality and value in other countries. It was impossible from an examination of German foreign trade statistics to ascertain how effective was the boy-

cott that was being waged not only by Jews in the United States, Great Britain, France, and Poland, but also by trade unionists throughout the world. The purchase of blocked marks at a sizable discount and the transmission of Jewish funds out of Germany by means of the sale of goods at reduced prices abroad were two factors which maintained the German foreign trade at its customary levels and, therefore, concealed the normal interference with trade and industry due to the boycott. There was no question, however, that if it was not crippling German life, it was at any rate having serious effects.

PALESTINE. The German-Jewish situation had its immediate reflex in Palestine where efforts to lower the immigration bars in favor of Jewish refugees met with hostility and mob violence on the part of Palestine Arabs. Jewish immigration into Palestine has continued to be fairly small. According to officials of the mandatory power in London, 6730 Jews were admitted into the country in 1932 and an additional 5500 were allowed to enter in the six months between April and September, 1933. For the six months' period following, 5500 more immigration certifications were issued, though a large number of these were used to cover persons who had originally entered Palestine on a temporary basis. Against this comparatively small group the Jewish Agency, whose activities have been previously described in these columns, sought permission for the entrance of 25,000 immigrants during 1933. This demand was based upon a revival of recovery in Palestine beginning with 1931, a process which has continued unabated while most of the world has remained in the depths of depression. Against these requests for relaxation of immigration restrictions Arab leaders have been inflexible, insisting that the absorptive capacity of the country was being exceeded to the economic detriment of the Arabs. The Arabs also have constantly been afraid of the fact that the Jews would obtain supremacy in Palestine. It is important to note that the riots of 1933 unlike those of 1929, as Mr. William Schack has pointed out, were directed against the government and not against the Jews. High Commissioner Wauchope forbade Arab demonstrations which led to bloodshed; with the ignoring of his orders fighting between Arabs and the police broke out. The support given to the High Commissioner by the Colonial Secretary of London indicated that the British government meant to maintain law and order at any cost. Nevertheless protests by Palestine Arabs as regards the relaxed immigration policy were beginning to have their effect and on November 14, it was announced that the Palestine government had decided to enforce stringent measures against illicit Jewish settlement in the country. The government announced its intention to prevent Jewish travelers from being smuggled across the frontiers, and to deport Jewish tourists who overstayed the allotted visa period, ordinarily three months. Also entry to the ports of Jaffa and Haifa for third and fourth class immigrants from America and Europe was to be restricted and visas to holders of Nansen and other temporary passports were to be refused. Admission of capitalist settlers were to be confined to those who could produce evidences of the possession of £1000 or more. Tourists were to show return tickets and deposit \$300 guarantees which were to be forfeited and tourists prosecuted on failure to leave when the visas expired. See PALESTINE.

RUMANIA. Anti-Semitic activities again broke out with increasing violence in this country during the year 1933. In large part atrocities directed against Jews centred about the Iron Guard, which was founded about three years ago and which made it its purpose to attack not only Jews but those political leaders of Rumania who sought to befriend the race. Apparently this organization had as its purpose, by allying itself with reactionary politicians, to create embarrassments for new governments by stirring up anti-Semitic riots. This weapon had been used with increasing frequency during the period of the depression and it had not become infrequent for the peasantry to turn upon the village shopkeepers and innkeepers, who usually were Jews, and destroy the records of indebtedness and wipe the financial slates clean. The leader of the Rumanian anti-Semites was Professor Cuza who had openly declared on many occasions that he was not prepared to rest until every one with a drop of Jewish blood in his veins had been deported to Palestine or central Africa. This anti-Semitic characteristic of a considerable part of the Rumanian population was aggravated with the importation of Facism along the lines of the German model; in other words, attacks on corrupt officials and the creation of a profound and jingo nationalistic spirit. Persons who became sympathetic with Rumanian Fascism in large part rallied around the banner of the Iron Guard, of which Monsieur Codreanu was the leader. The Iron Guard drew its support not only from the unemployed intelligentsia and university students but from hundreds of high army officers and officials. With the advent of the new Premier, Ion G. Duca, it became plain to the Iron Guard that a new liberal officialdom had come into power in the country and that anti-Semitism would be rigorously suppressed. However, Monsieur Duca, on December 29, was cold-bloodedly murdered, just after having had an audience with his monarch, by persons attached to the Iron Guard, and it was apparent that anti-Semitism would once more flourish in the country. It was generally conceded by informed observers that the lot of the Jews in Rumania was every whit as bad as it had been under Czarist Russia. See **RUMANIA**, under *History*.

JOHNE'S DISEASE. See **VETERINARY MEDICINE**.

JOHNS HOPKINS UNIVERSITY, THE. A nonsectarian institution of higher education for men and women in Baltimore, Md., founded in 1876. The enrollment for the autumn of 1933 was 3524, distributed as follows: School of higher studies of the faculty of philosophy, 426; school of higher studies in education, 52; school of engineering, 34 (graduate), 304 (undergraduate); college of arts and sciences, 470; school of business economics, 107; school of medicine, 283; school of hygiene and public health, 98; afternoon and evening courses, 1750. The enrollment in the 1933 summer session was 734. The faculty numbered 604. The productive funds amounted to \$30,798,453, and the income from all sources for 1932-33 was \$2,915,771. The main library contained 446,206 volumes. President, Joseph Sweetman Ames, Ph.D.

JOHNSTON, MAJ.-GEN. WILLIAM HARTSHORNE, U. S. A., RET. An American soldier, died in Nice, France, Feb. 20, 1933. He was born in Cincinnati, Ohio, Oct. 19, 1861. After studying law at Washington University he entered the 16th Infantry of the United States Army as a

2d lieutenant in 1883, having been first attached to the Lafayette Guard of St. Louis and to the Arizona Territorial Militia. He later attended the Infantry and Cavalry School at Fort Leavenworth (1887) and the Army War College in Washington (1907-08). He served in Cuba during the Spanish-American War and after acting as governor of the province of Isabela in the Philippines was commander of the Philippine Scouts in the campaign against the Pulajanes during 1905-07. On the entry of the United States into the World War General Johnston organized the 180th Infantry (Texas) Brigade, which served overseas with the 90th Division of the 1st Army Corps in the Toul sector. In August, 1918, he was assigned as major-general to the 91st Division, which he commanded during the St. Mihiel and Meuse-Argonne offenses in France and in the Ypres-Lys campaign in Belgium.

During 1920-21 General Johnston was chief of staff of the American Forces in Germany and during 1922-23 general liaison officer of the French Army of the Rhine. He also acted during the latter year as senior military adviser to the delegation representing the United States on the Commission of Jurists that was studying the rules of war at The Hague. On his return to the United States in 1923 he was stationed at Fort McPherson, Ga., as commander of the 4th Coast Artillery District. The following year he was made commander of the 3d Division of the United States Army with the rank of major-general. He retired in 1925. Among the honors conferred on him were the Distinguished Service Cross, the Distinguished Service Medal, the Victory Medal, and the French Croix de Guerre (with palm). He was also made a commander in the French Legion of Honor and in the Order of Leopold I of Belgium.

JOHORE. See **UNFEDERATED MALAY STATES**.

JOLY, J^oll, JOHN. An Irish physicist, died in Dublin, Dec. 8, 1933. Born in 1857, he was educated at Trinity College, University of Dublin, where he was demonstrator of civil engineering during 1882-91 and of experimental physics during 1893-97. In the latter year he became professor of geology and mineralogy. Professor Joly devised a diffusion photometer known by his name; made valuable experiments in the early '90s on color photography, perfecting a system of trichromatic ruled screens and a method which was used after 1897 for lantern slides; and determined with great accuracy the melting points of many minerals, inventing a meldometer for this purpose. He invented also in 1894 a steam calorimeter, which enabled the physicist to determine more accurately the specific heat of substances and the heat of gases of constant volume determinations, and in 1914 perfected with Dr. Walter Stevenson a method of obtaining uniform radiation in radium therapeutics. In the field of geology he devoted most of his research work to crust formation, estimating the age of the earth from the quantity of sodium in the ocean.

The Royal Society conferred on Professor Joly its medal in 1910 and the Royal Dublin Society its Boyle Medal in 1911. In 1908 he was president of the geological section of the British Association for the Advancement of Science and at the time of his death, president of the Royal Dublin Society. He visited the United States in 1918 as a member of the British Educational Mission. Besides many contributions to the *Proceedings* of the Royal Society and the Royal Dublin Society, he wrote

Radioactivity and Geology (1909); *The Birthtime of the World and Other Scientific Essays* (1915); *Reminiscences and Anticipations* (1920); *The Surface History of the Earth* (1925).

JONES, SIR ROBERT. A British surgeon, died at Llanfairfechan, Wales, Jan. 15, 1933. He was born at Rhyl, Wales, June 26, 1858, and attended the medical school of the University of Liverpool. Specializing in orthopedic surgery, he was consulting surgeon in a number of hospitals, chiefly in Liverpool, and was a member of the medical advisory board to the War Office and honorary adviser to the Ministry of Pensions. He also lectured on orthopedic surgery at the University of Liverpool. His most successful cures were of infantile paralysis and spinal tuberculosis, while during the World War, as chief of the division of orthopedic surgery of the British medical service corps, he was accredited with having reduced from 80 to 20 per cent the mortality from shell fractures.

In addition to presiding over the section of orthopedics of the International Congress of Surgeons, held in London in 1913, Sir Robert served as president of the British Orthopedic Association during 1921-25 and of the British Association of Surgeons in 1924. He was English editor of the *International Journal of Orthopedic Surgery* and an honorary member of medical societies in Great Britain, France, Germany, Italy, Sweden, and the United States. Knighted in 1917 for his war services, he received in 1919 the Distinguished Service Medal of the United States and in 1926 was created a baronet.

JUGOSLAVIA. See YUGOSLAVIA.

JULLIAN, CAMILLE. A French historian, died in Paris, Dec. 12, 1933. Born in Marseilles, Mar. 15, 1859, he attended the Superior Normal School and the French School in Rome and in 1891 became a member of the faculty of the University of Bordeaux. At Bordeaux he distinguished himself through his archaeological investigations of the region and through his writings on the Gallo-Roman era of French history. Among his early publications were: *Gallia* (1892); *Histoire de Bordeaux* (1895); *De la Littérature poétique des Gaulois* (1899); *Vereingétoria* (1901); *Recherches sur la religion gauloise* (1904); and *Histoire des institutions politiques de l'ancienne France* (1904).

Called to the College of France in 1905 as professor of history and national antiquities, Jullian continued his researches, publishing *Le Rhin gaulois* (1915); *La Tradition française* (1916); *De la Gaule à la France* (1922); and *Le Paris des Romains* (1925). His monumental work, however, was the eight-volume *Histoire de la Gaule*, on which he was engaged from 1884 to 1926 and which on its completion was crowned by the Academy. In addition to being an officer of the Legion of Honor he was elected in 1913 a member of the Academy of Inscriptions and Fine Arts and in 1924 a member of the French Academy.

JURIES. See LAW.

KAJANUS, KÄ-YÄ'NUS, ROBERT. A Finnish conductor and composer, died July 6, 1933, in Helsingfors, where he was born Dec. 2, 1856. His musical education was obtained at the Leipzig Conservatory, where he studied under Richter, Jadassohn, and Reinecke, and in Paris where he was a pupil of Svendsen, the Norwegian composer. In 1882 he founded in his native city an orchestral association (Orchester-föreningen)

which under his leadership developed into one of the finest bodies of instrumentalists in Europe. With it there were amalgamated in 1885 an orchestra school and in 1898 a symphony choir, its name being changed on the latter occasion to the Helsingfors Philharmonic Society and in 1914 to the Helsingfors Municipal Orchestra. Through the concert tours of this orchestra he was successful in awakening in other European musical centres an appreciation of the works of Sibelius, Merikanto, and other Finnish composers. He was also from 1897 to 1926 professor of music and musical director at the University of Helsingfors.

One of the first of the Finnish composers to strive consciously for distinct national expression, Kajanus drew his inspiration for such symphonic poems as *Kullervo* (1881) and *Aino* (1885) from the *Kalevala* and other national sagas. Among his other works were two *Finnish Rhapsodies*, founded upon Finnish folk melodies; *Memories of Summer*, an orchestral suite; a symphonietta, several cantatas, piano pieces, and songs.

KAMERUN. See CAMEROON.

KANSAS. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 1,880,999; in 1920 it was 1,769,257; in 1933, 1,900,000 (Federal estimate). Kansas City had (1930) 121,857 inhabitants; Wichita, 111,110; Topeka, the capital, 64,120.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Wheat ...	1933	6,774,000	57,504,000	\$40,245,000
	1932	10,365,000	120,178,000	34,848,000
Corn	1933	6,994,000	80,431,000	28,151,000
	1932	7,362,000	186,197,000	20,430,000
Hay (tame)	1933	1,142,000	1,608,000 *	9,809,000
	1932	1,077,000	1,800,000 *	8,460,000
Oats	1933	1,528,000	25,976,000	7,273,000
	1932	1,608,000	34,572,000	4,494,000
Grain sorghum ..	1933	1,607,000	16,070,000	5,946,000
	1932	1,328,000	17,264,000	3,108,000
Barley ...	1933	408,000	3,264,000	1,077,000
	1932	704,000	9,856,000	1,380,000
Potatoes ..	1933	42,000	2,436,000	2,626,000
	1932	44,000	5,148,000	1,493,000

* Tons.

MINERAL PRODUCTION. General compliance with the requirements of the State's public-service commission limiting production on a pro-rata basis resulted in a decline of the State's output of petroleum by 7 per cent, to 34,300,000 barrels, for 1932, from the total for 1931. The number of oil wells drilled in 1932 was 363, as against 229 drilled in 1931. A number of new pools were opened, notably the Johnson, Mabce, Chase, and Steckel pools. The development of resources in natural gas was discouraged by the lack of sufficient markets for this product. The Hugoton natural-gas field in southwestern Kansas, accounted the second greatest in the country, was estimated to have an open-flow rate of 690,000 M cu. ft. a day from 115 existing wells but was not being utilized to any substantial extent.

There were mined, in 1932, 6490 short tons of lead and 26,277 of zinc, which quantities combined attained the value of \$1,966,020. The production of lead was some 9 per cent below the 7082 short tons of 1931; that of zinc, about two-thirds of the 39,051 short tons of 1931.

The State's production of salt, fairly maintained, reached the quantity of 262,432 short

tons for 1932, as against 270,630 for 1931; in value, \$1,934,148 (1932) and \$1,977,097 (1931).

FINANCE. State expenditures in the year ended June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$16,512,832 (of which \$623,079 was for local education); for conducting public-service enterprises, \$207,933; for interest on debt, \$1,049,747; for permanent improvements, \$15,844,461; total, \$33,654,973 (of which \$18,787,843 was for highways, \$3,832,965 being for maintenance and \$14,954,378 for construction). Revenues were \$33,855,684. Of these, property and special taxes furnished 24.1 per cent; departmental earnings and compensation to the State for officers' services, 9.6; sale of licenses, 45.4 (in which was included a gasoline sale tax that produced \$8,036,841). Funded debt outstanding on June 30, 1932, totaled \$22,500,000. Net of sinking-fund assets, the debt was \$20,900,561. On an assessed valuation of \$3,673,577,370 the State levied in the year ad-valorem taxes of \$7,189,416.

EDUCATION. According to data issued by the National Education Association, the lack of revenue with which to meet the expense of holding school compelled some 700 of the rural schools in the State to remain unopened at the outset of the academic year 1933-34. No figures were available as to the presumption that other schools in great number either had previously been obliged to curtail their annual periods of instruction or were compelled to arrange for curtailment affecting the year 1933-34.

In contrast with rural schools, the city school systems were reported at the end of the year to be undertaking to provide the full usual duration of school terms, although in general they had reduced budgets by some 30 per cent.

CHARITIES AND CORRECTIONS. A Board of Administration, under the law as existing in 1933, maintained control of the State institutions for the care and custody of persons. This board subsisted, substantially, as created in 1905. It was composed of three ordinary members and of the Governor, serving *ex officio* as a fourth member. It had as its executive aid a business manager. Institutions under its control fell into three groups: the charitable, the correctional, and the educational of special types. Charitable institutions, with their respective populations of October, 1933, were: for the mentally afflicted, State hospitals at Topeka (1833), Osawatimie (1610), and Larned (967); State Hospital for Epileptics (789) at Parsons; State Training School (feeble-minded, 1025) at Winfield; State Sanatorium for Tuberculosis (257), Norton; State Orphans' Home (238), Atchison. Correctional institutions were: State Penitentiary (784), Lansing; State Industrial Reformatory (682, at ages from 16 to 25), Hutchinson; Women's Industrial Farm (106), Lansing; Boys' Industrial School (250, aged from 11 to 16), Topeka; Girls' Industrial School, Beloit (149 aged from 11 to 18). The educational institutions under the board were: School for the Blind (118), Kansas City; School for the Deaf (242), Olathe; Western University (Negroes, 130), and Kansas Vocational School (Negroes, 114) at Topeka.

LEGISLATION. The Legislature met in regular session on January 10. It took a major step in governmental organization, by creating a legislative council. This body was to be composed of 10

State Senators and 15 State Representatives, appointed respectively by the presiding officers of their houses, who were themselves to be *ex-officio* members. The council was to examine the operation of existing laws, recommend amendments thereto, prepare legislative programmes, and recommend changes in administrative set-up. It was to maintain its organization in recess. The minority party was expected to have representation on the council in proportion to its strength in the Legislative houses.

A State income tax was enacted, imposing 2 per cent on incomes of corporations and a graduated tax on individual incomes, from 1 per cent on \$2000 up to 4 per cent on the excess over \$7000. Authority was given receivers of insolvent State banks to pledge assets of such banks as security for the benefit of depositors only. A law for the licensing of automobiles and motor trucks provided license fees for passenger cars according to their age, the fee for the older cars being reduced; for trucks fees were graduated by carrying capacity, up to \$50 a ton or fraction for all over five tons. No action was taken by the session on the subjects of Federal and of State prohibition.

A special session in November passed an act to restore capital punishment but the act was vetoed as defectively framed.

POLITICAL AND OTHER EVENTS. In the course of the banking panic the State banks were limited to the payment of 5 per cent of the total of deposits by a State order of March 3. The State banks found to be in sound condition reopened after the general Federal closure, on March 12. The legislative council created by enactment, to draw up programmes of legislation for future sessions held its first meeting on May 15, receiving recommendations from Governor Landon.

Forged bonds to the total of \$1,000,000 or more were discovered in August to have been sold or placed as security for loans with institutions in the State, on the representation that they were bonds of Kansas municipalities. The fraud caused the closing of several banks holding such bonds among their resources. Though the leading part in the fraud was attributed to a private individual, at least one State official was accused of having part in it. The State, to prevent the entry of untaxed gasoline, imposed rules requiring clearance papers at a "port of entry" for all haulers of liquid fuels entering or leaving the State.

OFFICERS. The chief officers of the State serving in 1933 were: Governor, Alfred M. Landon; Lieutenant-Governor, Charles W. Thompson; Secretary of State, Frank J. Ryan; Auditor, Will J. French; Treasurer, Tom B. Boyd, and (later) W. M. Jardine; Attorney General, Roland Boynton; Superintendent of Public Instruction, W. T. Markham.

Judiciary. Supreme Court: Chief Justice, W. A. Johnston; Justices, R. A. Burch, John S. Dawson, W. W. Harvey, William E. Hutchison, William A. Smith, and Walter G. Thiele.

KANSAS, UNIVERSITY OF. A State institution of higher education in Lawrence, Kan., founded in 1864. The 1933 autumn enrollment was 3672, of which 2442 were men and 1230 women. The 1933 summer session had an enrollment of 1049, of whom 580 were men and 469 women. The full-time teaching staff, exclusive of deans, numbered 207. The endowment fund amounted to \$240,000, and the income for the year, including the bal-

ance carried over from 1932, was \$1,400,000. There were 256,000 volumes in the library. Chancellor, Ernest Hiram Lindley, LL.D., Ph.D.

KANSAS WESLEYAN UNIVERSITY. A coeducational institution under the auspices of the Methodist Episcopal Church, in Salina, Kan., founded in 1885. The enrollment for 1933 was 530. The faculty numbered 31. The endowment amounted to \$226,000, while the budget for the fiscal year ending July 31, 1933, amounted to \$93,000. President, L. B. Bowers, D.D.

KARAFUTO, ká-rá-fóo'tó. The portion of the island of Sakhalin lying south of 50° north latitude, belonging to Japan. Total area, 13,935 square miles; total population, 1930 census, 295,196. Fishing, mining, lumbering, and agriculture are the chief industries. Coal mined in 1932 amounted to 677,389 tons. Marine products in 1932 were valued at 12,715,419 yen of which the herring fisheries accounted for 8,020,723 yen. The budget for 1932-33 was estimated to balance at 23,092,628 yen (yen averaged \$0.2811 for 1932). Governor in 1933, S. Agata.

KELLAWAY, FREDERICK GEORGE. A British industrialist, died at Westerham Hill, Kent, England, Apr. 13, 1933. Born at Bishopston, Bristol, Dec. 3, 1879, he received his education in the common schools there, and after 1898 was engaged in editing a series of local newspapers at Lewisham. In 1910 he entered Parliament as Liberal member for Bedford Borough and continued to represent that constituency until 1922. He became Joint Parliamentary Secretary of the Ministry of Munitions in 1916, and Deputy Minister of Munitions two years later. In 1920 he was appointed Secretary to the Department of Overseas Trade, holding the double titles of Additional Under-Secretary of State for Foreign Affairs and Additional Parliamentary Secretary to the Board of Trade. He was also made Privy Councillor.

As Postmaster-General during 1921-22 Mr. Kellaway sponsored the amalgamation of the various broadcasting and wireless telephony interests in Great Britain, which led to the formation of the British Broadcasting Co.; from this he gained the sobriquet of the "Father of British broadcasting." After 1924 he was vice-chairman and managing director of Marconi's Wireless Telegraph Co., Ltd., and chairman and managing director of the Marconi International Marine Communication Co. He served also as deputy governor and joint managing director of Imperial Cables and Wireless, Ltd.; and joint managing director of Imperial and International Communications, Ltd., which were organized in 1929 so as to prevent the domination of either the radio-wireless or cable systems in linking the various parts of the British Empire.

KENDRICK, JOHN BENJAMIN. A United States Senator, died at Sheridan, Wyo., Nov. 3, 1933. Born in Cherokee Co., Texas, Sept. 6, 1857, he received a public school education and in 1879 migrated to northeastern Wyoming where he became a cattleman, operating one of the largest range ranches in the West. He was a member of

the Wyoming State Senate from 1910 to 1914. Elected governor of Wyoming in 1914 for a four-year term, he resigned in 1916 on his election to the United States Senate. As a Democrat, he supported President Wilson's war and League of Nations policies. He was also one of the staunchest advocates of a fair deal to returning veterans, being the author of a bill to enlarge the homestead rights of service men from 160 to 640 acres. His demand for Federal regulation of the meat-packing industry to prevent unfair, unjustly discriminatory, or deceptive practices resulted in the passage in 1921 of the Packers and Stockyards Act. In 1923 he was one of the principal agitators for investigation into the circumstances under which Teapot Dome and other oil reserve lands of the Navy Department had been leased to private interests.

During his two succeeding terms (1923-35) Senator Kendrick advocated such reclamation projects as the Casper-Alcova project, approved by the Public Works Administration previous to his death, and also the development of the great rivers of the United States for irrigation and power purposes, as is being carried out at Boulder Dam.

KENTUCKY. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 2,614,589; in 1933, by Federal estimate, 2,648,000. Louisville, the chief city, had (1930) 307,745 inhabitants; Frankfort, the capital, 11,626.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu	Value
Tobacco ...	1933	477,000	369,780,000 ^a	\$37,508,000
	1932	424,000	315,862,000 ^a	31,367,000
Corn	1933	2,727,000	68,175,000	31,360,000
	1932	2,811,000	67,464,000	18,215,000
Hay (tame)	1933	1,178,000	1,260,000 ^b	11,340,000
	1932	1,225,000	1,249,000 ^b	9,617,000
Potatoes ..	1933	62,000	4,092,000	4,092,000
	1932	60,000	4,620,000	2,541,000
Wheat	1933	270,000	3,240,000	2,722,000
	1932	270,000	2,835,000	1,304,000
Oats	1933	122,000	1,952,000	742,000
	1932	162,000	2,349,000	517,000
Sweet potatoes .	1933	20,000	1,840,000	1,196,000
	1932	25,000	2,200,000	1,078,000

^a Pounds. ^b Tons.

MINERAL PRODUCTION. The production of coal suffered less diminution in 1932 than in the majority of other producing States. It declined by 10.9 per cent, to the quantity of 35,010,000 net tons (1932) from 39,963,621 (1931). This relatively favorable showing was due chiefly to increased production in the western Kentuckian field, occasioned by interruptions of mining in Illinois and Ohio on account of labor troubles.

The production of petroleum decreased to 6,264,000 barrels (1932), which fell short of the quantity for 1931 by 3 per cent. There were drilled, in 1932, 279 oil wells, chiefly in the western part of the State.

Asphalt (native) was produced to the quantity of 314,039 short tons (1932), as against 470,491 for 1931; in value, \$1,415,427 (1932), and \$2,244,739 (1931).

FINANCE. State expenditures in the year ended June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$24,383,358 (of which \$6,305,100 was for local education); for conducting public-service enterprises, \$76,-

421; for interest on debt, \$809,634; for permanent improvements, \$12,817,249; total, \$38,086,662 (of which \$17,512,892 was for highways, \$6,141,011 being for maintenance and \$11,371,881 for construction). Revenues were \$36,930,115. Of these, property and special taxes furnished 32.2 per cent; departmental earnings and compensation to the State for officers' services, 6.9; sale of licenses, 41.8 (in which was included a gasoline sale tax that produced \$8,757,283). Funded debt outstanding on June 30, 1932, totaled, \$2,674,021. Net of sinking-fund assets, the debt was \$2,290,723. On an assessed valuation of \$2,786,717,683 the State levied in the year ad valorem taxes of \$9,786,143.

EDUCATION. In connection with work of public relief for the needy the State's Department of Education carried on efforts to provide schooling for adults.

The number of persons of school age in the State was reckoned, for June 30, 1932, as 710,380. There were enrolled in the public schools, in the academic year 1932-33, 607,517 pupils; the daily attendance averaged 457,576. Of the enrolled pupils, 517,431 were in common schools or elementary grades; in high schools or secondary grades, 90,086. The line of distinction between the elementary and secondary groups, however, was not uniform, as in some cases the sixth and seventh grades were counted with the secondary. The 17,863 teachers, principals, and supervisors earned in the year an aggregate of \$12,973,511 in salaries, which was some 12 per cent less than the total of such salaries for the year before. The current expenditures of the year 1932-33 for public-school education totaled \$16,638,193 and ran about \$2,400,000 below those for the year before.

CHARITIES AND CORRECTIONS. Under an act of 1932 the management of seven institutions of the State, for the care and custody of persons, was committed to a Department of Public Welfare, which became the successor of the previous Board of Charities and Corrections. The direction of this department was placed in the hands of a body of five salaried officers, functioning as a board, the chairman of the body acting as executive head of the department. The institutions under its control, with their respective average populations of the year ended June 30, 1933, were: Eastern State Hospital, Lexington, 1752; Central State Hospital, Lakeland, 2322; Western State Hospital, Hopkinsville, 1752; Feeble-Minded Institute, Frankfort, 588; Houses of Reform, Greendale, 519; State Reformatory, Frankfort, 2462; Penitentiary, Eddyville, 1204.

LEGISLATION. A special session of the Legislature dealt in September with matters of taxation. It failed to pass a law for a general tax on sales but made other tax provisions, including a levy of 50 cents a barrel on old whisky, the proceeds of which were to be applied to expenditures for relief of the needy, and a levy of \$1.25 a barrel on beer. There was created a State convention, of delegates to be chosen by popular election on November 7, to act for the State on the proposed repeal of the Eighteenth Amendment of the Federal constitution.

POLITICAL AND OTHER EVENTS. Governor Laffoon, in order to preserve banks in the State from depletion by withdrawals during the banking panic, declared on February 28 and thereafter a series of "days of thanksgiving," which under the law of the State he had power to appoint as legal holidays. By a proclamation of February 17

he requested financial institutions to observe a voluntary moratorium on foreclosures. The State Court of Appeals decided in June that without need of State legislation to that effect, it was lawful to transport and sell in the State beer of the alcoholic content of not more than 3.2 per cent sanctioned by Federal act.

A report of the State inspector and examiner submitted to Governor Laffoon on February 1 recommended that the Legislature in 1934 abolish Clay County, the scene of repeated mountain feuds, and divide its territory among counties adjacent. For the adornment of the Pioneer State Park at Harrodsburg, the Federal government commissioned Ulric Ellerhusen to execute a statuary group representative of the old Northwest.

The taxes on whisky and beer that had been imposed by the special session of the Legislature in September proved wholly inadequate to bring in the receipts required by the State to cover the \$250,000 a month of disbursements necessary for the support of the indigent part of the population. Governor Laffoon, whose demands for a State tax on the gross receipts from merchants' sales the Legislature had rejected, telegraphed on November 5 an appeal to President Roosevelt. He stated not only that the new taxation had failed to bring in the required money but that the State was unable to sell its tax-anticipation warrants in order to raise the monthly sum, that the State director of relief had resigned, and that the State had no means to furnish aid for 92,000 cases of destitution on its rolls after November 15. It was announced on November 7 that President Roosevelt had authorized Federal relief administrator Hopkins, in accordance with the Governor's plea, to take over the entire work of caring for the destitute in the State; the Administration thus altered the position it had taken in refusing a similar plea from the Governor of Ohio.

At the election of November 7 there were chosen a body of delegates, favorable to repeal, to meet in State convention on November 27 and vote the State's adoption of the repeal of the Eighteenth Amendment to the Federal Constitution, through the superseding amendment proposed by Congress. The popular vote of November 7 also, apparently, by a slight margin adopted an amendment to the State constitution, in order to empower the Legislature to abandon the State's direct tax on real property. In a proclamation of December 16, Governor Laffoon called upon the sellers of Burley tobacco to stop sales until a Federal arrangement favorable to this important product of the State should be made.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Ruby Laffoon; Lieutenant-Governor, A. B. Chandler; Secretary of State, Sara W. Mahan; Treasurer, Elam Hudleston; Auditor, J. Dan Talbott; Superintendent of Public Instruction, James H. Richmond; Attorney General, Bailey P. Wootton; Commissioner of Agriculture, Labor and Statistics, Eugene Flowers.

Judiciary. Court of Appeals: Chief Justice, William H. Reese; Associate Justices, Richard Priest Deitzman, William Rogers Clay, Gus Thomas, J. Basil Richardson, Wesley Vick Perry, Alex L. Ratliff.

KENTUCKY, UNIVERSITY OF. A coeducational State institution of higher learning in Lexing-

ton, Ky., founded in 1866. The enrollment in the autumn of 1933 was 2477. There were 1347 students registered in the 1933 summer session. The faculty numbered 258. The productive funds amounted to \$184,075, and the income for the year was \$1,084,733.50. The library contained 140,000 volumes. President, Frank LeRond McVey, Ph.D., LL.D.

KENYA, kě-nyā' or kěn-yā. A British colony and protectorate in East Equatorial Africa. Area, 224,960 square miles; total population, 3,076,343 (estimate) including 17,249 Europeans. Nairobi, the capital, had 85,722 inhabitants of whom 7164 were Europeans; Mombasa had 54,894 including 1023 Europeans.

The colony is mainly agricultural and pastoral. Coffee, maize, sisal, wheat, tea, and wattle are extensively raised in the higher altitudes; maize, sisal, coconuts, sugar, and cotton are grown in the lower altitudes. Kenya and Uganda constitute one administrative unit for customs purposes; the principal imports were cotton piece goods, textiles, automobiles, tobacco, and gasoline. In 1932, imports (Kenya and Uganda) totaled £4,662,859; exports (Kenya only), £2,280,982. Revenue amounted to £3,010,214 and expenditure to £3,119,713 for the year 1932.

The protectorate consists of the territories on the coast leased from the Sultan of Zanzibar since 1895. Kenya is governed by a governor who is aided by executive and legislative councils. The country is divided into nine provinces. Governor and Commander-in-Chief in 1933, Sir J. A. Byrne.

KENYON, WILLIAM SQUIRE. An American jurist, died at Sebasco, near Bath, Maine, Sept. 9, 1933. He was born at Elyria, Ohio, June 10, 1869, and after attending Iowa (later Grinnell) College was graduated in law from the State University of Iowa. Admitted to the Iowa bar in 1890, he began his practice at Fort Dodge, serving during 1892-96 as prosecuting attorney for Webster County and during 1900-02 as district judge for the Eleventh Judicial District of Iowa. In 1904 he was appointed district attorney for the Illinois Central Railroad Co. and in 1907 its general attorney. During 1910-11 he acted as assistant to George W. Wickersham, United States Attorney-General, playing a prominent part in various trust prosecutions, including the beef trust of Chicago meat packers, the grocery trust of the Southern Wholesale Grocers' Association and others, and the butter and egg trust of the Chicago Butter and Egg Board.

Elected to the United States Senate by the Iowa Legislature in 1911 to fill the unexpired term of Jonathan P. Dolliver, Judge Kenyon was reelected by popular vote for the terms 1913-19 and 1919-25. He attracted national attention by his advocacy of progressive legislation regarding child labor, lobbying, and government ownership of railroads and by his leadership of the so-called "Farm Bloc." In 1922 he resigned from the Senate to accept President Harding's appointment as judge of the United States Circuit Court of Appeals, Eighth Judicial District. His most famous decision was that of Sept. 28, 1926, whereby there was cancelled as fraudulent the lease by Albert B. Fall, former Secretary of the Interior, of the Teapot Dome oil reserve in Wyoming to the Sinclair oil interests for operation by the Mammoth Oil Co. In 1929 President Hoover appointed Judge Kenyon as member of the National Commission on Law Observance and Enforcement, headed by George W. Wickersham. In

the conclusions reached by the commission he was one of five members who urged a further trial of the Eighteenth Amendment and of the prevailing liquor regulations.

KENYON COLLEGE. A college of arts and sciences for men in Gambier, Ohio, established in 1824 by the Protestant Episcopal Church and associated with it. The enrollment for the autumn term of 1933 was 202. The faculty numbered 25 members. The endowment funds amounted to \$2,100,000, and the income for the year was \$128,670. The value of buildings and equipment was \$1,592,500. The library contained 84,000 volumes. President, William F. Pierce, L.H.D., D.D., LL.D.

KIDNAPING. See CRIME.

KINDERGARTEN ASSOCIATION. See NATIONAL KINDERGARTEN ASSOCIATION.

KING, BRIG.-GEN. CHARLES, U. S. A., RET. An American soldier and author, died in Milwaukee, Wis., Mar. 17, 1933. He was born at Albany, N. Y., Oct. 12, 1844, and was graduated from the United States Military Academy in 1866. After serving in the 1st artillery and the 5th cavalry, he was retired as captain in 1879 on account of wounds received in the Apache campaign of 1874 and other Indian skirmishes. Assigned as inspector and instructor to the Wisconsin National Guard in 1882, he was commissioned colonel in 1890 and adjutant-general in 1895. During the Spanish-American War he served as brigadier-general of a brigade of Wisconsin volunteers which participated, under General Lawton, in suppressing the Philippine insurrection. In 1904 General King again retired from the Army, but on the entry of the United States into the World War resumed his connection, helping to train units of the Wisconsin National Guard that formed part of the 32d Division. For several years he served as superintendent of the Michigan Military Academy and instructor in military tactics at St. John's Military Academy, Delafield, Wis.

Among the 50-odd books, mostly of a military nature, which General King published were *The Colonel's Daughter* (1883); *Famous and Decisive Battles* (1884); *Marion's Faith* (1885); *Between the Lines* (1889); *Campaigning with Crook* (1890); *Captain Blake* (1892); *Under Fire* (1894); *The General's Double* (1897); *Ray's Daughter* (1900); *A Tame Surrender* (1901); *The Iron Brigade* (1902); and *Medal of Honor* (1905): At the time of his death he was engaged in writing a history of the Indian wars at the request of military authorities.

KIRGHIZ A.S.S.R. See SOVIET CENTRAL ASIA.

KIWANIS INTERNATIONAL. An organization of clubs made up of not more than two of the leaders in each business and profession, united for the rendering of civil and social service to the community. Each club enjoys autonomy but at the same time functions in direct connection with district and international administrations. There are 29 geographical districts, each with a governor, in the United States and Canada. The first club was organized in Detroit, Mich., in January, 1915; by 1917 the organization had spread into Canada. At the close of 1933 the international organization consisted of 1860 clubs, with an approximate membership of 78,000. Some 35,000 civic and welfare projects were carried out by these clubs during the year.

The 1933 convention was held in Los Angeles, Calif., June 25-29. The international objectives

for 1933-34 were: Service to under-privileged children; intelligent, aggressive, and serviceable citizenship; friendly understanding among all citizens, rural and urban; vocational guidance; and boys' and girls' work. Two special objectives were the maintenance of adequate educational facilities, especially those making for character development, and business-like methods in administrative government, with special application to local government. The officers elected were: President, Joshua L. Johns, Appleton, Wis.; American vice-president, Arch A. Schramm, Marietta, O.; Canadian vice-president, Andrew Whyte, Edmonton, Alberta; secretary, Fred. C. W. Parker, Chicago; and treasurer, H. G. Hatfield, Oklahoma City. Headquarters are at 520 North Michigan Avenue, Chicago, Ill.

KLAIPEDA. Same as MEMEL (q.v.).

KNIGHTS OF COLUMBUS. A society of Roman Catholic men organized under a special charter, granted by the Connecticut General Assembly in 1882, permitting it to do business as a fraternal benefit society and to promote and conduct educational, charitable, religious, and social welfare work. The four principles of the order are charity, unity, fraternity, and patriotism.

The order is composed of a supreme council, the governing body and highest authority; a supreme board of directors, the executive body; 61 State councils; and 2536 subordinate councils. The total membership as of June 30, 1933, was 496,128, which represented an associate membership of 248,135 and an insurance membership of 247,993. In the 51 years of its existence the society has paid out more than \$36,000,000 to the beneficiaries of its members. Death claims paid during the fiscal year amounted to \$2,415,167.

At the international convention of the supreme council held in Chicago, Aug. 15-17, 1933, support of President Roosevelt's policies was pledged. Martin H. Carmody of Grand Rapids, Mich., was reelected supreme knight. William J. McGinley of New Haven, Conn., was supreme secretary in 1933, and D. J. Callahan of Washington, D. C., supreme treasurer. The order publishes *Columbia*, a monthly magazine. Headquarters of the supreme council are in New Haven, Conn.

KOREA (CHOSEN). A formerly independent country of eastern Asia, annexed by the Japanese Empire on Aug. 22, 1910, and incorporated as an integral part of Japan by an Imperial Rescript of 1919. Capital, Keijo-fu (Seoul).

AREA AND POPULATION. Korea has an area of 85,288 square miles. The census population on Oct. 1, 1930, was 21,058,305 (provisional), compared with 19,522,945 at the census of Oct. 1, 1925. At the end of 1930, the population comprised 19,685,587 Koreans, 501,867 Japanese, and 69,109 foreigners. The chief cities, with their 1930 populations, are: Keijo-fu (Seoul), 350,426; Fusan-fu (Pusan), 130,397; Heijo-fu (Pyongyang), 136,927; Taikyu-fu (Tai-Ku), 101,078; and Chemulpo, 63,658. The Korean language is intermediate between Japanese and Mongol.

EDUCATION. More than 60 per cent of the population is illiterate. For the education mainly of Koreans there were in 1931, 1176 common schools, with 476,246 pupils; 80 private common schools, with 23,464 pupils; 42 higher common schools (20 private), with 17,548 students; and a number of vocational schools. Mainly for Japanese, there were 467 elementary schools, with 71,836 pupils; 11 middle schools, with 6026 pupils; and various professional, vocational and normal

schools. The University at Seoul had 534 students (1931).

PRODUCTION. Korea is predominantly agricultural. Rice is the stable agricultural product, followed by barley, Italian millet, soy beans, wheat, and red beans. Fruit, cotton, hemp, tobacco, and ginseng are produced. Silk raising and livestock are subsidiary occupations. Japanese own about one-half of the tilled area. The value of the principal agricultural products in 1931 was: Rice, 268,804,979 yen; barley, 39,720,415 yen; soy beans, 32,103,209 yen; foxtail millets, 31,027,568 yen; cattle, 15,797,330 yen; straw manufactures, 13,642,122 yen; wheat, 10,696,978 yen; silk cocoons, 9,397,754 yen; cotton, 9,177,272 yen; fruits, 6,580,556 yen. Mineral production (1932) was valued at 35,029,767 yen (21,741,519 yen in 1931). The chief minerals are gold, silver, zinc, copper, lead, iron, tungsten ore, and graphite. The 1931 fish catch was valued at 46,578,000 yen. The chief manufactured products are textiles, paper, pottery, metal ware, manufactured tobacco, brewed drinks, and leather. New industries, such as the manufacture of cement, beet-sugar, matches, foundry iron, and fertilizers were developing. In 1932 there were 253 factories employing 50 or more hands, the total number of workers employed being 57,153.

COMMERCE. Exports in 1932 amounted to \$87,522,000 (\$129,224,000 in 1931) and imports to \$90,052,000 (\$133,502,000 in 1931). The chief 1932 exports were: Rice, \$40,854,000; soy beans, \$5,774,000; fertilizers, \$5,196,000; raw silk, \$3,279,000; fish, \$3,106,000 (conversions to dollars made at average yen exchange rates of \$0.2811 in 1932 and \$0.4885 in 1931). Cotton, silk and wool fabrics, millet, heavy iron, machinery, and sugar were leading imports. Japan in 1932 supplied 80.7 per cent of Korea's imports (China, 14.4 per cent) and purchased 90.6 per cent of Korea's exports (China, 9.0 per cent).

FINANCE. For the fiscal year ended Mar. 31, 1932, actual government revenues totaled 214,954,099 yen (ordinary, 174,713,672; extraordinary, 40,240,427) and expenditures totaled 207,782,798 yen (ordinary, 158,276,780; extraordinary, 49,506,017). The budget for 1932-33 balanced at 219,381,469 yen, with ordinary expenditures fixed at 163,558,402 yen and extraordinary expenses at 55,823,067 yen. The 1933-34 budget balanced at 231,938,384 yen (ordinary expenditures, 170,097,296; extraordinary, 61,841,088). The public debt on Mar. 31, 1933, amounted to 431,876,306 yen (406,996,000 yen on Mar. 31, 1932).

COMMUNICATIONS. Government railways open to traffic on Mar. 31, 1933, extended 1952 miles and 204 miles of line were under construction. In addition there were 709 miles of private lines. The government lines in 1932-33 carried 20,591,638 passengers and 6,248,863 metric tons of freight. Earnings were 39,309,000 yen and expenses 25,863,000 yen. The highway network covered 11,872 miles in 1931 and consisted mainly of graded earth or gravel roads. An air line linked the chief cities with Japan and with Manchuria. The shipping tonnage entered at the open ports in 1931 was 9,653,786; tonnage cleared, 9,679,305.

GOVERNMENT. Korea is governed as an integral part of Japan through a governor-general entrusted with large administrative powers. Governor-General in 1933, Gen. Kazunari Ugaki (appointed June, 1931).

KU KLUX KLAN, KNIGHTS OF THE. An American benevolent, eleemosynary, and fraternal institution, incorporated under the laws of the State of Georgia in 1915. "The membership is made up of white, male, Gentile persons, native-born American citizens, 18 years of age. They must be of sound mind, good character, commendable reputation, and respectable vocation; must believe in the tenets of Christian religion; and must owe no allegiance to any foreign government, nation, institution, sect, ruler, prince, potentate, people, or person, and whose allegiance, loyalty, and devotion to the Government of the United States of America in all things is unquestionable." The Klan continued its activity in matters of civil government affecting its ideals or principles. The programme adopted in 1933, "Communism must be destroyed in America," will be continued for 1934. The officers are President, Hiram W. Evans; secretary, H. C. Spratt; treasurer, Sam H. Venable. Headquarters are in Atlanta, Ga.

KUOMINTANG. See CHINA under *History*.

KURDISTAN, kūr'dī stān'. A region in eastern Asia Minor, comprising portions of Turkey, Persia, Soviet Transcaucasia, and Iraq. It is inhabited by approximately 1,500,000 semi-nomadic Kurds, a people related to the Persians in race and language. Due to their nationalistic aspirations the Kurds have remained in a state of revolt against their respective governments.

KUWAIT. See under ARABIA.

KWANGCHOW (KWANGCHOWAN). See FRENCH INDO-CHINA.

KWANTUNG, kwān'tōōng'. Leased territory at the southern extremity of the Liaotung Peninsula in Manchuria, which lease was transferred from Russia to Japan by the Treaty of Portsmouth, Sept. 5, 1905, and agreed to by China on Dec. 22, 1905. Total area, including the adjacent islands, 1336 square miles; total population on Jan. 1, 1933 was estimated to be 961,146 (excluding the army and navy), of whom 832,488 were Chinese, and 127,937 were Japanese. Dairen, the capital, had 258,793 inhabitants in 1930.

The area of land under cultivation at the end of 1931 amounted to 488,640 acres. The principal agricultural products are maize, millet, beans, wheat, buckwheat, rice, tobacco, hemp, and numerous vegetables. Fishing is an important industry. The production of salt in 1931 was 204,345 metric tons from a total area of 17,087 acres. There are factories for the manufacture of bean-oil and bean-cake, paint, glass, cement, lime, etc., with an output valued at 70,000,000 yen in 1932. Imports in 1932 amounted to 207,586,925 yen; exports, 305,067,978 yen. The special account budget for 1932-33 was estimated to balance at 22,736,016 yen; and the local expenses budget at 5,210,878 yen. The territory is administered by a Japanese governor-general. Governor-General in 1933, S. Tsukamoto.

KYLE, MELVIN GROVE. An American clergyman and archaeologist, died in Pittsburgh, Pa., May 25, 1933. Born near Cadiz, Ohio, May 7, 1858, he was graduated from Muskingum College in 1881 and from the Allegheny Theological Seminary in 1885. Ordained to the ministry of the United Presbyterian Church in 1886, he held the chair of Biblical archaeology at the Xenia Theological Seminary from 1908 to 1915. In 1922 he was elected president of that institution which, on its merger in 1930 with the Pittsburgh Theological Seminary, was renamed the Pittsburgh-

Xenia Theological Seminary and was transferred from St. Louis to Pittsburgh. From 1930 until his death he was research lecturer there.

As lecturer at the American School of Oriental Research in Jerusalem in 1921, Dr. Kyle became interested in Palestine archaeology, leading in 1924-26-28 and 1930-31-32 the joint expeditions sponsored by the Xenia Theological Seminary and the American School of Oriental Research. Among the important discoveries of these expeditions were the old fortress of Moab, the region of Sodom and Gomorrah, and the ruins of the Canaanite city of Kirjathi-Sepher. Besides contributing to scientific journals, he wrote *The Deciding Voice of the Monuments in Biblical Criticism* (1912); *Moss and the Monuments* (1920); *The Problem of the Pentateuch* (1920); and *Explorations at Sodom* (1928). He was also editor after 1911 of the archaeological department of the *Sunday School Times*, and in 1929 was revising editor of the *International Standard Bible Encyclopædia*. The General Assembly of the United Presbyterian Church of North America elected him moderator in 1927.

LABOR. There was every indication, as the year progressed, that American labor was entering upon a new and, perhaps, the most important chapter in its history. After almost ten years of virtual self-abdication, organized labor was once again becoming militant and closely pressing government and industry for protection of its rights to organize and to obtain a living wage. Frankly, organized labor looked upon Section 7 (a) of the National Industrial Recovery Act as a declaration banning the closed shop; and the increasing outbreak of strikes to effect this end demonstrated that most of the trade unions of the country would have nothing to do with company unions. The membership of the American Federation of Labor, by the end of the year, had already approached, if not exceeded, the highest strength of the World War days. The number of strikes, which despite efforts at mediation of the National Labor Board and its local mediators, showed that labor's only real weapon was being utilized to the full in order to obtain union recognition, higher wages, shorter hours, and better working conditions. Particularly encouraging from the point of view of organized labor was the rise to power once more of the United Mine Workers of America and the appearance of trade union organizations in industries which had hitherto successfully resisted all activities of organizers, notably the heavy industries of automobiles, steel, and oil. There was no question, too, that the rank and file were increasingly becoming progressive and forcing its leadership to take definite stands on questions vital to labor. The record of achievement over the year was a noteworthy one; and there was no question that the future of trade unionism in America was to hold many surprises and, from labor's point of view, many victories as well.

There were a number of important questions whose solution was undoubtedly to preoccupy labor in the near future. The issue of industrial versus craft unionism, particularly as it affected the mass production industries of automobiles, steel, rubber, oil, and the radio, had to be faced. However, trade unionists were quick to see the danger in the suggestion of General Johnson that trade unions be formed on vertical lines, each organization to be separate and distinct within its own industry and having no relations with

labor organizations in other industries. General Johnson's proposal that a government representative be placed in each labor organization in the same way that the government was being represented in each industry, was looked upon by many observers as being an effort of government control of trade unionism very much along the lines of similar achievement in Italy, Germany, and Russia. Undoubtedly the continued outbreak of jurisdictional disputes, which brought out from President Roosevelt at the unveiling of the Gompers' Memorial the warning that: Questions of jurisdiction have to be "settled quickly and effectively in order to prevent the slowing up of the general programme," added to the importance of the debate between industrial unionism and craft unionism.

Another difficulty was the uncertain character of the federal charters which had been issued to individual plants without any relationship to craft or industrial unions. These local plant unions included anywhere from a few hundred to several thousand workers and as many as 700 such groups had been organized with a total membership of 300,000. How to merge these separate bodies into the general army of organized labor was an important question that was not resolved at the 1933 convention of the American Federation of Labor.

Specifically the executive council of the American Federation of Labor would soon have to consider the matters raised in three resolutions which were submitted to the A. F. of L. and were turned back to the council for further debate and determination. One of these resolutions called for the establishment of a strategy board of seven trade unionists to "map out general plans and policies for strengthening the united action of the regular craft unions and at the same time extending organization into those industries in which the present form of organization has obviously not been successful." A second resolution proposed that the question of jurisdiction be held in abeyance for a year to permit an intensive unionization campaign among the 700,000 utility workers. A third resolution, which was sponsored by the metal trades departments, declared that organization by those unions was being hampered by the issuance of charters to federal labor unions into whose membership mechanics were being included. The executive council was requested to prevent the inclusion in federal unions of any laborers or mechanics over whom the international unions had jurisdiction.

The reader is referred to the following articles for other discussions of various aspects of the history of labor during the year: LABOR, AMERICAN FEDERATION OF; LABOR ARBITRATION AND CONCILIATION; LABOR LEGISLATION; MINIMUM WAGE; OLD AGE PENSIONS; STRIKES AND LOCK-OUTS; UNEMPLOYMENT; WOMEN IN INDUSTRY; WORKMEN'S COMPENSATION; and to the articles dealing with the respective countries. See also TRADE UNIONS; COMMUNISM; and SOCIALISM for special aspects of the labor subject.

LABOR, AMERICAN FEDERATION OF. The fifty-third annual convention of the American Federation of Labor met in Washington during October 2-13, with 506 delegates in attendance. The organization's executive council's report, which was released prior to the formal sessions, showed an average total membership for the year ended Aug. 31, 1933, of 2,126,796 persons. This was a

decline of 405,465. However, due very largely to the impetus given to trade union organization by Section 7(a) of the National Industrial Recovery Act, following its signing late in June, the membership of the American Federation of Labor increased by leaps and bounds almost daily. It was not far from the truth to say, therefore, that at about the time of the opening of the convention the total membership was at least 4,000,000. Further, Mr. Green was quite justified in pointing out that included in the trade union strength of the American Federation of Labor was to be reckoned the membership of the railroad brotherhoods, which while not in actual affiliation, essentially represented the same trade union philosophy. Adding the million odd members of the railroad brotherhoods the American Federation of Labor, therefore, made a conservative trade union strength of 5,000,000 persons. As further indicative of the increased activity of the American Federation of Labor during the NRA might be cited the fact that during July and August there were issued 340 charters to local trade and federal labor unions. Also, during the fiscal year ended Aug. 31, 1933, the international and national unions associated with the American Federation of Labor issued 2953 local charters. The 29,315 local unions of the national and international organizations and the 673 local labor unions made a total of 29,988 local bodies associated with the American Federation of Labor, as compared with 26,669 for the previous year, or a gain of 3319.

The executive council devoted the major part of its report to a consideration of the National Industrial Recovery Act. However, space was also given to the following subjects: unemployment, relief, discrimination against the older worker, trade union benefits, national legislation, convict labor, child labor amendment, repeal of the Eighteenth Amendment, old age security, non-partisan political policy, jurisdictional troubles, developments for railroad workers, the shorter work day and work week, the German labor movement, public schools and the Workers' Education Bureau. In the table that follows is indicated the American Federation of Labor's estimate of the total number of persons unemployed in the United States from 1930 to 1933 by months.

AMERICAN FEDERATION OF LABOR'S ESTIMATE
OF TOTAL NUMBER OUT OF WORK IN THE
UNITED STATES, 1930 TO 1933, BY MONTHS
[In thousands]

Month	1930	1931	1932	1933
January	3,216	7,160	10,197	13,100
February	3,565	7,345	10,486	13,294
March	3,543	7,098	10,739	13,689
April	3,188	6,739	10,990	13,256
May	3,090	6,750	11,470	12,896
June	3,250	6,841	11,853	12,204
July	3,714	7,198	12,300	11,798
August	4,101	7,857	12,344	10,960
September	4,150	7,303	11,767	10,108
October	4,639	7,778	11,586	10,122
November	5,364	8,699	12,008	10,651
December	5,541	8,908	12,124	10,769

The following is the basis of these calculations. The figures were derived from the Federal census, brought up to date by employment indexes furnished monthly by the Labor Department and other government agencies. The estimates include all workers in the United States whether engaged in agriculture, management, the professions, public service, and the industrial groups. However, the following were not included in the estimates:

domestic servants, automobile service, restaurants, clerical workers in banking, insurance and real estate, and semi-professionals. The following note made by the American Federation of Labor is interesting: "There are three groups counted as employed because, lacking data on which estimates for their unemployment may be based, they automatically fall into the employed groups: 1. Teachers who are teaching school but not being paid. 2. Those unemployed who have gone to the country to live with relatives on farms and are provided with at least food and shelter. 3. Those who were living on income from investments and are now forced to seek work; we have no way of estimating them."

The Federation's report also showed that during 1933 the following proportion of trade union membership was unemployed: January, 25.8 per cent; February, 26.0 per cent; March, 26.6 per cent; April, 26.1 per cent; May, 25.8 per cent; June, 24.5 per cent; July, 24.1 per cent; August, 23.7 per cent; September, 22.6 per cent. And the following proportion of trade union membership was on part time: January, 20 per cent; February, 20 per cent; March, 22 per cent; April, 21 per cent; May, 20 per cent; June, 21 per cent; July, 21 per cent; August, 20 per cent; September, 20 per cent. The executive council's report made the following recommendations. On the question of relief: 1. That the American Federation of Labor insist on adequate relief appropriations from Federal funds by Congress immediately after its reconvening in January so that moneys would be available by February when it is expected that the present appropriations will be exhausted. 2. That the surplus agricultural product be made available for distribution to the unemployed. 3. That the American Federation of Labor and all its affiliated bodies bend every effort to educate public opinion to the great need for relief during the winter of 1933-34. On this point the report said further: "There is danger that taxation and appropriations for relief may not have the necessary public support, since there is widespread belief that the re-employment of millions has greatly reduced relief needs, and that relief needs are, therefore less than last winter." 4. The American Federation of Labor report also insisted that higher incomes and surplus profits should be made to bear their fair share of the tax burden. In 1932 the international and national unions of the American Federation of Labor paid out in benefits to trade union membership \$51,448,348 as compared with \$39,961,873 in 1931. In 1932 unemployment benefits totaled \$19,970,556 as compared with \$9,146,724 in 1931.

President William Green, in addressing the convention of the American Federation of Labor, called attention to the fact that despite the marked reemployment effected as a result of the operations of the codes under the NRA, there were still 11,000,000 persons out of work in the country. It was true, he said, that as a result of the return of some 2,800,000 workers from March to August, 1933, the total buying power of the workers of the country had increased about 25 per cent; but because living costs had also increased the total increase in buying power approximated only about 17 per cent. He also stressed the fact that the increase in buying power was due completely to reemployment and not to the increase in buying power to the individual worker. For the average monthly in-

come of the individual worker increased only 6.9 per cent since March while the cost of living had increased 7.1 per cent. According to Mr. Green, it was impossible to return the whole body of unemployed to industry and the services without the establishment of the 30-hour week and increases in the wage rates. While he thus adverted to the inadequacies of the NRA, President Green called upon the assembled trade unions to have faith in the government. Said he: "We must have faith—faith in the New Deal, faith in the principles of this act, faith in those who are honestly and liberally administering it, and most important of all, faith in that great, fearless leader—the President of the United States." Also significant was President Green's flatfooted objection to any effort to inflate the currency. This was particularly interesting in view of the fact that the report of the executive council had made no mention of currency questions. President Green demanded that the wages of labor be paid in "honest dollars" and said, "labor knows that this is a problem that affects us very vitally because we know that when dollars are cheapened commodity prices rise, but wages stand still. Until they can assure labor that we will get more of these cheap dollars for the day's work we perform, so that it will conform to the increase of commodity prices, it is my judgment that labor will stand unflinchingly against inflation." President Green hailed the rising tide of unionization as a phenomenon that "even the old and tried veterans in our movement never saw before." He continued: "From every city and every town and hamlet . . . the workers are marching, organizing, keeping step, coming with us in the great American Federation of Labor." Other persons to address the convention were President Roosevelt who spoke at the unveiling of the Gompers Memorial on October 7; Hon. Frances Perkins, U. S. Secretary of Labor; Hon. James A. Farley, Postmaster General; General Hugh S. Johnson, Administrator of the NRA; Miss Elizabeth Christman, fraternal delegate, National Women's Trade Union League of America; Mr. James Rowan and Mr. Joseph A. Hale, fraternal delegates, British Trades Union Congress; Mr. Fred J. White, fraternal delegate, Trades and Labor Congress of Canada; Rev. Francis J. Haas, member of the Labor Advisory Board of the NRA; Spencer Miller, Jr., Secretary, Workers' Education Bureau of America; Hon. Robert F. Wagner, United States Senate; and Hon. James J. Davis, United States Senate. President Roosevelt, in referring to Samuel Gompers' service to the national cause during 1917 said: "We are engaged in another war, and I believe from the bottom of my heart that organized labor is doing its share to win this war. The whole of the country has a common enemy; industry, agriculture, capital, labor are all engaged in fighting it. Just as in 1917, we are seeking to pull in harness; just as in 1917, horses that kick over the traces will have to be put in a corral."

The extraordinary advances made by labor under the NRA were everywhere voiced in the addresses before the convention. Secretary Perkins said, for example: "I think that for the only time in my memory the people of the United States are united in the acceptance of one common idea, and that is the idea that upon the prosperity of the wage earners of America depends the prosperity of the whole United States."

Since we all see that, if we can all be but patient and have the character necessary to carry through this responsibility, I think we shall win through." The accomplishments of the NRA particularly attracted the attention of the British fraternal delegates, one of whom hailed the step as "a departure in the economic life of nations" which other countries would be compelled to follow. It was pointed out, however, that in order to seize adequately its opportunities American trade unionism would be forced to consider the fundamental questions of a reorganization of labor on industrial rather than craft lines, and the elimination of wasteful jurisdictional disputes. As regards the first matter, Miss Elizabeth Christman expressed the sentiments of many of the delegates when she declared:

I believe that we shall have to make some structural changes in our present trade-union set-up. While I fully recognize the value of craft unions, I am in sympathy with the idea now being advanced here and there of a great need for the functional union in such many-sided industries as the rubber, textile, automobile, meat packing, for example. I urge, therefore, a functional organization of unions in industries which comprise a great diversity of occupations. Looking toward such a development I have in mind the formation of something that we might call a stratory board. Such an agency could map out general plans and policies for strengthening the united action of the regular craft unions and at the same time extending organization into those industries in which the present form of organization has obviously not been successful.

This was the position of Messrs. James O'Connell and John P. Frey, respectively president and secretary-treasurer of the Metal Trades Department of the American Federation of Labor, who in their report to the convention indicated the only way for the trade union movement to organize the mass production industries was through a vertical set-up similar to that existing in the industries themselves. A resolution of this effect was presented to the convention by Miss Christman and it was indicated that in addition to the metal trades officials it had the support of such powerful union officials as John L. Lewis, president of the United Mine Workers of America, and George L. Berry, president of the International Printing Pressmen and Assistants Union. However, on October 10, in what was the first test of this outstanding question before the labor world as represented by the American Federation of Labor, the delegates by a total of 13,872 votes to 5859 votes accepted the executive council's decision to refuse permission for the creation of an industrial union in the brewing industry. In its decision the executive council had ruled that teamsters, firemen and oilers, and engineers did not belong in the United Brewery Workers Union but under the jurisdiction of their respective craft unions. Supporting the brewers were the miners, the railway clerks, the bricklayers, the pressmen, and the railroad telegraphers.

Senator Wagner made a strong appeal for industrial peace. He insisted that in view of the fact that labor had received a new charter under the New Deal certain responsibilities devolved upon it in the observance of industrial peace. While the strike as a first resort was not prohibited by law, machinery had been created in the National Labor Board to adjudicate disputes between factory owners and operators and the workers. He insisted that the strike was never more than a protest and said: "It has no constructive force. It creates hundreds of new problems, but cannot solve a single one. It should be used only as the very last resort." General

Johnson, as Administrator of the NRA, was even more emphatic. On October 10, during a night session in the course of which he reviewed the conditions which had led up to the passage of the National Industrial Recovery Act and the exact rights of labor under its new charter as set forth in Section 7(a), General Johnson characterized the strike as being nothing less than "economic sabotage." He went on: "The plain stark truth is that you cannot tolerate the strike. Public opinion is the essential power in this country. In the end it will break down and destroy every subversive influence." In the same address General Johnson came out in favor of industrial or "vertical" unionism as against craft unionism. The significance of General Johnson's speech was justly pointed out by Mr. Louis Stark, writing in the *New York Times* of October 11, when he said: "... the issue was definitely drawn between the implicit policy of the government toward the unions—federalization of labor under government sponsorship, with the government's decision final in disputes which heretofore might have resulted in strikes—and the stand of the American Federation of Labor upon the more conservative craft unionism."

Labor quickly replied to General Johnson's challenge when remarks made on the floor indicated that government interference would be opposed and that strikes would continue as long as codes were willing to grant payment of only \$0.40 an hour for skilled mechanics, and as long as men who joined unions were discriminated against.

On October 12, the American Federation of Labor, after a ringing address delivered by Mr. Green, went on record formally as adopting a boycott against German made goods and services. In the name of the membership of the Federation President Green attacked the Nazi government for having smashed the fifty-year-old trade union movement, torturing and jailing its leaders, seizing its treasuries, and placing the entire machinery of labor, the so-called German Labor Front in the hands of Dr. Ley, who had never been a worker but was a former employee of the I. G. Farbenindustrie A.G. Approval of the boycott resolution was unanimous except for one vote, that of Andrew Furuseth, president of the International Seamen's Union. The resolution adopted urged trade unionists to boycott German made goods and German services, this boycott to continue "until the German government recognizes the right of the working people of Germany to organize into bona fide independent trade unions of their own choosing and until Germany ceases its repressive policy of persecution of Jewish people."

The action of the convention, and other resolutions and recommendations, were as follows:

Organization. The decision of the Executive Council to grant a charter to the Amalgamated Clothing Workers of America was approved. This marked the return to the fold of the Federation of one of the most powerfully organized and intelligently led unions in America, the one that had given Mr. Sidney Hillman, its president, and Dr. Leo Wolman, its economic adviser, to the services of the National Labor Board of the NRA. The Amalgamated Clothing Workers had a membership in excess of 140,000 persons grouped in strong locals situated in the important clothing centres of New York, Chicago, Rochester, Cleveland, and Baltimore. A resolution which recom-

mended that the American Federation of Labor, instead of issuing federal labor union charters, be instructed to cooperate with the representatives of the national and international unions affiliated, was referred to the executive council. The convention voted down a proposal for the amendment of the Federation's constitution which was intended to increase the membership of the executive council from 8 to 25.

Government Administrations and Agencies. Approval was given to the executive council's statement to the effect that the purposes of the Recovery Act would not be achieved unless codes already approved were reopened for reconsideration of wages and hours. Support was extended to unionized and chartered locals of office workers in securing a hearing on the NRA codes relating to the wages and conditions of employment of such workers. The convention insisted on the equal representation of labor beside industry upon the local compliance boards and local mediation boards established by the NRA and the National Labor Board. A recommendation was made for continued efforts to set up the principle that the government should wherever possible purchase only such raw materials and manufactured articles as were produced in the United States; also that the use of these domestic articles be provided for in government contracts.

Federal Employees. A resolution was adopted demanding a 30-hour week for Federal employees without a reduction in the weekly pay. The American Federation of Labor also went on record as favoring a 30-year optional retirement law for such employees.

Older Workers. The American Federation of Labor demanded compulsory Federal and State old age pensions. The delegation also urged the adoption of provisions to assure every producing worker after his production years were over of an adequate income at least equal to his earned income at the time of his retirement.

Education and Research. The members adopted a resolution requesting the president of the Executive Council of the American Federation of Labor to present the convention's petition to the President of the United States to "use his good offices during this emergency to help save our schools." A resolution was also adopted requesting the Director of the Citizens' Conservation Camps to inaugurate an educational programme in these places.

Foreign Relations. The hope was expressed that the people of Cuba might establish a true trade union movement to act in unison with the trade union movement of the other nations of the western hemisphere, in cooperation with and through the Pan American Federation of Labor.

Immigration. The American Federation of Labor demanded the immediate and effective restriction of the immigration of Filipino laborers. It also reaffirmed the Federation's policy of upholding immigration quotas and demanded that Congress resist any efforts to liberalize these.

Financial. The Federation went on record as favoring the nationalization of banks, the licensing of individual firms and corporations engaged in interstate commerce, and approval of President Green's attitude against currency inflation.

Mr. William Green was reelected President of the American Federation of Labor and Mr. Martin F. Ryan and Mr. Frank Morrison were reelected Treasurer and Secretary respectively.

The 1934 convention was to meet at San Francisco, Calif.

LABOR ARBITRATION AND CONCILIATION. NATIONAL LABOR BOARD. In order to prevent stoppages of work which would hinder increasing employment, on Aug. 5, 1933, a National Labor Board was created for the purpose of mediating or arbitrating in controversies arising between employers and employees over the interpretation of the President's Reemployment Agreement. Senator Robert F. Wagner, of New York, became chairman, and Leo Wolman, William Green, John L. Lewis, George L. Berry, Gerard Swope, W. C. Teagle, Louis E. Kirstein, Edward N. Hurley, the Rev. Francis J. Haas, and Austin Finch, the other members of the board. William F. Leiserson was the first secretary of the board. The disputes which have come before the board during its first months have been many and varied. The largest number have involved the interpretation of Section 7 (a) of the National Industrial Recovery Act, which provides that "employees shall have the right to organize and bargain collectively through representatives of their own choosing," etc. Some disputes, however, have involved the equitable adjustment of pay schedules for those receiving in excess of the minimum; others have arisen because of efforts on the part of organized labor groups to hasten action on permanent codes. A few of the cases handled by the board have had no connection with the recovery programme, but jurisdiction over them has been assumed because of the menace to such a programme from a major industrial stoppage, whatever its origin. Industries in which disputes have arisen which have come before the National Labor Board include the hosiery, men's clothing, men's neckwear, ladies' garments, millinery, shirts, silk, dyeing and cleaning, shoes, dyeing and finishing textiles, metal trades, woolen knit goods, gloves, motion-picture studios, bridge construction, ship-building, cartridge manufacture, flour milling, and rubber industries. The principal centres of disturbance have been Reading and Philadelphia and their environs, Paterson and vicinity, New York City, St. Louis and southwestern Illinois. In order to facilitate settlements and to relieve the National Labor Board from some of the great pressure under which it has been working, many disputes have been referred to local National Industrial Recovery Act boards which have been set up in New York City, St. Louis, East St. Louis, and other places.

By the end of the year, the National Labor Board and its regional boards had handled cases involving about 600,000 workers. According to Senator Wagner, the chairman, there was a high proportion of settlements by agreement, a diminution of the number of strikes, increasing recourse to the labor boards by disputants and a drop in the number of cases pending. The National Board took jurisdiction in 155 cases involving 350,000 workers, of which 97 cases were strikes or lock-outs. Of the total, 104 cases were settled, 14 were pending, 25 were referred to regional boards, and 6 to the Labor Department or special committees. A notable feature of the adjustment machinery was the averting of 87 strikes by the regional boards and the settlement of 273 strikes by 11 of these boards.

The first serious labor disturbance to come before the board was a general strike in the hosiery industry of Pennsylvania over the question of unionization. The American Federation of Full-

Fashioned Hosiery Workers had been conducting a vigorous organization campaign during the early summer, and the movement had resulted by July 5 in closing down all the full-fashioned hosiery mills in Berks County, involving 10,000 workers; strikes had broken out also in other industries in the same neighborhood, involving between 3000 and 4000 workers. The board induced 25 hosiery manufacturers and the union to send representatives to a hearing in Washington, on August 10, at which an agreement was reached calling off the strike. On August 26, pursuant to the agreement, elections supervised by the board were held in the mills, which resulted in 37 mills with 13,362 workers (or 95 per cent) voting for representation through the union, while 8 mills with 720 workers (5 per cent) voted for non-union representatives. A number of the other strikes in the region were settled by resort to the same procedure. The seamless hosiery mills and 3 shoe manufacturers, a paint company, and a manufacturer of wool hats, all of Reading, accepted the same agreement. Later 3 shirt companies were induced to settle strikes in the same way. The hat manufacturer, however, agreed, before the elections could be held, to recognize the United Hatters of North America; in 2 of the shirt companies the elections were waived by agreement between the firms and their employees. In 2 concerns in the men's clothing industry, some of whose employees were on strike demanding recognition of the Amalgamated Clothing Workers, the board likewise recommended that elections be held, but the agreement of the firms to this solution was not obtained.

QUEENSLAND. Toward the end of 1932 the Queensland, Australia, legislature passed an act repealing its existing laws concerning industrial arbitration and substituting a new system of conciliation and arbitration, which was assented to Jan. 6, 1933. The new act established an arbitration court consisting of three members appointed by the governor in council, one of whom, appointed to act as president of the court, must be a judge of the supreme court of Queensland. His term is fixed by the governor, but the other two serve for seven years. No provision is made for conciliation commissioners or boards. Any member of the court, however, may convene a compulsory conference when he considers it desirable for the prevention or settlement of an industrial dispute, and any agreement reached at such a conference is enforceable as if it were an award of the court. The court is authorized to regulate the conditions of any calling by an award and in connection therewith to fix wages, overtime rates, and holiday pay, fix the number or proportionate number of women to men, of young workers to adult workers, and of apprentices and improvers to journeymen. It is specifically provided that in fixing rates of wages the same wage shall be paid to persons of either sex performing the same work or producing the same return of profit to their employer, and that the court shall be entitled to consider the prosperity of the calling and the value of an employee's labor to his employer in addition to the standard of living. Power is given to the court to make general rulings relating to any industrial matter, and such declarations shall be as binding as decisions of the court. General rulings may be made as to the cost of living, standard of living, basic wage for males and females, and standard hours. Careful provisions are made for registering industrial unions

and associations of employers. An industrial union may make an agreement with an industrial association of employers or some specified employers for the prevention or settlement of an industrial dispute, or relating to any industrial matter. Such an industrial agreement may be declared by the court to have the effect of an award and to be a common rule of any industry to which it relates.

During the year ended June 30, 1933, the Conciliation Service of the Department of Labor handled 833 trade disputes, of which 774 were adjusted. These involved, directly and indirectly, 476,919 workers. At the end of the fiscal year, 18 cases were pending and 17 remained unclassified. The following cases were characteristic of the work the Conciliation Service of the government was being called upon to handle:

Threatened strike—Aircraft mechanics, United Air Lines, Chicago, Ill.—The aircraft mechanics of the United Air Lines threatened to strike Apr. 29, 1933, because of alleged discrimination against some of the workers who had been active in collective bargaining in behalf of the craft. Six men, it was said, had been discharged, and around their dismissal the controversy centred. A Commissioner of Conciliation was assigned to the case, and his preliminary conferences indicated that the collective-bargaining activities of the discharged men had been looked upon with disfavor by the superintendent of the overhaul and repair department of the United Air Lines. This official denied discrimination, stating that the men had been laid off because of necessary reductions in the company's personnel. Subsequent investigations did reveal some discrimination on the part of the company's officials, and new expressions of dissatisfaction by the workers made a strike seem to be imminent. The Commissioner next arranged a conference with P. G. Johnson, president of the company, who stated that while he had no intention of recognizing the principle of collective bargaining, he was willing to discuss the complaints and to consider the matter fully immediately upon his return from a necessary business trip. The Commissioner at once made known this attitude to the men, with the recommendation that they take no strike action until President Johnson's return. To this, they agreed. Upon President Johnson's return, he resumed his investigation, at which time he agreed to reinstate the six discharged men in June. Upon their return to the shop, however, it was alleged that the superintendent of overhaul and repair attempted to place them on a part-time basis, to which they objected. The matter was again taken up with President Johnson, who came personally to the airport and conferred with the entire group of aircraft mechanics. At this conference the facts brought to light resulted in President Johnson's sending a special letter to each of the discharged men, instructing them to report back to work on May 29, and assuring them that they would be restored to their former status and paid in full for lost time. The company's president, Mr. Johnson, also agreed that future grievances might be taken up with the superintendent by a shop committee and, if necessary, could be appealed to him personally.

Dispute—Wage reductions, Motion Picture Studios, Hollywood, Calif.—A wage dispute arose when moving-picture producers, Hollywood, Calif., announced on March 8 that the wages of all employees would be reduced on a basis of 50 per cent for salaries over \$50 per week, and 25 per cent for salaries under \$50 per week. A series of meetings was at once called by 24 different local labor organizations represented in the studios, a number of which belonged to the four internationals, parties to the agreement between the Producers' Committee and the Carpenters, Electrical Workers, Musicians, and International Alliance of Theatrical Stage Employees. Approximately 25,000 workers were either directly or indirectly concerned in the outcome of this dispute which at the outset threatened to develop into a Nation-wide strike.

Two Commissioners of Conciliation were assigned by the Department to assist in making such a wage adjustment as might be possible.

Employees represented in the motion-picture arts and sciences not affiliated with the regular labor organizations agreed to accept the cuts, either by working four weeks without pay, or at the new rate proposed; but the federated motion picture studio crafts, in which was represented all of the local chartered by organizations outside the four internationals, refused to accept the reductions. The Actors' Equity refused to take any reduction unless so ordered by the New York headquarters.

Other details of reductions in wages included directors, actors, producers, writers, and technicians with salaries of \$100 or more per week, who were to be reduced 50

per cent, with a \$75 minimum. Those receiving \$51 to \$75 per week were to be reduced by 25 per cent; those receiving \$76 to \$100, by 35 per cent, with \$65 weekly as the minimum.

The Commissioners worked diligently to the end that an adjustment might be reached; and during their activities all employees, with the exception of certain science artists, remained on the job. Compromises were reached in some instances, with the result that by March 17 and 18, the following schedules obtained: Make-up artists \$100 per week, 25 men working, 20 per cent cut, total cut \$83.33 per day; scenic artists \$100 per week, \$4.25 per day proposed cut, 51 men working at a total reduction of \$216 per day; set designers \$90 per week, \$4.25 per day proposed cut, 50 men working, total reduction of \$212 per day; set directors \$72 per week, proposed reduction \$1 per day, 59 men working, total reduction \$59 per day. Total reduction of all of above-named classes \$570.33.

It was difficult to check up as to assistant directors, because they do not work steadily; and on March 17 and 18, there were but 70 of the normally employed 277, who were at work, and to whom no uniform wage reduction was applied.

Following such adjustments as were made, it was the Commissioners' conclusion that some effort should be made to prevail upon the producers, through their New York officers, to give consideration to the scenic artists and assistant directors. No further adjustments could be made affecting the other classes until the New York Arbitration Committee has settled the controversy affecting carpenters, electricians, musicians, and theatrical alliances.

Strike—Automobile-body workers, Hudson Motor Car Co., Detroit, Mich.—On Feb. 6, 1933, 3000 automobile-body workers at this plant went on strike because of alleged ultraradical influence.

A Commissioner of Conciliation, who was on the ground, tendered his conciliatory services, which were immediately accepted by the Hudson Motor Car Co.

Upon the Commissioner's advice it was quickly agreed to meet workers' committees, which, at their meetings, had developed very little complaint concerning working conditions, hours, or wages. It appeared, in fact, that the strike was a "sympathy" strike. At later conferences those who had dominated the strike were eliminated, their influence having waned when it became apparent to the strikers that the company was fully willing to meet any and all committees of workers and thresh out the differences presented. These differences were adjusted and on February 14 the plant resumed operations in full, including those of the additional 3000 workers whose work depended upon delivery of the motor-car bodies.

Strike—Retail clerks; controversies—Teaming trades and building trades, Butte, Mont.—A situation developed in Butte, Mont., late in the year 1932 which threatened to evolve into a bitter and long-drawn-out dispute.

The Builders' Exchange some months previous had demanded a horizontal wage decrease of 25 per cent which had been refused by the Building Trades Council and a deadlock in negotiations had been reached.

The Truck Owners' Association had also asked for a 25 per cent horizontal wage decrease, which request had been refused by the union with a resultant deadlock.

The Retail Clerks' Union, upon the expiration of its agreement with the store owners, had called the clerks on strike in nearly all the large stores in Butte, and many of the smaller ones.

The Commissioner who was assigned to the case arrived in Butte on the night of Dec. 2, 1932. He found that representatives of virtually every union in Butte had been called into conference that night with high officials of the Anaconda Copper Co. and the Montana Power Co., and advised that unless the labor difficulties were adjusted within a given time these companies would sever contractual relations with the unions, not only in Butte but throughout the State of Montana. As a start to reopening negotiations for settlements of these major disputes, the demand was made that the retail clerks be at once returned to work. The two companies mentioned employed organized labor extensively in Butte and other Montana localities, and inasmuch as they were the largest and most influential corporations in the State it was evident that a break was a very serious matter.

The Commissioner was in touch with representatives of the unions before midnight on the night of his arrival, and on the following morning was in conference with high officials of these two corporations. He was convinced from his conferences with the latter that they preferred reaching an amicable settlement rather than engage in further controversy but were prepared for a prolonged break if an early adjustment was not reached. He tendered his good offices as a friend to both sides, and was courteously received by each, receiving whole-hearted cooperation from both the companies and the union representatives, as well as from the employers involved in the trades affected.

The retail clerks returned to work the following Tuesday morning, and peace negotiations were opened up in

all the trades affected. Joint conferences between the employers and the men in each affected industry were instituted, the Commissioner going back and forth between the various conferences and sitting simultaneously.

At the end of 10 days, agreements were consummated in all three of the industries. Compromise was the order of the day on both sides, the extreme original demands of both sides being modified materially.

Union agreements witnessed by the commissioner were negotiated, to be effective until May 1, 1934. The two corporations referred to withdrew their threat to break off union relationship, and the old basis of friendly understanding was assured for the future.

LABOR CONDITIONS. See RAILWAYS.

LABOR DISPUTES. See LABOR; STRIKES AND LOCKOUTS.

LABOR LEGISLATION. Forty-three States, two territories, two insular possessions and the Congress of the United States met in regular legislative session in 1933. Special sessions in a number of these, and other, States were also held. Outstanding in the extension of legal protection for labor during 1933 is the adoption of codes of fair competition under the National Industrial Recovery Act which restrict child labor, limit hours of service, establish minimum wage levels and otherwise improve the standards and conditions of labor. Other noteworthy legislation includes the enactment of old age pension laws in ten States and the Territory of Hawaii; the enactment of minimum wage laws for women and minors in seven States; laws drastically limiting the issuance of injunctions in labor disputes in eight States; and, by Congress, the appropriation of \$3,300,000,000 to complete a comprehensive programme of public works, and the establishment of a national public employment office system providing for cooperation with the States.

Alaska. Lien laws revised; mechanics' lien law amended.

Arizona. State-wide old age pension system adopted.

Arkansas. Federal cooperation in emergency construction and relief provided for; preference for citizens in public works employment; State-wide old age pension system adopted (later declared unconstitutional).

California. Wage claimants given preference under receiverships; employees' bond law amended; receipt of wage rebate on public works made a felony; "yellow-dog" contracts voided; hours on public work limited, five-day week established for State employees; hours of truck and bus drivers limited; taking of fee for procuring employment for persons on public works prohibited; California Industrial Recovery Act enacted providing for codes in intrastate commerce; earnings of volunteer firemen defined; compliance with awards by insolvent self-insurers required; average earnings re-defined; act clarified in respect to emergency relief workers; Senate committee created to investigate feasibility of health insurance.

Colorado. Injunctions in labor disputes limited; "yellow-dog" contract voided; prevailing wage on public works required; preference granted to citizens in public works; investigation ordered into public employment of married women; preference in public employment of persons with dependents urged; emergency relief committee created; unemployment survey committee created; unemployment insurance investigating committee created; State fund investigation ordered; State fund operating expense requirements amended; county old age pension system established; State departments reorganized; abolishment of certain State mine officials authorized; public employees' salaries reduced; civil service reform amendment proposed. (Special session.) Blacklisting and boycotting laws temporarily suspended; national public employment office act accepted; emergency relief and construction act enacted.

Connecticut. Wage assignment law amended; wage payment law amended; prevailing wage required on public works; minimum wage law for women and minors enacted; hours law for women and minors strengthened; hours of motor vehicle drivers limited; Federal aid for public employment offices accepted; unemployment relief act enacted; child labor law amended; factory inspection code strengthened; registration of factories required.

Delaware. Mechanics' lien law amended; wage payments safeguarded; contractors' bond required on public works; prevailing wage required on public works; preference granted to citizens on public works; minor exclusions from workmen's compensation act.

Florida. Prevailing wage required on certain public

works contracts; public employment offices in certain counties authorized; Federal cooperation in road construction authorized; preference granted citizens in public employment; Agricultural and Industrial Relief Commission created.

Georgia. Wage garnishment law amended; bond required of insurance carriers; insurance company regulations.

Hawaii. Wage payment law amended; mechanics' lien law amended; hours of labor law amended; unemployment relief act enacted; workmen's compensation law amended relating to disability and voluntary payments; old age pension law enacted; public employees' retirement act amended; public employee wage reductions authorized.

Idaho. Public works contracts bond requirements amended; injunctions in labor disputes limited; "yellow-dog" contracts voided; preference granted citizens in public works employment.

Illinois. Wage garnishment law amended; mechanics' lien law amended; "yellow-dog" contracts voided; minimum wage law for women and minors enacted; Federal national employment system accepted; authority provided for contracting with Federal public works administration; emergency relief commission continued; unemployment investigating commission created; commissions created to investigate mine safety and mine working conditions; Federal child labor amendment ratified; workmen's compensation amendments affecting review procedure, rules, and notices; commission to investigate government reorganization created.

Indiana. Wage payment law enacted, wage payments on public works contracts safeguarded; injunctions in labor disputes limited, "yellow-dog" contracts voided; women's hours law amended; motor vehicle drivers' hours regulated, unemployment relief commission created, workmen's compensation amendment providing double compensation for illegally employed minors, county old age pension system adopted, reorganization of State government provided for, investigating committee on governmental economy created.

Iowa. Hours of commercial motor vehicle drivers reduced, workmen's compensation review and appeal procedure changed, public employees salary reduction, government economy committee created.

Kansas. Mine safety code amended.

Kentucky (Special session.) No labor laws enacted.

Louisiana (Special session.) No labor laws enacted.

Maine. Wage record of certain employees required, black list law amended, injunctions in labor disputes limited, prevailing wage and preference to citizens act enacted, unemployment insurance investigating committee created, reporting of occupational diseases required, old age pension law enacted, operation suspended; State retirement law amended.

Maryland. Workmen's compensation amendments affecting exempted employments and court appeal procedure.

Massachusetts. Commission on interstate Compacts affecting Labor and Industry created, wage assignment law exemptions, wage rate information to be furnished by employers, certain picketing activities legalized; "yellow-dog" contracts voided, women's hours law amended, authority granted to suspend certain provisions of women's hours law; one-day-rest-in-seven law amended; preference in public employment to persons with dependents continued; employment stabilization commission continued, old age pension law amended; industrial and development commission abolished.

Michigan. Wage assignment law amended; emergency relief commission created; private employment agency law amended; Federal child labor amendment ratified; workmen's compensation law amended; compulsory State-wide old age pension system adopted.

Minnesota. Prompt-wage-payment act extended; wage payment law enacted; written wage contract required; wage garnishment law amended; injunctions in labor disputes limited, "yellow-dog" contracts voided, truck drivers' hours regulated; women's hours law enacted; acceptance of employment gratuity by employer from employee prohibited, preference for handicapped persons in public employment urged, child labor act amended, workmen's compensation amendments affecting dependents, commission review, second injury fund, and election; old age pension act made compulsory and State-wide; State retirement act amended; public employees' retirement association act amended.

Missouri. Public works contract bond requirements amended; boiler rule provisions repealed; vocational rehabilitation appropriation.

Montana. Hours regulated in strip mining, cement plants, and sugar refineries; emergency relief commission created; workmen's compensation amendments affecting employers' elections and third party actions.

Nebraska. Hours of motor vehicle drivers regulated; workmen's compensation law amended in regard to insurance policies; compulsory old age pension system adopted.

Nevada. Minimum wage rate fixed for unskilled labor

on public works; hours of motor vehicle drivers regulated; board created to coordinate unemployment relief; mine inspector act amended; workmen's compensation law amended in regard to provision governing dependents; cooperation in labor law enforcement between highway department and labor commissioner provided.

New Hampshire. Minimum wage law for women and minors enacted; one-day-of-rest-in-seven law enacted; emergency relief through public works projects authorized; provision made for Federal cooperation; emergency unemployment relief act enacted; provision for investigation of unemployment insurance; Federal child labor amendment ratified; medical care under workmen's compensation extended; double compensation for illegally employed minors; workmen's compensation law amended in regard to weekly minimum and benefits made applicable to State employees; State employee salary reductions.

New Jersey. Act safeguarding wages on public works contracts amended; minimum wage law for women and minors enacted; discrimination in employment prohibited in public works contracts; certain emergency relief acts declared inoperative after Jan. 31, 1934; certain violations of National Industrial Recovery Act declared misdemeanors; cooperation with National Industrial Recovery Administration authorized including establishment of codes in intrastate commerce; child labor act amended; Federal child labor amendment ratified; emergency relief workers specifically excluded from workmen's compensation law and are to be compensated by State Director of Emergency Relief; old age pension act amended; State retirement act amended; public employee salary reduction act amended, authorization extended and further effected; civil service act amended.

New Mexico. Public employees' wage payments regulated; motor vehicle drivers' hours regulated; women's hours regulated; men's hours regulated; eight hour day established for public employees, preference granted to citizens in public employment; comprehensive mine code enacted including compulsory rock-dusting; workmen's compensation payments revised; labor commissioner reports requirements amended; labor and industrial commission provisions amended.

New York. Mechanics' lien law amended; prevailing rate of wage law amended; department required to determine wage schedules on public works contracts and minimum hourly wage rates on highway contracts; minimum wage law for women and minors enacted; five-day week on public works contracts and eight-hour day and prevailing wage rate on highway contracts is continued; law granting employment preference to citizens amended; emergency unemployment relief period extended, emergency relief act amended; participation in Federal emergency relief and construction act authorized, and amended; employment discrimination by public utilities forbidden; workmen's compensation amendments in regard to procedure for and payment on account of reclassified disabilities, assessment on appellant, State retirement act amended; State employee salary reductions; department's authority over manufacture and sale of bedding is broadened (Special session.) Cooperation with National Industrial Recovery Administration authorized including application of codes to intrastate commerce and authorization to utilize State employees, national employment office system accepted, workmen's compensation law amended in regard to procedure for and payment on account of reclassified disabilities.

North Carolina. Women's hours law enacted; unemployment insurance investigating committee created; workmen's compensation law amended in regard to electric railways, awards, certain sawmill and logging operators, third party action, free choice of physician, certain school employees; commissioner of labor's powers clarified; economy investigation ordered.

North Dakota. Bond requirements to secure wages in public works contracts amended, Federal child labor amendment ratified; workmen's compensation law amended in regard to bureau revision and coal mine operators; compulsory State-wide old age pension system adopted; industrial commission act reestablished; industrial survey commission act repealed.

Ohio. Wage exemptions from execution and attachment, minimum wage law for women and minors enacted; national employment office system accepted, State Industrial Recovery Act enacted providing for codes in intrastate commerce; elevator inspection provisions strengthened; Federal child labor amendment ratified; workmen's compensation act amended; compulsory State-wide old age pension system adopted on referendum November 7.

Oklahoma. Workmen's compensation law amended in regard to competitive State insurance fund, payments, hearings, claim-filing. (Special session.) Emergency relief and construction act amended; Federal child labor amendment ratified.

Oregon. Wage collection act amended; registration of labor unions required; injunctions in labor disputes are limited; "yellow-dog" contracts voided; private employment agency law amended; Federal cooperation in public

works provided for; emergency relief committee created; Committee to investigate unemployment insurance created; Federal child labor amendment ratified; State mining board created; factory inspection and boiler inspection fee requirements changed; workmen's compensation law amended in regard to appeal procedure, extraterritoriality, volunteer firemen, coverage, legal fees, alien payments, benefits, hazardous occupations, elective provisions, accident fund payments, defaulting employers, third party actions, State fund payments, reopened cases; vocational rehabilitation act amended; county old age pension act enacted; State employees' wages reduced. (Special session.) No labor laws enacted.

Pennsylvania. Mechanics' lien law amended; "yellow-dog" contracts voided; mine safety act amended; child labor investigation ordered; workmen's compensation law amended in regard to judgments against employers, work relief employees, State fund audit; State employees' retirement act amended. (Special session.) Old age pension law enacted.

Philippines. Wages safeguarded on public works contracts; wages declared preferential claims; mediation and conciliation of industrial disputes provided; private employment agency law enacted; employers required to furnish free emergency medical treatment; retirement gratuities provided for public employees; departmental reorganization and amendment.

Puerto Rico. Child labor act amended; workmen's compensation law amendments; public employees' retirement act amended. (Special session, 1933.) No labor laws enacted.

Rhode Island. Emergency unemployment relief act enacted and amended. (Special session.) Emergency public works act enacted providing for Federal cooperation; emergency unemployment relief act amended; investigation of working conditions in manufacturing plants and textile mills authorized.

South Carolina. Act granting preference to citizens in public works employment amended.

South Dakota. Hours of motor vehicle drivers limited; Attorney General designated Industrial Commissioner. (Special session.) Eight hour day established for public employees.

Tennessee. Garnishment laws amended; workmen's compensation law amended in regard to violations, prosecution provisions and insurance company bond requirement; departmental reorganization.

Texas. Wage payment law amended; prevailing wage required on public works; hours law for women amended; cooperation with Federal Reconstruction Finance Corporation authorized; unemployment relief commission created.

Utah. Payment of public payrolls in gold coin required; injunctions in labor disputes limited; "yellow-dog" contracts voided; minimum wage law for women and minors enacted; prevailing wage required on public works; constitutional amendment on minimum wage proposed and ratified, November 7; emergency relief commission authorized, child labor act amended; workmen's compensation law amended in regard to double compensation for illegally employed minors; committee to investigate State government created. (Special session.) No labor laws enacted.

Vermont. Wage preference act amended; minimum wage provided for highway construction; public employee salary reductions. (Special session.) Federal-State cooperation in public works.

Virginia. (Special session.) No labor laws enacted.

Washington. Lien law on crops amended; hours of certain motor vehicle drivers are limited; emergency relief act enacted; mining code amended; Federal child labor amendment ratified; workmen's compensation law amended in regard to accident fund payments, Federal vocational rehabilitation act accepted; county old age pension system adopted.

West Virginia. Prevailing wage on public works required; workmen's compensation law amended in regard to State fund investments; governor authorized to consolidate State departments. (Special session.) Committee on government efficiency authorized.

Wisconsin. Law exempting wages from garnishment amended; wage payment law extended; wage collection law revised; minimum wage established on public works contracts; national public employment system accepted; child labor act amended; workmen's compensation law amended in regard to exemption requirements, liability for occupational disease disability, procedure in certain respects, examiners' authorization to make decisions; compulsory provisions of old age pension act postponed until Jan. 1, 1935; interim investigating committee on old age pensions created; compulsory provisions of unemployment reserves act temporarily postponed and further amended.

Wyoming. Wage payment on public works contracts protected; injunctions in labor disputes are limited; women's hour law amended; mining code amended; workmen's compensation law amended in regard to coverage, procedure, accident fund payments, benefits; Department of Commerce and Industry changed.

United States. (72nd Congress.) One-day-rest-in-seven required for barbers in the District of Columbia; President is empowered to reduce, coördinate and consolidate government departments. (73rd Congress.) National public employment office system adopted, abolishing the existing employment service, creating a representative Federal advisory council and providing for cooperation with the States in establishing and maintaining public employment offices; President is authorized to provide emergency employment through public works projects including contracts with States; Federal Emergency Relief Act enacted providing for cooperation with the States and creating Federal emergency relief administration; National Industrial Recovery Act enacted providing for establishment of codes of fair competition, creating a Federal emergency administration of public works to complete a comprehensive programme of public works and construction projects and appropriating \$3,300,000,000, Emergency Railroad Transportation Act enacted creating Federal coordinator of transportation whose authority includes power to investigate and recommend methods of stabilizing railroad labor employment and improving labor conditions; public employee salary reductions; compulsory furloughs.

LABOR LEGISLATION, AMERICAN ASSOCIATION FOR. Founded in 1906, this membership organization of socially-minded economists, lawyers, journalists, labor leaders, and employers has worked along scientific lines, fearlessly attacking needless industrial evils from the general welfare viewpoint. It continues its work as the American arm of the International Association for Social Progress formed by the fusion of the three international organizations for labor legislation, unemployment, and social insurance. See SOCIAL PROGRESS, INTERNATIONAL ASSOCIATION FOR. Progress of the Association was recorded in its substantial quarterly, the *American Labor Legislation Review*, the December, 1933 issue of which contained a convenient annual summary and index of all new labor laws enacted in the United States. A cumulative index to the preceding 20 volumes of this *Review* was published in 1931.

The continuance of business depression during the year brought renewed interest in the Association's unemployment programme. As in 1915 and 1921 a country-wide unemployment survey was made in 1930 and standard recommendations concerning emergency relief measures, public employment agencies, long-range planning of public works, stabilization, and unemployment insurance were stressed. After consultation with representative authorities throughout the country an unemployment insurance bill was drafted which the Association called "An American Plan for Unemployment Reserve Funds" and which was carefully framed to meet the special conditions of American industrial life. It was revised in 1933 and printed in the June, 1933 issue of the Association's quarterly *Review*.

The twenty-seventh annual meeting was held at Philadelphia, December 27-29, several sessions being held jointly with the American Economic Association, and the American Statistical Association.

The president in 1933 was Ernest G. Draper, the secretary, John B. Andrews, with headquarters at 131 East 23rd Street, New York City. See LABOR LEGISLATION.

LABRADOR. A dependency of Newfoundland bounded west and south by the Province of Quebec; the coast boundaries are Blanc Sablon in the south and Cape Chidley in the north. Area, 112,400 square miles; population (1931 census), 4264, of whom 1300 were Eskimos. Fishing and lumbering are the chief industries. See NEWFOUNDLAND.

LABUAN. See STRAITS SETTLEMENTS.

LACROSSE. With more rules changes affecting the play materially, Johns Hopkins Univer-

sity once again was supreme in lacrosse ranks in 1933. The college team that had beaten Canada in the demonstration games at the Olympic games in 1932 went through the season undefeated, after facing a long row of worthy opponents, and was awarded the national championship. At the college where lacrosse is the major sport, the 1933 team was considered the best in the history of the institution.

Meeting before the season opened, the rules committee agreed on more changes in the playing code, supplementing the rather drastic changes made in 1932. The playing field, made smaller in 1932, was enlarged from eighty to ninety yards in length and to sixty yards in width. One important change was that declaring that three defensive men be between a player and the goal in order for that player to be "on-side." Only two were sufficient previously. Two positions were dropped—second attack and second defense—and the game was divided into quarters instead of halves and substitutions were permitted each period. These new rules served to speed up the game and make it more appealing both to the spectator and to the player, and had a beneficial effect in reducing injuries to a minimum. The year 1933 showed fewer injuries than in a decade.

Increased activity was shown in the game throughout the United States, with teams being formed in the south, mid-west and on the Pacific Coast for the first time. High school leagues were organized in Philadelphia and in Maryland, and in Baltimore, headquarters of the sport, in particular, even grammar school leagues were formed and teams played arduous schedules. The Public Schools Athletic League championship in New York City was taken by Alexander Hamilton High School.

Women also inaugurated lacrosse competition, and Baltimore won the first women's intercity matches by downing teams from Philadelphia and Boston.

LAFAYETTE COLLEGE. An institution for the higher education of men in Easton, Pa., founded in 1820. The registration in the autumn of 1933 was 900, the enrollment being restricted to 1000. The faculty numbered 93. The productive funds amounted to \$3,859,068 in 1933, and the income for the previous year was \$131,387. The number of volumes in the library was 87,134. President, William Mather Lewis, A.M., LL.D., Litt.D.

LA GUARDIA, FIORELLO H. See New York; RAPID TRANSIT.

LANDS, PUBLIC. During the fiscal year ending June 30, 1933, the total original public land entries, including those on Indian lands, fell to 3,117,781 acres from 4,551,774 acres the previous year, according to the annual report of U. S. Commissioner Fred W. Johnson of the General Land Office. The acreage included in public land entries is not, however, an infallible yardstick with which to measure the work accomplished, for each year adds to the already intricate land system many new laws that further complicate the work; 71 public land laws were enacted during the second session of the Seventy-second Congress and first session of the Seventy-third Congress that affect the system.

Homestead entries continued to account for over 87 per cent of the public lands appropriated. Nearly three-fourths of the lands homesteaded during the year were in the four Rocky Mountain States of Montana (233,237 acres), Wyoming

(678,777 acres), Colorado (254,228 acres), and New Mexico (721,579 acres). The geographic centre of homestead entries remains, as for the past 10 years, in northwestern Colorado, but the geographic centre of the vacant, unappropriated and unreserved public lands is 300 miles west on the Utah-Nevada boundary near Ely, Nev. There remained on June 30, 1933, 172,084,580 acres, exclusive of Alaska, of vacant, unappropriated and unreserved public lands.

Under authority of the Emergency Conservation Act, a camp was established in May to control a number of the coal fires in the Little Thunder Basin, Wyo. The superintendent and foremen were selected from those having years of experience in coal mining and kindred work in the coal fields of Wyoming, and at the close of the fiscal year the camp of 200 workmen was completely organized and work commenced on five separate and distinct fires.

The total cash receipts from sales, leases, and other disposition of public lands (including receipts from copies of records, sales of government property, etc.) were \$3,812,208 and from proceeds of Indian Lands \$47,222, an aggregate of \$3,859,430, all of which was deposited in the Treasury. Receipts of the Federal government from bonuses, rentals, and royalties under the act of Feb. 25, 1920, providing for the leasing of mineral rights on the public domain, aggregated \$3,256,440. The largest receipts were from mineral lands in California, the amount under this act being \$1,643,222. Wyoming came second with receipts totaling \$1,224,017. Receipts from the other States were: New Mexico, \$139,092; Utah, \$79,856; Montana, \$57,715; Colorado, \$53,400; North Dakota, \$33,515; Washington, \$9537; Alabama, \$9101; Louisiana, \$4813; Idaho, \$1225; South Dakota, \$498; Nevada, \$240; and Arizona, \$203. These figures do not include \$14,377 received as royalties on coal leases in Alaska, of which the Territory receives no share.

The aggregate receipts for the year, \$3,859,430 are distributed under the law approximately as follows: Reclamation fund, \$1,981,445; to the public-land States and certain counties within such States, \$1,328,585; general fund, \$502,176; and to the various Indian tribes, \$47,222. Total expenditures for the conduct of the business of the General Land Office (including expenses of the district land offices \$226,491) amounted to \$1,781,164.

The term "public domain" embraces all of the area that was once public land or in the control of the Federal government, including Alaska. In the United States proper it includes all the States north and west of the Ohio and Mississippi rivers except Texas, and includes in addition the States of Mississippi, Alabama, and Florida. The total area of the public domain in the United States proper is 1,442,200,320 acres. The accompanying is the disposition of this vast area as worked out from available records of disposals and with arbitrary adjustment for final entries and disposals that were later canceled and for exchanges, etc., that resulted in reissuance of patents, and with further adjustment due to purchases of patented lands by the government for special purposes. The subject, which involves the history of the growth and development of our country, is complex and changing and subject to numerous classifications and exceptions, but the accompanying table pictures the situation in its simplest form.

	<i>Acres</i>
Title passed from the United States:	
Homesteads (approximate)	274,000,000
Cash sales and miscellaneous disposals (approximate)	418,000,000
State grants for educational or other purposes	181,650,470
Canal and river improvement grants to States	6,842,920
Wagon-road grants to States	3,359,188
Railroad grants to States	38,206,390
Railroad grants to corporations	94,155,512
Total area disposed of	1,016,214,480
Pending and unperfected public land entries	23,208,704
Title remaining in the United States:	
National forests	187,576,500
National parks and monuments	8,370,989
Indian reservations (estimated net)	56,676,535
Military, naval, experimental reservations, etc. (approximate)	1,000,000
Withdrawals (estimated net)	27,068,532
Unappropriated and unreserved public land	172,084,580
Grand total	1,442,200,320

LARDNER, RING(GOLD) W(ILMER). An American humorist, died at East Hampton, Long Island, N. Y., Sept. 25, 1933. He was born at Niles, Mich., Mar. 6, 1885, and after receiving a high school education attended for a short time the Armour Institute of Technology in Chicago. Discovering, however, that engineering was not his forte, he became in 1905 a reporter on the South Bend (Ind.) *Times*. Two years later he went to Chicago where he was successively a writer of sporting news on the *Inter-Ocean*, the *Examiner*, and the *Tribune*. He edited the *St. Louis Sporting News*, a weekly, during 1910-11 and then became associated with two Hearst papers, the *Boston American* and the *Chicago American*. In 1913 he succeeded Hugh E. Keogh in the conduct of the *Chicago Tribune's* sports column, "In the Wake of the News." In 1915 appeared his first published work, *Bib Ballads*.

Lardner's humorous and slangy genre sketches of the sporting world, which began to appear at this time in the *Saturday Evening Post* and other magazines, owed their origin to some of the characters he met in the dressing rooms of baseball squads or while traveling with the teams. The best of the series was *You Know Me, Al* (1915), which in its lampoon of professional athletics established a debunking school of sports criticism. He carried his satire to other circles in *Gullible's Travels* (1917), an amusing exposé of snobbery among the newly rich. It was followed by *Own Your Own Home* (1917); *Treat 'Em Rough* (1918); *The Real Dope* (1918); *My Four Weeks in France* (1918); *The Young Immigrants* (1919); *Symptoms of Being 35*; and *The Big Town* (1921), the latter depicting with fidelity and kindliness various types of Broadway hangers-on.

In 1919 Lardner removed to New York City where until 1926 he was associated with the Bell Newspaper Syndicate. He achieved artistic maturity and a seriousness of purpose with the publication in 1924 of *How to Write Short Stories*, a collection of his own stories amusingly told in the style he had found effective—a departure from conventional syntax and the use of

slang and other expressions rooted in the speech of the American lower middle-class. It was followed by two other collections, *What of It?* (1925) and *The Love Nest* (1926). *The Story of a Wonder Man* (1927) was a satire on the often "ghost-written" autobiographies of certain successful business men. In 1928 he achieved recognition as a playwright with the production of *Elmer the Great*, on which George M. Cohan had collaborated. In 1929, with George S. Kaufman, he wrote *June Moon*, acclaimed one of the ten best plays of the year. His last published work was *Round Up* (1929), a collection of all his short stories.

LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF. A religious body, commonly known as the Mormon Church, organized in 1830 at Fayette, N. Y., by Joseph Smith. For the early history of this church see THE NEW INTERNATIONAL ENCYCLOPÆDIA under *Mormons*.

In 1933 the organization of this church included 104 stakes, 936 wards, and 76 independent branches, with a membership of 554,462. There were 13 missions in America with a membership of 103,327; the missions in Europe had a membership of 29,989, and those in the Pacific Islands of 16,171. Of the 1260 missionaries, 622 were at work outside the United States. The administrative affairs of the church and the performance of all church ordinances are attended to by the priesthood, consisting of the Melchizedek Priesthood, a senior order, with 84,093 members, and the Aaronic Priesthood, a junior order, with 87,379 members.

The general authorities who have jurisdiction over the entire church are the First Presidency, the Quorum of the Twelve Apostles, the First Council of Seventy, and the Presiding Bishopric. In 1933 these authorities were: First Presidency: Heber J. Grant, president, Anthony W. Ivins, first counselor; J. Reuben Clark, Jr., second counselor. Quorum of the Twelve Apostles: Rudger Clawson, president, and Reed Smoot, George Albert Smith, George F. Richards, David O. McKay, Joseph Fielding Smith, Stephen L. Richards, Richard R. Lyman, Melvin J. Ballard, John A. Widtsoe, Joseph F. Merrill, and Charles A. Callis, apostles. First Council of Seventy: J. Golden Kimball, Rulon S. Wells, Charles H. Hart, Levi Edgar Young, Antoine R. Ivins, Samuel O. Bennion, and John H. Taylor. Presiding Bishopric: Sylvester Q. Cannon, presiding bishop; David A. Smith, first counselor; and John Wells, second counselor.

The church maintains seven temples which are devoted to sacred ordinances for the living and the dead, such as baptisms, endowments, and marriages. It maintains also Brigham Young University (q.v.), the Latter-day Saints Business College, three collegiate institutes, one high school, 84 senior seminaries (schools adjoining high schools and providing special religious instructions), and 351 junior seminaries (schools for the religious training of junior high school students). Enrollment in senior seminaries was 13,438 and in junior seminaries, 20,537.

The auxiliary bodies include a women's relief society, numbering, in 1933, 67,382 members,

who care for the sick and poor. The Sunday Schools in 1933 had an enrollment of 806,313 pupils and 29,953 officers and teachers. The two mutual improvement associations, composed of young people, had an enrollment of 128,732. The primary association for those under 12 had a total membership of 113,277. The church holds in Salt Lake City, Utah, two general conferences each year, one during the first week in April and the other the first week in October, at which the work of the general authorities is reviewed.

LATTER-DAY SAINTS, REORGANIZED CHURCH OF JESUS CHRIST OF. After the death of Joseph Smith in 1844, several factions developed among the Latter-day Saints. See *THE NEW INTERNATIONAL ENCYCLOPEDIA* under *Reorganized Church of Jesus Christ of Latter-Day Saints* for the early history of this church.

In 1932 the church reported a membership of 112,000, which included members throughout the United States and in Canada, Great Britain, Australia, Germany, Isle of Pines, Holland, Switzerland, Norway, Sweden, Palestine, South Sea Islands, Hawaii, and New Zealand. There were 745 churches, 7000 ministers, and 730 Sunday schools with 50,000 pupils. The church maintains Graceland College at Lamoni, Iowa, and homes for the aged and the Independence Sanitarium at Independence, Mo. The official periodical, the *Saints' Herald*, is issued weekly. Headquarters are at Independence, Mo.

LATVIA. A Baltic republic established Nov. 18, 1918, from territories of the former Russian Empire. Capital, Riga.

AREA AND POPULATION. With an area of about 25,400 square miles, including lakes, Latvia had a population of 1,929,000 on Jan. 1, 1932, compared with 1,900,045 at the census of 1930. Letts comprised 73.42 per cent of the total population; Russians, 12.52 per cent; Jews, 4.97 per cent; Germans, 3.68 per cent; Poles, 3.12 per cent; Lithuanians, 1.36 per cent. In 1932 births numbered 36,340; deaths, 26,000; marriages, 14,750. The birth rate per 1000 inhabitants was 18.9 in 1932; death rate, 13.5. Riga (377,917 inhabitants in 1930) and Liepāja (Libau) (57,238) were the chief cities.

EDUCATION. Each national minority has its own schools, with its own language of instruction. In 1931-32 there were 2083 primary schools, with 197,540 pupils; 142 secondary schools, with 21,344 pupils; the Latvian University at Riga, with 8766 students; and 110 technical professional schools, with 10,082 students.

PRODUCTION. Latvia is predominantly agricultural, but industry is expanding. Production of the chief crops in 1932 (in metric tons) was: Rye, 299,550; barley, 192,660; oats, 332,990; wheat, 144,020; potatoes, 1,205,140; flax, 19,274; linseed, 18,610; Livestock in 1933 included 1,155,800 cattle, 585,900 swine, 1,114,300 sheep, and 370,200 horses. The forests, covering 4,098,280 acres, produced 2,285,327 cubic meters of timber (excluding firewood) in 1930-31. Industrial establishments in 1932 numbered 3032, with 66,304 employees. The value of industrial production in 1931 was 356,132,000 lats (lat equals \$0.193 at par). The number of registered unemployed on Dec. 31, 1932, was 27,200; the monthly average for the year was 14,587.

COMMERCE. Including bullion and specie, Latvian imports in 1932 were valued at 84,576,000 lats (177,083,000 lats in 1931) and exports at 96,528,000 lats (163,757,000 lats in 1932). The

balance of trade was favorable by 11,952,000 lats in 1932 and unfavorable by 13,326,000 lats in 1931. Latvia purchased 35.6 per cent of its 1932 imports from Germany, against 13.9 per cent from the United Kingdom, and 10.1 per cent from the Soviet Union. The United Kingdom took 30.8 per cent of all its exports, Germany 26.2 per cent, and the Soviet Union 14.7 per cent. The three leading export items in 1932 were: Butter, 18,600 metric tons worth 30,990,000 lats; vehicles, 11,160,000 lats; boards and planks, 10,330,000 lats. Drugs and chemicals, coal and coke, woolen yarns, metal manufactures, cotton piece goods, and refined petroleum were the chief imports.

FINANCE. The budget for the fiscal year ended Mar. 31, 1932, showed a deficit of 24,200,000 lats, with total expenditures of 152,300,000 lats. The budget for 1932-33 (preliminary results) showed receipts of 130,197,000 lats, expenditures of 127,598,000, and a surplus of 2,599,000 lats. However, a final deficit of 7,000,000 lats was anticipated. Budget estimates for 1933-34 balanced at 140,712,464 lats, of which 16,400,000 lats consisted of extraordinary expenditure to be covered by bond issue. The public debt on Apr. 1, 1932, amounted to 106,500,000 lats (116,300,000 lats on Apr. 1, 1931). Of the 1932 total, 105,600,000 lats were owed to the United States and British governments.

COMMUNICATIONS. Latvia in 1933 had 1724 miles of state railways, mostly of Russian gauge, extensively used for transshipment of goods to and from the Soviet Union. A 19-mile stretch of a new 94-mile line from Riga to Rujiena was opened in 1933. There were about 22,796 miles of highway (797 miles of macadam). In 1932 a total of 2625 vessels of 1,235,000 net registered tons entered the ports and 2623 vessels of 1,228,000 tons cleared. The merchant marine on July 1, 1932, included 106 steamships and motorships of 187,238 gross tons.

GOVERNMENT. The Constitution of Feb. 15, 1922, vested executive power in a president, elected by Parliament for three years, and legislative power in the *Saeima* (Parliament) of 100 members, elected by direct male and female suffrage for three years. There were some 25 different parties or factions represented in Parliament in 1933. President in 1933, Albert Kviesis, elected Apr. 9, 1930.

HISTORY. In domestic politics, the outstanding development of 1933 was the reelection in April of President Kviesis to serve another three-year term. In the foreign field, the main developments were the Fourth Economic Conference of the Baltic States, held in Riga September 8-9, the signing of a new non-aggression agreement with the Soviet Union, and commercial and political friction with Nazi Germany. The Baltic Conference was attended by unofficial delegates from Estonia, Lithuania, and Latvia. They adopted resolutions dealing with the projected Customs union, railway tariffs, intrusion of the state in private business, economic coöperation of the three Baltic states, currency and credit policies, shipping problems, and the establishment of a permanent conference organ.

The non-aggression pact signed by Latvia and the Soviet Union in 1932 was implemented by the multilateral treaty of July 3, 1933. The latter not only pledged the signatories to renounce aggression among themselves, but also specifically defined aggression in accordance with a formula

offered by the Soviet delegation at the Geneva Arms Conference earlier in the year. The trade war with Germany resulted from a boycott declared on German goods by Jewish and Socialist groups in Latvia. On June 12, the Hitler government retaliated by prohibiting all imports of Latvian butter into Germany. The Latvian government temporarily barred further imports from Germany, but on June 16 the Riga authorities capitulated and agreed to prohibit the boycott agitation as well as the anti-Nazi movement in Latvia. Germany then withdrew its restriction upon Latvian butter.

Nazi propaganda in Latvia continued to raise difficulties for the government. Late in December two alleged Hitlerite agents were expelled from the country. On November 22 the Diet revoked the parliamentary immunity of seven Communist deputies and six of them were immediately arrested on charges of conspiring to overthrow the republican régime. Notwithstanding these developments, the government ratified the non-aggression treaty with the Soviet Union early in December and on December 4 signed a new Soviet-Latvian trade agreement, which was ratified by the Diet on December 19. Latvia made "token" payments of \$6000 and \$8500 on war-debt installments of \$118,961 and \$180,705 due the United States government on June 15 and Dec. 15, 1933, respectively.

With the exception of a slight improvement in the cement, textile and paper industries, economic conditions in 1933 remained fundamentally unchanged, as compared with 1932. Satisfactory crop yields were offset by low prices. A budget deficit of about 10,000,000 lats was forecast for the fiscal year ended Mar. 31, 1934. Imports during 1933 increased 6.5 per cent in value, while exports declined in value by 15.5 per cent, with the result that the import surplus increased to nearly 10,000,000 lats.

LAUGHLIN, läf'lin, JAMES LAURENCE. An American political economist, died at Jaffrey, N. H., Nov. 28, 1933. Born at Deerfield, O., Apr. 2, 1850, he attended Harvard University where he took his A.B. degree in 1873 and his Ph.D. degree three years later. After teaching at the Hopkinson's Classical School in Boston he joined the political economy faculty of Harvard, serving as instructor from 1878 to 1883 and as assistant professor from 1883 to 1887. He then became president of the Manufacturers' Mutual Fire Insurance Co. of Philadelphia, but in 1890 accepted a call from Cornell University to serve as professor of political economy. In 1892 he became professor and head of the department of political economy at the University of Chicago, where he remained until his retirement as professor emeritus of the institution in 1916.

Dr. Laughlin acted as financial adviser to several State and government monetary commissions. In 1894-95 he prepared for the Dominican Republic a scheme of monetary reform which was afterwards adopted. The report which he prepared as a member of the Indianapolis Monetary Commission in 1897 was long considered one of the important documents in the history of American banking and monetary reform. In 1906 he delivered, by invitation, in Berlin a series of lectures entitled *Aus dem Amerikanischen Wirtschaftsleben* and in 1909 served as delegate to the Pan American Scientific Congress at Santiago, Chile. As chairman of the executive committee of the National Citizens' League for the Promo-

tion of Sound Banking from 1911 to 1913, he prepared the way for adoption of the Federal Reserve System. In 1919 he was a member of the European Commission of the National Industrial Conference Board.

Besides editing the *Journal of Political Economy* (after 1892), Dr. Laughlin prepared an abridgment of Mill's *Principles of Political Economy* (1884) and wrote *The Study of Political Economy* (1885); *History of Bimetallism in the United States* (1886); *Elements of Political Economy* (1887); *Facts about Money* (1895); *Principles of Money* (1903); *Reciprocity* (1903); *Industrial America* (1906); *Latter-Day Problems* (1909); *Banking Reform* (1912); *Credit of the Nations* (1918); *Money and Prices* (1919); *Banking Progress* (1920); and *Money, Credit, and Prices* (2 vols., 1931). In his last work, *The Federal Reserve Act: Its Origin and Problems* (1933), he was a bitter opponent of inflation as a remedy for increasing consuming power so as to fit reciprocal supply and demand.

LAW IN 1933. ADMINISTRATION. In general. Unfortunately we are obliged to begin with "Lawlessness in 1933"; for that has been a conspicuous feature of the year, especially in its latter portion. President Martin, in his annual address before the American Bar Association at Grand Rapids, Mich., voiced a growing conviction when he said that "America is a crime breeding and criminal protecting nation." In confirmation we have only to recall the attempted assassination of the President-elect and fatal wounding of Mayor Cermak in Miami at the beginning (February) of the year and, at its close, the frightful murder of the Armenian primate, Archbishop Tourian, in his church on Christmas day—for which we must go back to the twelfth century and the assassination of Thomas à Becket for a parallel. The crime wave seems spreading and to include not only the more violent forms, such as murder, bombing, kidnapping, robbery in broad daylight, etc., but also the more subtle phases. Two cases of forgery on a huge scale were uncovered in the middle west, one of Kansas State bonds, aggregating \$1,000,000 and involving the state treasurer, auditor, and attorney general who were impeached by the State House of Representatives. The other case arose in Omaha, Neb., where municipal bonds, of large amounts, were found to have been forged. But if the crime wave continues, efforts to check it likewise appear to have increased. The American Bar Association at the session above mentioned, adopted, as the foremost objective in its coördinated programme for the legal profession of the country, "criminal law and its enforcement." The United States Flag Association offered prizes aggregating \$150 for the two best papers presenting practical methods for combating lawlessness and more than 20,000 such were submitted. Soon after taking office, the new United States Attorney General began making plans to meet the situation. Early in July he announced the appointment of Joseph B. Keenan of Cleveland as his Assistant in charge of criminal prosecutions and the latter has already obtained some notable verdicts of conviction.

ANARCHY IN THE RURAL REGIONS. From various rural communities of the United States, came reports of concerted efforts to frustrate the execution of judicial decrees. On the 27th of April

at Le Mars, Ia., District Judge Charles C. Bradley was seized and dragged from his court room by a mob of between 150 and 200 men, some of them shouting, "Get a rope—hang him." A rope was procured, fastened around the judge's neck and thrown over a telegraph pole; notwithstanding which he steadfastly refused to promise not to sign further foreclosure decrees. Such scenes were not, however, confined to the United States. In August, groups of farmers in southern England, estimated at 10,000, conspired to resist payments of tithes—of which there are still two classes—constituting a perpetual charge on the land and amounting in some parts to as much as \$1.70 per acre. Hundreds of distress warrants were issued to enforce payments of these tithes; but their execution was often frustrated by crowds of farmers threatening the officials with violence. In one case, where three bullocks were seized, 40 policemen were required to resist the mob. Among persons charged with "unlawful assembly" in this connection, was Lady Evelyn Balfour, daughter of the second Earl of Balfour. Her case and those of 36 others were continued until after the harvest season. See also LYNCHINGS.

CAUSES CÉLÈBRES. As foreshadowed in these columns (see INTERNATIONAL YEAR BOOK for 1932, p. 434) the indictments against four Orientals for criminally assaulting Mrs. Thomas Massie, were dismissed in the Territorial court at Honolulu on February 13. Meanwhile on February 4, Chang, the Chinese defendant, had pleaded guilty to a similar offense against a Hawaiian girl and on February 18 was sentenced to 9 years and 11 months of imprisonment for violating his parole from a sentence in still another assault case several years earlier. Mrs. Massie, in Philadelphia, stated that the commutation of her sentence to one hour was the result of a "deal" with the authorities by which she agreed to leave the islands in order to secure immunity for her mother and husband. A resolution was thereupon introduced into the Hawaiian Senate, calling for the removal of Attorney General Harry Hewitt, for his handling of the cases.

United States Senator James J. Davis, whose trial for using the mails to defraud, had been suspended (see INTERNATIONAL YEAR BOOK, for 1932, p. 434), was again placed on trial and, after a lengthy one, was acquitted in October. Charles E. Mitchell, former head of the National City Bank, who had been indicted for making false returns of his income, was likewise acquitted after a long trial. The notorious "Scottsboro Case," in which prior convictions and death sentences were reversed by the Supreme Court (see INTERNATIONAL YEAR BOOK for 1932, p. 435), was retried as to one of the accused (Patterson) at Decatur, Ala., in April and, despite a complete retraction by one of the two complainants, the jury returned a verdict of guilty, which, however, the trial judge (Horton) set aside in an exhaustive opinion, reviewing critically the testimony of the other complainant. The remaining defendants were tried later before another judge and convicted, as was also Crawford, the Virginia Negro who had been indicted for murder, who had fled to Boston and whose extradition (q.v.) was stayed for a time by the order of Judge Lowell. As recommended by the jury (all white) he was sentenced to life imprisonment.

In Germany the trial of the five persons, accused of setting fire to the Reichstag building in Berlin commenced on September 21. The Nether-

lander, Marinus Van der Lubbe, confessed his guilt; but his conduct at the trial was such that his sanity was questioned. The other four, all communists, denied guilt. One of them, Torgler, was defended by Dr. Alfons Sack, a German lawyer; for the remaining three, all Bulgarians, the court appointed Dr. Teichert, though one of them, Dimitroff, insisted that he preferred to defend himself. Foreign lawyers were not permitted to appear; but an international group of five, including one woman, assembled at London in advance of the trial, absolved the four communists and charged that the fire "was set by or on behalf of the National Socialist party." Arthur Garfield Hayes of New York who attended the trial as an observer, asserted, on his return pending the hearing, his belief in the innocence of the four communists but made no charge of unfairness in the proceedings. The trial resulted in a finding of guilt as to Van der Lubbe alone, judgment being rendered on December 23.

In England Lieut. Norman Baillie-Stewart of the British army was court-martialed early in the year for disclosing military information to a foreign power. The evidence against him was entirely circumstantial and some of it was secret, the names of certain witnesses being withheld; but on April 13 he was sentenced to dishonorable discharge from the army and to five years of penal servitude in a civil prison.

Another trial in April was that of the engineers, Russian and foreign, at Moscow, before the Supreme Court of the U.S.S.R. on a charge of wrecking machinery. Of the 18 defendants, six were British subjects, of whom two were convicted and sentenced to terms of imprisonment, three were banished for five years, and one was acquitted. The Russians were convicted but one, whose offense was considered trivial, was not sentenced.

General Owen O'Duffy, after his release from prison by *habeas corpus* (see below) was charged before a military tribunal of the Irish Free State, with sedition and inciting murder. Justice O'Byrne of the High Court later granted a conditional order prohibiting the military tribunal from proceeding, on the ground that the charge was outside its jurisdiction. The president of the tribunal continued the cause but announced that such action was taken only to avoid a conflict with the civil court and maintained that the former had jurisdiction. Various prosecutions for hoarding gold in violation of the emergency banking act were instituted in the United States during the year but none had been brought to a final determination before its close.

EXTRADITION (Interstate). Several cases under this head, arising previously (see INTERNATIONAL YEAR BOOK for 1932, p. 435), were still pending in 1933. The Lukes Lea, father and son, of Tennessee, convicted in North Carolina, applied to a remote county judge in the former State, after its governor had honored the North Carolina requisition, for a writ of *habeas corpus*, which was eventually denied. The Leas thereupon appealed to the State Supreme Court which, on December 9, affirmed the ruling of the lower court unanimously in the result although reached by different lines of reasoning as disclosed by the two opinions. The court, however, allowed them three months more to apply for a review by the Federal Supreme Court. Thus the defendants have been able to delay for over two years the execution of their sentences. United States District Judge Lowell, at Boston, attracted much atten-

tion by granting a writ of *habeas corpus* to George Crawford, a Negro fugitive from Virginia, who had been indicted there for a double murder and for whom Governor Ely of Massachusetts had granted the requisition of the Virginia governor. Judge Lowell based his action on an affidavit reciting that Negroes had not served on juries in London County, Virginia, where Crawford was to be tried. The Court of Appeals reversed Judge Lowell's ruling, held the affidavit inadmissible and the question not subject to determination in *habeas corpus* proceedings. On October 16 the Federal Supreme Court upheld the last mentioned ruling and Crawford was returned to Virginia for trial with the result stated above. In *South Carolina v. Bailey*, 289 U. S. 411, the Supreme Court reversed a judgment of the North Carolina courts discharging, on conflicting evidence, a prisoner held on a requisition from the governor of South Carolina. The ground of discharge was the prisoner's claim that he was not in the State of South Carolina when the crime charged was committed; but he failed to testify and the Federal Supreme Court declared that "the (trial) judge would have been well advised if he had demanded that the prisoner present himself for examination." The International Association of Police Chiefs, in session at Detroit, on October 7, adopted as the first of its resolutions, a demand that the "extradition of criminals from one State to another be removed from the power of state authorities."

JUDICIARY. Before the American Law Institute on May 4, Chief Justice Hughes reported for the Supreme Court that "we have thus far (i.e. during the term which began in October) disposed of 213 cases on the merits and 543 applications for *certiorari*. All the members of the court have been at work without interruption." As no opinions are written in the second class of cases which he mentioned, this would represent somewhat less than 24 opinions for each of the nine justices. On December 11, the court rendered one of the few decisions in which it expressly overruled itself. This was in *Funk v. U. S.* 290 U. S. — (noticed *infra* p. 429). The overruled decisions are *Hendrix v. U. S.*, 219 U. S. 79 (1911) and *Jim Fucy Moy v. U. S.*, 254 U. S. 189 (1920), both comparatively recent. Other leading decisions of the year are discussed elsewhere under the subjects to which they relate. No vacancies occurred in the court's personnel during the year. The wall and roofs of the Supreme Court's new building were nearly completed and above the western portico are carved the words "*Equal Justice Under the Law*." Much work remains to be done on the interior and doubt is expressed of its full completion before 1935.

The Federal Judicial Code (tit. 28, sec. 218) requires the Chief Justice of the Supreme Court "annually to summon to a conference . . . the senior circuit judge of each judicial circuit" to "make a comprehensive survey of the condition of business in the courts of the United States . . . and submit such suggestions to the various courts as may seem in the interest of uniformity and expedition." The 1933 conference met in Washington on September 28 with the senior circuit judge present from each of the 10 circuits except the first, which was represented by a junior. The attorney general's report showed the disposition by the district, courts of 205,609 cases during the year ending June 30. Various legislative measures and additional judgeships

were recommended and suggestions were offered the Supreme Court relative to the rules of practice after verdict in criminal cases which are now in course of preparation. The report of the Citizens' Budget Commission's Counsel shows an increase of about 30 per cent in five years in the cost of maintaining the New York City courts. The personnel alone, exclusive of judges, increased more than 25 per cent.

Impeachment. For the first time in 20 years the Senate of the United States met in 1933 as a court of impeachment to consider articles presented by the House Judiciary Committee against District Judge J. Harold Louderback of San Francisco, who had been appointed by President Coolidge. There were five articles of impeachment. After a lengthy hearing there was a majority vote (45 to 34), but not the required two-thirds, for conviction under article 5. On each of the other articles the majority was for acquittal.

Necrology. Among the distinguished judges who passed away during the year 1933 were W. S. Kenyon of the United States Circuit Court of Appeals for the 8th Circuit, a former Senator from Iowa; Webster Thayer of Massachusetts, who presided at the Sacco-Vanzetti trial, and whose house was bombed (see *INTERNATIONAL YEAR BOOK* for 1932, p. 433); Richard E. Sloan formerly of the Arizona Supreme Court, and who helped to lay the foundations of that State's jurisprudence; Peter W. Meldrim, presiding justice of the eastern judicial circuit of Georgia and a former president of the American Bar Association; Warren Coffin Philbrook, retired member of the Maine Supreme Court and former Attorney General of that State; Sir Francis Lemieux, Chief Justice of the Superior Court of Quebec Province, and counsel for Louis Riel in the latter's trial for high treason at Regina in 1885; Sir Henry Fielding Dickens, Common Serjeant, who died on December 21 at the age of 85; and Chief Justice Jesse C. Hart of Arkansas who was in his 70th year.

JURIES. A recent report of the Boston Bar Association recites:

The fact that, during the past few years, jurors in this county (Suffolk) have been accepting bribes, is established beyond peradventure. Many different jurors have admitted the receipt of money. The disclosures have outraged the community, and there is an insistent demand, in which we join, that immediate steps be taken to overhaul the process by which Suffolk County jurors are selected.

Of some 30 former jurors who testified before the special commissioner investigating the situation, all stated that they had been "approached."

With such a situation existing in staid old Boston, we are not surprised to learn that on November 25, a grand jury at Paterson, N. J., returned two indictments, involving 12 persons, of whom seven were lawyers, for conspiring to obstruct justice by keeping witnesses and suspects out of the jurisdiction and attempting to discredit officials who had instituted prosecutions for a "jury fixing." Five were convicted on December 20. How a jury may sometimes work was well illustrated in the recent opinion of Justice Cardozo in *Clark v. U. S.*, 289 U. S. 1. The petitioner, a married woman, had been called to serve as juror in a prosecution against a former employer for using the mails to defraud. She failed to disclose her employment by the accused, was accepted by the prosecution as a juror, and stood out against the 11 others during a week of "deliberation," following eight

weeks consumed by the trial, until the jury was discharged for inability to agree. Judge Cardozo upheld petitioner's conviction for contempt.

Another illustration, showing how the jury system, even when functioning honestly, operates to delay justice, is found in *De Haan v. Winter* which has been before the Michigan courts during the year. It was an action for malpractice in treating an injury which occurred on Nov. 30, 1928. The action itself was commenced on Nov. 15, 1929 and after a trial in the circuit court, judgment was rendered for the plaintiff. Defendant appealed and on Jan. 12, 1932 the case was submitted to the supreme court which on April 4 of that year, reversed the judgment because an expert witness had been allowed to state his opinion as to the proximate cause of the injury; for "this invaded the province of the jury" (258 Mich. 300). Returned to the circuit court another long trial followed, another verdict and judgment for plaintiff, another appeal; and, on Mar. 2, 1933, another reversal, because a medical expert who gave no written basis for his opinion, was interrogated as to whether it was not opposed to certain medical authorities. "Although objections (to these questions) were sustained," said Clark J,

The effect of cross-examination is an impression that the opinion of the witness is not in accord with eminent medical opinion or authority and the jury, we think, must have been so impressed. Indeed such was the aim of the cross-examination. This is reversible error. (262 Mich. 197)

It will be seen that both reversals were expressly based on consideration for the jury. Had the trial occurred before judges or other experts, no such consideration would have been necessary. But the unfortunate plaintiff, now suffering for eight years from the injury which no one disputes, appears likely to spend more in litigation than he can hope to recover, even should he obtain a verdict which the supreme court will sustain.

Another factor which often complicates the tangled jury system, is the race question. We have seen (*ante* *extradition*) how a Massachusetts judge made it the basis of an order preventing extradition to Virginia. When that order was reversed and the prisoner was returned, the prosecution felt obliged to explain the absence from the jury of members of defendant's race. The jury commissioner was called and testified that he knew of no Negroes in the county who were qualified for jury duty. But after the verdict, finding the accused (Crawford) guilty of one of the two murders in which he was charged, his counsel offered to have him plead guilty in the other if he were saved from the gallows. The inclusion of members of his own race in the jury, would, therefore, evidently have made probable a clear miscarriage of justice. In another Virginia county, however, at Fredericksburg, two Negroes were drawn for the grand jury in December.

The topics considered by the judicial section of the American Bar Association at Grand Rapids in August concerned the jury system, viz., (1) Waiver of juries in civil and criminal cases; (2) Oral or written instruction to the jury; (3) Less than unanimous verdicts. Provision for the last is already made in certain States and a movement, said to be supported by former President Hoover, is reported from California to adopt it there and also to authorize the trial judge to comment on the evidence in his charge. A recent substitute for the jury in Oklahoma is the selec-

tion by the trial judge, with the approval of the parties, of two members of the bar to sit with the judge and participate in the trial and decision. It is reported as working satisfactorily and may prove to be a step toward the ultimate abolition of the jury. A Kentucky statute of the year (ch. 60) provides for a 13th juror who is to take no part in the deliberations, though he attends the trial, until a member of the regular panel is withdrawn. The new English Procedure Rules provide for dispensing with a jury, at the judges' discretion, in all but a limited class of civil cases, viz., actions for defamation, false imprisonment, seduction, breach of promise, fraud, etc.

Hardly, if at all, less ancient than the trial, or "petit" jury, is its counterpart, the presenting or "grand" jury (so called from its number 24 instead of the former's 12) which, in England, dates as far back as the Constitutions of Clarendon (1165). In many States of this country, as well as in several Canadian provinces, the grand jury has been abolished, its place being taken by an examining magistrate or an "information" being filed by the prosecuting attorney, after investigation conducted by himself or some one designated by him. On June 1, the "Administration of Justice Bill," which abolishes the grand jury in England (except in London and Middlesex, where it continues for the indictment of crown officials, for offenses committed outside the jurisdiction) was read for the second time in the House of Lords and was said to be certain of passage. On July 15, pursuant to legislation previously enacted, the grand jury was abolished in the province of Quebec. Some are calculating how long it may be ere the petit jury follows the same path.

In the *Comparative Law Bureau Bulletin* for 1933, Mr. Lionel M. Summers explains the recent change in the French jury, which functions in criminal cases only. If the court finds that the act charged constitutes a crime, the judges and jurors deliberate on equal terms under the presiding judge, voting on the penalty, in case of conviction, until a majority agrees on a specific one; after which the court retires to prepare the written judgment. This plan resembles that of the *naemd* in Sweden and of the *schöffengericht* of Germany, which has been copied in Fascist Italy and Spain. In Mexico, on the other hand, the jury has been superseded, by the "Supreme Council of Social Defense," created by the new Penal Code. In fact, outside of English speaking countries, the jury has never been otherwise than exotic and its steady displacement is not surprising.

LEGAL EDUCATION. The second subject in the American Bar Association's coordinated professional programme is "Legal Education and Admission to the Bar."

Law schools are now operating in every American State except New Mexico and 86 of them have been approved by the American Bar Association, Hartford College of Law in September, being the first night school to meet the test. There are about 100 "unapproved" (part time or mixed) law schools, which have somewhat less than two-thirds of the country's 38,000 law students. This total represents about 8000 less than the attendance of even five years ago and Dean Clark of the Yale Law School finds as a silver lining to the depression, that fewer young lawyers now locate in the cities and more are starting in the small towns.

The New York Joint Conference on Legal Educa-

tion, on December 16, adopted a report relative to character examinations, which recommends the requirement of a "qualifying certificate" upon entering a law school and a five-year probationary period after admission to the bar.

Interesting as a landmark in the history of American legal education, was the 160th anniversary of the foundation, at King's College (now Columbia University) in 1773, of a professorship of "natural law," held by John Vardill, an alumnus of the college. It was not only the first law professorship in America but the second in the British Empire, Blackstone's Vinerian professorship at Oxford having preceded it by only 15 years. On June 9, the University of Cincinnati Law School observed its centenary, the address being given by Dean Pound of Harvard. The school was founded as part of "Cincinnati College," by Timothy Walker, a Harvard graduate and author of a well-known treatise on American law, and J. C. Wright, later Supreme Court Reporter. William H. Taft was an alumnus and later dean for a number of years. On February 19, the faculties of the Yale Law School and of the Harvard Graduate School of Business, announced a joint course in law and business. Students will be selected by representatives of both institutions, limited in number and required to spend the first, third, and fourth years at New Haven, only the second being passed at Cambridge. Yale will confer the LL.B. degree. The plan marks a departure in the coöperation of rival institutions and in requiring four years of undergraduate study. In August, intimations were given of a proposed merger of Chicago and Northwestern Universities which would include two leading law schools. Dean Green of the last named school has an article in the *American Law School Review* on "Integrating Law School and Community," in which he shows what such schools may accomplish outside their primary work of training for the bar; instancing the legal clinic, legal aid, and legal publications, most of which at the school mentioned, were intimated by former Dean Wigmore. The law schools of Washington State and Virginia State Universities, have been provided with spacious new homes during the year.

The work of the Bar Examiners normally begins where that of the law schools ends; and now that the former have a national organization and a national organ (the *Bar Examiner*) they are beginning to take a scientific view of their problems and to plan programmes accordingly. One of their most serious problems is that of the "repeater"—the applicant who fails and tries again until he passes. In more than three-fourths of the States these constituted nearly one-half of the applicants and they seriously impede efforts to make examinations a means of reducing bar congestion. A remedy proposed by some, including Dean Clark of the Yale Law School, is by limiting the number admitted to the examination. But A. Z. Reed in his annual review of legal education, suggests that "the remedy (for bar congestion) may be to make a law school education increasingly valuable for government service and for business." But if bar congestion is a serious problem in the United States it has become far more so in Germany. From 1914 to the end of 1932 the numbers of the German bar grew from 1250 to 18,791 while professional incomes correspondingly fell. With a ratio of one lawyer to every 3450 inhabitants, a third of them earning less than \$1400 per year and a sixth

less than \$600, the body which corresponds in Germany to the American Bar Association has formally demanded a three-year moratorium on admissions to the bar. "Proletarianization of the bar," says Dr. Rudolf Dix, president of the German organization, "must inevitably lead to its decay. . . . And if the bar decays, justice also decays. This means an end of the lawfully ordered existence of a nation."

LEGAL PROFESSION. *American Law Institute.* This organization, composed of about 700 members, carefully selected from bench and bar, to promote a restatement of American law, began its 10th annual session on May 4 in Washington. President Wickersham's brief address reviewed cursorily the work of the decade and indicated the source of its financial support.

The Director's report dealt with the present status of the Institute's work as a whole and announced its programme.

The balance of the week was devoted to consideration of the proposed final draft of the law of agency and the proposed tentative drafts of "property" and "torts."

The American Bar Association held its 56th annual meeting at Grand Rapids, Mich., during the last week of August. All of the sections held their respective sessions prior to the formal opening of the association's on August 30. The secretary's report showed a membership of 27,704, which is considerably less than 25 per cent of the country's lawyers. See under **BAR ASSOCIATION, AMERICAN.**

Bar Integration. A subject which commands increasing attention among members of the profession is the proposed reorganization of the American bar upon an official basis, with self government, including the power to admit and expel members. Statutes embodying the plan have been enacted in 13 States, three of which (Alabama, Mississippi, and North Carolina) are in the south. Attempts during the year to adopt it failed in Michigan, Montana, and Texas. In some quarters the objection is raised that admission to or exclusion from the bar is a judicial function which cannot be delegated. Moreover, it is doubted if these powers would be exercised as impartially by an association of lawyers as by a court. Still more ambitious is the project of Dean Wigmore to establish international bar relations. Through his efforts a committee, of which he was made chairman, on the project was appointed by the American Bar Association and has been at work during the year to ascertain the state of the legal profession in all countries.

Unauthorized Practice. This is another subject in the coördinated bar programme and refers particularly to the large and growing volume of legal business conducted by corporations, such as banks, trust companies, title and abstract companies, collection agencies, credit associations and "bureaus" for "negligence service," tax matters, etc. The real objection here is not, as some laymen have thought, competition with regular practitioners; but the fact that a corporation, which "has no soul," is not subject to professional regulation and control to the same extent as individuals and that practices considered unethical (e.g. the solicitation of business and assignment of claims for purposes of suit) are more easily concealed under the cloak of corporate organization. A special committee on the subject, of the American Bar Association, cites a number of de-

cisions during the year, condemning such practices and recommending legislation to prohibit them. Sometimes this "unauthorized practice" is carried on by notaries public, as in *People v. Alfani*, 227 N. Y. 334, where defendant, one of them, was convicted of having drawn certain legal papers for parties to whom he answered affirmatively the question whether they could return for legal advice.

Unprofessional Employment. But far more serious than "unauthorized" (i.e. unlicensed) practice is the willingness of a class of licensed lawyers to sell their services to those whom they know are engaged in criminal, or at least illegitimate, enterprises. Attorney General Cummings recently said:

One of the most important elements of predatory crime is the manner in which some members of the bar cooperate with the underworld. Wherever we can prove improper connection, we propose not only to punish such lawyers but to disbar them.

The law firm at Stamford, Conn., of which the Attorney General is the head, is said to have sponsored the bill introduced into the legislature of that State to exclude New York lawyers from practicing there unless they maintained offices in Connecticut.

Two members of the American Bar Association were expelled for unprofessional conduct and another was reprimanded during the year. On March 16, Governor Lehman of New York vetoed the bill authorizing a review by the court of appeals of disbarment cases and removals of magistrates.

NECROLOGY. William M. N. German, a member of the Ontario bar for over a half century, died at Welland, in that province, on March 31. He appeared before the Privy Council in behalf of the American vessel, *Kitty D*, seized by Dominion revenue officers; and defended one of the alleged dynamiters of the Welland Canal. Among the prominent American lawyers who passed away during the year Thomas J. Walsh, of Montana, for twenty years a Senator from that State and who had accepted the appointment as Attorney General in President Roosevelt's cabinet; Thomas W. Gregory of Texas, Attorney General for a time under President Wilson; and Morris Hillquit of New York, well known as an able lawyer as well as a moderate Socialist leader.

LEGISLATION. The normal organ of lawmaking in most civilized States to-day is an elective legislature and that body, as a rule, has been very active during the year. In the United States the final session of the 72nd Congress, which closed on March 4, passed the Philippine Bill over President Hoover's veto on January 17, submitted the 21st Amendment of January 23 and the Senate removed its long time Sergeant at Arms on February 8 on account of a newspaper article which he had written. The 73d Congress was called in special session on March 9 and sat for 72 days, adjourning June 16. It enacted 105 measures, at least 20 of which are of outstanding importance, and some of which are discussed in detail elsewhere in this article. Only one bill—an amendment to the Farm Loan Act—failed to receive executive approval, being subjected to a pocket veto. Including the territories, 47 American legislatures held regular sessions during the year and there were also 43 special sessions. See **LEGISLATION** under the different States.

The Philippine Legislature which met on July 17 and was adjourned by Acting Speaker Paredes

on November 9, at midnight, leaving some 600 measures undisposed of, devoted most of its energies to discussions, within and without, of the Hawes-Cutting bill providing for gradual independence in about a decade. The bill was finally rejected by a decisive vote of more than three to one and the controversy is now transferred from the legislature to the hustings, as all of the Representatives and half of the Senators are to be elected in June and the campaign seems likely to be fought out on the same issue. The limit for legislative action on the bill expired, however, on January 17 and even if its insular advocates prevail in the coming election a new act of Congress will be required in order to effect their purpose. Meanwhile, Senate President Quezon, who successfully opposed the bill, spent the month of December in the United States working for a different measure. Other bills were passed by the legislature, however, including one for female suffrage which Governor General Murphy had recommended and promptly signed. It becomes effective in 1935—after the coming election. The Governor General signed altogether 38 of the bills passed and vetoed an unusual number. He is reported as dissatisfied with the legislative methods in vogue, especially that of holding back legislation until the last night, and to be planning corrective measures. His administration, thus far, seems highly efficient.

On October 30 a commission was appointed to revise Germany's seventy-five-year-old maritime law and included prominent representatives of the nautical callings, ship owners, fisheries, over-sea merchants and the sea coast towns.

PENAL LAW. Germany. A memorial by the Prussian minister of justice, Hans Karl, announces that legal experts have in preparation a penal code which will conform to the ideas of the Hitler régime. It is said to be "inoculated with Nazi ideology" and marked by "formal recognition of civilian Jewry, application of the unwritten law principle at the judge's discretion and punishment of 'race poison' as implied in mixed marriages with racial aliens," who are said to include Jews and colored persons. "State, family, and church receive a maximum of protection in the Reich" and even dueling according to the "code of honor" is recognized, except as it affects public safety.

Louisiana. An article in the *Virginia Law Review* (xix, 351), by Charles S. Lobingier, on "The Franco-American Codes," discloses that "the State which led all others of the western hemisphere in codifying civil law, has never yet codified its law of crimes." Perhaps for that reason Louisiana has provided more recent penal legislation than most of the States.

Act No. 120, abolishes the distinction, imported there from the common law States, between principal and accessory, penalizing as a criminal any one concerned in the commission of a crime, directly or indirectly and whether present or absent. Act 80 penalizes the possession of machine guns except by the military, guards, etc. Delivery of explosives is penalized in Act No. 199.

Act No. 215 penalizes both the completed and the attempted abduction of inmates of orphan, insane, and feeble-minded asylums.

Mexico. The new Penal Code purports to be based on the premise "that crime is the fault of society as well as of the criminal and that the aim is reformation and not vengeance."

Philippines have also a new Penal Code, enacted

after nearly 30 years of effort and agitation, and constituting a revision and adaptation to present day conditions of the Spanish *Código Penal*, extended to the archipelago in 1887. The new code comprises 367 articles and the Spanish terminology is replaced by English.

PENOLGY. Capital Punishment. An expression from President Roosevelt in November, favorable to the abolition of the death penalty, revived a discussion of that subject. Among other comments was an "open letter" from Donald Wilkie of California, formerly of the United States Secret Service, who cited crime records begun by his grandfather, 60 years ago, and wrote:

Figures prove the average careful murderer has 6 chances to 1 that he will never be arrested, 12 chances to 1 that he will never be convicted, and 121 to 1 that he will never die for his crime. . . . There is little need for a hue and cry against capital punishment.

After experimenting for several years with electrocution, declared neither "cruel" or "unusual" (*In re Kemmer* 136 U. S. 436) as a means of inflicting capital punishment, several States have now adopted "euthanasia" through the application of lethal gas. A constitutional amendment providing therefor was ratified in Arizona on October 3 and an execution in that form was to take place in Colorado late in the year but was stayed.

Prisons. Although the Wickersham Commission reported (No. 1) that "the prison has failed as an educational institution," the new "State Medium Security Prison" at Wallkill, N. Y., is designed to be just that; and throughout the year it "has been admitting trustworthy convicts from other prisons in a new experiment in criminal rehabilitation." It is built without surrounding walls (hence the name?) and provides technical training with various courses (e.g. in automobile engineering) "to fit its inmates for gainful employment." In contrast, a four-story surrounding wall encloses the new model penitentiary of Puerto Rico, which was officially opened on May 14, replacing the Spanish *Carcel* which had been occupied continuously since 1837. Of the 1058 prisoners, including 16 women, incarcerated in the new structure at its opening, some 250 worked on the interior, which contains a central *patio* covering an acre, with concrete walks, drives, and lawns and a sign in large letters reading *Bienvenido* (welcome)! Two new modern canneries are being constructed by the inmates of the North Carolina State Prison at Raleigh, each with a capacity of 20,000 (No. 2), or 35,000 (No. 10), cans. The lumber will be cut and dressed at the prison farms. In an address before the Anti-Crime Conference of the United States Flag Association at Washington on October 12, Attorney General Cummings announced the acquisition of the military prison on Alcatraz (Pelican) Island in San Francisco Bay, for the purpose of incarcerating certain dangerous types of Federal prisoners.

Alcatraz now has "secure cells" for 600; but a writer in the *New York Times*, under date of October 14, who seems to know his subject, denies that the isle is as "inaccessible" as the Attorney General believes, and suggests either San Clemente or Santa Margarita, islands "off the coast of Southern California" as "much better suited to the purpose." Professional penologists, however, seem generally opposed to isolated prisons. A recent product of practical research in penology is a study of 114 "Jails of Virginia,"

by Messrs. Hoffer, Mann, and House, three professors at the University of that State, for the Institute of Research in the Social Sciences. A chapter on "Some Implications of the Data and Procedure," contains highly suggestive conclusions regarding the reform of jails as well as of criminals. The Georgia penal system, "including the 'chain gang,'" was defended in an address at Valley Forge, Pa., on January 22, by James H. Gates, a divinity student and native of that State, who claimed that it was beneficial to convicts, despite the criticisms which afforded Governor Moore of New Jersey a ground for refusing extradition of a Georgia prisoner (see *INTERNATIONAL YEAR BOOK* for 1932, p. 435).

Austin H. MacCormick, assistant director of the United States Bureau of Prisons, was chosen by Mayor-elect LaGuardia as Commissioner of Correction for New York City. Engaged in prison work since 1917 his appointment seems a fitting, though tardy, recognition of the expert in penology.

REMEDIES AND PROCEDURE. The year has been quite fruitful in procedural reforms. The new procedure rules of the English Supreme Court (adopted by the "Rules Committee," consisting of eight judges and four members of law societies) were the result of long agitation and effort, for which laymen were largely responsible. The rules are designed for civil cases; but, except actions for defamation, false imprisonment, breach of promise, seduction, and fraud. They give the trial judge almost unlimited discretion to dispense with juries and witnesses (substituting referees and affidavits) and to limit appeals. The purpose is to expedite litigation and render it less costly for litigants, whose complaints in England have been long and loud. Notable in the same field, and utilizing the experience of the mother country, was the enactment by the Illinois General Assembly of the "Civil Practice Act," to take effect Jan. 1, 1934. It superseded the separate systems known as "common law" and "equity" practice which are coexistent with the State's legal history.

"*Discovery Before Trial.*" Such is the title of a notable work in the field of sociological jurisprudence, by George Ragland, Jr. of the Chicago bar, appearing in 1933 under the auspices of the Michigan State University's Legal Research Institute, and reviewed in the *New York Times* of March 26. It describes a relatively new reform, now in vogue in England and several American States.

This is an adaptation of the ancient, chancery remedy of "discovery" which Justice Cardozo recently construed in *Sinclair Refining Co. v. Jenkins et al.*, 289 U. S. 689, holding it available for the ascertainment of damages in an action at law. The adapted remedy is incorporated into the Illinois Civil Practice Act, above discussed.

Adoption of this remedy by the several States has been rendered easier by the Supreme Court's decision in *Bevan v. Krieger*, 289 U. S. 459, upholding the power of a notary public to commit for contempt a witness who, in giving his deposition, refuses to answer a question. The Nebraska Supreme Court had so decided in *Dogge v. State*, 21 Neb. 272; but other State courts had held to the contrary.

Habeas Corpus. This ancient remedy of the English law was granted by Justice O'Byrne of the Irish Free State High Court to release Gen. Owen O'Duffy and his companion, Capt. John

Sullivan, from Arbour Hill military prison, where they had been detained following their arrest at a political meeting in Westport. However, instead of issuing an order and requiring its return, the Justice peremptorily ordered their release.

This was somewhat of a departure from the usual procedure and was doubtless designed to expedite the release; but it is evident from the proceeding as a whole, where English precedents were freely cited and followed, that, whatever may be the political relations between the two countries, the common law of England is still in force in Ireland. Even more interesting was the news earlier in the year that *habeas corpus* had been virtually adopted in France, except in cases involving expulsion and extradition; five days being the limit of detention without trial except of recidivists, vagabonds, and dangerous characters.

Injunction should not be granted against a permanent public nuisance, such as a sewer system, if the alleged injury can be compensated for in damages, the Supreme Court held in *Harrisonville v. W. S. Dickey Co.*, 289 U. S. 334.

Mandamus is a remedy whose allowance is, to some extent, discretionary and was held in *U. S. v. Dern*, 289 U. S. 352, to have been properly denied where the effect would have been to increase the government's cost of constructing a parkway.

Venue. In the new Illinois Civil Practice Act, all personal, civil actions may be instituted in the county of defendant's residence or in that where the transaction, or a part of it occurred, out of which the cause of action arose. Previously, defendant might be sued in any county where he might be found, even temporarily.

Parties. An unincorporated association is not entitled as such to bring a suit against the United States, was the ruling in *Moffat Tunnel Leaguc v. U. S.*, 289 U. S. 113. "The right to appear (before the Interstate Commerce Commission) or to intervene in a suit brought by another, is to be distinguished from the authorization to bring suit," said Justice Butler in the unanimous opinion.

In *George Moore Ice Cream Co. v. Rose*, 289 U. S. 373, it was held that the collector of internal revenue, being merely a formal party to a claim for income tax refund ("an anomalous relic of bygone modes of thought," wrote Justice Cardozo in the opinion) would "not be heard to object that there has been a denial of due process in enlarging the liability to be borne by some one else"—i.e. the Government.

Pleading. "Any one interested in procedural simplicity will hail with delight the opinion of Mr. Justice Cardozo in *U. S. v. Memphis Cotton Co.*" 288 U. S. 62, writes Professor Arnold of Yale Law School in the *American Bar Association Journal* (xix, 215).

There "the Supreme Court takes a practical and pragmatic attitude" on the question whether a claim for income tax refund, amended, after the filing limit had expired, so as to supply omitted statements of grounds, was barred. It was decided in the negative and the rule was reiterated in *Bemis Bros. Bag Co. v. U. S.*, 289 U. S. 28; *U. S. Factors etc. Co. v. Rose*, 288 U. S. 89; and *George Moore Ice Cream Co. v. Rose*, 289 U. S. 373. Under the new Illinois Civil Practice Act, as under the American codes of procedure generally, there is but one form of civil action which is commenced by filing a "complaint" (in place of the former "declaration" or "bill"),

to which defendant may "answer"; and to the latter, if defendant files a counterclaim, plaintiff may "reply." The "demurrer" is abolished (in Illinois, following England) and defects, both of substance and form, must be raised by motion, specifying the grounds relied upon.

Process. In *Washington v. Super. Ct.*, 289 U. S. 381, the Supreme Court upheld service of process on a foreign corporation by "handing a copy to an assistant secretary" of State, even after the corporation had been dissolved in the State of its origin. The new Illinois Civil Practice Act makes general the simpler method of serving process, long followed in equity cases, by leaving a copy of the writ, either with the defendant, personally, or at his usual place of residence, with some person of discretion.

Removal of Causes. In *Puerto Rico v. Russell and Co.*, 288 U. S. 476, which was an action to recover insular taxes, it was held that the respondent, a *sociedad in comandita* (the equivalent in Spanish law of a corporation) was not entitled to have the cause removed from the insular to the Federal Court on account of the non-residence of its members nor on the theory that it was one arising under the laws of the United States; being rather an action by the territory under its own laws.

Criminal Procedure. On February 24, President Hoover approved Public Law 371, giving the Federal Supreme Court "the power to prescribe, from time to time, rules of practice and procedure with respect to any or all proceedings after verdict in criminal cases in district courts of the United States, including . . . the United States Court for China" and those of the Territories, etc. Chief Justice Hughes announced before the American Law Institute on May 4, that "in responding to this grant of authority, the court will welcome the assistance of the bench and bar." While covering but a limited phase of Federal criminal procedure, the grant is a step in the right direction and should lead eventually to the formulation of rules by the same tribunal, not only for all criminal proceedings but for all civil ones as well.

Act No. 153 of Louisiana permits joinder in one indictment of several crimes arising from the same continuous act. Chapter 1954 of the Rhode Island acts, specifies formal defects which will not vitiate an indictment; e.g. it is no longer necessary to allege malice nor the means, time, or place of committing the crime, unless they are essential elements thereof.

Evidence. Under date of June 24, Robert E. Whalen in the *New York Times* asked

Is it not time for Congress . . . to do away with an abominable rule, for which not even its three centuries of age can command respect . . . which bars a man or his wife as a witness for or against the other?

But it proved unnecessary for Congress to do for the Federal courts what the State legislatures had already done for the State courts; for on December 11, the Supreme Court in *Funk v. U. S.*, 290 U. S.—abrogated the rule in criminal cases.

But for Amendment V of the Federal Constitution, which provides that "no person . . . shall be compelled, in any criminal case, to be a witness against himself," the doctrine above announced would seem to justify the court in discarding also even this "hoary rule." The constitutional clause just quoted binds only the Federal courts; but many State constitutions

likewise contain it and in California, a movement said to be "supported by former President Hoover and a number of educational organizations" has been launched to eliminate the clause from the constitution of that State. Certainly "adaptation to the successful development of the truth" can hardly be claimed for a rule which forbids the State to ascertain the facts concerning the commission of a crime from the one who usually knows most about them. In *Quercia v. U. S.*, 289 U. S. 460, the court again discussed evidence and procedure in criminal cases, reviewing a sentence of the late Judge Lowell, in a prosecution under the narcotics act, where he told the jury:

What I think of the defendant's testimony. You may have noticed . . . that he wiped his hands during his testimony. It is rather a curious thing; but that is almost always an indication of lying. Why it should be so we don't know; but that is the fact. I think that every single word that man said, except when he agreed with the government's testimony, was a lie.

Reversing the sentence, in an unanimous opinion by the chief justice, the Supreme Court, while reiterating that

In a trial by jury in a Federal court, the judge is not a mere moderator, but is (its) governor for the purpose of assuring its proper conduct and of determining question of law,

declared:

The trial judge did not analyze the evidence; he added to it and based his instruction upon his own addition. . . . This was error and we cannot doubt that it was highly prejudicial.

Under Louisiana Act No. 136, insanity is a condition to be ascertained by the judge upon evidence, expert and non-expert, instead of being left to a non-judicial board, applying its own knowledge. Just at the turn of the year two conflicting decisions were rendered as to the admissibility of blood tests of paternity. On December 29, in *State v. Damm*, the South Dakota Supreme Court rejected them; while three days later in the affiliation case of *Beuschel v. Manowitz*, Supreme Court Justice Steinbrink of Brooklyn, in an exhaustive opinion, citing scientific works and a judgment of the Italian Court of Cassation, held that blood tests were admissible in evidence in such cases, though not conclusive.

United States Department of Justice. On February 23, the cornerstone of this department's new building, on the south side of Pennsylvania Avenue, between 9th and 10th Streets, was laid by President Hoover, who, in his address, expressed the layman's view by saying that "a chief glory of our nation is our system of laws." There are experts who think it needs considerable improvement in order to become "our chief glory." Attorney General Mitchell declared that "this building will be a model of economy."

The Attorney General announced that "the Department had 1026 employees at the seat of government with a monthly payroll approximating \$200,000." This, however, was but a small part of the \$52,000,000 which Congress appropriated for the Department for 1932—the largest expenditure ever made for it. The new Attorney General, Homer S. Cummings of Connecticut, announced on April 25, that of the \$41,550,000 appropriated for next year, \$8,500,000 would be saved. The Attorney General's most intensive effort thus far has been made to meet the crime situation and he delivered a notable address before the American Bar Association on the evening

of August 31 at Grand Rapids, Mich., on "Modern Tendencies and the Law."

CONSTITUTIONAL AND PUBLIC LAW. AMERICA, UNITED STATES OF. Amendments of the Federal Constitution. *The Twentieth Amendment* (1932 YEAR BOOK, 442) was ratified early in the year, the 36th State (Missouri) acting on January 23, about ten and a half months after submission. Later all the remaining States joined in ratifying, making this the first unanimously adopted amendment. Moreover, only two previous amendments (12th and 13th) were pending for a shorter period. The 20th Amendment, by its terms, came into force on October 15 and, for the first time since the government was organized, there was no session of Congress in December.

Twenty-first Amendment. (See also REFERENCE.) The amendment to repeal the 18th Amendment was submitted on February 23, when the Senate approved it, the House having done so in the previous month. Besides the repeal section, it provides for protecting the States which remain "dry." The first State to ratify was Wisconsin, voting in April. Between that date and November 7, no less than 31 other States voted and all favored ratification. On the last named date, which was the regular election day, seven more voted and five ratified, while two—the Carolinas—rejected the proposal. But as more than the required 36 had approved the amendment it was proclaimed in force on December 5, the date when the conventions of the last ratifying States took action.

Probable Twenty-second Amendment. What is known as the "child labor" amendment had a curious recrudescence during the year. Submitted by action of the Senate on June 3, 1924, it contained only the following provisions.

- Sec. 1: The Congress shall have power to limit, regulate and prohibit the labor of persons under 18 years of age.
- Sec. 2: The power of the several States is unimpaired by this article, except that the operation of State laws shall be suspended to the extent necessary to give effect to legislation enacted by the Congress.

It will be seen that no limit is imposed, as in most of the later submitting resolutions, as well as in that submitting the 18th Amendment, within which the State legislatures must act thereon. The result was that it remained pending for more than eight years, during which only six legislatures approved it while 24 voted in the negative. This appeared to insure its defeat and in fact it was virtually given up by its friends. But as the depression deepened and youth sought employment to help in family support, taking the places of adults, the latter began to view the proposal in a new light and to advocate it for their own protection instead of the child's as was originally intended. Thus, while the National Recovery Act limited the scope of child labor, the idea of self-preservation seems to produce a reversal of popular opinion and a conviction that no opportunity must be lost to suppress this new form of competition. Hence during 1933 no less than 14 State legislatures ratified the proposed amendment, 12 of which had previously rejected it. With nine State legislatures to meet in 1934 adoption of the amendment early in 1935 now seems probable. See CHILD LABOR.

Other Proposed Amendments. A monograph by Charles S. Lobingier entitled *Obsolete Features of Our Federal Constitution* was recently issued as Senate Document No. 100, 73d Cong., 2d

Sess. It discusses the proposal of Senator Norris and Representative Lea to abolish the electoral college; the proposal of Senator Pope of Idaho to provide the popular ratification of future constitutional amendments; and the proposal of Senator McCarran of Nevada to authorize the President to veto separate items of fiscal measures. The first has already received the approval of a House committee and of a Senate sub-committee and the supporters of all three promise active campaigns in their behalf during the present session.

Immigration (q.v.) and Naturalization. On April 15 Secretary Perkins revoked, without explanation, Secretary Doak's order for finger printing all newly arrived aliens. The original order had resulted from numerous recommendations, as a safeguard against fraudulent entry. But the courts appear not less inclined to construe it so as to effect the purpose for which it was designed. Thus in *U. S. v. Smith*, 289 U. S. 422, it was held that the reentry of an alien who had pleaded guilty to the crime of counterfeiting in this country, was an "entry" within the prohibition of the 1917 Immigration Act and justified the alien's deportation as an undesirable. Perhaps even more drastic was the decision of the 9th circuit Court of Appeals in *Taguchi v. Carr*, 62 Fed. Rep. (2d), 307, that a Japanese who had entered this country illegally and remained some 13 years, after which, while employed on an American fishing boat, which was shipwrecked, he was obliged to land on a foreign shore, could not reenter the United States. The National League for American Citizenship reports an increase in the requests for aid in effecting naturalization. Out of a group of 26 aliens recently receiving certificates of citizenship in Washington, almost one-third were natives of Italy. A new act passed by the Mexican Congress provides that any child born in that country is a Mexican, regardless of the parents' nationality but that a child born abroad of Mexican parents is also Mexican.

Interstate Commerce. The "National Industrial Recovery Act" (Public Law No. 67) approved June 16, has been called the "keystone statute in 'the new deal.'" Its objectives, as recited in its first section, are comprehensive and far-reaching, viz. to remove obstructions to the free flow of interstate and foreign commerce, to promote the organization of industry for cooperative action among trade groups, to secure united action of labor and management under adequate governmental sanctions and supervision, to eliminate unfair competition, to promote full utilization of industry's productive capacity, to avoid, except temporarily, undue restriction of production, to stimulate consumption by increased purchasing power, to reduce and relieve unemployment, to improve labor standards, to rehabilitate industry and to conserve natural resources. It will be seen that the promotion of commerce is placed at the head of this long list of objectives; it is in fact the only one which justifies legislation of that character by Congress; all the others are accessory thereto. Whether all of its provisions square with the commerce clause of the constitution is a question which was raised soon after its passage. Attorney General Broderick of Michigan declared that "no court will mutiny or attempt to scuttle the NRA ship by injunction." But Judge Samuel H. Sibley, of the United States District Court at New Orleans, asserted that "if

the NRA offends against the cherished constitution, there are judges everywhere who, with the courage of sworn duty, will so declare." The act requires Federal district attorneys to apply for injunctions against violations of it and several such applications have already been made. One of them was in *U. S. v. Bazemore*, Fed. Rep. (2d) wherein, on December 2, Judge Akerman of the United States District Court for the Florida district, denied an injunction to prevent a cleaning and dyeing operator from reducing his prices below the code limit. The grounds of the ruling were that the business was "purely intrastate" and "that no emergency exists which would justify Congress in attempting to regulate" it. Doubtless this ruling will eventually be reviewed by the Supreme Court and speculation as to the outcome has already begun.

Candor demands (from a writer in the *A. B. A. Journal*, XVIII, 483) the admission that for the statute and the codes to be sustained in their entirety, requires a change of attitude on the part of the Supreme Court, no less revolutionary than the legislation itself.

But another (*Temple Law Quar.*, viii, 14) found "from an examination of the cases, that the . . . act may be sustained as a valid attempt to foster and safeguard interstate commerce."

Radio Law. The power of Congress to regulate radio communication was assumed as part of its power over interstate commerce in *Federal Radio Commission v. Nelson etc. Co.*, 289 U. S. 266, which upholds the amended radio law and declares the court acting judicially, and not merely administratively, in reviewing the commission's findings; which, in the case before it, were left undisturbed as resting on substantial evidence. Courses in radio law are now offered in five law schools, viz., those of the National, Catholic, Columbus, Marquette, and South Carolina Universities.

Interstate Controversies. (See also *Extradition*.) In the case of *Vermont v. New Hampshire* (1931 YEAR BOOK 457), Special Master Trabue filed his report in January with the Supreme Court, recommending that the boundary between the two States be fixed at low water mark of the Connecticut River on the Vermont side. That State had contended for the centre of the stream as the boundary (which is the usual one in such cases); New Hampshire claimed it as the top of the west bank and its Attorney General filed a new brief, arguing that low water mark is too indefinite, since it may mean either the bank or the bed of the stream. On May 29 the Supreme Court rendered its decision (289 U. S. 593), adopting the Special Master's report, including his definition of low water mark, which Justice Stone fortified in an exhaustive opinion, reviewing the provincial grants and subsequent legislation. This disposed of a case which had been pending since 1915 and a controversy which arose long before.

On October 9, Special Master Rawle of Baltimore filed his report in the case of *New Jersey v. Delaware*, involving the boundary between those two States. The report recommended the recognition of the latter's title to the Delaware River and all lands therein within a 12 mile circle around Newcastle, and of New Jersey's claim that below the circle, the boundary should be the centre of the ship channel and not that of the river and bay. According to the latter's Attorney General, the report "preserves to New Jersey some 60,000 acres of (the ship John Light)

oyster grounds." The recommendation is based partly on a conveyance in 1682 by the Duke of York to William Penn; but the decree in *Gibbons v. Ogden*, 9 Wheat. (U. S.) is also claimed to sustain it.

The States of Wisconsin, Minnesota, Ohio, and Michigan having applied to the Supreme Court to compel the performance of its decree of Apr. 21, 1930 (*Wisconsin v. Illinois*, 281 U. S. 179), requiring the construction of works and facilities to prevent the lowering of Lake Michigan's water level, the cause was referred to Edward F. McClenen as Special Master who found "a total and inexcusable failure (on the part) of the defendants." The court then entered a new decree requiring the State of Illinois

to take all necessary steps . . . to preclude any ground of objection on the part of the State or of any of its municipalities to the reduction of the diversion of the waters of the Great Lakes-St. Lawrence system or watershed.

A tri-State controversy involving Colorado, Wyoming, and Nebraska, relative to the head waters of the North Platte River, has occasioned a boycott of Colorado products in Wyoming. Meanwhile, riparian owners in Nebraska are establishing priority rights to the waters by actual appropriation thereof. The situation somewhat resembles that of the States dependent upon the Colorado River, whose difficulties, according to Professor McBride of the University of California, are largely

due to the fact that, when State lines were drawn, geographical factors were completely ignored. Territory directly dependent upon the river was divided into seven different political units which have never been able to get together on the utilization of the river's water power. They are paying the penalty for disregard of natural geographical boundaries.

Local Government. The District of Columbia, when originally organized, consisted of two counties; but all subdivisions have long been discarded and the district authorities are looking to Congress to relieve it of many obsolete statutes, inherited from colonial Maryland, by repealing them. Following Virginia's example (1932 YEAR BOOK, 443) the Ohio voters adopted a plan to reform county government. Several other States, including Georgia and Tennessee, now provide for the consolidation of counties and it is beginning to be realized that the present county system not only imposes an enormous burden of needless taxation, through its duplication of functions and multiplicity of offices, but is extremely artificial. As was recently pointed out by Justice Roberts in *Jaggett v. Lee*, 288 U. S. 534:

There is no more reason for adopting the county line as the measure of the tax, than there would be for taking ward lines in cities, or arbitrary lines drawn through the State regardless of county boundaries

And now comes a candidate for governor in Arizona who has announced as part of his programme the abolition of counties. So the extension of Federal activities, especially at the recent special session of the 73d Congress has called attention to the artificiality of State, as well as of county, boundaries. For the promotion of such activities, the unit is no longer the county, nor even the State, but a "region large enough to have a valid and diversified economic basis." (Wallace, *Our Obsolete Constitution*, 185.)

A proposed law has been initiated in Nebraska reducing the legislature to a unicameral body of 25 in accordance with the views of Senator Norris.

Police Power. This is "the least limitable" of all the powers of government, wrote Chief Judge Pound in *People v. Nebbia*, 282 N. Y. 259, upholding the milk control law (1933 c. 158), enacted by the New York legislature, fixing minimum prices and otherwise regulating what had theretofore considered a strictly private business.

There was a dissenting opinion by Justice O'Brien and the case is to be reviewed by the Federal Supreme Court. That tribunal decided in *Public Service Co. v. Utilities Co.*, 289 U. S. 130, that a State may prohibit a service corporation from reducing its rates below cost, in order to eliminate competition; and in *Stephenson v. Binford*, 298 U. S. 251, it upheld the Texas act regulating the use of motor trucks on public highways and subjecting them to control by the State railway commission.

Public Officers. The case of William E. Humphrey of Washington State, who was reappointed Federal Trade Commissioner by President Hoover in 1932 for a term of seven years, raised in a new form the question of the President's power of removal. On July 25 President Roosevelt wrote Commissioner Humphrey asking for his resignation but congratulating him on his "long and active service." The commissioner in reply merely asked "a reasonable time in which to consult my friends in regard to future actions" and the President gave him until August 15. The commissioner then, for the first time, denied the President's right to remove him and, after further exchange of letters, removal was formally announced on October 7. Later the Comptroller General sustained the President in denying salary to Humphrey after his removal had been declared; but the courts have yet to pass on the precise question involved. The President's advisers rely on the Taft opinion (much of which was *dicta*) in *Myers v. U. S.*, 272 U. S. 52, and from which three of the justices (including Holmes and Brandeis dissented); but Humphrey, in one of his letters, pointed out that the statute there construed involved postmasters only, while that creating the Federal Trade Commission, authorized removal "for inefficiency, neglect of duty, or malfeasance" and that none of these was suggested. Humphrey sued for salary on December 28, thus raising the whole question of the validity of his removal. On July 12 President Roosevelt signed an executive order requiring all applicants for postmasterships to take civil service examinations, unless they are already in that service or hold commissions. The order affected over 15,000 first, second, and third class postmasters, those of the fourth class being already under civil service regulations. Announcement of the order was accompanied by a statement that legislation would be asked to make it permanent.

The proposal that personnel records now kept by the Civil Service Commission, and indispensable to its proper functioning, be kept hereafter by the various departments and independent offices, is opposed by the Commission itself and by the National Civil Service Reform League.

Reorganization of government bureaus and agencies was attempted, after slight efforts by his predecessor, by President Hoover near the close of his term, pursuant to an act of the 72d Congress. That act required the approval of Congress itself before such an executive order could become effective; and the approval was never

given. A new act was passed by the 73d Congress (special session) authorizing the President "to group, coordinate, and consolidate executive and administrative agencies" and to reduce, transfer, or abolish them, reporting to Congress but not needing its approval. Under this authority, President Roosevelt, on June 10, reported certain changes which became effective on August 9, including the transfer of the Prohibition Bureau's functions to the Bureau of Investigation and Internal Revenue, respectively; absorption of the Shipping Board by the Department of Commerce and of six building commissions by the Interior Department and merger of the Bureau of Immigration and Naturalization. The savings thus effected were claimed not to exceed \$5,000,000, annually; but the act remains in force until Mar. 1, 1935 and further changes thereunder are promised.

Taxation. (q.v.) A sales tax was adopted in certain States (notably Illinois and Michigan) and there is much complaint of double and conflicting taxation. An "interstate legislative assembly," called by the American Legislators' Association, met in Washington February 3 and 4, listened to a number of papers dealing with tax problems and provided for a continuing committee to study them and report a solution. A special committee of the American Bar Association presented a report at the Grand Rapids meeting containing a number of recommendations which were adopted by the association. Especially have gasoline and motor vehicles become favorite objects of taxation in which "the trend . . . has been towards increasing amounts on the truck, still larger increases on the commercial, contract, and common carrier, with comparatively little increase in levies upon the private pleasure car." In *Nashville etc. R. Co. v. Wallace*, 288 U. S., 249, the court upheld a Tennessee statute imposing a tax on gasoline stored in the State though eventually intended for interstate commerce; and the question was held properly raised on an appeal from a decree denying relief to a taxpayer in the form of a declaratory judgment.

Another favorite subject is the chain store. A Florida statute, imposing a license fee on retail stores, but exempting those exclusively handling petroleum products, exacting more for each store over one, but not over 15, and much more if located in different counties, was upheld by the State supreme court (104 Fla. 609) whose judgment, however, was reversed by the Federal Supreme Court (which treated the license fee as a tax), in *Liggett Co. v. Lee*, 288 U. S. 517 (distinguishing *State Board v. Jackson*, 1931 YEAR BOOK, 457) on the ground that there was no reasonable basis of the classification. Justice Brandeis dissented in an elaborate opinion in which Justice Stone concurred. In *Williams v. Baltimore*, 289 U. S. 236, the court declined to interfere with a legislative exemption from taxation of a railway in receivership, no constitutional inhibition having been found. For said Justice Cardozo, "it is not the function of a court to determine whether the public policy that finds expression in legislation of this order is ill or well conceived."

ANDORRA. In 1933 for the first time in history the bishop's feudal dues of cheeses, chickens, and hams, were withheld, and a provisional Council General named by the *viguers* (French appointed magistrates) refused to serve. A visit of the bishop in November, seemingly recognizing the

new constitutional status, appears to have had a conciliatory effect. Steps have since been taken to provide a militia which every able bodied male must join. The Spanish government has not attempted to interfere in the situation. See **ANDORRA**.

BRAZIL. This republic has heretofore functioned under its original constitution of Nov. 15, 1889. On Nov. 16, 1933, a convention assembled at Rio de Janeiro, one of whose avowed purposes was to adopt a new constitution. See **BRAZIL under History**.

BRITISH COMMONWEALTH AND EMPIRE. *Australia.* The state of Western Australia voted, in April to secede from the Australian Commonwealth, but no further steps appear to have been taken.

India. Outlines of a new constitution for all India, culminating a formative period of nearly six years were published during the year. See **INDIA under History**.

Ireland. Bills before the Dail, sponsored by the De Valera government, to amend the Free State constitution by abolishing appeals to the Privy Council, and terminating the office of governor general, led to a statement in Parliament by Colonial Minister Thomas on November 14, that such legislation conflicted in important respects with the Anglo-Irish treaty of 1921. See **IRISH FREE STATE under History**.

Newfoundland. That dominion status is not necessarily permanent was demonstrated by the passage in December of a parliamentary act enabling the British government to take charge of Newfoundland's finances in a manner similar to that of handling a crown colony. See **NEWFOUNDLAND under History**.

CUBA. A presidential decree, published in the *Gaceta Oficial* of September 20, declared that a national constituent assembly, elected by direct popular vote in April, 1934, for the organization of the republic, will convene at the capitol on May 20. See **CUBA under History**.

GERMANY. On March 23, the newly elected Reichstag, by a vote of 441 to 94, passed the "enabling act" which confers on the Hitler cabinet, the power to "decree" laws even when they "deviate from the (Weimar) constitution." See **GERMANY under History**.

MEXICO. On March 20, the Congress voted unanimously to submit a proposed constitutional amendment prohibiting the reelection of a president of the republic or the governor of a state. See **MEXICO under History**.

URUGUAY. Elections for a constituent assembly of 284 members were held on June 25 and that body met at Montevideo on the national holiday, two months later. See **URUGUAY under History**.

POLAND. Outlines of a new constitution, the result of several years of work, were announced at a meeting of the government party on December 15. See **POLAND under History**.

SPAIN. On May 17, the Cortes, by a vote of 278 to 50, enacted into final form the "congregations law" (1932 YEAR BOOK, 440). It nationalized church property in an estimated amount of \$500,000,000, and while it does not suppress the religious orders, it subjects them to state control. Monks and nuns were required to cease teaching after the year's end. See **SPAIN under History**.

PRIVATE LAW. CONTRACTS. What is characterized by a none too friendly critic as an "important event in our law, deserving of the most careful and intelligent appraisal," and by Chief Justice Hughes as rendering "the past year . . .

the most notable in the annals of the (American Law) Institute," was the publication by that body of the "Restatement of the Law of Contracts." Prepared under the supervision of Prof. Samuel Williston of Harvard Law School, a recognized authority on the subject, and with eight associates, all law school professors, and representing a decade of labor, discussion, and criticism, it is unique among legal treatises and has rightly been termed "a new kind of law book." Published in two volumes, the "Restatement" comprises eighteen chapters, each divided into "topics" and these into sections, of which there are 609, each containing, in black letter, a statement of the legal rule, in the style of a code, and usually followed by comment or illustrations; but "unmarred by the citation of a single authority." The work is too comprehensive to permit of detailed treatment here; but it should be mentioned that already the critics are at variance regarding its merits. Dean Clark of the Yale Law School, declares in the March number of that institution's *Journal*,

Actually the resulting statement is the law nowhere and in its unreality only deludes and misleads. It is either a generality so obvious as immediately to be accepted, or so vague as not to offend, or of such antiquity as to be unchallenged as a statement of past history.

He also stresses the cost which, he says, "together with its State annotations, will be, it seems, in excess of \$400,000 or \$650 per section." He proposes,

(1) Such modification of the Institute's formula of expression of its restatements as will release the work of the experts and (2) such encouragement and preservation of the writings of individuals concerning the Institute's work, as may, through careful planning, be found feasible.

President Wickersham of the Institute published in the *A. B. Journal* (xix, 660) what was virtually a rejoinder.

One form of contract has become so familiar to us that many fail to realize how widely the law governing it has been reduced to written form. This is the "negotiable instrument," now subject to a uniform statute in every jurisdiction under the American flag, Puerto Rico having been the latest to adopt it. The same statute has been reenacted in the Republic of Colombia. On Sept. 15, 1932 (too late to obtain the necessary data for insertion in the 1932 YEAR BOOK) a new law governing "Negotiable Instruments and Credit Operations," came into force in Mexico. Its provisions are summarized in the *A. B. A. Journal* (xix, 250) by Phanor J. Eder.

The Anglo-American law of sales has practically always embodied the maxim, *caveat emptor*—let the purchaser beware;—but the Securities Act (Public Law No. 22) of the 73d Congress, substitutes therefor, to some extent the Civil Law maxim—*caveat venditor*. The act requires a full disclosure of the security's nature and of the persons offering or sponsoring it and gives the purchaser a right of action against them for "an untrue statement (or omission) of a material fact." Fine and imprisonment are likewise imposed for such acts and the law is to be administered by the Federal Trade Commission. Overruling on November 25, the motion of Brown and McCarthy to dismiss the indictment against them for fraudulently using the mails, Judge Woolsey of the United States District Court sitting in New York City, likewise applied the maxim, *caveat venditor* and condemned "stock 'touting'

by operators of pools through 'wash' sales, hiring customers' men, publicity agents, etc."

Acts providing a moratorium in some form for mortgages, were passed in Arizona (ch. 29), Arkansas (act 57), Iowa, Kansas, Minnesota, Montana (S. No. 72), Nebraska (H. R. 600), Oklahoma (S. B. 76), and Wisconsin (ch. 11). In New Jersey (ch. 82), the amount of the deficiency may be contested by the mortgagor, while in South Dakota (S. B. 21) deficiency judgments are permanently prohibited. In Minnesota the act was upheld by the State supreme court (one judge dissenting). The Federal Supreme Court granted a writ of *certiorari*, but later affirmed the judgment. (*Blaisdell v. Minnesota*, 290 U. S.—) The President's order of April 5, prohibiting the retention by any individual, or corporation, of gold or gold certificates, is discussed with reference to its effect on obligations payable in gold (which the debtor is unable to procure) by Professor Hanna of the Columbia Law School in the *A. B. A. Journal* (xix, 349). The order itself is based on the act of Congress of March 19, whose constitutionality is assailed.

Attorney General Mitchell, addressing a group of New York (mostly corporation) lawyers, utilized the opportunity to offer what was virtually an apology for attempting to enforce the Sherman anti-trust law, forbidding agreements in restraint of trade. A few more decisions like that in *Appalachian Coals Inc. v. U. S.*, 288 U. S. 344, would have relieved him of his embarrassment. In the opinion therein by Chief Justice Hughes, McReynolds J. dissenting, the court reversed a decree enjoining, as in restraint of interstate commerce, a combination of numerous coal producers, creating an exclusive selling agency by which competition among themselves was eliminated. The Chief Justice holds that the Sherman Act does not apply, although its purpose is to prevent undue restraint of interstate commerce.

The American Bar Association's committee on commerce commented:

Since the decision in the Trenton Potteries case, lawyers have been prone to say that price fixing agreements . . . are in and of themselves unlawful. The Appalachian Coals case seems to deny the correctness of this interpretation.

And as if this were not enough, the N. I. R. A. appears in some of its provisions to repeal parts of the Sherman act.

CORPORATIONS. In an address before the Illinois State Bar Association, on June 21, Professor Johnson of the university of that State discussed "Recent Judicial and Legislative Trends in Corporation Law," which he found to include a stricter view of corporate directors' liability, looking beyond the corporate form to the reality, protection of minority stockholders, greater liberality as regards intercorporate relations and efforts toward restatement or codification of corporation law. The latter is well illustrated in California, where a revision of the statutes relating to corporations, largely accomplished under the leadership of the State Bar Association (*A. B. A. Journal*, xix, 679) was finally completed during the year and became effective August 21.

DOMESTIC RELATIONS. The Scandinavian countries appear to be about the only ones disclosing an increase of marriages; and they have the simplest and most advanced marriage law (1932 YEAR BOOK, 444). Elsewhere a declining mar-

riage rate and a rapidly rising divorce rate, have resulted in a diminishing birth rate and created problems which the various nations have attempted to solve in different ways. Thus, in the Irish Free State, after a temporary rise from 1894 to 1920, there has been a steady decline since in the number of marriages which the government has sought to check by making substantial increases in the salaries of its clerks of both sexes, upon their marriage, with an additional sum for each child. Similar provisions have been enacted in France and Italy and in the latter there is a tax on bachelors, from which a small dowry is provided for each bride. In the Arab state of Hedjaz, it is proposed to require marriage of every person over 15. Czechoslovakia has raised the minimum marriage age to 16 while even India has recently fixed it at 14. Turkey has prohibited the old style, religious wedding and substituted a brief civil ceremony. In South Carolina, where marriage licenses were not required until 1911, couples married prior to that date may appear before the judge of probate with two witnesses of their marriage who will make affidavit thereto, and thus obtain a certificate, bearing the wedding date and affording *prima facie* evidence of the marriage, which is often important, e.g. in property matters, inheritance, etc. The certificate heretofore required of applicants for a marriage license in North Carolina, has been eliminated and an affidavit by the male applicant that he has been free from tuberculosis and social diseases for two years, is now sufficient. A bill to legalize "common law" (unsolemnized) marriages and to treat as bigamous a party thereto who remarries, was introduced into the Puerto Rican Senate on March 31. In June, the court of appeals at Milan, Italy, affirmed a decision of the court of first instance denying the claim of Maddelina Michel for services as a matchmaker in promoting the marriage of Leone Calleoni, former assistant manager of a hotel in Rome, with Miss Ann Murdock, an American actress.

This harmonizes with Anglo-American law which treats acts of the latter class as opposed to public policy. A bill introduced into the New York State Senate, would abolish the action for breach of promise to marry and forbid the courts to entertain such an action. This likewise harmonizes with the views of the eminent American commentator, James Schouler. (See Lobingier, "Lex Christiana," *Georgetown Law Journal*, xx, 171 n.

Sterilization. This method of preventing the perpetuation of the criminal and diseased classes has long been advocated by social reformers and is actually in vogue in certain American States. A law providing for it in Germany was enacted during the year and became effective Jan. 1, 1934. Under it some 1700 "hereditary health courts" will function throughout the country subject to an appeal to the "supreme hereditary health court." Besides the sterilization of "dangerous sex criminals" the law provides for it in case of any one of nine hereditary diseases, ranging from "feeble-mindedness" to "chronic alcoholism" and including blindness and deafness. Every physician is required to report all such cases within his knowledge and the patient may escape sterilization only by entering an institution for life at his own expense. Some estimate that about 400,000 will be affected. Both the Pope and the German Cardinal, Bertram, have protested against the application of the law; but a sentence there-

under, by consent, was imposed as early as December 6. A similar law was promulgated by the Senate of the free city of Danzig as early as December 1.

Birth Control advocates were active toward the year's close in support of a bill pending before the lower house of Congress, to amend the Federal penal code by permitting the dissemination by licensed physicians and institutions, of information regarding their favorite project. Such advocates would find little to do in Greensburgh, N. Y., where, with a population of 3600, there were no births (although 20 deaths and 41 marriages took place) during the month of June.

Divorce. In contrast with the birth rate, the divorce rate shows an alarming increase. From a ratio of less than one divorce for every 20 marriages, in 1888, the American rate has risen to about one for every five. Moreover, only a small portion of these (about 11 per cent) are contested. A similar situation appears in England; for at the opening of a London court early in the year no less than 618 undefended divorce actions were pending. During the first year of Spain's divorce law (1931 YEAR BOOK, 455), as many as 4500 divorces were granted, of which 1300 were in Barcelona and 800 in Madrid. Meanwhile the trend toward freer divorce likewise continues. In North Carolina where a separation for five years was a sufficient ground for divorce (1931 YEAR BOOK, 455), the period has now been reduced to two years, and relief may be obtained by either party even where there are children. In Delaware, a law was enacted authorizing divorce after 60 days' residence in the State. The Nevada law (1931 YEAR BOOK, 455) was construed in a decision rendered on July 13 at Reno, by District Judge Walsh, to require of plaintiffs in divorce proceedings a *bona fide* intention to reside indefinitely in the State, following the rendition of the decree. "Merc proof of physical presence here for six weeks," he said, "does not establish this intention." In Colorado, the practice of granting divorce decrees automatically, six months after an interlocutory decree, has been substituted for that of waiting for plaintiff's application, which is often never made, leaving the case still pending.

In Chile, the radical party of the Congress presented a divorce bill at the 1933 session and was counting on the Democrats and other left wing groups to secure its passage. The Austrian constitutional court recently decided that marriages between divorced Catholics were voidable, though entered into with the provincial governor's approval as provided by law. The California legislature in April, passed two bills prohibiting marriages between Filipinos and whites. A private member's bill, based on the majority report of the royal commission on divorce, was introduced in the British House of Commons in November, providing as new grounds for divorce and annulment, insanity, incurable inebriety, and imprisonment under a commuted death sentence. On December 6, a Paris civil tribunal announced that a decree granted in Monaco (whose decrees require confirmation by a French court) divorcing Princess Charlotte, only daughter of the reigning Prince Louis, from Prince Pierre, infringed no rule of French law.

In Mexico the very liberal divorce provisions of the Federal and state codes (1932 YEAR BOOK, 444), have occasioned serious and perplexing problems in other countries, particularly the

United States, through their utilization on the part of the latter's citizens. Chihuahua, in northern Mexico, seems to have outstripped even Yucatan in its provisions for easy divorce, designed, according to a Mexican lawyer (Urias of Juarez) to attract Americans. The law of Jan. 16, 1932, which purported to make possible the procurement of a divorce by mail, at a minimum cost of \$60 has been amended by reducing the time required from 30 to 15 days and increasing the number of grounds from 10 to 20, the new ones including abandonment, for three months, bigamy, criminal accusation, "dishonorable conduct," and separation for one year. In November, the Supreme Court of the Republic rendered a decision annulling the divorce granted in 1927 to General Berlanga, chief of military in the state of Campeche, where the decree was obtained, and who had meanwhile remarried. The ground of the Supreme Court's decision was the failure to provide an opportunity for the defendant to be heard. The *Colegio de Abogados* (bar association) of Chihuahua, took prompt occasion to deny that the decision affected adversely divorce decrees in that state. According to Lindell T. Bates in his monograph on "The Divorce of Americans in Mexico" (1929), "the risk of conviction for bigamy is very slight"; but Justin M. Edgerton, the New York credit executive, who obtained two Mexican divorces and then eloped with Grace, daughter of James A. Adams of New Bedford, Mass., found it otherwise. Prosecuted for bigamy at the instance of the girl's father, Edgerton was found guilty, on October 7, by a jury in Maryland (where jurors are judges of the law in criminal cases) after 20 minutes of deliberation and was given a "suspended sentence" of imprisonment for 18 months. The Mexican decrees were excluded from evidence; the first on the ground that when it was rendered, defendant was not a resident of Mexico. Alleged Mexican divorce "agencies," operating fraudulently in Washington City, are under investigation by the District of Columbia Bar Association. A wife living with her children but apart from her husband, and never having sought divorce, was notified by the Mexican court at Juarez (Chihuahua) that the charges of desertion in her application for divorce had been "confessed" and that satisfactory proof had been offered that there were no children by the marriage and no community property. It appeared later that the husband had instituted the proceeding in her name but without her knowledge.

PROPERTY. A committee of the National Conference of Commissioners on Uniform Laws has drafted a uniform mechanics' lien act of 39 sections for adoption by all the States. The mechanics' lien, though an adaptation of the civil law "privilege," is an American device, originating in Pennsylvania and spreading to all the States and Canada; but each has a different statute and the purpose of the new draft is to produce uniformity; this has been accomplished with negotiable instruments, bills of lading, warehouse receipts, etc. An article in the *Yale Law Journal* (xlii, 702) reviews the legislation and litigation of the past two years relative to the production and conservation of petroleum.

U. S. v. Dubilier Condenser Corp., 289 U. S. 178, was a suit by the Federal government to compel the assignment to it of certain patents for radio apparatus invented by Messrs. Francis W. Dunmore and Percival D. Lowell, employed in the

Bureau of Standards Laboratories at Washington. The suit was dismissed on the ground that they were not employed to invent. Justice Stone (and with him Chief Justice Hughes and Justice Cardozo) dissented, holding that

they were employed to conduct scientific investigations in a laboratory devoted principally to applied rather than pure, science, with full knowledge and expectation of all concerned that their investigations might normally lead, as they did, to invention;

and that it was contrary to public policy to permit them to profit personally from work done for the government.

The new German inheritance law (applicable for the present to Prussia alone) not only restores the feudal principle of primogeniture, giving the oldest child all of the land, but provides (Art. 1): "Only a German citizen of German blood may inherit land as a farmer."

For each family there is to be but one farm, no larger than its needs, and "huge estate owners' right of transmitting inheritance will be revoked," according to Prof. Ernst Wagemann, chief "Nazi" economist.

TORTS. This branch of the law, known among civilians as "delicts," is that which relates to private wrongs independent of contract. It is one of the subjects on which the American Law Institute has been working and a tentative draft of its restatement of the law relating thereto was considered at the annual meeting on May 6. The final drafts, in two volumes, are promised for the next annual meeting in 1934. Among the more noteworthy decisions rendered during the year in this field, was *Young v. Masci*, 289 U. S. 253, upholding that provision of the New York automobile law (typical of many State laws) which imposes upon the owner of such a vehicle, liability for injuries resulting from negligence in its operation by any one using it with the owner's permission, express, or implied. In this case the owner was a resident of New Jersey; while the injury caused by the car when driven by another, occurred in New York.

Following *Castle v. St. Augustine Links*, an English case, Municipal Court Justice Pette, of New York, in *Gleason v. Knorr*, held liable a golf player, and the club whose course he played on, for injuries caused the occupant of a passing automobile, from his golf ball which, carried by the wind, struck the latter's windshield.

Failure to provide medical care for seamen constitutes a "personal injury," under the Merchant Marine Act of 1920, according to the Supreme Court's decision in *Cortez v. Baltimore*, 287 U. S. 367. Another peculiar application of the law of negligence was in *Olson v. North*, tried in the circuit court at Rockford, Ill., where the plaintiff obtained a verdict of \$29,250 against his former attorney who had defended him in a prosecution for murder which the attorney knew, but failed to disclose, had been committed by others. Plaintiff had been convicted but never served his sentence.

LAWN BOWLING. See BOWLING.

LAWN TENNIS. See TENNIS.

LAWRENCE COLLEGE. A coeducational institution, comprising a college of liberal arts and a conservatory of music in Appleton, Wis., founded in 1846. For the 1933 autumn term 706 students were enrolled in the college and 272 in the conservatory. There were 23 students enrolled in the Institute of Paper Chemistry, a graduate school affiliated with Lawrence College. There

were 57 members on the faculty of the college and 20 on the faculty of the conservatory. The endowment, exclusive of buildings and equipment, amounted to \$1,772,381.13; the income from endowment for 1933 was \$70,549.78. There were 60,995 volumes in the library, exclusive of government documents. President, Henry Merritt Wriston, Ph.D., LL.D.

LEAD. Refined lead produced in the United States from domestic ores in 1933 totaled 252,500 tons, a decrease of 1 per cent from the output in 1932 and a new low record production since 1899, according to a preliminary summary of the U. S. Bureau of Mines. Refined primary lead produced from foreign sources amounted to considerably less than one-half of that recovered in the preceding year and was less than in any year since 1886. The recovery of secondary lead at primary plants increased during the year, however, and the total output of refined lead at primary plants was only 3 per cent less than in 1932. The calculated new supply of lead made available for consumption was 9 per cent lower in 1933 than in 1932.

The output of primary domestic desilverized lead in 1933 was about 146,900 tons; of soft lead about 81,900 tons, and of desilverized soft lead about 23,700 tons, making a total output from domestic ores of about 252,500 tons of refined lead. Corresponding figures in 1932 were 156,683 tons of desilverized lead, 63,130 tons of soft lead, and 35,524 tons of desilverized soft lead, making a total of 255,337 tons. The output of lead smelted and refined from foreign ore and bullion was about 13,900 tons, as compared with 33,024 tons in 1932. The total primary lead smelted or refined in the United States in 1933 was thus about 266,400 tons, a decrease of about 8 per cent as compared with the total of 288,361 tons in 1932. Plants that treat primary materials mainly produced 46,300 tons of secondary lead in 1933 compared with 33,611 tons in 1932. Therefore, the total output of primary and secondary refined lead at primary refineries was 312,700 tons, as compared with 321,972 tons in 1932, a decrease of 3 per cent. Antimonial lead produced at primary refineries in 1933 amounted to about 18,000 tons, as compared with 21,024 tons in 1932.

The imports of lead as "pigs, bars and old" for eleven months amounted to 109 tons. The base bullion imported during the same period contained 322 tons of lead. The exports of domestic lead in pigs, bars, etc., during the first eleven months amounted to 22,309 tons and exports of lead sheets during that period were 170 tons. Exports of foreign pig lead for 10 months amounted to 4 tons. Total exports of pig lead for the entire year 1932 were 23,516 tons.

By excluding the stocks of lead at smelters and refineries and by estimating the amount of lead exported with benefit of drawback (for which figures for only 9 months are available), the new supply of lead made available for consumption in 1933 is calculated at about 235,000 tons, a decrease of 9 per cent from 257,669 tons in 1932.

The lowest average quoted monthly price for lead at New York (outside market) for the year was 3 cents a pound in January and February, 1933. From that level it rose to 4.5 cents a pound, the highest monthly average, in August and September. The price declined in each of the last three months and closed the year at 4.15 cents a pound. The highest and lowest daily prices of the year were the same as the highest and lowest

monthly prices. The daily price of 4.50 cents a pound held from July 10 until October 16 and that of 3 cents a pound began Nov. 18, 1932 and continued until Mar. 8, 1933.

LEAGUE OF NATIONS. The withdrawal of Japan and Germany from the League of Nations brought forward the question of its future and of its present usefulness. In the opinion of Frank H. Simonds in his *Atlantic Monthly* article the machinery of peace of the post-war era has collapsed. He observes—"Germany never did want anything out of the League but revision and return to military primacy, and the French and Poles are immovable in their boundaries. Europe has returned to its traditional methods, and the United States has now to retire to its similarly traditional isolation or to take sides in a new Continental war to preserve the balance of power. In a word, Europe is back in 1914, and America is facing the problems which confronted it two decades ago." It has been asked, however, "but is it?"—it being either Europe or America. Foreign to Mr. Simonds' premises is the new factor that did not exist in 1914, and did not exist at the time of the Congress of Vienna from which he draws so many lessons—the stabilizing factor of the social State, the new concept of national policy—whether internal or external—the League of Nations, which is practically always in session. The record of its activities for 1933 shows what it is doing, practically day by day, to settle irritating disputes between nations, just such disputes as have frequently led to war, and yet in the opinion of Henri Barbusse, a noted French writer and pacifist, "The League of Nations has prevented nothing and allowed everything done. It has allowed twenty-seven conflicts. It is a fomentor of war and each country which is a member of it is protecting its own imperialistic interests." He declared that the Disarmament Conference "can count as many failures as ceremonious performances and to-day it is on its way toward a new failure."

When the Thirteenth Assembly concluded its sessions it was generally considered as the most barren of the series. It met in the midst of gloomy auspices. "Fears and rumors of wars in Europe made dismal the atmosphere," according to the *Philadelphia Ledger*. "There was no suggestion that the League could do anything about the situation of tension and strain. No attempt was made to do anything. It is clear that the League of Nations has fallen upon evil days. Its prestige is at a low ebb. It is obviously failing to fulfill the hopes and expectations toward which it has moved. It still provides a world stage for the expression of opinion which otherwise might be a light hidden under a bushel. But this last session of the Assembly has demonstrated that League activities and influence have become extremely limited."

Raymond B. Fosdick, the new president of the League of Nations Association, took a far more cheerful view. He believed that the sentiment in the United States for the League of Nations, and the collective principle on which it is based was never stronger than in 1933. "A new generation is growing up," he points out, "unhampered by the political prejudices of a dozen years ago. In every college and high school in the country the question is asked why, in an interwoven world like this, we should refuse to associate in a coöperative attempt to handle the problems that are fast overflowing national boundary lines. That question will be asked with increasing insistence as the years go by; and to that question the answer

of the objectors will seem increasingly unintelligent. Time is on the side of the friends of the League of Nations. The growing complexity of international relationships and the driving need of a rational method of control is taking us day by day nearer to Geneva."

Charles H. Strong, an official of the same Association contends that America's non-membership in the League of Nations has been responsible for the fact that the League has not been "highly effective" in dealing with the Far Eastern problem. He said that Matsuoka, chief Japanese delegate to the League, had declared in "open conference at Geneva that Japan joined the League in the belief that the United States would join, and when the United States did not join the League, Japan should perhaps have then resigned. . . . Japan, therefore, 'cannot be judged under the Covenant of the League, as it might have been had the United States and Russia become members and as if the League were to-day complete.'"

The activities of the League during January, 1933, included the seventieth session of the Council and meetings of the Committee of Nineteen, the Bureau of the Conference for the Reduction and Limitation of Armaments. The Committee of Nineteen of the Special Assembly, upon the failure of its attempts at conciliation in the Sino-Japanese dispute, decided, while continuing its negotiations with the parties, to begin the preparation of the draft report contemplated in Article 15, paragraph 4, of the Covenant. The Council, which met on January 25, heard the views of the governments of the United Kingdom and Persia on the cancellation of the concession of the Anglo-Persian Oil Company. A special Council Committee met to examine difficulties which had arisen in connection with the plan of assistance to Liberia, more particularly by the declaration of a moratorium by the Liberian Parliament.

During March the attention of the League was principally engaged by the new British disarmament proposals, as well as by the conflict in the Far East and the disputes in Latin America between Bolivia and Paraguay on the one hand, and Colombia and Peru on the other.

The Japanese government, finding itself in complete disagreement with the League in the matter of the policy to be pursued in the Far East, gave the preliminary two years' notice, provided for in the Covenant, of its intention to withdraw from the League. The government of the Union of Soviet Socialist Republics, while acknowledging that the decisions taken by the League on the Sino-Japanese dispute coincided in part with its own views, declined to participate for the moment in the work of the Advisory Committee. On the other hand, the government of the United States accepted the invitation to cooperate with this Committee. The Advisory Committee set up two Sub-Committees—one to study the question of the export of arms in relation to the situation in the Far East; the other, to consider the practical application of the undertakings assumed by the Members of the League, more particularly in regard to the non-recognition of Manchoukuo.

Following upon the rejection by the Peruvian government of the Council's proposals for the settlement of the dispute with Colombia, under paragraph 3 of Article 15 of the Covenant, it adopted a report in accordance with paragraph 4 of Article 15, recommending the complete evacuation by the Peruvian forces of the Leticia trapezium. It also appointed an Advisory Committee to watch

the situation. The governments of the United States and Brazil cooperated in the work of this Committee. The Council further heard the representatives of the governments of Bolivia and Paraguay over the Chaco controversy, and decided to ask for official information on the arbitration proposals submitted by the governments of the Argentine and Chile.

In May the activities of the League included the seventy-third session of the Council and the meetings of the Disarmament Conference.

An agreement providing for the settlement, in accordance with the Council's recommendations of March 18, of the dispute between Colombia and Peru was signed by the representatives of the two parties and the President of the Council on May 25. The agreement stipulated for the dispatch to Leticia of a Commission to take charge in the name of the Colombian government of the territory which was to be evacuated by the Peruvian troops. See PERU under *History*.

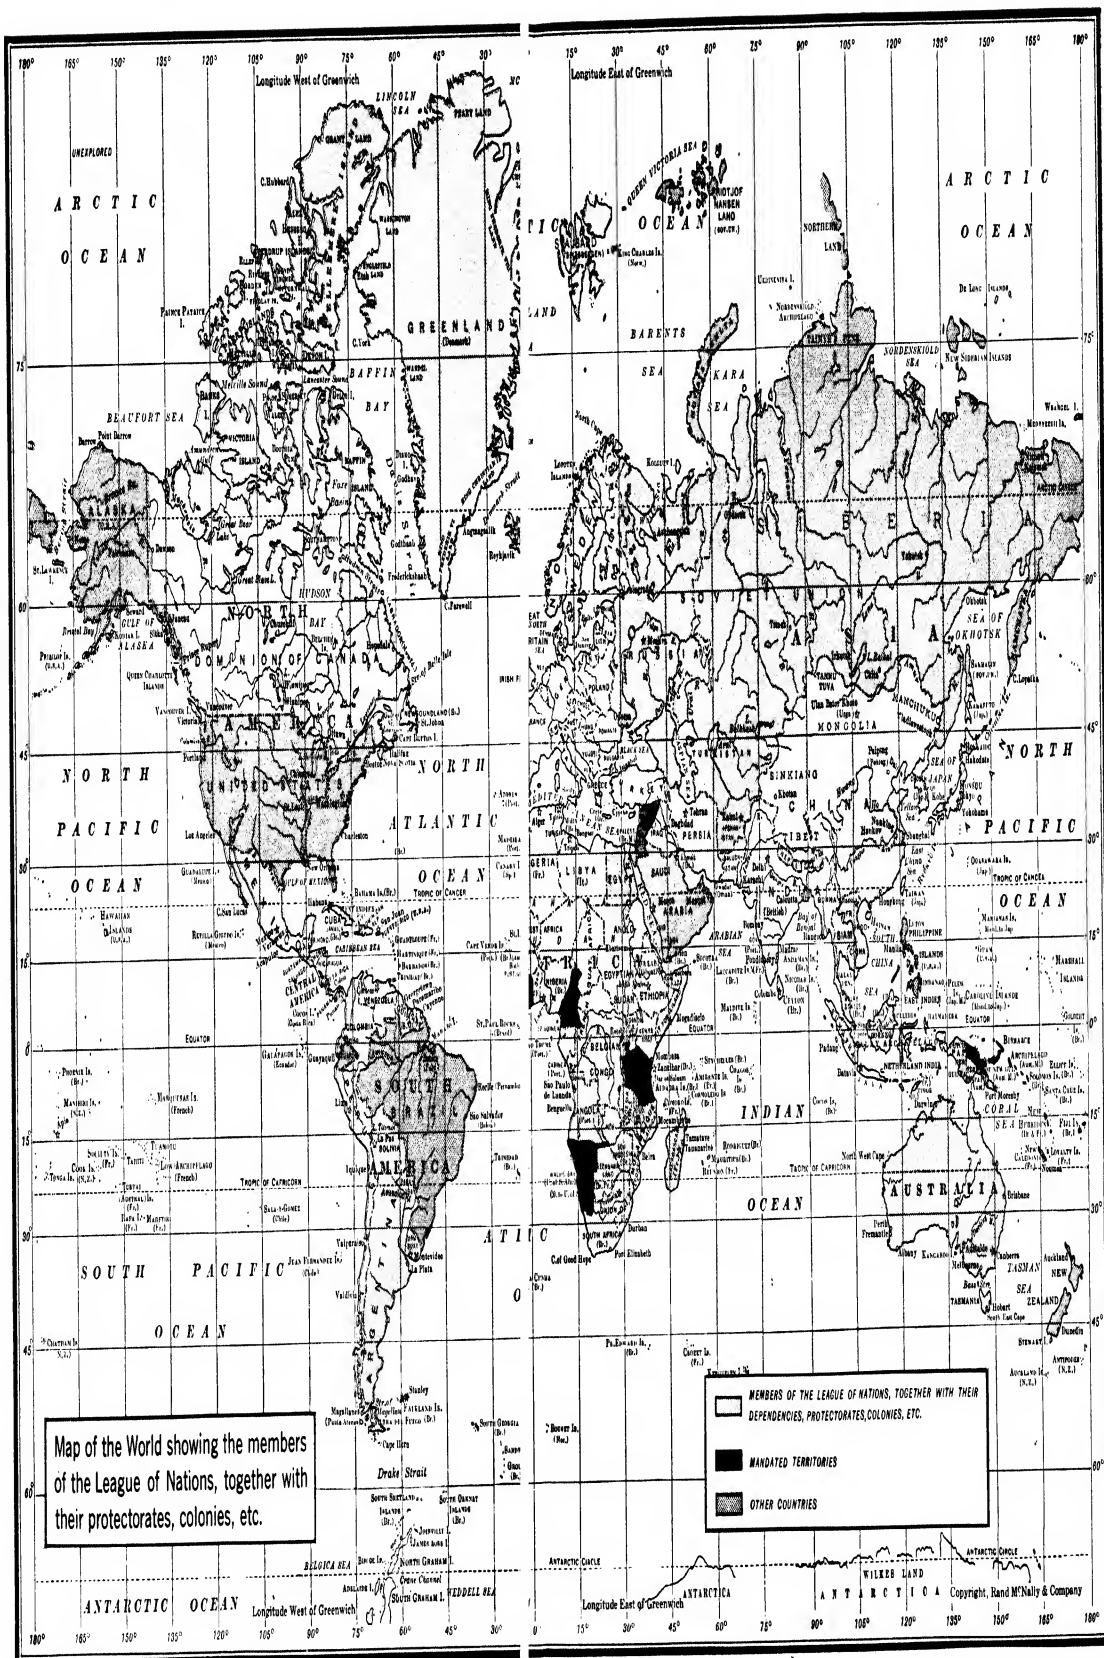

Following the declaration of war by Paraguay on Bolivia, the Council heard the representatives of the two governments concerned, and instructed its special committee to propose a solution for the dispute. The Committee presented a draft report providing for the cessation of hostilities, withdrawal of the declaration of war, and an agreement to submit the dispute to arbitration. The representative of Bolivia having reserved the decision of his government on the report which was accepted by the representative of Paraguay, the Council asked its Committee to continue to follow the situation.

The Council noted that the dispute between the United Kingdom and Persia was virtually settled as the result of an agreement reached on April 29 providing for a new concession to the Anglo-Persian Oil Company.

The outstanding feature of the League's activities during June was the meeting in London of the Monetary and Economic Conference (see ECONOMIC CONFERENCE, WORLD). This was the third great conference on economic and financial problems summoned under the League's auspices. The first was held in Brussels in 1920 and dealt mainly with financial questions; the second, devoted to economic problems, met in Geneva in 1927. The London Conference, organized at the request of the Lausanne Reparations Conference, dealt with both the monetary and economic aspects of the present world crisis. It constituted an international effort for the economic and financial reconstruction of the world. Unlike its predecessors—the Brussels and Geneva Conferences—it was composed not of experts but of government representatives.

During July the Monetary and Economic Conference and an extraordinary session of the Council were held. At the London Conference efforts to reach an understanding on currency stabilization failed. As some measure of currency stabilization was generally considered an essential condition for the examination of other important items on the agenda, especially that of tariff policy, it was deemed advisable to adjourn the Conference until the conditions permitting of an agreement had been created.

The Council heard the representatives of Bolivia and Paraguay over the Chaco dispute, and approved the report of its Committee, already accepted by the parties. Just as the Commission was about to set out the Bolivian and Paraguayan governments proposed that the Council should

invite the four neighboring states—Argentina, Brazil, Chile, and Peru—to act on its behalf for the settlement of the dispute. The Committee instructed to deal with the question decided, therefore, to summon a meeting of the Council. See **BOLIVIA** under *History*.

With the opening of the fourteenth ordinary session of the Assembly and the meeting of the Council the League displayed, as usual, a more intense activity during September. The return of the Argentine to League membership was the outstanding event of the Assembly's session. (See **ARGENTINA** under *History*.)

It noted the report of the Mandates Commission and the conclusion, between Danzig and Poland, of agreements on the utilization of the port of Danzig by Poland, and the treatment of Polish nationals in the territory of the Free City. It dealt with a number of petitions arising out of the application of the German-Polish Convention relating to Upper Silesia, and with a petition concerning the dissolution of a German Association in Yugoslavia. At the request of the Iraq government, it postponed, until the close of the Assembly session, its consideration of the situation of the Assyrian minority in Iraq. The Financial Committee, which also met in September, surveyed the financial situation of Austria, Greece, and Hungary, and examined the question of technical collaboration with the Rumanian government.

October was also marked by great activity. The Assembly continued its fourteenth ordinary session; the Council held a number of meetings; and the Disarmament Conference resumed its work. President Henderson, of the Disarmament Conference, reported to the Bureau on his negotiations with the heads of various delegations with a view to preparing a text for the second reading of the British draft convention (MacDonald Plan). On October 14 the Bureau heard a statement from Sir John Simon on further conversations between the principal delegations. As a result of these exchanges of views, Sir John Simon considered that the British draft would have to be modified in certain respects. On the same day, M. von Neurath communicated to the President the decision of the German government to leave the Disarmament Conference. He stated that it was clear that the Conference would not fulfill its sole object—namely, general disarmament, because of the unwillingness of the highly armed states to carry out their contractual obligations, and that this rendered impossible the satisfaction of Germany's recognized claim to equality of rights. On October 16 the General Commission noted Sir John Simon's statement and approved the terms of the reply of the President of the Conference. The President declared in his reply that he could not accept as valid the reasons given by the German government. He regretted that its decision had been taken at the moment when the Bureau had just decided to submit to the General Commission a definite programme, which provided for the progressive realization of reduction of armaments and equality of status. On October 21 the German Consul at Geneva forwarded to the Secretary-General a communication intimating that Germany was withdrawing from the League, in conformity with Article 1, paragraph 3, of the Covenant. See **DISARMAMENT; MILITARY PROGRESS; GERMANY** under *History*.

The governments of the Argentine, Brazil, Chile, and Peru declined (October 1) the invitation ad-

dressed to them by the Council to submit a formula for the settlement of the dispute between Bolivia and Paraguay. Consequently, in accordance with the Council's decision of September 28, a League Commission was dispatched to the spot.

The Assembly, acting in conjunction with the Council, increased provisionally, for the period 1933-36, the number of non-permanent seats on the Council from nine to ten. It elected Denmark, the Argentine, and Australia to succeed Norway, Guatemala, and the Irish Free State as non-permanent Members of the Council, and called upon Portugal to occupy the newly created additional seat.

The Assembly recommended the appointment of a High Commissioner to deal with the German nationals, Jewish and other, who had taken refuge in several countries. Mr. James G. McDonald of New York accepted the Council's invitation to assume the duties of High Commissioner. He was to be assisted in his work by a Governing Body composed of representatives of a number of governments, including the United States.

Early in July representatives of all nations and all parties joined hands at the Queen's Hall, London, to honor Sir Eric Drummond upon the completion of 14 years' service as Secretary General of the League of Nations. The meeting had moments of intense enthusiasm when it was announced that Sir Eric had been appointed British Ambassador to Rome. It was a tribute to a man more responsible than any other for the smooth functioning of the League since its inception.

Sir Eric was succeeded as Secretary General of the League by M. Joseph A. C. Avenol, of France, in whose opinion the problem before the world does not involve a choice between the League of Nations and some better system, but between the League and almost complete anarchy. Before the assembled members of the British Parliament M. Avenol laid the world crisis at the door of disarmament. He expressed no opinion on the desirability of revising the League Covenant, but said he doubted whether objections made to its operation could be met only by a change in procedure. The Secretary General said despite the injunction of Article 8 of the League Covenant arms discussions had simmered down to one of equality of rights, a purely European matter, with the reduction of armaments relegated to the background. He maintained confidence in the League was fully justified and added that it was to be regretted that a combination of circumstances had rendered any understanding between the Great Powers impossible. What is "still more to be regretted," he went on, "is that the responsibility for the failure of the Great Powers to reach an understanding should be laid at the door of the League."

As the successor of the late M. Albert Thomas (France) Director of the International Labor Office, Mr. Harold Beresford Butler, of Great Britain, was chosen. He had been the Assistant Director.

M. Pierre Comert, for 13 years Director of the Information Section of the League of Nations, tendered his resignation, which became effective Jan. 1, 1934. He was succeeded by Arthur Sweetser of Boston, Mass., who had been a member of the secretariat of the League of Nations since its foundation. He was assigned to special duty of handling questions calculated to interest the United States. Mr. Sweetser was one of President Wilson's associates at the Paris Peace Conference.

His appointment attracted attention because of President Roosevelt's announcement of steady American cooperation with the League.

Leadership of the League of Nations movement in the United States was assumed by Raymond B. Fosdick, New York attorney, and former under Secretary-General of the League of Nations, when, on May 1, he became President of the League of Nations Association, succeeding former Attorney-General George W. Wickersham.

Philip Curtis Nash, who had been Executive Director of the League of Nations Association, resigned to become president of the University of Toledo (Ohio). Hilton Howell Railey was chosen as Mr. Nash's successor.

The League of Nations, which has kept practically all its money reserves, totaling \$5,000,000, in dollars, has sustained through the fall of the dollar a paper loss of nearly \$1,000,000, and has had to exchange a part of this reserve at the loss of from 15 to 20 per cent. In making out the new budget, already difficult to balance, the supervisory committee has authorized cuts, including a 50 per cent reduction in the information section of the League.

With due form the ceremony of hoisting the traditional bouquet took place over the new League building at Geneva on November 6. The bouquet consisted of a large and much be-ribboned Christmas tree and all over the building there were strings of the flags of all the 57 member States of the League of Nations. See CHINA, COLOMBIA, PERU, BOLIVIA, PARAGUAY, ARGENTINA, JAPAN, GERMANY, DENMARK, under *History*.

LEATHER. Along with the shoe industry the production of leather during the year 1933 experienced a gratifying upturn, according to data furnished by the Tanners' Council of America. The greatest increase occurred in the production of sheep and lamb skins with a rise from 27,560,000 in 1932 to 35,093,000, an increase of 27 per cent, and almost three million skins above the output of 1931. Goat and kid leathers rose 20 per cent over 1932, with 44,312,000 skins as against 37,010,000, but not equaling the figure of 48,638,000 skins in 1931. The production of cattle hide leathers also topped the figures for 1932 and 1931: 17,057,000 in 1933; 14,583,000 in 1932, and 16,235,000 in 1931. Calf and kip leathers showed a similar curve: 13,030,000 in 1933; 11,579,000 in 1932, and 12,439,000 in 1931.

The importation of raw hides and skins, other than furs, exceeded by 79 per cent the imports of 1932, 339,979,720 pounds as compared with 190,229,272 pounds, and exceeded the figure for 1931 by about 68,900,000 pounds. The value of the 1933 imports was \$45,675,185, slightly more than double the value of 1932 imports. Finished leather imported into the United States in 1933 was valued at \$9,786,192 (\$6,846,578 in 1932); and imports of leather manufactures were valued at \$8,425,350.

Exports of hides and skins, other than furs, from the United States in 1933 declined markedly in quantity, though higher value almost offset the reduction in quantity. In 1932, 42,405,505 pounds of hides and skins were shipped out of the United States, the value being \$2,240,161; in 1933, the quantity dropped to 27,497,365 pounds, the value being \$2,048,363. Unfinished leather exports were valued at \$13,778,804, and leather manufactures were valued at \$2,955,456. See also **SHOE INDUSTRY**.

LEBANON REPUBLIC. See SYRIA.

LEE, ELISHA. An American railway official, died in New York City, Aug. 6, 1933. He was born in Chicago, Ill., Sept. 24, 1870. On his graduation from the Massachusetts Institute of Technology in 1892 he began his railway service on the Pennsylvania Railroad as a rodman in the engineering division at Tyrone, Pa. From 1899 to 1901 he was assistant supervisor, and from 1901 to 1903 supervisor of various divisions of the Pennsylvania Railroad. He was appointed assistant engineer of the maintenance of way department in 1903 and four years later was made principal assistant engineer on the Philadelphia, Baltimore, and Washington Railroad, a subsidiary of the Pennsylvania system. In 1909 he was advanced to superintendent of the New York, Philadelphia, and Norfolk Railroad, another subsidiary. He became assistant to the general manager of the Pennsylvania lines east of Pittsburgh in 1911 and was appointed general superintendent of the Philadelphia, Baltimore, and Washington Railroad in 1914. In 1917 he became the general manager of the Pennsylvania lines east of Pittsburgh and, when the United States government took over the control of all railroads as a war-time measure, served as Federal manager of the Pennsylvania's eastern lines, under the jurisdiction of the Director of the Allegheny Region.

On the reorganization of the Pennsylvania Railroad System in 1920, Mr. Lee became vice-president in charge of the eastern region with headquarters in Philadelphia. In 1923 he was transferred to Pittsburgh as vice-president in charge of the central region and the following year was appointed vice-president in charge of operation of the entire system. In 1926 he was elected vice-president of the Pennsylvania Railroad Co., holding that office until his death.

LEEWARD ISLANDS, BRITISH. A British colony consisting of a group of islands in the Greater and Lesser Antilles, lying north of the Windward Islands and the southeast of Puerto Rico. Total area, 716 square miles; total population (Jan. 1, 1933 estimate), 131,066. The islands are divided into five presidencies (1) Antigua (with Barbuda and Redonda), (2) St. Christopher-Nevis (with Anguilla), (3) Dominica, (4) Montserrat, (5) British Virgin Islands, which are near the American Virgin Islands. The chief towns are Basseterre (St. Christopher), with approximately 9000 inhabitants on Jan. 1, 1933; Roseau (Dominica), 7500; St. John (Antigua), 7000. In 1930-31, there were 108 primary schools with a total average attendance of 17,699; 11 secondary schools with average attendance of 300; and 1 industrial school.

The principal products in 1932 were sugar (39,137 tons valued at £379,582), cotton (414,717 lbs. valued at £18,125), limes and lime products (were valued at £33,382), tomatoes (524,580 lbs. valued at £4481), bay oil (20,915 lbs. valued £3683), rum (11,520 gals. valued at £1587); other products are cotton seed, coconuts, oranges, mangoes, onions, salt. Imports in 1932 were valued at £551,488; exports, £483,263 (sugar represented 82 per cent of the total exports by value). During 1932 there were 2126 steamships totaling 5,403,768 tons that entered and cleared the ports of the colony. The government revenues for 1932 totaled £230,730; expenditures, £263,476; public debt, £287,767; sinking fund, £249,958. A governor, who is also the commander-in-chief, is at the head of the cen-

tral government which consists of a Federal executive council and a Federal legislative council. The governor is represented in each of the presidencies of St. Christopher-Nevis and Dominica by an administrator and in those of Montserrat and the Virgin Islands by a commissioner. The four larger presidencies each have separate executive and legislative councils, and the Virgin Islands has only an executive council. Governor in 1933, Sir R. St. Johnston.

LEEWARD ISLANDS, FRENCH. See OCEANIA, FRENCH ESTABLISHMENTS IN.

LEGAL EDUCATION. See LAW.

LEGGE, ALEXANDER. An American industrialist, died at Hinsdale, Ill., Dec. 3, 1933. Born in Dane Co., Wis., Jan. 13, 1866, he received a common school education and in 1891 entered the employ of the McCormick Harvester Co. as a collector in its Omaha office. Following his promotion to collection manager at Council Bluffs, Iowa, three years later, he was made branch manager there in 1898 and the following year manager of the collection department at headquarters in Chicago. On the merger of the McCormick Harvester Co. with the International Harvester Co. in 1902 he was made manager of domestic sales. He later became assistant general manager in 1906, general manager in 1913, vice-president and general manager in 1919, and president in 1922, succeeding Harold McCormick in the latter office.

During the World War Mr. Legge was manager of the Allied Purchasing Commission, which expended approximately \$10,000,000,000 in the purchase of industrial war supplies for the allied governments. As vice-chairman of the War Industries Board after May, 1918, he headed the requirements division, organized for the purpose of estimating and correlating the requirements of the various war agencies. In 1919 he attended the Paris Peace Conference as economic adviser and also surveyed the devastated regions of France with an eye to their industrial rehabilitation. In 1929 President Hoover appointed him chairman of the Federal Farm Board, in which post, during his two year tenure, he introduced many reforms in the marketing of agricultural commodities so as to place agriculture on a basis of economic equality with other industries.

LEGISLATION. See AUTOMOBILES; CHILD LABOR; LAW; UNITED STATES, and the articles on the separate States.

LEHIGH UNIVERSITY. A nonsectarian institution for the higher education of men in Bethlehem, Pa., founded in 1866. The enrollment for the autumn of 1933 was 1426, distributed as follows: arts and science, 226; business administration, 307; engineering, 781; graduate studies, 112. The enrollment for the summer session of 1933 was 435. The faculty numbered 162, including 15 persons on the administration staff. The endowment amounted to \$5,308,921, while the total income for the year was \$1,138,782. There were 202,082 volumes in the library. President, Charles Russ Richards, Eng. D., LL.D.

LETICIA DISPUTE. See PERU, COLOMBIA, and BRAZIL under *History*; LEAGUE OF NATIONS.

LEVY, RAPHAËL-GEORGES. A French economist, died Dec. 9, 1933, in Paris, where he was born Feb. 24, 1853. Educated in law at the University of Paris, he later held a chair at the School of Political Sciences and was president of the Superior School of Financial Teaching. He was also a sub-director of the Banque de Paris et des Pays-Bas, vice-president of the Crédit Mobilier Fran-

çais, and a member of numerous extra-parliamentary commissions on finance. In the Senate he was leader for some time of the Republican-Democratic Union, whose chief support was among leaders of industry and finance. Besides being president of the Society of Political Economy, he was a member after 1913 of the Academy of Moral and Political Sciences of the Institute of France. His decorations included officer of the Legion of Honor, grand officer of the Orders of the Crown of Belgium, Rumania, and Italy, and Commander of the Order of Christ of Portugal.

Outstanding among M. Lévy's works were: *Les Conversions des rentes* (1886); *Le Pétit financier* (1888); *La Spéculation et la banque* (1893); *Les Chemins de fer français* (1894); *Le Métal argent à la fin du XIX^e siècle* (1894); *L'Union monétaire au moyen d'une banque centrale universelle* (1895); *La Fortune mobilière de la France à l'étranger* (1897); *Les Finances aux États-Unis* (1898); *La Dette anglaise* (1898); *Le Mouvement industriel* (1899); *Les Finances égyptiennes* (1899); *Les Tendances de la législation fiscale en Europe au cours de XIX^e siècle* (1900); *Le Triomphe de l'unité monétaire* (1901); *L'Allemagne industrielle* (1901); *Finances de la guerre: Russie et Japon* (1904); *Principes de monnaie et de banque* (1907); *La juste Paix* (1922).

LEYGUES, GEORGES JEAN CLAUDE. A French statesman, died at St. Cloud, near Paris, Sept. 2, 1933. Born at Villeneuve-sur-Lot, Nov. 28, 1858, he was educated at the college there and at the Universities of Toulouse and Bordeaux. Successively a journalist and lawyer, he was for many years an advocate at the Court of Appeal in Paris. He made his entry into politics on his election in 1885 as Left-Republican deputy for Lot-et-Garonne and continued to represent that department in each succeeding chamber. His first ministerial post was that of Public Instruction and Fine Arts in the Dupuy cabinet of 1894. In 1895 he served as Minister of the Interior in Ribot's cabinet, and in 1898 as vice-president of the Chamber of Deputies. He again held the portfolio of Public Instruction in Depuy's third cabinet (1898) and in Rousseau's cabinet (1899-1902). In 1905 he founded with Barthou the Republican Union, forming part of the opposition to the Radicals and Socialists, and in 1906 served under Sarrien as Minister of the Colonies.

After a semi-retirement M. Leygues emerged in 1917 as Minister of Marine in Clémenceau's cabinet and during the remainder of the War played a prominent part in coördinating the activities of the Allied fleets. In 1921 he was Premier and Minister of Foreign Affairs, but his government fell after a four-month tenure on account of the offense which the Nationalists had taken at its leniency in the matter of German reparations and its moderate tendency in dealing with such internal dangers as Bolshevik propaganda. Under Briand in 1925-26 he successively held the portfolios of Marine and War and continued his notable work of developing the French Navy as Minister of Marine in the succeeding cabinets of Poincaré and Tardieu. He was Minister of the Interior in the short-lived Steeg cabinet of 1931 and closed his career as Minister of Marine in Herriot's cabinet of 1932 and Daladier's cabinet of 1933. Previous to his death he expressed satisfaction with the progress made in building up the French Navy, keeping, however, within the restrictions of the London Naval Treaty of 1930.

In his youth, M. Leygues belonged to the Parnassian group of poets, publishing *Le Coffret brisé* (1882) and *La Lyne d'airain* (1883). He wrote also *Discours politiques* (1902); *L'Ecole et la vie* (1904); and *Colbert* (1920).

LIAPTCHIEFF, ANDREAS. A Bulgarian statesman, died in Sofia, Nov. 6, 1933. Born at Ressen, Macedonia, Nov. 30, 1866, he attended the Universities of Zurich, Berlin, and Paris. In 1885 he played a prominent part in the revolution by which Eastern Rumelia was united to Bulgaria and after 1895 edited *Les Réformes*, originally founded as an advocate of freedom for Macedonia. In politics he was a member of the Democratic party, serving as editor of its organ *Préparetz* after 1895 and as its vice-president from 1903 to 1923. After 1908 he was a member of the Sobranje, the Bulgarian Parliament.

Liaptcheff held under Malinoff the portfolio of Commerce and Agriculture during 1908-10 and that of Finance in 1911. He participated also (1908-09) in the negotiations at Constantinople which led to the recognition of Bulgaria's independence, but 10 years later witnessed his country's humiliation in the Armistice negotiations concluded at Saloniki after the capitulation of Bulgaria on Sept. 30, 1918. In the Radoslavoff cabinet of 1918-19 he was successively Minister of Finance and of War.

In 1923 Liaptcheff helped to found the Democratic Entente, a bloc of conservative middle-class element which advocated strengthening of the state authority. He served as president of the Entente until 1932 when the party split into two groups, the more radical of which under Zankoff favored active interference of the state in economic affairs and a vigorous stand against communism. He took also a prominent part in the Bulgarian coöperative movement, founding various coöperative societies and banks and serving as president of the Economic Society.

Appointed Premier and Minister of the Interior in January, 1926, Liaptcheff became known during the five years that his government was in power for his conciliatory policy, especially in avoiding war with Yugoslavia. In the national election of June, 1931, however, widespread economic discontent brought about the overwhelming defeat of the Democratic Entente and resulted in the formation of a new ministry under Alexander Malinoff, leader of the Opposition bloc of Agrarians, Democrats, National Liberals, and Radicals.

LIBERIA. A Negro republic on the west coast of Africa. Area, about 43,000 square miles; population, estimated at 2,000,000 to 2,500,000, of whom about 60,000 coast Negroes may be considered civilized. Capital, Monrovia (population, about 10,000, including Krutown). The interior population is divided into some 40 tribes, speaking as many languages. In 1930 there were 7588 pupils in 169 schools (51 government and 118 mission schools).

PRODUCTION AND TRADE. Native coffee is the staple product and some cacao and cotton are produced. The exploitation of the agricultural, mining, industrial, and forest resources of the country has scarcely begun. Small quantities of piassava fibre, palm oil, kola nuts, beni seed, and rice are produced. The Firestone Company had more than 30,000 acres of its 1,000,000-acre concession planted to rubber trees. Foreign trade, in U. S. dollars, was in 1931: Imports, \$858,742 (\$1,228,102 in 1930); exports, \$679,885 (\$838,739

in 1930). The value of Liberia's trade with the United States in 1933 was: Exports, 10,494; imports, \$96,714.

FINANCE. Revenue and expenditure for the fiscal year 1930-31 were \$482,029 and \$1,000,065, respectively. In 1929-30 revenues were \$980,156 and expenditures \$985,554. A \$5,000,000 loan was arranged for in the United States in 1926, of which \$2,027,700 was issued up to 1933. Service charges on the loan and the salaries of American loan officials amounted to \$269,284 annually, or 54.9 per cent of the revenues in 1931. In November of that year the government defaulted on the Firestone loan payments. The external debt (1931) totaled \$2,255,000, of which \$2,192,000 represented the bonded debt.

COMMUNICATIONS. Liberia has no railways and only about 150 miles of motor highways. The rivers are the main arteries of traffic. In the interior native porters carry most of the goods transported. There is no telegraph or telephone service in the country, but Monrovia has cable and wireless connections with Europe and America.

GOVERNMENT. The Constitution, modeled on that of the United States, vests executive power in a president, assisted by a cabinet of eight members, and legislative power in a legislature of two houses. Suffrage is restricted to Negroes owning land. English is the official language. President in 1933, Edwin Barclay, whose term expires in 1936.

HISTORY. Nearly three years after the Liberian government had requested the League of Nations' assistance in meeting its acute financial problems, the League Council in the autumn of 1933 approved a plan for the rehabilitation of the country worked out by the League's Committee on Liberia, headed by Viscount Cecil of Chelwood. The plan provided for the appointment by the League Council of a chief foreign adviser to the Liberian President and of three foreign commissioners to supervise the administration of the three Liberian provinces. The appointment of one or two health experts was provided for as well as the continuation of the financial adviser contracted for under the American loan of 1926, with increased authority to control Liberian revenues and expenditures. The cost of the plan to the Liberian government was estimated at \$150,000 annually.

The United States government sent Maj. Gen. Blanton Winship, Judge Advocate General of the U. S. Army, to Liberia in March, 1933, to aid in restoring satisfactory diplomatic relations and in formulating the League's rehabilitation plan. Objections to the plan were raised by Louis Grimes, Liberian Secretary of State, before the League's special committee at Geneva in October. He objected in particular to the post of adviser being filled by a citizen of any country having special financial relations with Liberia or territory contiguous to Liberia. General Winship met this objection in part by stating that the United States would not insist on the appointment of an American as adviser. Other objections raised were that the plan was unconstitutional, that it would impose a dictatorship on the country, and that it favored the Firestone rubber interests. While ratification of the League's plan was being considered by the Liberian legislature the United States State Department on Nov. 18, 1933, published the notes and other documents pertaining to the Liberian situation together with

an introductory statement which included the following paragraph:

The American government expects Liberia to accept the (League) plan of assistance and will be pleased in this case to cooperate in its successful execution. Should the present administration at Monrovia reject this opportunity, such action could only be construed as opposition to reforms, the urgent desirability of which has been apparent for over three years, and as indifference to the welfare of a million and a half native peoples of Liberia.

The Liberian legislature, however, had not acted upon the plan up to the end of the year. See LEAGUE OF NATIONS.

LIBIA, lh'i-á. An Italian colonial possession in North Africa between Egypt on the east and Algeria and Tunisia on the west. It is divided into the administrative districts of Tripolitania (q.v.) and Cyrenaica (q.v.).

LIBRARY ASSOCIATION, AMERICAN. The official organization of librarians in the United States and Canada, founded for the purpose of promoting library service and librarianship. In 1876 its membership was 103; in 1933 it was more than 11,000. The activities of the association are carried on by its officers; by more than 60 voluntary committees and boards, engaged in studying such problems as book buying, book selection, cataloguing, and library work with the blind and with the foreign born; by hundreds of voluntary workers; and by the members of the headquarters staff, which numbered more than 50 in 1933.

The association issues various books and pamphlets for libraries and in the interest of library progress. During 1933 it confined its publishing activities chiefly to books which would have some bearing on current library problems and on current national and international issues. In a series called *Exploring the Times*, designed to point the way to good reading and intelligent thinking, five booklets were issued: *World Depression—World Recovery*, by Harry D. Gideonse; *Collapse or Cycle?*, Paul H. Douglas; *Living with Machines*, William F. Ogburn; *Meeting the Farm Crisis*, J. H. Kolb; and *Less Government or More?*, Louis Brownlow and Charles S. Ascher. *NRA the New Deal for Business and Industry*, a bibliography compiled by Jerome K. Wilcox, was a timely index to codes, rulings, interpretations, and the like, issued from official sources or appearing in magazines and newspapers.

To help libraries solve their own difficulties *Current Problems in Public Library Finance* was outstanding. There was also a *Replacement List of Fiction*, designed as a guide in selecting for replacement books worn out by hard usage. Two important new editions were *Simple Library Cataloging* and *The Library in the School*. A book which linked the newer concepts of higher education to effective book service was *Circulation Work in College and University Libraries*. In the more general field *Popular Libraries of the World* was significant. *Library Literature, 1921-1932* was a monumental index to all library literature in English appearing after 1920; it served as a supplement to Cannons' *Bibliography of Library Economy* which, in turn, goes back to 1876.

The association issues three periodicals: *Bulletin of the American Library Association*, a monthly which includes the annual reports, the conference proceedings, and the yearly handbook, and which in 1933 included also a number devoted to library salary statistics; *The Book-*

list, published monthly as a guide to the selection and purchase of current books; and *Subscription Books Bulletin*, a quarterly which presents critical estimates of subscription books and sets sold currently by canvassing agents.

The fifty-fifth annual conference was held in Chicago Oct. 16-21, 1933, with more than 3000 librarians present. On this occasion, the John Newbery Medal, given annually by the section for library work with children for the most distinguished children's book of the year, was awarded to Mrs. Elizabeth Foreman Lewis for her book, *Young Fu of the Upper Yangtze*.

The council approved passage as written of Senate Bill 1928 and H. R. 5853 of the Seventy-third Congress, first session (on copyright); reaffirmed its belief in the importance of strong State library agencies; indorsed the plan of setting up work relief projects for unemployed librarians in connection with State and community adult education and leisure time programmes for the unemployed; adopted new requirements for library schools; and urged the elimination of politics from the organization and control of public libraries, national, State, and municipal.

In accordance with its plan of adding \$1,000,000 to the permanent fund of the American Library Association, the Carnegie Corporation of New York in November, 1933, turned over to the association \$200,000. An appropriation bill passed by Congress in February provided for the continuance of the work of placing Decimal Classification numbers on Library of Congress cards in the card division of the national library. This work originated in a voluntary committee of the American Library Association.

Officers for 1933-34 elected at the fifty-fifth annual conference, were: Gratia A. Countryman, librarian, Public Library, Minneapolis, president; Louis Round Wilson, dean, Graduate Library School, University of Chicago, first vice-president; Ralph Munn, director, Carnegie Library, Pittsburgh, Pa., second vice-president; Matthew S. Dudgeon, librarian, Public Library, Milwaukee, Wis., treasurer. The headquarters of the association are at 520 North Michigan Avenue, Chicago.

LIBRARY ASSOCIATION, THE. An organization of libraries and librarians throughout the British commonwealth of nations, founded in 1877 and incorporated by Royal charter in 1898. Its primary objects are: to unite all persons engaged or interested in library work by holding conferences and meetings for the discussion of bibliographical questions and matters affecting libraries; to promote the better administration of libraries; to promote whatever may tend to the improvement of the position and qualifications of librarians; and to hold examinations in librarianship, and to issue certificates of efficiency. It maintains a professional register of more than 800 qualified persons, classified as Fellows (F.L.A.) and Associates (A.L.A.); candidates for senior positions in libraries are selected from amongst those who have been elected to fellowship or associateship. The school of librarianship at the University of London is conducted under the joint auspices of the university and of the association. Among the association's publications are: *The Library Association Record*; *The Library Assistant*; *The Library Association Year Book*; *The Year's Work in Librarianship*; and *The Subject Index to Period-*

icals. The president elected for 1934 was S. A. Pitt, F.L.A. The secretary was P. S. J. Welsford, F.I.S.A. Headquarters are at Chaucer House, Malet Place, W. C. 1, London.

LIBRARY PROGRESS. Depleted book stocks, in the face of increasingly heavy demands for library service, created major library problems in 1933. Since 1929 the number of library users has increased about four or five millions, according to estimates of the American Library Association, making the total registration now about twenty-four or twenty-five millions. During the early months of 1933, 61 sample libraries reported the number of books borrowed increased 41 per cent over 1929. On the basis of American Library Association figures, it is estimated that the total circulation for 1932-33 was approximately 400,000,000.

The inevitable wearing out of books, because of the increased circulation, together with the reduction in the number of new books purchased, has seriously reduced the number of books in the libraries. This is particularly true of the larger cities, notably Detroit and Chicago. In Chicago the public library reported that 40 per cent of its reference questions could not be answered because of the depleted book stock.

In October, 1933, the Council of the American Library Association adopted minimum standards covering registrations and circulation per inhabitant in various sized cities, the type of staff, book collection, and financial support. (See the *Bulletin* of the Association, November, 1933.)

LIBRARY EXTENSION. Financial difficulties during the last four years have curtailed the extension of library facilities to new districts. The number of county libraries has remained practically the same, but the increase in library service has not kept pace with the increase in population. A survey sponsored by the League of Library Commissions showed that, while in the last seven years the percentage of people without such service had dropped from 43 to 38 per cent of the population in 42 States, the actual number of people not reached by libraries had increased by 1,208,502. The number unserved by local public libraries in these States is approximately 43,000,000.

To reach the population which now has no adequate library service, library leaders are advocating larger units of service such as county or regional libraries. An example of the trend is the project for library service to the people adjacent to Knoxville, Tenn., under the Tennessee Valley Authority. In Michigan a plan for regional library service has been set up by the Michigan State Library, while in Louisiana the Library Commission submitted to the Tax Board a proposal for a complete State-wide service. Pennsylvania has renewed its appropriation for State aid for newly established county libraries.

A programme for the establishment of libraries in national parks was approved on Apr. 18, 1933, by Secretary of the Interior Ickes, as the culmination of a three-year study of the project by the Committee on Libraries in National Parks of the American Library Association. At the Conference of Southern Leaders, called by President Graham of the University of North Carolina, a long-time programme for library extension in the South was drawn up and approved.

In Canada the publication of *Libraries in Canada*, the result of a survey of library conditions made under a grant from the Carnegie Corporation of New York, has stimulated dominion in-

terest in libraries. In Prince Edward Island, with the aid of grants from the same source, a demonstration of a province-wide library service has recently been initiated. In the Fraser Valley, British Columbia, an experiment begun under a Carnegie grant in 1930 is to be continued with tax support, according to a recent announcement.

ADULT EDUCATION. Shorter work weeks for the employed and existing unemployment have been in a large measure responsible for the great increase in library use. Much of the increase has been of a serious nature and has emphasized the need of strengthening the library's educational services for adults.

The inclusion of educational activities in the programme of the Federal relief administration has made it possible for many libraries to further their adult education activities with the aid of temporary emergency workers. In some States, Pennsylvania for example, libraries have participated in State-wide planning for adult education.

Typical of possible rural library services is the long distance readers' advisory service, initiated by the Oregon State Library, which in six months reached 441 students, scattered in all the rural counties, who enrolled in courses in 116 different subjects. "Rural and State-wide Adult Education and the Library" was the subject of a panel discussion at the October conference of the American Library Association under the leadership of Benson Y. Landis, secretary of the American Country Life Association. The American Association for Adult Education has issued a report on *Rural Adult Education* which emphasizes the need for library services.

STATUS OF LIBRARIANS. Efforts to reduce the number of students in library schools, because of the large number of librarians already unemployed, were responsible for part of the drop of 300 in the registration in 31 library schools for 1932-33. Directors of library schools see a tendency toward higher entrance requirements with greater emphasis on scholarship and personal qualifications. Minimum requirements for library schools, presented by the Board of Education for Librarianship, were adopted by the Council of the American Library Association in October, 1933, replacing standards adopted in 1925.

Enrollment of unemployed librarians under the Civil Works Administration and other Federal administrations for special educational and library projects was being carried on in December.

International Relations. In October the International Committee of the International Federation of Library Associations held a meeting in Chicago, attended by delegates from 16 countries. Efforts of the American Library Association and of the Medical Library Association to secure a reduction in the price of certain German scientific periodicals were, with the aid of the librarians of certain foreign countries, successful during the year.

PUBLICATIONS. Outstanding items of the year 1932-33 include: *An Introduction to Library Science*, by Pierce Butler; *Our Starving Libraries*, by R. L. Duffus; *The Right Book for the Right Child*; *The College Library Building, Its Planning and Equipment*, by James T. Gerould; *Library Service in Great Britain*, by J. M. Mitchell; *A History of the Public Library Movement in Great Britain and Ireland*, by John Minto; *The Periodicals Directory*, edited by Carolyn F. Ulrich; *A Fifteen-Year Program of Building De-*

velopment: the Extension Program of the Public Library of the District of Columbia; The University Libraries, by M. Llewellyn Raney; *Elementary School Libraries*, the twelfth yearbook of the department of elementary school principals of the National Education Association; *The Secondary School Library*, published as Bulletin, 1932, no. 17, of the United States Office of Education; and *Who's Who in Library Service*.

GIFTS AND NEW BUILDINGS. The Carnegie Corporation of New York made grants during the year to the American Library Association, college libraries of the United States and Canada, Rosenwald county libraries in the South, two Canadian library experiments, the University of Denver School of Librarianship, Emory University Library School, Hampton Institute Library School, and for eleven fellowships for advanced study.

There were dedicated during the year the Enoch Pratt Free Library in Baltimore, Md., the Edward L. Doheny, Jr. Memorial Library at the University of Southern California, the Deering Memorial Library at Northwestern University, and the Myrtle Reed library at the University of Denver. Construction on the Rundel Memorial library and fine arts building in Rochester was begun in December, 1933, with a grant of \$263,000 from the Federal government for labor and materials. The Rundel Fund amounts to more than a million dollars.

LIBYA. See **LIBIA**.

LIECHTENSTEIN, lĭk'ten-shtĭn. A small independent European principality lying between the eastern extremity of Austria, and Switzerland. Area 65 square miles; population (1930 census), 10,213. Vaduz, the capital, had 1715 inhabitants. Agriculture is the chief occupation of the people. Cattle rearing is highly developed. Cotton weaving, leather goods, and pottery, are other industries. The chief products are wheat, wine, marble, and lumber. Revenue for 1933 was estimated at 1,854,500 Swiss francs; expenditure, 1,434,176 francs (Swiss franc equals \$0.194 at par). The public debt on Jan. 1, 1933 amounted to 4,803,691 francs. The constitution provides for a Diet of 15 members elected by universal suffrage for four years. Reigning Prince in 1933, Francis I.

LIGHT, VELOCITY OF. See **PHYSICS**.

LIGHTHOUSES. The annual report of the U. S. Commissioner of Lighthouses stated that at the end of the fiscal year on June 30, 1933, there were 22,495 marine aids to navigation maintained by the service, a net increase over the previous year of 921; mostly in the smaller and less expensive aids marking improved waterways. During the year various improvements were made in the aids; 103 lights were changed from fixed to flashing or occulting and the illuminant of lights was changed as follows: 153 to electric and 69 to acetylene. Four radiobeacons were established, increasing the total number to 104; radio and sound signals were synchronized for distance finding at 4 stations. The number of aids discontinued was 1718. The airways division, which had been conducted as a division of the Lighthouse Service, but under the administrative supervision of the Assistant Secretary for Aeronautics, was separated from this Service at the close of June 30, 1933.

The use of electricity, especially in connection with automatic lights, was extended. A 36-inch flashing unit, using a 1000-watt electric lamp,

has been developed for unwatched lights requiring high candlepower. A photo-electric-controlled alarm system was developed for checking the operation of an unwatched electric light. A new type of flashing light, using 18-inch and 10-inch pressed glass doublets and spherical mirror, and mounted in pairs on 2 drums and oriented for any desired group combination of flashes, was developed. Electric lamps better adapted for use with the various types of lighthouse lenses than are the commercial type of electric lamps, were developed. Reliable and efficient electric minor lights using duplex lanterns, lamp changers, primary cells, and single-unit photronic cells for control were developed. Battery relays for switching to standby battery, when the service battery becomes exhausted, have been introduced. Range lanterns using compound lenses and 4-volt miniature lamps developing 11,000 candlepower and operated on primary cells with photronic cell control have been placed in service.

A plan was developed for distinctive flashing light characteristics to distinguish between buoys at night, according to their purpose, and a service test of this system was commenced; by this means, for the first time, a buoy will show by its flash whether it marks the side of a channel, a danger or middle ground, a fairway, a wreck, and the use of color of lights will be reserved to show the side on which to pass. A new flash characteristic, the interrupted quick flash, was made use of in this system.

The improvement of lighted buoys by the conversion of the Pintsch gas type to acetylene has been continued. Spar buoys continue to be replaced by steel nun and can buoys.

The improvement of fog signals was extended by the installation of Diesel and electric-driven compressors and air diaphones, typhons, and other types of modern signals. The conversion of steam fog-signal plants to modern air and electric fog signals was extended. Electric-control apparatus for fog signals was further perfected. Improved types of fog-signal apparatus operating air horns consisting of self-contained units with electric motors direct connected to rotary-type compressors operating the signal on low pressure and with a minimum of air consumption and having semiautomatic control, were introduced. With this type of apparatus the necessity for providing air receivers, extensive air-line systems, numerous valves, etc., for controlling the characteristic of the signal is eliminated, and it provides an efficient signal unit at a lower cost for installation and for annual maintenance and operation.

An extended test and demonstration was made on Lake Michigan of mobile radiobeacons for the avoidance of collisions, with favorable results. A new radiotelephone transmitter was constructed and installed at the Detroit Lighthouse Depot for direct communication with Detroit River light station, or with vessels equipped for service.

Appropriations for the maintenance of the Lighthouse Service totaled \$9,799,280 for the fiscal year 1933, and for special works, \$3,860,000; the larger part of this latter amount was, however, later withdrawn; there were also allotted from Department appropriations for printing and binding, \$23,000, and for contingent expenses, \$5825. There was received and deposited in the Treasury the following: From sale of government property, \$16,344, rent of buildings, etc., \$4391; forfeitures by contractors, \$8; reimbursement for property destroyed or damaged, \$3062; work done

for private interests, \$1198; commissions received on telephones, \$22; total, \$25,025.

At the close of the year lightships were maintained on 37 stations, and 47 lightships were in commission, of which 10 were regular relief ships. In addition there were 3 lightships, No. 86, No. 87, and No. 78, laid up awaiting extensive reconditioning, and 2 lightships, No. 41 and No. 13, awaiting survey with a view to their being sold. Seven lightship stations were permanently discontinued during the year as follows: Great Round Shoal, Mass.; Hedge Fence, Mass.; Bartlett Reef, Conn.; Northeast End, N. J.; Fenwick Island, Del.; Charleston, S. C., and Milwaukee, Wis.

LIGHTING. See ELECTRICAL ILLUMINATION.

LIME. The sales of lime in 1933 by producers in the United States amounted to 2,224,000 short tons, valued at \$14,006,000, according to figures furnished by lime manufacturers to the U. S. Bureau of Mines, from whose preliminary report this article is taken. This is an increase of 13.5 per cent in quantity and 13.8 per cent in value compared with sales of 1,959,990 tons valued at \$12,302,231 in 1932, and follows a decrease of 28 per cent in quantity and 34 per cent in value in 1932 compared with 1931. The average unit value per ton in 1933 was \$6.29; in 1932 it was \$6.28. The total sales of lime in 1933 include 822,000 tons of hydrated lime valued at \$5,512,000, a decrease of 3.6 per cent in quantity with increase of 2.6 per cent in value as compared with 1932 (852,251 tons valued at \$5,370,273). The average value per ton of hydrated lime in 1933 was \$6.71; in 1932 it was \$6.30.

Sales of lime in 1933 for construction are estimated at 507,000 tons compared with 596,825 tons in 1932, a decrease of 15 per cent. This followed a decrease of 37 per cent in 1932 from the 1931 production. Sales of lime for chemical uses are estimated at 1,486,000 tons, an increase of 33 per cent over 1932 (1,118,591 tons). These figures include 252,000 tons of dead-burned dolomite, an increase in this commodity of 86 per cent over the output (135,733 tons) for 1932. Exclusive of dead-burned dolomite the estimated sales of chemical lime in 1933 was 1,234,000 tons, an increase of 26 per cent over the corresponding sales (982,858 tons) in 1932. The sales of lime for agricultural use are estimated at 231,000 tons, a decrease of 6 per cent in 1933 from 1932 (244,574 tons).

Of the 38 States reporting a production of lime

LIME SOLD BY THE PRODUCERS IN THE UNITED STATES IN 1932 AND 1933

Total .	1,959,990	\$12,302,231	2,224,000	\$14,006,000

in 1933, 22 showed increased and 16 decreased output, but for 12 of these States the gains or the losses shown by the preliminary figures were practically negligible and may easily change with the completion of final figures.

The table, shown in the first column, compares the estimated sales of lime in 1933, by States, with the sales in 1932.

Figures of exports and imports of lime for 1933 as compiled by the Bureau of Foreign and Domestic Commerce, and subject to revision, are available for 11 months only and are as follows: Exports, 3292 short tons, value \$50,629; general imports (exclusive of dead-burned dolomite) 8449 short tons, value \$96,035; imports of dead-burned dolomite 1067 short tons, value \$10,400.

LINDBERGH SURVEY. See AERONAUTICS.

LIONS CLUBS, INTERNATIONAL ASSOCIATION OF. An organization of business and professional men's clubs, formed in Chicago, Ill., in 1917 for the purpose of promoting good government and good citizenship, encouraging efficiency, and promoting high ethical standards in business and the professions. In 1933 it was composed of 2680 clubs, with a membership of approximately 80,000. At the international convention held in St. Louis, Mo., in July, 1933, the following officers were elected: President, Roderick Beddow, Birmingham, Ala.; vice-presidents, Vincent C. Hascall, Omaha, Neb., Richard J. Osenbaugh, Denver, Colo., and Edwin R. Kingsley, Parkersburg, W. Va. Melvin Jones, the founder of the association, has been secretary-treasurer from the first. The official magazine is *The Lion*. Headquarters are at 332 South Michigan Avenue, Chicago, Ill.

LITERATURE. See FRENCH LITERATURE; GERMAN LITERATURE; ITALIAN LITERATURE; PHILOLOGY, MODERN; ETC.

LITERATURE, ENGLISH AND AMERICAN. For the American publishers, 1933 was a year of turmoil. The year began with a succession of bankruptcies, mergers, reorganizations, all the symptoms of the kind of financial distress which only the strongest houses could withstand. With the announcement of plans for regulating competition under the NRA, however, these troubles almost ceased, and the publishers could give consideration to the codes intended to govern their own and allied industries. In these, as in many other codes, the troublesome questions concerned price-fixing. Some, but not all, of these codes were effective by the end of the year. It was apparent, however, that publishers felt more cheerful than for some time. They were even attacking, of their own motion, such problems as remainders, with their bad effect on the markets. Book-sellers, too, were hopeful that the NRA might relieve their distresses, such as department store competition and their troubles with the book clubs.

But all this business activity did not make for more or better books. If the quality of 1933 books was not lower than in other years, and it probably was not, there was a notable absence of adventurous experiment either with form or content. And in quantity there seemed to have been a falling-off, except perhaps in sociology and economics. But then publishers were not to be blamed if, by and large, they made timely appeal their first demand on a manuscript during 1933.

In England, publishing was quieter, but the complaint was made there that the business was

falling into fewer and fewer hands, just as in America.

FICTION. The leading novel of the year, *Anthony Adverse*, by Hervey Allen, was semi-historical and huge. Escape into the imagined past was the vogue, shown in such popular works as, Kenneth Roberts' *Rabble in Arms*, the early years of the American Revolution; Herbert Gorman's *Jonathan Bishop*, Paris in 1870; David Garnett's *Pocahontas*; Roark Bradford's *Kingdom Coming*, negroes affected by the Civil War; Liam O'Flaherty's *The Martyr*, the Irish civil war; Mary Borden's *Mary of Nazareth*, the mother of Christ; G. B. Lancaster's *Pageant*, history of Tasmania; Walter D. Edmunds' *Erie Water*, about the building of the Erie Canal.

Regional stories maintained their popularity in America, exemplified in *The Farm*, by Louis Bromfield, about rural Ohio; *Bonfire*, by Dorothy Canfield, rural Vermont, sympathetically treated; *This Bright Summer*, anonymous, rural Vermont, not sympathetically treated; *South Moon Under*, by Marjorie Kinnan Rawlings, the Florida scrub; *Union Square*, by Albert Halpern, New York City; *Let the Hurricane Roar*, by Rose Wilder Lane, the western plains; *As the Earth Turns*, by Gladys Hasty Carroll, a Maine farm; *God's Little Acre*, by Erskine Caldwell, about brutal Southern poor whites; *The Woods Colt*, by Thames Williamson, Ozarks hill-billies; *Within This Present*, by Margaret Ayer Barnes, a Chicago family since 1914.

John Galsworthy's last novel concluded the story of the Cherrils, *One More River*. Virginia Woolf published *Flush: a Biography*, about the Brownings' dog. John Masefield's *Bird of Dawn* evoked the delights of the sea. H. M. Tomlinson's *Snows of Helicon* described a dreamer in this harsh world. A. J. Cronin's *Grand Canary* was set on a steamship. Hugh Walpole's *Vanessa* was the fourth and last about the Herries family. In Richard Aldington's *All Men Are Enemies* was shown a man bruised by the war. Alice Tisdale Hobart's *Oil for the Lamps of China* was about cruel American business there. Conrad Aiken's *Great Circle* was modernistic writing about a betrayed husband. Kay Boyle's *Gentlemen, I Address You Privately* gave a queer set of perverted people.

Booth Tarkington, in *Presenting Lily Mars*, dealt with theatre life. Jack Conroy's *The Disinherited* was proletarian stuff, dear to the communist critics. Robert Nathan, in *One More Spring*, fancifully portrayed people in the depression. *Eva Gay*, by Evelyn Scott, was set in many parts of the world, a triangle story. *The Master of Jalna*, by Mazo de la Roche, was the fourth of the Whiteoaks books. Jews in old and new worlds were shown in *Hear, Ye Sons*, by Irving Fineman. A. S. M. Hutchinson gave a yielder to temptation in *The Soft Spot*.

A number of novels tried to foretell the future, such as, *Public Faces*, by Harold Nicolson, about diplomacy and politics; *Man's Mortality*, by Michael Arlen, the future internationalism; *Full Circle*, by John Collier; and *Sometime*, by Robert Herrick. There was also a considerable group of satirical novels, including H. G. Wells' *The Bulpington of Blup*, on a life-evader; Stella Gibbons' *Cold Comfort Farm*, on the English rustic novel; *Mandoo, Mandoo!* by Winifred Holthy, on civilization; *Lose with a Smile*, by Ring Lardner, on baseball and popular songs; *England, Their England*, by A. G. McDonell;

The Fault of the Angels, by Paul Horgan, on culture in American small cities; *Wonder Hero*, by J. B. Priestley, on the English press; *Gay Life*, by E. M. Delafield, on the search for pleasure.

Among first novels that attracted attention were: Janet Beith's prizewinner, *No Second Spring*, about the troubles of a Scotch minister; *Not to Eat, Not for Love*, by George A. Weller, life at Harvard University; *Original Design*, by Eardley Beswick, about modern machine industry; Ainsworth Morgan's *Man of Two Worlds*, an Eskimo in civilized life; *Desirable Young Man*, by Patrick Carleton, college life in England; *Livingstones*, by Derrick Leon, an interior decorating firm; *Hostages to Fortune*, by Elizabeth Cambridge, family life in Oxfordshire. But the youngsters showed little that was new.

Perhaps the best of the romantic novels was Alexander Laing's *The Sea Witch*, about a clipper ship. There were few others, but William McFee's *No Castle in Spain*, and Lord Dunsany's *The Curse of the Wise Woman* must be mentioned; the first was set in Latin America, the second in Ireland.

Humorous novels included P. G. Wodehouse's *Heavy Weather*; Anne Green's *A Marriage of Convenience*; Evelyn Waugh's *Black Mischief*. Fantasies made, naturally enough, a queer group: *Gabriel over the White House*, anonymous, showed angels leading the world out of depression; *Lost Horizon*, by James Hilton, made some aviators disappear over Tibet; Edith Olivier's *Mr. Chilvestor's Daughters* concerned a man mad about houses; and Francis Stuart's *Glory* and *Try the Sky* were symbolist and philosophical about the conflict between the spirit and the earthly.

The anonymous *The Gold Falcon* was poetic about separation of wife and husband. Wilson Follett's *No More Sea* showed Maine coast dwellers in revolt against the sea. Charles G. Norris' *Zest* was a warning against women. Isabel Paterson, in *Never Ask the End*, gave the triangle story up-to-date trimmings. The struggle between the generations was the subject of Zona Gale's *Papa La Fleur*. A semi-historical adventure and sea story was found in *Long Pennant*, by Oliver La Farge. W. R. Burnet, in *Dark Hazard*, wrote about a gambler and his wife. Graham Greene collected odd people on the *Orient Express*. Helen Hull's *Hardy Perennial* was a woman of forty in New York. Martin Hare's *The Enchanted Winter* showed rural life in Ireland. Wilson Wright's *Man Wants but Little* was about the interior of Cuba. It was not an exciting year in fiction.

SHORT STORIES. Volumes of short stories were both popular and distinguished this year. They included: *Winner Take Nothing*, by Ernest Hemingway; *After Such Pleasures*, by Dorothy Parker; *They Brought Their Women*, by Edna Ferber; *Ah King*, by William Somerset Maugham; *We Are the Living*, by Erskine Caldwell; *The First Lover*, by Kay Boyle; *The First Wife and Other Stories*, by Pearl S. Buck; *Legends of Angria*, now first published, by Charlotte Brontë; *The Lovely Lady*, by D. H. Lawrence; *Human Nature*, by Edith Wharton; *Death in the Woods*, by Sherwood Anderson; *Other Women*, by Katharine Brush; *The Woman on the Beast*, by Helen Simpson, also prophetic of the future; sporting stories by Gordon Grand, *Colonel Weatherford and His Friends*; *The Two*

Thieves, by T. F. Powys; *Don Juan and the Wheelbarrow*, by L. A. G. Strong; *The Delicate Fire*, stories of classical times, by Naomi Mitchison, with essays and poetry; *Mrs. Egg and Other Barbarians*, by Thomas Beer; *Haven's End*, by John P. Marquand.

POETRY. Depression or not, 1933 was a good year for poetry. W. B. Yeats' *Collected Poems* won him plaudits as "the greatest living poet," but he laid traps for his bibliographer by publishing also *The Winding Stair*, a title used in 1930, but not for the same poems, and *Words for Music Perhaps and Other Poems*, which appeared to be the 1930 volume retitled. Horace Gregory's *No Retreat* caused him to be regarded as one of the coming American poets. Edwin Arlington Robinson's *Talifer* was again long narrative. Robinson Jeffers' *Give Your Heart to the Hawks* showed him doing the same things as before. *The Collected Poems of Hart Crane* made his admirers mourn his death. Stephen Spender's *Poems* added him to the list of promising young Englishmen. Archibald MacLeish, Pulitzer prize winner, published *Poems 1924-1933*.

New poets won recognition by such works as: William Faulkner's *A Green Bough*; *The Boar and Shibiloth*, by Edward Doro; Leonard Barnes' *Youth at Arms*, war poetry; Leila Jones' *Assent to Autumn*; Anne Persov's *Whatever You Reap*; Berenice C. Dewey's *Poems*; Lawrence Lee's *Summer Goes On*. Established poets gave us: Walter de la Mare's *The Fleeting and Other Poems*; Ezra Pound's *A Draft of XXX Cantos*; Lizette Woodworth Reese's *Pastures*; Frances Frost's *Pool in the Meadow*; Edgar Lee Masters' *The Serpent in the Wilderness*; William Rose Benét's *Starry Harness*; Sara Teasdale's *Strange Victory*; Winifred Welles' *Blossoming Antlers*; Richard Aldington's *The Eaten Heart*; G. K. Chesterton's *The Queen of Seven Swords*; Willa Cather's *April Twilight and Other Poems*; Sacheverel Sitwell's *Canons of Giant Art*; John Peale Bishop's *Now with His Love*; Berenice Kenyon's *Meridian*; Harold Lewis Cook's *Spell against Death*; *Selected Poems of George Edward Woodberry*; Cale Young Rice's *High Perils*; Thomas C. Chubb's *Ships and Lovers*; Robert P. Tristram Coffin's *Ballads of Square-Toed Americans*.

Good light verse included: Ogden Nash's *Happy Days*; Newman Levy's *Theatre Gayed*; Margaret Fishback's *Out of My Head. A Book of Americans*, by Rosemary and Stephen Vincent Benét, and *Heroes and Heroines*, by Eleanor and Herbert Farjeon, were rhymed histories.

An exceptionally interesting anthology was *Texts and Pretexts*, by Aldous Huxley. Other anthologies were: *Poet's Gold*, by David Ross, chosen by radio presentation; and *Fifty Poets*, by William Rose Benét, each selection chosen by the poet.

DRAMA. With *Ah, Wilderness*, Eugene O'Neill returned to simplicity after much tortured psychologizing. Sean O'Casey, silent many years, appeared again with a strange poetic play, *Within the Gates*. Historical plays of importance were all British: John Masefield's *End and Beginning*, in poetry, about Mary Queen of Scots; Gordon Daviot's *Richard of Bordeaux* (Richard II); and Noel Coward's *Cavalcade*, England since the Boer War. Coward also published *Design for Living*, an amusing and empty comedy. Rapid-fire farces were: *Twentieth Century*, by Ben Hecht and Charles MacArthur, set on a train;

Sailor, Beware! by Kenyon Nicholson and Charles Robinson, set in Panama; and *Clear All Wires!* by Bella and Samuel Spewack, set in Russia. W. Somerset Maugham published *For Services Rendered*, a bitter piece about the war's effects, and *Sheppey. Both Your Houses*, by Maxwell Anderson, was political satire, and the Pulitzer Prize play. Sidney Howard's *Alien Corn* concerned an artist soul trapped in the Middle West, and his *The Late Christopher Bean* was adapted from the French. Two plays dealing with young women with advanced ideas were Rachel Crothers' *When Ladies Meet* and S. N. Behrman's *Biography*. Elmer Rice wrote strong propaganda in *We, the People*. C. L. Anthony's *Autumn Crocus* was sentimental comedy. Lennox Robinson spoofed Scandinavian and Russian drama in *Is Life Worth Living?* An anthology was volume vi of *Contemporary Drama*, by E. Bradlee Watson and Benfield Pressey.

ESSAYS. These were rather scanty. Semi-philosophical were: Osbert Burdett's *The Art of Living*; A. C. Ward's *What is This Life?*; A. E.'s *The Avatars*; G. K. Chesterton's *All I Survey*. Edith Sitwell's *The English Eccentrics* was biographical. Frank Sullivan's *In One Ear* was funny. Branch Cabell's *Special Delivery* was answers to correspondents. Oliver Baldwin's *Unborn Son* was topical. Henry Williamson's *As the Sun Shines* had to do with nature in Devon. These were literary: *Collected Essays of Robert Bridges*; *Later Critiques*, by Augustus Ralli; *Selected Essays*, by Anne C. E. Allison. There was also *Candelabra*, by John Galsworthy.

CRITICISM AND THE HISTORY OF LITERATURE. For no discoverable reason, 1933 brought to light a number of important books about poetry and poets. A. E. Housman's *The Name and Nature of Poetry* explained his own methods of composition and took an anti-intellectual position in criticism. At the opposite pole in criticism, T. S. Eliot tried to show *The Use of Poetry and the Use of Criticism*. Other noteworthy books about poetry in general were: Humbert Wolfe's *Romantic and Unromantic Poetry*; Lascelles Abercrombie's *Poetry: Its Music and Meaning*; John Sparrow's *Scene and Poetry*, attacking modernism; Elizabeth Drew's *Discovering Poetry*; Theodore Maynard's *Preface to Poetry*. Histories of poetry included: *The English Muse*, by Oliver Elton, and *Modern English Poetry, 1882-1932*, by R. L. Megroz. Studies of individual poets were: *William Blake*, by J. Middleton Murry; *The Lost Leader*, about Wordsworth, by Hugh I'Anson Fausset; *Edmund Spenser*, by B. E. C. Davis.

Shakespeare, the inexhaustible subject, was studied in: *On Reading Shakespeare*, by Logan Pearsall Smith; *Art and Artifice in Shakespeare*, by E. E. Stoll; *Aspects of Shakespeare*, by Lascelles Abercrombie and others; *Shakespeare under Elizabeth*, by G. B. Harrison.

About the drama, the theatre, and dramatists were: Gilbert Murray's *Aristophanes: a Study*; *The Theatre in My Time*, by St. John Ervine; *Since Ibsen*, by George Jean Nathan; *The Drama of the Medieval Church*, by Karl Young; *Watching a Play*, by C. K. Munro; *Three French Dramatists* (Racine, Marivaux, de Musset), by Arthur Tilley.

The novel was comparatively neglected, but Norman Collins' *The Facts of Fiction*; Pelham Edgar's *The Art of the Novel*; and Frederick Watson's *Robert Smith Surtees* did appear.

Among general works: R. D. Charques' *Contemporary Literature and Social Revolution* found that literature now was written too exclusively for the "classes"; Myron F. Brightfield proposed a pragmatist's method of judging literature in *The Issue in Literary Criticism*; Henry Hazlitt offered *The Anatomy of Criticism*; Granville Hicks' *The Great Tradition* was history of American literature from the standpoint of a radical in politics; George D. Berkhoff explained the principles of *Aesthetic Measure*; J. W. Cunliffe described *English Literature in the Twentieth Century*. Dealing with miscellaneous figures and forms were: Lytton Strachey's *Characters and Commentaries*; and Burton Rascoe's *Prometheans: Ancient and Modern*. An important work of reference was *The Oxford Companion to English Literature*, by Sir Paul Harvey.

BIOGRAPHY. Best sellers in this field in America were concerned, most often, with politics. Alice Roosevelt Longworth's autobiography, *Crowded Years*, found a large public. Critical esteem went to Marquis James' *Andrew Jackson: the Border Captain*, the first volume of a complete life; and to *John Hay*, by Tyler Dennett. Other American political figures were portrayed in *President Lincoln*, by William E. Barton; *William Penn*, by C. E. Vulliamy; *Beauregard, the Great Oricle*, by Hamilton Basso; *The Francis Preston Blair Family in Politics*, by William F. Smith; and self-glorification by Huey P. Long, *Every Man a King*.

American literary persons were given by James Truslow Adams in *Henry Adams*; by Gertrude Stein in *The Autobiography of Alice B. Toklas*, really her own autobiography; by Albert Mordell in *Quaker Militant. John Greenleaf Whittier*; in *The Journal of Gamaliel Bradford*; by Fairfax Downey in *Richard Harding Davis: His Day*; by Floyd Dell in *Homecoming*, an autobiography; by A. G. Keller in *Reminiscences of William Graham Sumner*.

Biographies justified because their subjects made money were: Harvey O'Connor's *Mellon's Millions*; H. J. Eckenrode and P. W. Edmunds' *H. H. Harriman*; and Thomas W. Lamont's *Henry P. Davison*. There was much American autobiography, such as *Julia Newberry's Diary*, of a young girl long dead; *Intimate Memories*, by Mabel Dodge Luhan; *Watching the World Go By*, by Willis J. Abbot; *He Went Away for a While*, by Max Miller; *The Long Road Home*, by John Moody; *With My Own Eyes*, by Frederick Palmer, and *Slanting Lines of Steel*, by E. Alexander Powell, the last two by war correspondents. Other Americans: *Wild Bill and His Era* (Wild Bill Hickok), by William Elsey Connelley; *Old Gimlet Eye*, about Smedley D. Butler, by Lowell Thomas. Also appeared volumes x, xi, and xii of *The Dictionary of American Biography*, edited by Dumas Malone.

British literary figures, always popular with biographers, were presented in: *Poor Splendid Wings*, about the Pre-Raphaelites, by Frances Winwar; *Shakespeare at Work, 1592-1603*, by G. B. Harrison; *Harlequin Sheridan*, by R. Crompton Rhodes; *Charles Lamb and His Contemporaries*, by Edmund Blunden; *The Life and Friendships of Dean Swift*, by Stephen Gwynn; *Macaulay*, by Arthur Bryant; *The Life of Katherine Mansfield*, by Ruth E. Mantz and J. Middleton Murry; *The Brontës*, by Irene Cooper Willis; *George Eliot*, by Anne Fremantle; *John Henry Newman*, by J. Elliot Ross; *Unpublished Letters*

of Samuel Taylor Coleridge, edited by Earl Leslie Griggs; *Lawrence and Brett*, by Dorothy Brett, the latest about D. H. Lawrence. And again there was much autobiography by writers: volume iii of *The Journals of Arnold Bennett*, 1921-1928; Storm Jameson's *No Time Like the Present*, and Vera Brittain's *Testament of Youth*, these two showing the effects of the World War on the artist; *Looking Back*, by Norman Douglas; *Under the Fifth Rib*, by C. E. M. Joad; *Celebrities and Simple Souls*, by Alfred Sutro; *It Was the Nightingale*, by Ford Madox Ford.

About British persons important politically: the first two volumes of Winston S. Churchill's *Marlborough*; the second volume of J. L. Garvin's *The Life of Joseph Chamberlain*, covering the years 1885 to 1895; two like-titled *Cecil Rhodes*, by William Plomer and Sarah Gertrude Millin, the second friendly, the first not; *Charles the First*, by Hilaire Belloc; *King Edward VII*, by E. F. Benson; *England's Elizabeth*, by Milton Waldman; *The Crimson Queen*, Mary I, by Daniel Henderson; *The Queen and Mr. Gladstone*, letters edited by Philip Guedalla; *John Hampden*, by Hugh Ross Williamson; *John Hampden's England*, by John Drinkwater; *Chinese Gordon*, by H. E. Wortham; *De Valera*, by Denis Gwynn; *More Memories*, by Margot, Lady Oxford; *Lord Jeffrey Amherst*, by J. C. Long; *British Agent*, by R. H. Bruce Lockhart, about an unusual diplomat.

Two interesting books about humble Britishers were: *Twenty Years A-growing*, by Maurice O'Sullivan, about life in the Basket Islands; and *The Autobiography of a Liverpool Irish Slummy*, by Pat O'Mara. Miscellaneous Britishers: *One Arm Sutton*, autobiography by F. A. Sutton, an adventurer; *Forty Years for Labrador*, by Sir Wilfred Grenfell; *Alfred Mond, First Lord Melchett*, by Hector Bolitho; *The Strange Life of Lady Blessington*, by Michael Sadleir; *Studies in Sublime Failure*, by Shane Leslie, about Newman, Parnell, and others; *Memories of a Misspent Youth*, by Grant Richards; *The Book of Talbot*, by Violet Clifton, his wife.

Continental and others interesting politically: *What Me Befell*, by J. J. Jusserand; *Metternich*, by Algernon Cecil; *Mazzini*, by Gwilym O. Griffith; *Ivan the Terrible and Boris Gudunof*, by Stephen Graham; *Always a Grand Duke*, by Alexander, Grand Duke of Russia; *Grey Wolf*, by H. C. Armstrong, about Mustafa Kemal; *Napoleon III*, by Robert Sencourt.

The Man of the Renaissance, by Ralph Roeder, was scholarly and sweeping biography of Savonarola, Castiglione, Machiavelli, and Aretino. Rebecca West did *St. Augustine*; G. K. Chesterton *St. Thomas Aquinas*; and Enid Starkie *Baudelaire*.

Important biographical books in addition: John Maynard Keynes' *Essays in Biography*, about the peacemakers of 1919, Malthus, and some economists; Glenway Wescott's *A Calendar of Saints for Unbelievers*; Stella Benson's *Pull Devil, Pull Baker*, about a down-and-out adventurer; R. B. Cunninghame-Graham's *Portrait of a Dictator*, about Lopez of Paraguay; volume i, 1813-1848, of *The Life of Richard Wagner*, by Ernest Newman; *The Unconquerable Tristan*, by B. M. Steigman, also Wagner; Morris Bishop's *The Odyssey of Cabeza de Vaca*; Robert Haven Schaufler's *The Unknown Brahms*; Edgcomb Pinchon's *Viva Villa!*

THE FINE ARTS. Herbert Read's *Art Now* dis-

cussed critically modern theories of painting and sculpture. *A Grammar of the Arts*, by Sir Charles Holmes, taught the beginnings of judgment. Roger Fry's *Characteristics of French Art*; Eric Underwood's *A Short History of English Painting*; and Masaharu Anesaki's *Art, Life, and Nature in Japan* studied national art histories, as did volume iv of Chandler Ruthfon Post's *A History of Spanish Painting*. Studies of techniques were: Gardner Hale's *Fresco Painting*; Herbert Maryon's *Modern Sculpture*; and Stanley Casson's *The Technique of Early Greek Sculpture*. Lloyd Goodrich's *Thomas Eakins* was both biographical and critical. W. E. Gladstone Solomon's *Essays on Mogul Art* was partly controversial. Big illustrated art gift books almost disappeared, but *Great Georgian Houses of America* was a pleasant survival.

RELIGION. The centenary of the Oxford Movement in England was celebrated by many books, such as a series of lives of the Tractarians, and a history by E. A. Knox, *The Tractarian Movement, 1833-1845*. The recent Oxford Group Movement, or Buchmanism, caused debate, for instance, *The Oxford Group Movement*, by H. H. Henson, and *The Buchman Groups*, by Ivor Thomas, both anti-Buchman; and *He That Cometh*, by Geoffrey Allen, pro-Buchman. Barthianism was explained again in John McConachie's *The Barthian Theology and the Man of Today*. W. R. Inge's *God and the Astronomers* reconciled science and religion by way of neo-Platonism, while Ernest W. Barnes' *Scientific Theory and Religion* offered a different reconciliation. Winfred Ernest Garrison's *The March of Faith* was a history of American churches since 1865, and Stuart Means' *Faith: an Historical Study* was of all Christendom. Two able books of apologetics were: *The Christian Belief in God*, by Alfred F. Garvie; and *What It Means to be a Christian*, by Arthur C. Headlam. Works advocating the "social gospel" were: Edmund B. Chaffee's *The Protestant Churches and the Industrial Crisis*; Francis Neilson's *The Eleventh Commandment*. Analyses of contemporary religious conditions were found in: *Religion Today*, by Arthur L. Swift and others; *Contemporary Religious Thinking*, edited by R. W. Searle and F. A. Bowers; *Problems of Protestantism*, by Lewis Gaston Leary. The difficulty of adapting the historic Jesus to the present world was faced in *The Ordeal of Western Religion*, by Paul Hutchinson; but P. W. Wilson asked *Is Christ Possible?* and answered yes. W. E. Orchard explained how he moved *From Faith to Faith*, that is, to Rome.

SOCIOLOGY. The most imposing and perhaps the most useful work in this field was the report of President Hoover's commission, *Recent Social Trends*. Of similar import were: Mauritz A. Hallgren's *Seeds of Revolt*, asking about the possibilities of revolution as a result of the depression, and finding them few; *What is American?* by Frank Ernest Hill; Horace M. Kallen's *Individualism, an American Way of Life*; William Ayloott Orton's *America in Search of Culture*, which was hopeful.

Concerned with the law and penology were: *Law and the Social Order*, by M. R. Cohen; *A Judge Takes the Stand*, by Joseph N. Ulman; *Trial by Prejudice*, by Arthur Garfield Hays; *The Untried Case*, by H. B. Ehrenmann, about Sacco-Vanzetti; *Prison Days and Nights*, by Victor Nelson.

The peering into the future, practiced in so many fields this year, appeared here with H. G. Wells' *The Shape of Things to Come*, and an odd shape it was, too. Other descriptions of or prescriptions for the future were: Herbert A. Miller's *The Beginning of Tomorrow*, a study of the possible international great society; Edward T. Devine's *Progressive Social Action*, how to ward off depressions and their consequences.

Local and anthropological studies included: Robert Marshall's *Arctic Village*; Hortense Powdermaker's *Life in Lesau*; Malcolm Ross's *Machine Age in the Hills*; Stanley Walker's *The Night-Club Era*, New York under prohibition; William Atherton DuPuy's *Hawaii and Its Race Problem*; Robert Gesner's *Broken Arrow*, about the American Indian now; Gene Fowler's *Timber Line*, journalism in Denver.

About women: a historical survey: *Women in Subjection*, by I. B. O'Malley; *Angels and Amazons*, about women and "causes," by Inez Hayes Irwin; *America Through Women's Eyes*, edited by Mary R. Beard. *100,000,000 Guinea Pigs*, by Arthur Kellett and Fred J. Schlink, was about the adulteration of foods and medicines. The problems following prohibition were discussed in *Toward Liquor Control*, by Raymond B. Fosdick and Albert L. Scott. Other sociological works: James M. Williams' *The Human Aspects of Unemployment and Relief*; Sidney Hook's *Toward the Understanding of Karl Marx*; Frederick E. Lumley's *The Propaganda Menace*; C. C. Regier's *The Era of the Muckrakers*; Edgar Sydenstricker's *Health and Environment*.

EDUCATION. Among the important books in this field during 1933 were: *Academic Illusions*, by M. Schutze, attacking the present methods of teaching literature in our schools and colleges; *Molders of the American Mind*, by Norman Woelfel, offering a new programme in place of following the Christian and capitalistic tradition; *Our Movie-Made Children*, by Henry James Forman, which showed the movie more effective and more dangerous than other forms of education; *The Illiteracy of the Literate*, by H. R. Huse, attacking the effectiveness of schools; *Native Education*, by H. A. Wyndham, how to educate in a dependency; and *The Nation at School*, by F. S. Marvin, proposals for reform of English schools.

POLITICS AND INTERNATIONAL. Two topics in this field elicited many books. First, Germany, in such works as Edgar Ansel Mowrer's *Germany Puts the Clock Back*, about her failure to govern herself since 1918; Calvin B. Hoover's *Germany Enters the Third Reich*, a dispassionate description of what happened and why; *The Brown Book of the Hitler Terror*, anonymously attacking; Oswald Garrison Villard's *The German Phoenix*, a defense of the Socialist régime. And of course Germany was discussed in many other books. Second, the programme of the new administration in America, in, for example, Franklin D. Roosevelt's own *Looking Forward*, made up of campaign speeches and his plans; Ernest K. Lindley's *The Roosevelt Revolution*; Alva Lee's *America Swings to the Left*; Cleveland Rogers' *The Roosevelt Program*.

General books, cross-sectioning contemporary governments, were: Sir Norman Angell's *From Chaos to Control*, asking whether a rational political world could be made; G. D. H. Cole and Margaret Cole's *The Intelligent Man's Review of Europe Today*; John Strachey's *The*

Coming Struggle for Power and The Menace of Fascism, prophesying the end of capitalism and universal communism; *The Modern State*, edited by Mary Adams, a collection of essays; Sir Stafford Scripps and others' *Problems of a Socialist Government*; Harold J. Laski's *Democracy in Crisis*, a lonely voice defending democracy; and *Recovery through Revolution*, a symposium edited by Samuel D. Schmalhausen, analyzing the present revolutionary states.

How to attain peace was sought in *Peacemaking*, by Harold Nicolson, a history of the 1919 Peace conference and a warning for the future; in *Cry Havoc!* a pacifist manifesto by Beverley Nichols. And *What Would Be the Character of the Next War?* by eighteen experts in frightfulness, seemed related to the problem of peace.

The latest information about Russia came in *The Great Offensive*, by Maurice Hindus; and *In Place of Profit: Social Incentives in the Soviet Union*, by Harry F. Ward. Concerning China were: Edwin D. Harvey's *The Mind of China*, and Agnes Smedley's *Chinese Destinies*. P. T. Ether-ton and H. Hessel Tiltman raised the question *Japan: Mistress of the Pacific?* Carleton Beals discussed with vehemence *The Crime of Cuba*. R. C. K. Ensor considered *Courts and Judges in France, Germany, and England*. John W. Wheeler-Bennett's *The Wreck of Reparations* was about the Lausanne agreement.

Three books concerned with the government of the United States were: *Tattered Banners*, by Talcott Powell, attacking Treasury raids by the veterans; *The United States in World Affairs*, volume ii, by Walter Lippmann and William O. Scroggs; and *Government of the People*, by D. W. Brogan, British comment on American political institutions.

ECONOMICS. Attracting most attention in this field were the books by members of the Roosevelt "brain trust," such as: *Prices*, by George E. Warren and Frank A. Pearson, which advocated the compensated dollar, and may have persuaded the President to his gold-buying policy; *The Industrial Discipline and the Governmental Arts*, by Rexford G. Tugwell, insistence on government planning; and *The Modern Corporation and Private Property*, by Adolf A. Berle, Jr., and Gardiner C. Means, which was obscurely published in 1932 but re-issued this year, and showed how an economic state was arising within the political one. Two books favoring controlled inflation were: *Inflation: What Everybody Wants to Know about It*, by Donald B. Woodward and Marc A. Rose; and *The Primer of Inflation*, by Earl Sparling.

At the beginning of the year Technocracy was on everybody's tongue, and a number of books about it appeared, among which Allen Raymond's rather unsympathetic *What is Technocracy?* was outstanding. The most impressive publication by a technocrat was Bassett Jones' *Debt and Production*, which explained the new economics based on statistics. Other writings about the problem of debt were: *The Internal Debts of the United States*, edited by Evans Clark, showing how to keep the debts serviced; *The A B C of War Debts*, by Frank H. Simonds; and *Money versus Man*, by Frederick Soddy, which offered a programme for getting along without debt.

Interesting economic history was found in: J. Laurence Laughlin's *The Federal Reserve Act*, about its origin and practice; Frederick L. Nuss-

baum's *A History of the Economic Institutions of Modern Europe*; and *The Investor Pays*, by Max Lowenthal, about the bankruptcy of a great railroad. Insurance against unemployment was considered in: *Job Insurance*, by John B. Ewing; and *Standards of Unemployment Insurance*, by Paul H. Douglas.

John Maynard Keynes' *The Means to Prosperity* advocated international action; *Stamp Scrip*, by Irving Fisher and others, offered a device for solving the money shortage; H. V. Hodson's *Economics of a Changing World* meant to bring the science up to date. Other noteworthy books: Ramsay Muir's *The Interdependent World and Its Problems*; Harold Rugg's *The Great Technology: Social Chaos and the Public Mind*; Edward S. Mead and Bernhard Ostrolenk's *Voluntary Allotment: Planned Production in American Agriculture*; George R. Geiger's *The Philosophy of Henry George*.

HISTORY. Readers of history during 1933 apparently preferred it recent, say, since the War. So we had the very lively and important *War Memoirs of David Lloyd George*, volumes i and ii; volume v, *Over Here, 1914-1918*, of Mark Sullivan's *Our Times*; Gilbert Seldes' *The Years of the Locust*, which was about the United States since 1929; J. Hampden Jackson's *Europe Since the War*; George Seldes' *World Panorama, 1918-1933*; and the photographic history, *The First World War*, edited by Laurence Stallings. Another photographic history, from the Civil War to the World War, was *The American Procession*, edited by Agnes Rogers and Frederick Lewis Allen; and covering the same period was volume ii of James Truslow Adams' *The March of Democracy*. Other histories of fairly late times were: *Fifty Years of Europe*, by J. A. Spender; *Beginning the Twentieth Century*, about the generation that made the War, by Joseph Ward Swain; *The Victorian Aftermath, 1901-1914*, by Esmé Wingfield-Stratford; *The White Armies of Russia*, by George Stewart; *Modern Italy*, by George B. McClellan, from the Congress of Vienna; *Toward the New Spain*, by Joseph A. Brandt, from 1833; *The River War*, by Winston S. Churchill, about the British conquest of the Sudan; a number of books occasioned by the Century of Progress, such as, Henry Justin Smith's *Chicago's Great Century*, and Milo M. Quaife's *Checacou*; and Sir J. A. R. Marriott's *Queen Victoria and Her Ministers*.

The last named author also published an outline history, *The Evolution of Modern Europe, 1453-1932*. F. J. C. Hearnshaw's *Conservatism in England*, history of a party; T. G. P. Spear's *The Nabobs*, about the English in India; *The Oxinden Letters, 1607-1642*, edited by Dorothy Gardiner; and volume ii, *Australia and New Zealand, of The Cambridge History of the British Empire*, edited by J. H. Rose and others, were noteworthy contributions to British history.

Other works of American history were: volume x of *A History of American Life, The Rise of the City*, by A. M. Schlesinger; *Revolution 1776*, by John Hyde Preston, attempted debunking; *War out of Niagara*, by Howard Swiggett, the Revolution in western New York; *The Explorers of North America*, by John Bartlett Brebner; *Mexico before Cortez*, by J. E. Thompson; *The Lost Empires of the Iltzas and Mayas*, by Theodore A. Willard; *Republicanism Religion*, by G. Adolf Koch, a history of American political thought.

Other histories deserving mention were B. J.

Kidd's *The Counter-Reformation*, and M. C. Burkitt's *The Old Stone Age*.

SCIENCE. That some scientists wished to pause to take stock was apparent in such books as *The New Background of Science*, by Sir James Jeans; *Time, Matter, and Values*, by Robert Andrews Millikan; *Philosophical Aspects of Contemporary Science*, by C. E. M. Joad; and *The Limitations of Science*, by J. W. N. Sullivan. Sir Arthur Eddington's *The Expanding Universe* was astrophysical, but philosophical also, as was H. Levy's *The Universe of Science*. The biologists, however, were confident and vocal, in such books as: J. B. S. Haldane's *Science and Human Life*; H. M. Parshley's *The Science of Human Reproduction*; H. S. Jennings' *The Universe and Life*; Alan Frank Guttman's *Life in the Making*. Specialized biological works included Carroll Lane Fenton's *The World of Fossils*, and L. O. Howard's *Fighting the Insects*. Sir William Bragg's *The Universe of Light* was a notable work in physics; P. W. Bryan's *Man's Adaptation of Nature* in geology; Walter Goodacre's *The Moon* in astronomy; and Sir Napier Shaw's *The Drama of Weather* in meteorology. A general work was H. Gordon Garbedian's *Major Mysteries of Science*. Logan Clendening's *Behind the Doctor* was medical history.

TRAVEL AND SPORT. *The House of Exile*, by Nora Waln, about aristocratic life in China, won plaudits. But the largest single group in this field was books about life at sea, such as: *Grain Race*, by Alan Villiers, sailing from Australia to England; *Yachts under Sail*, edited by Alfred F. Loomis, a collection of lovely photographs; *Log of the Sea*, by Felix Riesenbergl; *A Million Miles in Sail*, the life of a sea captain by J. H. McCulloh; *Rolling Round the Horn*, by Claude Muncaster; *Bowsprit Ashore*, by Alexander H. Bone. *The Log of the "Betsy Ann"*, by Frederick Way, Jr., was about a river steamboat.

The jungles of the Amazon were described in *Pindorama*, by Desmond Holdridge, and *Jungle Memories*, by Henry H. Russell. E. E. Cummings' *Eimi* was curiously written about a journey to Russia, where Irina Skariatina was *First to Go Back*, that is, first aristocrat. Hendrik Willem Van Loon made *An Indiscreet Itinerary* of Holland. Walter Starkie went off with the *Raggle Taggle* (Hungarian gypsies). Elliott Merrick traveled *True North* to Labrador. The good old South Seas were described in *Islands Under the Wind*, by Hassoldt Davis; *Africa in Congo Solo*, by Emily Hahn; Haiti in *Black Bagdad*, by John H. Craigie, a United States marine.

R. G. Burton published *The Book of the Tiger*; and Clyde Beatty and Edward Anthony showed how tigers and lions were tamed in *The Big Cage*. Roy Chapman Andrews described *The New Conquest of Central Asia*. Elizabeth Knowlton wrote about climbing the Himalayas in *The Naked Mountain*. Courtney Borden's *Adventures in a Man's World* was about hunting and fishing.

LITHUANIA, lith'ü-a'n'i-ä. A Baltic republic, established Feb. 16, 1918, from former Russian territory. Capital, Kaunas (Kovno), although Vilna, which was transferred to Poland by the Council of Ambassadors in 1923, was still claimed by the Lithuanians in 1933 as their capital. The Lithuanian Telegraph Agency ("Elta") furnished much of the statistical information in this article.

AREA AND POPULATION. The area under Lithuanian sovereignty, including Memel (q.v.), is

21,489 square miles and the population Jan. 1, 1933, was 2,422,000. In addition, Lithuania claims an area of 10,422 square miles, with about 1,000,000 inhabitants, which was incorporated in Poland. The chief towns are Kaunas (Kovno), 113,000; Klaipeda (Memel), 37,400; Siauliai (Shavli), 23,249. The population is about 80 per cent Roman Catholic, the remainder being Protestants (9.5 per cent), Jews (7.3 per cent), and Greek Orthodox (2.5 per cent).

EDUCATION. At the 1923 census, 35.9 per cent of all males and 38.8 per cent of all females over five years of age were illiterate. In 1931-32, there were 2541 primary schools, with 245,685 pupils; 48 secondary schools, with 4862 pupils; and 53 high schools, with 15,249 students. The University of Kovno had 4475 students in 1932.

PRODUCTION. Nearly 77 per cent of the population is engaged in agriculture, and 10 per cent in commerce, industry, and communications. Of the total area, 49.6 per cent is arable land, 25.3 per cent meadow and pasture, and 15.9 per cent forests. The estimated production of the chief crops in 1933, with 1932 figures in parentheses, was (in metric tons): Rye, 568,660 (573,920); wheat, 256,460 (237,500); barley, 238,950 (229,500); oats, 356,380 (362,270); peas, 54,010 (66,760); vetch, 23,020 (25,820); flax, 14,260 (17,990); linseed, 15,890 (21,070); potatoes, 1,918,800 (1,598,680). Livestock in 1931 included 597,050 horses, 1,297,376 cattle, 1,221,450 sheep, and 1,568,543 swine.

The value of industrial production (of establishments employing five or more workers) was estimated at 300,000,000 lits in 1932, 303,800,000 lits in 1931, and 263,500,000 lits in 1930 (1 lit = 10 cents at par). In 1933, there were 245 concerns producing foodstuffs, 177 woodworking establishments (including 107 sawmills), 56 textile mills with an annual production of 25,000,000 lits, 63 metal factories and machinery foundries with an annual output of 15,000,000 lits, 47 soap, match, and other chemical works with an annual production of 6,000,000 lits, 61 paper and printing establishments, and 132 garment factories.

COMMERCE. Lithuanian exports in 1932 declined to 189,125,800 lits and imports to 166,953,500 lits, from 273,119,100 lits and 277,959,100 lits, respectively, in 1931. The leading export items, by value, in 1932 were: Meat, 56,840,000 lits; dairy products, 44,030,000 lits; cellulose, 19,410,000 lits; flax and hemp, 9,130,000 lits; eggs, 6,280,000 lits. The chief import items were: Textile tissues, 19,150,000 lits; threads and yarns, 10,740,000 lits; machines and motor cars, 11,610,000 lits; coal, etc., 9,930,000 lits; gasoline and other petroleum products, 7,810,000 lits. Great Britain displaced Germany as Lithuania's most important market in 1932, taking 41.39 per cent of her exports, as against 39.14 per cent purchased by Germany. However, Germany supplied 40.27 per cent of Lithuania's total imports, against only 10.78 per cent furnished by Great Britain. Exports to the United States in 1933 were valued at \$372,691; imports from the United States, \$192,602. Total exports in 1933 were valued at 160,227,400 lits; imports were valued at 142,176,200 lits.

FINANCE. According to a report of the United States Bureau of Foreign and Domestic Commerce, the closed 1931 budget showed a surplus of 4,800,000 lits, with total revenues of 340,086,000 lits, while the closed 1932 budget showed a

deficit of 5,300,000 lits, with total revenues of 266,000,000 lits. The deficit was covered from the Treasury reserve, which at the end of 1932 totaled 14,897,400 lits. The Lithuanian Telegraph Agency reported the 1932 revenue at 293,260,000 lits and expenditure at 278,477,900 lits. The national debt on Sept. 1, 1933, amounted to 136,331,252 lits (140,380,001 lits on Sept. 1, 1932). Of the 1933 total, 134,352,207 lits represented the foreign and 1,979,045 lits the domestic debt.

COMMUNICATIONS. The railway, telegraph, and telephone systems are state owned. In 1932, the state railways carried 4,447,018 passengers and 1,599,317 tons of freight. Total operating and upkeep expenses were 31,625,279 lits and receipts were 34,414,269 lits. There were 9738 miles of highways. In 1931, 981 vessels of 445,500 tons entered the port of Memel.

GOVERNMENT. The constitution as amended May 15, 1928, vested executive power in the President, elected for seven years, who was to act through a responsible ministry. Legislative power was vested in a diet elected for five years by universal suffrage. Parliament was dissolved Apr. 17, 1927. No elections had been held from 1926 up to 1933 and government remained in the hands of a small nationalist intelligentsia, with legislation being enacted by presidential decree. President in 1933, Antanas Smetona, who was reelected by a board of directors Dec. 11, 1931. Premier and Minister of Finance, Juozas Tubelis.

HISTORY. Although a large proportion of her people were dependent upon agriculture, which felt the effects of the world depression most acutely, Lithuania showed some signs of recuperation early in 1933. It was the only country in Eastern Europe to retain an effective gold standard currency and consequently Kovno became the banking capital of the Baltic states, with favorable economic effects upon the entire country. In order to check the depletion of its gold reserves, Lithuania in February, 1933, created a commission to supervise foreign trade with a view to reducing imports. Special import licenses were required for iron, coal, salt, cotton, etc. At the same time foreign goods were excluded by means of higher tariffs, with the result that the domestic industries were kept busy supplying local needs. In the spring of 1933, the unemployed numbered less than 1 per cent of the population. However the economic upswing noted in other countries did not occur in Lithuania during the remainder of the year. On the contrary industrial activity declined, increasing unemployment. Lower prices for agricultural and manufactured goods, an unbalanced budget, and the smallest returns from foreign trade in 11 years all contributed to the unfavorable trend in 1933.

The country was much perturbed during the year by the growth of the Nazi movement in Memel, with its large German population. Nazi sympathizers won a sweeping victory in the Memel elections of May 23, 1933, but the Lithuanian minority increased its representation in the municipal assembly. Determined not to allow a relaxation of its control over its only seaport, the Lithuanian government sought to weaken the Hitlerite influence in Memel. On August 24 it abrogated the agreement between the German Protestant Church and the Protestant Church of Memel Territory. The explanation given for this action was that the capture of control over the German Protestant Church by Hitler's "German Christians" had eliminated one of

the parties to the agreement. Later the Lithuanian Governor of Memel dismissed 101 Germans from the civil service. While opposing German Fascism, the national congress of the Tautininkai party, which controlled Lithuania, adopted fascism as a governing principle on Dec. 16, 1933. President Smetona was named leader of the party and Premier Tubelis became head of its central committee. President Smetona announced that elections would be held on a corporative basis. The Soviet-Lithuanian convention for the definition of aggression, signed in London, July 5, 1933, was ratified and went into effect on Dec. 14, 1933.

Lithuania was unofficially represented at the Fourth Economic Conference of the Baltic States, held in Riga, Latvia, Sept. 8-9, 1933. See *LATVIA under History*. On June 23, 1933, Lithuania made a "token" payment of \$10,000 instead of the \$132,091 war-debt payment due the United States government and on Dec. 15, 1933, it made a \$10,000 payment instead of the \$105,474 due.

LITTLE ENTENTE. Designation applying to the three countries of Czechoslovakia, Rumania, and Yugoslavia (q.v.), whose governments in 1921 and 1922 concluded bilateral treaties forming an alliance to maintain the status quo in central Europe as established by the treaties of Versailles, St. Germain, Trianon, and Neuilly. The terms of the treaties were extended on May 21, 1929, on which date the three governments also signed an agreement providing for the conciliation, arbitration, and judicial settlement of their mutual disputes.

A closer political and economic union was effected by the Little Entente pact signed by the foreign ministers of the three countries at Geneva, Feb. 16, 1933. This extended indefinitely the treaties of alliance and the Act of Conciliation, Arbitration, and Judicial Settlement. In addition the pact gave the alliance "an organic and stable basis." It established a permanent council, composed of the foreign ministers of the three powers, and a permanent secretariat, with a branch office in Geneva. The council, which was to meet at least three times a year, was to direct the foreign policy of the Little Entente and its unanimous approval was required for all important treaties concluded by member states. An economic council also was created "for the progressive coördination of the economic interests of the three states, whether among themselves or in their relations with other states."

The closer union of the Little Entente in 1933 was the direct result of the victory of Hitler's National Socialist movement in Germany, whose primary objective was declared to be the revision of the territorial and other clauses of the peace treaties. Fearful that France would be forced to make concessions at the expense of its allies, the Little Entente powers prepared to defend themselves against a possible coalition of Germany, Italy, and Hungary. The conclusion during 1933 of Mussolini's Four-Power Pact (see *ITALY under History*) increased their determination to free themselves from dependence on France and the other great powers. This desire was reflected in the vigorous effort made by Rumania and Yugoslavia to enroll Bulgaria in the Little Entente and to establish friendly relations with the other Balkan states.

The Little Entente further strengthened its position by the conclusion of a non-aggression pact, containing a definition of aggression, with the Soviet Union at London on July 4, 1933. This

freed Rumania from fear of a Soviet attack to regain Bessarabia. The conference of the Little Entente foreign ministers at Sinaia, Rumania, Sept. 25-27, 1933, was attended for the first time by King Carol of Rumania and King Alexander of Yugoslavia. Foreign Minister Beneš of Czechoslovakia and Foreign Minister Titulescu of Rumania held a second meeting on December 10 at Kosice, a small town in the province of Slovakia, Czechoslovakia, whose return to Hungary had been demanded by Hungarian revisionists. At the conclusion of the conference M. Titulescu frankly warned Hungary, Austria, and Germany that the territorial revision of the peace treaties meant

tributed by the Federal Emergency Relief Administration. The entire programme cost about \$35,000,000. A tax levied on marketed live hogs to finance this programme and also the Corn-Hog Production programme for 1934 was set at \$.50 per 100 pounds in November and \$1 in December, and was expected to be \$1.50 in January, and \$2 per 100 pounds until the end of the 1934-35 hog marketing year. The Corn-Hog Production programme is designed to reduce corn production 25 per cent and hog production 20 per cent in 1934. The price of hogs in late 1933, although considerably above that of 1932, was below the price level of feeds and other agricultural products.

MEAT SLAUGHTERED UNDER FEDERAL INSPECTION IN THE UNITED STATES IN 1933

	Cattle	Calves	Hogs	Sheep, lambs
Number slaughtered:				
1933	8,655,000	4,907,000	47,226,000	17,854,000
1932	7,025,000	4,492,000	45,245,000	17,899,000
5-year average*	8,139,000	4,594,000	46,505,000	16,086,000
Total dressed weight of slaughtered animals:				
1933—lbs.	4,541,000,000	505,000,000	8,226,000,000	673,000,000
1932—lbs.	3,940,000,000	454,000,000	7,831,000,000	682,000,000
5-year average*—lbs.	4,201,000,000	460,000,000	8,078,000,000	617,000,000
Exports:				
1933—lbs.	16,835,000 ^b		726,213,000 ^c	321,000
1932—lbs.	12,514,000 ^b		661,186,000 ^c	259,000
5-year average*—lbs.	17,017,000 ^b		941,121,000 ^c	907,000
Per capita consumption:				
1933—lbs.	40.10 ^b		57.90	5.36
1932—lbs.	35.37 ^b		58.06	5.45

* Average for 1928, 1929, 1930, 1931, 1932.

^b Beef and veal

^c 14,410,000 lbs. fresh, 116,778,000 lbs. cured, and 10,847,000 lbs. canned pork, and 584,178,000 lbs. lard.

^d 8,133,000 lbs. fresh, 99,433,000 lbs. cured, and 8,713,000 lbs. canned pork, and 552,135,000 lbs. lard.

^e 12,041,000 lbs. fresh, 217,537,000 lbs. cured, and 10,110,000 lbs. canned pork, and 683,558,000 lbs. lard.

war. The Economic Council of the Little Entente was scheduled to hold its first meeting in Prague, Czechoslovakia, early in January, 1934. For the text of the Little Entente pact of Feb. 16, 1933, see *Current History*, May, 1933, p. 200. Also see GERMANY, HUNGARY, ITALY, BULGARIA, AUSTRIA, and FRANCE under *History*; UNITED STATES OF EUROPE.

LITVINOFF, MAXIM. See UNION OF SOVIET SOCIALIST REPUBLICS; UNITED STATES.

LIVESTOCK. Unusually large surpluses, particularly of hogs and beef cattle and their products, resulting largely from the low purchasing power of consumers in this country and abroad, characterized the livestock situation in 1933. The condition was aggravated further by trade restrictions established by foreign countries, limiting importations, and by the efforts of various European countries to stimulate livestock production, especially hogs. Meanwhile, beef and pork production in this country continued without decrease.

The Agricultural Adjustment Administration of the United States Department of Agriculture attacked the situation by attempting to remove a portion of the surplus of livestock products from the market and adjust farm production more in accord with consumption and exports. An emergency hog-marketing programme, designed to bring a measure of relief to hog marketing in the fall and winter of 1933-34 resulted, during the period August 23 to September 29, in the government purchasing about 6,140,000 pigs weighing less than 100 pounds each, and 221,000 pregnant sows weighing over 240 pounds each. The pork from the smaller pigs was converted into fertilizer tankage and the carcasses from the larger pigs and sows were cured. Approximately 100,000,000 pounds of cured pork obtained in this manner was dis-

tributed by the Federal Emergency Relief Administration. Increased numbers of cattle and calves on farms, totaling 65,129,000 head on Jan. 1, 1933, high-priced feed, and unfavorable range and pasture conditions over much of the country caused increased fall marketing of beef cattle. Some aid to the beef situation, which was depressed, was expected from the purchase of about 25,000,000 pounds of canned beef by the Federal Surplus Relief Corporation early in 1934.

Sheep enjoyed a better position than cattle and hogs. The peak in sheep production was evidently past and sheep and lamb slaughter fell below that of 1932. The 1933 lamb crop was estimated at 28,988,000 head, which was about 2.5 per cent less than the 1932 lamb crop. The smaller lamb crop was further reduced by unfavorable spring weather and feed shortage in the late lambing States. Consequently, there were heavy death losses. Wool prices were favorable. (See WOOL.)

There were also indications of improvement in the horse and mule markets. The stronger demand for horses stimulated prices above 1932 levels, but they were still less than half the calculated average price for 1910-14.

Although the numbers of hens and pullets of laying age on farms in 1933 were slightly larger than in 1932, production per bird and per flock was decidedly less. As a result, prices were fairly well maintained for both fresh and storage eggs. Unusually large marketing of hens occurred during the early summer. Heavy receipts of turkeys for the fall holiday season resulted in price declines which were reflected in the market for other classes of poultry.

INTERNATIONAL CONDITIONS. Primary interest in international conditions was related to the action taken by the principal European meat-producing countries in limiting production to a point where the products could be profitably dis-

posed of, and the regulations of the importing countries to stimulate production and limit imports. The United States was mainly interested in the control of foreign hog production and its effect on marketing in the two principal European importing countries, the United Kingdom and Germany.

The embargo since 1926 on importations of fresh pork into Great Britain caused European exporting countries to turn to the production of cured pork products. The resultant increase of bacon imports into England coupled with the general decline in commodity prices caused abnormally low bacon prices and resulted in severe losses to British producers. British production was organized and licensed under the terms of the Agricultural Marketing Act. Total foreign imports of cured pork were limited to about 862,000,000 pounds annually. On November 10 this quota was further reduced about 16 per cent until Feb. 28, 1934, but Dominion allotments were increased. Canada was limited to a maximum of 2,500,000 cwt. annually, Denmark was allowed 62 per cent of the foreign supply, and the United States 6.3 per cent. As a result, during the latter part of the year bacon prices on British markets advanced sharply.

Imports of bacon, ham, and lard by the United Kingdom for the period Nov. 23, 1932 to Sept. 14, 1933 were reduced about 20 per cent as compared with the preceding year, resulting in totals of 1,114,209,000 pounds, 99,802,000 pounds, and 307,581,000 pounds, respectively. Bacon imports from Denmark during the year decreased more than 20 per cent as compared with 1932.

Germany almost eliminated foreign competition in lard by placing an import duty of 100 marks per 100 kilos, effective on July 19. Domestic production was thereby stimulated. A considerably larger proportion of the lard imports of Germany were received from Denmark during the last part of the year. Hogs marketed in Germany during the year were about 10 per cent less than in the preceding year, and bacon imports, principally from the Netherlands, although larger than usual, decreased 38 per cent.

Hog products consumed by the other European importing countries, France, Czechoslovakia, Austria, Belgium, and Italy, are so much smaller than the importations of the United Kingdom and Germany that although several of them took action to stimulate domestic production and reduce importations, the effect on world supplies was of less importance.

In the hog marketing year ended Sept. 30, 1933, Denmark exported 692,971,000 pounds of bacon to the United Kingdom. As a result of the import limitations and expansion of the industry in Great Britain there resulted a marked overproduction in Denmark, necessitating special government control of hog production. Increased competition for the bacon market of the United Kingdom since 1926 from the Baltic states, Poland, and later the Netherlands, played an important part in the situation. The Danish Hog Control Law, which became effective in February, 1933, was designed to reduce hog slaughtering, maintain the domestic bacon price, and restrict exportations to Great Britain in accord with British import regulations. Under this plan production was controlled by card permit. The plan was financed by taxes on all hogs slaughtered weighing over 110 pounds. Sows were so reduced by this plan that it was anticipated that produc-

tion and supplies would be brought in line with British and home demand by the end of 1933 or early in 1934.

In 1931 hog numbers reached relatively high levels in the Netherlands and prices fell below production costs. The increased competition on the British bacon markets further depressed the situation. By an act passed in August, 1932, the government took over complete charge of hog production and marketing. It was made illegal to own hogs over 22 pounds in weight that were not ear marked under the government limitation. Bacon hog marketing and exports were controlled and the price of bacon hogs fixed. The whole plan was financed by a tax of from 4.75 to 5.28 cents per pound live weight on all hogs killed for domestic consumption. As hog production in the Netherlands declined before the measure was put into effect, it was unnecessary to exert the curb on production which is in the form of a tax of 5 guilders per head on all pigs above the allotted numbers. Exports of hog products from the Netherlands were over 10 per cent less in 1932-33 than in 1931-32.

Exports of frozen pork carcasses from New Zealand to Great Britain showed an increase from 147,021 in the year ended Sept. 30, 1932 to 301,986 carcasses in the year ended Sept. 30, 1933.

A phenomenal increase in Brazilian exports of lard to Great Britain was reported during 1933. In recent years less than one million pounds of lard have been exported by Brazil, principally to France and Germany. By mid August, 1933, 4,950,000 pounds had been shipped to Great Britain and it was expected that this would reach 11,000,000 pounds by the end of the year.

Limitation was also attempted in the production of beef and dairy products in Denmark by slaughtering old and unprofitable cows and converting the carcasses into meat meal. In the fall of 1932, 22,000 head were disposed of, but the funds were insufficient to go further. The second plan was started in March, 1933, and by October 1, 85,000 cows had been slaughtered. It was expected that the number would reach 125,000 by the end of the year. The offerings toward the end of the year were enlarged as a result of a relatively dry summer and reduced pasturage. In July, 1933, there were in Denmark nearly 10 per cent less calves and heifers that had not calved than in 1932.

The beef exports of New Zealand increased materially for the year ended Sept. 30, 1933, to 310,678 quarters as compared with 195,313 in the 1932 period. Boneless beef exports also increased about 20 per cent in the same period. Canadian cattle exports of 28,000 head during the first seven months of 1933 were more than double those in the corresponding period of 1932. Attempts were made to stimulate beef production in the Union of South Africa and Rhodesia by offering bounties on export beef.

World sheep numbers were reduced to a point where sheep occupy an advantageous position. During the 12 months ended Sept. 30, 1933, there were 2,165,757 mutton carcasses and 8,856,549 lamb carcasses exported from New Zealand. This represented a considerable reduction as compared with the preceding year. A severe drought in South Africa reduced the numbers of sheep about 5,000,000 head.

The Fifth World's Poultry Congress, held at Rome, Italy, from September 6 to 15, was elabo-

ately arranged with sections of general and specialized interest. It was attended by some 1400 delegates from 48 countries. National exhibits were staged by Bulgaria, Canada, Denmark, France, Germany, Great Britain, Hungary, Italy, Japan, Yugoslavia, Lithuania, Netherlands, Spain, and the Vatican state.

RESEARCH. Continued attention was given to quantitative factors in livestock production as applied to both the feeds used and the marketable products. Studies of the value and utilization of feeds were no longer limited to the gains in weight, but special attention was given in many such studies to the quality of the carcass and the palatability of different cuts of meat.

As a result of the wide interest in the United States in the English market for Wiltshire and Cumberland sides, the North Dakota Agricultural Experiment Station studied the qualities desired by the English market and attempted to determine why American Wiltshire sides are judged inferior to the Danish product. Wiltshire sides from hogs of lard and bacon breeds, and crosses between them, were shipped to England for observation.

Interest in pastures increased because of the more economical production possible where pastures and forage crops are utilized. Investigations were designed to study the composition, quality, and biological value of forage and pasture crops at different stages of growth and as affected by the curing process. An extensive series of studies was conducted by Woodman, et al., at the University of Cambridge, on the influence of various factors such as soil type, season, intensity of grazing, fertilizers, and artificial drying on the chemical and botanical composition, and feeding value of the pasture herbage. Studies at the Colorado and Ohio Agricultural Experiment Stations were especially concerned with the vitamin contents of hay plants and alfalfa. The yield and composition of alfalfa was found to vary with the stage at which it was cut in investigations in New South Wales. The results of these studies demonstrate the importance of the wide variety of factors in influencing the feeding value of the plants.

The importance of minerals, particularly lime and phosphorus, for normal development has been well demonstrated and interest continued in determining sources of these products and the antirachitic vitamin which is needed for their assimilation. Sardine oil and other fish oils were compared with cod-liver oil as sources of the vitamin for poultry at the Nebraska and Washington Agricultural Experiment Stations. Although the potency of these oils was less than that of cod-liver oil, they were nevertheless effective in preventing rickets if sufficient quantities were fed. McDonald and Massengale were able to significantly raise the vitamin D potency of the eggs laid. The increase was, however, very small as compared with the extra amount of the vitamin that had to be added to the ration of the hens.

The many technical phases of livestock production continued to receive the active attention of research workers in this field. Many findings of fundamental importance to a scientific understanding of the every-day nutrition and breeding problems were reported during the year.

CHANGES IN PERSONNEL. Dr. W. F. Holst, head of the poultry department at the University of California, died on Jan. 28, 1933. Doctor Holst

was well known for his important contributions on the protein and vitamin requirements for growth, reproduction, and egg production in poultry.

Louis Vinke, head of the animal husbandry department at the Montana Agricultural college, resigned July 31 to engage in commercial work.

Dr. Joseph B. Lindsey, head of the department of plant and animal chemistry at the Massachusetts Agricultural College, retired Dec. 26, 1932. Dr. Lindsey has made important contributions in the field of animal nutrition.

Professor H. H. Kildee, head of the animal husbandry department at Iowa State University, and Prof. E. L. Anthony, head of the dairy department in the Michigan State Agricultural College, were each appointed dean of agriculture in the respective institutions.

R. S. Stephenson, associate professor of animal husbandry at Iowa State College, resigned on January 1 to engage in farming.

M. O. North was appointed assistant professor of poultry husbandry at Wyoming University vice F. J. Kohn, deceased.

LOEB, JAMES. An American banker and philanthropist, died near Murnau, Bavaria, Germany, May 27, 1933. He was born in New York City Aug. 6, 1867. On his graduation from Harvard University in 1888 he became a member of the New York banking firm of Kuhn, Loeb and Co., of which his father, Solomon Loeb, was founder. He retired, however, in 1901, devoting

himself thereafter to his many cultural and philanthropic interests. The most important of these was the Loeb Classical Library, which he established in 1912 for the purpose of reviving interest in the humanities. Its scope was to cover 25 centuries of Greek and Latin literature, with original texts and English translations side by side on opposite pages. By 1933 more than 250 volumes had been published. In recognition of this achievement there was conferred on him the honorary degrees of Ph.D. by the University of Munich and of LL.D. by Cambridge University. Also he was made a trustee of the American School of Classical Studies in Athens and a member of the Society for the Promotion of Hellenic Studies, the Society for the Promotion of Roman Studies, and the Deutsche Archäologische Institut.

Deeply interested in music and himself a cellist of ability, Mr. Loeb founded and endowed in New York City in 1905 the Institute of Musical Art, which was incorporated 20 years later into the Juilliard Musical Foundation. He was also one of the donors of the Music Building at Harvard and presented to the Fogg Museum of that institute his extensive collection of Aretine pottery. In 1916 he assisted in founding, and thereafter supporting, the Deutsche Forschungsanstalt für Psychiatrie in Munich, one of the first institutions for the systematic study of the causes of mental disorders and their prevention and cure. His published works, all translations, include Paul Decharme's *Euripides and the Spirit of His Drama* (1906); Maurice Croiset's *Aristophanes and the Political Parties at Athens* (1909); Philippe Legrand's *The New Greek Comedy* (1917); and Auguste Couat's *Alexandrian Poetry under the First Three Ptolemies* (1930). At the time of his death he was staying at Hochried, his estate on the Staffelsee in southern Bavaria, where he had lived intermittently since 1905.

LORD, CHESTER SANDERS. An American journalist, died at Garden City, N. Y., Aug. 1, 1933. Born at Romulus, N. Y., Mar. 18, 1850, he attended Hamilton College during 1869-70 and then began his newspaper career as associate editor of the Oswego (N. Y.) *Advertiser*. Removing to New York City in 1872, he joined the staff of the *Sun* as a reporter and rapidly rose through the ranks as suburban editor, assistant night city editor, and assistant managing editor to managing editor, holding the latter position from 1880 until his retirement in 1913. With Charles A. Dana, the brilliant editor of the *Sun*, he succeeded in making that paper noted for its literary style, terse, strong, and clear, through the able reportorial staff that he assembled. Among the *Sun*'s "graduates" were Frank Ward O'Malley, Arthur Brisbane, Samuel Hopkins Adams, Edwin C. Hill, Will Irwin, Frank M. O'Brien, and Walter Prichard Eaton.

Mr. Lord's resourcefulness as a managing editor was frequently tested, but his greatest triumph was the system of gathering election returns

which he devised in the national election of 1884. On that occasion, despite news from the Associated Press to the contrary and although it had been a bitter opponent of the Democratic candidate during the campaign, the *Sun* was the first paper to concede Cleveland's victory in New York State. Later in the '90's, as a result of the *Sun*'s breach with the Associated Press, Mr. Lord developed with William M. Laffan the Laffan News Bureau, which adequately supplied the paper with its foreign and domestic news over a period of 25 years. He was also one of the most ardent foes of sensational journalism, holding that "a cheap literature produces cheap mentality and consequently a cheap people."

Mr. Lord served after 1897 as a regent of the University of the State of New York, and in 1921 was elected chancellor of the board of regents. During 1923-25 he was president of the National Institute of Social Sciences. He wrote *The Young Man and Journalism* (1922).

LOS ANGELES. See AQUEDUCTS.

LOUISIANA. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 2,101,593; in 1920 it was 1,708,509; in 1933, by Federal estimate, 2,153,000. New Orleans, the chief city, had (1930) 458,762 inhabitants; Baton Rouge, the capital, 30,729.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu	Value
Cotton . . .	1933	1,283,000	486,000*	\$22,346,000
	1932	1,668,000	611,000*	18,330,000
Sugar cane .	1933	215,000	3,125,000*	10,721,000
	1932	223,000	3,339,000*	10,730,000
Rice	1933	369,000	14,760,000	11,513,000
	1932	410,000	15,990,000	6,556,000
Corn	1933	1,198,000	15,574,000	8,877,000
	1932	1,261,000	17,906,000	6,625,000
Sweet potatoes	1933	74,000	5,180,000	2,849,000
	1932	84,000	5,544,000	2,218,000
Hay (tame) .	1933	176,000	198,000*	1,584,000
	1932	170,000	221,000*	1,503,000
Potatoes . . .	1933	41,000	2,337,000	1,729,000
	1932	40,000	2,160,000	1,469,000

* Bales. † Tons.

MINERAL PRODUCTION. Continued decline in the production of petroleum in the State's northern fields brought their year's output for 1932 down to 10,123,000 barrels, as against 12,244,000 for 1931. Fields adjacent to the coast, on the contrary, continued to increase production, attaining a total of 11,355,000 barrels for 1932, as against 9,560,000 for 1931. Thus the output for the entire State, 21,478,000 barrels (1932), was but 1 per cent short of that for 1931. The Gueydan and Darrow fields were opened in the coastal area.

The production of natural gas declined to 194,000,874 M cu. ft. (1932), or by 14.6 per cent from the total for 1931. Largely the decline was attributable to diminished activity in the production of carbon black, one of the chief applications of the Louisianian product. Draft on the Louisiana fields for piping to the southern States farther east was reduced by the pipe line's drawing on a natural-gas field in the area of Jackson, Mississippi.

Activity in the State's deposits of sulphur was resumed. Production occurred in Iberia parish, and the Grande Ecaille dome in Plaquemine parish was developed by the Freeport Sulphur Company on a large scale. An amendment to the State constitution, adopted by popular vote in November, 1932, prohibited the levying of ad-

valorem taxes on deposits of sulphur, but the severance tax on production of sulphur, fixed by statute at 27 cents a ton, was unaffected.

FINANCE. State expenditures in the year ended Dec. 31, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$26,673,036 (of which \$5,880,240 was for local education); for conducting public-service enterprises, \$55,264; for interest on debt, \$2,692,017; for permanent improvements, \$54,266,987; total, \$83,687,304 (of which \$55,664,261 was for highways, \$6,090,798 being for maintenance and \$49,573,463 for construction). Revenues were \$34,590,584. Of these, property and special taxes furnished 28.5 per cent; departmental earnings and compensation to the State for officers' services, 5.5; sale of licenses, 49.4 (in which was included a gasoline sale tax that produced \$7,334,713). Funded debt outstanding on Dec. 31, 1931, totaled \$73,454,855, of which \$51,760,000 was for highways. Net of sinking-fund assets, the debt was \$73,313,455. On an assessed valuation of \$1,666,140,457 the State levied in the year ad valorem taxes of \$9,580,307.

EDUCATION. Reductions of teachers' salaries and of the length of the year's term of school sessions were reported, in the *Journal* of the National Education Association at the end of the year, as prevalent. Lower assessments and delay or delinquency in the payment of school taxes had caused financial breakdowns in some of the parishes. Hopes of improvement were entertained by reason of proposals in the report rendered to the Legislature by its commission on tax reform. Extension courses were offered during the year in some areas for unemployed graduates of the high schools.

For the academic year 1932-33 the number of persons of school age in the State was reckoned as 663,169, of which total 399,999 were whites and 263,170 Negroes. There were enrolled in the public schools 459,706 pupils, of whom 293,485 were whites and 166,221 Negroes. Of these, 391,255 (233,164 whites and 158,091 Negroes) were in common schools or elementary grades; in high schools, 68,451 (60,321 whites and 8130 Negroes). Expenditures of the year for public-school education totaled \$13,439,008, of which \$11,898,572 was for white and \$1,540,436 for Negro schools. The salaries of teachers averaged, by the year, \$735.65 for whites and \$227.04 for Negroes.

CHARITIES AND CORRECTIONS. The State's central authority over institutions for the care and custody of persons, under the system in force in 1933, rested in a Board of Charities and Correction. This board included five ordinary members and, also, the Governor as *ex-officio* member and chairman. Exercising no administrative or executive powers, the board performed supervisory duties with regard to the State and subdivisional institutions. The State institutions themselves were conducted by separate directing bodies. The board, further, had authority to visit private eleemosynary institutions. The State institutions were: the penitentiary, at Baton Rouge; Training Institute, at Monroe; Industrial School for Girls, Alexandria; State hospitals for the insane, at Pineville and Jackson; Greenwell Springs Tuberculosis Hospital, Greenwell Springs; Charity Hospital (general), New Orleans; Charity Hospital (general), Shreveport; schools for the blind, at Baton Rouge; for the deaf, Baton Rouge;

State College and Training School (for the feeble-minded), at Alexandria.

LEGISLATION. A special session of the Legislature repealed, by an act signed on March 24, the State law for the enforcement of prohibition. It took no action with regard to repealing the Eighteenth Amendment of the Federal Constitution.

POLITICAL AND OTHER EVENTS. The State was one of the first in which the banking troubles of the late winter became acute. A legal holiday to prevent the exhaustion of banks' resources by depositors' withdrawals was decreed early in February. The popular vote by which the State's prohibition law of 1921 had been repealed in a referendum proposed to the people by the Legislature in 1932, was declared unconstitutional by the State Supreme Court on March 4. The law being consequently still valid, a special session of the Legislature (see above) was necessary to repeal it.

Payments by the State, of charges on its bonds, were delayed until late in May by reason of the inability of the Hibernia Bank and Trust Company, of New Orleans, containing State deposits, to reopen on a solvent basis. The formation of a successor, the Hibernia National Bank, aided by the Reconstruction Finance Corporation with a subscription to the bank's preferred stock, made 43 per cent of deposits in the old bank immediately available, and the State's payments were resumed. Similarly, the National Bank of Commerce was created, to take over and release 30 per cent of the deposits of the old Canal Bank and Trust Company. Deposits released in the two cases totaled, respectively, \$14,000,000 and \$18,000,000. Payment of the teachers of New Orleans, interrupted by the banks' failure to pay on salary checks in February, was resumed only in May. Widespread inability to make money payments led the State to cut the penalty on tax delinquency temporarily in April; the State ordered on May 15 indefinite postponement of sales of property to satisfy taxes levied in 1932.

Opponents of Senator Huey Long's political organization agitated for a recount of votes cast in November, 1932, on proposed State constitutional amendments favored by the Long faction and declared to have been carried. It was alleged that in some New Orleans precincts a negligible adverse vote or none at all had been counted. District Attorney Stanley of New Orleans began late in 1932 a grand-jury inquiry into the count, whereupon Attorney General Porterie, a supporter of Long, took over the inquiry and the grand jury adjourned. A new grand-jury inquiry was started in the spring. Efforts were made by the State Bar Association to act against Porterie, and he resigned from the Association in June. Judge O'Donnell directed District Attorney Stanley to bring before him on August 2 six of the contested ballot boxes; thereupon Governor Allen, a partisan of Long, proclaimed qualified martial law, and progress in the recount proceeding was checked. Opponents of Long testified at hearings in New Orleans during February and again late in the year, by a committee of the United States Senate investigating charges against the election of J. H. Overton to the Senate in 1932.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Oscar K. Allen; Lieutenant-Governor, John B. Fournet; Secretary of State, E. A. Conway; Treasurer, J. S. Cave; Auditor, L. B. Baynard, Jr., Attorney General,

G. L. Porterie; Superintendent of Education, T. H. Harris.

Judiciary. Supreme Court: Chief Justice, Charles A. O'Neill; Associate Justices, Winston Overton, John St. Paul, W. G. Rogers, John R. Land, H. F. Brunot, Fred M. Odom.

LOWELL, JAMES ARNOLD. An American jurist, died Nov. 30, 1933, at Newton, Mass., where he was born Feb. 5, 1809. He was graduated from Harvard with the A.B. degree in 1891 and the LL.B. degree three years later. Admitted to the Massachusetts bar in 1894, he began his law practice in Boston with his father, John Lowell. Ten years later he made his entry into politics on his election to the Massachusetts House of Representatives for the term 1904-06. He served as chairman of the Commission on Workmen's Compensation in Massachusetts during 1910-12, and of the Massachusetts Board of Labor and Industries during 1913-14. In 1917 he sat as a member of the Massachusetts Constitutional Convention and during the next three years was a member of the Massachusetts Commission to Consolidate the Laws. In 1922 President Harding appointed him judge of the United States District Court in Boston.

Judge Lowell became widely known for his liberal attitude in interpreting the immigration law by admitting "conscientious objectors" to citizenship and the prohibition law by denouncing the wire-tapping methods of prohibition agents in obtaining evidence of violations and by refusing to impose any more jail sentences in prohibition cases on account of the imminent repeal of the Eighteenth Amendment. Previous to his death, however, he faced impeachment for his refusal to allow the extradition of George Crawford, a Georgia negro wanted for the murder of two white residents of Virginia. His decision in freeing the negro was based on "Yankee common sense"—that his trial in Virginia would not be a fair trial, since negroes were not permitted to serve on the State's juries. The writ of habeas corpus which he granted in April, 1933, was later overruled by the Circuit Court of Appeals and the United State Supreme Court, and in October Crawford was returned to Virginia for trial. He edited *Lowell on Bankruptcy* (1898).

LUBECK. See GERMANY under *Arca and Population*.

LUKS, GEORGE BENJAMIN. An American painter, died in New York City, Oct. 29, 1933. Born at Williamsport, Pa., Aug. 13, 1867, he attended the Pennsylvania Academy of Fine Arts and then went to Germany where he studied at the Düsseldorf Academy. On his return he became staff artist for the Philadelphia *Press* and during the Cuban revolution of 1895-96 was war correspondent and artist for the Philadelphia *Bulletin*. He originated also the comic strip "The Yellow Kid," in the New York *World*, from which the term "yellow journalism," as applied to sensational papers, was derived.

After 1905 George Lusk devoted himself seriously to his painting, gaining recognition with such works as "The Wrestlers," "East Side Docks," and "Little Madonna" in which he early portrayed his instinctive sympathy with the "other half." His individuality was still further displayed in the vital colors which he used, the saliency of his style, and the striking variety of his characterizations. He twice received the Logan Medal of the Art Institute of Chicago, in 1920 for "The Player" and in 1926 for "Otis Skinner

as Col. Philippe Brideau in 'The Honor of His Family.'" The Temple Gold Medal was awarded him in 1918 by the Pennsylvania Academy of Fine Arts for "Houston Street, New York." In addition to the Hudnut Water Color Prize and the Locust Club Gold Medal, he received the Corcoran Art Gallery prize for his "Woman and Black Cat."

Among Mr. Lusk's other canvases were: "Mrs. Gamely" (Whitney Museum of American Art, New York City); "The Dominican" and "Ducks, Morris Canal" (Phillips Memorial Gallery, Washington); "Three Top Sergeants" (Detroit Art Institute); and "The Breaker Boys" (Albright Art Museum, Buffalo). In private collections were: "The Guitar"; "Clown"; "Old Woman with White Pitcher"; "Mount Vernon Street, Boston"; "Commonwealth Avenue, Boston"; "East Side Waifs"; "The Pawnbroker's Daughter"; "Little Milliner"; "Tango Artist"; and "The Round Houses at Highbridge." He was a member of the National Association of Portrait Painters and of the New Society of Artists.

LUMBER. See FORESTRY.

LUNACHARSKY, ANATOL VASILIEVITCH. A Soviet author and politician, died at Mentone, France, Dec. 26, 1933. He was born at Poltava, Ukraine, Nov. 24, 1875, and was educated at the University of Kiev where he specialized in literature, and at the University of Zurich where he studied natural science and economics. On his return to Moscow in 1897 he became prominently identified with the revolutionary Social Democratic party, but his activities led to his arrest and deportation to Vologda the following year. He succeeded in escaping in 1901 and went to Paris, where he continued to work for the cause of the Social Democratic party. On its split in 1903 into the Menshevik and Bolshevik wings he joined the latter. The following year he became associated with Lenin in editing the Bolshevik organ *Vpered* (Forward) in Geneva.

Lunacharsky returned to Russia during the Revolution of 1905, acting as a delegate to the St. Petersburg Workmen's and Peasants' Council, but was obliged to flee when the reactionary forces again came into control. While in Italy in 1910 he became associated with Gorky and Bogdanov in forming the radical wing of Bolshevism, which was opposed to Lenin on certain theoretical points in the application of Marxian doctrines, and in founding at Capri and Bologna Social Democratic schools. During the early part of the World War he was engaged in disseminating pacifistic propaganda in France and Switzerland, becoming reconciled in the meanwhile with the Lenin group.

On the outbreak of the revolution of 1917 Lunacharsky joined Lenin and Trotsky in Russia, where he was one of the principal agitators for the overthrow of the provisional government. In the ensuing months he acted as emissary of the Military Revolutionary Committee to the war fronts, where he successfully spread among the despairing soldiers extravagant promises of what a Bolshevik régime would accomplish in fulfilling their longings for peace, for land, and for proletarian privileges. After Kerensky's fall in October he served as vice-president of the Petrograd Municipal Council.

Chosen People's Commissar for Education for the Russian Socialist Federated Soviet Republic in November, 1917, and a few months later for the Union of Soviet Socialist Republics, Lunacharsky instituted many educational reforms dur-

ing his 12-year administration, the most important of which was education for the masses. Under his direction there was developed a system of public schools, owned and directed by the State, in which loyalty to Communist principles was thoroughly inculcated. Lack of money, however, prevented the carrying out of an extensive programme anywhere but in the large cities, but in spite of these difficulties he succeeded in laying the foundation for wiping out the illiteracy which prevailed among two-thirds of the nation's population. By 1928 more than 10,000,000 pupils were enrolled in the primary and intermediate grades, as compared with 7,000,000 in 1914. Adult education was provided for by a sort of university extension system, while skilled workers for industry were trained in technicums and in factory and shop schools. At the end of the first five-year plan in 1932 literacy among the city population had increased to 97 per cent and among the village population to 88 per cent.

Lunacharsky contributed to the preservation of Russia's cultural traditions by organizing the Academy of Science, by furthering the artistic interests of the theatre, and by renewing the vogue of Dostoyevsky, Turgenev, Tolstoy, and other novelists whose work, though bourgeois in conception, was extolled for its art form. After he relinquished the post of Commissar for Education in 1929 he was appointed chairman of the Administration Committee for Scientific and Educational Institutions and served as editor of *Land and Factory and Academia*. Previous to his death he was appointed Soviet Ambassador to Spain. Among his political works were *Religion and Socialism* (2 vols., 1911) and *Culture and the Working Class* (1919). He was the author of 14 plays, the more important of which were *Oliver Cromwell*, *Ivan in Paradise*, *Vasilisa the Wise*, *The Magi*, and *Faust and the City*.

LUNG REMOVAL IN CARCINOMA. See MEDICINE AND SURGERY.

LUTHERAN CHURCH. A church that expresses itself in groups of religious bodies and synods that receive and hold the canonical Holy Scriptures of the Old and New Testaments as the inspired Word of God and the only infallible rule and standard of faith and practice and that declare the unaltered Augsburg Confession to be a correct exposition of the faith and doctrine of the Evangelical Lutheran Church. The membership of the church, while found chiefly in central and northern Europe and in the United States and Canada, is distributed throughout the world, there being in 1933 a total of about 83,000,000 members in 75,000 congregations, served by more than 50,000 pastors.

In the United States, as the result of mergers and the formation of federations, the Lutheran Church expresses itself in practically a threefold equal division in the United Lutheran Church in America, the American Lutheran Conference (consisting of the American Lutheran Church, the Augustana Synod, the Norwegian Lutheran Church, the Lutheran Free Church, and the United Danish Church), and the Synodical Conference (consisting of the Missouri Synod, the Joint Wisconsin Synod, the Slovak Synod, the Norwegian Synod, and the Negro Missions). In addition there are the following minor religious bodies: Eielsen Synod, Church of the Lutheran Brethren, Danish Church, Icelandic Synod, Finnish Suomi Synod, Finnish National Church, Finnish Apostolic Church, and a number of non-synodical or in-

dependent congregations. Further efforts toward Lutheran unity were manifested during the year by the many intersynodical associations, agencies, and organizations, which gave hope that the day was not far distant when there would be but one Lutheran Church in America.

An outstanding event during 1933 was the 450th anniversary of the birth of Martin Luther. The anniversary was observed unanimously by the Lutheran Church in every country of the world. In America it took the form of great mass meetings in the larger centres of population like New York, Chicago, Detroit, and St. Louis. Protestant Churches, Lutheran, and non-Lutheran, participated in some form in observance of the occasion. The mass meetings in New York and Washington were participated in by the ambassadors and consuls of the various nations. The chief address of the Washington celebration was by the German Ambassador, Dr. Hans Luther. Various clergy and lay readers of the Lutheran Church were present when the treasurer of the National Lutheran Council, the Hon. E. F. Eilert of New York City, presented in the name of the council a plaque of Martin Luther to President Roosevelt.

Of equal importance was the stand of the 6000 and more Evangelical Lutheran pastors in Germany against the secularization, regimentation, and nationalization of the Lutheran and Protestant Churches in Germany, the Lutheran Church of Germany standing four-square on their Lutheran Confessions and the Bible and the Word of God, as the re-organization of the Lutheran-Protestant Church in Germany proceeded under the momentum of the pressure of the state.

Two gatherings of world-wide significance were the meeting of the executive committee of the Lutheran World Convention in Hanover, Germany, attended by the Rev. R. H. Long and L. W. Boe of America, and the Bishops Conference of northern countries held in Naantali, Finland, August 23-27, attended by Pres. J. A. Aasgaard of the Norwegian Lutheran Church of America and President A. Haapanen of the Finnish (Suomi) Synod. Two Archbishops Lari Ingham of Finland and Erling Eidem of Sweden, and 24 bishops of Finland, Sweden, Norway, Denmark, and Iceland were in attendance.

Statistics for 1932-33 for the United States and Canada were as follows: pastors, 12,267; congregations, 16,717; baptized members, 4,497,999; confirmed or communicant members, 3,012,276; communing members, 2,466,178; church schools, 20,628; officers and teachers, 368,581; scholars, 1,868,349; value of church property, \$367,039,678; congregational expenses, \$33,323,645; congregational benevolences, \$7,980,834; congregational expenditures, \$41,304,479. The per capita gifts were for congregational expenses, \$11.00; for congregational benevolences, \$2.64; and for congregational expenditures, \$13.71.

In 1933 the Lutheran Church in the United States and Canada maintained 29 theological seminaries, 29 colleges, 75 junior colleges, academies, and schools with a total enrollment of 25,580 students, 1718 instructors, an endowment amounting to \$16,167,109, and a property value of \$43,921,135. Steps were taken by the American Lutheran Church looking toward the consolidation of Eureka Lutheran College of Eureka, S. D., with St. Paul-Luther College, of St. Paul, Minn., at St. Paul, Minn., and the Wartburg Normal College of Waverly, Iowa, with the Wartburg College of Clinton, Iowa, at Clinton, Iowa, and the

discontinuance of St. John's Junior College at Petersburg, W. Va. The first and last steps were consummated during the year. In the United Danish Church, Dana College of Blair, Neb., and Trinity Theological Seminary of Blair, Neb., were incorporated as separate educational institutions.

Lutheran inner mission institutions, such as deaconesses' homes, hospitals, old people's homes, orphanages, immigrants' and seamen's homes, numbered 417, with an endowment of \$5,509,791 and a property value of \$53,014,550. During the year they sheltered, cared for, and ministered to 9089 children and 1,184,112 women and men at an annual expense of \$12,761,538. In addition to the institutional work, congregational and society inner mission work was done at an expense of approximately \$9,000,000.

The National Lutheran Inner Mission Conference met in Detroit, June 11 to 17, 1933, with the General Conference of Social Work, which was attended by 3000 delegates representing 42 social agencies. They reported an expenditure of over \$13,000,000 in Lutheran work on charities, more than the combined expenditures for home and foreign missions and education. The four divisions of work which received special attention were the family, children, institutions, and health services. The theme of the convention's programme was "The crusade of compassion." In the field of home missions the American Lutheran Conference started the national survey of the home missions of the various general Lutheran Church bodies federated in that conference, the survey being the elimination of overlapping of fields and the development of greater cooperation.

The work of the American Lutheran churches in fields outside of the United States and Canada was carried on principally in India, Africa, Japan, China, New Guinea, Argentina, and British Guiana in charge of 398 pastors, serving 2989 congregations and missions with 286,796 baptized members, 137,115 confirmed members, 134,356 communing members, 2244 church schools, 3437 officers and teachers, 98,537 scholars. The property value was \$4,322,560; the local congregational expenses, \$14,283; the benevolences, \$351,573; the total congregational expenditures, \$365,856.

The church maintains 25 publishing houses, with a total property value of \$5,663,798. The official periodicals are: *The Lutheran* (United Lutheran Church), *Lutheran Standard* (American Lutheran Church), *Lutheran Companion* (Augustana Synod), *Lutheran Herald* (Norwegian Lutheran Church), *Lutheran Witness* (Missouri Synod), *Northwestern Lutheran* (Wisconsin Synod), *Ansgar Lutheran* (United Danish Church), *Lutheran Men* (American Federation of Lutheran Brotherhoods), and *National Lutheran* (National Lutheran Council). Headquarters of the National Lutheran Council, in which the United Lutheran Church in America and the American Lutheran Conference cooperate, are at 39 East 35 Street, New York City, the executive director being the Rev. Ralph H. Long, D.D.

LUXEMBURG (LUXEMBOURG), lük'sembürg. A small European state adjoining the southeast corner of Belgium to which country it is linked economically by a customs union (May 1, 1922). Area, 999 square miles; population (1930), 299,782. Luxemburg, the capital, had 53,791 inhabitants in 1930; Esch-Alzette, 29,429; Differdange, 17,567; Dudelange, 14,657; and Petange, 11,008.

Agriculture is the occupation of 32 per cent of the population, the 450,000 acres under cultivation in 1930 being devoted primarily to oats and potatoes. On Dec. 1, 1931 there were 91,908 cattle; 148,958 pigs; 16,967 horses; 7733 sheep; and 5046 goats. The principal industries are mining and metallurgical; the 1932 production was iron ore, 3,215,000 metric tons (estimated); pig iron, 1,958,930 metric tons; steel, 1,955,665 metric tons. In 1931 there were 46 blast furnaces and 7 steelworks in operation. Figures for foreign trade are included in those for Belgium. The estimated budget for 1932 was revenue, 394,120,907 Luxemburg francs; expenditure, 388,248,608 francs (the Luxemburg franc averaged \$0.1391 in 1932). The public debt on Jan. 1, 1932 amounted to 551,827,967 francs.

Executive power is vested in the sovereign, who appoints the Cabinet, and legislative power is vested partly in the sovereign and partly in the Chamber of Deputies of 54 members elected by direct suffrage for six years. The Council of State of 15 members, chosen by the sovereign for life, acts as a Senate. Premier in 1933, Joseph Beck (Catholic-Conservative), who is assisted by three director-generals. Ruler in 1933, Grand Duchess Charlotte.

LYNCHINGS. Undoubtedly the increased deepening of the depression during 1933 had its effects in recurring outbreaks of mob violence. The result was that 28 lynchings occurred as compared with 10 in 1932 and 25 in 1930, which was the high point in recent years. Of the 28 lynchings during the year under review, Alabama led with 5, Louisiana followed with 4, Georgia with 4, South Carolina with 3, Tennessee with 3, Mississippi with 2, California with 2, and Florida, Missouri, North Carolina, Texas, and Maryland with 1 each. Particularly reprehensible not only in the ugly temper they displayed but in the official approval they received were the lynchings occurring in San Jose, Calif., on November 26 and on the eastern shore of Maryland in November.

In San Jose, a mob, after having stormed the city jail for the greater part of a day, seized and hanged the two men who had confessed to the kidnapping and brutal murder of young Brooke L. Hart, a son of a prominent local merchant. The next day Gov. James Rolph, Jr., of California, who had been apprised of the movement of the mob and who had refused to send State aid to the local authorities, even delaying a trip out of the State lest lesser officials send necessary assistance in his absence, shocked the world when he condoned the lynching. In an interview he declared:

That was a fine lesson to the whole nation. There will be less kidnapping in the country now. They made a good job of it. If any one is arrested for the good job I'll pardon them. . . . I am checking up at San Quentin and Folsom prisons to find out what kidnappers they have. I am thinking of paroling them to those fine patriotic citizens of San Jose who know how to handle such a situation. It would clean this kidnapping out of California. Their method is the best way to get rid of kidnappers, and I think San Jose citizens are good parole officers.

Immediately following this occurrence came another lynching at St. Joseph, Missouri, and a lynching in the town of Prince Anne on the eastern shore in Maryland. In the case of the Missouri lynching, Governor Parke condemned the mob and told the State's attorney-general to go to the limit to punish its leaders. In the Maryland lynching, however, the local authorities made no effort to apprehend the criminal leaders of

the mob or to proceed with elementary investigations. Governor Ritchie, of Maryland, however, spurred on by the tide of indignant sentiment throughout the country, after a preliminary investigation had been conducted by the State attorney, ordered the local national guard to arrest nine men against whom information had been gathered. Four persons were taken from their homes in the early morning and despite the appearance of a threatening mob were successfully carried off to Baltimore by the militiamen. The arrested men were subsequently released by the courts on the ground that the evidence offered against them had been insufficient.

The failures on the part of the constituted authorities to apprehend and punish the participants of such deeds of mob violence roused public sentiment throughout the country. Immediately following Governor Rolph's approval of the San Jose's mob's action, a group of prominent Californians, among them ex-President Hoover, attacked the action of the Governor as undermining "the very foundations upon which the State and all civilized society are built." Most of the outstanding writers of the country banded together in an organization called the Writers' League Against Lynching, sent an indignant telegram to Rolph and called upon President Roosevelt, as the leader of American public opinion, to condemn the continuance of mob outrages. This organization formed itself into a permanent body naming Mr. Harry Hansen, as its president, and Miss Suzanne LaFollette, as its secretary. The Federal Council of Churches of Christ in America made a similar appeal to the President and it was heartening to observe that on December 6, in a radio address to this body, President Roosevelt made public a statement attacking lynching.

As a result of these examples of mob violence there was a renewal of demand of enactment of a Federal anti-lynching law. Numerous States have such acts already on their statute books. In the six States of Alabama, Indiana, Kansas, Kentucky, Virginia, and North Carolina there are statutes which define lynching and make it a special crime. Mob violence is also a special crime in the four States of Illinois, Pennsylvania, New Jersey, and West Virginia. The maximum punishments for lynchings in the States enumerated are life imprisonment or death. Records show, however, that while lynchings have occurred in 8 of the 11 States, in only Alabama and Georgia have participants in such acts been punished.

Eleven States also provide for recovery against the city or county in which a lynching or mob death occurs, ranging from \$1000 in Nebraska to \$10,000 in Pennsylvania. These States are Connecticut, Kansas, Illinois, Minnesota, Nebraska, Ohio, Pennsylvania, South Carolina, New Jersey, North Carolina, and West Virginia. In nine States provisions have been made for the removal of peace officers who fail to prevent lynchings. In the four States of Illinois, Kansas, Kentucky, and New Jersey, the mere fact that a lynching occurred calls for the immediate and automatic removal of the officer in charge by the governor.

Federal bills in recent years have frequently been introduced in Congress but have met with no success. In 1920 Representative Dyer, of Missouri, introduced in the lower house a bill to protect aliens and citizens from lynching. In 1922 this measure was adopted by the House but was

defeated in the Senate as a result of a filibuster. The Dyer bill, which gave Federal courts authority to punish county officers and lynchers and provided for the forfeiture to the United States of \$10,000 by any county in which a lynching had occurred, was reintroduced in Congress in 1925 and again in 1929.

An intensive case study of each of 21 lynchings that took place in 1930 was made available as a result of the study conducted at the request of the Commission on Interracial Cooperation. These findings were published in the volume called *The Tragedy of Lynching*, written by Mr. Arthur Raper, research and field secretary of the commission. The study showed that practically all of the usual charges about the cause of lynching were false. It was demonstrated that individual Negroes were not more leniently treated than whites in Southern Courts. For the 18 months period in 1930-31, only 13 out of 81 persons executed in the South were white and all these had been convicted of murder. On the other hand 68 Negroes were executed, 57 having been charged with murder, 8 with rape, and 3 with theft. Once again the report disproves the commonly accepted charge that most of the Negro victims of lynch mobs had raped white women. In 1931 only 8 of the 21 victims were charged with rape, and in that year the proportion of victims accused of sex crimes was higher than in any year since lynching records have been kept. Mr. Walter White, field secretary of the National Association for the Advancement of the Colored People, made the following comment on the report:

If *The Tragedy of Lynching* has a weakness, it is its insufficient emphasis upon the economic factor—the abject poverty of whites as well as Negroes. It does not pretend to be anything more than a factual examination of lynchings of a given year, and it is all the more impressive because of the objectivity of its approach, and the fact that the authors are Southerners at last speaking out boldly against an intolerable crime.

MACAO, mǎ-k'ü'ô. A Portuguese colony on a peninsula of Macao island at the west side of the estuary of the Canton River in South China, forming with the nearby islands of Taipa and Colôane a province of Portugal. Area, 4.6 square miles; population (1927 census), 157,175, of whom 152,738 were Chinese and 3846 were Portuguese. The Chinese control trade, which is mostly of a transit nature. In 1930, imports were valued at 20,571,497 patacas; exports, 11,014,782 patacas (pataca equals approximately \$0.48). For 1932-33, revenue was estimated at 5,254,040 patacas; expenditures, 5,222,413 patacas. Governor in 1933, Artur Tamagnini.

McCONNELL, IRA WELCH. An American civil engineer, died in Buenos Aires, Brazil, Jan. 8, 1933. He was born at Schell City, Mo., Oct. 17, 1871, and was graduated from Cornell University in 1897. Successively he held the positions of instructor in civil engineering at Cornell, 1899-1903; contractor's superintendent in Chicago and New Orleans, 1901-03; and professor of civil engineering at the Missouri School of Mines, 1903. In 1904 he became connected with the United States Reclamation Service as project engineer, having charge during the next six years of the construction of the Gunnison Tunnel, a part of the Uncompahgre irrigation project in Colorado, and of the Pathfinder Reservoir of the Platte River in Wyoming. After serving for two years as vice-president and general manager of the Idaho Irrigation Co., Ltd., he was appointed in 1912 hydraulic engineer with Stone and Web-

ster, Boston construction engineers, and in 1917 chief engineer. During the World War he was assistant general manager for the American International Shipbuilding Corp. at the Hog Island shipyard, Philadelphia.

Mr. McConnell became vice-president of Dwight P. Robinson and Co., Inc., New York construction engineers, in 1919, and four years later was sent to Brazil to direct construction by that company of an irrigation project in the Province of Ceara. He superintended during 1927-31 the construction in Buenos Aires of the La Croze subway, a special feature of which was that it served to connect the Central Railroad of Brazil with the heart of the city. On the merger of the Robinson company in 1928 with the United Engineers and Constructors, Inc., of Philadelphia he became senior vice-president. He resigned his engineering affiliations in 1932 but remained in Buenos Aires to represent New York banking interests in the operation of the La Croze subway.

MCCUMBER, PORTER JAMES. An American lawyer and Senator, died in Washington, D. C., May 18, 1933. He was born at Crete, Ill., Feb. 3, 1858, and was graduated in law from the University of Michigan in 1880. The following year he established with B. L. Bogart the law firm of McCumber and Bogart at Wahpeton, N. D. A Republican in politics, he was elected to the Territorial House of Representatives in 1885 and again in 1887, the last sessions of that body held previous to North Dakota's admission to the Union. He also served during 1896-97 as State's attorney for Richland Co.

Elected to the United States Senate in 1899, Mr. McCumber served four terms, being defeated in the primaries of 1922. He was chairman first of the Committee of Manufactures, being active in securing the passage of the Pure Food and Drugs Act of 1906. Throughout the Taft administration he was chairman of the Committee on Pensions and in 1919, as a member of the Foreign Relations Committee, was the only Republican to urge ratification of the Versailles Peace Treaty and to sponsor the entry of the United States into the League of Nations. During his last term he served as chairman of the Senate Finance Committee and was co-author with Representative Joseph W. Fordney of the Fordney-McCumber Tariff Bill, enacted Sept. 15, 1922, for the purpose of producing additional revenue to carry the heavy burden of indebtedness caused by the World War.

In 1926 President Coolidge appointed Mr. McCumber a member of the International Joint Commission, concerned with boundary water disputes between the United States and Canada. After his retirement from the Senate he practiced law in Washington as a member of the firm of McCumber and Brand.

MCGIFFERT, m'-giff'ert, ARTHUR CUSHMAN. An American theologian and author, died at Dobbs Ferry, N. Y., Feb. 25, 1933. He was born at Sauquoit, N. Y., Mar. 4, 1861, and was graduated from Western Reserve University in 1882 and from Union Theological Seminary in 1885. Afterward he continued his studies in Germany at the Universities of Berlin and Marburg, receiving the Ph.D. degree from the latter in 1888. Ordained to the Presbyterian ministry, he became instructor in Church history at Lane Theological Seminary in 1888 and professor there in 1890. In 1893 he was called to the same chair at Union

Theological Seminary, and from 1917 to 1926 also served as president of that institution.

One of the outstanding modernists among Protestant theologians, Dr. McGiffert incurred the criticism of some of his fundamentalist colleagues with the publication of *A History of Christianity in the Apostolic Age* (1897), which caused his voluntary resignation from the Presbyterian ministry. He further expounded his views in *The Apostles' Creed* (1902); *The Christian Point of View* (with Francis Brown and G. W. Knox, 1902); *Protestant Thought before Kant* (1911); *Martin Luther, the Man and His Work* (1911); *The Rise of Modern Religious Ideas* (1915), based on the Earl Lectures delivered in 1912 at the Pacific Theological Seminary; *The God of the Early Christians* (1924); and *A History of Christian Thought* (2 vols., 1931-32).

MCGILL UNIVERSITY. A coeducational institution of higher learning in Montreal, Quebec, Canada, founded in 1821. The enrollment for the autumn session of 1933 was distributed as follows: Faculties of arts and science, 1117; medicine, 491; engineering, 348; dentistry, 50; law, 101; music, 135; and graduate studies, 211; and schools or departments of agriculture, 157; architecture, 46; commerce, 217; household science, 108; graduate nurses, 23; physical education, 15; library administration, 16; and teachers' training school, 194. The registration in the French summer school of 1933 was 120 and in the summer library school, 37. The number of members on the teaching staff was 549.

At Macdonald College, an affiliated college of McGill University at Sainte Anne de Bellevue, Quebec, there was completed during the year construction of the Institute of Parasitology, of which T. W. M. Cameron was appointed director and professor of parasitology. The endowment of the university amounted to \$18,738,786; the income for the year was \$2,044,328. Among the important gifts received during the year were \$132,500 for the construction of the Neurological Institute; \$15,000 for the department of biochemistry; and \$29,500 for the library and library school. The library contained 450,000 volumes. Principal and Vice-Chancellor Sir A. W. Currie (q.v.) died on Nov. 30, 1933.

MACIA Y LLUSA, FRANCISCO. A Spanish statesman, died in Barcelona, Dec. 25, 1933. Born at Villaneuva, Catalonia, in 1859, he attended a military academy and after receiving his commission fought in the Spanish-American War and in the Moroccan Wars of 1908 and 1911. His political career began on his election in 1909 to the Cortes, but on the unsuccessful attempt of Francisco Ferrer a few months later to seize Barcelona and set up a provisional, republican, and anticatholic state in Catalonia he resigned both his post as deputy and his commission as colonel in the army. In 1917 he led the extremist Catalan party, whose demands for a greater measure of local autonomy became more and more insistent. On account of his demand, however, that ties with the Bourbon dynasty be severed he was exiled from Spain along with Ventura Gassols, the popular Catalan poet, who later became his principal political and literary supporter.

Shortly after his return to Spain in 1922, Macia was again expelled on account of his attempt to overthrow Primo de Rivera. Settling in Paris, he directed from there the separatist movement, encouraging the Catalans in their refusal to use the Spanish language. The plan by which in 1926

he attempted to lead a band of 400 rebels across the border into Spain was discovered by the French police and resulted in his imprisonment for two months, after which he made his headquarters in Brussels. During 1927-30 he was ejected from the United States as well as from several South American countries where he tried to raise money for his cause among Catalan immigrants.

On the granting of amnesty and the restoration of constitutional guarantees in February, 1931, Macia once more made his appearance in Barcelona, this time to stay. He immediately organized his party from the communist syndicalists, the Republicans, and the Socialists and was victorious over the monarchic Right in the election that followed. Early on the day of the collapse of the monarchy (Apr. 14, 1931), he led his supporters to the Barcelona city hall where they proclaimed Catalonia to be a republic. He was chosen Provisional President of the first Catalan Generalidad in 400 years, charged with the framing of a state constitution. The Madrid government, however, was determined that the constitution should provide for a unitary instead of a federal republic. Its position was strengthened through the sending of government troops to quell the Barcelona general strike of September, which was aimed at establishing a soviet government. A compromise was finally achieved through the Cortes's incorporating in the constitution of the Spanish republic a clause which designated Spain as "an integral republic with ample facilities for regional autonomy."

In 1932 the Cortes approved a statute defining Catalonia as an "autonomous region within the Spanish state" and authorizing the Catalans to use their own language, national anthem, and flag. The completion of the autonomy programme was insured through the election in November of Macia's Esquerra party to the majority of seats in Parliament. In the elections of the following year, however, his party suffered reverses, and on his death bed he expressed the fear, "All this will collapse now." See SPAIN; CATALONIA.

MACKENZIE, DISTRICT OF. See NORTHWEST TERRITORIES.

McMILLIN, BENTON. American lawyer, Congressman, governor, and diplomat, died in Nashville, Tenn., Jan. 8, 1933. He was born in Monroe Co., Ky., Sept. 11, 1845, and was educated at Kentucky University (later Transylvania University), Lexington, Ky. Admitted to the Tennessee bar in 1871, he began practice at Celina. In 1874 he was elected to the House of Representatives of the Tennessee Legislature and the following year was a member of a commission appointed by the governor to treat with Kentucky for the purchase of land along the State boundary. He was a presidential elector on the Democratic ticket during the Hayes-Tilden contest of 1876 and sat thereafter in each electoral college, with the exception of that of 1920.

Appointed a special judge of the Circuit Court in 1877, Mr. McMillin resigned upon his election the following year to represent the Fourth Tennessee District in the 46th Congress. During the 10 terms that he served in the House of Representatives he was one of the most forceful opponents of the Republican tariff, being a member for 14 years of the Ways and Means Committee. He was elected Governor of Tennessee in 1898 and was reelected in 1900. At the end of his second term he became engaged in the insurance business in Nashville. In 1913 President

Wilson appointed him Minister to Peru. Later he was transferred to Guatemala, and on his retirement in 1921 returned to his law practice in Carthage, Tenn.

MADAGASCAR. A French island colony separated from the east coast of Africa by the Mozambique Channel (which is 240 miles wide at its narrowest point). Area, 241,094 square miles; population (1931 census), including the dependent Comoro archipelago, 3,701,770, of whom 3,665,234 were Malagasy, 23,076 were French, and 13,460 were foreigners. Tananarive, the capital, had 92,475 inhabitants in 1931; Majunga, 20,000; and Fianarantsoa, 12,575. On Jan. 1, 1932, there were 1600 schools with a total of 179,000 students.

Cattle breeding and agriculture are the chief occupations, the principal crops being rice, sugar, coffee, manioc, cacao, cotton, beans, cloves, rubber, and mulberry trees. On Jan. 1, 1932 there were 9,000,000 cattle; 255,000 sheep; 500,000 pigs; 70,000 goats; 3000 horses; and 2000 ostriches. The forests produce many valuable woods and gums. Phosphate, graphite, and mica are mined; the total output of minerals in 1931 was valued at 16,110,000 francs. The balance of foreign trade has been unfavorable since 1925. In 1931, imports were valued at 507,322,279 francs (franc equals \$0.0392 at par); exports, 361,349,497 francs. Of the imports France supplied 378,136,962 francs, and received 291,579,633 francs of the exports, in 1931. During 1931, there were 7561 ships totaling 3,312,823 tons entered and 7629 ships totaling 3,319,566 tons cleared the ports of the colony.

There are over 2000 miles of highways. Railway mileage (including narrow-gauge local lines) on Jan. 1, 1928 was 430 miles. The budget for 1932 was estimated to balance at 267,042,150 francs. The colony is under a governor-general assisted by a consultative council. A delegation of 24 French citizens and 24 natives meet once a year to examine budget proposals. Chiefs represent the natives in their relations with the government. Governor-General in 1933, Leon Cayla.

MADEIRA, mã-dê-rá. An archipelago in the North Atlantic approximately 350 miles from the west coast of Morocco, politically an integral part of Portugal. It comprises the inhabited islands of Madeira and Porto Santo, and several uninhabited rocks. Area, 314 square miles; population at its latest census was 210,220. Funchal, the capital on the island of Madeira, had 24,238 inhabitants.

MADOERA (MADURA). See NETHERLAND INDIA.

MAHÉ. See FRENCH INDIA.

MAINE. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 797,423; in 1920 it was 768,014; in 1933 (Federal estimate), 802,000. Portland, the chief city, had 1930) 70,810 inhabitants; Augusta, the capital, 17,198.

AGRICULTURE. The table on page 465 shows the acreage, production, and value of the principal crops for 1933 and 1932.

FINANCE. State expenditures in the year ended June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$14,573,122 (of which \$2,394,210 was for local education); for conducting public-service enterprises, \$91,081; for interest on debt, \$1,098,579; for permanent improvements, \$11,022,199; total, \$26,784,981

Crop	Year	Acreage	Prod. Bu.	Value
Potatoes	1933	150,000	42,000,000	\$25,200,000
	1932	170,000	40,460,000	10,115,000
Hay (tame)	1933	966,000	804,000*	8,522,000
	1932	966,000	804,000*	7,960,000
Oats	1933	130,000	5,200,000	2,132,000
	1932	130,000	4,940,000	1,581,000
Apples	1933	1,884,000	1,225,000
	1932	2,575,000	1,288,000

* Tons.

(of which \$14,421,530 was for highways, \$4,285,107 being for maintenance and \$10,136,423 for construction). Revenues were \$22,971,645. Of these, property and special taxes furnished 30.1 per cent; departmental earnings and compensation to the State for officers' services, 9.8; sale of licenses, 45.7 (in which was included a gasoline sale tax that produced \$4,815,725). Funded debt outstanding on June 30, 1932, totaled \$27,251,500, of which \$21,487,500 was for highways. Net of sinking-fund assets, the debt was \$27,008,837. On an assessed valuation of \$756,800,383 the State levied in the year ad-valorem taxes of \$5,857,791.

EDUCATION. The work of the public schools fared better than in some other States, where revenues for that purpose had become inadequate. According to the *Journal* of the National Education Association, the school system in Maine was maintained through 1933 without serious impairment. A survey of the finances of the public schools was made by a commission of 15 members appointed by the Governor. University-extension courses were conducted in Portland under a faculty of college standing.

For the academic year 1932-33 the number of persons of school age in the State was reckoned as 255,179. There were enrolled in the public schools 171,681 pupils. Of these, 138,484 were in common schools or elementary grades; in high schools, 33,197. The year's expenditures for public-school education totaled \$10,214,811, or some 10 per cent less than the total for the year before. The average salaries of teachers, by the year, sustained diminution in almost the same proportion, to \$815.97 for elementary positions and \$1418.83 in the high schools.

LEGISLATION. The Legislature convened in regular session on January 4. It made a material innovation in the distribution of State authority by granting the Governor, at his urging, sweeping powers to reduce State expenditure. These powers included the immediate reduction, by his order, of the salaries of the majority of State employees. An emergency measure enacted in the course of the banking panic of March empowered the State commissioner of banking whenever the Governor should declare that an emergency existed, to restrict the transactions of any or of all banks; also, authorized the commissioner to permit the issue of clearing-house certificates, scrip, or other evidence of claims against the assets of a bank. To declare the will of the State with regard to the proposed repeal of the Eighteenth Amendment of the Federal Constitution, there was created a State convention, to be composed of 80 unpledged delegates, to be chosen by popular election on September 11, as apportioned among the 16 counties. The State's prohibition system was not repealed, but it was made lawful by statute to manufacture, transport, and sell beer of such alcoholic content as the State's supreme judicial court might permit. An effort to alter the date for

State elections, so that it might coincide with that fixed for National elections, failed.

A special session that convened on November 14 legislated to permit banks to enter the Federal system for insuring deposits.

POLITICAL AND OTHER EVENTS. At an election on September 11 the voters chose, by counties, 80 delegates all unpledged but all informally known to favor the repeal of the Federal Eighteenth Amendment. An advisory opinion of the State's supreme judicial court, which had guided the Legislature in providing for the election of the delegates, had enjoined that nominees must be free of any pledge on the subject of the convention's deliberations, but the precautions in the law did not prevent the circulation of cards informing voters as to nominees' intentions. The delegates met in State convention on December 6 and voted Maine's adoption of repeal through the superseding amendment proposed by Congress. The popular vote of September 11 was about three-fifths of the State's presidential vote of 1932 and favored repeal in the approximate proportion of 2 to 1. Because of the State's standing as the "birthplace" of the prohibition movement and of its adherence to prohibition as a fixture of its constitution ever since 1884, the vote displayed a striking overturn of traditions.

The voters rejected on September 11 proposals, by referendum, to render lawful the use of the voting machine, to authorize an issue of \$2,000,000 in State bonds in order to provide relief for the needy, to tax the gross earnings of companies selling electric current, and to impose a tax on intangible property. Conflagrations, a week apart, destroyed the homes of 400 persons at Ellsworth on the night of May 7, doing damage estimated at \$2,000,000, and burned 231 buildings in Auburn on May 15, causing loss in excess of \$1,000,000.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Louis J. Brann; Secretary of State, Robinson C. Tobey; Treasurer, George S. Foster; Auditor, Elbert D. Hayford; Attorney General, Clyde R. Chapman; Commissioner of Education, Bertram E. Packard.

Judiciary. Supreme Judicial Court: Chief Justice, William R. Pattangall; Associate Justices, Charles J. Dunn, Guy H. Sturgis, Sidney St. F. Thaxter, Charles P. Barnes, James H. Hudson. Superior Court: Justices, George L. Emery, H. T. Powers, W. H. Fisher, George T. Worster, Herbert E. Holmes, Arthur Chapman, Harry Manser.

MAINE, UNIVERSITY OF. A coeducational State institution of higher learning at Orono, founded in 1865 and opened for students in 1868. The enrollment for the autumn of 1933 was 1470 and for the summer session of 1933, 326. There were 166 members on the faculty. The productive funds of the university amounted to \$906,337, and the income for the year was \$1,603,214. The library contained 109,000 volumes. President, Harold Sherburne Boardman, C.E., D.Eng., LL.D.

MAKINS, SIR GEORGE HENRY. A British surgeon, died in London, Nov. 2, 1933. Born Nov. 3, 1853, he was educated at St. Thomas's Hospital Medical School and the Universities of Halle and Vienna. In addition to his private practice he was consulting surgeon to St. Thomas's Hospital, the Evelina Hospital for Sick Children, King Edward VII Hospital, and the Royal Hospital for Incurables at Putney and was lecturer on surgery

and anatomy at the St. Thomas's Hospital Medical School. He gained his greatest distinction, though, as an army surgeon, serving as consultant to the South African Field Force in the Boer War and to the British Expeditionary Force during the World War and being commissioned honorary Major-General of the British Army Medical Service. In 1918 he was chairman of the committee appointed to inquire into the standard of comfort and accommodation in the hospitals of British Troops to India.

In addition to being president of the Royal College of Surgeons, Sir George was a member of its court of examiners, president of the board of examiners for the Naval Medical Service, examiner for the Army and Indian Medical Services, and member of the consultation committee of the Queen Alexandria Military Hospital. At the time of his death he was a member of the council of the British Red Cross Society, treasurer of the Imperial Cancer Research Fund, and chairman of the distribution committee of the Hospital Sunday Fund. He was created a Companion of the Bath in 1900, a Knight Commander of St. Michael and St. George in 1915, and a Knight of the Grand Cross of St. Michael and St. George in 1918. He wrote *Surgical Experiences in South Africa* (1901) and *On Gunshot Injuries to the Blood-vessels* (1919).

MALTA. A British crown colony in the Mediterranean, 58 miles south of Sicily, Italy, comprising the island of Malta (95 square miles); Gozo (26 square miles); Comino (1 square mile); and the islets Filfla and Cominotto. Total area, 122 square miles; population (1931 census), 241,621 not including the garrison. Chief towns: Valetta, the capital, had 22,779 inhabitants in 1931, including suburbs it had 48,240; "Three Cities" (Senglea, Cospicua, and Vittoriosa) 26,319; Citta Vecchia, 10,032; and Victoria (Gozo), 5,531. Malta is an important link in British Imperial communications and is the base of the British Mediterranean Fleet. Italian and English are the official languages but Maltese is in general use. In 1931-32 there were 165 elementary schools with 30,134 students; 3 government secondary schools with 623 students; 25 technical schools; 50 private schools with 3513 students; and a university with 120 students.

The church owns one-third of the land. Cereals, vegetables, cotton, and fruits are the leading agricultural crops. Fishing, and the manufacture of lace, cotton, filigree, beer, and cigarettes are other industries. Excluding transit trade but including bullion and specie, imports (1931) were valued at £3,714,530; exports (1931), £490,055. The principal imports were wheat, gasoline, coal, flour and semola, textiles, metals, cattle foods, and wines. Vessels entering the ports in 1931 numbered 2322 and aggregated 3,639,918 tons. Revenue in 1931-32 amounted to £971,313; expenditure, £967,189.

Under the Constitution of 1921 (suspended June 26, 1930; restored Mar. 2, 1932; and again suspended on Nov. 2, 1933) local affairs were controlled by a legislature, consisting of the senate of 17 members, 10 of whom were appointed,

and a legislative assembly of 32 elected members. There was a responsible ministry for local affairs. A governor, appointed by the King, controls the naval, military, and air forces, Imperial interests, external relations and trade, coinage, immigration, and had the power to veto local legislation. He is assisted by an appointed executive council and a nominated council, consisting of a Lieutenant-Governor, a legal adviser, and three officers of the military forces. Governor and Commander-in-Chief in 1933, General Sir David Campbell.

HISTORY. The governor, Sir David Campbell, on Nov. 2, 1933 dismissed the Malta ministry headed by Sir Ugo Mifsud, dissolved the local legislature, suspended the Constitution, and personally assumed control of the local government of the island. These steps were taken, on instructions from the Secretary of State for the Colonies, because of the policy pursued by the Mifsud ministry, since it assumed office in June 1932, of evading the language provisions of the Letters Patent of May, 1932. The leading Nationalist newspaper, *Malta*, was suspended by the Governor December 15 under the Sedition Ordinance. For the growth of the Nationalist movement, see 1931 and 1932 YEAR BOOKS.

MANADO. See NETHERLAND INDIA.

MANCHOUKUO. A new state established under Japanese auspices on Mar. 1, 1932; comprising the Chinese provinces of Fengtien (Liaoning), Kirin, and Heilungkiang in Manchuria and Jehol province in Inner Mongolia. Geographically, Manchoukuo also includes the Kwantung Leased Territory (q.v.) and the South Manchuria Railway Zone. Following the establishment of Manchoukuo, Hsangan (Khingan) province was created out of the western parts of Fengtien and Heilungkiang. Capital, Hsinking (formerly Changchun).

AREA AND POPULATION. The western boundary of Manthoukuo has not been clearly defined and no census has been taken in recent years. Accordingly the accompanying statistics for the area and population, by provinces, compiled by the Manchoukuo government, are rough estimates.

MANCHOUKUO: AREA AND POPULATION

Province	Area, sq miles	Population, Dec. 31, 1932
Fengtien	74,017	15,143,420
Kirin ..	101,683	7,135,542
Heilungkiang	170,339	3,672,777
Jehol	52,113	2,054,805
Hsangan ..	147,996	920,400
Tungsheng Special District ..	464	553,364*
Hsinking Special Municipality		126,309
Total	546,612	29,606,117

* Including Harbin Special Municipality.

Including the population of the Kwantung Leased Territory and the South Manchuria Railway Zone, estimated on May 31, 1933, at 1,353,047, the total population approximated 30,950,164. With the exception of 287,061 Japanese, about 750,000 Koreans, a few Mongols, and 139,221 foreigners, the population was entirely Chinese. According to Japanese estimates, the population of the chief cities in 1931 was: Mukden, 421,727; Harbin, 332,680; Dairen, 386,405; Antung, 157,979; Port Arthur, 136,605; Hsinking (Changchun), 133,705; Yingkow, 110,975. Dairen and Port Arthur are in the Kwantung Leased Territory.

EDUCATION. About 90 per cent of the population are illiterate. A survey by the Manchoukuo department of education in July, 1933, showed 12,877 primary schools, with 460,633 pupils; 269 middle schools, with 27,882 pupils; 131 normal schools, with 8068 students; 67 vocational schools, with 5069 students; and 8 colleges and universities, with 2121 students. In addition, the Japanese maintained 222 schools of all classes in Kwantung Leased Territory and the South Manchuria Railway Zone, with a total of 86,155 students.

PRODUCTION. Manchuria proper is one of the world's most fertile and rapidly developing agricultural regions. Arable land was estimated at about 83,000,000 acres, or 28 per cent of the total area, of which about 38,000,000 acres were under cultivation in 1932. Estimated production of the chief crops of Manchoukuo in 1933 was (in metric tons): Soy beans, 5,166,049; other beans, 320,530; kaoliang, 3,908,132; millet, 3,144,840; maize, 1,738,795; wheat, 1,717,812; rice, 132,592; upland rice, 141,087; miscellaneous crops, 1,921,783. Livestock in January, 1933, included about 682,874 cattle, 969,681 horses, 407,579 mules, 425,704 sheep and goats, 2,610,670 swine. Forests cover about 28,756,000 acres. Iron deposits, chiefly in Fengtien Province, are estimated at more than 1,299,470,000 metric tons; coal deposits, about 3,866,229,000 metric tons. Mineral and metallurgical production (1931) was (in metric tons): Iron ore, 963,529; coal, 9,048,703; magnesite, 36,034; limestone, 545,131; pig iron, 342,269; coke, 409,066; oil shale, 1,245,094. There were about 2025 industrial establishments in 1931 (chiefly bean-oil and flour mills), with 73,336 employees and a production valued at 224,327,515 yen (yen equals \$0.4985 at par).

COMMERCE. Imports into Manchoukuo in 1932 were valued at 192,991,900 Haikwan taels (218,948,972 in 1931) and exports totaled 394,969,070 Haikwan taels (473,868,941 in 1931). The Haikwan tael exchanged at an average of about \$0.34 in 1932. Of the total 1932 imports, Japan supplied 225,747,118 Haikwan taels; China, 35,236,097; British India, 11,795,493; United States, 11,376,847; Korea, 8,211,984. Of the exports, Japan took 121,624,486 Haikwan taels; China, 108,953,415; Germany, 47,401,209; Korea, 27,129,264; Soviet Union, 21,657,989. The value of the chief export items in 1932 was: Soy beans, 143,859,524 Haikwan taels; bean cakes, 66,311,390; coal, 32,604,805; bean oil, 24,511,557; kaoliang, 18,206,351.

FINANCE. The estimated national budget for the fiscal year ended June 30, 1933, balanced at 113,308,055 Manchoukuo yuan. Ordinary revenues were placed at 97,386,000 yuan; ordinary expenditures, 104,482,088 yuan. On Oct. 11, 1932, a supplementary budget of 24,048,945 Manchoukuo yuan was adopted. It was covered by a 30,000,000-yen construction loan floated in Japan. For the fiscal year 1933-34, the budget estimates balanced at 149,169,178 Manchoukuo yuan. The revenue estimates were: Ordinary, 132,134,300; extraordinary, 17,034,878. Expenditure estimates: Ordinary, 107,448,708; extraordinary, 41,720,470. The new monetary unit of Manchoukuo is the yuan containing 23.91 grammes of pure silver. The exchange rate for American dollars was quoted in Japan at approximately the yen exchange rate. Through the agency of the Central Bank of Manchou, established at Hsinking, July 1, 1932, the 15 different kinds of paper money previously in circulation were being replaced by the

new national currency at officially fixed exchange rates.

COMMUNICATIONS. Railway lines in operation in Manchoukuo in 1932 aggregated 3874 miles, divided among 18 different systems. Excluding a few of the minor lines, from which returns were not available, the railways during 1932 carried 12,236,851 passengers and 22,339,122 metric tons of freight. The chief systems were the South Manchuria Railway (700 miles of line) and the Chinese Eastern Railway, jointly owned and operated by the Soviet Union and China (1800 miles). In 1932 all the railways except the Chinese Eastern were unified under the management of the South Manchuria Railway, acting for the Manchoukuo government. Negotiations for the sale of the Soviet share in the Chinese Eastern to Manchoukuo were under way in 1933 (see JAPAN under *History*). The South Manchuria Railway's net profits in 1933 were estimated at 40,000,000 yen; in 1932 revenues aggregated 87,933,218 Manchoukuo yuan. The extension of the Hsinking-Tunhua line to the port of Raashin in northeast Korea and the Koshan-Hailun link in Heilungkiang province were completed during 1933, while much additional construction of both strategic and economic nature was under way.

Highways in 1933 were in a primitive condition, with only about 8197 miles suitable for motor traffic. A 10-year programme calling for the building of 31,050 miles of additional highways was inaugurated in 1932. In December, 1933, the Manchoukuo Highways Board announced the completion of 2484 miles of new highways. At the beginning of 1933, a Japanese company was operating a passenger, express, and mail service over eight air routes, aggregating 1484 miles. On July 10, 1933, new lines were inaugurated connecting Hsinking and Lungchingsun (1320 miles) and Tsitsihar and Heiho (1304 miles).

GOVERNMENT. The Manchoukuo Constitution of Mar. 11, 1932, vests executive power in the hands of the Chief Executive, who acts upon the advice of his Privy Council and is assisted by a State Council consisting of a Prime Minister and eight other heads of departments. There is a Legislative Council, appointed by the Chief Executive, whose functions are to draft and approve laws and budget bills. A third body, the Supervisory Council, has supervisory and auditing functions. It is under the direct control of the Chief Executive and independent of the State Council. The provincial governments, contrary to the practice under the former Chinese régime, have no control over the military or finance. They consist of a governor and five boards, all under the jurisdiction and control of the Minister of Civil Affairs at Hsinking. The constitution made all residents in Manchoukuo eligible to hold office. In accordance with this principle, Japanese were appointed to key positions, especially to the presidency of the Board of General Affairs and head posts in the six bureaus comprising the Board. Having complete control over the budget and wielding the power of dismissal over ministers and officials, the Board of General Affairs was the actual sovereign authority in the government. Chief Executive in 1933, Henry Pu Yi, the former Manchu "boy emperor" of China. President of the Privy Council, Gen. Chang Ching-hui; Prime Minister, Cheng Hsiao-hsu; Director of General Affairs Board, Ryusaku Endo; President of the Legislative Council, Dr. Chao Hsin-po.

Japan on Sept. 15, 1932, extended formal recog-

dition to the state of Manchoukuo and concluded with it a treaty of alliance. Up to the end of 1933 no other foreign government had recognized the Manchoukuo government. The non-recognition policy adopted by the United States and the League powers in 1932 was extended by the action of the League's Manchurian Advisory Committee in 1933. The committee on June 14, 1933, sent a circular to the 21 governments composing its membership, recommending a procedure for the practical application of the principle of non-recognition of Manchoukuo. By Nov. 8, 1933, 11 members, including the United States, had definitely approved the recommendations while the others gave their tacit approval. See JAPAN, CHINA, and UNION OF SOVIET SOCIALIST REPUBLICS under *History*; LEAGUE OF NATIONS; KWANTUNG.

MANGANESE. Preliminary returns received from all present known producers of manganese and manganiferous ores in 1933 indicate that the shipments of ore containing 35 per cent or more manganese were slightly more than in 1932; that the shipments of ore containing 10 to 35 per cent manganese were considerably less than in 1932; and that the shipments of ore containing 5 to 10 per cent manganese were substantially greater than in 1932, according to a preliminary summary of the U. S. Bureau of Mines.

Shipments of manganese ore containing 35 per cent or more metallic manganese from domestic mines (exclusive of Puerto Rico) in 1933 were approximately 18,500 long tons valued at \$447,000, compared with 17,777 tons valued at \$377,222 in 1932. Compared with the five-year average for 1928 to 1932, which amounted to 46,249 tons, the 1933 shipments showed a decrease of 60 per cent. Shipments of manganese ore from Puerto Rico to the United States during the twelve months ended Dec. 31, 1933, were 1638 long tons valued at \$66,450, compared with total shipments for the year 1932 of 2302 tons valued at \$65,509. The total shipments of manganese ore in 1933 (exclusive of Puerto Rico) consisted of 10,700 tons of metallurgical and miscellaneous ores valued at \$185,500 (10,765 tons valued at \$137,955 in 1932) and 7800 tons of battery ore valued at \$261,500 (7012 tons valued at \$239,267 in 1932). Manganese ore was reported shipped from Alabama, Arkansas, Georgia, Montana, Virginia, and West Virginia in 1933 in quantities ranging from about 100 tons in West Virginia to about 9200 tons in Montana. Montana and Virginia together supplied about 13,800 tons, or about 75 per cent of the total shipments.

The imports of manganese ore for the eleven months ended Nov. 30, 1933, amounted to 152,169 long tons containing 76,785 tons of metallic manganese, compared with 110,034 tons of ore containing 53,553 tons of metallic manganese during the entire year 1932. Of the ore imported in 1933, 83,780 tons were from Soviet Russia, 39,546 tons were from the Gold Coast, and 28,257 tons were from Cuba. Shipments of domestic ore containing 10 to 35 per cent manganese (ferruginous manganese ore) in 1933 were about 12,000 long tons, compared with 15,635 tons in 1932. Compared with the five-year average for 1928 to 1932, which amounted to 65,177 tons, the 1933 shipments showed a decrease of 82 per cent. The ferruginous manganese ore shipped in 1933 was from Alabama,

Arkansas, Georgia, and Virginia. Shipments of domestic ore containing 5 to 10 per cent manganese (manganiferous iron ore) in 1933 were about 204,000 long tons valued at \$542,000, compared with 9799 tons valued at \$29,546 in 1932. Compared with the five-year average for 1928 to 1932, which amounted to 626,118 tons, the 1933 shipments showed a decrease of 67 per cent. All the manganiferous ore shipped in 1933 came from Minnesota and Michigan.

MANITOBA, mǎn'tō'bǎ. A province of Western Canada, bounded by Ontario and Hudson Bay on the east and Saskatchewan on the west. Total area, 251,832 square miles; population (1931 census), 700,139, compared with 610,118 in 1921. Chief cities: Winnipeg, the capital, had 218,875 inhabitants in 1931 (Greater Winnipeg had 300,001); Brandon, 17,082; St. Boniface, 16,305; Portage la Prairie, 6597. In 1931, births totaled 14,391; deaths, 5344; marriages, 4888. In the 4304 public schoolrooms there were 153,553 students enrolled in 1930-31. Intermediate schools (having one room for high school work) numbered 121; other schools for higher education numbered 97. The University of Manitoba at Winnipeg had 3162 full-course students in all courses for 1931-32.

Agriculture, mining, and manufacturing are the principal industries. In 1932, the area under field crops totaled 5,866,800 acres (5,664,109 in 1931) and the value of production was \$28,981,000 (\$24,847,000 in 1931). The total value of all agricultural production in 1932 was estimated at \$49,113,000, of which wheat accounted for \$14,416,000; oats, \$5,156,000; barley, \$3,402,000; hay and clover, \$3,757,000; potatoes, \$1,205,000. Livestock (1931 census): 324,659 horses; 668,878 cattle; 216,790 sheep; 390,043 swine; 5,566,793 poultry; 975 mules.

Mineral output for 1932 was valued at \$8,719,863, of which gold represented \$2,538,294; copper, \$3,362,803; zinc, \$1,004,016; silver, \$328,283. The gypsum production for 1931 amounted to 23,076 tons valued at \$231,124. The 1931 fish catch was valued at \$1,241,575. In 1931 there were 955 manufacturing establishments, with a total capital investment of \$191,935,311; employees numbered 24,193, the gross value of production was \$118,540,865, and the net value was \$63,391,473. For the fiscal year ending June 30, 1931, ordinary revenues amounted to \$13,842,511; expenditures, \$14,491,673; provincial bonded debt was \$89,630,906 (subject to revision). The government of the province is administered by a lieutenant-governor and a legislative assembly of 55 members elected for five years. The 19th legislative assembly had 39 Progressives, 10 Conservatives, 5 Laborites, and 1 Independent. In the Dominion Parliament at Ottawa the province is represented by 6 members in the Senate and 17 in the House of Commons. Lieutenant-Governor in 1933, J. D. McGregor; Premier and President of the Council, John Bracken. See CANADA.

MANUFACTURING. See BUSINESS REVIEW.

MARBURY, ELIZABETH. An American feminist, died Jan. 22, 1933, in New York City where she was born June 19, 1856. After receiving a private school education she began her colorful career as an author's representative. Her first client was the French dramatist, Sardou. She later introduced to the American public the works of Feydeau, Halévy, Meilhac, Richepin, Bataille, and Moreau, twice receiving decorations from the French government for the service she had thereby

rendered. In the British field her most important clients were Oscar Wilde and George Bernard Shaw. Besides selling Wilde's *Ballad of Reading Gaol* to the New York World, she arranged for the production of his plays in the United States. She succeeded also in dispelling much of the prejudice that was attached to Shaw's earlier plays, such as *Mrs. Warren's Profession*, and in creating a vogue for *Candida*, *John Bull's Other Island* and *Man and Superman*. At the time of her death she was vice-president of the American Play Co.

Miss Marbury was active in the woman suffrage movement, and on the passage of the Nineteenth Amendment was appointed a member of the Democratic National Committee. She was also prominently identified during the World War with relief work for the Allied armies on the western front and in recognition of these services was decorated by the American, Belgian, and Italian governments. A bitter opponent of prohibition, she invited many persons, including Lady Astor, to debate the subject with her. She wrote *My Crystal Ball* (1923), a volume of reminiscences, and translated Maurice Barrès's *Faith of France* (1918).

MARIETTA COLLEGE. A nonsectarian co-educational institution at Marietta, Ohio, founded in 1835. The total registration for the autumn term of 1933 was 384 of whom 230 were men and 154 women. The 1933 summer school enrollment was 29. The faculty numbered 36. The endowment amounted to \$1,383,786 and the income for the year to \$114,761. The library contained 103,206 volumes. President, Edward Smith Parsons, L.H.D., LL.D.

MARINE DISASTERS. See SAFETY AT SEA; FIRE PROTECTION.

MARITIME PROVINCES. The Atlantic Coast provinces of Eastern Canada, comprising PRINCE EDWARD ISLAND, NOVA SCOTIA, and NEW BRUNSWICK. See CANADA.

MARLING, SIR CHARLES MURRAY. A British diplomat, died in London, Feb. 10, 1933. Born Dec. 3, 1862, he was educated at Wellington College and at Trinity College, Cambridge. He began his diplomatic career in 1888 as attaché at Sofia, Bulgaria, becoming third secretary in 1890, second secretary in 1894, and acting agent and consul-general in 1902. He held the latter post for three years, with the exception of a short period in 1904-05 when he acted as chargé d'affaires in Madrid, Bucharest, and Athens. In 1905 he was transferred to Crete as acting consul-general and in 1906 became counselor at the British Embassy in Teheran, Persia. He held the same post at Constantinople from 1908 to 1913 and then returned to Teheran as Minister. During the World War his diplomacy was largely responsible for Persia's neutrality, in spite of German propaganda to undermine the influence of the Allies and successive Russian and Turkish invasions of the province of Azerbaijan. He also succeeded in 1915 in inducing the Shah to dismiss his pro-German premier, Mohammed Ala Khan, and to appoint a pro-Ally cabinet under Prince Firman Firma.

After the War Sir Charles was appointed Minister to Denmark, serving in 1920 as British delegate and president of the International Commission for taking the plebiscite in the former Danish duchy of Schleswig. His last post was that of Minister to the Netherlands during 1921-26. In 1931 he was elected a governor of Welling-

ton College. He was created Knight of the Grand Cross of St. Michael and St. George in 1926.

MARQUETTE UNIVERSITY. An institution of higher education for men and women, under Roman Catholic direction, in Milwaukee, Wis., organized as a college in 1881 and chartered as a university in 1907. It comprises the following colleges and schools, for which registrations of regular students in the autumn of 1933 were as follows: College of liberal arts, 730; business administration, 208; dentistry, 168; engineering, 367; journalism, 124; law, 266; medicine, 359; graduate school, 236; speech, 8 (with 750 students enrolled in speech courses from other schools and colleges of the university). In addition, there were 257 students in evening courses in business administration, 21 in dental hygiene, and 241 in late afternoon and Saturday morning liberal arts teachers' courses, making a grand total of 3045. The registration for the 1933 summer session was 568. The faculty in the autumn numbered 349 members. Endowment funds amounted to \$2,670,941. The income for the year was \$858,928, which includes the value of the services rendered gratis by Jesuit priests in 1932-33. The library contained 60,000 volumes. President, the Rev. William M. Magee, S.J., A.M., LL.D.

MARRIAGE AND DIVORCE. According to the Bureau of the Census, during the year 1932 there were 981,759 marriages performed in the United States as compared with 1,060,791 in 1931. These figures represent a decrease of 79,032, or 7.5 per cent. During the year 1932 there were 160,329 divorces granted in the United States as compared with 183,664 in 1931, representing a decrease of 23,335, or 12.7 per cent. There were 3900 marriages annulled in 1932, as compared with 4339 in 1931. The estimated population of continental United States on July 1, 1932 was 124,822,000, and on July 1, 1931, 124,070,000. On the basis of these estimates the number of marriages per 1000 of the population was 7.9 per cent in 1932, as against 8.5 in 1931; and the number of divorces per 1000 of the population was 1.28 in 1932, as against 1.48 in 1931. While the net decrease in the number of marriages performed in the country as a whole was 7.5 per cent, the relative change in the different States ranged from a decrease of 43.5 per cent in Iowa to an increase of 6.6 per cent in Nebraska. Only 10 States reported increased rates—Missouri, 3.5 per cent; South Dakota, 2.7 per cent; Nebraska, 6.6 per cent; West Virginia, 1.7 per cent; Mississippi, 5.1 per cent; Arkansas, 5.2 per cent; Oklahoma, less than one-tenth of 1 per cent; New Mexico, 6 per cent; Arizona, nine-tenths of 1 per cent; and Utah, five-tenths of 1 per cent. All 10 States adjoin those in which recent changes made in the marriage laws require from 3 to 5 days to elapse between the application for a marriage license and the issuance of the same. Missouri, South Dakota, and Nebraska adjoin Iowa where the change became effective July 1, 1931; South Dakota and Nebraska also adjoin Wyoming where the law changed June 1, 1931; and South Dakota further borders Minnesota where the restrictions began Apr. 29, 1931. Missouri, Mississippi, and Arkansas border Tennessee where the change in laws was made July 1, 1929. West Virginia is neighbor to Ohio with a change effective July 23, 1931. Oklahoma and New Mexico both adjoin Colorado and Texas where restrictions began Sept. 1, 1931 and June 13, 1929, respectively. Utah also adjoins

Colorado, while Arizona borders California where the change in laws was made July 29, 1927. In 1932, for the United States as a whole, 6.1 marriages for each divorce were reported, as against 5.8 in 1931. The District of Columbia and New York State, each having but one cause for absolute divorce, reported 35.3 and 21.4, respectively, while the rates in other States ranged from 15.4 marriages to each divorce in West Virginia to 1.8 marriages to each divorce in Nevada. The changes in the various States as regards the number of divorces compared with the year 1931, ranged from a decrease of 34.9 per cent in the District of Columbia to an increase of 12.5 per cent in Arkansas. Increased rates for divorces were reported in 2 other States, Rhode Island and Vermont. The following table gives the number of marriages and divorces for each State for both 1932 and 1931, as well as the number of marriages annulled during the same period. The figures for 1932 are preliminary and subject to correction.

MARSEILLES. See PORTS AND HARBORS.

MARSH, DANIEL BRAND. A Canadian clergyman and astronomer, died at Hamilton, Ont., Sept. 22, 1933. Born near Walters Falls, Ont., in 1859, he attended Knox College and about 1885 entered the ministry of the Presbyterian Church, his first pastorate being at Blackheath. His avocation was the construction of various mechanical devices, such as a stethoscope, audiphone, and cylinder phonograph. From these he turned to astronomy and the construction of refracting telescopes with equatorial mounting. He designed also a mechanism by means of which the stars and planets could be photographed through small telescopes and was mainly responsible for the establishment of the centres of the Royal Astronomical Society of Canada at Peterboro, Guelph, and Hamilton.

Called to St. Andrew's Church in Hamilton, Bermuda, in 1920, Dr. Marsh was chosen leader of the party sent by the Bermudian government

* Revised since publication of last report.

to observe the total eclipse of the sun at New Haven, Conn., Jan. 24, 1925. The discoveries that he made at this time regarding the coronal spectra led to his devising light filters that were used in photographing the total eclipse at Acton Vale, Quebec, Aug. 31, 1932, the resulting image being amplified by means of a concave lens inserted inside the focus of the telescope. The totality duration was fixed at 90 seconds. Dr. Marsh was a Fellow of the Royal Astronomical Society of Great Britain and a member of the astronomical societies of France, Belgium, and Mexico. Previous to his death he received from the Dominion government a grant of \$1000 and had retired from the ministry so as to devote more of his time to astronomical study.

MARSHALL, (DAVIS) EDWARD. An American editor and author, died at New Brunswick, N. J., Feb. 24, 1933. He was born at Enfield Center, N. Y., Mar. 31, 1869, and attended Benedict's Preparatory School, Rochester, N. Y. He began his newspaper career as a reporter in Rochester and in 1885 became news editor of the American Press Association, being located successively in Buffalo and New York City. From 1890 to 1895 he was Sunday editor of the New York *Press*. In 1896 he was European correspondent for the Bacheiler and Johnson Newspaper Syndicate, in 1897 Sunday editor of the New York *Journal*, and in 1897-98 European correspondent and Sunday editor of the New York *World*. During the Spanish-American War he served as a war correspondent for the New York *Journal*, attaching himself to Col. Theodore Roosevelt's Rough Riders. At the action of Las Guasimas, June 24, 1898, he was badly wounded, being struck by a bullet which shattered a vertebra. The injury resulted several years later in the amputation of one leg and paralysis from the waist down.

Mr. Marshall became editor of McClure's Newspaper Syndicate in 1900 and the following year attended as correspondent the first Peace Conference at The Hague. Later in 1901 he became Sunday editor of the New York *Herald* but had to relinquish this post on account of ill health. After a long sojourn in the Middle West to regain his health he became in 1911 correspondent for the *Columbian Magazine* and other publications during the Mexican insurrection. From 1910 to 1914 he contributed a series of special articles to the New York *Times* and other Sunday newspapers throughout the United States. He then organized in New York City the Edward Marshall Newspaper Syndicate, Inc., which in 1916 purchased the Curtis Brown News Bureau of London. During the World War he was a correspondent in England, France, Belgium, and Italy and had a miraculous escape when the Channel steamer *Sussex*, on which he was passenger, was sunk by a torpedo in 1916. After the war he was American correspondent to the London *Observer* and a consulting editor of the *Aéro Digest*.

After 1894 Mr. Marshall was secretary of the New York State Tenement House Commission and contributed numerous articles to newspapers and magazines on tenement house reform as a result of his study of slum conditions not only in New York City but in the larger European cities. As an official historian of the Spanish-American War he wrote *The Story of the Rough Riders* (1898). During his sojourn in the Middle West he began to write fiction, his published novels in-

cluding *Lizette* (1902); *The Middle Wall* (1904); *The Writing on the Wall* (1909); *The Old Flute-Player* (with Charles T. Dazey, 1911); and *Bat: An Idyl of New York* (1912). He collaborated with several dramatists in writing a fiction version of such plays as Charles T. Dazey's *In Old Kentucky* (1910); Porter Emerson Browne's *The Spendthrift* (1911); Robert Herbert Davis's *The Family* (1911); Edgar James's *Master of the House* (1912); and George M. Cohan's *Broadway Jones* (1913), and was co-author with Earl Mayo in the dramatization of *Cape Cod Folks* (1902).

MARTINIQUE, mār'ti-nēk'. A French island colony in the Lesser Antilles group of the West Indies, between Dominica on the north and St. Lucia on the south. Area, 385 square miles; population (1931 census), 234,050, of whom 10,000 were whites, and the remainder Negroes, mulattoes, East Indians, and Chinese. Fort-de-France, the capital and chief seaport, had 48,395 inhabitants in 1931. In 1931, the primary schools had 24,000 students enrolled; four secondary schools had 2389 students; the law school at Fort-de-France had 65 students.

The chief exports are sugar, rum, bananas, preserved pineapple, and cacao beans. The production of sugar in 1932 amounted to 48,280 tons. Exports were valued at 180,070,000 francs and imports at 220,457,000 francs (franc averaged \$0.0392 for 1931), in 1931. Vessels entering the ports in 1931 numbered 603 and aggregated 1,134,032 tons. The budget for 1931 was balanced at 93,450,000 francs; public debt amounted to 1,023,755 francs. A governor administers the colony assisted by a privy council. The budget is voted by an elected general council; the communes, of which there are 32, are administered by elected municipal councils. The colony is represented in the French Parliament by a senator and two deputies. Governor in 1933, L. Gerbinis.

MARYLAND. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 1,631,526, as against 1,449,661 in 1920. Baltimore had (1930) 804,874 inhabitants; Annapolis, the capital, 12,531.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1933	560,000	14,000,000	\$6,440,000
	1932	548,000	16,440,000	5,096,000
Hay (tame)	1933	403,000	529,000*	6,031,000
	1932	403,000	468,000*	4,446,000
Tobacco	1933	32,200	17,710,000 ^b	8,188,000
	1932	33,900	26,272,000 ^b	4,466,000
Wheat	1933	395,000	6,320,000	5,246,000
	1932	380,000	4,940,000	2,470,000
Potatoes	1933	30,000	2,700,000	2,943,000
	1932	31,000	2,852,000	1,483,000
Sweet potatoes	1933	6,000	840,000	462,000
	1932	8,000	888,000	311,000

* Tons. ^b Pounds.

EDUCATION. The need of the year, to provide instruction for increased enrollment out of reduced country-school budgets, was reported to have been met without serious decrease in efficiency. The number of persons of school age (5 to 18 years, inclusive) in the State was reckoned for November, 1932, as 413,328. There were enrolled in the public schools, in the academic year 1932-33, 294,119 pupils. Of these, 240,199 were in elementary grades or schools and 53,920 in high schools. The year's current expenditures

for public-school education totaled \$17,793,076. Salaries of teachers, by the year, averaged \$1452.

CHARITIES AND CORRECTIONS. The central functions of the State with regard to the administration of its institutions for the care and custody of persons, under the system in force in 1933, were somewhat widely distributed. The Department of Welfare, headed by a board of seven appointees and by the Director of Welfare, who was chairman of this board, held authority over correctional institutions. These were the Maryland Penitentiary, at Baltimore, which had 1106 inmates on Sept. 30, 1932, and the Maryland House of Correction, Jessups, 1164. Prisoners employed by these institutions or by contractors produced in the previous year revenue of about \$416,000, of which somewhat more than a third was reckoned to the prisoners' own account.

Institutions for mental patients and for the feeble-minded were independently operated. They included the Eastern Shore State Hospital at Cambridge, the Springfield State Hospital, at Sykesville (about 2500), Spring Grove State Hospital, Catonsville (capacity 1500), and the Crownsville State Hospital (Negroes), at Crownsville, each of which had its own board of managers, appointed by the Governor; also the Rosewood State Training School, at Owings Mills (for the feeble-minded) under a Governorially appointed board of visitors.

The Department of Charities, composed of a board of six members, a Director of Charities and a staff, was charged with the investigation of the whole system of State aid to public and private institutions. It administered certain laws as to the placement of children and against the separation of mothers and infants in the first six months of infancy. The Legislature charged the board in 1933 with the duty of administering emergency relief to the temporarily unemployed and destitute. A system of State sanatoria for sufferers from tuberculosis cared for some 465 patients at the State Sanatorium in Frederick County, 50 at the Eastern Shore Branch at Salisbury, 150 at the Mount Wilson Branch (Baltimore County), and 150 at the Colored Branch, at Henryton.

LEGISLATION. A regular 90-day session of the General Assembly was held, convening on January 4. It made extensive provisions for meeting the trouble caused by reduced public revenues. Among these were: authorization of an issue of \$12,000,000 of bonds by Baltimore to cover the anticipated cost of relief to the city's needy for two years to come and to replace the funds previously spent by the city for this purpose; authorization of an issue of \$4,000,000 of bonds by the State Road Commission for improving the system of main roads connecting with the North; reduction of the State's budget by some \$2,815,000 a year to \$29,000,000 a year for the ensuing biennium; increase of Baltimore's share of the lateral-road tax on gasoline, to 30 per cent, from 20; taxation of chain stores, according to the number of such stores operated as a chain in the State, at rates rising from \$5 a store up to \$150 for each unit in excess of 20; authorization to reduce teachers' salaries by from 10 to 15 per cent; imposition of a tax of 1 per cent on pari-mutuel bets at racetracks; increase of charges for motor-truck licenses.

There was created a State convention of 24 delegates, to be elected by popular vote, 3 from each Congress district and 6 at large, to act

for the State with regard to the proposed repeal of the Federal Eighteenth Amendment. The sale of beer of the strength permitted by Federal law was permitted throughout the State, except Carroll County, and with special powers of local control to Baltimore and 8 other counties; save in the specified counties, licenses to sell beer were made to cost \$50 for sellers where consumption was on the premises and \$25 for other sellers. The Legislature ratified the Federal Twentieth Amendment, but only after its adoption had been proclaimed. An emergency banking measure to provide authority for control of the reopening of State banks was enacted during the banking panic early in March.

POLITICAL AND OTHER EVENTS. Some of the large banks of Baltimore were in weakened condition when the banking panic started to spread over the country in February. Governor Ritchie was obliged to declare a legal holiday as early as February 24 in order to prevent defaults of payment upon demands of depositors. He prolonged the holiday by successive proclamations at intervals until the general closure of banks. When banks reopened it was found impossible to let the Baltimore Trust Company and the Union Trust Company resume payment of depositors in full. A new institution, the Baltimore National Bank, was opened on August 7, taking over the liquid resources of other institutions.

There were elected on September 12 by popular vote 24 delegates, who met on October 19 and voted the State's adoption of the repeal of the Federal Eighteenth Amendment through the repealing amendment proposed by Congress. The popular vote of the State favored repeal by somewhat less than 5 to 1.

The public service commission of the State was reported in August to have refused that utility companies under its control be accorded higher rates in the event of their incurring added expense for more employees in conformity with the general demand of the National Recovery Administration on utility companies. The Consolidated Gas, Electric Light, and Power Company, citing its consequent inability to increase its expenditures, declined to undertake what the Administration demanded.

Local authorities having failed to proceed against persons accused of having lynched a Negro at Princess Anne on October 18, Governor Ritchie called out the National Guard, who arrested 4 of the accused on November 28. The prisoners were discharged by a local tribunal on the following day.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Albert C. Ritchie; Secretary of State, David C. Winebrenner, 3d; Treasurer, J. R. Dennis; Auditor, Edmund R. Stewart; Comptroller, William S. Gordy, Jr.; Attorney General, William Preston Lane, Jr.; Superintendent of Schools, Albert S. Cook.

Judiciary. Court of Appeals: Chief Judge, Carroll T. Bond; Associate Judges, John R. Patison, T. Scott Offutt, W. H. Adkins, Francis N. Parke, Hammond Urner, W. M. Digges, D. Lindley Sloan.

MARYLAND, UNIVERSITY OF. A coeducational State institution of higher learning at College Park and Baltimore, Md., founded in 1807. The enrollment for the autumn term of 1933 was 3280; the summer school enrollment was 840. The faculty in the autumn numbered 567. The total income from appropriations and

other receipts amounted to \$2,537,240. The library contained approximately 87,332 volumes. During 1933 work was begun on the construction of a new University Hospital at Baltimore, for which the State made an appropriation of \$1,500,000. President, Raymond A. Pearson, D.Agr., LL.D.

MASHONALAND. See RHODESIA.

MASSONS. See FREEMASONRY.

MASSACHUSETTS. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 4,249,614, as against 3,852,356 in 1920. Boston, the capital, had (1930) 781,188 inhabitants.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame)	1933	330,000	433,000 ^a	\$7,058,000
	1932	332,000	404,000 ^a	6,464,000
Cranberries	1933	14,000	470,000 ^b	2,585,000
	1932	14,000	395,000 ^b	2,765,000
Tobacco	1933	3,600	5,051,000 ^c	1,066,000
	1932	5,600	8,232,000 ^c	1,077,000
Apples	1933	3,486,000	2,092,000
	1932	3,525,000	2,115,000
Potatoes	1933	15,000	2,325,000	2,441,000
	1932	13,000	1,950,000	1,072,000
Corn	1933	38,000	1,520,000	1,034,000
	1932	38,000	1,520,000	760,000

^a Tons. ^b Barrels. ^c Pounds.

EDUCATION. The public-school system succeeded in 1933, in the face of the prevalent fiscal difficulties, in offering a full academic year of instruction to every child. Free daytime courses were extensively provided for unemployed adults, through the cooperation of the State's Department of Education with colleges and universities in the eastern part of the State. The number of postgraduate students in the high schools rose to twice the normal total.

For the academic year ending June 30, 1933, the number of persons of school age (from 5 to 16 years) in the State was reckoned as 845,067. There were enrolled in the public schools 780,446 pupils. Of these, 505,155 were in common schools or elementary grades; in junior high schools, 108,153; in upper high schools, 167,138. The expenditures of the year for public-school education totaled \$66,843,644, exclusive of outlays, which totaled \$5,515,359. The salaries of teachers, by the year, were estimated to have averaged \$1838.

CHARITIES AND CORRECTIONS. The State's institutions for the care and custody of persons, under the system in force in 1933, were not under the central authority of a single administrative body; but each of divers groups of institutions was under its respective governmental department. A Department of Public Welfare, composed of a commissioner and an advisory board of six members, dealt with divers welfare problems; it gave some sort of State assistance to about 80,000 individuals during the year at an expenditure of some \$9,000,000. Among these were 3028 mothers and 11,784 children assisted under the mothers'-aid law. The department had custody (December 1) of 7067 children declared to be State wards. It had charge of 3372 other minors, on parole from the State training schools. Its duties included granting State old-age assistance, supervision of town-planning, control of housing regulations, supervision over charitable bodies of divers sorts, and investigation of adoptions.

It directed the State Infirmary, at Tewkesbury (3097 inmates); Massachusetts Hospital School, Canton (300); Lyman School for Boys, Westborough (409); Industrial School for Girls, Lancaster (247); Industrial School for Boys, Shirley (278).

Under the government of a Commissioner of Correction were: the State Prison, Boston; Massachusetts Reformatory, Concord; Reformatory for Women, Framingham; Prison Camp and Hospital, Rutland; State Farm, Bridgewater. A Department of Mental Diseases supervised mental hospitals at Worcester, Taunton, Northampton, Danvers, Westborough, Medfield, Monson, Foxborough, and Grafton. The Department of Health had authority over five State sanatoria.

LEGISLATION. The General Court, convening on January 4, held a protracted regular session. It authorized an issue of \$30,000,000 of State bonds for purposes of economic relief and imposed on the dividends of domestic corporations a tax at the rate of 6 per cent, of which the proceeds were to be used for purposes of relief among municipalities. A measure to create an advisory State banking board somewhat similar to that of New York State was passed but was vetoed by Governor Ely. Provision was made for reductions of public salaries by the City of Boston. There was created, to act for the State with regard to the proposed repeal of the Federal Eighteenth Amendment, a convention to be composed of 3 delegates from each Congress district, or 45 in all, who were to be elected by the people on June 13 from nominees (3 for prohibition and 3 for repeal) chosen for each district by the Governor, his council, the secretary of State and the State auditor. The manufacture and sale of beer of the alcoholic strength of 3.2 per cent was made lawful. A committee of 15 members of the General Court was appointed to prepare a code of laws to regulate traffic in alcoholic drinks in the event of repeal of Federal prohibition. The State's system of certificates of insurance for automobiles, in connection with liability for damages, was subjected to more stringent regulation. The existing law prohibiting employment of women at night in textile and leather industries was rendered, by act, subject to suspension by the commissioner of labor and industry.

A special session in November authorized banks under State charter to sell preferred stock to the Reconstruction Finance Corporation.

POLITICAL AND OTHER EVENTS. Banks in the State were closed, at the height of the banking panic, by a proclamation of legal holidays on March 4. They reopened generally eight days later, with the exception of savings banks, and comparatively little need was found to liquidate or restrict payments by banks in the State. On June 13, by a popular vote in the approximate proportion of 4 to 1 there were elected delegates in favor of the repeal of the Eighteenth Amendment, who met in State convention on June 26 and voted the State's adoption of repeal as provided in the superseding amendment proposed by Congress.

The State authority and the Federal Public Works Administration clashed in July over the question whether Federal loans for public works under the National Recovery Act might be made directly to municipalities and other public bodies in the State or must be made through the intermediary of the State. The State laws for supervision over the debts of cities were held by Gov-

ernor Ely to render it impossible for cities to contract debt lawfully save as the State approved. In addition the General Court had created a general-finance board to supervise the financial steps taken by cities in providing aid to check the effects of economic depression, and it had charged this body with the particular duty of passing upon cities' intended borrowings from Federally provided funds. Secretary of the Interior Ickes declined to proceed as the State had provided and attacked Governor Ely's position in an allusion to "political influence" as likely to mark State control. Fortunately he had appointed a Federal board to pass upon municipal requests in the State, for loans under the Federal act; Former Governor Fuller had been made the head of this board, which was virtually to duplicate the work of the State board. The difficulty was composed by Governor Fuller's undertaking, early in August, that his board would cooperate fully with that of the State.

The City of Boston, in order to render bankers willing to help it issue some \$30,000,000 of tax-anticipation notes in advance of its September collection of taxes, made an agreement to reduce its payroll by \$5,000,000; the requisite reductions in salaries were ordered on April 21. The seven members of the supreme judicial court of the State made a voluntary cut of 15 per cent in their own salaries. A strike of some 6000 workers in the shoemaking industry at Brockton and Lynn started on September 18. In October a move on the part of some of the interests affected to remove machinery from Lynn led to opposition from a mob. The ancient emblem commonly known as the sacred cod was stolen on April 26 from the chamber of the State's House of Representatives; it was later returned, after the act had reportedly been traced to college students.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Joseph B. Ely; Lieutenant-Governor, Gaspar G. Bacon; Secretary of the Commonwealth, Frederic W. Cook; Treasurer, Charles F. Hurley; Auditor, Francis X. Hurley; Attorney General, Joseph E. Warner; Commissioner of Education, Payson Smith; Commissioner of Public Welfare, Richard K. Conant.

Judiciary. Supreme Judicial Court: Chief Justice, Arthur Prentice Rugg; Associate Justices, John Crawford Crosby, Edgar P. Pierce, William C. Wait, F. Tarbell Field, Charles H. Donahue, Harry T. Lummus.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY. A non-sectarian institution for scientific and technical education in Cambridge, Mass., founded in 1861. The enrollment for the autumn of 1933 was 2606, including 500 graduate students. For the summer session, the registration was 1055. There were 231 members on the faculty and 274 others on the active staff of the institute. The productive funds amounted to \$32,700,000. The income for the year was \$3,300,000, received from various sources as follows: Funds, \$1,450,000; student fees, \$1,475,000; miscellaneous, \$375,000. The book value of land and buildings in Boston and Cambridge was \$15,700,000. The library contained 288,000 volumes. President, Karl Taylor Compton, D.Sc., D.Eng., Ph.D., LL.D.

MASSACHUSETTS STATE COLLEGE (formerly MASSACHUSETTS AGRICULTURAL COLLEGE). A State institution for agricultural and scientific training in Amherst, founded in 1867. The enrollment in 1933 was 1245. There were 203

members on the faculty, including 110 in resident teaching, 63 in research at the experiment station, and 30 in extension service in agriculture and home economics. The income in 1933 amounted to \$1,128,837, of which \$933,070 was from State appropriation and \$195,707 from Federal appropriation. The library contained approximately 95,000 volumes. As a part of the Federal and State emergency building programme, plans have been announced for the construction of a new library and a men's dormitory at the College early in 1934. President, Hugh P. Baker, M.F., D.Oec, LL.D.

MASTITIS OF DAIRY CATTLE. See VETERINARY MEDICINE.

MATABELELAND. See RHODESIA.

MAURITANIA. See FRENCH WEST AFRICA.

MAURITIUS. An island crown colony of Great Britain in the South Indian Ocean some 500 miles east of Madagascar. The dependencies of the colony consist of many small islands from 200 to 1200 miles away, the largest being Rodrigues which had an estimated population of 8091 on Jan. 1, 1933. Total area, 720 square miles; population of Mauritius (1931 census), 393,323, of whom 268,049 were Indians. The estimated population on Jan. 1, 1933 was 388,400, including 262,428 Indians. For 1932, births numbered 10,266; deaths, 12,848; marriages, 1271. Port Louis, the capital, including suburbs, had 54,290 inhabitants in 1931. In 1932 there were 127 elementary schools with 36,436 students and 11 secondary schools with 2005 students.

The production of sugar is the main occupation of the population; in 1932 the production from over 134,915 acres was 247,220 metric tons. Coconuts, cacao, tobacco, coffee, tea, aloe fibre, and vanilla also are grown. In 1932, merchandise imports were valued at 27,014,125 Indian rupees; merchandise exports, 27,662,851 rupees; bullion and specie exports amounted to 1,042,352 rupees (rupee averaged \$0.2635 in 1932). The only harbor suitable for ocean-going ships is at Port Louis where in the foreign trade for 1932, 184 ships totaling 553,347 tons entered and 181 ships totaling 551,780 tons left. For the year ending June 30, 1932, revenue amounted to 12,160,278 rupees; expenditure, 17,704,574 rupees; public debt, £3,396,994. Government is vested in a governor who is assisted by an executive council of 4 members and a council of government of 27 members. Governor in 1933, Sir W. E. Jackson.

MAURY, DABNEY HERNDON. An American hydraulic engineer, died at Chevy Chase, Md., May 11, 1933. He was born in Vicksburg, Miss., Mar. 9, 1863, and was graduated from the Virginia Military Institute in 1882 and from the Stevens Institute of Technology in 1884. After spending two years as assistant engineer in the construction of the Fort Worth and New Orleans Railway, he accompanied his father, Gen. Dabney H. Maury, then minister to Colombia, to South America where he was engaged as engineer and general manager of various mining enterprises. Upon his return to the United States in 1892 he became engineer and superintendent of the Peoria (Ill.) Water Works Co., and in 1912 opened an office as consultant on hydraulic and sanitary engineering in Chicago.

On the entry of the United States into the World War, Mr. Maury became advisory engineer on water supply to the construction division of the Army, holding the rank of major in the Engineers Reserve Corps, and also acted as

adviser to the Marine Corps on water supplies at Paris Island and Quantico and to the Navy on those at Pearl Harbor and other stations in Hawaii. He rendered his most important service, however, when he was assigned by the War Industries Board to develop joint water supplies for the Army, Navy, and Shipping Board and Housing Corp. in the Hampton Roads (Va.) district. On his discharge in 1919 he returned to his consulting practice in Chicago as a member of the firm of Maury and Gordon, retiring in 1927. He was a past president of the American Water Works Association, and in 1920 won the James Laurie prize of the American Society of Civil Engineers.

MAYO-ROBSON, SIR ARTHUR WILLIAM. A British surgeon, died in London, Oct. 12, 1933. Born Apr. 17, 1853, he attended the medical school of Yorkshire College (later the University of Leeds) and on his graduation in 1874 served successively during the next 12 years as demonstrator and lecturer on anatomy. In 1886 he was appointed lecturer on pathology, in 1888 lecturer on operative surgery, and in 1890 professor of surgery, holding the latter chair until his retirement as professor emeritus in 1904. He held also from 1884 to 1902 the post of surgeon to the Leeds General Infirmary and after 1902 that of consulting surgeon. In 1896 he was elected president of the Leeds and West Riding Medico-Chirurgical Society, and in 1897 held the office of president of the British Gynaecological Society. A member of the council of the Royal College of Surgeons from 1893 to 1909, he served as its vice-president for two terms (1902-03 and 1904-05), as Hunterian professor (1897, 1900, and 1904), and as Bradshaw lecturer (1905). At the International Medical Congress held in Paris in 1900 he was honorary president of the surgical section.

On removing to London in 1905 Sir Arthur was named honorary surgeon to the "Dreadnought" Hospital. He served during the World War at Gallipoli and in Egypt with the Mediterranean Expeditionary Force, holding the rank of colonel (assistant military secretary). On his return in 1917 he became a member of the Consultative Medical Council at the War Office and consulting surgeon to the Southern Command in France. The following year he was appointed inspector of military orthopedic hospitals. At the time of his death he was governor of the Imperial Service College and honorary consulting surgeon to the King Edward VII Memorial Hospital, both at Windsor.

Sir Arthur was knighted in 1918, having been previously created a Commander of the Royal Victorian Order (1911) and a Companion of the Bath (1916). In 1919 he was made a Knight Commander of the Order of the British Empire and in 1921 a Chevalier of the French Legion of Honor. Among the other honors bestowed on him were Member of the Order of St. John of Jerusalem, Knight of Grace, and Fellow of the Royal College of Surgeons. His publications pertained to his researches: *Diseases of the Stomach and Their Surgical Treatment* (1901); *Diseases of the Pancreas and Their Surgical Treatment* (1902); *Diseases of the Gall-Bladder and Bile Duct* (1904); *Cancer and Its Treatment* (1905); *Cancer of the Stomach* (1907); and *On Gall-Stones and Their Treatment* (1909).

MAYOTTE (má'yôt') AND **COM'ORO ISLANDS.** An archipelago midway between the

east coast of Africa and northern part of Madagascar, consisting of the islands of Mayotte, Anjouan, Grande Comore, and Moheli. It is a colony under the general government of the French colony of Madagascar of which it is the 21st province. Total area, 836 square miles; total population 130,253 including 501 Europeans.

MECHANICAL ENGINEERS, THE AMERICAN SOCIETY OF. An organization founded in 1880 to promote the art and science of mechanical engineering and the allied arts and sciences. It includes 16 professional divisions—aeronautics, applied mechanics, fuels, hydraulic, iron and steel, machine shop practice, management, materials handling, national defense, oil and gas power, petroleum, power, printing industries, railroad, textile, and wood industries. The membership at the beginning of the fiscal year, Oct. 1, 1933, was 20,200.

The society has established local sections in 72 industrial centres of the United States to foster and promote the welfare of strong local engineering societies, inclusive of members of all branches of the engineering profession, together with architects and chemists. Also it has 108 student branches, in 48 of which a new plan of membership more closely affiliating students with the work of the society has been adopted.

There were held during the year nearly 400 meetings of the local sections of the society, as well as meetings of the student branches and professional divisions. The major meetings, however, were the semi-annual meeting held in Chicago, June 25-30, during engineering week of the Century of Progress Exposition, and the annual meeting held in New York City, December 4-8.

During 1933 the society devoted itself particularly to unifying the engineering profession and to improving the status of the engineer. It participated in the Engineers' Council for Professional Development, a joint organization of a number of engineering societies, and was represented on the Coördination Committee of Engineering Societies. It approved the model law for the registration of engineers and land surveyors as a basis for framing new registration laws and amended existing laws so as to attain a uniform standard throughout the United States.

The society assisted also in relief work for unemployed engineers through the employment service, operated by the civil, mining and metallurgical, electrical, and mechanical engineering societies, with offices in New York City, Chicago, and San Francisco. Its local work was carried on through the Professional Engineers Committee on Unemployment in New York and through similar agencies set up by local sections of the society, in coöperation with other bodies, in a number of other cities.

The technical committees of the society carried on their work in research, standardization, and the formulation of safety, power test, and boiler codes and rules. The regular publications during 1933 were: *Mechanical Engineering*, the monthly journal; *Transactions*, containing the year's papers of specialized interest and issued in 24 sections, including the Record and Index, which contains annual reports, necrology, and an index to all publications of the society for the year; *The Engineering Index*; and *Mechanical Catalog*.

The officers for 1933-34 were: President, Paul

Doty; vice-presidents, Harold V. Coes, James D. Cunningham, C. F. Hirshfeld, William L. Batt, H. L. Doolittle, Ely C. Hutchinson, Elliott H. Whitlock; managers, Eugene W. O'Brien, Harry R. Wescott, Alexander J. Dickie, Robert L. Sackett, Alex D. Bailey, John A. Hunter, James A. Hall, Ernest L. Ohle, James M. Todd; treasurer, Erik Oberg; secretary, Calvin W. Rice; executive secretary, C. E. Davies; assistant secretaries, Ernest Hartford, C. B. LePage.

The main office of the society is in the Engineering Societies Building, 29 West Thirty-Ninth Street, New York, N. Y. There is a mid-west office at 205 West Wacker Drive, Chicago, Ill., and a mid-continent office, concerned principally with the problems of the petroleum industry, at 202 Midco Building, Tulsa, Okla.

MEDICAL ASSOCIATION, AMERICAN. A union of the constituent, or State and Territorial, medical associations, founded in 1847 to "promote the science and art of medicine and the betterment of public health." Members of the association must be members of constituent associations; those in good standing, who have qualified as fellows, constitute the scientific assembly of the association. On Dec. 1, 1933, there were 96,467 members, of whom 62,005 were fellows.

The scientific assembly is divided into 16 sections, each having its own officers who serve for a year. These sections are: Practice of medicine; surgery, general and abdominal; obstetrics, gynecology, and abdominal surgery; ophthalmology; laryngology, oology, and rhinology; pediatrics; pharmacology and therapeutics; pathology and physiology; nervous and mental diseases; dermatology and syphilology; preventive and industrial medicine and public health; urology; orthopedic surgery; gastro-enterology and proctology; radiology; and miscellaneous topics.

The eighty-fourth annual session was held in Milwaukee, Wis., June 12-16, 1933, the house of delegates, in which there are vested the legislative powers of the association, convening on June 12 and the scientific assembly the following day. At the section meetings leading authorities and investigators in the field of medical science announced and discussed the latest discoveries and methods in treating the sick. The scientific exhibit and the technical exhibits were also of great interest. The session was concerned primarily with the problem of socialized medicine, the association scoring group hospitalization plans. Dr. Dean Lewis, the newly inaugurated president, urged better geographical distribution of physicians to cover sections in need of medical care. There were 4601 persons in attendance.

The officers elected for 1933-34 were: President, Dean Lewis, Baltimore, Md.; president-elect, Walter L. Bierring, Des Moines, Iowa; vice-president, John H. Musser, New Orleans, La.; secretary and general manager, Olin West, Chicago, Ill.; and treasurer, Herman L. Kretschmer, Chicago, Ill. The official publication is the *Journal of the American Medical Association*, Morris Fishbein, editor. Eight other scientific journals, each dealing with a special field of medicine, as well as *Hygeia*, a health magazine,

are published by the association. Headquarters are at 535 North Dearborn Street, Chicago, Ill.

MEDICINE AND SURGERY. AMEBIC DYSENTERY IN CHICAGO. A recent epidemic of amebic dysentery originating in Chicago has served to call attention to this disease, long considered almost exclusively a tropical one, and to emphasize the necessity of regarding it as a potentially serious menace to public health, even in temperate zones. The infection is caused by a protozoal parasite, *endamoeba histolytica*. The mode of its transmission (by the ingestion of food contaminated by excreta from the intestinal tract of infected persons and containing the organisms in an encysted stage) is well known. Once arrived in the intestine of the new host the cyst liberates a single ameba with four nuclei. This divides once, producing eight small "amebules" which then develop into adult forms and by burrowing under the submucous coat of the intestine begin to produce the clinical symptoms associated with the disease. Further division of the mature protozoa occurs until conditions for growth become unfavorable, when again the encysted form begin to appear in the feces. The cyst, unlike the motile organism, is very resistant and may live under suitable conditions for periods of many hours. The destructive effect of the organism in the intestine is produced by the liberation of tissue destroying toxins.

Clinically the disease may present several different forms. After a variable incubation period there may be an acute illness with diarrhea and abdominal pain (mistaken in some instances for appendicitis or ulcerative colitis). This may prove fatal, or may after several days subside, only to be followed by repeated milder attacks of the same nature. Or rather insidiously there may develop a chronic form of the disease with attacks of colic and diarrhea, bloody stools, and all the symptoms of a wasting illness. Treatment in the early cases by emetine or certain other parasitocides (chiniofon, acetarsone, etc.) is usually successful, although in no more perhaps than a third of the cases is the patient completely freed of the organism. Relapses, which are apt to occur, respond very well as a rule to therapy. (*Jr. Am. Med. Assn.*, 101, 1639, 1933, after Craig, Simons, and others.)

One interesting feature of the disease is that presumably well persons may harbor amebas in their digestive tracts and thus serve as "carriers" in a manner quite analogous to the well known "typhoid carrier." And furthermore infected persons may, after the subsidence of clinical symptoms, still carry the organism. Recent studies carried out in this country seem to show that the incidence of the organism is much greater than had previously been suspected; that from 3 to 10 per cent of the population harbor the organisms. A relatively greater number of cases are found in the South.

The outbreak in Chicago became apparent in August of this year and a thorough investigation instituted at once by officials of the Chicago Board of Health soon traced the source of the infection to a large hotel where roughly a quarter of the persons employed in the handling of food were found to be harboring the *endamoeba histolytica*. Up to September 1, 15 active cases and 11 carriers were found among 364 employees examined. A subsequent investigation, October 25, revealed that 60 additional food-handlers whose stools had been negative at the first examination were now harboring the organism. (Also a study of 498 non-

food handlers showed that 100 had amœbas in their stools). The results of this study were reported in the *Journal of the American Medical Association* for Nov. 18, 1933 (Budesen, Rawlings, and Fishbein, p. 1636; Tonney, Hoeft, and Spector, p. 1638).

The present epidemic is interesting from several points of view, but especially because as a result of the fact that most of the guests were not residents of Chicago (many of whom were attending the Century of Progress Exposition) the disease was spread widely to other parts of the country. Because of the long incubation period, symptoms did not usually develop until the infected persons had returned home. A questionnaire sent to all individuals who had been guests at the hotel after May 1st (about 22,000 in all) revealed that of approximately 3500 who replied 69 had had illnesses positively diagnosed as amœbic dysentery, 23 others were suspected of having it, and 88 had had illnesses which in some instances might have been amœbic dysentery. Up to November 14 there had been in Chicago 185 cases with 19 deaths, and 193 carriers had been discovered. From various other parts of the country 69 cases had been reported in which a positive laboratory diagnosis of amœbiasis had been made.

Quite a few prominent persons succumbed in the present epidemic. The death of "Texas" Guinan, especially attracted comment in the press.

The Board of Health's study revealed that the present epidemic probably could be traced to a mild outbreak occurring in 1927. Two employees who were found to be harboring amœbas had also been discovered to be "carriers" during the previous epidemic. They had been treated at that time and apparently cured, only to turn up with the organisms two years later, and it seems not unlikely that they served as a source for the infection of their fellow workers. If this be the case, it is apparent that the employment of previously infected persons is fraught with danger in spite of the fact that they may have been subjected to extensive treatment and apparently cured. Vigorous measures to control the epidemic were taken. These included prompt isolation and treatment of all active cases and of all carriers, and various measures to promote cleanliness of the hands and to prevent the contamination of food by excreta. A standard for cure was established and the recommendation made that all persons with a history of amœbiasis should be subjected to examination every four months as long as they work as food handlers.

The questionnaire mentioned previously was probably very helpful in locating cases and in suggesting to those responsible for treatment that the disease might be amœbic dysentery. In fact, because of the rarity in the past of obvious clinical cases, many competent physicians are not familiar with the condition and in some instances treatment resulted unfortunately because of mistakes in diagnosis. Due to the prominence given the report by the *Journal*, physicians throughout the country have been put on their guard against the disease. It appears that we must now consider amœbiasis as an endemic disease in this country and that public health measures to prevent its wide dissemination, centring especially on a careful examination of all those who work in connection with the preparation or serving of food, is warranted.

ENCEPHALITIS IN ST. LOUIS, THE EPIDEMIC OF. In 1917 there appeared in Austria, in a mildly epidemic form, a disease of the central nervous system

characterized by fever, somnolence and visual disturbances caused by paralysis of the extra-ocular muscles. Von Economo in Vienna first called attention to the condition, but cases were soon recognized throughout Central Europe and shortly later in England and in this country. Their occurrence roughly coincided with the pandemic of influenza which raged so disastrously during the latter part of the World War. Pathologically the disease presented no especially characteristic features, and in spite of numerous investigations both here and abroad no very enlightening information concerning its etiology could be obtained. Most workers felt that it was a disease produced by an as yet unrecognized filtrable virus, and that possibly it bore some relationship to influenza, which too seemed likely to be a virus disease.

The disease has varied somewhat in different epidemics and indeed there has been a fairly wide variation in individual cases depending upon the particular part of the brain most involved by the infection. In the early typical cases, from which the name encephalitis lethargica was derived (so called "sleeping sickness"), the lesion was confined largely to the basal ganglia of the midbrain. The mortality has ranged between 20 and 40 per cent during various outbreaks of the disease, but what is especially disturbing is that not infrequently those surviving the acute attack may be left with residual disturbances—character changes, insomnia, ocular paralyses—or may develop a year or more later a train of symptoms—called rather formidably "post-encephalitic Parkinsonism"—practically identical with the well known paralysis agitans or "shaking palsy" of the aged, a very pathetic and totally disabling condition.

The first major epidemic of encephalitis in this country since the war has recently occurred in St. Louis and has prompted further study of the nature and causation of the disease. According to Dr. J. P. Leake of the United States Public Health Service, who has been in charge of the Encephalitis Investigation (*Jr. of the Am. Med. Ass'n*, 101, 928 (Sept. 16), 1933), the present epidemic is similar to ones described in Japan (1924) and in Australia, and probably is not identical with the disease as it appeared here in 1918. This atypical form varies from the classic one, according to Dr. Leake, in the rarity of ocular disturbances, the more frequent involvement of the meninges, and the greater incidence of prompt and apparently complete recovery. It might be said that not all workers agree with Dr. Leake regarding the difference in identity of the two outbreaks.

Between August 7 and September 10th of 1933 there appeared in St. Louis city and county 656 cases with more than 115 deaths, a case mortality of about 20 per cent. There has been as yet no reported spread of the disease, and it seems more than likely that the epidemic will be localized to St. Louis. One interesting feature of the present epidemic is that older persons have been more frequently attacked, and that among them the disease has proved to be more serious. Whereas in the past the incident of the disease has been roughly the same in the various age groups, in the present instance 35 per cent of the cases have been among those over 55, who comprise but 15 per cent of the population. The death rate in this group has been double that in other age groups.

The lesions found at post-mortem resemble

those found in other epidemics but are more diffuse as a rule, and do not involve so characteristically the basal ganglia. One important observation made by Dr. Margaret Smith of the Department of Pathology of the Washington University Medical School was that in half the cases examined, "inclusion bodies" could be demonstrated in the kidneys. These small intra-cellular masses are found with a high degree of frequency in diseases known to be caused by filtrable viruses, and their presence suggests that this disease, too, is caused by a virus.

Epidemiologic studies have been undertaken by the United States Public Health Service and by officials of the Army Medical School in Washington. Attempts to transmit the disease by the bite of the mosquito have been made but with no positive results as yet. This experiment which involved the voluntary participation of a group of persons confined to the Missouri State Penitentiary received wide notice in the daily press. As far as can be determined, drinking water and milk have been excluded as factors in the spread of the disease, although as Dr. Leake points out, the epidemic was at first primarily suburban. Up to the present time none of the studies has contributed any very certain information regarding the mode of transmission.

Interesting experimental studies have been carried out by a group including Drs. Muckenfuss and McCordock of Washington University and Dr. Armstrong of the Public Health Service who reported on September 8 that "six monkeys inoculated with material from five different patients dying with encephalitis have shown fever beginning with the eighth to the fourteenth day after inoculation. Coincident with the rise of temperature tremors, incoordination and weakness have appeared. Three of these animals have been submitted to pathological examination, and their central nervous systems showed lesions consistent with the picture found in human epidemic encephalitis. Reinoculations of materials from these monkeys into normal monkeys is also progressing. While these results are encouraging, many weeks' work has yet to be done before it can be stated that the human disease has been established in animals."

In a disease such as this, whose etiology is so obscure, no specific treatment is possible; nor indeed have any empirical methods proved of great value. If the careful studies being made during the present epidemic result in throwing any light on the cause of the process, as it seems now that they possibly may, a very important step forward will have been made.

METABOLISM BY A NEW DRUG, STIMULATION OF. For some years extracts of the thyroid gland, and more recently its active principle, thyroxine, isolated by Kendall, have been used to increase the body's rate of metabolism. These preparations have proved to be exceedingly valuable in the treatment of myxedema, a disease caused by a deficiency of thyroid secretion and characterized by a conspicuously lowered metabolic rate. Physicians have found, also, that thyroxine may be an important adjuvant in the treatment of obesity, although in general chief reliance has been placed upon a strict dietary régime, with a limitation of the caloric intake below the amount the body ordinarily consumes. The use of thyroid preparations has been restricted because of their tendency to produce such symptoms as nervousness, palpitation, tachycardia, and sweating—symptoms which regularly

accompany hyperfunction of the thyroid. Recent studies of a new drug, alpha-dinitrophenol, seem to indicate that it may prove useful in conditions requiring a metabolic stimulant; and further that by its use certain of the objectionable features of thyroid medication may be avoided.

Alpha-dinitrophenol, a chemical closely related to picric acid (tricresol) has been known for some time as an intermediate product in the manufacture of munitions, and cases of poisoning attributed to it were encountered not infrequently among munition workers, especially in France, during the World War. Studies from the toxicological standpoint were made at that time and measures to prevent poisoning hit upon, but apparently no very complete investigation of the pharmacological properties of the substance were undertaken. It is interesting that the symptoms of poisoning originally described—loss of weight, nervousness, sweats, etc., should have suggested that the drug caused a stimulation of a metabolism, although this essential action was not discovered at that time.

Recent thorough pharmacological studies of alpha-dinitrophenol carried out in this country by Cutting, Tainter, and others at the Stanford University School of Medicine, and abroad by Magne, Meyers, and others have shown that the drug "markedly augments metabolism in doses which are not demonstrably harmful." (Cutting, Mehrtens, and Tainter, *Jr. Am. Med. Ass'n*, 101, 193 (July 15) 1933). From these experimental observations, Cutting and his co-workers concluded that "Dinitrophenol possesses prompt and striking pharmacologic actions" the outstanding features of which are "sustained increases in metabolism and body temperature, enormous activity of all metabolic functions, and fatal pyrexia with excessive doses." . . . "Doses within the therapeutic range cause in man increases in metabolism without fever, which may be useful in the treatment of obesity, hypothyroidism, and similar depressed metabolic states." They undertook a clinical study to determine its value in these conditions and have recently reported on their experience with it in the treatment of obesity. (Tainter, Stockton, and Cutting, *Jr. Am. Med. Ass'n*, 101: 1472 (Nov. 4) 1933.)

In their first report to the *Journal* (July 15) they write:

Preliminary results indicate that dinitrophenol can satisfactorily increase metabolism for therapeutic purposes in patients. The limiting factor would seem to be the fever caused by the increased heat production. The metabolism has been maintained at a rate 50 per cent above normal for months, with no deleterious symptoms, such as the hyperirritability caused by equivalent doses of thyroid gland. Therefore, dinitrophenol offers this advantage over thyroid. It would appear generally useful for increasing the metabolic rate, experimentally and therapeutically.

Oral administration of the drug to obese patients in daily doses of about 8. mg. per kilogram has resulted in a steady reduction of their weight without demonstrable side actions.

They point out, however, that since the drug has not been subject to wide use nor administered over a long period of time very little is known concerning the possibility of a cumulative toxic effect or of individual idiosyncrasy to it, and since it is known to produce a fatal hyper-pyrexia in excessive doses, they advise that it be used "only as an experimental therapeutic procedure in carefully selected patients under close observation by the physician."

At the time of their November report, 113 consecutive cases of obesity encountered in clinic and

office practice had been treated. The period of treatment averaged forty days although some patients had been treated over four months. The average initial weight of their patients was 188% lbs. and the average weight at the end of treatment 179% lbs. Treatment was considered successful in all but twelve cases; in three probably because of insufficient dosage and in the remaining nine because of the occurrence of undesirable "side-actions," the most important of which was the appearance of a skin rash (7 per cent of total cases) and the temporary loss of the taste of salt and sweets (5.3 per cent). The authors remark, "These results show that dinitrophenol can be used therapeutically to reduce the weight of obese patients regardless of the etiology of the obesity and even when low caloric diets or thyroid are ineffective. The loss of weight takes place predominantly from the hips and abdomen, as shown by measurements; the other regions share in the loss but to a less degree. A sufficient amount of the drug can usually be taken without discomfort to cause a loss of from 2 to 3 pounds weekly over extended periods. Indeed, some patients even experience a feeling of improved well being."

"Aside from skin reactions, the chief danger from the drug is in the indiscriminate or careless overdosing that may result from its sale to the public. . . . For maximal safety the initial dose of dinitrophenol should be small, and increasing doses may be employed only as the clinical response seems to warrant."

That the warning against the injudicious use of so potent a substance is warranted is indicated by the fact that a fatal case of hyper-pyrexia resulting from an overdose of the drug has already been reported. Also, Anderson, Reed, and Emerson of San Francisco have described their experience with a patient who apparently had an idiosyncrasy to dinitrophenol and developed an extensive and troublesome skin rash after the administration of the drug in the customary small preliminary dose. (*Jr. Am. Med. Ass'n* -01: 1053 (Sept. 30), 1933.)

REMOVAL OF THE NORMAL THYROID IN HEART DISEASE. In a series of recent publications, Blumgart and his co-workers of the Beth Israel Hospital in Boston have presented a new method for the treatment of certain intractable forms of chronic heart disease, and have detailed their experiences with its clinical application in a number of cases. In brief, the method consists in lowering the metabolic rate by completely removing the normal thyroid gland and thus decreasing the body's demands on the heart.

This plan of treatment was suggested by Blumgart only after extensive investigations on the rate of blood flow, carried on over a period of years, and seems to be based on sound physiological reasoning. Blumgart found in studying normal individuals that the "velocity of blood flow was determined directly by the metabolic demands of the body." This demand may be estimated clinically by determining the basal metabolic rate. In patients with congestive heart failure, the velocity of blood flow was found to be markedly decreased; but, strikingly enough, similar rates of blood flow were observed in patients with myxedema, a disease caused by hypoactivity of the thyroid and accompanied by a conspicuously lowered metabolic rate, who presented no signs of heart failure. It seemed, therefore, that "the diminished circulation was evidently adequate to the diminished demands of the body."

Patients with hyperthyroidism were found to have, in the early stages before any signs of heart failure had developed, greatly increased rates of blood flow, due it seemed to the greatly increased metabolic demands. And the fact that serious involvement of the heart is such a frequent accompaniment of advanced hyperthyroidism seemed explained on the basis of the greatly increased work demanded of the heart over long periods of time.

It seemed to Blumgart that if in the treatment of chronic heart disease it became impossible to maintain a rate of blood flow adequate to meet the body's needs, it still might be possible to so decrease the body's metabolic demands, that the lowered supply of blood would still match the lowered demand for it. On this basis, then, he suggested that an artificial state of hypothyroidism be produced by removing the normal thyroid.

Realizing the difficulties inherent in a purely clinical study, Blumgart and his co-workers established certain criteria for patients to be included in the study. The patient, they said, must show evidence of a progressive, incapacitating condition; he must have normal thyroid function; be intelligent enough to accurately describe any subjective changes in his health; and finally be not too old, and in general a good operative risk. At the time of the first report four patients satisfying these conditions had been operated upon (Blumgart, Levine, and Berlin, *Arch. Int. Med.* 51: 866 (June), 1933). In the first two cases the thyroid was subtotally removed. In both instances there was a transient drop in the basal metabolic rate accompanied by definite objective evidence of improvement in the patient's clinical condition. These two patients who had been confined to bed for long periods were able to be up and about the ward, and were free from edema. In both cases, however, after the third week the basal metabolic rate began to rise, and symptoms of heart failure began to re-appear. It became apparent, then, that in order to produce a permanent lowering of the metabolic rate it is necessary to completely remove the thyroid gland, a much more difficult and hazardous procedure than ordinary subtotal thyroidectomy. A technique for total ablation of the gland was devised by Dr. Berlin (*Am. Jr. Surg.* 21: 173 (August) 1933) and in all subsequent cases this procedure has been carried out. In the third patient (the first to have the thyroid completely removed) a lowering of the basal metabolic rate to —30 per cent was accomplished, and there was striking clinical improvement. He was a man of 52 who had been confined in a hospital for chronic diseases for more than two years with congestive heart failure due to arteriosclerotic heart disease, and who apparently had been going slowly but steadily down hill. After operation the signs of heart failure cleared, he was able to be up and about without discomfort and at the time of a later report (*Arch. Int. Med.* 52: 165 (August) 1933) had maintained his improvement for over six months and had been able to work eight hours a day. The fourth case, a man of 51 with angina pectoris of five years' duration, had a consistently lowered metabolic rate after operation and was free from attacks of angina.

By the time of their August report eleven additional patients had been subjected to operation. There was one operative death, and one patient died suddenly three weeks after operation although he had apparently been improved in health

following the operative procedure. Of the remaining patients all showed definite clinical improvement. It also became apparent that the degree of myxedema produced by the total removal of the thyroid in adults does not compare in severity with the spontaneous disease and that it does not seriously discommode the patient. Another interesting finding was that the velocity of blood flow in most cases was even slower after operation than before, so that the heart was required to do less work. The degree of decrease of the metabolic demands of the body was sufficiently greater than the decrease in blood flow, however, to allow a certain degree of "cardiac reserve."

Subsequently attempts to create a state of hypothyroidism by intensive irradiation of the thyroid with X-ray were made (Friedman and Blumgart, *Jr. Am. Med. Assn.*, 102: 17 (Jan. 6) 1934) in the hope that the rather formidable operative procedure might be avoided, but these proved quite unsuccessful. Only by completely removing the thyroid, apparently, can a permanent lowering of the basal metabolic rate be accomplished. At the time of this last report total thyroidectomy had been performed in approximately fifty cases and their conception of the value of the procedure fully confirmed.

Blumgart suggests that, until more exact information be obtained concerning the permanency of the therapeutic effects apparently attained, the observation be reserved for those suffering from progressive congestive heart failure or angina pectoris in whom medical treatment has proved to be of no avail.

It would seem that for this group at least a real contribution in therapy has been made; and many patients who have been totally incapacitated for long periods may enjoy a certain degree of activity, though at a lower metabolic level.

LUNG REMOVAL IN CARCINOMA. Graham and Singer of the Washington University School of Medicine and the Barnes Hospital in St. Louis have recently reported what is apparently the first successful case of removal of an entire lung in carcinoma. (*Jr. Am. Med. Ass'n* 101, 1371, (Oct. 28), 1933). Their report is significant from many points of view, but especially because it seems to indicate that the radical surgical extirpation of a malignant new growth of the lungs is a feasible technical procedure. Primary carcinoma of the lung, Graham points out, is in reality a fairly common type of cancer, constituting perhaps from 5 to 10 per cent of all carcinomas, and consequently equaling in frequency much better known cancers such as those of the large bowel; and what is more interesting, although its significance is not as yet known, is that in recent years there has been a definite and rather marked increase in the incidence of this type of tumor. Moreover, since the development and refinement of such comparatively new diagnostic procedures as bronchography (delineation of the bronchial tree in the X-ray by means of opaque iodized oils) and bronchoscopy (direct examination of the interior of the trachea and bronchi by means of an ingenious instrument devised by Dr. Chevalier Jackson of Philadelphia) it has become possible to diagnose this condition clinically, and often in its early stages, though it must be confessed that even to-day, certainly in most cases, the diagnosis of lung cancer is far behind that of other internal neoplasms.

According to Graham there is at present no evidence in the literature that carcinoma of the

lung may be cured by other than surgical means—that is, there are no authenticated cases of patients alive and well five years after treatment by X-ray or radium. And apparently only six cases of successful treatment by means of surgery are recorded. It must be added that in most of these cases not enough time has elapsed to be sure that the growth has been permanently eradicated, although all the patients were well at the time of the reports, a year or more after operation. Of these surgical cases, in only one was more than one lobe of the lung removed. Churchill of the Massachusetts General Hospital in Boston reported in February, 1933 the successful removal of the lower and middle lobes of the right lung. Graham's case is apparently the first in which an entire lung was deliberately removed in one stage.

His patient, a physician of 48, had been ill for seven months with cough, fever, and pain in the chest. By means of X-ray examination and bronchoscopy a small growth was discovered in the bronchus of the upper lobe of the left lung. Examination of a piece of tissue removed through the bronchoscope revealed that the growth was a carcinoma. Surgical removal of the upper lobe of the left lung was advised and operation undertaken on Apr. 5, 1933. Exploration disclosed that the growth lay so close to the bronchus of the lower lobe that its removal seemed indicated along with the upper lobe. Excision of the lower lobe seemed further advisable because of the presence of nodules in its upper surface suggesting cancer. Graham therefore deliberately excised the entire left lung and in order to fill the space formerly occupied by the lung removed parts of seven ribs and allowed the chest wall to collapse over the "dead space." (This latter procedure, thoracoplasty, is well known in thoracic surgery and has proved of great value in the treatment of certain cases of tuberculosis which are benefited by the collapse of one lung.) The patient, after another minor procedure necessary to obtain complete collapse of the chest wall on the affected side, made a surprisingly smooth convalescence and left the hospital about two months after operation. At the time of the report, four and a half months after operation, he was apparently well and had gained 16 pounds.

Examination of the excised lung showed that the growth was small, apparently localized, and so far as could be determined, had been completely removed. Examination of lymph nodes removed from the thorax at the time of operation again failed to disclose the presence of cancer, another very favorable finding, because in its spread carcinoma usually involves first these neighboring nodes. The nodules felt in the upper part of the lower lobe proved not to be cancerous but rather to be small abscesses. In other words, all the findings would seem to indicate that the patient had been cured of a cancer, which without operation would certainly have proved fatal; although, of course, it is too early yet to say finally that an absolute cure has been obtained.

As Graham says, "It seems particularly important to call attention to the fact that an entire lung has been successfully removed for carcinoma of the bronchus because if this should prove to be a feasible operation in properly selected cases, it is probable that many cases would be saved who otherwise would die of carcinoma."

It might be added that Graham's Clinic at the Barnes Hospital has been for some time one of

the outstanding centres in this country for the surgical treatment of disease of the thorax; and further, that it was in this same clinic that the now widely used and exceedingly valuable method of demonstrating the gall bladder outline in the X-ray (so-called "cholecystography") originated.

According to the Associated Press of Dec. 11, 1933 Dr. Wm. F. Rienhoff of the Johns Hopkins Hospital in Baltimore reported before the Interurban and Cosmopolitan Medical Clubs in Baltimore that he had twice during the past year completely removed one lung for neoplastic disease and in a brief report in the *Bulletin* of the Johns Hopkins Hospital for December, 1933 (v. 53, no. 6, p. 390) devoted primarily to the technical aspects of the problem, a few details are added. His first patient, a girl of three and a half years with a malignant tumor of the left primary bronchus, was subjected to a left pneumonectomy (complete removal of the lung) on July 24th of this year. She had an afebrile and an uneventful convalescence. His second patient, a woman of twenty-four with a benign tumor of the bronchus, was operated upon on November 3, and she too made a complete recovery.

Rienhoff stresses certain features of the operative procedure, among them the advisability of a preliminary pneumothorax. He believes that in uninfected cases thoracoplasty is unnecessary because the normal lung, he finds, soon expands to practically fill the chest. He believes drainage unnecessary if "mass ligation" and cauterization of the bronchial stump are avoided.

TRANS-URETHRAL PROSTATECTOMY. One rather complicated technical problem of the sort that would not ordinarily be discussed in such a review as this seems worthy of attention because it promises to effect wide changes in the field of urological surgery which will be of public interest. This problem is that of the surgical treatment of prostatic hypertrophy and prostatic carcinoma; and it had best be prefaced by a brief discussion of the question of the relation of diseases of the prostate to urinary obstruction.

The prostate is a small gland found in the male whose secretion is an important component of the seminal fluid. Its chief interest and importance from the surgical point of view lies in two facts: first, that in men past middle life it very frequently enlarges. The cause of this enlargement, so-called "benign hypertrophy of the prostate," is not known. It is not apparently neoplastic, although carcinoma arising in the prostate produces similar functional results. And second, that because of the peculiar situation of the gland, surrounding as it does the neck of the bladder and a portion of the urethra, its enlargement causes an interference with the outflow of urine from the bladder. Once a partial obstruction has been established the patient is liable to a sequence of changes in the urinary tract, the most important of which are degenerative changes in the kidneys and infection. It is imperative that this obstruction be relieved if the patient is to be kept in a state of good health. This is usually accomplished by the surgical removal of the gland, either by an abdominal approach ("supra-pubic route") or through the perineum. The results of prostatectomy, especially since the development of the present pre-operative régime, have been surprisingly good, and countless sufferers have been permanently relieved. The operation, however, in the best of hands is a major and rather serious one, and since many of the patients suf-

fering from prostatic hypertrophy are aged and debilitated, there is inevitably a certain percentage of operative deaths. It is indeed surprising, however, to what a low level competent urologists have reduced their mortality figure.

The development of the cystoscope, an ingenious instrument which when introduced through the urethra allows inspection of the interior of the bladder, not only allowed accurate diagnosis of diseases of the lower urinary tract, but also made possible certain intra-urethral and intravesical surgical procedures. In 1926 Stern presented a greatly improved instrument, which he called a "resectoscope," by means of which it was possible to carry out extensive electro-surgical operations. Since then, improvements by Kirwin, McCarthy, and Davis, and others have widened the field of trans-urethral surgery and made practicable the removal of the prostate without open operation. (Grauer has recently reviewed the literature dealing with this subject—*Surg. Gyn., and Obs.*, 57: 401 (November), 1933.)

That this new procedure is of great value in certain types of cases nearly all urologists agree. Kirwin (*Jr. Urol.*, 28: 539, 1932) believes that it is the ideal procedure for contractions of the neck of the bladder, for carcinoma (which in most cases is inoperable) and for moderate degrees of hypertrophy. He believes that for marked degrees of hypertrophy when the lateral lobes of the prostate extend well into the bladder, open operation is still the procedure of choice. Others believe that trans-urethral procedures are indicated in nearly all cases.

The advantages of the trans-urethral operation are well outlined by Kretschmer (*Surg. Gyn. and Obs.* 57: 654 (November) 1933). He points out that 1st, the period of incapacity after operation is brief and that the hospital stay is greatly shortened (in his series the average duration of hospitalization was only nine days; some patients stayed but two); 2d, because of the relative lack of danger inherent in this procedure many patients previously considered inoperable by older methods could be treated; 3d, because of the increased safety of the procedure patients will submit to operation earlier; 4th, in most cases there is no "surgical shock," a complication so frequent after open operation; 5th, obstruction in cases of carcinoma can be relieved and the necessity of permanent bladder drainage avoided; and 6th, the method is useful in treating certain conditions found after prostatectomy (i.e. removing tissue previously overlooked, etc.).

While it seems certain that this new method of treatment will prove of great value, and has for that matter a wide vogue in this country at the present time, it seems only fair to state that its limitations have not as yet been clearly defined and many conservative urologists feel that its use at present has been perhaps pushed a little further than is advisable.

AWARD OF THE AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE. Dr. R. L. Kahn, well known bacteriologist and immunologist, of the University of Michigan Medical School at Ann Arbor, was the recipient of the eleventh annual prize of the American Association for the Advancement of Science at its recent meeting in Cambridge, Mass. (W. L. Laurence in a special dispatch to the *New York Times*, Dec. 31, 1933). Dr. Kahn's paper, "Tissue Reactions in Immunity," which was deemed the most noteworthy of the present meeting, challenged present concepts of

the mechanism of immunity, and presented experimental evidence that the so-called "fixed tissues" of the body (such as the skin, muscle, peritoneum, and so on) were not, as they had previously been considered, hypersensitive to infection, but rather possessed powers of immunity, in some instances many times greater than that of the blood, to which in the conventional theories most of the body's ability to resist bacteria and other noxious foreign protein substances had been attributed. By means of an especially devised experimental method Dr. Kahn was able for the first time to measure, with a degree of accuracy comparable to that obtainable in studies of the blood serum, the immunologic properties of fixed tissues. These determinations showed the skin to have resistive powers ten times greater than that of blood serum; and further that the peritoneum, muscle, and brain (in the order named) all exceeded the blood in their ability to protect against infection. Dr. Kahn's studies showed that protective substances could be detected in the skin, so frequently the portal of entry of infection, before they appeared in the blood, and further that they persisted in the fixed tissues for long periods after their disappearance from the blood.

Dr. Kahn's new concept of immunity seems likely to produce wide changes in immunologic theory and procedure and may have important therapeutic applications.

BRIEF NOTICES. Two interesting medical items have quite recently found their way into the daily press, and despite the lack of full accounts in technical journals, seem worthy of notice.

The first of these deals with the transplantation of human tissues, a subject of great interest and of considerable practical importance in medicine. While transplantation of skin and of certain other tissues from one part of the body to another (so-called "autograft"), has proved feasible and indeed found a wide field of usefulness in surgery, it has been considered that the transplantation of tissue from one individual to another ("isograft") is impossible, with the possible exception of skin (and here too the prevailing opinion seems to doubt that the grafted tissue ever really becomes a part of the new host). However, Dr. Harvey B. Stone of the Johns Hopkins Medical School reported before the Interurban Medical Society (*Associated Press*, Dec. 11, 1933) that by means of a newly developed technique he had been able to successfully transplant portions of the thyroid and para-thyroid glands from one patient to another. His method is in brief as follows: small portions of tissue taken from normal persons (who suffer no ill effects because the amount of tissue removed is never great enough to interfere with the function of the gland, which besides rapidly regenerates) are grown for a time outside of the body in a culture medium obtained from the blood of the prospective recipient. (This method of "tissue culture" is widely used in experimental medicine.) After having remained in the fluids of the new host long enough to become adapted to them, the tissue is then transplanted and according to Dr. Stone grows normally and becomes an integral part of the new organism.

If Dr. Stone's work is confirmed and the method proves practicable, it will be of unusual significance, for it will make it possible to supply to patients lacking certain vital organs perfectly normal ones obtained without harm from other persons. In the past it has been possible to treat

certain glandular deficiencies by the daily injection of extracts of the gland obtained from animals, as in myxedema, a disease caused by a lack of thyroid secretion, where the symptoms may be alleviated by the injection of thyroid extract. If in such a case a portion of thyroid gland could be successfully transplanted into the sufferer, a permanent cure could be obtained.

It is of course too early to attempt any appraisal of what significance Dr. Stone's work may have.

The second item deals with the treatment of lobar pneumonia by the induction of an artificial pneumothorax, and emanates from the University of Pennsylvania Hospital in Philadelphia where, according to Dr. Alfred Stengel, Professor of Medicine in the University of Pennsylvania Medical School, the method has been used with considerable success. The procedure of pneumothorax consists of injecting a quantity of gas (atmospheric air or nitrogen usually) through the chest wall into the pleural cavity. This causes a collapse of the lung on the corresponding side, varying in extent upon the quantity of gas introduced. Pneumothorax is extensively used in the treatment of pulmonary tuberculosis, and has been used to a limited extent in the treatment of pneumonia in Europe.

Before beginning the clinical use of pneumothorax in the treatment of pneumonia, Drs. Leopold and Liebermann of the University of Pennsylvania Medical School conducted a series of experiments in dogs where it was found that fifteen of eighteen animals thus treated survived, whereas thirteen of the untreated controls died. According to Doctor Stengel the clinical results are "comparable, in every respect, with the effects of this form of treatment in animals, and with patients who have been similarly treated abroad.

"In the treatment of lobar pneumonia by this method, two or three injections of air are usually given at intervals of eighteen to twenty-four hours, depending on the rate of absorption of the air administered at the previous injection.

"The impressiveness of the results lies not alone in the high percentage of recoveries but also in the dramatic promptness of the patient's response, indicating an early artificial limitation of an infection which under ordinary conditions of medical treatment is self limited after a usual duration of seven to nine days."

There are according to Dr. Stengel certain limitations in the method. He says, "In the present state of our knowledge it is believed that it should be used when only one lung is diseased, and in cases in which the effect of the introduction of air in order to splint the affected lung will not throw an impossible burden on the heart." (*Associated Press*, Dec. 9, 1933.)

It will be of considerable interest to watch the results of the further use of this method of combating pneumonia, and to learn if further experience will confirm Doctor Stengel's impression of the value of the procedure.

MELCHERS, GARI. See **ART EXHIBITIONS.**

MELCHIOR, CARL JOSEPH. A German banker, died Dec. 30, 1933, in Hamburg, where he was born Oct. 13, 1871. He attended the Universities of Bonn and Berlin and in 1902 began his association with the banking firm of M. M. Warburg and Co., serving as managing partner after 1917. With the Paris Peace Conference of 1919 began his rôle as mediator for Germany at the various

international conferences, such as those of London, Brussels, Spa, and Genoa, at which reparations and post-war finances were discussed. In 1929 and 1930 he was a delegate to the Conferences held in Paris and The Hague at which there was formulated, under the Young Plan, the total World War reparation Germany was expected to pay. On the latter occasion a major factor in securing the German delegates' assent was the Allied promise to evacuate the Rhineland within eight months after the ratification of the Young Plan by France and Germany. He had also been a member of the League of Nations financial committee from 1926 to 1930, and on the establishment of the Bank for International Settlements in 1930 served as deputy chairman of its administrative board until his resignation in April, 1933. At the Lausanne Conference of 1932 he successfully negotiated the agreement which provided for the final settlement of Germany's reparation obligations by the payment of a lump sum of 3,000,000,000 reichsmarks (\$714,000,000).

Besides being awarded the Rathenau prize in 1932 for his work in the interests of the German Republic, Dr. Melchior received the Stolten Medal, the highest award of his native city. In 1922 he was named one of a committee of six German experts to assist the Carnegie Foundation for the Advancement of Teaching in the preparation of an economic and social history of the World War.

MELLON, RICHARD BEATTY. An American banker and philanthropist, died Dec. 1, 1933, in Pittsburgh, Pa., where he was born Mar. 18, 1858. After a private school education he began his career with his brother, Andrew W. Mellon, as a lumber dealer. The panic of 1873, however, caused the brothers to abandon this trade and enter their father's banking house, known thereafter until its incorporation in 1902 as a national banking institution as T. Mellon and Sons. There were later affiliated with the Mellon National Bank two other Pittsburgh banks, the Union Trust Co. and the Union Savings Bank, all three of which soon ranked among the soundest and most influential of Pennsylvania's financial institutions. On the appointment of Andrew W. Mellon as Secretary of the Treasury in President Harding's cabinet in 1921, his brother Richard assumed the presidency of the Mellon National Bank. He served also as a director after 1917 of the Federal Reserve Bank of the Fourth District (Cleveland) and as president of the Pittsburgh Clearing House Association.

Mr. Mellon assumed the supervision of the various Mellon industrial interests after his brother's entry into public life, including in particular the Ligonier Valley Railroad, which they had constructed in 1877 from Latrobe, Pa., eastward to the Somerset Co. boundary of Westmoreland Co., and the Gulf Oil Corp., which they had developed independently of the Standard Oil System during the '90s. Among the other corporations of which he was a director were the Aluminum Co. of America, American Surety Co., Crucible Steel Co. of America, Guaranty Trust Co. of New York, Minnesota By-Products Coke Co., National Union Fire Insurance Co., Pennsylvania Railroad Co., Pennsylvania Water Co., Pittsburgh By-Products Coke Co., Pittsburgh Coal Co., Pittsburgh Plate Glass Co., St. Lawrence River Power Co., United Gas Improvement Co., United States Aluminum Co.

The Mellon Institute of Industrial Research, which Andrew and Richard Mellon founded at the University of Pittsburgh in 1913, is often referred

to as "the West Point of America's industrial system." In recognition of the contribution which they had thereby made toward advancing the science of industrial chemistry the brothers received in 1931 the medal of the American Institute of Chemists. Richard Mellon was also prominent in the Presbyterian Church, being one of the chief sponsors in 1926 of a campaign to raise a ministerial pension fund of \$15,000,000 and giving \$3,000,000 in 1930 toward the construction of a new edifice for the East Liberty Presbyterian Church of Pittsburgh.

MEMEL, mā'mēl, or KLAIPEDA. A territory on the Baltic including the city of Memel (population 37,400) and the lower reaches of the Memel or Niemen River, which was detached from Germany by the Treaty of Versailles and incorporated in Lithuania (May, 1924). The German population received a large degree of political and financial autonomy. The governor is appointed by the President of Lithuania. The total area is 943 square miles and the population on Jan. 1, 1932, was 146,000. Governor in 1933, M. Gyls.

HISTORY. The triumph of Adolf Hitler's National Socialists in Germany early in 1933 was reflected in the municipal elections held in Memel on May 23. A Nazi organization, the Christian Socialist Workers Alliance, captured 9860 of the 19,140 votes cast, securing 18 of the 38 seats in the municipal assembly. The Social Democrats and Communists lost heavily, while the Lithuanian vote increased from 2180 at the previous election to 4510. The German Nazi movement in Memel was countered by the growing Lithuanian Fascist movement, which was determined to prevent Memel from falling into Germany's hands. In December, 1933, the Lithuanian governor dismissed 101 Germans from the civil service in Memel, most of them teachers. In many respects the struggle for control of Memel resembled that between Chancellor Dollfuss and the German and Austrian Nazis for control of Austria. See GERMANY and LITHUANIA under *History*.

MENARDOS, SIMOS. A Greek educator, died in Athens, July 23, 1933. Born at Mytilene, Lesbos, May 18, 1872, he was educated at the University of Athens, from which he received the Ph.D. and LL.D. degrees. Appointed inspector of Greek education at Cyprus in 1907, he returned to the University of Athens in 1911 as professor of ancient Greek literature, serving also as dean of the faculty of arts in 1916 and in 1923, and as rector of the university during 1925-26. From 1908 to 1914 he lectured in modern Greek at Oxford University, in 1918 at King's College, London, and in 1919 at Cambridge University. He was also vice-president of the committee for the construction of a Historical Lexicon of Greek, vice-president of the Literary Society of Parnassos, and secretary of the Greek Academy for Science and Art.

In 1930 Dr. Menardos was president of the committee for the Byzantine Congress, which was held in Athens in October and at which preliminary steps were taken toward greater economic unity and peace among the Balkan States. He was a frequent contributor to the *Journal of Hellenic Studies* and prepared an anthology of ancient Greek poetry translated into modern Greek verse (1924), and a collection of epigrams (1930). His chief work on the *Place Names of Cyprus* was crowned in 1909 by the Association for the Encouragement of the Study of Greek in France.

METALLURGY. Continued curtailment of metal production, accompanied by lack of funds for research and development, has acted as a brake on progress except in the field of gold production. In the later months of 1933, however, the scale of operations was enlarged, prices were in many instances better, and progress in metallurgical lines showed signs of getting back to normal.

ORE DRESSING. In crushing machinery, an interesting development is a high-speed impact disintegrator, with horizontal shaft, operating on the hammer-mill principle, developed at the Copper Range mill in Michigan. No description has yet been published but preliminary reports indicate that it may supplant the steam stamps heretofore used in that district for crushing native-copper ore, the only place in the world where they have been accepted. The product is about one-quarter inch in diameter. Another form of impact disintegrator is being developed at the Noranda mill, in Quebec, for copper-gold ore. It is provided with a high-speed vertical shaft surmounted by a device for hurling the ore against a fixed circular die, breaking the ore solely by impact.

A new mammoth jaw crusher is reported from Germany, weighing 250 tons and with a mouth opening 63 by 96 inches. This type of crusher continues to share popularity with the gyratory type as a primary crushing device for run-of-mine ore. For secondary crushing, the so-called cone crusher continues more popular than rolls. A new short-head form of the cone crusher, recently introduced, makes a somewhat finer product. Used in closed circuit with screens, finished products as fine as 14 mesh are possible. Magnets are customarily used over the feed and discharge belts to remove all tramp iron. V-belt drives are popular.

Development of the Hadsel mill has continued, this being a slow-revolving wheel of large diameter for crushing ore by impact. Mechanical difficulties have necessitated re-design of the machine for several new installations. It appears suited to some types of ore, but of not such wide applicability as at first thought.

For fine-grinding, the ball mill and, less frequently, the rod mill continue in general use, though much study has been given recently to the deficiencies of this type of equipment. The importance of large circulating loads and quick removal of material ground sufficiently fine for the subsequent metallurgical process has been emphasized. A better desliming classifier for this work is needed; an entirely new type may be developed. It has been suggested that the cone washer, as used for coal, might be adapted to ore dressing. Another coal-washing machine, the Hydrotator, a classifier of the hindered-settling type, has possibilities. It consists essentially of a cylindrical tank in which is installed a vertical shaft bearing horizontal arms that revolve near the bottom. Water passes through the shaft and arms, from the bottom of which it emerges through small holes, the water impinging against the bottom of the tank. The ore pulp enters at the top of the tank and the falling ore particles meet the rising current of water. The slime is floated off and the larger and heavier particles removed from the bottom of the device.

In the conventional ore classifier used in closed circuit with most ball mills, a new type has been

developed to increase the duty for heavy work. This is the new Dorr "FX" machine, developed at the Braden mill in Chile and now being applied at the Wright-Hargreaves in Canada and elsewhere. The feature of the new machine is an entirely new head-motion that resembles a valve linkage on a locomotive. This permits strokes as high as fifty per minute without "weaving" of the machine and does away with the rakes' riding on the sand when heavily loaded. The machine is expensive, and weighs twice as much as the old type, but has three times the capacity. So far as metallurgical efficiency goes, the new type is no improvement on the old, for duties to which the old was adapted.

Several new forms of vibrating screens have appeared, and this method of separating fine sizes has even been applied to a wet ball-mill product, as in a silica mill in California. Here a separation is made at about 35 mesh, more efficiently than with a classifier.

Flotation continues as the dominant process for removing fine minerals of value from waste rock. As to just why minerals float, there is not, after all these years, common agreement. The "chemical" theory assumes that flotation reagents function by means of ordinary chemical reactions with molecules at the surface of the mineral. On slightly oxidized sulphide particles, the flotation reagent may react to form a compound less soluble than the oxidation product but more soluble than the sulphide itself. The hydrocarbon part of the reagent is oriented away from the surface and since it has more attraction for air than for water, the particle becomes attached to an air bubble in the pulp and is thereby floated off. Another theory holds that the flotation reagent is selectively adsorbed on the surfaces of the mineral particles, forming a monomolecular layer with the hydrocarbon groups oriented outward.

Whatever the theory, excellent results are being secured on a constantly wider variety of material, including many nonmetallics. Few quantitative data are yet available on such subjects as depth of bubble column, bubble size, and pulp temperature and density; nor on the types of machines best suited to various ores; nor on the proper position of flotation in the flowsheet.

One recent trend in ore dressing should be noted: a general acceptance of the desirability of removing a middling product early in the concentration process, and of regrinding it to unlock the mineral grains for subsequent separation. In this work, the microscope has played a conspicuous part. This instrument is now an essential part of all milling laboratory equipment. Presence of valuable minerals previously unsuspected may be determined.

In the realm of filtering concentrate, a new Laughlin continuous filter has been offered recently. It has a ring-shaped filtering medium consisting of granular magnetite, all parts of which are stirred in sequence by a traveling solenoid, allowing a thorough cleaning by a flow of water.

The importance of concentration in the treatment of nonferrous ores is attested by the data in the table on page 485, compiled by the U. S. Bureau of Mines. Comparatively little ore, other than iron ore, is smelted directly these days. Even on iron ore, progress is being made on jigging and magnetic roasting.

GOLD. Emphasis has been placed on the removal of as much gold as possible at the first opportunity, when the pulp is coarser than the final

TOTAL NONFERROUS ORE PRODUCED IN THE UNITED STATES IN 1932, BY CLASSES OF ORE AND METHODS OF TREATMENT, IN DRY TONS

Method of treatment	Copper ore	Copper-lead ore	Lead ore	Lead-silver ore	Zinc ore	Gold and silver ore	Total ore
Straight flotation concentration	8,956,121	165,490	35,816	1,141,646	194,396	97,706	10,591,175
Combined gravity and flotation concentration	2,022,846	4,815,740	1,909,402	1,105,993	202,488	9,555,969
Straight gravity concentration	15	8,157	24,500	11,900	12,088	51,660
Total ore concentrated	10,978,482	165,490	4,854,713	8,075,548	1,812,289	312,282	20,198,804
Direct smelting	752,527	1,616	99,155	1,216	715	225,612	1,080,841
Amalgamation or cyanidation	8,619,718	8,619,718
Miscellaneous methods	581,207	260,800	580,509	1,422,816
Total ore, all methods:							
1932	12,812,216	167,106	4,453,868	3,387,864	1,898,513	4,157,612	26,821,679
1931	34,447,480	203,334	6,048,169	6,028,825	3,912,958	4,134,076	54,764,842

product of grinding. This removal may be made by various means: amalgamation, blankets, tables, flotation. Practically all of the small gold mills that have been constructed in the last year use flotation; also many of the old established large plants, though it has not been adopted in the world's largest gold field, the Rand. When a flotation tailing can be rejected, the process is clearly advisable. Pyrrhotite has been found particularly troublesome in cyanidation, and where present, consideration should be given to its removal by flotation.

In some gold mills, flotation is the only process used, the tailing going to waste and the concentrate being shipped to a smelter. Another flow-sheet floats the ore first, regrinding and perhaps roasting the concentrate, and then cyaniding both it and the flotation tailing. Or the ore may be cyanided, and the cyanide tailing floated. One of the outstanding large new gold mills, described during 1933, is that of the McIntyre Porcupine, in Ontario. Here, flotation is followed by regrinding and cyanidation of the concentrate. The ball-mill discharge, without mechanical classification, goes to a Fahrenwald flotation cell which is equipped with a hydraulic classifier in its bottom section to catch coarse gold. It has been phenomenally successful.

Tellurides present in gold ores are treated at Kirkland Lake, Ontario, by a combination of a fine grind, highly alkaline circuit, extreme aeration, and relatively high temperatures. Possibly these conditions are indicated whenever the mineral must be broken down by chemical action to free its gold for solution in cyanide.

COPPER. Exceptionally good work is reported from the Noranda smelter, in Quebec, where the two reverberatories averaged 1193 tons of solid charge per furnace last year, using 10.65 per cent of powdered coal on the solid charge. The furnaces have an outside measurement of 29½ by 105 ft. Their great capacity has been secured by (1) using a greater percentage of 5-lb. air in the coal-dust burners; (2) widening the furnace by decreasing the thickness of the side walls, and increasing the effective width by moving the drop holes as close to the side walls as possible; (3) raising the furnace arch; (4) use of preheated primary air; (5) use of as hot and as fine calcine as possible.

Flash roasting, by dropping fine dry concentrate through a heated chamber containing air, has largely superseded roasting in the old mechanically rabbled hearth furnace at some plants. The practice has been given no publicity as yet, possibly owing to the patent situation, but is likely to become of increasing importance.

Of notable importance was the publication early in 1934 of a 740-page volume devoted to the metal-

lurgy of copper, by the American Institute of Mining and Metallurgical Engineers. This is the first book on the subject that has appeared for a number of years, and though consisting of individual papers, adequately covers current smelting, refining, and leaching practice in America. There is a particularly good section on waste-heat-boiler practice in connection with copper reverberatory furnaces.

Copper sheets are now being made by electro-deposition on a commercial scale. Considerable work has also been done in developing the treatment and extending the uses of copper powder, oxygen-free copper, and end-poured copper shapes, cast in vertical molds.

LEAD. Lead smelters have been forced recently to handle an increasing tonnage of scrap material, such as automobile battery plates. The extent of this business is shown by the fact that in 1932, 255,000 tons of lead was recovered from domestic ores in the United States and 198,000 tons from scrap material. Large smelters are handling this scrap material in reverberatory furnaces, endeavoring to get most of the antimony into the slag, which is then reduced to produce about a 30 per cent antimonial lead.

The Betts electrolytic process for refining lead, especially that high in bismuth, is gradually being abandoned, only one plant, that at Trail, B. C., now being in operation. The Betterton process, on the other hand, is becoming more popular; it employs calcium and magnesium for the removal of bismuth.

The Grasselli, Indiana, plant of the United States Smelting company has been abandoned and a new lead refinery built at Midvale, Utah, adjoining the company's smelter. Molten lead is brought from the blast furnaces in four-ton fire-brick-lined steel pots, which are dumped into the drossing kettles. These are of 1-in. welded steel, of 235 tons' capacity, supported entirely by a rolled flange on the upper edge of the kettle. The Hulst method for decopperizing the drossed lead by means of sulphur is used; the dross is added to the reverberatory charge. The drossed lead is softened in a 200-ton furnace, where the aim is to reduce the antimony to as low a figure as possible. After desilverizing in kettles the lead is treated by chlorine for the removal of zinc, and is cast by machine at the rate of 30 to 40 tons per hour.

ZINC. Complete roasting of zinc ores on large sintering machines, utilizing the gas for acid manufacture, is becoming increasingly popular, thus eliminating the old hearth-roasting furnaces. Silica brick as a furnace lining has come into quite general use. On the Continent, an improved design of the Dor-Delattre furnace has been developed, embodying automatic charging and effecting increased recoveries and better working

conditions. An electrolytic zinc plant is being constructed in Germany, to have a capacity of 25,000 long tons per year. Waelz kilns will be used to work up the leach residues. Electro-galvanizing by the Tainton process for applying heavy coatings to wire has been commercially developed by the Bethlehem Steel Co. In England, Sherard Cowper-Coles has developed a process for electrodepositing zinc on steel plate, the equipment being continuous and automatic.

Pigment zinc sulphide in the paper, floor covering, paint, and allied industries has increased to such an extent recently that the New Jersey Zinc Co. has built a new plant for its production. Raw sulphide ore is leached with sulphuric acid, producing hydrogen sulphide and crude zinc sulphate. The sulphate is leached with water, the solution purified, and then treated with the hydrogen sulphide gas to form the pigment.

Among the less common metals, beryllium is commanding increasing attention, especially in an alloy with copper containing $1\frac{1}{2}$ to $2\frac{1}{2}$ per cent of beryllium. With heat-treatment, a tensile strength of 200,000 pounds per square inch can be secured, as contrasted with 33,000 for copper alone. High fatigue resistance, attainable hardness of 350 to 400 Brinell, good electrical properties and satisfactory machining qualities are favorable to the increased use of these alloys.

Chromium is finding increased use through the development of two-ply metal sheets, mild steel clad with stainless steel. Chromium linings are finding increased use in a variety of utensils. Smelting of domestic chrome ore is being accomplished in Montana. Molybdenum is finding increasing outlets in the steel industry sufficient to keep domestic producers exceedingly busy. Selenium is being produced in a new plant just built in connection with the refinery of Canadian Copper Refiners, Montreal East, Quebec.

METALS. See **CHEMISTRY, INDUSTRIAL OR APPLIED.**

METEOROLOGY. Much public interest in the stratosphere has been aroused recently because of the flights into this region by Piccard in Europe, and by Settle in America. While some scientific data have been obtained, many more observations will be necessary before all the needed facts about the upper air can be definitely ascertained. It should be borne in mind that continuous records of the surface meteorological conditions have been made for over fifty years, yet a complete explanation of all the observed phenomena is still far from having been accomplished. Conditions in the stratosphere are known from sounding balloon records to vary from season to season, and from day to day, and undoubtedly the stratosphere is an important factor in the everyday course of the weather. Direct observations of the stratosphere should supplement the data being gathered by other means, and should add to the general knowledge of the atmosphere.

Durst has studied the structure of wind over different surfaces. He classifies winds into three types: (a) those in which there are wide fluctuations in both speed and direction which he considers are caused by convectional cells moving along with the wind, the gusts being due to down currents in the rears of the cells, and attendant frictional eddies caused by the striking of air against obstacles; (b) smooth flowing air which occurs when a surface inversion is present and external frictional eddies are heavily damped; (c) those winds in which internal frictional ed-

dies are present due to the wind gradient exceeding a critical value. Durst shows that these three types are readily recognized from the autographic records of wind direction and speed. He also points out that over the sea the short period fluctuations in wind are greater in tropical air than in polar air, although when inversions occur over the sea smooth flowing air can persist with higher speeds than over level land. Along similar lines Walker has shown that clouds may be regarded as products of a scheme of air motion in the form of cells, with upcurrents along their axes and downflow in the peripheries.

In September Admiral Byrd started on his second Antarctic Expedition. During the Expedition's stay in the Antarctic, extensive observations of the Antarctic weather will be made. These observations, as well as the weather observations of Byrd's first Antarctic Expedition, and those taken during the Jubilee Year around the North Pole, which have not yet been published, will be important additions to our knowledge of Polar meteorology.

METEOROLOGICAL PHYSICS. As a result of observations and experiments made during the past twenty years, Vegard of Norway has given a plausible explanation of the cause of aurorae; this explanation throws considerable light on the state of the earth's atmosphere at high levels. The heights of aurorae are easily determined by trigonometric methods; and aurorae are found at all levels from 70 to 800 kilometers above the earth's surface. Vegard places the average temperature of the auroral region at -31° C. Spectroscopic studies of the aurorae indicate that their glow is due mostly to electrically excited nitrogen gas which exists at considerable density at these great heights. Vegard has observed 83 lines and bands in the spectrum of the aurorae. Spectral lines characteristic of the light gases hydrogen and helium are absent or at least extremely weak, in the auroral spectrum; hence Vegard concludes that there are no layers of light gases in the very high atmosphere.

Vegard states that in the aurorae we observe the nitrogen of the high atmosphere made luminous through the action of electric rays from the sun. In the auroral region the nitrogen is brought to the high altitudes by electrical forces which result from the photoelectric action of short wave length solar radiation. The distribution of matter at the limits of the earth's atmosphere is similar to that around the sun, whose atmosphere is surrounded by the solar corona. That is, the earth may be thought of as having a corona, which differs from the solar corona chiefly in that the latter is due to influences from the sun itself, while the earth's corona is not due to terrestrial influences; moreover, the solar corona is relatively constant, while the terrestrial corona varies considerably from day to night. The shape of the earth's corona (more prominent on the day side of the earth) explains the facts that the maximum altitude reached by auroral rays increases toward the equator, and that aurorae extend higher near sunset than at midnight.

Two interesting and important papers have been published recently by Carl Störmer on clouds in the stratosphere, a region commonly free from clouds of every kind. There are two types of these clouds: the nacreous which occurs at heights of 20 to 30 km. above sea level; and the noctilucent which forms at about 80 km. above sea level. The nacreous resembles an alto-cumulus lenticularis,

or, more exactly, an alto-stratus lenticularis, though presumably it contains much less cloud material than either of these generally do, and is brightly colored like a glorified iridescent cloud. The noctilucent seems usually if not always to resemble cirrus. It is silvery, or bluish white, in color and has been seen in both hemispheres but only when the lower atmosphere was in the shadow of the earth and the cloud in full sunshine. These two kinds of clouds have long been recognized, even before the existence of the stratosphere was established, but it has been very recently that Störmer has measured their heights trigonometrically. From coronae observed in the nacreous clouds, he has computed the diameters of the particles forming them at not to exceed 0.0025 mm.

PHENOMENA. There was an unusually large number of tropical hurricanes in the North Atlantic during the year. A total of 17 were observed, more than half being severe. Usually about 7 are observed each year. Two of them struck the coasts of the United States, Florida and Southwestern Texas, respectively, on September 4; the simultaneous landfall of two tropical storms was unprecedented in the history of the Weather Bureau.

METHODIST CONNECTION (OR CHURCH) OF AMERICA, WESLEYAN. A branch of the Methodist Episcopal Church, organized in 1843 in Utica, N. Y., as an anti-slavery and non-episcopal denomination. In 1933 it comprised 29 annual conferences. There were 649 churches, 854 ministers, and 24,350 members. The Sunday schools numbered 652, with 7174 teachers and officers, 45,039 pupils, and 7059 persons enrolled in the home department and on the cradle roll.

The different corporations of the church meet annually in February in Syracuse, N. Y. These corporations are: The Wesleyan Methodist Connection (or Church) of America; the Wesleyan Methodist Publishing Association; the Superannuated Ministers' Aid Society of the Wesleyan Methodist Connection of America; the Missionary Society of the Wesleyan Methodist Connection of America.

The church maintained the following educational institutions: Houghton College in Houghton, N. Y., Central College in Central, S. C., Marion College in Marion, Ind., and Miltonvale College in Miltonvale, Kans. The foreign missionary department of the Missionary Society continued its work in Africa, India, and Japan, and the department of home missions and church extension among the American Indians, Mexicans, and mountaineers of the South. The *Wesleyan Methodist*, weekly, is the official organ of the church. The officers are: President, the Rev. E. D. Carpenter; first vice-president, the Rev. J. S. Willett; second vice-president, Joe Lawrence; and secretary, the Rev. E. F. McCarty. Headquarters are at 330 East Onondaga Street, Syracuse, N. Y.

METHODIST EPISCOPAL CHURCH. Principal body of the denomination that sprang from the Oxford Movement of the eighteenth century, its aim, according to John Wesley, being a "revival of Christian earnestness, simplicity, and power." (For historical details, see the *NEW INTERNATIONAL ENCYCLOPEDIA*, vol. xv, and the *NEW INTERNATIONAL YEAR BOOK*, 1932.) The Methodist Episcopal Church in the United States was organized under the leadership of Francis Asbury at the Christmas conference held in Baltimore, Md., in 1784. The governing body of the church is the quadrennial general conference, composed of an equal number of ministerial and lay delegates who make all the rules and regulations and appoint commissions to carry on the work of the church. The last such conference was held in Atlantic City, N. J., May 2-25, 1932. There are also held annual conferences, presided over by the bishop of each area, at which all pastoral changes are considered and reports of the local churches are gathered and compiled.

In 1933 there were in the United States and territories 95 annual conferences and missions, 375 districts, and 14,807 charges in 18 episcopal areas. Effective ordained ministers numbered 12,445 and local, or lay, preachers, 10,092. There were 4,259,397 church members, of whom 569,934, however, were inactive. The preparatory roll had 100,210 members. Enrolled in the 23,901 church schools were 3,947,306 pupils. The Epworth League had 559,445 members. Conferences outside of the United States in 12 episcopal areas included 5 in Africa, 10 in eastern Asia, 21 in Europe and northern Africa, 5 in Latin America, 3 in southeastern Asia, and 12 in southern Asia. Of the 311,013 members 22,195 were inactive. The preparatory roll had 327,315 members. There were 1716 effective ordained ministers and 4249 local preachers. Church schools numbered 7011 with an enrollment of 339,878 pupils. There were 67,187 Epworth League members.

The administration of the missionary, educational, and philanthropic work of the Methodist Episcopal Church is committed to six general boards: Foreign missions; home missions and church extension; education; hospital, homes, and deaconess work; pensions and relief; and temperance, prohibition, and public morals. These boards cooperate in the world service movement, their budgets being fixed and their work correlated by the world service commission. On May 31, 1933, this commission reported total net receipts of \$3,495,698.

The board of foreign missions administers the missions of the church in Africa (Central and South), Europe and North Africa, Eastern Asia (China, Japan, Korea), Latin America (Mexico, Central America, South America), Southeastern Asia (Philippine Islands, Malaya, Sumatra), and Southern Asia (India and Burma). The board of home missions and church extension administers the missions in the United States and its possessions, not including the Philippine Islands, and looks after weak churches in new and growing communities in the United States. There are also two women's missionary societies, the foreign and the home.

The educational system of the church, administered by the board of education, included, in 1933, 47 colleges and universities, 24 secondary and preparatory schools, 8 schools of theology, and 15 institutions for colored students. The board of hospitals, homes, and deaconess work admin-

istered, 77 hospitals, 44 homes for the aged, 43 children's homes, 45 deaconess homes, and 27 homes for young business men and women. The board of pensions and relief reported at the general conference in 1932 a connectional permanent fund amounting to \$1,376,825; endowments and reserves in trust, \$332,028; conference stewards' fund in trust, \$303,193; and ministers' provident annuity fund, \$614,751.

The board of temperance, prohibition, and public morals is responsible to the general conference, its purpose being "to make more effective the efforts of the church to create a Christian public sentiment" and "to crystallize opposition to all public violations of the moral law and to all attempts to undermine and destroy civil and religious liberties."

The official publications of the church are the *Christian Advocate* (New York, Cincinnati, Chicago, Kansas City, San Francisco, and Southwestern editions); the *Epworth Herald* (Chicago); *Zion's Herald* (Boston); and *Der Christliche Apologete* (Cincinnati). The secretary of the general conference is the Rev. John M. Arters, 700 Hammond Street, Bangor, Me.

METHODIST EPISCOPAL CHURCH, COLORED. This denomination was organized in Jackson, Tenn., in 1870 and was composed of the colored membership of the Methodist Episcopal Church, South. In 1933, it reported 4321 churches with 493,610 members; 3060 traveling preachers and 1932 local preachers; 3268 Sunday schools with an enrollment of 323,610 pupils; and 1819 Epworth Leagues with a membership of 47,610. The amount raised during the year for educational purposes was \$98,000 and about the same for missionary purposes. More than \$1,000,000 was also contributed for home maintenance. The church has 6 bishops and 12 connectional officers. The *Christian Index* is the official organ, while the *Eastern Index* and *Western Index* serve their respective sections. A quadrennial general conference was to be held in St. Louis, Mo., May, 1934. Headquarters are in Jackson, Tenn.

METHODIST EPISCOPAL CHURCH, SOUTH. A separate branch of the Methodist Episcopal Church, formed in 1845 over the question of slavery. In 1933 there were 48 conferences and missions, of which 41 were in the United States and seven in foreign countries; 16,362 churches; 8038 traveling preachers and 4358 local preachers; and 2,701,537 church members. Sunday schools numbered 15,499, with an enrollment of 1,974,351 pupils; and Epworth League societies, 10,359, with a membership of 313,353. Contributions for all purposes in 1933 amounted to \$21,511,490. The denomination sponsored 87 educational institutions, including 48 universities and colleges, 8 academies, and 31 mission schools. Important periodicals are the *World Outlook* and the *Christian Advocate*. The executive body is the college of bishops which in 1933 had 15 members. The general conference, its governing and law-making body, was to meet in quadrennial session at Jackson, Miss., in April, 1934. Headquarters of the church are in Nashville, Tenn.

MEXICO. A federal republic of North America. Capital, Mexico City.

AREA AND POPULATION. With an area of 760,290 square miles, Mexico had a population at the

1930 census of 16,552,722 (8,119,004 males and 8,433,718 females), compared with 14,334,780 in 1921. Of the 1930 population, 9,040,590 were of mixed race (white and Indian), 4,620,880 were Indian, 2,444,466 were pure white, 140,094 were of unknown racial origin, and 158,000 (including about 14,600 United States citizens) were foreigners. About 1,791,000 Indians still spoke their native language. Populations of the chief cities in 1930 were: City of Mexico, 1,029,068 (615,367 in 1921); Guadalajara, 175,539; Monterrey, 132,577; Puebla, 114,793; Mérida, 95,015; San Luis Potosí, 74,003; Tampico, 68,126; León, 69,238; Vera Cruz, 67,494; Torreón, 66,001; Aguascalientes, 62,244.

EDUCATION. The census of 1930 showed 56.08 per cent of the population illiterate, compared with 65 per cent in 1921. The population of school age in 1930 was 3,369,975, while school enrollment was 1,816,699. In 1932 there were 610,030 pupils in 7165 primary public schools, 6885 in 15 public secondary schools, and 3460 in 31 private secondary schools. There were 9472 students in the seven universities in 1930.

PRODUCTION. Agriculture is the main support of the population. About 24,000,000 acres, or 5 per cent of the total area, was under cultivation in 1932; there were 146,000,000 acres of pasture and 43,993,000 acres of forests. Livestock in 1930 included 3,735,000 cattle, 2,728,000 swine, 1,574,000 sheep, 3,150,000 goats, and 2,580,000 horses, mules, and asses. The chief crops were reduced in 1932 by drought and frost, but the 1933 harvest was unusually good. Production of the principal crops in 1932 (thousands of units—bushels except as indicated), with 1931 figures in parentheses, was: Wheat, 9658 (16,226); barley (3158 in 1931); corn, 76,458 (84,196); rice (rough), 3574 (3535); beans, 4304 (4096); tomatoes, 78 metric tons (77); tobacco (25,184 pounds in 1931); cacao beans (1753 pounds in 1931); coffee, 72,475 pounds in 1931–32 season; cotton, 45,331 pounds (100,488); henequen, 118 metric tons (84); chick-peas, 1605 (3301); alfalfa, (1637 metric tons in 1931).

The value of mineral and metal production in 1932, excluding petroleum and coal, was 147,913,000 pesos (\$47,184,000); in 1931, 202,874,000 pesos (\$72,000,000). Petroleum production in 1932 was valued at 75,687,000 pesos (\$24,144,000); in 1931, 77,530,000 pesos (\$27,515,000). Output of the chief minerals in 1932 (1931 in parentheses) was: Gold, 600,000 troy ounces (628,000); silver, 69,398,000 troy ounces (87,461,000); copper (metal content of ores), 34,938 metric tons (54,121); lead (metal content), 132,779 metric tons (226,629); zinc (metal content), 57,100 metric tons (120,292); antimony (metal content), 1737 metric tons (5443); arsenic (white), 3967 metric tons (6508); graphite, 2045 metric tons (3122); mercury (metal content), 255 metric tons (255); coal, 605,000 metric tons (808,000); petroleum, 32,805,000 barrels (33,039,000). The 1933 petroleum output was 34,000,830 barrels.

The 1930 industrial census showed 48,850 manufacturing and industrial establishments, representing an investment of 979,529,000 pesos (\$461,652,000) and employing 318,763 persons. The value added in the process of manufacturing by the chief industries in 1930 was: Foodstuffs, \$76,365,000; textiles, \$58,331,000; earth, stone, and metals, \$41,755,000; hides, rubber and paper,

\$21,780,000; chemicals, \$13,652,000; machinery and tools, \$11,686,000.

COMMERCE. Imports into Mexico in 1932 were valued at 180,912,000 pesos (\$57,621,000), compared with 216,585,000 pesos (\$92,352,000) in 1931. Exports amounted to 304,697,000 pesos (\$97,046,000), against 399,711,000 pesos (\$170,437,000) in 1931. Conversions to dollars were made at average exchange rate of \$0.3185 for 1932 and \$0.3549 for 1931 (par value of peso, \$0.4985). The chief import items in 1932 were: Machinery, \$6,322,000; mineral oils and by-products (except asphalt), \$3,757,000; automobiles and chassis, \$3,066,000; lard and substitutes, \$2,200,000. The principal 1932 export items were: Silver, \$11,131,000; gold, \$10,677,000; lead, \$6,817,000; henequen, \$4,692,000; crude petroleum, \$4,630,000; fuel oil, \$4,390,000; copper, \$4,353,000; tomatoes, \$4,284,000; coffee, \$4,257,000.

The United States in 1932 took 65.3 per cent of Mexico's exports (61.2 in 1931); Germany, 6.6 (7.7); United Kingdom, 4.0 (11.9). Of the 1932 imports the United States supplied 63.8 per cent (66.8 in 1931); United Kingdom, 7.9 (7.2); Germany, 11.3 (9.0). United States trade statistics showed exports to Mexico in 1932 of \$31,899,714 (\$37,519,534 in 1933) and imports from Mexico of \$37,422,588 (\$30,715,914 in 1933). Total imports into Mexico (1933) were 244,495,000 pesos; exports, 364,967,000 pesos.

FINANCE. Early in 1933, Secretary of Finance Pani reported a budget surplus of approximately 500,000 pesos in 1932, with actual receipts totaling 201,288,000 pesos. Preliminary returns for the 1933 fiscal year indicated a surplus of between 2,000,000 and 3,000,000 pesos, with expenditures totaling about 233,000,000 pesos. The 1934 budget, as approved by Congress Dec. 23, 1933, called for revenues and expenditures balancing at 243,000,000 pesos. Expenditure appropriations included 61,118,189 pesos (25 per cent of the total) for the army and 40,669,180 pesos for service of the internal public debt (25,468,709 pesos in 1933). Education and highways received 31,235,183 pesos and 30,429,054 pesos, respectively. The public debt as of Dec. 31, 1932, stood at 1,051,802,000 pesos (external, 1,021,471,000; internal, 30,331,000). In December, 1931, the Mexican government arranged with the International Committee of Bankers for a moratorium on foreign debt payments, extending to Jan. 1, 1934.

COMMUNICATIONS. Mexico in 1932 had about 14,800 miles of railway lines, the principal system being that of the National Railways of Mexico. In 1931 the National Railways carried 5,910,000 metric tons of freight and earned gross receipts equivalent to \$36,759,000. There were some 62,137 miles of highway (380 miles surfaced). Road construction was being actively pushed to attract tourist traffic, particularly from the United States. The 770-mile highway from Laredo, Tex., to Mexico City was practically completed in 1933. Construction of a highway from Nogales to Hermosillo, Sonora, was under way. During 1932 planes of civil air lines flew 1,595,461 miles, carrying 23,447 passengers, 88,241 pounds of mail, and 966,316 pounds of express and baggage.

GOVERNMENT. The Constitution of 1917, as amended in 1929, vested executive power in the President, elected by direct popular vote for four years and ineligible for reelection. Legislative

power was vested in a Congress of two houses—the House of Deputies, of 185 members, elected for two years by popular suffrage, and the Senate, of 58 members, composed of two members from each state, elected in the same manner. Congress sits from September 1 to December 31, and during the remainder of the year delegates its powers to a permanent committee of 14 Senators and 15 Representatives appointed by the respective houses. President in 1933, Abelardo L. Rodríguez, elected by Congress Sept. 4, 1932, to complete the term of office ending Nov. 30, 1934, following the resignation of President Pascual Ortiz Rubio on Sept. 3, 1932. The Republic comprises 28 states (with large powers of autonomy), three territories, and the Federal District embracing the City of Mexico. The National Revolutionary party, organized by former President Plutarco Elias Calles in 1928, retained complete control of the government through 1933.

HISTORY

SIX-YEAR PLAN. At the instigation of former President Calles, Mexico's unofficial dictator, the predominant National Revolutionary party during 1933 definitely espoused socialism as its goal. A six-year plan, designed to hasten the socialization of Mexico without transgressing upon socially useful private enterprise, was adopted by the annual party convention at Querétaro in December. Before the end of the month, legislation was passed by Congress empowering President Rodríguez to put the plan into effect on Jan. 1, 1934.

General Calles' suggestion, first made in June, 1933, was that the state should intervene actively to remedy "the broken equation of unemployed men and unemployed national resources." He declared that Mexico lacked the moral and administrative preparation required for successful collective operation of economic enterprises and that for the time being she "must depend on private initiative, guided and sustained and channeled by the state, stimulating distributive justice and blazing the trail toward the socialistic state." His proposals were studied and elaborated by the government. As submitted to the party convention in published form, they called for "a coöperative economic system tending toward socialism." The specific aims of the Six-Year Plan were: (1) to improve the workers' standard of living, (2) to establish definite minimum wages, (3) to promote mass education, (4) to complete the agrarian and public-works programme, and (5) to improve Mexico's relations with foreign countries.

In accordance with the recommendations of the party convention, Congress on December 21 invested President Rodríguez with extraordinary powers for a period of nine months to enable him to put the plan into effect by decrees. He was authorized to amend and revise the mineral laws of 1926 and 1930; to reorganize the diplomatic and consular service; to reform the civil and criminal codes; to change the regulations for monopolies; to coördinate highway construction; and to decree new public health legislation.

Under the authority conferred upon him, President Rodríguez announced an extensive programme of public works and economic reconstruction for 1934. The public-works programme called for the expenditure of about 50,000,000 pesos on irrigation projects, municipal water and sanitation systems, parks, markets, housing for

workmen, highway construction, modernization of the national telegraph system, establishment of public health centres, and the erection of school houses. Other parts of the plan provided for a new agrarian department to expedite the distribution of communal lands to villages, and the extension of credit to small farmers by the National Bank of Agricultural Credit. The employment of foreign technical experts was to be restricted and industrial enterprises required to train Mexican technologists. Amendment of the mining laws to aid small Mexican companies was envisaged; also the establishment of a Federal electrical commission with broad authority over power and light companies, to extend and improve electricity service for small villages and communities.

The Six-Year Plan provided also for the direct intervention of the Federal government in foreign trade, by means of a commission to control imports and exports, a board of standards, a semi-official exporters' association, governmentally facilitated credit and insurance for exporters, and officially designated sales agents in foreign countries. The cooperative movement was to be encouraged. Trade by barter with Central America was to be studied.

AGRARIAN REFORM. The government's recovery plan was added to by the party convention in two particulars. The convention enthusiastically approved a proposal by the Vera Cruz delegation that the Constitution be amended to make "Socialist education . . . the basis for primary and higher education." This project was debated in Congress, but a final decision was reserved until the 1934 session. The other amendment adopted by the convention called for conversion of the National Agrarian Commission into an autonomous government department to facilitate land distribution to the peasants. On December 20 Congress carried out this recommendation by submitting to the state legislatures a proposal for a constitutional amendment. It authorized the President to expropriate lands and distribute them without hindrance from the courts. Compensation was to be made for expropriated lands through additional national bonds (some \$250,000,000 of agrarian bonds were already outstanding, with little prospect of redemption). The amendment had been ratified by 20 of the 29 Mexican states, or more than the required two-thirds, before the end of the year.

CÁRDENAS NOMINATED FOR PRESIDENT. Another important function of the National Revolutionary party convention was the nomination of a Presidential candidate to run in the July, 1934, election. By unanimous vote the nomination, which was practically equivalent to election, went to Gen. Lázaro Cárdenas, who had resigned as Minister of War on May 15 in order to legalize his candidacy. Only 38 years old, General Cárdenas had long been active in party circles and had served as Governor of Michoacán, president of the party, and minister in two cabinets. He was descended from the Tarascan Indians. Other leading contenders for the nomination, were Gen. Manuel Pérez Treviño, who resigned as president of the party May 12; Finance Minister Alberto Pani, who resigned September 28; and former Gov. Alberto Tejeda of Vera Cruz, head of the party's radical wing. Gen. Pérez Treviño abandoned his candidacy on June 7. On June 11 Colonel Tejeda announced his endorsement of the newly formed Radical party in Vera Cruz. It was considered likely that he would oppose General

Cárdenas in the 1934 elections, but with little chance for success. In accepting his party's nomination, General Cárdenas pledged strict enforcement of the anti-clerical laws, repatriation of Mexican émigrés, support for the greater participation of women in public affairs, and continuance of the army as "the stronghold of proletarian tendencies and the source of inspiration of our social evolution."

If elected, he would serve a six-year term, commencing Dec. 1, 1934. A constitutional amendment, ratified by two-thirds of the states and promulgated Mar. 20, 1933, increased the Presidential term from four to six years, but made the incumbent ineligible for reelection. By the same amendment, Senators and Deputies were to be chosen for six and three-year terms, respectively. Senators, deputies, mayors, and state legislators were barred from succeeding themselves, but might be reelected after the lapse of one term. The president and the state governors were restricted to one term. The object of the amendment was declared to be the prevention of the establishment of a dictatorship in any form or the control of the federal or state governments by a single individual or group for a long period. It was thus calculated to prevent revolutions and to develop new leaders.

SYMPTOMS OF UNREST. The possibility of an anti-government uprising by the radical agrarians in Vera Cruz had developed late in 1932 (see *INTERNATIONAL YEAR BOOK* for 1932). President Rodríguez met this threat against his government with firmness, sending some 17,000 Federal troops into the state. On Jan. 10, 1934, he ordered the disarming of all agrarian guards in Vera Cruz. These guards, numbering between 15,000 and 20,000, were said to have been used by Colonel Tejeda and other disgruntled local leaders to oppose the government's policies.

Thereafter the country was reported quiet, except for an abortive attempt by nine young army officers to oust their superiors after the fashion of the sergeants' revolt in Cuba. Arrested in October, they were released with a reprimand. A demonstration against the government and the National Revolutionary party by 7000 persons in Mexico City, led by Aurelio J. Manrique and Antonio I. Villareal, was broken up by the police November 19. The two leaders were released after a short detention.

STUDENT RIOTS. A somewhat more serious situation was presented by the student riots, which broke out in the university towns of Guadalajara and Durango on November 17. The students, demanding autonomy for their institutions and a government subsidy, clashed with local police. In Guadalajara 18 students were injured and more than 100 arrested. Shortly before 30 members of the law faculty of the National University in Mexico City had resigned, asserting that the students were more interested in politics than in their studies. On October 18, the Federal Chamber of Deputies approved a measure submitted by President Rodríguez which extended autonomy to the National Universities and an annual subsidy of 10,000,000 pesos.

THE CHURCH-STATE CONTROVERSY. The controversy between the government and the Roman Catholic Church, which verged on open conflict in 1932, was largely quiescent during 1933. The government, however, continued to display an attitude violently antagonistic to the Church. Vigorous denunciations of the clergy marked the

convention of the National Revolutionary party. General Calles charged the clergy with instigating the student riots, a charge denied by Archbishop Pascual Diaz. Additional anti-Catholic legislation was adopted by some of the States. The Guanajuato Legislature on March 1 ruled that all priests who professed allegiance to a foreign potentate would be declared foreigners. As the Pope was considered a foreign potentate and foreigners were prohibited by law from officiating as priests, the measure in effect outlawed all Roman Catholic priests of the state. In February it was reported that the state of Chiapas had suspended all Roman Catholic Church functions. The conflict with the state authorities of Vera Cruz appeared to be terminated by the capitulation of the Church. The Bishop of Vera Cruz announced June 12 that the two-year-old restrictive clerical law would henceforth be complied with. Hundreds of churches in the state had been closed following the Church's previous opposition to the law. The clergy now petitioned for their reopening.

THE ECONOMIC UPTURN. One important reason for the relative political peace of the country was the decided improvement in economic conditions. The business upswing commenced following the abandonment of the gold standard by the United States in May, 1933. The dollar price of silver increased as the dollar depreciated on the international exchange market, causing a widespread revival of silver mining, which previous to the depression had been one of the leading industries. President Roosevelt's gold policy had a similar effect on gold prices. The handsome profits realized in the mining industries were reflected in the reopening of smelters, the reduction of unemployment, and an increase in railway traffic, government revenues, and general business. The tourist trade showed a steady increase during 1933.

Mexico's financial structure was stabilized by the balancing of the budget and the establishment of the Bank of Mexico as a rediscount institution, with ample silver reserves backing the paper currency in circulation. Former President Calles, who succeeded Alberto J. Pani as Secretary of Finance on Sept. 29, 1933, resigned effective Jan. 1, 1934. According to a government announcement, his retirement was "due to the fact that Mexico's main economic problems, . . . have been solved satisfactorily, and all financial and fiscal questions have been arranged."

Partially offsetting the encouraging economic outlook was the wrecking of Tampico, Mexico's leading oil port, by a hurricane on September 25. Three-fourths of the city was destroyed, hundreds were killed, 20,000 families were made homeless, and property valued at from \$3,000,000 to \$3,500,000 was ruined.

RELATIONS WITH THE UNITED STATES. In addition to the beneficial effects in Mexico of President Roosevelt's economic policies, various political developments contributed to a marked strengthening of American-Mexican friendship during 1933. Mr. Roosevelt's non-intervention policy in Cuba, his consultation with the Mexican and other Latin-American governments concerning the Cuban situation, and the definite pledge of non-intervention given by the United States delegation to the Pan American Conference made a highly favorable impression in Mexico. The government organ, *El Nacional*, of Mexico City, stated editorially:

President Roosevelt has wiped out all unfavorable recollections on Mexico's part. The past is forgotten and we now, with love and trust, join our powerful northern sister, for we believe in her.

Comment in other leading newspapers was similar in tone. The appointment of Josephus Daniels as Ambassador to Mexico, succeeding J. Reuben Clark, aroused considerable hostility in Mexico, due to the fact that Mr. Daniels, as Secretary of the Navy in 1914, had ordered the landing of American forces in Vera Cruz. Following Mr. Daniels's arrival in Mexico City April 15, he quickly dissipated the unfriendliness of students and others by his tact and frankness. He soon became as popular as his two predecessors, Mr. Clark and Dwight Morrow. On Jan. 30, 1933, Señor Fernando González Roa, prominent Mexican lawyer and public figure, was named Ambassador to Washington.

On Feb. 1, 1933, the two governments signed a convention for the joint control of floods and of the course of the Rio Grande for a distance of 87 miles below El Paso and Juárez. The convention was ratified by the U. S. Senate April 25 and by the Mexican Senate September 16. It called for the expenditure of \$4,932,300, Mexico's share being \$591,876. On May 10, the United States government made a voluntary payment of \$30,000 as an indemnity to the heirs of Emilio Cortés Rubio and Manuel Gómez, the two Mexican students who were killed by deputy sheriffs at Ardmore, Okla., in June, 1931. Also see **ARBITRATION, INTERNATIONAL**, for U.S.-Mexican mixed claims.

RELATIONS WITH OTHER POWERS. The Mexican government strove to strengthen its bonds of amity with the other Latin-American nations during 1933. As stated by Foreign Minister José Miguel Puig Casauranc in Buenos Aires November 19, his government held that Ibero-American unity must be firmly established before Pan Americanism could be usefully developed. Mexico accordingly was one of the six original signers of the Argentine anti-war pact (see **ARGENTINA** and **BRAZIL** under *History*). Diplomatic relations between Mexico and Venezuela, severed for 20 years, was resumed on June 9. At the Pan American Conference (q.v.) Foreign Minister Puig Casauranc submitted a 15-point programme for the consideration of the steering committee. It included such controversial questions as a moratorium on inter-American public and private debts, an inter-American money and banking system, and joint steps to banish the economic depression.

An agreement for the settlement of all Spanish claims for damages arising out of the revolutionary disorders of 1910-20 was announced by the Mexican Foreign Office on Jan. 10, 1933. Mexico contracted to pay 2.19 per cent of the original Spanish claims of 184,100,156 pesos.

MIAMI UNIVERSITY. A coeducational institution at Oxford, Ohio, founded in 1809. The enrollment for the autumn of 1933 was 2280, distributed as follows: College of liberal arts, 801; school of education, 650 (four-year course), (two-year course), 171; business administration, 522; fine arts, 99; graduate students, 37. The enrollment in two summer sessions was 708. The faculty numbered 166. The income from the State of Ohio, fees, gifts, and income on investments for 1932-33 was approximately \$1,300,000. There were 119,000 bound volumes in the library. President, Alfred H. Upham, Ph.D.

MICHIGAN. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 4,842,325; in 1933 (Federal estimate) it was 5,043,000. Detroit had (1930) 1,568,662 inhabitants; Lansing (capital) 78,397.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame)	1933	2,491,000	3,059,000*	\$20,189,000
	1932	2,397,000	3,164,000*	17,402,000
Corn	1933	1,365,000	42,315,000	18,195,000
	1932	1,407,000	46,431,000	12,586,000
Oats	1933	1,121,000	23,541,000	7,769,000
	1932	1,335,000	36,045,000	6,128,000
Wheat	1933	818,000	13,457,000	9,689,000
	1932	702,000	16,771,000	6,216,000
Potatoes ...	1933	265,000	20,670,000	18,436,000
	1932	260,000	29,900,000	6,877,000
Dry beans .	1933	510,000	8,519,000*	7,566,000
	1932	495,000	4,455,000*	4,678,000
Sugar beets .	1933	154,000	1,236,000*
	1932	122,000	1,215,000*	6,959,000
Barley	1933	250,000	3,250,000	1,658,000
	1932	317,000	6,340,000	1,775,000
Rye	1933	125,000	1,312,000	722,000
	1932	158,000	2,133,000	597,000
Apples	1933	8,651,000	5,623,000
	1932	5,800,000	3,770,000

* Tons. ♢ 100-lb. bags.

MINERAL PRODUCTION. The relatively small production of native coal increased sharply to 446,000 net tons (1932), from 359,403 (1931). The gain coincided with a year of interrupted production in Illinois and Ohio. The industries of the State continued to convert into coke many times the State's yearly output of coal. There were consumed in by-product coking ovens 3,091,775 net tons of coal (1932), from which were produced 2,165,109 net tons of coke, in value \$10,144,218.

Michigan was the only State in the Union to attain in 1932 its highest recorded production of petroleum. There were produced 6,729,000 barrels, as against 3,789,000 for 1931. The heavy increase for 1932 resulted chiefly from high production in the eastern extension of the Mount Pleasant field. The rejuvenation of old wells by the use of acid was practiced in the Muskegon field.

Natural gas, from 62 wells, was produced to the total of 1,405,880 M cu. ft. for 1932, as against 472,000 M for 1931, from a smaller number of wells.

There were mined, in 1932, 54,396,108 pounds of copper, or less than half the State's total quantity for 1931, which was 118,059,941.

The mining of iron ore diminished radically, to 968,789 gross tons (mines' shipments) for 1932, from 5,555,376 for 1931; by value, to \$2,703,900 (1932), from \$15,986,273 (1931). The average yearly earnings of the iron miners fell to \$377.89 (1932) from \$843.71 (1931). For 1933 there was no estimated rise in the yearly total of iron ore mined, but the shipments of ore were resumed on a substantial scale during the year and attained the estimated total for 1933, of 6,104,000 tons. The blast furnaces shipped 280,536 gross tons of pig iron (1932), as against 519,643 (1931); by value, \$4,269,528 (1932), and \$8,964,439 (1931).

FINANCE. State expenditures in the year ended June 30, 1933, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$71,760,613 (of which \$26,607,193 was for local education); for conducting public-service enterprises, \$198,856; for interest on debt, \$4,482,927; for permanent improvements, \$25,745,417; total, \$102,187,

513 (of which \$31,642,721 was for highways, \$9,525,919 being for maintenance and \$22,116,802 for construction). Revenues were \$102,262,634. Of these, property and special taxes furnished 41.1 per cent; departmental earnings and compensation to the State for officers' services, 6.5; sale of licenses, 34.0 (in which was included a gasoline sale tax that produced \$12,525,649). Funded debt outstanding on June 30, 1932, totaled \$89,945,984, of which \$50,000,000 was for highways. Net of sinking-fund assets, the debt was \$56,487,476. On an assessed valuation of \$8,261,839,200 the State levied in the year ad valorem taxes of \$42,213,638.

EDUCATION. The financial state of the public schools in the early part of the academic year 1933-34 was adverse. The school year opened with some \$30,000,000 less of cash resources available than the total of a year before; whereas in the previous academic year the schools had been conducted on \$23,000,000 less than for three years earlier. It was estimated in the *Journal* of the National Education Association that not over one-tenth of the school districts were in condition to complete the current academic year; further, that 12,000 teachers lacked employment. The education of adults was restricted, but provision was made for employing teachers in this field with means provided by the Federal Emergency Relief Administration.

The number of persons of school age in the State on May 31, 1932, was reported as 1,382,630 (ages from 5 to 19). There were enrolled in the public schools in 1931-32 (the latest year of available figures) 996,825 pupils. Of these, 809,091 were in common schools or elementary grades, according to figures partly estimated, and 186,734 in high schools. The expenditures of that year for public-school education in the State totaled \$90,819,707, exclusive of debt service. The salaries of teachers averaged, by the year, \$1645.

CHARITIES AND CORRECTIONS. The State's functions of central control and administration with regard to institutions for the care and custody of persons were distributed among several commissions, under a system created in 1923 and still in force in 1933. These commissions, in turn, formed parts of the State's Welfare Department, headed by a director (Evelyn S. Mershon). The bodies within this department were: the State Welfare Commission, State Prison Commission, State Hospital Commission, State Corrections Commission, and State Institute Commission. Each was composed of five members, serving by the Governor's appointment and at his pleasure, except the Hospital Commission, which had seven members. The department handled work under special provisions for the relief of the destitute, on account of the industrial depression.

The 17 institutions maintained by the State had in November, 1933, 24,321 inmates. These institutions were: State hospitals for the mentally afflicted, at Kalamazoo (2749 inmates), Pontiac (1755), Traverse City (2293), Newberry (1188), Ionia (821), Ypsilanti (1480); Farm Colony for Epileptics (961); Michigan Home and Training School (feeble-minded, 3659); State Prison, Jackson (5218); Michigan Reformatory, Ionia (1486); Branch Prison, Marquette (783); Boys' Vocational School (465); Girls' Training School (242); State Public School (462); School for the Deaf (502); School for the Blind (194); Employment Institute for the Blind (63).

LEGISLATION. The regular session of the Legislature, convened on January 4, was occupied in great part by measures required to meet the emergencies due to the banking collapse of February and March and to the financial difficulties of Detroit. Measures were passed to regulate the reopening of closed State banks, to reopen the budget of Detroit, to enable that city to take steps toward scaling down its debt charges and to make temporary issues of scrip with which to meet certain expenditures.

The Legislature took the lead, among the States, with regard to action on Federal prohibition, by creating a State convention of 100 delegates, to be chosen by popular election on April 3, who should act for the State with regard to the proposed repeal of the Eighteenth Amendment. An act was passed to render it lawful immediately to sell beer of an alcoholic content of 3.2 per cent. Another act removed the State's particular restrictions on the prescribing of liquor by physicians and made the State's restrictions coincide with the Federal ones. The Legislature gave the State's ratification to the proposed Federal constitutional amendment to prohibit child labor.

A general sales tax of 3 per cent, applicable to sales of tangible property to ultimate consumers, was enacted; a separate yearly tax on chain stores, at graduated rates, from \$10 each for two establishments under one ownership to \$250 each for 25 establishments or more, was enacted over the Governor's veto. A system of old-age pensions was created, with provision for payments up to a maximum rate of \$1 a day for indigent persons 70 years old and over; an annual head tax of \$2 on all residents of the State between the ages of 21 and 70 was included in the measure, to provide the means for the payment of the pensions. A bill to create a State milk commission with power over prices for milk was vetoed. A legislative council was created, similar to that of Kansas, to help prepare legislation in advance of sessions.

The Legislature was convened in special session on November 22 to pass laws regulating the liquor traffic and to advance the financing of public works.

POLITICAL AND OTHER EVENTS. At an election on April 3 the voters chose, by districts as established for the election of State representatives, delegates to a State convention. Of 100 so chosen, all but one favored the repeal of the Federal Eighteenth Amendment; and the popular vote was cast for repeal in the approximate proportion of 3 to 1. The delegates met in convention on April 10 and voted the State's adoption of repeal through the superseding Federal Constitutional amendment proposed by Congress. The State was the first to elect a convention to deal with Federal repeal and its convention was the first to ratify repeal. Governor Comstock ordered on April 12 that all prisoners of the State against whom stood no record of crime other than against prohibition laws be released on parole.

Detroit was the point from which, in February, the nation-wide banking panic made its sudden and sweeping spread. The Guardian Detroit Union Group, a holding concern with a chain of banks having an aggregate of some \$290,000,000 in deposits, and the Detroit Bankers' Company, a holding company of which the banks held deposits of some \$485,000,000, controlled the chief banking institutions of the State. Banks in these

chains had an overburden of mortgages and other unliquid assets. An effort was made early in February to have wealthy Detroit interests help the Union Guardian Trust Company, a member of the first-named chain. This failed; thereupon Governor Comstock proclaimed an 8-day moratorium or banking holiday on February 14, with a view to giving the bank time to find the means to meet withdrawals. At the same time he issued a public statement asserting that Henry Ford had refused to join two other chief depositors, great motor-manufacturing companies, in subordinating claims as depositors so that the generality of depositors might more readily be paid. This statement, though withdrawn by the Governor on the following day, increased the alarm due to the sensation caused by the halt of withdrawals. About \$1,500,000,000 in deposits, including public and manufacturing payrolls, was tied up. A shortage of cash ensued. Withdrawals on the part of Michigan interests having deposits outside the State became heavy. Depositors elsewhere became prone to draw money, and banks encountered difficulty in State after State as the trouble spread. It was impossible to reopen Michigan institutions on a regular basis after the expiry of the original moratorium, though 5 per cent of deposits had meanwhile been released.

When Federal measures had been taken for resuming banking after the complete closure following the inauguration, Secretary of the Treasury Woodin put the National banks in the two great Michigan chains under conservators and supported a plan for opening in Detroit a new National bank that would take over an entirely sound 40 per cent of the resources of the chains' two chief National institutions, the First National and the Guardian National. This was bitterly opposed by the interests formerly dominant through the holding companies. A popular campaign through the press and otherwise was carried on against it. Father Charles E. Coughlin, a Catholic priest widely known because of his radio addresses on public topics, attacked the local banking practices in severe terms on March 26; on the night of the 29th his residence was bombed, but he was not harmed. The National Bank of Detroit opened on March 24 with common stock subscribed chiefly by large local automobile concerns and with preferred stock subscribed by the Reconstruction Finance Corporation; it took over the better assets of the two chief suspended National banks, as designed by Secretary Woodin, and allowed depositors in the latter banks proportionate deposit credits on its books, with full privilege of withdrawal. There remained in the State at the end of April some 200 State banking institutions unable to reopen on terms that the Federal administration would admit as qualifying them for Federal Reserve membership.

A judicial investigation of the affairs of the First National and Guardian National banks was held by Judge H. B. Keidan in Detroit. The chairman of the former bank accused Senator Couzens of having occasioned the crisis by refusal to sanction a loan to the Guardian National from the Reconstruction Finance Corporation; he also testified that Henry Ford had refused to take part in a reorganization of the First National save if Ford and his son were to underwrite all the stock.

Other State Affairs. The State Supreme Court

declared in a decision of October 19 that the act of 1931 rendering known evildoers punishable on conviction as "public enemies" was unconstitutional in that it deprived defendants of rights of trial. Provision was made to put the goods manufactured by State prisoners to use for welfare work through the State welfare department. The State administrative board took on April 13 the radical step of cutting the salaries of State employees 50 per cent, subject to later adjustment as the condition of State revenue might indicate. The public service commission ordered the Detroit Edison Company in September to reduce its commercial lighting rates by 3 per cent.

Affairs of Detroit. Mayor Murphy having resigned to become Governor General of the Philippines, Frank Couzens, president of the city council, succeeded to the office as acting mayor on May 10. The city was forced by lack of cash in April to attempt the sale to the public of its scrip to obtain money with which to pay employees. Acting Mayor Couzens offered to the holders of \$139,000,000 of the city's debt in May a refunding plan that involved replacing existing issues with 30-year bonds bearing at first only 3 per cent of interest a year, but rising later to 4½ per cent. The plan was ratified later by a part of the city's creditors.

A strike among makers of tools and dies for the automobile factories at Detroit, late in October, was accompanied by a raid upon seven Detroit factories, made on October 30 by men in about 300 automobiles, who swept through destroying window glass, equipment, blue prints, and the like. Frank Couzens, acting mayor of Detroit, was elected mayor on November 7; a plan of port development was adopted by the vote of Detroit and of the rest of Wayne County, and a project for a city subway system in Detroit, to be built with Federal aid, was approved.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, William A. Cockett; Lieutenant-Governor, Allen E. Stebbins; Secretary of State, Frank D. Fitzgerald; Treasurer, Theodore I. Fry; Auditor, John K. Stack, Jr.; Attorney General, Patrick H. O'Brien; Superintendent of Public Instruction, Dr. Paul Voelker.

Judiciary. Supreme Court: Chief Justice, John S. McDonald; Assistant Justices, Henry M. Butzel, William W. Potter, Nelson Sharpe, Walter H. North, Louis H. Fead, Howard Wiest, George M. Clark.

MICHIGAN, UNIVERSITY OF. A State institution for the higher education of men and women at Ann Arbor, founded in 1817. In 1932-33 the enrollment was 13,257. The registration in the 1933 summer session was 2959. The teaching staff was composed of 828 members, including 50 of the summer session staff not at the university during the regular year. For current expenses the State appropriated \$4,182,000, while approximately \$4,392,000 was derived from other sources.

In September, 1933, Hutchins Hall, the new law school building and the latest addition to the law quadrangle presented to the university by the late William W. Cook of New York City, was occupied by the law school as its classroom and office building. The building, exclusive of equipment, is valued at more than \$1,000,000. Gifts totaling in value more than \$230,000 were received during the year. The university libraries contained 874,866 bound volumes. President, Alexander Grant Ruthven, Ph.D.

MIDDLEBURY COLLEGE. A coeducational, nonsectarian college at Middlebury, Vt., founded in 1800. For the autumn term of 1933, 610 students were registered as undergraduates and 18 as graduates; of these 320 were men and 308 women. The enrollment in the special summer schools of French, Spanish, German, and English, conducted by the college, amounted to 389. There were 74 members on the faculty, including administrative officers and those on leave of absence. The productive funds of the college in 1932-33 amounted to \$4,210,599, and the income for the year was \$368,035. Gifts to the college amounted to \$193,517. The library contained 60,000 volumes. President, Paul Dwight Moody, D.D.

MIDDLE CONGO. See FRENCH EQUATORIAL AFRICA.

MID TOWN TUNNEL. See TUNNELS.

MILITARY PROGRESS. **GENERAL.** The withdrawal of Germany from the League of Nations and the Geneva Disarmament Conference in October, 1933, does not by any means indicate that the world is facing another military struggle. The Hitlerite government wants absolute revision of the Versailles Treaty and the absorption of Austria in the Third Reich. Both of these are opposed by France.

Germany's withdrawal from Geneva has resulted in almost feverish diplomatic activity. Germany has made certain proposals to France for the practical realization of her military equality; France has made counter-proposals. In brief Germany has demanded a short-service army of 300,000 men and "defensive" armaments to a quarter of the total combined strength in these armaments of France, Poland, and Czechoslovakia. She will forego "offensive" weapons, is willing to accept reciprocal, automatic, and periodical control of her armaments and of the storm detachments.

France replies that she can only consider a comprehensive scheme leading to disarmament, not one leading to rearmament. Any convention must provide for the security of its signatories through effective control of armaments and a collective guarantee of the contracting parties. There must be 200,000 only, and Germany must not have the longed-for "defensive" weapon until the transformation of the twelve-year army into a short-term service one has been completed. This is one of the main points of disagreement. See DISARMAMENT.

Threats of war appear in the East along the Amur. Strategic railroads are being built so that soon Japanese troops can reach Soviet borders in 3 days or less—as against 10 days from Moscow to the same point. Japan probably has an eye on the Russian port of Vladivostok, as well as the southern portion of Sakhalin Island, the latter for its petroleum and fisheries. There is no oil in Manchuria.

There will not be a war very soon or within a stated time, the recognition of Russia by the United States undoubtedly being the very thing to prevent war. Without doubt it has strengthened Russia very much. (*New Republic*, Oct. 25, 1933.)

There will be no "preventive war" either by France or the Allied governments it is believed for the coming year at least.

If the four-power pact can bring about a common policy among the Big Four assuredly great benefit will result. Anything removing friction and the danger of open opposition of those coun-

tries will help the maintenance of peace. Whether they can agree among themselves remains to be seen. If they can then they can run Europe to suit themselves, the Little Entente and Poland to the contrary notwithstanding.

The Disarmament Conference after the withdrawal of Germany adjourned until early in the new year, to sometime in January, with probability of a further adjournment.

As the year closed German intentions toward Austria were crystallizing and the fate of that small but highly important country hung in the balance.

In the consideration of mechanical devices supplementing man power the tank, submarine, and the airplane hold the attention of military experts. These are now capable of speed not dreamed of at the end of the World War. And each is equipped with implements of attack and defense far more repellent, more penetrating, more annihilating than any of the lethal devices in use on the western front in 1918.

"When we consider that present day peace-time army aircraft mounts five machine guns and travel at nearly three times the speed possible in the last war we can visualize the havoc that could be created in communities far behind the fighting line." (Lieut. George S. Brady in *Army Ordnance*, recent issue.)

FRANCE. M. Jules Sauerwein, of *Le Soir*, Paris, Dec. 1, 1933 gives a picture of the solid system of fortifications near completion guarding the Rhine and the main corridor of invasions from the north and east across Lorraine. These forts would hold in case of trouble and France would feel perfectly safe were it not for her side entrances—Belgium and Switzerland.

The rapid succession of events of the past few months has turned attention of populations and statesmen to the traditional routes of invasion of Europe. The experience of the last war has not reassured Belgium and Switzerland as to what might happen in another war. Both are engaged seriously in measures to protect their territory serving either as a battle ground or as an easy mode of access to military objectives.

On the Swiss side the corridor of Belfort is the way of approach; from the Lake of Neuchâtel between Jura and the Vosges Mountains, across the Rhine from Basle.

On the Belgium side—the main route of attack follows the general line of the Meuse River through Liège and Namur and Charleroi—then to Paris through the valley of the Oise River. This too is a corridor and its control early in hostilities would be vital in any conflict through Belgium between France and Germany. This narrow passage—between the Sambre et Meuse and the Ardennes at Chimay has been flanked by France with heavy fortifications at Mirson and Meurbruge, but its defense would fall to Belgium.

The new system of forts along the terrain from Dunkirk to Humingue; and from Mont Blanc to Nice strengthens the old chain of defenses. This great plan is almost completed at a cost of \$132,000,000 in gold. As of old the region about Dunkirk is protected by the opening of flood gates and inundating the surrounding country. The Belgium border is lightly fortified by small shelters at wide intervals supplemented by mobile units called "flying fortifications." The most heavily fortified region is the wide slightly elevated plateau known as the "Highway of Lorraine"—the direct contact with Germany.

South and east are the Vosges Mountains—a good natural barrier covered with forests—protected by preparations made to destroy routes by mines, protecting the passes with light defenses and a scattered pill-box line of fortifications. Then the Rhine along Alsace's eastern border—a great natural barrier where the construction of concrete pill-boxes every mile or two is considered sufficient protection. The Swiss border has the great natural protection of the Alps—needing no fortifications.

Between Switzerland and the Mediterranean the Alps continue to act as a natural defense and it is considered necessary only to fortify six of the ten passes with mine containers to permit rapid destruction of bridges and roads. The other four passes leading straight to Nice will be strongly barred by a network of trenches, pill-boxes, and gun emplacements. The pill-boxes forming the backbone of the whole system vary greatly in size and shape. On the average they will be concrete rooms, about 30 by 36 feet, 6 feet below the ground, with places for 12 men, a tower for a lookout and a machine gunner.

As a general principle the attacking enemy will first encounter scattered groups of small machine-gun units, placed in the front line to delay approaching infantry. Then the line of small pill-boxes to hold back infantry and field artillery combined. Finally come the great ones, built to withstand the highest powered artillery.

The "mobile park" or "fortifications on wheels" contain large stocks of materials for digging trenches, constructing shelters and machine gun emplacements and equipment for quickly installing large systems of barbed wire entanglements. Situated near a railway or road, it can immediately supply material to bolster any particular point, or to make a new defense. It is estimated that it can double the strength of any terrain in two or three days. (Herbert Matthews, Paris correspondent, *New York Times*, August 20.)

The French Chamber of Deputies on December 19 passed the army service bill designed to spread out the military service age in such a manner as to assure during the "lean" years of 1936 and after, the army strength will be maintained at 200,000 men. The bill permits France to avoid increasing the length of service with the dangerous consequences. This would entail yet maintain a sense of security by guaranteeing that the military force will be as strong in 1936-37-38 as it is now. The conscription age at the beginning of this period will be advanced from 21 years to 21 years and 4 months. Later on the recruiting age will be put back by stages from 21 to 20 years. The armed strength will be about 10,000 less than normal, as far as conscription is concerned, but the shortage will be made up by transferring several African battalions from Morocco and increasing the term of service of a certain number of regular soldiers. (*New York Times*, Dec. 19, 1933.)

ITALY. Early in the year the Under-Secretary of Education announced steps to build up a force of 10,000 officers to supervise the military and moral training of 2,000,000 boys, members of the Fascist organizations. The purpose is to give the youthful black shirts strict training required to fulfill Fascist interests and for "preparation of the new generation for possible emergencies."

On December 19, war, air, and navy budgets for the fiscal year 1934-35 totaling \$367,899,000 were submitted to the Chamber of Deputies. This was

a reduction of \$21,867,000 for the same departments under the current budget.

The Minister of War had decreed changes in the Italian uniform for Italian officers, adopting the British turn-down collar, with ties to be always worn. The gray-green color is still maintained; for summer wear white drill uniforms with black ties. An entirely new black uniform, optional save for social events and off-duty functions, double breasted tunic of black broadcloth and black trousers, was decreed. It is to have the high collar and traditional facings and stripes to denote different regiments.

SPAIN. The Republic begins to realize that it must be prepared to defend itself. While the old Army was badly handled by the new government, it is now creating a new one and one more efficient. The last budget included 423,000,000 pesetas for war, 158,800,000 for military action in Morocco, 868,900,000 for public works, including fortifications, national dredging and other military enterprises. The fortifications on the Island of Minorca are important as it commands the Mediterranean from Gibraltar to Malta.

GERMANY. On Aug. 14, 1933, Aviation Minister Goering issued a decree prohibiting the taking of photographs from airplanes flying over Germany. During flights cameras will be taken from passengers and placed under lock and key.

To remind the population of the necessity of air-craft defenses National Socialist organizations will unveil in Berlin a monument in the shape of an aircraft bomb.

The auxiliary police force in Prussia, made up of Nazi storm troops and steel helmets, was abolished by Premier Goering effective August 15. It was organized before the March, 1933, election for the alleged purpose of saving the country from the dangers of a communist uprising.

In the High Schools of Germany have been instituted chairs of military science, filled by men trained in the theory of war and its practice. The new book of Prof. Ewald Bause of the Brunswick Technical High School makes strong statements, quite in contrast to the peaceable intentions expressed by the chief officials of the government.

"War to-day, is no longer a frolicsome campaign with regimental music and a cornucopia of decorations. It is a bloody battle and in particular a contest of material. It is gas and plague. It is hunger and poverty. It is baseness and falsehood. It is desperation and sacrifice. Only a nation can endure it where every member has known for years that his life belongs to the state and only to the state, which is the guardian of Nationhood and mother tongue and culture. Let no one raise moral objections. When a nation disarmed, deprived of its just dues and driven to destruction, fights for its existence, there can be but one law! To fight for its liberty and regain its sovereignty. And for attaining that any means is just."

According to the author of the book, lack of arms need not be a barrier to determined militants. For a disarmed and defenseless people "biological war is a given" weapon. Water poisoned by typhoid microbes; pestilence introduced by fleas and artificially infected rats; airplanes to carry disease germs into enemy country—is a sample of the daily intellectual fare of the youth of the entire country.

Although the German government has withdrawn the book from use in high schools and Universities it was an official publication, produced under government auspices and no doubt ac-

curately represents the attitude of Germany's rulers.

Outside of the schools, the lads of the Nazi storm troops have it persistently drummed into them that they are soldiers. Their weekly newspaper keeps war constantly before their eyes with pictures and articles on fighting strategy, and tactics, diagrammed instruction in the art of machine guns, etc. Streams of children and youths are constantly passing through war exhibits, studying modes of trench warfare.

Concrete evidence of the rapid increase of German war equipment was published in the *Journal de Paris*, July 26, 1933, reprinted in the *Neue Weltbühne* of Prague and the *Living Age* in the United States, giving the list of German factories manufacturing arms and equipment. It has not been satisfactorily answered by the German authorities.

AUSTRIA. Permission given Austria to enlist 8000 men in addition to her regular army which is below treaty strength was temporary and conditional, intended as it was by the British, French, and Italian governments to help the Austrian government to defend itself against acts of violence and intimidation of Austrian Nazis. The duration of the concession was limited to one year. In no way was it a permanent national militia recruited by conscription—nor in addition to the 30,000 long-service army provided by the Treaty of St. Germain.

The decree published by the Austrian government in September stated that the Army will in future consist of the present permanent force and a new auxiliary corps to be created. . . . The members of the new corps will be subject to military law and discipline, but will serve only six months in the field and remain for a year in the reserve. Recruiting will be voluntary.

SWITZERLAND. The war fear referred to above is exemplified by the actions of Switzerland, Belgium, and the Netherlands, three states that seldom before thought of themselves as subject to possible invasion.

On December 14, the Swiss Federal Council approved of a complete overhauling of the illuminating system of the army in the Alpine passes. The appropriation of 82,000,000 francs (\$24,600,000) followed the recent decision of the government to renovate the fighting equipment and put their defenses in first class condition. See *SWITZERLAND, BELGIUM, and THE NETHERLANDS under History*.

RUSSIA (U.S.S.R.). Is Trotsky right in his warning early in May that Fascism in Germany "can bring in its trail nothing less than the mobilization of the Red army"?

The Soviet's Far Eastern frontier is not free from trouble—what with Japan's aggressive military activity in that vicinity. One's attention is drawn to the Red army, and when one thinks of this army he must perforce gauge its worth by its leader, K. E. Voroshilov. His career has been devoted to military strategy and organization. Beginning with secret military companies consisting of workers, he engaged in the civil war following the wake of Lenin and Trotsky. That civil war found him in its midst and working with Stalin successfully defending Tsaritsyn against the superior German army in 1918. He fought the armies of General Denikin in 1919 and took part in the Russian-Polish war in 1920, as well as the campaigns against Makshno and Wrangel. He commanded the Fifth Ukrainian army and later

became head of the Fourteenth Soviet army and finally the forces of Northern Caucasia, and the garrison of the Moscow region. At the age of 44 years he was named War Commissar.

Since that time the guiding principle of his office has been the freeing of the Soviet war machinery from dependence upon foreign countries.

The changes made may be grouped under three basic heads—first, the complete technological modernization of the army, navy, air forces, including the raising of new scientific and engineering personnel among the military; second, the reorganization of those forces on a rigidly domestic basis, using none but Soviet-made ammunition, tanks, motors, and artillery; third, the simultaneous conversion of the Soviet machine, with most of its personnel and many of its institutions, especially those of an educational character, into a social agency for the permanent fixation of communism as the sole economical, political, and ethical order of the country.

The Soviet manufactures its own ammunition, in Soviet plants and from native raw materials. It manufactures its own tanks, airplanes, and artillery, its own gases. New war bases have been established in Siberia and new railroads and military roads have been added at strategic points. Under his direction, the Red army officer and soldier is trained in public work and public office in the commune, in his village, in his city on the expiration of his military service. It is this latter phase of army training that directly links this war commissar with the Soviet masses and makes him defender of 100,000,000 peasants. (Elias Tobenkin, *New York Times*, May 7, 1933.)

The 16th anniversary of the October Revolution opened with a 101-gun salute in Moscow's Red Square and for 2½ hours soldiers marched past the tribune of Lenin's mausoleum. One unit was made up entirely of women. Tanks, anti-aircraft guns and radio cars revealed to the spectators the technical advance of the Red army (*New York Times*, Special Correspondent, Moscow, Nov. 7, 1933).

JAPAN. Japan's undeclared war on China has made drastic changes in the world balance of power. She has carved out a new empire. Since Sept. 18, 1931, Japan has seized and consolidated almost 500,000 square miles of Chinese territory, including Manchuria with Jehol, part of Inner Mongolia and the so-called demilitarized zones within the Great Wall. The territory seized contains one-thirteenth of the total population of China.

Under date of July 27, 1933, the *New York Times* correspondent in Harbin, Manchuria, verified the construction of Japan's new strategic railway. It is being built to run northward from the Harbin-Hailun branch of the Chinese Eastern railway from Hailun to Heiho just across the Amur River from the Russian city of Blagoveshchensk south of the important division point of the Trans-Siberian railway. It will leave the Russian maritime province, with the great port of Vladivostok, at the mercy of the Japanese by putting them in a position to sever the only great traffic artery across Siberia.

The newly opened important railway link in Manchuria, connecting Changchun with the newly developed ice-free port of Rashin, northern Korea, gives Japan easy access to the new strategic railway spoken of above.

The Japanese military authorities on September 21 decided to get approval of the establish-

ment of 4 Army Divisions that were eliminated in 1925, to make a total of 21 divisions.

UNITED STATES. In the struggle of the government to fight the economic depression, sharp reductions have been made in the sums normally appropriated for the maintenance of the Army, reported the Chief of Staff in his annual report for the fiscal year ending June 30, 1933.

The Commander-in-Chief has assigned the Army unique responsibilities in his coordinated campaign for economic rehabilitation. The Army assumed on April 10 under the general supervision of the Director of Civilian Conservation Corps, complete and permanent control of the C.C.C. project. There were 1450 camps eventually established and administered, with a total of 3109 officers of the regular army, 532 of the Navy and Marine Corps and 300,000 civilians.

"To epitomize the military lessons of the 1933 mobilization it has given renewed evidence of the value of systematic preparation for emergency, including the maintenance of trained personnel and suitable supplies and the development of plans and policies applicable to a mobilization.

"The four-Army plan provides for the assignment of every existing unit to a definite place in a larger tactical organization, and each is provided with a commander and the principal elements of his staff. This process applies to all elements from the lowest to the highest, and establishes a direct chain of tactical control from the smallest unit to the Commander-in-Chief himself. It provides opportunity for efficient training in higher command and staff."

He ends up his report with the following significant statement which under present world wide conditions is rather ominous—

"It is my conviction that at the moment the Army's strength in personnel and material and its readiness for employment are below the danger line."

According to Miss Clara Dutton Noyes, Washington, D. C., National Director of Red Cross Nursing Service, there are 35,000 trained nurses in the United States ready for mobilization in the event of war.

At a meeting of the Association of Military Surgeons in Chicago, Sept. 25, 1933 the *Associated Press* reported Dr. Louis B. Wilson of the University of Minnesota as saying that the velocity of rifle bullets has increased so tremendously since the world war that problems of surgery in the next war will be greater. "The new rifle has a muzzle velocity of 5000 feet a second as against the present velocity of 2700 feet. Wounds from bullets fired from this gun will shock and destroy three times as much tissue as the old style bullets. Hence Army surgeons must make extensive studies of the wound factors of the next war," he said.

The National Defense Act of 1920—which the War Department calls "the first real military policy the United States ever had"—in reality does not lay down a military policy of any kind.

The mobilization plan of the General Staff is nowhere prescribed in the National Defense Act. The War Department through its war plans division of the General Staff has been engaged on its mobilization plan for the past thirteen years. It is based upon two premises—first, that immediately upon the outbreak of war the President will be given ample statutory powers to mobilize promptly and use effectively the manpower and material resources of the nation; sec-

ond, that Congress will pass a universal draft law on or before mobilization's first day.

Based on this the war plans division estimates 11 million men between 21 and 30 immediately available; 4 million to be drawn for the first 12 months' requirements. Also the rapid manufacture of thousands of the essential articles needed to arm and equip four field armies.

From the purely military view the War Department is left to carry out a general mobilization scheme without a trained reserve and no effective means of training such a reserve. If we really want to be prepared for the next war the National Defense Act must be overhauled.

A great feat was performed on Feb. 18, 1933, when ten huge bombing planes carrying an entire battalion of Field Artillery escorted by 21 pursuit planes and 29 observation planes flying 100 miles an hour, transported the battalion from Bejuco, Panama, to Chorrera, 25 miles from the Panama Canal. Less than half an hour was required to load and unload the 3-inch mountain howitzers. The entire battery with gun crews, officers, and ammunition was rushed by air to repel surprise attacks.

The Chief of Engineers expended on the maintenance and improvement of rivers and harbors works for the year the sum of \$69,589,208.04; on flood control \$3,957,684.90; on the operation and care of canals, removal of wrecks, etc. \$7,199,283.25; a total of \$116,586,396.51.

A corporal of the United States army in the Canal Zone, has been found guilty of violating the Espionage Act and sentenced to two years hard labor and fined \$10,000, with dishonorable discharge. The Act was aimed at the obtaining of information on the national defense with the intention of using it to the injury of the United States for the benefit of foreign nations. He was charged with attempting to transfer certain secret military documents to a citizen in the United States.

In 1926 the army Air Corps consisted of 32 squadrons equipped with planes which included a large portion of obsolete war-time ships. To-day with the 5 new pursuit squadrons approved March 1, the Air organization will consist of 51 squadrons of modern military aircraft; i.e. 21 pursuit squadrons; 12 bombardment squadrons; 4 attack squadrons; 14 observation squadrons.

Three of the new squadrons were created on April 1, one for Barksdale Field, Shreveport, La., as part of the first attack wing; two for Albrook Field, Panama. On June 30, another squadron was organized for Selfridge Field, Mich. and the last on September 1 at Langley Field, Va. for duty in Hawaii.

The distribution will be as follows—two bombardment wings, each consisting of one bombardment and one pursuit group of three squadrons each. One wing at March Field, Riverside, Calif. and one at Langley Field, Va. Construction is progressing on the new bombardment field and base near San Francisco.

An attack group, of three squadrons, at Galveston, Tex., and one pursuit group of three squadrons at Shreveport, La. These will constitute the third attack wing. There will be one pursuit group of three squadrons at Selfridge Field. There will be nine observation squadrons in the various corps areas.

The ultimate distribution of Army Air strength will be as follows: Hawaii—one bombardment and one pursuit group, consisting of 4 squadrons each, together with two observation and one at-

tack squadron; Panama—one composite group of one bombardment squadron and two observation squadrons and one pursuit group of four squadrons; Philippine Islands—one squadron each of bombardment, pursuit and observation. (Report of Sec., F. T. Davison, March, 1933.)

Recent bombing tests at Wright Field showed bombers capable of a top speed of more than 200 miles an hour and of a range without a bomb load such that they might reach the Canal Zone in 12 hours or even six or seven from Kelly Field, Tex., or Miami; and reach Hawaii in 15 hours carrying gasoline for armament.

Notwithstanding Army and Navy Air Forces are below that recommended by the Morrow Board, our total air force in training and general equipment ranks well up with that of other world powers. The United States is the only nation in the world equipped for building military airships of the Macon type.

Anti-aircraft efficiency seems to be gaining if the recent order for 104 60-inch, 80,000,000 beam candle power searchlights by army engineers indicates anything. These lights can pick up aircraft under good air conditions at 15,000 feet elevation and their rays can be seen from a distance of 100 miles. There are to be 61 portable, carried in trucks, and 43 mobile lights, drawn or tractor types, costing \$2,015,900. The operator of the light is 20 feet away and searches the sky by remote control. They are to be equipped with shutters for signaling purposes and to be built of aluminum. Both artillery and defensive aircraft are blind and helpless unless supplemented by efficient equipment for detecting and illuminating attacking planes.

Offensive and defensive weapons in aerial attack depend upon searchlight organization—the essence of which is time.

Assuming that the listening devices or sound detectors or locators are capable of detecting attacking aircraft at a range of 10 miles, the time availing before the oncoming aerial forces reach the boundary of the objectives is a maximum of six minutes. During this time the sound locators must give the searchlights the approximate azimuth and elevation of the aerial enemy, the searchlights must find and illuminate them, the guns or combat planes of the defending forces must get "on" and their fire must become sufficiently effective to force the abandonment of the attack. So the maximum possible range in both searchlight and locator is sought.

The range of the searchlight, an engineer of the Sperry company said, is the maximum distance at which an object in its beam is visible. The visibility of the object does not depend on its actual illumination, but upon the contrast between its illumination and that of the surrounding field. This contrast depends upon the apparent size of the object; that is, upon the angle which subtends at the eye of the observer and the area presented toward him. The most obvious way of improving the contrast between the illuminated aircraft target and the searchlight beam is to move the controlling observer away from the searchlight and thus decrease the depth of the illuminated atmospheric particles through which he sees the target. This is the reason for the remote control provisions in the new 60-inch light. (New York Times, November 20.)

On June 26 contracts totalling \$3,880,001.53 for 174 new airplanes and equipment, including engine and spare parts, were awarded as follows:

—111 P-26 airplanes of the single seater type, low wing pursuit monoplane powered with a supercharged radial air-cooled engine of 525 horse power; for Boeing 14 YB—10 bombardment planes and spare parts, \$1,201,117.50; for YB0—13 planes and spare parts, \$782,729.95; mid-wing monoplane bombers powered with two radial air-cooled engines of 550 horse power, each fuselage deep bellied so bombs may be carried internally—planes from their shape called “flying-fish,” \$644,018.28; 10 single-engined cargo transport of the C-27 type, high-wing monoplane transports with deep struts, similar to the commercial “air bus” and spare parts, \$275,651; 15 O-38E observation planes with spare parts for use by the National Guard, \$174,613.40; this type has round-sectional fuselage with pilot's and observer's cockpits enclosed and stream-lined above the engine; 28 Y-1R—1690 D (Hornet) radial air-cooled engines and spare parts for use with O-38E airplanes, \$157,729.12.

National Guard. On June 30, 1933, the strength of the National Guard stood at 185,925 of all ranks. Under the present plan of National Guard development 839 headquarters and 3186 units are organized or authorized for organization; 58 headquarters and 400 units are inactive, classed as non-essential for peace-training; and 135 headquarters and 436 units remain to be organized. This gives a total of 1032 headquarters and 4022 units in the Guard allotment.

The attendance for armory training during the fiscal year 1933 continued high. The average was 81 per cent as against 77 per cent of the year previous.

The start in motorization of the National Guard had a decided impetus during the year, and General Leach reports that sufficient new motor vehicles were procured to equip 20 regiments of light field artillery. The old motor equipment, as a whole, is in satisfactory condition. Every effort has been made to keep in repair and maintenance much of this war-time equipment.

The appropriations for the National Guard for the fiscal year were \$35,484,864.

The Air Corps equipment of the 19 squadrons indicates the progressive policy of the Chief of the Bureau, and has resulted in a definite and final change which revised existing allocations of airplanes. This revision now allocates eight standard observation planes to each unit, and plans and estimates for the fiscal year 1934 indicate the fulfillment of the policy. The matter of communications continues to be of much concern mainly because of the rapid changes occurring in radio-equipped planes, and if plans can be made effective all service-equipped planes in the Guard will be two-way radio equipped.

Despite the rapid motorization of the National Guard units it still has 8613 horses, of which 2293 are State or organization owned.

The programme for replacement of the 75 mm gun by the 3-inch anti-aircraft gun, M-1918, in anti-aircraft regiments and anti-aircraft batteries assigned to the Coast Artillery, harbor defense regiments was completed this fiscal year. It is not the latest equipment but should prove beneficial in the training of anti-aircraft batteries.

Additional mounts, wheeled, M. G. MI, were procured and with those under order the programme for issue of 4 of these mounts to each machine gun company of infantry will be completed. Each squadron has 5 radio-equipped planes.

During the year ending June 30, there were 239

officers and 108 enlisted men of the National Guard authorized to attend special courses at the various service schools.

The new name, made effective by legislative enactment and approved by the President June 15, 1933, of the Militia Bureau is—The National Guard Bureau, War Department.

Recent changes in the National Defense Act have made the National Guard more readily available in its organized form to the Federal government and established it on a basis in keeping with the desires of the guardsmen themselves.

The Appropriation Act for 1934 required that members of the National Guard, except State Adjutant Generals, either give up retirement, disability compensation, pension or disability allowances from the Federal government, or sever their connections with the National Guard. That resulted in many changes.

At the close of the fiscal year there were 14,421 positions authorized in the National Guard leaving 849 vacancies for officers and 2 for warrant of officers. On June 30, 1933 there were 17 Major Generals; 76 Brigadier Generals; 229 Colonels; 523 Lieutenant-Colonels; 1213 Majors; 4410 Captains; 3570 First Lieutenants; 3326 Second Lieutenants; or a total of 13,364 commissioned officers.

MILK STRIKES. See AGRICULTURE.

MILLS COLLEGE. A college for women in Oakland, Calif., founded in 1852. The enrollment in the autumn of 1933 was 376, while that for the summer session was 148. The summer session included courses in art, music, French, and physical education. The faculty numbered 70 members, plus 19 assistants below the rank of instructor. Preceptorial aid was furnished by 10 tutors who were in residence with the students. The total productive funds amounted to \$1,579,785, and the total assets to \$4,330,757, while the gross income for the year ending June 30, 1933, was \$590,088. The library contained 60,000 volumes. President, Aurelia Henry Reinhardt, B.L., Ph.D., LL.D., Litt.D., L.H.D.

MINERALOGY. Among the important books of the year in the field of petrography is Alfred Harker's *Metamorphism. A Study of the Transformations of Rock-Masses*. (London, Methuen & Company.) It would hardly be an exaggeration to place this work by an eminent petrographer beside Bowen's *The Evolution of the Igneous Rocks*, that appeared five years ago. The author's examples, as might be expected, are drawn mainly from the rocks of the British Isles, a fact that does not, however, prevent his work from being broad in scope and far reaching in conclusions.

In the field of gem minerals, a work of primary importance is the 3d edition of Max Bauer's *Edelsteinkunde* (Leipzig, Bernhart Tauchnitz), edited and rewritten by Karl Schlossmacher, who began the preparation of this great reëdition in 1928. The tradition which has for nearly forty years made the *Edelsteinkunde* the standard work on gems throughout the world has been faithfully followed by Dr. Schlossmacher, who in bringing Bauer's text up to date, has now established another standard. The volume, which has been issued in thirteen parts, contains 871 pages, and is amply illustrated in colored and monochrome plates, and in line text-figures.

The year 1933 has also marked the completion of a classic text in the field of mineralogy. This is the *Handbuch der Mineralogie* begun in 1889

by the late Carl Hintze, who had finished three volumes at the time of his death in 1916. Subsequently the work has been ably continued by G. Linck with the aid of several collaborators, and the resulting vast work of reference now comprises six large volumes with 7903 pages and 2472 text-figures.

The new mineral species announced during the year come mainly from localities that have been productive of new species in the past.

A new hydrated oxide of calcium has been found at Scawt Hill, County Antrim, Ireland, a locality that has yielded several new species (see larnite, *NEW INTERNATIONAL YEAR BOOK*, 1929, page 518; and scawtite, *ibid.*, 1930, p. 490). Because an artificial calcium hydroxide has long been known and studied in Portland cement, the new mineral has been named *portlandite*. It occurs in pearly hexagonal plates somewhat resembling the closely related mineral brucite.

Letovice in Moravia, a locality from which rosickyite (*NEW INTERNATIONAL YEAR BOOK*, 1932, p. 514) was obtained, has produced the new mineral *letovicite*, an acid sulphate of ammonia. Letovicite occurs in minute colorless pseudo-hexagonal crystalline plates associated with gypsum, and results from the decomposition of pyrite in Cretaceous coal beds and carbonaceous shale.

Two new uranium minerals have been found in the Belgian Congo. *Vandenbrandeite* from Kalongwe in Upper Katanga has been so named in honor of P. Van den Brand, who is credited with the discovery of it. It is a hydrous uranate of copper occurring in deep green crystalline masses and minute triclinic crystals. Also from the Belgian Congo comes a new hydrous uranium-magnesium phosphate, occurring in small square yellow plates at Skinkolowe, in Katanga. It has been named *saleite*.

An X-ray study of the platinum concentrates from Rustenburg and Potgietersrust, Transvaal, has resulted in the discovery of a new sulphide of platinum and palladium, tetragonal in crystallization, but differing from cooperite (*NEW INTERNATIONAL YEAR BOOKS*, 1929 and 1931) in cell dimension. Since this is the first new mineral to be discovered by X-ray methods, it has been very appropriately named *braggite*, in honor of Sir William H. Bragg and Prof. W. L. Bragg, pioneers in this method of crystal-structure investigation.

A new silicate of aluminum and calcium, closely related to vesuvianite, has been found in the rocks of Azegour, Morocco, and named *duparoite*, in honor of Professor Duparc. It occurs in greenish-gray tetragonal crystals of prismatic habit.

A lime-soda zeolite from Narsarsuk, Greenland, which was formerly regarded as a variety of thomsonite (kalithomsonite) has now been established as a separate species and named *ashcroftite*, in honor of Dr. Frederick N. Ashcroft, the noted specialist on zeolites.

The intensive study of the minerals of Western Australia, which has in recent years added several new species to science, has revealed a new hydrous phosphate of potash iron and alumina from Ningamboun Hills, South West Division, W. Australia. This has been named *leucophosphate*. It occurs in white chalk-like masses, and is assumed to owe its origin to the action of bird guano upon serpentine, chlorite, and other silicates. From the same division (S.W.) of West

Australia has been noted *minyulite*, a new hydrated alumina-potash phosphate found near Minyulo Wells, Dandaragan. The mineral occurs in radiating groups of white needles.

Brickerite, a new zinc-calcium arsenate, occurring in white crusts of radiating fibres, has been found in the Lomitos mine, near Chijmuni, Bolivia. The phosphatized residual clays overlying diabase at Maranhas, Northern Brazil have yielded small, white to brown spherulitic aggregates composed of a new hydrous phosphate of aluminum, differing from wavellite in the amount of the water content. This new mineral has been named *hardbortite*.

A new calcium, magnesium, and aluminum hydrous silicate from Iron Hill, Colorado occurs in sheaves of white crystalline fibres (probably orthorhombic). This has been named *juanite*. Two new substances of somewhat uncertain chemical formula have been noted from the carnotite region covering parts of Utah and Colorado. The names *corvusite* and *rilandite* have been proposed for these somewhat doubtful species. *Corvusite* (from Latin *corvus*, a raven) is a black hydrous compound apparently involving two vanadium oxides, V_2O_5 and V_2O_4 . *Rilandite* is named in honor of J. L. Riland, on whose carnotite claim it was found. It is a massive pitch-like material, giving an analysis that indicates a hydrous chromium silicate.

MINERAL PRODUCTION IN THE UNITED STATES. Viewing the mineral industry as a whole, the general effect in 1933 indicated a slight improvement over 1932, though some lines of production, such as the output of lead, sank to lower figures than had been recorded for many years. Articles on individual minerals, metallic and non-metallic, present production data for the year 1933, while the following paragraphs, based on the *Minerals Yearbook* of the U. S. Bureau of Mines, indicate the recession in production that had about reached its nadir at the conclusion of the preceding year.

INDEX NUMBERS COMPARING TRENDS OF QUANTITY PRODUCTION OF SOME IMPORTANT MINERAL COMMODITIES DURING RECENT YEARS IN THE UNITED STATES WITH THOSE OF THE REST OF THE WORLD

[Index numbers based on 1925-29 average = 100]

Commodity	1930		1931		1932 *	
	United States	Rest of world	United States	Rest of world	United States	Rest of world

* Subject to revision.

Whereas the average annual value of the mineral production of the United States during the five-year period 1925-29 was approximately 5.7 billion dollars, the total had fallen in 1931 to 3.2 billion dollars, a decline of 45 per cent. In 1932 the total value of all minerals dropped to about 2.4 billion dollars, a decrease of around 57 per cent below the previous five-year average. This recession was greatest in the output of metals which as a group dropped to about 31 per cent in quantity and 21 per cent in value of the figures for the 1925-29 averages. The group of non-metals was

SUMMARY				
Total value of metallic products		\$ 567,200,000		\$ 283,700,000
Total value of nonmetallic products (ex- clusive of mineral fuels)		699,700,000		430,700,000
Total value of mineral fuels		1,892,400,000		1,722,600,000
Total value of "unspecified" (metallic and nonmetallic) products (partly esti- mated) *		7,300,000		6,000,000 *
Grand total approximate value of mineral products		\$3,166,600,000		\$2,443,000,000

* In this general statement certain of the figures represent shipments rather than quantity mined, and some of the figures for 1932 are estimates.

* Figures represent antimonial lead produced at primary refineries from both domestic and foreign primary and secondary sources; no figures for value of antimonial lead available. Estimate of value of primary antimony and lead contents of antimonial lead from domestic sources included in total value of metallic products.

* All from foreign ore; Bureau of Mines not at liberty to publish figures for 1931 and value for 1932.

* Value not included in total value.

* Bureau of Mines not at liberty to publish figures. Value excluded from metallic total as duplicated in content of antimonial lead.

* Value included in total value of metallic products; Bureau of Mines not at liberty to publish figures.

* Product from domestic ores only.

* Value, \$20.671834625323 an ounce.

* Difference between total gold given here and total mine output (\$52,113,780) given in chapter on Gold and Silver is accounted for by fact that there was a large hold-over at a smelter, which did not reach the refinery before the end of 1932.

* Figures not available.

* Figures showing values not available.

* Figures for 1932 not yet available.

* 1,000 pounds.

* Figures obtained through cooperation with Bureau of the Census. Figures for 1932 not yet available; estimate of value included in total value of nonmetallic products.

* Includes brown coal and lignite, and anthracite mined elsewhere than in Pennsylvania.

* Figures represent tripoli only. Value of diatomite is included in total value of nonmetallic products; Bureau of Mines not at liberty to publish figures.

* No canvass. Estimate of value included in total value of nonmetallic products.

* Value included in total value of nonmetallic products; Bureau of Mines not at liberty to publish figures.

* Canvass discontinued after 1915. Value of iron ore sold for paint included under last item ("Unspecified").

* Sublimed blue lead, sublimed white lead, leaded zinc oxide, and zinc oxide.

* Equivalent as K_2O .

* According to Bureau of the Census.

* Figures represent talc only. Value of soapstone is included in total value of nonmetallic products; Bureau of Mines not at liberty to publish figures.

* Includes for 1932 the value of bismuth, cadmium compounds, chats, columbite (\$234), flint lining for tube mills and pebbles for grinding (\$18,070), optical fluorspar (\$59), iodine, iron ore sold for magnets, iron ore sold for paint (\$10,770), lithium minerals, new ingot magnesium (\$228,653), natural magnesium salts (\$896,085), calcareous marl (\$26,442), greensand marl (\$201,173), micaceous minerals (\$30,000), molybdenum (\$1,186,000), selenium, silica sand and sandstone (finely ground) (\$875,749), sodium salts (carbonates and sulphates) from natural sources (\$1,098,394), sulphur ore, tellurium, and an estimate of the value of miscellaneous mineral products, statistics for which are not collected annually by the Bureau of Mines.

less affected, shrinking to 47 per cent in quantity and 35 per cent in value of the 1925-29 averages. Mineral fuels, though least affected, suffered a great recession; the output dropped to 77 per cent of the 1925-29 average, the value to 55 per cent.

Among the principal mineral commodities, the production of gold, as in 1931, continued to rise above the index figures of 1925-29, increasing to 8 per cent above the index. Aluminum, still at 1 per cent above the index in 1931, dropped to 59. Silver and lead each dropped to an index of 39, as against 59 and 50 in 1931. Zinc dropped to 35; copper to 30, and pig iron to 22. In the group of non-metals, the greatest decline between the years 1931 and 1932 was in the production of sulphur which dropped from an index, based on the 1925-

29 figures, of 109 to 46. Other similar index figures for 1932 are: salt, 83; crushed stone, 54; sand and gravel, 45; Portland cement, 46; lime, 44; slate, 39; building stone, 48, and gypsum, 25. Fuel production, other than coal, maintained much higher figures. On the indexes of 1925-29, natural gas dropped from an index of 113 in 1931 to 102 in 1932; petroleum, from 98 to 90; anthracite from 79 to 66, and bituminous coal from 72 to 58.

These decreases may be indicated more comprehensively by a few comparisons. The output of pig iron in 1932 was the lowest since 1896. With the exception of the post-war depression year of 1921, the yield of copper had not been so low since 1898, of lead since 1899, and of zinc since 1905. The production of silver was the least since 1875. Bitumi-

nous coal and anthracite production approximated the levels of 1905 and 1890 respectively.

A review of the quantity-production records of some mineral commodities reveals pronounced diversities between the trends of output in the United States and elsewhere. The extent to which the burden of recent curtailment has fallen on America is illustrated in the table on page 500.

MINIMUM WAGE. An extraordinary impetus was given to this reform as a result of the writing of minimum wage provisions into the industrial codes prepared under theegis of the National Recovery Administration. The range of minimum wages in the industrial codes is discussed elsewhere in this volume. In this article we shall concern ourselves only with the enactment of legislation in the various States setting up minimum wage standards for women and minors. Before 1933 minimum wage legislation had been passed in nine States, namely: California, Colorado, Massachusetts, Minnesota, North Dakota, Oregon, South Dakota, Washington, and Wisconsin, the first such law having been enacted in Massachusetts in 1912.

During 1933 new minimum wage laws were passed by the legislatures in New Hampshire, New Jersey, New York, Utah, Connecticut, Ohio, and Illinois. In New Hampshire, New Jersey, and New York laws were passed upon a standard minimum wage bill sponsored by the National Consumers' League, which measure does not attempt to regulate wages, generally. This law has sought to meet the constitutional objection to such legislation which was raised by the United States Supreme Court in the case of *Adkins v. Children's Hospital* in 1923 (261 U. S. 525). The new standard law does not attempt to fix a living wage. However, whenever a substantial number of women and minors in any occupation are receiving less than a subsistence wage, the industrial commission of the State may conduct an investigation to determine whether the wages are "fairly and reasonably commensurate with the value of the service or class of service rendered." The law further defines an unreasonable wage as one that is "less than the fair and reasonable value of the services rendered and less than sufficient to meet the minimum cost of living necessary for health." Power is then granted to the labor commissioner, after a minimum wage order has been in effect for a period of time—five months in New Hampshire and nine months in New Jersey and New York—to make such wage orders mandatory, if he is of the opinion that "the persistent non-observance of such order by one or more employers is a threat to the maintenance of fair minimum-wage standards." Employers who fail to observe the provisions of the law and the orders of the labor commissioner are liable to fine and imprisonment.

The Utah law, which is similar to the California statute, empowers the industrial commissioner of the State to ascertain the wages paid, the hours, and the conditions of labor in the various occupations. Upon investigation if it is found that the wages paid "are inadequate to supply the cost of proper living," the commissioner is ordered to call a "wage board" into conference. After a public hearing the commission is empowered to fix a minimum wage, maximum number of hours, and standard living conditions. A mandatory order may be subsequently issued, setting forth the minimum wage and the maximum hours.

The laws of Connecticut and Ohio were very similar to the New Hampshire, New Jersey, and New York laws. In Connecticut, nine months after and in Ohio three months after a minimum wage order has been in effect, the responsible enforcing officer is empowered to make the order mandatory. The Illinois law contains the same general provisions as the laws cited above, except that there is a provision whereby the act remains in effect only until July 1, 1935.

The *Monthly Labor Review* for December, 1933 (vol. xxxvii, p. 1347-54) contains a valuable summary of the principal provisions of the minimum wage laws in effect in 1933.

MINING AND METALLURGICAL ENGINEERS, AMERICAN INSTITUTE OF. An organization founded in 1871 and incorporated under the laws of New York State in 1905 "to promote the arts and sciences connected with the economic production of the useful minerals and metals and the welfare of those employed in these industries." It is made up of 27 local sections and has 47 affiliated societies in American colleges. On Nov. 15, 1933, there were 7817 members, distributed as follows: Honorary, 15; members, 5847; junior members, 439; associates, 742; student associates, 448; Rocky Mountain members, 122; and junior associates, 204.

In addition to the monthly meetings of the local sections and regional meetings held in various important mining or metallurgical centres, an annual meeting, or four-day convention beginning on the third Tuesday in February, is held in New York City. The medals and prizes awarded by the society during 1933 for notable work in the field of mining and metallurgy were: The James Douglas Medal to James O. Elton; William Lawrence Saunders Gold Medal to Walter Hull Aldridge; Robert W. Hunt Prize to Clarence E. Sims and Gustaf A. Lillieqvist; and the J. E. Johnson, Jr. Award to Hjalmar W. Johnson.

The Institute publishes *Transactions*, an annual in several volumes containing the best papers of the year on mining and metallurgical subjects; *Mining and Metallurgy*, a monthly magazine; the *Directory*, which constitutes a "Who's Who" in the profession; a series of individual technical pamphlets; and special volumes from time to time. In connection with three other societies it maintains the engineering societies library and an employment bureau. The officers elected at the 1933 convention were: President, Frederick M. Becket; vice-presidents, Henry Krumb and Edgar Rickard; secretary, A. B. Parsons; and treasurer, Karl Eilers. Headquarters are in the Engineering Societies Building, 29 West 39th Street, New York City.

MINNESOTA. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 2,563,953, as against 2,387,125 in 1920. Minneapolis, the most populous city, had (1930) 464,356 inhabitants; St. Paul, the capital, 271,606.

AGRICULTURE. The table on page 504 shows the acreage, production, and value of the principal crops for 1933 and 1932.

MINERAL PRODUCTION. The iron mines, producing normally nearly nine-tenths of the revenue of the State's mineral industries, almost halted their production in 1932. The quantity of iron ore shipped from the mines fell to 2,248,727 gross tons (1932), from the already exceedingly low total of 17,063,591 (1931), or by more than six-sevenths; and the value of the shipments dwined

Crop	Year	Acres	Prod. Bu.	Value

* Tons.

dled to \$6,263,181, from \$46,020,269. Small as was the total of shipments for 1932, the stock of ore at points on Lake Erie when the closed season for navigation ended in May, 1933, was 4,969,303 tons, or somewhat less than twice the shipments of both Michigan and Minnesota for 1932. The quantity of ore mined in Minnesota considerably exceeded the shipments of 1932, attaining 5,154,291 tons; but this represented a decrease of 70 per cent from 1931. Blast furnaces for the production of pig iron did not operate in 1932.

Iron-mining conditions were favorably reversed in 1933. The mining of ore more than doubled, attaining an estimated 11,980,000 tons for the year. The shipments of ore, much below the mined total for 1932, were 14,794,000 tons for 1933: a total some six times that for the year before and well in excess of the quantity mined in 1933 itself.

FINANCE. State expenditures in the year ended June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$40,586,115 (of which \$10,812,954 was for local education); for interest on debt, \$4,049,986; for permanent improvements, \$30,356,656; total, \$74,992,757 (of which \$30,991,020 was for highways, \$5,506,872 being for maintenance and \$25,484,148 for construction). Revenues were \$60,577,792. Of these, property and special taxes furnished 19.2 per cent; departmental earnings and compensation to the State for officers' services, 9.5; sale of licenses, 48.4 (in which was included a gasoline sale tax that produced \$8,507,322). Funded debt outstanding on June 30, 1932, totaled \$94,951,310, of which \$29,000,000 was for highways; much of the remainder was incurred to provide rural credits. Net of sinking-fund assets, the debt was \$37,003,343. On an assessed valuation of \$2,303,227,139 the State levied in the year ad valorem taxes of \$15,028,707.

EDUCATION. Attention was given during the year to organizing on a Statewide scale the facilities for the further education of unemployed graduates of the public high schools. Use was made of Federal relief funds to pay unemployed and needy teachers to give schooling to adults.

There were enrolled in the public schools of the State, in the academic year 1932-33, 559,150 pupils. Of these, 430,035 were in common schools or elementary grades, 8170 in special classes for defectives, 118,051 in high schools, and 2894 in special courses. The year's expenditures for public-school education totaled \$52,208,998. Salaries of teachers, by the month, averaged \$162.45 for men; for women, \$100.57.

CHARITIES AND CORRECTIONS. The State's chief central administrative powers over institutions

having persons in their care or custody rested in 1933 in the State Board of Control. It was composed of three six-year appointees, of whom one at least was required to be a woman. It exercised general supervision over 18 State institutions, advisory supervision over 14 district sanatoria, and administration of laws relative to special groups to which the State accorded particular care. Its administrative divisions were: Children's Bureau, Division of the Blind, Division of Soldiers' Welfare, Division of Tuberculosis, Division of Research, Division of Inspection, Division of Prevention of Cruelty, Division of the Insane, Division of Purchase, Division of Accounting, Division of Registration, Supervisor of Institution Libraries, Director of Dietetics.

State institutions under the board's authority, with their populations of Dec. 1, 1933, were: State asylums at Anoka (1090), Hastings (1056), Willmar (1260), State hospitals at Rochester (1714), Fergus Falls (1934), St. Peter (1924), School for the Feeble-Minded, Faribault (2255), Colony for Epileptics, Cambridge (677), School for the Blind, Faribault (108), School for the Deaf, Faribault (248), State Public School, Owatonna (479), State Training School for Boys, Red Wing (334), Home for Girls, Sauk Center (304), State Reformatory for Women, Shakopee (59), State Reformatory for Men, St. Cloud (1117), State Prison, Stillwater (1408), State Sanatorium for Consumptives, Ah-gwah-ching (284), Gillette State Hospital for Crippled Children, St. Paul (234). The institutional inmates totaled 16,485.

LEGISLATION. A regular session of the Legislature convened on January 3 and adjourned on April 18. It was pressed by Governor Olson to take bold measures to relieve economic distress among the inhabitants. To this end it passed a law granting a moratorium of two years on foreclosure of mortgage debts (see *Events*, below), provided for a reduction of State direct taxes on property, enacted an income tax on individuals, ranging up to 5 per cent of income over \$10,000, to supply revenue lost from the property tax, and authorized the addition of 4000 miles of roads to the State's highway system so as to provide more public work.

Provision was made for the more rapid reorganization of State banks that had collapsed early in the year; to this end sweeping powers were granted the banking commissioner; he was empowered to suspend State banks for 15 days, and it was made lawful for banks to remain closed for as long as 90 days, if they chose, with a view to effecting reorganization. Special powers were given the commissioner of insurance to regulate insurance companies' loans on policies until March, 1935. A special tax was placed on chain stores, with design to produce a yearly \$1,300,000 for State aid to public-school districts. As in a number of other agricultural States, a preventively high tax (10 cents a pound) was imposed on oleomargarine sold in the State. The appropriations for State expenses during the ensuing two years were reduced to an anticipated extent of some 20 per cent. A State convention of 21 elected delegates was created to deal with Federal repeal of the Eighteenth Amendment.

POLITICAL AND OTHER EVENTS. There were elected by popular vote, on September 12, 21 delegates to a State convention to act for the State on the proposal to repeal the Eighteenth Amend-

ment to the Federal Constitution. The popular vote ran in favor of delegates advocating repeal, by nearly 2 to 1. Governor Olson appointed in September a liquor-control commission to prepare a system of controlling the liquor traffic in the event that it should again become lawful.

State action with regard to debtors and the needy was largely responsive to widespread agitation. A group of farmers and business men declared to Governor Olson in January that taxpayers should refrain from payment unless the expenditures of the State were reduced by one-fourth. Farmers assembled early in the year at scheduled sales of farms in foreclosure and prevented the sales at the advertised places by threats or violence. The Governor issued on February 24 a proclamation forbidding the foreclosure of farmers and home-owners until May 1, which was superseded by the Legislature's provision for a moratorium on mortgages, extending for two years, to May 1, 1935. The validity of this act was contested; the lower courts sustained it, and the litigation was carried to the United States Supreme Court.

On May 8 the Minnesota Farm Holiday Association declared for a farmers' strike, calling on its members to buy nothing and sell nothing. The strike was postponed, but in October was again called in connection with the effort of several Northwestern States to put pressure on the Federal Administration to apply more radical measures for agricultural relief.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Floyd B. Olson; Lieutenant-Governor, K. K. Solberg; Secretary of State, Mike Holm; Treasurer, Julius A. Schmahl; Auditor, Stafford King; Attorney General, Harry H. Peterson; Commissioner of Education, E. M. Phillips.

Judiciary. Supreme Court: Chief Justice, John P. Devaney; Associate Justices, Homer B. Dibell, Andrew Holt, Clifford L. Hilton, Royal A. Stone, I. M. Olsen, and Charles Loring.

MINNESOTA, UNIVERSITY OF. A coeducational State institution for higher learning in Minneapolis, founded in 1851. The 1933 autumn registration was 11,292, while the summer session enrollment for the same year was 3678. The university staff on a full-time basis, including professors, associate professors, assistant professors, and instructors, numbered 580. The income for the year ending June 30, 1933, amounted to \$8,967,280. The permanent university fund was increased by \$125,099.

Gifts received during the year included \$38,763 from the Carnegie Corporation of New York and \$76,555 from the Rockefeller Foundation, for an economic and social study of unemployment and a study of the reeducation of the unemployed; \$60,000 from the Rockefeller Foundation to be used for a Fluid Research Fund; \$80,000 from the Rockefeller Foundation for the Institute of Child Welfare; \$10,000 from the American Association for Adult Education for the study of university extension class students under the special supervision of a special subcommittee of the Committee on Educational Research. The new home for nurses was completed at a cost of \$324,936. The library contained 734,039 volumes. Chancellor, Lotus Delta Coffman, Ph.D., LL.D.

MINORITIES. See **LEAGUE OF NATIONS**; **GERMANY**, **BULGARIA**, **YUGOSLAVIA**, **CZECHOSLOVAKIA**, **BELGIUM**, and **SPAIN** under **History**; **JEWS**.

MISSISSIPPI. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 2,009,821, as against 1,790,618 in 1920. Jackson, the capital, had (1930) 48,282 inhabitants.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Cotton	1933	2,964,000	1,180,000*	\$57,820,000
	1932	3,839,000	1,180,000*	35,990,000
Corn	1933	2,890,000	35,850,000	20,434,000
	1932	2,414,000	32,589,000	11,406,000
Hay (tame)	1933	315,000	363,000*	3,267,000
	1932	318,000	369,000*	2,694,000
Sweet potatoes	1933	63,000	5,670,000	8,118,000
	1932	79,000	7,900,000	2,607,000

* Bales. † Tons.

MINERAL PRODUCTION. The development of the Jackson natural-gas field, starting in 1930, brought the State its first substantially remunerative mineral industry. The production of natural gas jumped to 6,048,000 M cu. ft. for 1931 and to 9,847,907 M for 1932. All but about 2 per cent of the latter total came from the Jackson field, being delivered by 97 producing wells. The greater part of the product of this field went by pipe line eastward as far as Pensacola, and into Louisiana, for urban distribution.

EDUCATION. The public schools, in spite of the financial difficulties of the time, were kept open during the year, though the level of teachers' salaries were low. The State's public-school system included elementary and high schools and junior-college grades. Twenty-five county agricultural high schools for whites and one for Negroes were in operation. There were enrolled in the public schools, in 1932, 587,831 pupils, and the daily attendance was 438,137. The teachers numbered 15,424.

POLITICAL AND OTHER EVENTS. Governor Conner requested the members of the Legislature individually, in September, to agree to a special session, pledging themselves to provide for a new State constitution. He was reported to design the creation of a constitution that would simplify the governmental organization of the subdivisions of the State in order to do away with numerous salaried public positions.

A flood of the Mississippi River early in April caused a break in the levee and raised the peril of inundation for some of the towns near the river. Individuals fearing that their own localities would suffer overpowered armed guards and dynamited a levee near Tippon on April 8, with a view to diverting the water elsewhere.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Sennett Conner; Lieutenant-Governor, Dennis Murphree; Secretary of State, Walker Wood; Attorney General, Greek L. Rice; Treasurer, Lewis S. May; Auditor, Joseph S. Price; Superintendent of Education, W. F. Bond.

Judiciary. Supreme Court: Chief Justice, Sydney Smith; Associate Justices, W. D. Anderson, James G. McGowen, George H. Ethridge, W. H. Cook, V. A. Griffith.

MISSISSIPPI, UNIVERSITY OF. A coeducational, State institution of higher learning at University, Miss., chartered in 1844 and opened in 1848. The university consists of a college of liberal arts and schools of law, engineering, medicine, pharmacy, education, and commerce

and business administration. The enrollment for the autumn of 1933 was 1110, while that for the 1933 summer session was 235. There were 70 faculty members. The library contained approximately 40,000 volumes. The income (appropriation) for the biennium was \$270,000; students' fees amounted to approximately \$180,000. Erection of a new hospital completed the \$1,600,000 building programme which was made possible through special legislative appropriation in 1928. Chancellor, Alfred Hume, C. E., D. Sc., LL.D.

MISSISSIPPI RIVER. See FLOOD CONTROL.

MISSOURI. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 3,629,367, as against 3,404,055 in 1920. St. Louis had (1930) 821,960 inhabitants; Kansas City, 399,746; Jefferson City, the capital, 21,596.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1933	6,019,000	141,446,000	\$55,164,000
	1932	6,472,000	197,896,000	87,505,000
Hay (tame)	1933	2,797,000	2,547,000	17,829,000
	1932	2,847,000	2,572,000	14,146,000
Cotton ...	1933	345,000	245,000	11,638,000
	1932	406,000	307,000	7,982,000
Wheat ...	1933	1,331,000	16,639,000	12,147,000
	1932	1,404,000	15,733,000	5,665,000
Oats	1933	1,764,000	32,684,000	9,790,000
	1932	1,939,000	36,841,000	5,526,000
Potatoes ..	1933	54,000	2,808,000	3,089,000
	1932	56,000	5,600,000	2,520,000
Tobacco ..	1933	9,000	8,325,000	999,000
	1932	8,200	8,405,000	1,177,000

* Tons. † Bales. ‡ Pounds.

MINERAL PRODUCTION. Mines in the State shipped silver, lead, and zinc to the total value of \$7,089,018 (1932) as against \$12,014,134 for 1931. The amount of silver was trifling, 1128 ounces being produced by recovery from ore and concentrates in 1932 and 40,000 in 1931. The quantity of recovered lead fell to 117,159 short tons (1932) from 160,121 (1931). That of zinc, to 985 tons, from 3205. Producers of lime sold 180,000 short tons, valued at \$6.01 a ton (1932) as against 224,416 tons, at \$6.60 for 1931. The coal fields benefited somewhat by reason of the interruption of production in 1932 in Illinois and Ohio, through labor troubles.

EDUCATION. The latest statistics obtainable for the public schools of the State as a whole were those covering the academic year 1931-32. For that year, the number of persons of school age in the State was reckoned as 956,707. There were enrolled in the public schools 683,830 pupils. Of these, 194,734 were in rural common schools; in elementary grades, 344,005; in high schools, 145,091. The year's expenditures for public-school education totaled \$41,874,442, or about 2 per cent below the total for the year before. Salaries of teachers, by the year, averaged \$615 for men and \$603 for women in rural schools; in high schools, \$1540 for men and \$1037 for women.

The situation of the rural schools deteriorated in the year 1932-33; according to the *United States News*, one in four of the teachers in these schools taught for a month or more of that period without pay; and 10 per cent of them took rural-school positions for 1933-34 at salaries of less than \$320.

CHARITIES AND CORRECTIONS. The State's Board of Charities and Corrections was abolished by an enactment of 1933. Its powers and duties with

regard to children were transferred to a Board of Managers of Eleemosynary Institutions. The latter board was invested with the management of the State Home for Children, at Carrollton. It exercised this function through a Children's Bureau.

LEGISLATION. A regular session of the Legislature was convened on January 4. Dealing with the current banking emergency it granted extraordinary powers to the Governor and the commissioner of finance to regulate State banks and trust companies during the continuation of the trouble. There was created, to pronounce for the State with regard to the proposed repeal of the Eighteenth Amendment of the Federal Constitution, a State convention, to be composed of 68 delegates, to be nominated by State senatorial districts, but to be elected at large by popular vote. A measure for the repeal of the prohibition law of the State failed to pass the lower house, but another measure, rendering lawful the sale of beer containing alcohol up to 3.2 per cent, was enacted. State salaries were subjected to fairly general reductions reported as averaging 10 per cent. Savings were effected by the abolition of some of the State boards and bureaus. Provision was enacted for a system of central State purchasing. The economy measures thus passed had been strongly sponsored by Governor Park. Appropriation at the rate of about \$3,000,000 a year from general revenue was made for aid to public schools. The Twentieth Amendment to the United States Constitution was ratified.

POLITICAL AND OTHER EVENTS. Governor Guy B. Park was inaugurated on January 9. Supporters of Federal prohibition sought to prevent the election of delegates to a State convention to act on the repeal of the Federal Eighteenth Amendment; they contended that the proclamation calling for the popular election of the delegates was void as coming within 3 months after the Legislature had provided for the election, thus contravening the State's law as to the application of any laws not specifically declared as emergency acts. The State supreme court held that the Federal call for State conventions overruled the State's law and allowed the election. Accordingly on August 19 the election was held; 68 delegates in favor of repeal were chosen by a popular vote in the proportion of more than 2 to 1. The majority for repeal in this vote was achieved chiefly in the cities; 55 of the 114 counties gave majorities against repeal; they were chiefly in the farming regions of the north and the southwest.

The banks of the State were temporarily relieved from obligation to pay their depositors, at the height of the banking panic, by the proclamation of a series of legal holidays on March 3. The banks of the State fared relatively well as to ability to reopen later in March. The City of St. Louis, in contrast to several other of the chief cities of the Middle West, continued to balance its budget and to pay in cash. It went outside of its budget only for money borrowed to meet the exceptionally high requirements for disbursements to relieve the needy. The Missouri State Life Insurance Company, with liabilities of \$149,961,746, was placed in the hands of the State superintendent of insurance on August 28, as insolvent. At Kansas City the William Rockhill Nelson Gallery of Art and Atkins Museum, which cost \$15,000,000, was opened on December 11.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Guy B. Park, Lieu-

tenant-Governor, Frank G. Harris; Secretary of State, Dwight H. Brown; Auditor, Forrest Smith; Treasurer, Richard R. Nacy; Attorney General, Roy McKittrick; Superintendent of Public Schools, Charles A. Lee.

Judiciary. Supreme Court: Chief Justice, Ernest S. Gantt; Associate Justices, Frank E. Atwood, William F. Frank, George R. Ellison, Charles Thomas Hays, Clarence A. Burney, Ernest M. Tipton.

MISSOURI, UNIVERSITY OF. A State institution of higher education in Columbia and Rolla, Mo., founded in 1839. The enrollment for all divisions for the first semester of 1933-34 was 3423 of whom 2496 were men and 927 were women. The total enrollment for the 1933 summer session was 1470, of whom 712 were men and 758 were women. The total annual enrollment of all classes of students, including those in correspondence and extension courses was 7382. There were 437 faculty members. The endowment of the University was approximately \$1,807,210, and the total income from all sources was approximately \$2,716,258. The libraries contained 340,000 volumes. President, Walter Williams, LL.D.

MODERN ART, MUSEUM OF. See ART MUSEUMS.

MOFFETT, REAR ADMIRAL WILLIAM ADGER, U.S.N. An American naval officer died off the New Jersey coast in the Akron disaster of Apr. 4, 1933. Born in Charleston, S. C., Oct. 31, 1869, he was graduated from the United States Naval Academy in 1890. During the Battle of Manila Bay in the war with Spain he served on the *Charleston* under Admiral Dewey. He was commander of the *Chester* when on Apr. 10, 1914, at Tampico, Mexico, Admiral Mayo demanded a salute of the American flag as satisfaction for the seizure by Mexican soldiers of a boat load of American marines who were attempting to land. He held the same command at Vera Cruz, when that city was captured by American forces on Apr. 21, 1914, to prevent the landing of a cargo of arms from Germany. During the World War he was commandant of the United States Naval Training Station at Great Lakes, Ill., receiving in recognition of the service which he rendered in training 40,000 naval recruits the Distinguished Service Medal. He served as technical adviser to the Conference on the Limitation of Armaments held in Washington during 1921-22 and at the same conference held in London in 1930.

Admiral Moffett became chief of the Bureau of Aeronautics of the U. S. Navy Department in 1921, being reappointed in 1925 and again in 1929. Under his direction there were added aircraft suitable for carrying out any operation which the fleet might find it necessary to accomplish from the air, including scouting, torpedo, bombing, observation, and fighting planes, almost 1000 in all. He sponsored also the construction of the Navy's various airships, the *Shenandoah*, the *Los Angeles*, the *Macon*, and the *Akron*, and it was on the latter that he lost his life during an inspection flight. Previous to the flight he had expressed his confidence in the dirigible for both national defense and commercial purposes. See AERONAUTICS.

MOIR, SIR ERNEST WILLIAM. A British engineer, died in London, June 15, 1933. Born June 9,

1852, he attended University College School and University College, London, and began his career with the engineering firm of A. Chaplin and Co. of Glasgow. During his association with Tancred, Arrol and Co., he had charge of the construction of the southern cantilevers of the Firth of Forth railway bridge, opened in 1890. Sent to the United States as resident engineer for Sir Benjamin Baker in 1888, he was engaged in the preliminary construction of the Hudson River tunnel for the Pennsylvania Railroad, utilizing the shield system in cutting through the rock under the river from the Jersey shore. He later constructed the four single-track tunnels under the East River for the Long Island Railroad, a subsidiary of the Pennsylvania System.

After 1900 Sir Ernest was a director of S. Pearson and Son, London contractors for public works, and at the time of his death was partner with Lord Cowdray in this firm. He designed and constructed the Blackwall Tunnel for street traffic under the Thames River in London; the Surrey commercial dock and its extensions; the Great Northern and City Railway under London; Seaham harbor; the Admiralty harbor and defense works at Dover; the Southern extension of the Royal Albert Dock in London; and the Valparaíso (Chile) harbor works.

During the early part of the World War, Sir Ernest represented the British government in the purchase of war supplies in the United States. Recalled to England in 1915, he served on the council of the Ministry of Munitions, founding the inventions branch of that Ministry and having charge of the purchase of rolling stock and rails for the various Allied fronts. He was also president of the Inter-Allied Non-Ferrous Committee and, under the Ministry of Health, chairman of the Committee on New Methods of House Construction.

Both before and during the War, Sir Ernest rendered a valuable service to the British Admiralty as a member of its engineering committee, reviewing the proposed modifications and improvements of naval bases and giving evidence on the organization and efficiency of the works department. He testified also at hearings of the Government Departmental Committee on Deep Excavations and of the Royal Commission on Oil Fuel Storage. In 1916 he was created a baronet. He was an officer of the French Legion of Honor, a Fellow of University College, London, and a member of the Institute of Civil Engineers.

MOLUCCA ARCHIPELAGO. See NETHERLAND INDIA.

MONACO, mōn'ā-kō. A principality on the Mediterranean coast, surrounded on the land sides by the French Department of Alpes-Maritimes. Total area, 149 hectares (368 acres); population (1933), 22,994. Monaco, the capital, had 2085 inhabitants; La Condamine, 11,787; Monte Carlo, 11,055. Revenue is mainly derived from a gambling concession. Net profits of the Monte Carlo Casino, a gambling resort, for the fiscal year ended Mar. 31, 1932, totaled \$712,000; gross profits were \$3,538,000.

Under the constitution promulgated, Jan. 5, 1911, the government consists of the Prince, assisted by a council of state, and a national council elected by universal suffrage. A decree issued by Prince Louis, Dec. 26, 1930, dissolved the council of state, and national council and suspended some of the constitutional guarantees. Ruler in 1933, Prince Louis II.

HISTORY. On Jan. 18, 1933, Princess Charlotte, only child of Prince Louis, renounced her rights to the throne in favor of her son, Renie. Treaties concluded with France during the year stripped the Prince of all but nominal sovereignty. The roulette monopoly of the Casino was abolished and France reserved the right to fortify the Rock of Monaco in the event of war. On Dec. 18, 1933, the Principality applied to the U. S. Supreme Court for permission to sue the State of Mississippi for the principal and interest due on bonds in default since 1841.

MONETARY MEASURES. See UNITED STATES under *The Treasury*.

MONEY. The table on page 509 from the annual report of the director of the United States Mint shows the distribution of the stock of money in the United States on June 30, 1933, with comparative totals for June 30, 1932, Oct. 31, 1920, Mar. 31, 1917, June 30, 1914, and Jan. 1, 1879.

MONGOLIA. A large, vaguely defined region lying west of Manchuria and south of the Siberian territories of the Soviet Union. It is divided politically into Inner Mongolia, administered partly by China and partly by Manchoukuo (q.v.), and Outer Mongolia, an independent Soviet republic under the protection of the Soviet Union. The total area is roughly estimated at from 1,367,000 to 1,875,000 square miles and the population at about 2,000,000, mostly half-nomadic Mongols with a small infusion of Chinese and Russians. The Mongols live mainly by stock raising and furs, skins, hides, horns, and wool are the principal exports. The fertile soil needs irrigation to be productive. Mineral deposits are fairly extensive but there is little commercial production.

INNER MONGOLIA. Inner Mongolia was comprised mainly within the Chinese provinces of Jehol, Suiyuan, and Chahar, which also included parts of China proper. In 1933, Jehol was taken from China by the Japanese and incorporated in the new state of Manchoukuo.

A movement for an autonomous Inner Mongolia, under nominal Chinese control, was launched at a conference of Mongol princes and other dignitaries held in October, 1933, at the great Lama temple at Pailingmiao (Bathahalek), 100 miles north of Kweihua. The region which they desired to have set apart as a semi-independent Mongol state comprised practically all of Suiyuan province and about half of Chahar, or approximately 160,000 square miles. The Mongol leaders threatened to seek union with Manchoukuo if their demands were not granted by the Chinese authorities at Nanking. Negotiations between the Mongols and Chinese were still under way at the end of the year. In the meantime Japanese and Manchoukuo troops had occupied the Dolonnor district along the eastern border of Chahar and made several raids to the west for the alleged purpose of breaking up bandit groups. These moves aroused fears in China and the Soviet Union that Japan was planning to annex additional large portions of Inner Mongolia to Manchoukuo.

OUTER MONGOLIA. Established as an independent republic along Soviet lines in May, 1924, Outer Mongolia, according to data furnished by Soviet sources, had a total area of 1,544,500 square kilometers (596,177 square miles) and a population of 767,000. The capital is Ulan Bator Hoto (formerly Urga), with about 60,000 inhabitants. Trade is largely with the Soviet Union and is a government monopoly. Governing powers are vested in a parliament (the Great Huruldan) elected by uni-

versal suffrage. It elects an executive committee of 30 members (the Little Huruldan) which acts in its behalf, mainly through a smaller committee of five. All lands, forests, minerals, waterways, and marine products were collectively owned, and the Mongol princes and priests were deprived of their privileges.

According to Japanese reports, a Nationalist uprising against the Soviet régime in Outer Mongolia occurred late in 1933 and civil war ensued. The report was not confirmed. See CHINA, JAPAN, MANCHOUKUO and UNION OF SOVIET SOCIALIST REPUBLICS, under *History*.

MONTANA. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 537,600, as against 548,889 in 1920. Helena, the capital, had (1930), 11,803 inhabitants.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Wheat	1933	3,653,000	27,194,000	\$15,308,000
	1932	4,070,000	55,610,000	14,738,000
Hay (tame) ..	1933	1,548,000	1,934,000	12,958,000
	1932	1,630,000	2,388,000	13,134,000
Sugar beets ..	1933	68,000	842,000
	1932	54,000	739,000	8,983,000
Oats	1933	383,000	6,511,000	2,084,000
	1932	403,000	10,075,000	2,015,000
Potatoes ..	1933	23,000	1,955,000	1,271,000
	1932	22,000	2,244,000	898,000
Dry beans ..	1933	35,000	336,000	773,000
	1932	24,000	259,000	363,000
Corn	1933	215,000	2,472,000	1,236,000
	1932	215,000	2,580,000	774,000
Barley	1933	205,000	2,768,000	1,024,000
	1932	195,000	3,900,000	858,000

* Tons. † 100-lb bags

MINERAL PRODUCTION. The gold, silver, copper, lead, and zinc mined in 1933 had an estimated value of \$8,469,580. Of this total gold (reckoned at \$20.67 an ounce though for much of the year it brought considerable more) supplied \$1,056,372; silver (2,572,000 ounces), \$887,340; copper (65,789,000 pounds), \$4,210,496; zinc, (43,448,000 pounds), \$1,868,204.

The definitely ascertained production of copper, almost wholly from the mines at Butte, was cut to 84,847,349 pounds for 1932, from 184,555,735 for 1931; in value, \$5,345,383 (1932) and \$16,794,572 (1931). As most of the product of gold and silver came from the copper ore, the output of silver likewise fell, to 1,686,213 fine ounces (1932), from 3,829,837 (1931); a slight rise was that of gold, to \$839,318 (1932), from \$829,192 (1931). The loss of gold production from the copper ores was a little more than offset by the resumption or increase of activity in gold mines. No like extensive resumption of work in old silver mines occurred up to the end of 1932. The production of lead, 2,157,766 pounds for 1932, was some 75 per cent below the 8,860,186 pounds of 1931; in value, the decline was in the proportion of 80 per cent. The production of zinc, 4,393,000 pounds (1932), was likewise far below the 13,494,896 of 1931. The aggregate value of the output of the five metals was \$6,856,737 (1932) as against \$19,575,053 (1931).

The production of petroleum declined, chiefly by reason of the lack of new discoveries to make up the reduced productivity of the Kevin-Sunburst and other existing fields. It fell to 2,449,000 barrels (1932), from 2,830,000 (1931).

FINANCE. State expenditures in the year ended

LOCATION, OWNERSHIP, AND PER CAPITA CIRCULATION OF UNITED STATES MONEY, JUNE 30, 1933
 [From Annual Report of the Secretary of the Treasury, 1933]

June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$7,446,090 (of which \$1,192,828 was for local education); for interest on debt, \$385,121; for permanent improvements, \$6,685,205; total, \$14,516,416 (of which \$8,328,335 was for highways, \$1,717,735 being for maintenance and \$6,610,600 for construction). Revenues were \$13,708,228. Of these, property and special taxes furnished 18.6 per cent; departmental earnings and compensation to the State for officers' services, 6.0; sale of licenses, 27.9 (in which was included a gasoline sale tax that produced \$3,006,606). Funded debt outstanding on June 30, 1932, totaled \$5,833,156, of which \$1,500,000 was for highways. Net of sinking-fund assets, the debt was \$4,314,763. On an assessed valuation of \$410,634,611 the State levied in the year ad-valorem taxes of \$2,253,979.

EDUCATION. The decrease in the number of the teaching force in the public schools over four years ending with 1933 was reported in the *Journal* of the National Education Association to have been in the proportion of some 12 per cent; during the same time the enrollment in the schools increased by 7 per cent. A shortening of the terms in some of the school districts was in prospect. The State Department of Public Instruction, nevertheless, had in preparation a plan carrying provisions for general adult education, literacy classes, and vocational education.

The number of persons of school age in the State was reckoned in 1933 as 160,797. There were enrolled in the public schools, in the academic year 1932-33, 118,559 pupils. Of these, 80,897 were in common schools or elementary grades; in high schools, 31,662. The year's expenditures for public-school education totaled \$11,138,401.

LEGISLATION. A regular session of the Legislature was held, convening on January 2. It created a State convention to be composed of 51 delegates, to be elected by popular vote at the general election of November, 1934 or at a prior special election, who should act for the State with regard to the proposed repeal of the Federal Eighteenth Amendment. A liquor law was enacted, in anticipation of the repeal of Federal prohibition; it rendered the sale of liquor a monopoly of the State, save for beer, which was classed as non-intoxicating. The Governor, secretary of State, and attorney general were to act as a board of liquor control, with a supervisor, operating liquor dispensaries at which persons holding purchasing permits costing \$2 a year might buy for consumption at their residences, in amounts that the State might fix. An act, later held invalid, permitted redemption of property previously sold for taxes, without penalty or interest, if taxes should be paid up by Nov. 30, 1933. Building-loan associations were authorized to become members of the Federal Home Loan Bank system. A State income-tax law was enacted.

A special session met on November 27 to provide more State money for the relief of needy persons, limit hours of labor, extend the time for redeeming real estate from tax liens, and make provisions for carrying out State merchandising of liquor.

POLITICAL AND OTHER EVENTS. Governor John E. Erickson was inaugurated on January 2. He resigned on March 13 to become, by appointment of his successor, Lieutenant-Governor Cooney, United States Senator in place of Thomas J. Walsh, deceased. Congress having passed a measure to give

Federal consent to the formation of an agreement by Montana and Wyoming for a division of the waters of the Yellowstone River, Montana was reported to have shaped a tentative agreement with Wyoming to that end. Federal Secretary of the Interior Ickes declared in June that the Federal government would not approve the damming of Yellowstone Lake, which it was supposed that this agreement contemplated.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, John E. Erickson (resigned to become Senator); Lieutenant-Governor (later Governor), F. H. Cooney; Attorney General, Raymond T. Nagle; Secretary of State, Sam W. Mitchell; Treasurer, James J. Brett; Auditor, John J. Holmes; Superintendent of Public Instruction, Elizabeth Ireland.

Judiciary. Supreme Court: Chief Justice, Lew L. Callaway; Associate Justices, John A. Matthews, Albert H. Angstman, Ralph J. Anderson, Samuel V. Stewart.

MONTANA, STATE UNIVERSITY OF. A State institution for the higher education of men and women at Missoula, Mont., founded in 1895. The enrollment for the autumn of 1933 was 1431. In the 1933 summer session 559 students were registered, of whom 228 were men and 331 women. The faculty had 92 members. The productive funds and income for the year amounted to \$545,000. There were about 200,000 volumes in the library, including government documents. President, Charles H. Clapp, Ph.D.

MONTE CARLO. See MONACO.

MONTEJO Y RICA, TOMÁS. See SPANISH LITERATURE.

MONTES, món'tás, ISMAEL. A Bolivian statesman, died Nov. 18, 1933, in La Paz where he was born Oct. 5, 1861. Educated for the law at the University of La Paz, he was admitted to the bar in 1886 and later became judge of the La Paz district court. His political career began in 1890 when he was elected Liberal deputy from La Paz. In 1903 he was appointed Minister of War, having risen to the rank of colonel in the army after serving with distinction in the War of the Pacific of 1879. He again distinguished himself as a military leader during the war with Brazil over the possession of the Acre region in 1903.

In 1904 Montes was elected to the presidency, and because of the death of his successor, Dr. Guachalla, before his inauguration in 1908, continued in office a year beyond the regular term, pending a new election. Under his able administration the country made rapid progress along economic lines, especially in the extension of the railway system. He was also instrumental in promoting agriculture, mining, the financial credit of the country, and its educational system, founding normal schools, schools for the Indians, and agricultural, mining, and professional schools.

On the expiration of his term in 1910 Montes was commissioned general of a division in the Bolivian army and was appointed Minister to France. The following year he was transferred to the Court of St. James's. While in both Paris and London he negotiated new loans under favorable conditions for Bolivia. He was reelected president in 1913 and continued throughout his four-year term his energetic efforts to better the financial and economic conditions of the country. The principal achievement of his second administration was the passage in 1914 of a law providing for much needed reforms in the banking system. On the sinking of the *Tubantia* during Germany's

submarine campaign, Bolivia broke off diplomatic relations in April, 1917. Its principal aid to the Allies during the War were exports of its metal resources.

Exiled by the revolutionary junta of 1920, Montes lived most of the time until 1928 in Paris. On his return he became chairman of the board of the Central Bank of Bolivia, which he had founded in 1911, and head of the Liberal party.

MONTSEERAT, mõnt'së-rät'. One of the presidencies of the LEEWARD ISLANDS (q.v.).

MOONEY, THOMAS. See CALIFORNIA under *Political and Other Events*.

MOORE, GEORGE. An Irish novelist, dramatist, poet, and critic, died in London, Jan. 21, 1933. He was born at Ballyglass, Co. Mayo, Ireland, Feb. 24, 1852. After attending a Roman Catholic school at Escott, he turned to the study of art, first in London and then in Paris, but always remained a dilettant. While in Paris, however, he became an intimate of the circles frequented by Baudelaire, Mallarmé, Zola, Monet, Manet, and other great literary and artistic figures, later incorporating his impressions of these geniuses in *Confessions of a Young Man* (1888) and *Memoirs of My Dead Life* (1906). He returned to London in the late '70s and, temporarily in straitened circumstances, worked diligently as a journalist and critic, acquiring by degrees idiomatic fluency in the writing of English, which for years had been an unused tongue to him. His first publications were two small volumes of verse, *Flowers of Passion* (1877) and *Pagan Poems* (1881).

In 1883 appeared Moore's first novel, *A Modern Lover*, a transplantation in its realistic approach of the French "philosophical" novel. It was followed in quick succession by *A Mummer's Wife* (1884); *A Drama in Muslin* (1886); *A Mere Accident* (1887); *Spring Days* (1888); *Mike Fletcher* (1889); and *Vain Fortune* (1890). On the appearance of *Esther Waters* in 1894 Moore's position among the novelists of his generation was established; it showed him to be a realist in his strict regard for truth but, in contrast with his French masters, one whose work was often aglow with imaginative insight and poetic quality. *Evelyn Innes* (1898) and its sequel, *Sister Teresa* (1901), established his claim to remembrance as one of the first writers to break down the barriers of Victorian inhibition.

In 1901 an interest in the movement known as the Irish literary revival took Moore to Dublin where he remained for a decade, assisting Lady Gregory and William Butler Yeats in the establishment of the Irish National Theatre (Abbey Theatre) and identifying himself variously with its literary activities. Out of this residence grew *The Untilled Field* (1903), a collection of stories of anti-Catholic tendency, and *The Lake* (1905), a novel Irish in theme and setting. Catholic objections to the free play of his ideas in art, and also, perhaps, a general failure to fit in with the aims, moods, and methods of the movement, led him to abandon his native land again in 1911. His dominant trait of exhibitionism was admirably displayed in the indiscreet record of his Irish adventures, *Hail and Farewell*, published in three volumes during 1911-14 as *Ave*, *Salve*, and *Vale*.

George Moore attained his greatest artistry as a novelist in *The Brook Kerith* (1916), in which with mystical insight he recreated the story of

Jesus, and in *Heloise and Abelard* (1921), an almost lyrical version of the ageless medieval romance. His last novels were *Ulick and Soracha* (1926) and *Aphrodite in Aulis* (1931). *A Story-teller's Holiday*, another subjective work, banned on its publication in 1918, was recognized by the United States Department of the Treasury as a work of "established literary merit" only a few weeks previous to his death and the ban on its importation lifted.

Although primarily a novelist, Moore was also an art critic and a dramatist. His most stimulating critiques were *Impressions and Opinions* (1890); *Modern Painting* (1893); and *Reminiscences of the Impressionist Painters* (1906). Of his plays the most masterly and impressive were *The Bending of the Bough* (1900); *The Making of an Immortal* (1927); and *The Passing of the Essenes* (1930). His other works include: *Literature at Nurse* (1885); *Parnell and His Island* (1887); *The Celibates* (1895); and *In Single Strictness* (1922). At the time of his death he was writing a volume of reminiscences, entitled *A Communication to My Friends*.

Of him Mr. Martin A. McGoff, of Liverpool, justly wrote: "Anyone familiar with Moore's intellectual make-up would not expect accuracy in details from him, nor any particular sensibility to other people's feelings where a literary effect was concerned. In *Salve*, statements about W. B. Yeats, which appeared in the first issue, were subsequently withdrawn. Always writing for effect, Moore's object was to reproduce a picturesque personality—one that would appeal to Holbein and Durer but was a little too benign for Quintin Mastys; and Moore certainly would not scruple over a little 'artistic license' over the facts of a portrait. The exaggeration of the age lends an added touch of pathos which Moore could not miss."

Oscar Wilde said of Moore that "he had to write prose for seven years before he realized that there was such a thing as grammar, and another seven years before he found out that a paragraph is architectural." Wilde's satire like that of Moore knew no scruples.

MORAVIA AND SILEZIA. A Province of Czechoslovakia. See CZECHOSLOVAKIA under *Area and Population*.

MORAVIANS. A religious denomination comprising, in the United States, three branches: The Moravian Church (Unitas Fratrum); the Evangelical Union of Bohemian and Moravian Brethren in North America; and the Independent Bohemian and Moravian Brethren Churches. For early history see THE NEW INTERNATIONAL YEAR BOOK, 1932.

THE UNITAS FRATRUM, the largest branch, is organized in the United States in two coordinate provinces: the Northern, with a provincial synod meeting every fifth year; and the Southern, of which the provincial synod meets every third year. The church maintains the following four educational institutions: Linden Hall, Lititz Pa.; Moravian College and Theological Seminary, and Moravian Seminary and College for Women, Bethlehem, Pa.; and Salem Academy and College for Women, Winston-Salem, N. C. Missionary workers are maintained in southern California and Alaska, and in Nicaragua, Honduras, the West Indies, Jamaica, Labrador, Surinam, South America, the Himalayas, Unyamwezi, Central Africa, and South Africa. The official peri-

odical, *The Moravian*, is published weekly in Bethlehem, Pa.

On Jan. 1, 1933, there were in the United States 152 churches; 170 ministers; 26,809 communicant members, although the actual membership was estimated at 37,026; and 146 Sunday schools with 24,476 pupils. The five "home provinces" of the American and European branches had a total membership of 57,649. In Europe there were also affiliated societies, known as "Diaspora," with a membership of about 30,000. The foreign missions had a membership of 146,528. Samuel H. Gapp, Ph.D., D.D., has been president of the Northern Province since 1930. Headquarters of the Provincial Elders' Conference (executive board) of the Moravian Church in America are at 45 West Church Street, Bethlehem, Pa.

MORGAN, REAR ADMIRAL CASEY BRUCE, U. S. N., RET. An American naval officer, died at Lake Clear, N. Y., Aug. 17, 1933. He was born in Augusta, Ga., Oct. 20, 1867. Following his graduation from the U. S. Naval Academy in 1888, he was commissioned ensign in the Navy in 1890, and soon after his promotion to the rank of lieutenant-junior in 1898, he served on the *Raleigh*, Dewey's flagship, in the Battle of Manila Bay. He was later an inspector of equipment in San Francisco (1905-06), executive officer in Milwaukee (1906-08), and inspector in charge of the 11th Light House District in Detroit (1908-10). On returning to sea duty he was in command of the *Dubuque* (1910-11), the *Nashville* (1911-12), and the *Missouri* (1912-13). In 1913 he was at the Naval War College in Newport, R. I., and from 1914 to 1916 served as commander of the *Minnesota*.

In 1917 Admiral Morgan assumed command of the *Agamemnon* (the former German liner, *Kaiser Wilhelm II*), and in 1919 was assigned to the *Imperator* (another seized German vessel, later renamed the *Berengaria*) in the same capacity. Both these vessels were part of the transport force for the A.E.F. On his promotion to the rank of temporary rear admiral in October, 1919, he assumed command of the Transport Force. He was commandant of the Naval Station at Cavite, P. I., from 1919 to 1920 and commander of the Special Service Squadron from 1921 until his retirement in 1923. The permanent rank of rear admiral was conferred on him in 1930.

MORGAN, HARRY HAYS. An American diplomat, died in London, Mar. 19, 1933. He was born in New Orleans, La., Dec. 24, 1860, attended Exeter Academy during 1876-78, and studied law with his father, Philip H. Morgan. His first diplomatic post was that of secretary of the American Legation in Mexico City, where his father was envoy during 1882-85. After 1897 he represented the State Department at several Swiss consulates, including Horgen, Aarau, and Lucerne. In 1906 he was transferred to Stuttgart, Germany, and the following year to Amsterdam, the Netherlands. In 1910 he was advanced to consul-general, holding that post in Barcelona, Spain, until 1913 and in Hamburg, Germany, until 1917.

On Cuba's declaration of war against Germany in April, 1917, a few days after the entry of the United States into the conflict, Mr. Morgan was sent to the island as special investigating agent, and remained there during the next two years as representative for the United States Food and Fuel Administrations and War Trade and Shipping Boards. After the war he was sent to Bel-

gium, first as consul-general in Antwerp and then in Brussels, serving also in 1919 as a member of the United States Commission which negotiated the economic reconstruction of Belgium. Previous to his retirement in 1925 he was consul-general in Buenos Aires, Argentina. He was the father of Lady Furness and Mrs. Reginald C. Vanderbilt.

MORMONS. See LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF.

MOROCCO. Morocco is divided administratively into (1) the French Zone (area, 162,162 square miles; population, 1931, 5,057,449), including about 85 per cent of both the area and population; (2) the Spanish Zone (area, 13,125 square miles; population, about 1,000,000); and (3) Tangier (q.v.). The chief cities of the French Zone are Marrakech, 191,936 in 1931; Casablanca, the chief port, 160,418; Fez, 106,838; Meknes, 54,156; Rabat, the political capital, 53,006. There were about 4,230,000 Islamized Berbers and Arabs, 120,000 native Jews, and 150,000 foreigners. The school enrollment (1931) was 63,007 (37,107 Europeans, 13,648 Moslems, and 12,192 Jews). The principal towns in the Spanish Zone are Tetuan (38,000), Alcazar (12,750), Ceuta, and Melilla. The following statistics cover the French Zone, unless another zone is specified.

PRODUCTION. Agriculture and livestock raising are the chief occupations. There were some 9,300,000 acres of arable land in the French Zone in 1932. Crops for that year totaled (in thousands of units, bushels except as indicated): Wheat, 27,970; barley, 47,147; oats, 1267; corn, 4677; linseed, 369; wine (gallons), 9956; olive oil, (gallons), 2856. Livestock in 1932 included 1,598,000 cattle, 7,558,000 sheep, 3,860,000 goats, 117,000 swine, 80,000 horses, 108,000 mules, 611,000 asses, and 120,000 camels. Production of potash in 1932 was 997,317 metric tons (900,723 in 1931).

COMMERCE. Imports into the French Zone in 1932 were valued at 1,785,100,000 francs (\$69,977,000 at par), against 2,075,200,000 francs (\$81,348,000) in 1931. Exports totaled 685,100,000 francs (\$26,855,000), compared with 761,400,000 (\$29,846,000) in 1931. The value of the principal imports for consumption (1932) was: Refined sugar, \$6,683,000; tea, \$3,593,000; cotton piece goods, \$5,218,000; gasoline, \$3,107,000; automobiles, \$2,384,000. The chief export items were: Wheat, \$8,168,000; phosphate rock \$4,972,000; barley, \$3,590,000; eggs, \$2,059,000; and palm fibre, \$1,073,000. In 1931 France supplied 56.2 per cent of all imports and purchased 63.4 per cent of the total exports. Other sources of imports were the United Kingdom (8.5 per cent in 1931); United States (6 per cent); Germany (2.5 per cent).

FINANCE. Budget estimates of the French Zone for the fiscal calendar year 1933 were: Revenue, 842,205,000 francs; expenditure, 916,000,455 francs. The public debt on Dec. 31, 1931 amounted to 1,750,210,000 francs (\$68,608,000). The budget for the Spanish Zone in 1932 balanced at 51,841,200 pesetas, including a subvention of 26,600,000 pesetas from the Spanish Treasury.

COMMUNICATIONS. Railways in the French Zone extended 1433 miles in 1929; highways, 3490 miles (1931). Air lines connected Casablanca with Dakar and with Toulouse, via Tangier and Rabat. In the Spanish Zone there were about 72 miles of railway (1933) and 350 miles of good roads. A new road across the Rif country between Ceuta and Melilla was officially opened Nov. 2, 1933. The

shipping tonnage entered at French Zone ports in 1931 was 3,529,000 (3,483,000 in 1930).

GOVERNMENT. Nominal authority is vested in the Sultan of Morocco, who resides in the French Zone, usually at Rabat. But effective control is exercised by the French Resident General, who has authority to veto all the Sultan's edicts and decrees. Local administration is under native caids and French agents. Sultan in 1933, Sidi Mohammed, who ascended the throne Nov. 18, 1927. Auguste Henri Ponsot succeeded Lucien Saint as French Resident General in 1933. The Spanish Zone is administered by a Spanish high commissioner resident at Tetuan. Nominal authority is vested in a Khalifa, chosen by the Sultan of Morocco from a list of two candidates selected by the Spanish government. Khalifa in 1933, Sidi Muley Hassan Ben el Mehedi. Spanish High Commissioner, Luciano Lopez Ferrer, appointed June 20, 1931.

HISTORY. During 1933 the French brought almost to conclusion their 25 years of effort to subdue the unruly Berber tribesmen of the Upper Atlas region. In February they met with a serious reverse. An expedition sent against rebels in the Djebel Sarro was defeated with the loss of 79 killed and 107 wounded. The French then mobilized a force of 25,000 men and launched four columns from Marrakech, Tadla, Meknes, and Eastern Morocco which converged upon the rebel stronghold in the Atlas chain about 175 miles south of Rabat. After some of the most sanguinary fighting recorded since the French entered Morocco the Berbers were surrounded and forced to surrender during September. At the end of 1933 the only part of the French Zone not subject to French control was a strip of territory bordering on the Spanish colony of Rio de Oro.

Meanwhile the completion of a new highway between Ceuta and Melilla in Spanish Morocco had enabled the Spaniards to reduce their Moroccan forces by 8000 men to a total of 32,000.

MORRIS, SIR DANIEL. A British agriculturist, died at Bournemouth, Eng., Feb. 9, 1933. He was born at Loughor, Glamorgan, Wales, May 26, 1844, and received his education at Cheltenham; the Royal College of Science, South Kensington; and Trinity College, Dublin. In 1877 he was appointed assistant director of the Royal Botanic Gardens, Ceylon, and in 1879 director of the Botanic Department of Jamaica. He was assistant director of the Royal Botanic Gardens, Kew, England, from 1886 to 1898, during which time he visited the West Indies and other colonies on several special missions connected with the improvement of their agriculture. While Imperial Commissioner of the West Indian Department of Agriculture (1898-1908) he was active in inaugurating agricultural reforms. Among the successful enterprises undertaken by him was the reestablishment of the cultivation of Sea Island cotton in the West Indies. After his retirement from active duty he served until 1913 as scientific adviser in tropical agriculture to the Colonial Office.

Sir Daniel was president of the West Indian Agricultural Conferences (1899-1908), the South-East Union of Scientific Societies (1918-19), and Section K (botany) of the British Association for the Advancement of Science (1919). He served also during 1909-24 as vice-chairman of the John Innes Horticultural Institution. After organizing the Canadian Reciprocity Conference in 1908, he served during 1909-10 as member of the Royal

Commission to Inquire into Closer Trade Relations between Canada and the West Indies. Among his publications were: *The Colony of British Honduras* (1883); *Planting Enterprise in the West Indies* (1883); *Agricultural Resources of St. Helena* (1884); *Fruit as a Factor in Colonial Commerce* (1887); *The Specific Resources of the West Indies* (1888); *The Colony of the Leeward Islands* (1891); and *Botanical Enterprise in the West Indies* (1891). From 1899 to 1908 he was editor of the *West Indian Bulletin*, the quarterly journal of the Imperial Department of Agriculture, and from 1902 to 1908 of the *Agricultural News*, Barbados. In 1893 he was made Companion of St. Michael and St. George and in 1903 Knight Commander of St. Michael and St. George.

MORRISTOWN NATIONAL HISTORICAL PARK. See PARKS, NATIONAL.

MORSE, CHARLES WYMAN. An American financier, died Jan. 12, 1933, at Bath, Me., where he was born in 1856. On his graduation from Bowdoin College in 1877, he engaged in the ice-shipping business in Maine, but three years later removed to Brooklyn and then to New York City. Here he established an ice business which finally, in 1899, under the name of the American Ice Co., expanded to include the areas of Philadelphia and Baltimore. This company practically secured a monopoly in New York. Through political affiliations it obtained exclusive wharfage rights, enabling it to raise prices from 30 to 60 cents per hundred-weight until public clamor caused an investigation. The scandalous condition then revealed was regarded as one of the causes of the overthrow of Tammany Hall in 1901. In the meanwhile Morse had sold his holdings, making a profit, it was claimed, of over \$12,000,000. He then turned to the shipping business. His efforts to secure a monopoly of the American coastwise transportation service resulted in the combination of the Clyde Steamship Co., the Mallory line, the Metropolitan Steamship Co., the Hudson Navigation Co., the Ward line, and others under the control of the Consolidated Steamship Co. Morse entered also the publishing business and was influential in establishing the Butterick Co., of which he was first vice-president.

To finance his vast industrial undertakings, and especially to make possible a spectacular manipulation of American Ice, Consolidated Steamship, and United Copper Stocks, Morse secured control of the Garfield National Bank in 1895 and soon thereafter of a chain of eight other State and national banks, using methods afterward considered questionable. Because of his connection with several of the banks which failed during the panic of 1907 and the general belief that in a measure he was responsible for the panic, his methods and transactions came up for review in the Federal courts. The National Bank of North America (New York), of which he was vice-president, was closed in January, 1908. The indictment charged that he had criminally misapplied the funds of this bank (and so of others also), that "he had entered upon a career of reckless and forbidden speculation," and that he had concealed his unlawful practices by making false entries in the books. Later in the same year he was convicted and sentenced to 15 years' penal servitude in Atlanta Penitentiary; higher courts sustained this decision. The case attracted general attention, but opinions regarding the outcome were various. Many, regarding it as a salu-

tary lesson to those who were conducting big business illegally, rejoiced in the ability of the government to convict a rich man. Others thought that, while Morse was guilty, such actions as his were common in Wall Street and that his offense was more technical than real. The case was important in that it gave an impetus to the anti-trust movement.

After Morse had served a part of his sentence, his health was reported to have been undermined, and efforts were made, particularly by his wife, to obtain a pardon, which was granted by President Taft in 1912. A sojourn abroad enabled him to recuperate rapidly and he returned to the United States the next year. From then on he again acquired corporate interests, becoming president of the Hudson Navigation Co., and building for the Emergency Fleet Corporation of the United States Shipping Board during the World War 22 merchant vessels. In 1922, however, with his three sons, he was indicted by the grand jury of the District of Columbia on the charge of using the United States mails to defraud investors in the stock of the United States Steamship Co. After numerous postponements of the trial the indictment was quashed, and he retired in 1927 to his birthplace at Bath, Me.

MOSKOWITZ, BELLE LINDNER ISRAELS. An American public relations counselor, died Jan. 2, 1933, in New York City, where she was born Oct. 5, 1877. She attended Teachers College, Columbia University, and in 1903 was married to Charles H. Israels. Following his death in 1911 she was married three years later to Henry Moskowitz. After serving on the editorial staff of *The Survey* during 1908-10, she became field secretary of the Playground and Recreation Association of America, forming its Committee on Amusement Resources for Working Girls. Her interest in bettering the condition of the masses was further stimulated by her appointment in 1913 as clerk of the grievance board of the Dress and Waist Manufacturers' Association. Made manager of the Association's labor department the following year, she was instrumental during her two-year tenure of this office in settling thousands of individual disputes. During this period she assisted in founding the Travelers' Aid Society and served for several years as vice-president of the Association to Promote Proper Housing for Girls and as director of the Council of Jewish Women.

After 1917 Mrs. Moskowitz was connected with Publicity Associates, Inc., becoming its president in 1928. Previous to the entry of the United States into the World War she was secretary of Mayor Mitchell's Committee of Women on National Defense. She played a prominent part in Alfred E. Smith's campaign for the governorship of New York in 1918 and following his election was made secretary of the Reconstruction Commission, concerned principally with the improvement of housing and marketing conditions. She was also secretary during 1920-21 of the Labor Board appointed by Governor Smith, and after 1922 was director of the publicity committee of the Democratic State Committee. Throughout Governor Smith's four administrations she was his most influential adviser, both in politics and statecraft. At the time of her death she was vice-chairman of the Democratic National Committee.

MOTION PICTURES. The two greatest popular screen successes of 1933 were *She Done Him Wrong* and *Little Women*; which would seem to suggest at first glance that it would be difficult to discover any one general trend in audience interest during the year. *She Done Him Wrong* was a rowdy, hearty cartoon of New York night life in the '90's, filled with vigorous humor and ribald gayety. *Little Women*, on the other hand, was a gentle, sentimental evocation of the sweetness and light of a period long past in the national life. In viewpoint, manner, and conception they were utterly different. The first was all raucousness; the second, all wistful gentleness. Thereupon puzzled producers, longing to find out what the public wanted, grew understandably bewildered until they noted that, despite all of their vast differences in attitude and approach, the two films had one thing in common. They dealt amid a show of nostalgia with a day when life apparently was simpler.

There were, as a matter of fact, many trends in the year's cinema, but of them all the mood of escape gave evidence of being the most important. There were films devoted to recapturing the pioneer past in America, films contemplating the careers of dead kings and queens; fantasies of various types, as represented by such different approaches as *Alice in Wonderland* and *Mickey Mouse*; nostalgic depictions of a nation's great past, such as *Cavalcade*, and wistful love stories based upon metaphysical themes, of the type of *Berkeley Square*. In almost all cases of outstanding hits it was discernible that nostalgia, whether done with gusto or with sentimentality, was the most popular audience commodity devised in the course of the year.

The two outstanding films, as judged by popular appeal, also provided the two most successful new performers of 1933. They were Katharine Hepburn and Mae West. Miss Hepburn, a stage actress of minor fame, had made her screen debut the year before, but it was during the last season that her work in *Christopher Strong*, *Morning Glory*—probably her best performance—and, above all, the triumphant *Little Woman* made her the most talked about and admired actress in the cinema. Miss West, an actress and playwright who had got into various difficulties with the police when she appeared on the stage several years ago in one of her own dramas, *Sex*, emerged in *She Done Him Wrong* and *I'm No Angel* as the films' most successful exponent of good-natured, unashamed ribaldry, which laughed at sex, instead of taking it with any gravity. Her speech and mannerisms definitely became part of the American social consciousness, and she became a great fad among the French.

Greta Garbo, generally regarded as the most distinguished personality yet developed by the screen, with the possible exception of Charles Chaplin, did not appear in a new film until the last week in the year. She had passed several months in Europe, and she was so late in going to work in a new vehicle that there were many observers who predicted that, with such new idols as Miss Hepburn and Miss West springing up, the forgetful screen followers would neglect her. When, however, she emerged in *Queen Christina*, a fanciful romance presumably dealing with the life of the eccentric daughter of Gustavus Adolphus, the heroic Swedish king, the popular and

critical acclaim that had followed her in the past was renewed with great heartiness, and most of the film critics agreed that her portrait of the mannishly-attired Scandinavian ruler was her finest performance since the arrival of screen speech. The picture, incidentally, marked the return to the films of John Gilbert, who had once been a tremendously popular star, but had suffered a complete eclipse since the coming of the talking pictures.

Three of the popular and nostalgically inclined films of the year were directly attributable to England. First, there was *Cavalcade*, Noel Coward's pageant of the British Empire since Victoria's day, in which the playwright ended his pæan to Britain on a note of wistful sighing over the greatness of his country's past. Although made in Hollywood, the film was presented by a cast which, with one exception, was English, and its production was based carefully on the version that was originally acted on the London stage. Then, there was *Berkeley Square*, which although it was the work of an American newspaper man, John L. Balderston, and was made in California, dramatized the love for Eighteenth Century London of a citizen of the modern United States; featured an English actor, Leslie Howard, in the leading rôle and was so faithful to Britain in its spirit and atmosphere that it was generally regarded as an Anglo-American, rather than a strictly American, photoplay. Its chief virtue, though, was its demonstration of the cinema's ability to capture a delicate quality of fragile, metaphysical romance.

In the past British films have not been regarded highly in this country, either by reviewers or public. The arrival from England of *The Private Life of Henry VIII*, a vigorous, moderately ribald comedy of the much-married Tudor, with Charles Laughton in the leading rôle, demonstrated conclusively that Great Britain must henceforth be regarded seriously as a rival to Hollywood's eminence as the film capital. Before it, such a work as the lively melodrama called *Rome Express* hinted that pictures rivaling in popular appeal those made in Hollywood could be manufactured in the vicinity of London, but it required the Laughton picture to establish the alien product definitely as something to be sought after by the American film-going public. Whereas *Cavalcade* and *Berkeley Square* were at least American in their birthplace, the new film suggested to a hitherto skeptical country that the English were to be regarded as serious rivals to the native product. It was not long after the arrival of the historical film that the Fairbankses, father and son, were announced as scheduled to appear in films made abroad.

In past years, photoplays made in Germany have been the recipient of a great deal of admiration. At the beginning of 1933, a distinguished Teutonic drama called *M* which dealt, amid a strange mingling of pity and terror, with the pathological case of a wholesale child murderer, arrived and it was regarded quite definitely as standing in the front rank of the accepted screen classics. It proved, however, to be the last of the important importations from Germany. With the arrival of the Hitler régime, most of the distinguished figures of the Teutonic cinema were forced to flee and the ensuing regimentation of the screen resulted in nothing better than an obvious sort of propaganda melodrama called *Storm Trooper Brand*, which has not even been

shown in America. In addition, the numerous little film houses that had been accustomed to showing German films in English-speaking cities diminished to almost nothing.

While the German photoplays were being increasingly subjected to regimentation, the Russian films, on the other hand, showed signs of relaxing their intense preoccupation with the building of Socialism. It was not that they gave evidence of weakening in their essential crusading zealously, but that for the first time they began to contemplate individual, rather than purely collective, problems; to go in for the merest suggestion of romantic attachment; to consider with some show of kindness the problem of the old school intellectuals who were trying to adjust themselves to a new régime, and, above all to take advantage of the hearty, earthy Russian sense of humor. The best of the new Soviet films were *Shame* and *Men and Jobs*, which regarded the construction of the new state with surprising humanness and gayety, and *The Patriots*—known as *Okraina* in Russia—which was a rather grim picture of war days, brightened but not softened by scenes of fresh character humor. It was even reported that a musical comedy film, to be produced by the director of *The Road to Life*, was in the process of manufacture in Moscow.

Chiefly the French cinema industry has seemed in the past to be René Clair, and nothing more. Last year M. Clair was represented on American screens by a minor, but gayly charming musical romance called *Quatorze Juillet*, but his was not the only contribution made by France to the motion picture. A delicate, poignant study of tragic adolescence called *Poil de Carotte* seemed to most observers the most distinguished work turned out by the French motion picture studios in several seasons.

Another international film that aroused much interest was the silent picture that S. M. Eisenstein, the Soviet director who made *Potemkin*, photographed in Mexico under the financial guidance of Upton Sinclair. Eisenstein's reputation as a director has always been based in great part on his skill at editing his films, but his Mexican work was left behind in the United States when the Russian returned to Moscow after a lengthy controversy with his backer. The ambitious project, which was to have been called *Que Viva Mejico* and was to have captured all of its maker's comment on the Southern republic, was left behind in bulky, incomplete form, and eventually Mr. Sinclair turned it over to the Hollywood film cutters, who transformed it into an apparently innocuous little screen work called *Thunder Over Mexico*. Many people felt that the film should have been edited only by its maker and that the picture which finally appeared was a gross extortion of Eisenstein's ideas. Thereupon a violent controversy raged between the Eisenstein and the Sinclair partisans, amid much mutual acrimony. The general verdict seems to have been that, whatever the personal merits of the battle, the picture was not all that it would have been had the editing of the film been left to Eisenstein.

The growing social consciousness of the American films continued during the year, with every sign that the cinema would eventually develop into an important medium for effective propaganda. Observers differed widely as to whether or not this phase of film making was a desirable one, and there appeared to be evidence on both

sides. The Russian films, it was felt, showed the worth of crusading zeal in adding to the dramatic distinction of screen dramas, while the apparent collapse of the German films under the Hitler régime was generally regarded as a warning against such a trend. It seemed certain, though, that for better or for worse and despite the popularity of the escapist films, the photoplay was destined to be used with increasing vigor as a pulpit. The most blatant of the works in this editorial manner was *Gabriel Over the White House*, which was released shortly after President Roosevelt took office, and which shouted forth, in melodramatic terms, the advantages of a dictatorship in America. *This is America* a compilation of news reels depicting the history, grave and gay, of the United States from 1917 to the inauguration of Roosevelt, was definitely editorial in its plea for the war-time spirit of national coöperation. A modest film called *Private Jones* was regarded by many as presenting a sardonic and scornful commentary on military bureaucracy, while some news reel scenes showing the killing of a striker in a Pennsylvania mine war were hailed by editorial writers as demonstrating the value of the screen for the vigorous presentation of social propaganda.

In the field of social comment there was also the screen version of the Faulkner novel, *Sanctuary*, which, somewhat censored, appeared in the films as *The Story of Temple Drake*. Although brightened up somewhat in the interest of the censors and the picturegoers, this version of Faulkner's eerie, tortured story of Southern decadence retained enough of the original quality to make it a work of power and significance. It was strongly disapproved of in many quarters, but it was regarded as a valuable example of the screen's ability to present a reasonably faithful edition of an important novel and an interesting social document.

Among the great successes of the year were those scored by Walt Disney, the outstanding figure in the making of cartoon comedy for the screen. Long accepted as one of the distinguished creators of the cinema for his brilliant Mickey Mouse comedies, Mr. Disney has also been admired for his Silly Symphonies, but up to 1933 his endeavors in this field had been more critical than popular. Early in the year he presented *Father Noah's Ark*, a slightly ribald treatment of the Biblical story, but although it was regarded by many observers as a brilliant creation and is still considered by some of them the best of his Silly Symphonies, it never managed to approach the popularity of Mickey Mouse. With his version of the celebrated nursery tale adventures of the *Three Little Pigs*, however, Disney brought the Symphonies into equal repute with his exploits of the popular rodent and it was not long before America was singing the simple little theme song of the three pigs, *Who's Afraid of the Big Bad Wolf?*

Elaborate musical comedy films resumed something of their popularity last year, when *Forty-Second Street*, *Gold Diggers of 1933*, and *Footlight Parade* were produced with extravagant and fantastic chorus numbers which could not possibly have been presented on any stage. The number in the latter show in which the chorus girls went through their routine while swimming about under a waterfall was the most spectacular episode of its kind.

Among the chief examples of the expert use of shrewd popular material produced during the year were *The Price Fighter* and *the Lady and Lady for a Day*. A fragile, poetic quality of religious reverence, rare for the screen, was provided in *Cradle Song*. In *The Invisible Man*, based upon the H. G. Wells novel, the fantastic horror story was expertly manipulated. Other important films of the year included *Dinner at Eight*, *Only Yesterday*, *Bombshell*, *State Fair*, *Topaze*, *Our Betters*, *King Kong*, *Mamma Loves Papa*, *The Emperor Jones*, *Eskimo*, *The Little Giant*, and *Penthouse*. Among the performers whose work was important during the year were Jean Harlow, Charles Laughton, Leslie Howard, Diana Wynyard, Myrna Loy, Lee Tracy, Spencer Tracy, Otto Kruger, May Robson, John and Lionel Barrymore, Paul Robeson, Margaret Sullavan, Claudette Colbert, Alison Skipworth, James Cagney, Edward G. Robinson, Marlene Dietrich, Janet Gaynor, Robert Montgomery, and Helen Hayes.

MOTORBOATING. Motorboat competition grew to new heights in 1933, when there were more regattas held than ever before and there were more contesting drivers and boats on the waterways of the world. Of course, the outstanding event, from the spectacular viewpoint, was the successful defense of the Harmsworth trophy by the veteran Gar Wood, with his *Miss America X*. His challenger on the St. Clair River at Marine City, Mich. in the summer, was Hubert Scott-Paine, Englishman, who brought a novel boat with him, one adapting its hull design from outboards, and which Scott-Paine figured would equal Wood's 6600 horse power with a mere 1375. Wood won in two straight heats and thus retained the trophy he has held since 1920 when he won at Osborne Bay, England.

In the Gold Cup class, *El Lagarto*, owned by George C. Reis of Lake George, N. Y. made a clean sweep. His eleven-year-old craft took the National Sweepstakes at Red Bank, N. J., the Gold Cup at Detroit and the President's Cup on the Potomac at Washington.

Paul Hyatt of Brooklyn annexed the Lipton Trophy for outboards on the Schuylkill. Sam Crooks, winner of individual honors in the inter-collegiate championships at Lake Hopatcong, N. J., aided Rutgers to win the team title. William Feldhusen of Staten Island won the annual Albany to New York race on the Hudson, the leading long distance fixture. The race was run on a handicap basis for the first time and Feldhusen passed his last rival five miles from the finish line.

The Townsend Medal, symbolic of the American outboard championship, was taken by young Lewis G. Carlisle, of East Islip, N. Y. Eugene Appel of Ventnor, N. J. took the 125-cubic-inch piston displacement hydroplane title in his *Emancipator II* at Ocean City, N. J. The national outboard championships, held on the lagoon at the Century of Progress Exposition at Chicago, resulted in wholesale toppling of defending champions. All except one champion of 1932 were dethroned, the exception being Frank Vincent of Tulsa, Okla., who retained his class B professional title. The winners in the amateur division were Paul Hyatt, Clinton Ferguson of Waban, Mass., John C. Maypole, of River Forest, Ill., and George Keuhn, of Milwaukee. Mid-Western drivers took all four professional events, the winners being Vincent, Robert Meyer of Chicago, James Rogers of Mel-

rose Park, Ill., and Walter Everett of Tulsa, Okla.

For the first time a mile-a-minute speed was attained in an outboard in 1933. In the class F (professional) mile trials held at Cedar Lake, Indiana, on Oct. 9, 1933, Herschel Turk of Tulsa, Okla., made a new record of 60.303 m.p.h. George Coleman Jr., of Miami, Okla. (the holder of the previous record of 59.50 m.p.h.) later, on the same day, beat Turk's record by driving his boat at 61.75 m.p.h.

MOTOR RACING. See **AUTOMOBILE RACING.**

MOTZKIN, LEO. A Jewish statesman, died in Paris, France, Nov. 7, 1933, age 66. A Russian by birth, he received his higher education in Berlin and in 1889 founded what was later claimed to be the first German-Jewish society with Zionist principles. During the '90s he was associated with Dr. Theodore Herzl in the Zionist movement which sought the creation in Palestine of a publicly recognized and legally secured home for those Jews "who cannot or will not be assimilated by the country of their adoption." He helped draw up the political programme which was adopted by the first Zionist Congress held in Basel, Switzerland, in 1897 and fought against the acceptance of the offer submitted to the seventh Congress by the British government of a grant of land in British East Africa for an autonomous Jewish settlement.

During the World War Dr. Motzkin had charge of the Copenhagen bureau of the International Zionist Association which consisted of more than 1000 constituent societies with 500,000 members in all parts of the world. After the War he served as general secretary and later as president of the committees of Jewish delegations sent to Paris to insure the preservation of Jewish rights in drawing up the peace treaties. In 1920 he instituted an international conference to aid Jewish refugees left destitute by the War, and as president of the actions committee of the International Zionist Association after 1925 headed several Jewish delegations to the League of Nations, where he fought for the protection of Jewish minority rights.

MOUNTAIN CLIMBING. See **EXPLORATION; POLAR RESEARCH.**

MOUNT HOLYOKE COLLEGE. An institution for the higher education of women at South Hadley, Mass., founded in 1837. The registration for the autumn session of 1933 was 968. The faculty, including professors, associate professors, assistant professors, instructors, and chief administrative officers, numbered 130. The endowment funds amounted to \$4,629,88 and the income for the year was \$1,233,071. The total amount of gifts and bequests during the year 1932-33 was \$106,548. There were 131,800 volumes in the library. President, Mary Emma Woolley, Litt.D., L.H.D., LL.D.

MOVABLE DAMS. See **DAMS.**

MOZAMBIQUE (PORTUGUESE EAST AFRICA). A Portuguese colony between Tanganyika Territory and the Union of South Africa. Area, 297,657 square miles; population (1930), 3,995,831 including 35,570 Europeans. The colony is divided into the state-administered Province of Mozambique (245,776 square miles) and the territory of Manica and Sofala (51,881 square miles; population 313,927 in 1929) administered from Beira by the Mozambique Company under royal charter. Lourenço Marques, the capital of the Province, had 42,779 inhabitants (1930); Beira had 23,694.

The chief products of the Province are sugar, maize, cotton, and minerals. For 1931, imports into the Province totaled 50,951,922 escudos gold (gold escudo equaled \$1.08); exports, 44,022,586 escudos gold. Imports of the chartered territory (1930) amounted to 80,250,344 escudos; exports, 75,209,406 escudos. Revenue of the Province for 1932-33 was estimated at 356,402,149 escudos paper; expenditure, 340,933,897 escudos paper. In 1931, 771 ships aggregating 3,925,408 tons cleared the port of Lourenço Marques; and in 1931, 643 ships totaling 3,180,695 tons cleared the port of Beira. The Province is under a governor-general, assisted by a governor in each of the six districts. Governor-General in 1933, José Cabral.

MUIR, MAJ.-GEN. CHARLES HENRY, U. S. A., RET. An American soldier, died in Baltimore, Md., Dec. 8, 1933. He was born at Erie, Mich., July 18, 1860. On his graduation from the United States Military Academy in 1885 he was commissioned 2d lieutenant in the 17th Infantry of the United States Army and during his early career saw service in the Indian campaigns, participating in 1890 in the Battle of Wounded Knee against the Sioux. During the Spanish-American War he distinguished himself in the storming of Santiago, Cuba, receiving in recognition of his gallantry the Distinguished Service Cross. His greatest exploit, however, was during the Philippine Insurrection when with the aid of 10 others he succeeded in routing General Malvar from his headquarters at Rosario, seizing \$25,000 from his treasury and releasing 300 Spanish prisoners. He received the Silver Star Citation for his gallantry in action at Taal in 1900. The following year, having been promoted to the rank of captain, he was sent to China with the relief expedition sent out by the United States during the peace negotiations following the Boxer Rebellion. From 1903 to 1907 he was a member of the General Staff in Washington, being promoted at the end of this service to the rank of major. He was commissioned lieutenant-colonel in 1914 and colonel in 1916.

On the entry of the United States into the World War General Muir was made a brigadier-general in the National Army and was sent to Camp Jackson, S. C., to train the troops of the 81st Division. Transferred to Camp Logan, Texas, he trained there the troops of the 5th Division and at Camp Hancock, Ga., those of the 28th Division. Promoted to the rank of major-general, he accompanied the latter division, composed mainly of Pennsylvania National Guardsmen, to France and commanded it in the Battles of the Marne, St. Agnan, the Ourcq, the Vesle, and in the Meuse-Argonne offensive. After the Armistice General Muir was transferred to the command of the Fourth Army Corps of the American Army of Occupation in Germany, retaining the post until April, 1919. On his return to the United States he was stationed at Camp Merritt, N. J., during the muster-out of the 28th Division. His services in the World War were rewarded with the Distinguished Service Medal, the Victory Badge with six stars, and the Croix de Guerre with palms. He was also made Knight Commander of the British Order of St. Michael and St. George and Commander of the French Legion of Honor.

Commissioned brigadier-general in the Regular Army in 1919, General Muir served as commandant of the general service schools at Fort Leavenworth, Kans. While commanding Camp Lewis,

Wash., in 1921, he was commissioned major-general. From 1922 until his retirement in 1924 he was commander of the Third Corps Area with headquarters in Baltimore.

MUNICIPAL GOVERNMENT. Curtailment of all municipal operations except unemployment relief, and in some cities that as well, continued through the year 1933. Heavy debt service charges, the great burden of the unemployed, shrunken revenues as a result of uncollected taxes, and difficulties in borrowing money for current expenses, harassed the municipal officials and the people they served. Between the poor municipal credit and public sentiment against increasing the debt and tax burden, outlays for permanent municipal improvements were small in 1933. This in turn increased the number of the unemployed and the volume of relief expenditures. State aid was given in varying degrees but where this diverted funds from highway or other State construction work it reacted unfavorably upon the municipalities. Federal loans from the \$3,300,000,000 fund provided by the National Recovery Act (see UNITED STATES under *Administration*) did not provide the immense sums for municipal construction work that had been expected, due partly to the slowness of most cities in submitting programmes and other data required under the Act, partly to the rigid demands of the Recovery Administration, and partly to the inability of the many cities to finance their share of the outlays. Late in the year \$400,000,000 were set aside from the recovery fund to speed up construction work and take men from the unemployment relief rolls. This fund is under the control of a Federal Civil Works Administrator and of local administrators in each municipality, with no contribution from local funds and a minimum of red tape. (See UNITED STATES under *Administration*.) It is available for projects that can be got under way immediately.

Defaults on municipal bonds and short-term notes, either principal or interest (see *The Bond Buyer*, New York, for classified summary of a thousand defaults, reported up to May 5, 1933), together with pressure for renewals of old grants and for new loans, gave grounds for bankers to continue their demands for reduced and balanced budgets (see 1932 YEAR BOOK). At the close of the year both *New York City* (see NEW YORK under *Political and Other Events*), and *Newark*, N. J., were forced into financing plans dictated by the bankers, the one for New York providing that the tax on real estate should not be increased during the next four years, that the 1934 budget must be reduced and new revenues found. Public sentiment continues not merely for lower tax rates but also for making them imperative through statutory provisions or, more rigid still, by constitutional amendment. A new statutory limit in *Indiana* and a new constitutional limit in *Michigan* were noted in the 1932 YEAR BOOK. Three other States must be added: *West Virginia*, *Oklahoma*, and *Ohio*. On July 1, there became effective in *West Virginia* a constitutional amendment—adopted in November, 1932, by an 8 to 1 popular vote—setting a limit on the real estate tax rate. The Legislature apportioned the total rate between the State, counties, boards of education, and cities, leaving the cities little to go on. According to the October issue of *Public Management* (Chicago) "most of the cities of *West Virginia* were able to raise, under the levy limitation amendment, only enough revenue to pay debt

service charges for the current year." Acting on a suggestion of the State tax commission, many of the tax levying bodies of the State kept their levy for operating expenses within the constitutional limit but went beyond it for debt service charges. In a suit brought against *Huntington* to enjoin it from such a course the State Supreme Court ruled (*Engineering News-Record*, Oct. 19): "Regardless of constitutional limits on levies, old obligations must be paid and paid from restricted levies before any money is given to current expenses." This left *Huntington*, *Morgantown*, *Wheeling*, and other cities with almost no funds for police, fire, street, sewerage, garbage disposal, and public lighting purposes. An application for a rehearing of the case was pending in October. The *Oklahoma* amendment cut the tax limit for the State and all local governments from 43.5 to 27 mills. The combined rate of counties, cities, and school districts cannot exceed 15 mills, except that 10 mills additional may be authorized by popular vote. The 15 mills is said to be barely enough for current expenses after budget slashing, leaving nothing for permanent improvements. The Ohio tax limit, adopted by the voters on November 7, is only 10 mills.

CITY MANAGERS. Adoption of the council-manager plan at *Asbury Park*, N. J., by some 3700 to 3000 votes brought the total number of manager cities up to 450 adoptions that accord with the *Model City Charter* of the National Municipal League. In addition, 165 other places have the plan in some modified form. Most of these places are in the United States but some are in Canada and other English-speaking countries. For distribution by States and by other countries and much other information on city managers and municipal government see *The City Manager Year Book*, (Chicago). *Henrico County*, Va., adopted the county-manager plan on September 19, while in June *Princess Anne* and *Northampton counties*, Va., defeated it by popular vote. Across the continent, *Sacramento County*, Calif., voted to have a city manager. The movement for the consolidation of counties and of cities and counties makes slow progress. In *Texas*, a county home-rule constitutional amendment was adopted by a large popular majority on August 26. It authorizes such reorganization and mergers of local units as promise to give increased economy and efficiency in the 13 counties of the State having populations of more than 62,000 by the 1930 census. In *Florida*, a constitutional amendment authorizing the consolidation of the City of *Jacksonville* and *Duval County* will go to referendum vote in 1934. In *Georgia*, a merger of the City of *Macon* and *Bibb County* was defeated in August by a small majority. The governor of Wisconsin vetoed a bill which would have enabled electors of *Buffalo* and *Pepin Counties* to vote on consolidation but signed an act allowing adjoining towns to consolidate, on petition signed by the owners of two-thirds of the taxable property, if approved by popular vote.

BIBLIOGRAPHY. Among the many new publications in this field are: *Andrews, County Government in South Carolina* (Chapel Hill, N. C.); *Bromage, American County Government* (New York); *Finnegan, Tammany at Bay* (New York); *Griffith, Current Municipal Publications* (Boston); *Harris, Local Government in Many Lands*, second edition (London); *Merriam, Parrott, and Lepawsky, The Government of the Metropolitan Region of Chicago* (Chicago); Na-

tional Municipal League, *Model City Charter* (New York), the council-manager brought to date—the first edition, dealing with the “strong” mayor and council man, appeared in 1900; Rightor, *Bonded Debt of 277 Cities as of Jan. 1, 1933, and Comparative Tax Rates of 284 Cities, 1933* (reprints from *National Municipal Review*, New York); Schlesinger, *The Rise of the City, 1878–98*, vol. x of “A History of American Life” (New York); Seasongood, *Local Government in the United States* (Cambridge); Snavely, Hyde, and Briscoe, *State Grants-in-Aid in Virginia* (New York) also gives data on 14 other States; Wells, *German Cities; a Study of Contemporary Municipal Politics* (Princeton).

MUNICIPAL OWNERSHIP. The finances of cities, the bond market, and the state of the public mind in regard to any increase of municipal debts have not been conducive of late to new ventures in municipal ownership. Notwithstanding this cities have held fast to the utilities already in their possession and have authorized some new ventures. A number of cities voted down municipal acquisition of utilities in October and November, but in magnitude of projects the votes for municipal ownership were far in the lead. The largest of the latter was at *Detroit*, on Nov. 7, where by a 2 to 1 vote an outlay of nearly \$88,000,000 was authorized for a rapid transit system, including subways and elevated railways, to be financed by mortgage bonds secured by the property and revenue of the system. The bond issue was limited to whatever amount may be provided under the National Recovery Act (see UNITED STATES under *Administration*). Application has been filed for a grant of \$26,000,000 and a loan of \$62,000,000, on the assumption that the project will be self liquidating. In addition to the action just noted, voters of Detroit and vicinity authorized the creation of a Port of Detroit Authority and a \$60,000,000 bond issue for port development, the whole of Wayne County to be included in the port district. *Camden, N. J.*, voted \$10,000,000 for an electric light and power plant on November 7, as did *Sandusky, Ohio*, \$1,400,000. On November 25, *Knoxville, Tenn.*, approved by a vote of about 4500 to 2500 a \$3,225,000 bond issue for a municipal system to utilize electric light and power from Muscle Shoals, the current to be brought from the Tennessee Valley Association, one of the large developments under the National Recovery Act. (See UNITED STATES under *Administration*). The city has applied to the NRA for a loan to cover the amount voted. The proposal was fought by the Anti-Bond Association of some 1200 members, as well as by the Tennessee Public Service Co., a subsidiary of the National Power & Light Co. It is reported that the company will compete with the city in supplying light and power. On October 20, *Bessemer, Ala.*, voted in favor of municipal ownership of both electric and water plants, services now being rendered privately. Seven other *Alabama* cities voted in favor of municipal ownership of electric light and power plants. Of these, *Sheffield*, *Florence*, and *Muscle Shoals* are adjacent to the Federal hydro-electric plant at Muscle Shoals. The other five are: *Guntherville*, *Hartsell*, *Russellville*, and *Tarrant City*. Another small *Alabama* city that recently voted against municipal ownership of its electric lighting service was *Hammond*. A more notable defeat of municipal ownership occurred in November at *Birmingham, Ala.*, where, besides voting down municipal

operation of electric light and power facilities by some 9700 to 6900 ballots, three other projects were defeated: street railway, 12,400 to 3,800; central steam heating system, 12,100 to 3,800; water-works, 10,000 to 6400, a much better showing than for the other projects. *Birmingham* is one of 9 of the 93 cities in the United States above 100,000 population that does not own and operate its water-works. Had *Birmingham* voted for electric light and for street railway ownership it would have bought power from Muscle Shoals. In other parts of the country electric bonds were defeated on November 7 as follows: *San Francisco*, a large sum for an additional electric generating plant, as well as for a transmission and distribution system; *Salt Lake City*, \$18,000,000 for an electric power plant; and at *Youngstown*, \$500,000 for municipal electric light service. *Cincinnati* voted decisively against taking over the privately-owned gas and electric works. In the 1932 YEAR BOOK the ownership of water-works in the United States was given as 7853 publicly against 2936 privately owned, or 73 and 27 per cent respectively. A summary made especially for this YEAR BOOK, based on heretofore untabulated data given in *The Canadian Engineer* (Toronto) for Mar. 28, 1933, shows that of 582 water-works systems in the Dominion, 488 are publicly and 83 privately owned, with 11 of un-stated ownership, giving percentages of 84, 14, and 2, respectively. The 84 per cent of municipal ownership in Canada compares with 73 per cent in the United States. In both countries the largest cities own their water-works and the population publicly supplied is very much above that privately supplied. See Cooke (editor) *What Electricity Costs* (New York).

MUNICIPAL PLANNING. See CITY AND REGIONAL PLANNING.

MUNRO, DANA CARLETON. An American educator and historian, died in New York City, Jan. 13, 1933. He was born at Bristol, R. I., June 7, 1866, and was graduated from Brown University in 1887. He also attended the Universities of Strassburg and Freiburg (1889–90). In 1912 he received the degree of L.H.D. from Brown University. He was successively instructor and assistant professor of Roman and medieval history at the University of Pennsylvania from 1893 to 1902 and professor of European history at the University of Wisconsin from 1902 to 1915. He then became Dodge professor of medieval history at Princeton University, serving also from 1916 to 1928 as chairman of the history department at that institution. During the World War he was research assistant to the Committee on Public Information (1917–1918) and chairman of the National Board for Historical service (1918–19). He was president of the Wisconsin Academy (1912–15), of the American Historical Society (1925–26), and of the Medieval Academy (1930–33). He was also a fellow of the Royal Historical Society.

Dr. Munro published *Medieval History* (1902); *Essays on the Crusades* (joint author, 1902); *A Source Book of Roman History* (1904); *Medieval Civilization* (joint author, 1904, part ii, 1906); *Syllabus of Medieval History* (8th ed., 1919); *German War Practices* (1917); *German Treatment of Conquered Territory* (1918); and *The Middle Ages* (1921). He served as editor of *Translations and Reprints from the Original Sources of History* (1894–1902), and in 1928–29 was managing editor of the *American Historical*

Review. He was also editor of the department of medieval history for the *NEW INTERNATIONAL ENCYCLOPEDIA*.

MURAL PAINTING. See **PAINTING**.

MURRAY, SIR DAVID. A British painter, died in London, Nov. 14, 1933. He was born in Glasgow, Jan. 29, 1849, and studied at the Glasgow Art School. After devoting 11 years to business he turned to landscape painting and in 1882 removed to London. Elected an associate of the Royal Academy in 1891 and an academician in 1905, he exercised a marked and salutary influence on contemporaneous British landscape painting. His color, especially in his earlier works, was fresh and brilliant, his handling dexterous, and he delighted in delicate detail and movement. His subjects were chiefly landscapes of the Trossachs, Picardy, southern England, the Isle of Lewis, and the Italian lakes, and marines from the Dorset coast. Among the best known were "My Love has Gone a-Sailing," "In the Country of Constable," "Loch Linne near Port Appin," "River Road," "View of Windsor," "Mangolds," "Gorse," "Hampshire," and "Long After." Sir David served after 1917 as president of the Royal Institute of Painters in Water Colors and in 1918 was created a knight.

MUSIC. **GENERAL NEWS.** Economic conditions and the depletion of patrons' purses after four years of hard times again played a prominent part in the course of the musical events of 1933 in the United States, while in Europe the principal outside influence of the year was the advent to power of the Hitler régime in Germany and the effects upon music and musicians of its nationalistic and racial policies. This overshadowed to some extent what would have been the principal features of the year under normal conditions, the observances of the fiftieth anniversary of the death of Richard Wagner and of the hundredth anniversary of the birthday of Johannes Brahms.

Although many thought that the nadir of the depression had passed by the beginning of the spring, the after-effects of a long period of adverse conditions caused economic difficulties among several of the principal American musical organizations at the end of the season of 1932-33. The Metropolitan Opera Association of New York, the only permanently organized resident opera company in the country giving an extensive season, announced in February that its resources had been exhausted and that its continuance was doubtful, but was enabled to go on by the success of a campaign to raise a guarantee fund of \$300,000. Several symphony orchestras faced the possibility of suspension in the spring, but all the principal organizations were enabled to continue, although in some cases with shortened schedules. A revival of interest in opera marked the second half of the year.

The house-cleaning policy of the new German régime, which proceeded against musicians not meeting the requirements of unimpeachably Aryan ancestry or believed to be out of sympathy with the ruling party's ideas, began to attract international attention in March when Bruno Walter, who had been prevented from conducting in Berlin and Frankfurt-am-Main, relinquished his post as conductor of the Leipzig Gewandhaus orchestra and left the country.

Fritz Busch, general music director of the Dresden Opera, was ousted soon afterwards. Although of Aryan descent, he was said to be in-

sufficiently in sympathy with Nazi ideas; being charged with having too liberal a policy toward foreign artists at the opera house, and also with accepting too many outside engagements. With him went the Intendant of the Dresden Opera, Dr. Alfred Reucker. In June, Otto Klemperer was told to resign from his musical directorship at the Berlin State Opera, under the non-Aryan section of the Civil Service Act, and Franz Schreker and Arnold Schönberg received indefinite leaves of absence from their professorial posts in the Prussian Academy of Fine Arts. Schönberg went first to France, then, accepting an invitation to come to America to teach composition for the Malkin Conservatory of Music in Boston, arrived there late in October.

Musical affairs were included in the State corporation scheme with the organization of a sub-chamber for music, controlling activities in public performance and in official organizations, as part of the State Chamber of Culture, with Richard Strauss as president and Wilhelm Furtwängler as vice-president.

Musicians living outside of Germany lost little time in protesting against the hardships of this kind which were inflicted on their colleagues. On April 1, ten prominent musicians living or working in the United States sent Chancellor Hitler a cable requesting him to modify the anti-Jewish policy which had affected so many of their fellow-artists. Arturo Toscanini, at his own request, headed the list of signers. This aroused uncertainty as to whether he would fill his engagement in the summer's Wagner festival at Bayreuth, of which town he had been made an honorary citizen on February 11 in connection with the Wagner anniversary observance. No action was taken against him on account of his participation in this appeal, except for the temporary barring of his records from radio programmes, but early in June he made public a message he had sent to Mme. Winifred Wagner, stating that since the policies which grieved him had not been changed, he felt compelled to withdraw from Bayreuth.

Furtwängler, who had come to occupy a dominating position in German musical affairs by the latter part of the year, took an early stand against the extreme application of racial and political considerations to musical matters, making representations to Dr. Joseph Goebbels in April. Modifications in this regard had begun to be made in June, when State Commissioner Hans Hinkel gave out a statement that the free artistic activities of foreigners and non-Aryans should not be hindered.

Although the most intensive observances of the fiftieth anniversary of Wagner's death took place in Germany and Austria, its observance was virtually world-wide. The principal ceremony in Germany took place at Leipzig, where a memorial concert under Dr. Karl Muck was attended by Mme. Winifred Wagner, the composer's daughter-in-law, and by Chancellor Hitler and other high officials of the government. Max von Schillings delivered the memorial address. In the memorial ceremony at Bayreuth on the exact date of the anniversary, February 13, the freedom of the city was conferred upon Mme. Wagner, Wagner's surviving step-daughters, Eva Chamberlain, Daniela Thöde, and Blandina Gravinga, as well as Arturo Toscanini. In Vienna, President Miklas opened a Wagner memorial exhibition in the Konzerthaus on February 13, when the Staat-

soper presented *Parsifal* and the Volksoper, *Die Meistersinger*. A Wagner museum at Tribschen, the villa near Lucerne where Wagner had lived during the composition of *Tristan und Isolde*, was opened on July 30. In America most of the symphony orchestras played Wagner programmes in the neighborhood of the anniversary date, while the Metropolitan Opera in New York presented a special performance of *Parsifal*.

The most important festival in observance of the centennial of Brahms' birth (May 7) took place in Vienna from May 16-22, under the auspices of the Deutsche Brahms Gesellschaft and the Vienna Friends of Music. Furtwängler, as head of the former organization, made the memorial address: the heads of the German and Austrian governments bestowed their patronage on these occasions. Another important festival was held in Hamburg, Brahms' native city.

On June 2, Dr. Frank Damrosch, head of the Institute of Musical Art of New York (for the last few years a part of the Juilliard School of Music) resigned after twenty-eight years' service, and was succeeded as dean by Ernest Hutcherson, who is also dean of the Juilliard Graduate School.

Philip Hale, music critic of the Boston *Herald* and programme annotator for the Boston Symphony Orchestra, resigned from both positions in the autumn owing to advancing years and ill health. The dean of American writers in this field, he was highly esteemed both for his critical judgment and the extent of his musical knowledge.

ARTISTS. As a result, direct or indirect, of the policies of the new German régime, several prominent musicians changed the scenes of their activities. Three principal figures among the conductors who had been ousted from German positions, Bruno Walter, Otto Klemperer, and Fritz Busch, soon found opportunity elsewhere. Another musician of note who had left Germany in 1933 was Artur Schnabel, who, in January, had played all of Beethoven's piano sonatas in seven Berlin programmes. Later he gave a similar series in London, and, in October, came to the United States for a short tour, giving all-Beethoven recitals, and appearing as soloist with the principal orchestras. The high accomplishment and sincerity of his art and the thoroughness of his musicianship won him unusual success in his American appearances.

Ignace Jan Paderewski, in his seventy-third year, made an American tour early in the year, and planned to return in the season of 1933-34, but early in November acute neuritis made him cancel all his concert engagements, and his condition was causing some apprehension by the end of 1933.

During the last few years, most of the child prodigies who had been successful on the concert stage had been violinists, but in this class the feature of 1933 was the work of an eight-year-old American pianist, Ruth Slenczynski, who, after a Paris appearance early in the year, made her New York début in a recital on November 13, astounding the critics by her technical talent and the maturity of her musicianship.

Lily Pons, the Metropolitan Opera Company's French coloratura soprano, who, having sung only in French provincial opera companies before coming to New York, had not yet been heard in the

French capital, made her first Paris appearance in a benefit concert with the Paris Symphony under Pierre Monteux on May 29.

With conditions militating against the obtaining of the necessary financial backing, there were fewer début recitals in New York and other large American cities, and few, if any new names appeared in the list of artists who had won a national reputation.

The National Federation of Music Clubs held its biennial competition for young artists during the first part of the year. In the finals at Minneapolis on May 24 during the Federation's biennial convention the winners were Marion Clayton, organist; Edward Austin Kane, singer; Louise Essex, cellist, and Dalles Frantz, pianist. The Schubert Memorial, of New York, chose the last two artists for its sponsorship, and arrangements were made for the appearance of Mr. Frantz as soloist with the Philadelphia Orchestra the following January.

CHAMBER MUSIC. The Adolf Busch String Quartet, with Rudolf Serkin, German pianist, paid their first visit to America in April to take part in the Library of Congress Festival in Washington sponsored by the Elizabeth Sprague Coolidge Foundation (see *American Festivals*), and also made its New York début in an invitation concert April 26. Mrs. Coolidge, who has long been noted as the chief American patron of chamber music, presented the Pro Arte Quartet of Brussels in three October concerts for the Chicago Society of the Friends of Music. In November, she presented the same ensemble in four concerts in the Boston district, including a Cambridge concert in which Arnold Schönberg was the guest of honor at a performance of his second quartet. The Pro-Arte group also played in Schönberg programmes given in New York and Washington in honor of the composer.

The League of Composers, of New York, which had done much to bring forward new chamber music and works for small orchestra, celebrated its tenth anniversary with a concert on April 2, when Francesco Malipiero's *Epodi ed Iambi* was played for the first time. In its next concert, April 16, Leopold Stokowski conducted a revival of Schönberg's *Pierrot Lunaire*, which, critics found, had "dated."

London had a generous supply of chamber music programmes throughout the music season, with the Lener and Adolf Busch quartets among the foreign visitors. On February 17, the Kutscher Quartet and Frederick Thurston gave the first performance of Arthur Bliss's new quintet for clarinet and strings at Wigmore Hall; another new work by Mr. Bliss, a sonata for viola and piano, was introduced by Lionel Tertis and Albert Sammons on November 3. In connection with the Brahms anniversary, all his chamber music works were played in May in a series of eight concerts.

CHORAL SOCIETIES. Choral activities, as far as the presentation of large-scale works was concerned, were at a rather low ebb in New York during 1933, although the Oratorio Society, according to custom, gave Bach's B minor Mass on May 2 and Handel's *Messiah* December 27. The Schola Cantorum, the city's other large concert chorus, gave no concerts of its own, although it took part in two orchestral programmes.

An interesting, while ancient novelty was provided by a group from Margarete Dessoff's choirs, which presented on March 13 the first American

performance of Orazio Vecchi's humorous late sixteenth century "harmonic comedy," *L'Amfiparnasso*.

Local choruses, for the most part, held their own during the year in the United States, and some new ones were organized. The dean of American metropolitan choral groups, the Handel and Hayden Society of Boston, reviewed Elgar's "The Dream of Gerontius" on April 23 under Thompson Stone. On February 21 the Apollo Musical Club of Chicago gave a new cantata, "The Bird Woman" by William Lester; its idiom was described as American in texture but somewhat reminiscent of Massenet.

In Toronto two new choruses, the Philharmonic Society under Matthias Turton and the Bach Choir under Reginald Stewart, both gave their first concerts in April.

One of London's 1933 choral novelties was Hindemith's *Das Unaufhörliche*, introduced in a B.B.C. Orchestra concert in March under Sir Henry Wood. In Berlin, Otto Bochum's oratorio *Der Jungste Tag*, given in March by the Singakademie under Georg Schumann, was one of the season's principal novelties. A short "Choros" on a fourteenth century subject by Anton van den Horst, given in the winter at Amsterdam by the Residentie Orchestra under the composer, was regarded as the most striking recently composed Dutch choral work.

AMERICAN FESTIVALS. The Library of Congress Chamber Music Festival, one of a series held in Washington at approximate intervals of eighteen months, took place from April 23 to 25. The Juilliard School of Music, of New York, presented Cimarosa's opera *The Secret Marriage* under Albert Stoessel's direction. The Adolf Busch String Quartet played works of Pizzetti, Busch, and Beethoven. Serge Koussevitzky conducted a chamber orchestra of Boston Symphony players in Aaron Copland's *Music for the Theater*, Stravinsky's Octuor, Ravel's Introduction and Allegro for flute, harp, and strings and Hindemith's *Kammermusik* No. 1. The Laurent Wind Quintet of Boston and the Kroll Sextet of New York played music by Bohuslav Martinu, Gustav Strube, and Schönberg, and the festival closed with a programme of violin and piano sonatas played by Busch and Adolf Serkin.

The thirtieth biennial May Festival in Cincinnati opened May 2 under the direction of Eugene Goossens, who conducted the Cincinnati Symphony and May Festival Chorus. The principal works performed were Handel's oratorio *Belshazzar's Feast* and scenes from Wagner's *Die Meistersinger*. Among the soloists were Emily Roosevelt, Margaret Matzenauer, Kathryn Meisle, Robert Steel, Herbert Gould, Richard Crooks, Dan Beddoe, and Ezio Pinza.

The third annual American Music Festival of the Eastman School of Music was held at Rochester, N. Y., from May 2-5 with the Rochester Philharmonic Orchestra, Eastman School Orchestra, Eastman Little Symphony and Eastman School Chorus taking part. Among the new works performed were Lawrence Powell's *Keltic Legend*, William Still's *From the Black Belt*, Irving Landau's Free Variations on a theme of Walter Mourant for orchestra, Bernard Rogers's Cantata *The Exodus*, and two ballets, Burrill Phillips's *Princess and Puppet*, and Still's *La Guaiablesse*. Howard Hanson was the festival director with Karl Van Hoesen, Samuel Belov, and Herman H. Genhart among the conductors.

After the death of J. Fred Wolle in January, it was feared that the historic festivals of the Bach Choir of Bethlehem, Pa., would have to be abandoned, but the 1933 festival was represented by a performance of the B minor Mass in memory of Dr. Wolle on May 13 under the direction of Bruce Carey of Philadelphia. Later it was decided to continue with Mr. Carey as permanent conductor.

The principal feature of the University of Michigan festival at Ann Arbor was the world première in concert form of the opera *Merry Mount* with music by Howard Hanson, and book by Richard L. Stokes. This work, scheduled to have its stage première at the Metropolitan the following winter, was given on the closing day, May 20, with Leonora Corona, John Charles Thomas, Frederick Jagel, Rose Bampton, and Chase Baromeo as soloists. The Chicago Symphony Orchestra under Frederick A. Stock and Eric Delamarter and the University Choral Union under Earl V. Moore furnished the instrumental and choral background of the programmes, with Guy Maier and Lee Pattison, making their first appearance since the resumption of their two-piano partnership; Nina Koshetz and Grete Stückgold among the other soloists.

The annual festival of the Westchester Choral Society at White Plains, N. Y. was reduced to a single concert under Albert Stoessel's direction on May 19, with Albert Spalding, violinist, as guest artist with the chorus of 1200. In December Mr. Stoessel resigned owing to the pressure of his other work and was succeeded by Sandor Harmati, who began preparations for a three day series in 1934.

The third annual White Top festival at Marion, Va., on August 11 and 12, was devoted to Southern Appalachian balladry, folk music and dances.

The second festival of American music on the Yaddo Estate at Saratoga, N. Y. was held September 30 and October 1. The programme included a string quartet by Walter Piston, a concerto for string sextet by Roy Harris, works for voice with string quartet by Richard Donovan, Evelyn Berckman, and Dante Fiorillo, piano works by Ross Lee Finney and George Antheil, songs by Theodore Chanler, Charles Ives, Israel Citkowitz, and Roger Sessions and other works by Henry Cowell, Otto Luening, Charles Martin Loeffler, Quincy Porter, and Carl Ruggles. The Piston and Harris works were regarded as the outstanding items among the works performed.

The Worcester County Musical Association's seventy-fourth annual festival at Worcester, Mass. given October 2-7 under Albert Stoessel's direction, was the first to be held in the new municipal Memorial Auditorium. A Festival Fanfare and Chorale by Mr. Stoessel and a *Dedication* for organ by Walter Howe, both composed for the occasion, opened the first concert. The principal works performed were Cimarosa's *The Secret Marriage* given by the Juilliard School's opera group; Verdi's Requiem, Mendelssohn's *Elijah*, Stravinsky's *Symphony of Psalms*, Brahms's *Song of Destiny*, Vaughan Williams's *Toward the Unknown Region*, and Constant Lambert's *The Rio Grande*.

FOREIGN FESTIVALS. The Wagner festival at Bayreuth, Germany, began July 21 and closed August 20 with a schedule including eight performances of *Die Meistersinger*, five of *Parsifal*, and two of the "Ring" cycle. After the withdrawal of Arturo Toscanini six weeks before

the festival, Richard Strauss was engaged to conduct *Parsifal* while Karl Elmendorff, beginning his fifth Bayreuth season, took over *Die Meistersinger* in addition to his scheduled work with the "Ring." One *Meistersinger* performance was conducted by Heinz Tietjen, who had been appointed artistic director. New settings by Emil Praetorius were furnished for all the productions except *Parsifal*, which was given for the last time with the original sets of 1882.

Mr. Toscanini's withdrawal was one factor in reducing the foreign attendance at Bayreuth; the fall of the dollar in exchange value was another deterrent as far as Americans were concerned. Chancellor Hitler and other high officials attended the first series of performances, and the government bought and distributed several thousand tickets, besides giving the festival all possible publicity through officially controlled organs.

Chancellor Hitler took praiseworthy precautions against letting political demonstrations divert attention from the music-dramas. Notices were distributed urging those attending from hailing the Chancellor's presence or singing patriotic songs in the theatre; Wagner, it was pointed out, represented the highest possible tribute to German greatness. Still, according to certain foreign observers, this could not prevent a change in the prevailing atmosphere, which became political and nationalistic, instead of international and purely artistic, as before.

The annual Munich Festival, which began July 18, was again devoted to Wagner and Mozart, including the presentation of the former's works from *Rienzi* to *Parsifal* in chronological order; several of these with new settings by Adolf Linnebach. Hans Knappertsbusch conducted the Wagner performances and shared the Mozart repertoire with Paul Schmitz. Sir Thomas Beecham conducted an orchestral concert.

The Salzburg Festival began on July 29 in the face of difficulties from Germany, which had imposed the virtually prohibitive tax of 1000 marks on visitors to Austria; substitutes also had to be found for Hans Pfitzner and two or three German singers who had been prevented from filling their engagements. But, thanks especially to propaganda conducted in Great Britain and Belgium by the "Friends of Salzburg," visitors from other countries almost made up for the loss of the usual German contingent.

Conductors included Richard Strauss, Clemens Krauss, Bruno Walter, and Vittorio Gui, who substituted for Pfitzner. Strauss's *Die Aegyptische Helena* which had hitherto been popular only in Dresden, was presented for the first time in a revised version in which the second act was somewhat condensed and simplified.

The year's chief Italian festival was the "Musical May" at Florence, which began April 30. One feature was an international congress of musicians, at which papers were read in four languages on topics such as musical criticism, radio, the gramophone, films, contemporary operatic tendencies, interpretation and creation, diffusion of musical culture and international exchanges. Among stage works presented in the festival programme were Spontini's *La Vestale* in which the American soprano Rosa Ponselle made a much applauded Italian debut.

The eleventh annual festival of the International Society for Contemporary Music was held at Amsterdam from June 9 to 14. Among the

major presentations in a programme of choral, orchestral, chamber music works, and other works in smaller forms were Willem Pijper's opera *Heer Halewijn*, B. van Sigenhorst Meyer's *Canticum Fratris Solis*, J. N. Mul's *Mass Causa nostrae Laetitiae*, Diepenbrock's *Carmen Saeculare*, Guillaume Landre's first symphony and William Walton's *Belshazzar's Feast*.

In London, an orchestral festival from May 8-19, devoted partly to Brahms, was conducted by Adrian Boult and Serge Koussevitzky; Adolf Busch and Artur Schnabel appeared as soloists. The annual Dolmetsch Festival at Haslemere, devoted to early music played on instruments of contemporary type, began July 21.

The annual Three Choirs Festival was held at Hereford in September under the direction of Dr. Percy Hull. The programme included the Brahms Requiem and Elgar's *The Kingdom* and *The Apostles*, these conducted by their composer, and, as novelties, George Dyson's *St. Paul's Voyage to Melita* and Martin Shaw's *Sursum Corda*. A scene by Armstrong Gibbs for contralto and orchestra, *The Love-Talker*, was presented at a secular concert.

The Sheffield Festival was revived in November after a lapse of twenty years with Sir Henry Wood and J. F. Stater conducting and a programme including Kodaly's *Psalmus Hungaricus* and Mahler's Eighth Symphony (Symphony of a Thousand).

AMERICAN ORCHESTRAS: Bruno Walter began his second term as conductor of the Philharmonic-Symphony Orchestra of New York on Dec. 29, 1932, and closed it February 26. On January 4 he introduced to America the suite arranged by Richard Strauss from his ballet *Schlagobers* (Whipped Cream), a product of 1922 which found scant favor with the New York critics. January 19 brought the American premiere of Serge Prokofiev's suite *The Gamblers* derived from an opera based on a novel of Dostoevsky.

Arturo Toscanini, entirely recovered from the muscular trouble in his arm which had cut short his term in 1931-32, gave his first concert of the season March 1, when he presented the local premiere of Howard Hanson's second (Romantic) Symphony, which was marked by a somewhat self-conscious reversion to romanticism. A later, not particularly important, novelty was Alexander Wepruk's *Songs and Dances of the Ghetto*. Mario Castelnuovo-Tedesco's second violin concerto *The Prophets*, which received its world premiere April 12 with Jascha Heifetz as soloist, was acclaimed for its musicianship and lofty intentions, but its subject was considered too vast for any composer not of the class of Bach or Wagner.

Mr. Toscanini devoted his last five Sunday afternoons of the season, which closed April 23, to a Beethoven cycle including all the symphonies except the ninth. This drew capacity houses and was considered a high point of the season from the artistic point of view.

Although the Philharmonic-Symphony Society did not broadcast a public appeal for funds, it let it be known on March 14 that only by drastic economies had it been made possible to continue for another season. The musicians took their second pay cut in two years; the conductors, it was said, had also agreed to reduce their stipends. It was decided to discontinue the concerts in Brooklyn and at the Metropolitan Opera House, replacing these by a new Sunday series at Carnegie

Hall, and, except for one concert in Hartford, all appearances outside of New York.

The new season, the ninety-second counting from the foundation of the Philharmonic Society and the sixth since the amalgamation with the Symphony Society of New York, began October 5 under Bruno Walter's direction. His first novelty, introduced to America October 14, was the late Leos Janacek's rhapsody *Taras Bulba*. An American work, Randall Thompson's second symphony, was played for the first time in New York, November 2. It won unusual acclaim, for a novelty, and, while not regarded as a work of genius, was considered well wrought and pleasing. Richard Strauss's rarely heard *Macbeth* was revived November 2. 1929—*A Satire* by David Stanley Smith, dean of the Yale University School of Music, was introduced to New York November 15. It was expertly scored and effective as a representation of its subject (the emotions besetting the American public before and after the stock market crash of 1929) but was hampered by slightly excessive length and insufficiency of salient thematic material. Arnold Bax's *Summer Music* and *Overture to a Picturesque Comedy* were played for the first time in New York November 22; the first of these was regarded as often exquisite and poetic.

Hans Lange began his mid-season share of the Philharmonic Symphony schedule December 21, reviving Vaughan Williams's Pastoral Symphony, which had been heard in New York only once before in 1922. Nikolai Lopatnikoff's first symphony, played December 28, was the last novelty of the year.

The orchestra also took part in the sixteenth summer season of outdoor symphony concerts at the Lewisohn Stadium from July 29–August 23. Willem van Hoogstraten conducted most of the symphony concerts, while Leon Barzin and Hans Kindler directed five each. José Iturbi directed two concerts in August in which he doubled as conductor and piano soloist with successful results.

The New York Orchestra, a coöperative group of ninety musicians, invited Nikolai Sokoloff, who was closing his long career with the Cleveland Orchestra, to be its conductor. Mr. Sokoloff gave a preliminary concert at Carnegie Hall on January 16, and, during the summer, conducted the orchestra in a tri-weekly symphony concert series on his estate at Weston, Conn.—a mere hamlet, but accessible by automobile from the principal centres of Fairfield County.

The series of large-scale concerts arranged by Walter Damrosch at Madison Square Garden for the benefit of the Musicians' Emergency Fund continued with a Beethoven programme January 25, in which the finale of Beethoven's Ninth Symphony was presented choreographically as a *Pageant Pantomime of World Peace*. On April 3, both Fritz Kreisler and Sergei Rachmaninoff appeared as soloists. The 1933–34 series began with a Bach-Wagner programme November 18, followed by other concerts on November 25 and December 9.

The Musicians Symphony Orchestra, organized in March, 1932, to give work to worthy instrumentalists out of regular jobs, closed its series on May 2. Two of its 1933 concerts were conducted by a California girl, Antonia Brico, and others by Georges Enesco, Sandor Harmati, Vladimir Golschmann, and Henry Hadley; the Wiener Saengerknaben and the Hall Johnson

Negro Choir, besides various prominent soloists, appeared as assisting artists. On March 10 Ignace J. Paderewski appeared in a special concert under Ernest Schelling's direction.

A valuable contribution to the New York orchestral season was made by the training orchestra of the National Orchestral Association, which gave concerts for subscribing members who paid very moderate fees. It introduced Nicolai Berezowsky's Fantasy for two pianos and orchestra February 14, Vladimir Dukelsky's first symphony April 4; Arnold Zernachson's chorale and fugue October 31 and William B. Dinsmore's *Elegie* December 12.

The New York Civic Orchestra, of unemployed musicians, began giving free concerts in museums in the spring under the auspices of the Gibson Relief Committee; later its support was taken over by the New York State Department of Education.

The Philadelphia Orchestra closed its thirty-third season April 30. During the seventeen weeks since the first of the year, Leopold Stokowski had conducted for nine weeks, and Issay Dobrowen for six, while Eugene Ormandy and Alexander Smallens shared the remaining concerts. Novelties offered in this period were few, the only American premiere in the regular programmes being Alexander Weprick's *Songs and Dances of the Ghetto* introduced by Mr. Dobrowen March 10. Mr. Stokowski presented the whole of Wagner's *Parsifal* in three installments on March 31, April 1, and 3. On April 27 and 30, two "wired transmission" concerts were given with Mr. Smallens conducting and Mr. Stokowski operating the controls regulating the volume and proportion of sound. Both concerts were given at the Academy of Music, the audience listening to the first in Washington and to the second in the Academy's foyer; the results of the experiment were enthusiastically described. Another innovation was two "youth" programmes conducted by Mr. Stokowski for hearers between twelve and twenty-five years old; these were continued the following season.

Like several other American orchestras, the Philadelphia Orchestra faced a difficult financial situation at the end of the season, and was not assured of beginning another until May 27, when the musicians agreed to a further pay cut of 9 per cent, to be made only if conditions in the new season should demand it.

The thirty-fourth season began October 5 under Mr. Stokowski, who conducted for the rest of the year, except for three weeks under Mr. Ormandy and one under Mr. Smallens. Werner Josten's *Concerto Sacro* No. 1 had its local premiere October 13, and Roger Sessions's suite from *The Black Maskers* October 20. Frances McCollin's Adagio and Irene Pickhardt's *Mountains* were both played for the first time November 3; Henry Eichheim's *Bali*, first played in a "youth" concert in April, entered the regular series December 1.

The fourth summer series in Robin Hood Dell, with an orchestra consisting mainly of Philadelphia Orchestra players, ran from July 6 to August 30. Unlike the New York Stadium concerts, it was unusually well attended, the receipts wiping out a \$7000 deficit left over from 1932. This was attributed mainly to the introduction of opera (see under *Opera*) on Monday and Tuesday evenings.

The Boston Symphony Orchestra closed its

fifty-second season and its ninth under Serge Koussevitzky's direction with a Brahms festival April 26 to 30 in commemoration of the Brahms centenary. Dr. Koussevitzky conducted all the concerts of the first part of 1933, except in January when Richard Burgin, the concertmaster, and Albert Stoessel held the baton for a week each. On January 20, Mr. Stoessel gave the first concert performance of Philip James's "Station WGBZ," which had won first prizes in the National Broadcasting Company's composers' competition in 1932.

Dr. Koussevitzky gave the world première of Louis Gruenberg's symphony, a work composed in 1919 and revised in 1929, on February 10. A Sinfonietta by Edward Burlingame Hill, of the Harvard musical faculty, was introduced in a Cambridge concert March 9. William Walton's *Belshazzar's Feast*, regarded in England as the principal choral work produced in 1931-32, was performed for the first time in America March 31, with the assistance of the Cecilia Society. *Rebus, an Imaginary Ballet* by Igor Markevitch, a twenty-year-old Russian living in Paris, had its first performance in a New York concert of the Boston Symphony on April 6. Critical comment ran from fairly favorable to distinctly condemnatory, but, nothing daunted, Dr. Koussevitzky introduced another Markevitch work, *Introduction and Hymn* to Boston December 15 in a programme including the world première of Emerson Whithorne's suite *Moon Trails*.

The new season opened October 6. Its first novelty was Nicolai Tcherepnin's Three Pieces for Orchestra, based on Poe's *Masque of the Red Death* (October 13). American premières were afforded Honegger's third *Mouvement Symphonique* November 3 and Gabriel Pierné's *Divertissement on a Pastoral Theme* November 10. Arthur Lourié's *Sinfonia Dialectica* was introduced to Boston December 1. Richard Burgin relieved Dr. Koussevitzky for the concerts of November 24-25.

The Chicago Symphony Orchestra closed its forty-second season April 21 and began the next October 6, a week earlier than usual to accommodate visitors at the Century of Progress Exposition. Most of the concerts were conducted by Frederick A. Stock, who has directed this orchestra since the death of Theodore Thomas in 1905, while the others were under the direction of Eric Delamarter, the assistant conductor, who gave the first performance of his third symphony, in E major, on February 16. Schönberg's *Gurrelieder* was introduced to Chicago, January 10. The first symphony of Felix Borowski, programme annotator for this orchestra, had its world première March 16. John Alden Carpenter's *Sea Drift* was played for the first time November 30.

A financial crisis and threat of discontinuance—which, a Chicago critic noted, had become an annual affair—was announced in the spring, but the problems of beginning a new season had been solved by June, when the orchestra gave a series of concerts at the Auditorium in connection with the Exposition. Mr. Stock conducted most of these programmes, with Rudolph Ganz and Karl Krueger as guest leaders.

In January Artur Rodzinski, conductor of the Los Angeles Philharmonic, was invited to succeed Nikolai Sokoloff as conductor of the Cleveland Orchestra, and began his first Cleveland season October 25. The following week, in a

Polish programme, he gave the American première of Karol Szymanowski's fourth *Symphonie Concertante* for piano and orchestra. An innovation was a stage production of Wagner's *Tristan und Isolde* given in the regular series at Severance Hall November 30 and December 2; the public response resulted in a third performance December 4.

The Detroit Symphony closed its season March 4 after giving the regular number of concerts within a period shorter than before. The 1933-34 schedule, beginning November 2, was reduced from sixteen to fourteen pairs of subscription concerts. Ossip Gabrilowitch continued as conductor throughout the year, assisted by Victor Kolar. On January 19, Rudolph Ganz conducted the Detroit Orchestra in the first performance of his humorous suite *Animal Pictures*.

Eugene Goossens, conductor of the Cincinnati Symphony Orchestra, was kept out of action by a long illness from February until the last week of the season; during this period Vladimir Bakaleinikoff, the assistant conductor, Eugene Ormandy, and Walter Damrosch conducted in his stead. In January, Mr. Goossens presented the first performance of Leopold Godowsky's *Java* suite. The new season began October 10 with a schedule of sixteen pairs of symphony concerts and ten "popular" concerts. Tickets, as in the case of some other mid-Western orchestras, were reduced in price.

The St. Louis Symphony Orchestra closed its fifty-fourth year and its second season under Vladimir Golschmann on March 25. The new season (1933-34) opened on November 3. Mr. Golschmann offered his hearers a considerable proportion of new music, including Two Symphonic Movements by Alexander Tansman in January; Alexander Steinert's *Symphonic Legend* in February; Roussel's *La Ville Rose* on November 3 and Maurice Jabot's *Suite Française* November 10. The Minneapolis Symphony, under Eugene Ormandy, began its thirty-first season October 29. In Kansas City the new Philharmonic Orchestra of eighty-five musicians gave its first concert November 28.

William Andrews Clark, Jr. the sole guarantor of the Los Angeles Philharmonic Orchestra, announced in December, 1932, that he would withdraw after the close of the 1933-34 season, and various civic groups conferred at intervals during 1933 about ways of supporting the orchestra during the future. Otto Klemperer, who had been removed from his Berlin post owing to the racial policy of the Nazi régime, was appointed as Artur Rodzinski's successor, and conducted his first Los Angeles concert October 19.

The annual summer series at the Hollywood Bowl was jeopardized in the spring when the musicians balked at a thirty per cent pay cut, but matters were finally adjusted under a re-organized sponsoring group. The series consisted of thirty-two concerts within eight weeks, conducted by Sir Hamilton Harty, Ossip Gabrilowitch, Raymond Paige, Pietro Cimini, Ernest Lert, and others. Charles Wakefield Cadman's *Dark Dancers of the Mardi Gras* was played for the first time August 8.

During Issay Dobrowen's absence in the East early in the year, the San Francisco Symphony Orchestra was conducted by Alfred Hertz and Bernardino Molinari; Mr. Dobrowen was engaged as sole conductor for the 1933-34 season, which began December 8. It was planned to have Arturo

Toscanini as guest conductor in December, but his visit was postponed until the following spring. The orchestra gave the usual summer series at the Exposition Auditorium and at Hillsborough, Calif.; the former series was curtailed by the exhaustion of available funds. The Seattle Symphony under Basil Cameron and the Portland Symphony under Willem van Hoogstraten continued their activities; the former, in January, gave the American première of *No. 3 Beaufort* by the Finnish composer Uuno Klami. The National Symphony Orchestra of Washington, D. C., began its third season under Hans Kindler's conductorship in the fall, while the Rochester (N. Y.) Philharmonic Orchestra continued its policy of guest conductors.

FOREIGN ORCHESTRAS. In contrast with the financial difficulties faced by most of the major American orchestras, London had a boom in orchestral music during 1933, with three groups giving regular seasons; the B. B. C. Orchestra with Adrian Boult as regular conductor; the London Philharmonic under Sir Thomas Beecham and the London Symphony under Sir Hamilton Harty, who resigned from the Halle Orchestra of Manchester in February. There were also the Courtauld-Sargent concerts with Malcolm Sargent as chief conductor, while the London Philharmonic also played in the Royal Philharmonic Society's concerts, a series which, nearly moribund a year or two before, was increased from eight to eighteen concerts in 1933-34. The Berlin Philharmonic, under Furtwängler, appeared in London in February.

The thirty-ninth annual season of Promenade Concerts under Sir Henry Wood was held from August 12 to October 7, with six British composers conducting their own music as guests.

Although the standards of the orchestras of Paris were not regarded as on a par with those of the larger cities of America or Germany, they outstripped these in their number and in their devotion to indigenous music. The chief orchestras active in 1933 were the Colonne under Paul Paray, the Lamoureux under Albert Wolff, the Paris Symphony under Pierre Monteux, the Pasdeloup under Piero Coppola, the Poulet under Emile Cooper, the Conservatoire under Philippe Gaubert and the Walter Straram Orchestra. The most noted foreign visitor to appear with a Paris orchestra was Arturo Toscanini, who led the Straram group in three concerts in October.

The changes of personnel imposed by the new régime considerably altered the roster of German conductors. The regular features of the Berlin season were the Philharmonic concerts under Furtwängler and Erich Kleiber and Kleiber's concerts with the State Opera Orchestra.

Carl Schuricht was appointed conductor of the Gewandhaus Orchestra of Leipzig, and Werner Ladwig and Walter Stoeper took over the Dresden Philharmonic concerts after Fritz Busch's departure. In July, the veteran Dr. Karl Muck resigned the conductorship of the Hamburg Philharmonic, objecting to its prospective merger with the orchestra of the Municipal Opera.

Clemens Krauss was the regular conductor of the Vienna Philharmonic until May, when it was decided to divide the new season among guest conductors. Arturo Toscanini conducted the Philharmonic in two concerts in October and also took it to Budapest. The new Vienna Concert Orchestra, trained by Herrmann Scherchen, made its début in the fall under Kurt Adler; Monteux

and Alexander von Zemlinsky conducted later concerts.

An innovation in Italy was the establishment of summer orchestral concerts in Milan and Rome; the latter series was held in the Forum with Molinari, Mario Rossi, Sergio Failoni, Riccardo Zandonai, and Tullio Serafin as the conductors.

Willem Mengelberg, Pierre Monteux, and Edward van Beinum shared the direction of the Concertgebouw Orchestra of Amsterdam. In Moscow Margaret Heifetz, a nine-year-old musician, conducted a concert of the Philharmonic Orchestra early in the year, and was praised for her interpretations of Beethoven's Fifth Symphony and *Scheherazade*. The Persimfans, Moscow's conductorless orchestra, resumed its activities March 12, after a year's suspension.

A feature of the orchestral year in Mexico City was the début of José Iturbi in the spring as a conductor in a series of concerts including Beethoven's Ninth Symphony.

OPERA. On Feb. 9, the directors of the Metropolitan Opera Association of New York announced that unless the public could contribute a guaranty fund of \$300,000, they would be unable to renew the lease on the Metropolitan Opera House expiring May 31.

A committee headed by Lucrezia Bori, one of the company's leading sopranos, immediately began a campaign, appealing both to operagoers and to radio listeners. The total raised had approached near enough to the goal by April 16 to permit the announcement of a fourteen week season in 1933-34. By April 28, the required amount had been subscribed or pledged; the Julliard Foundation gave \$50,000; \$24,000 was raised by two special performances in which the artists donated their services, and another \$20,000 by an Opera Ball held April 28.

During the 1932-33 season, which began November 21, the company gave 126 performances of thirty-six operas at the Metropolitan in 113 nights and matinees. Eighteen works were given in Italian 64 times, 11 in German 36 times, six in French 19 times, and one American opera seven times. The company gave 16 performances in Philadelphia, 6 in Brooklyn, 3 in White Plains, and 2 in Hartford, Conn. The usual post-season tour was represented only by three performances in Baltimore. The subscription season closed March 11; post-season benefit performances were given March 17, 18, and 24.

The only novelty of 1933 was *The Emperor Jones* by Louis Gruenberg, who derived his libretto from Eugene O'Neill's play of the same name. This had its world première January 7 with Lawrence Tibbett in the title rôle, Marek Windheim as the overseer, Smithers, and Pearl Besuner completing the speaking cast, while Hemsley Winfield mimed the dancing witch-doctor. A Negro chorus and dance group from the New Negro Art Theatre also took part.

This opera, conducted by Tullio Serafin, was the fourteenth American work to be given at the Metropolitan during Giulio Gatti-Casazza's régime. It proved popular with the public during its first season, being presented seven times at the Metropolitan and three times elsewhere by the company. It was also heard in Chicago, Los Angeles, and San Francisco.

Bedrich Smetana's *The Bartered Bride*, given in German, was revived February 4 after five years out of the repertoire, with Elizabeth Reth-

berg, Rudolf Laubenthal, Ludwig Hofmann, and Marek Windheim as the principals. Artur Bodanzky conducted. Montemezzi's *L'Amore dei Tre Re* was revived under Mr. Serafin on February 17 with Lucrezia Bori, Edward Johnson, Richard Bonelli, and Tancredi Pasero heading the cast.

Among the new singers appearing at the Metropolitan in 1933 the most significant from an artistic point of view were Frida Leider, soprano, and Maria Olszewska, contralto, German singers who had been acclaimed by American critics who had heard them in Europe or with the Chicago Civic Opera. Both made their debuts in *Tristan und Isolde* January 18. Richard Crooks, an American tenor well known as a concert artist, made his Metropolitan debut as Des Grieux in *Manon* February 25.

In the new season Emanuel List, an Austrian basso who had sung in New York motion picture houses and become an American citizen before winning operatic note abroad, made a very favorable impression in his Metropolitan debut as the Landgrave in *Tannhäuser* December 27. Nino Martini, a young Italian tenor hailed as the first specialist in the radio field to join the Metropolitan, made his debut December 28 as the Duke in *Rigoletto*.

The other newcomers engaged for 1933-34 were Lotte Lehmann, Lillian Clark, and Irra Petina, sopranos; Cyrena Van Gordon, mezzo-soprano; Carlo del Corso, tenor; John Charles Thomas, barytone, and Virgilio Lazzari, basso. Four artists who had left the Metropolitan from one to twelve years before, returned to it: Claudio Muzio, soprano; Paul Althouse, Charles Hackett, and Max Lorenz, tenors.

The Metropolitan gave *Lakmé* in Philadelphia December 19 and a Christmas matinee of *Hänsel und Gretel* in New York before beginning the regular subscription season December 26 with Deems Taylor's *Peter Ibbetson*—the first American opera in the Metropolitan's history to be given on an opening night.

On June 2 a company headed by Alfredo Salmaggi, a New York impresario, began a season at the Hippodrome at unusually low prices, ranging downward from ninety-nine cents. The success of the venture was remarkable and unexpected; crowds thronged the Hippodrome through July and into August, despite some very hot weather. After an intermission from August 14 to September 6, the company began a fall season which, at slightly higher prices, ran until December 18.

The Juilliard School of Music gave three productions: Monteverdi's *L'Incoronazione di Poppea* and Puccini's *Gianni Schicchi* February 23-25, Cimarosa's *The Secret Marriage* April 25-27, and Mozart's *The Marriage of Figaro* April 25-27. On April 25, the Henry Street Settlement Music School gave the American première of Kurt Weill's *Der Jasager*. The Ukrainian Art Theatre gave the first New York performance of Tchaikovsky's *Mazeppa* February 4, and another Tchaikovsky work, *Iolanthe*, had its first American public performance September 10 at Scarborough, N. Y.

Chicago, left without any regular opera by the demise of the Civic Opera Company in 1932, had to content itself during the winter with two performances of *Toaca* with Maria Jeritza, John Charles Thomas, and Mario Duca (Myron Duncan) as principals. *The Emperor Jones*, preceded

by *Pagliacci*, was presented on May 2 and 5. In connection with the Century of Progress Exposition, several opera performances were given during the summer.

Operatic activity in Chicago began to pick up in the fall, when Fortune Gallo's San Carlo Opera began a popular-priced season at the Auditorium Theatre on September 18. This lasted for five weeks, and an eight weeks' season was contemplated for the autumn of 1934.

Meanwhile plans for the resumption of opera at the new Civic Opera House resulted in the organization of the Chicago Grand Opera Company with Paul Longone as impresario. This began a five weeks' season December 26 with *Tosca*, in which Mme. Jeritza, Pasquale Amato, and Mario Chamlee sang the leading rôles and Genaro Papi conducted.

Philadelphia, during the regular music season, had to depend mainly upon the Metropolitan for its opera. The experiment of opera in the summer concerts at Robin Hood Dell, under the direction of Alexander Smallens, began with *Aida* July 10 and 11. The success of this venture, which offered familiar Italian and French works twice weekly, made it probable that it would be continued on a more permanent basis the next summer.

For a second consecutive summer, there was no opera at Ravinia Park, near Chicago, but the usual "Zoo" opera season in Cincinnati was held with a schedule of six weeks of grand opera and two of Gilbert and Sullivan. Light opera, as usual, was presented in the St. Louis Municipal Opera's outdoor season. Boston had relatively little opera in 1933, although the company operating at the New York Hippodrome gave a series from September 24 to October 14.

The San Francisco Opera Association, under Gaetano Merola's direction, held its second season in the new War Memorial Opera House from November 3 to December 1, giving ten subscription performances and five repetitions. The casts were composed mainly of Metropolitan Opera principals, with Alfred Hertz and Wilfred Pelletier sharing the conductorship with Mr. De Merola. The repertoire included *Samson et Dalila*, *Coq d'Or*, *Aida*, *Tristan und Isolde*, *Manon*, *The Emperor Jones*, *The Secret of Suzanne*, *Cavalleria Rusticana*, *Pagliacci*, *La Traviata*, *La Bohème*, and *La Forza del Destino*.

In London the international opera season at Covent Garden, which had been shortened to four weeks in 1932, was increased to six divided evenly between German and Italian opera. The German half of the season, which began May 1, included Wagner's "Ring" cycle, *Tristan und Isolde* and *Parsifal*, with Sir Thomas Beecham and Robert Heger conducting. Among the Italian operas offered were two of the less familiar operas of Verdi, *Don Carlos* and *Otello*. Sir Thomas Beecham conducted Berlioz's *La Damnation de Faust* in operatic form May 26.

The company which had its headquarters at the "Old Vic" and Sadlers Wells Theatres did some notable work in the field of opera in English; on October 11, it gave Rimsky-Korsakoff's *Tsar Saltan* for the first time in England. A new group, the Metropolitan Opera Company, began its schedule in September with Wagnerian presentations in suburban London theatres, going thence to Birmingham, but was brought to a close in October by financial losses.

Both Paris opera houses pursued their usual

schedules, with a short summer lapse at the Opera Comique; rumors of turning this house to other uses proved unfounded. At the Opera Berlioz's *La Priée de Troie* and Alberic Magnard's *Guerooeur* were revived in March; Halevy's *La Juive* had its first performance in forty years in April. Joseph Canteloube's *Veroingetoria* had its premiere in June with Georges Thill in the title rôle and Philippe Gaubert conducting. Wagner's *Ring* was given between April 18 and 24, and further Wagnerian performances, with Lauritz Melchior and Frida Leider, were given in the autumn. At the Opera-Comique, Tullio Serafin, of the Metropolitan, conducted a Rossini series in October.

Zandonai's *Giulietta e Romeo*, first given in Rome in 1922, was the year's first novelty at La Scala in Milan; the same composer's one-act *Una Partita*, with a libretto by Arturo Rossato, was received with cool politeness in February. The most important Milanese novelty, produced in April, was Igino Robbiani's *Guido del Popolo* which, with a libretto by Rossato, was the winning choice among 200 scores entered in the Scala's competition for new operas.

Verdi's *Macbeth*, with Benvenuto Franci in the title rôle, was the winter's first revival at the Royal Opera in Rome. Zandonai's *La Farsa Amorosa* was considered successful at its premiere in March under the composer's direction, Marinuzzi's *La Palla de Mozzi* was the season's only novelty at the Carlo Felice in Genoa. In the fall, the continuance of the San Carlo Opera in Naples seemed doubtful, but the financial difficulties were surmounted. Another opera by Robbiani, *Romanticismo*, was praised in its February premiere in Venice.

In Germany the principal new production of the year was Richard Strauss's latest opera *Arabella*, libretto by the late Hugo von Hofmannsthal, given for the first time at the State Opera in Dresden on July 1. Clemens Krauss, general music director of the Vienna Opera, conducted; artists of the Vienna Opera also played a large part in the cast, which included Viorica Ursuleac, Margit Bokor, Martin Kremer, and Alfred Jerger. The house was sold out at raised prices, and there were seventeen curtain calls for the artists and the composer. American critics found a resemblance to the manner of *Der Rosenkavalier*—the story was also a comedy staged in Vienna—and thought well of the first half of the score. Inspiration and interest, however, were thought to have slumped after the middle of the second act.

The Wagner anniversary was observed in Dresden with the presentation of all his works in chronological order; the summer festival which had brought forward *Arabella* also included four Wagner works and Strauss's *Frau ohne Schatten* and *Die Aegyptische Helena*, these conducted by the composer. Dr. Karl Böhm, who conducted the Wagner works, was appointed general music director in succession to Fritz Busch, but, owing to a contract in Hamburg, could not take up this post until June, 1934.

Wagner also dominated the Berlin opera houses in the winter, and nine performances of *Parsifal* were given in Berlin in five days during the Holy Week and Easter period. In June Wilhelm Furtwängler, whose previous official status had been that of guest conductor, became the chief executive of the State Opera with the title of First State Conductor, with Erich Kleiber,

Robert Heger, and Leo Blech (who, though Jewish, had retained his post) as his assistants. *Arabella* was first heard at the State Opera on October 12. The American soprano Dusolina Giannini appeared there both in the spring and the fall; another American singer heard there in October was Margaret Halstead, who sang Venus in *Tannhäuser*.

The Berlin Municipal Opera revived Hermann von Waltershausen's twenty-year-old *Oberst Chabert* in March; Georg Vollerthun's patriotic *Freikorporal* was first produced June 10. Berliners waxed enthusiastic over a week of Italian works at the Municipal Opera from October 9 to 15, with Italian singers, including Rosa Raisa, Toti dal Monte, and Beniamino Gigli, under the direction of Ettore Panizza. Max von Schillings succeeded Carl Ebert as Intendant of the Municipal Opera in March; his death in the summer left this theatre without a permanent head.

Jaroslav Kricka's *Spuk im Schloss* was the year's first novelty at the State Opera in Vienna, where the Wagner repertoire also received much attention in connection with the anniversary observance. *Rienzi* was revived without cuts. In October, Clemens Krauss conducted the local première of Strauss's *Arabella* with Lotte Lehmann in the title rôle.

The opera season at the Teatro Colon in Buenos Aires began May 25 with Pizzetti's *Debora e Jaele*; a German season under Fritz Busch ran from August 8 to September 10. *L'Amico Fritz*, *Khovantchina*, *Palla de' Mozzi*, *Vida Breve*, and *Königskinder* were among the operas produced in addition to more items in the international Italian and German repertoire.

BIBLIOGRAPHY. Biographies of Wagner and Brahms, thanks to the fiftieth anniversary of the former's death and the centenary of the former's birth, formed an important part of the 1933 output of books on musical subjects. A partial list of the books published during the year follows:

Books on Wagner: Ernest Newman, *The Life of Richard Wagner*, vol. 1, 1813-1848, New York and London; B. M. Stegman, *The Unconquerable Tristan*, the Story of Richard Wagner, New York; Walter Lange, *Richard Wagner und seine Vaterstadt*, Leipzig; W. J. Turner, *Wagner*, London; Fritz Jung, *Richard Wagner*, Lubeck; Julius Kapp, *Richard Wagner, sein Leben, sein Werk, seine Welt*, Berlin; Paul Alfred Mehrbach, *Richard Wagner, der deutsche Musiker und Mensch*, Stuttgart; Gustav Renker, *Finale in Venedig, ein Richard Wagner Roman*, Leipzig; Alexander Spring, *Richard Wagner's Weg und Wirken*, Stuttgart; Eduard Stempelinger, *Richard Wagner in München*; Aldo Oberdorfer, *Riccardo Wagner*, Milan; G. Frommel, *Der Geist der Antike bei Richard Wagner in Selbstzeugnissen dargestellt*, Berlin; Pierre Lalo, *Richard Wagner, ou le Nibelung*, Paris.

Books on Brahms: Daniel Gregory Mason, *The Chamber Music of Brahms*, New York; Willi Schramm, *Johannes Brahms in Detmold*; Ralph Hill, *Brahms, his Life and Times*, London; Ottilie von Balassa, *Die Brahmsfreundin Ottilie Ebner und ihr Kreis*, Vienna; Alfred von Ehrmann, *Johannes Brahms, Weg, Werk und Welt*, Leipzig; Kurt Arnold Findeisen, *Lied des Schicksals, Roman um Johannes Brahms*, Leipzig; William Murdoch, *Brahms*, with an analytical study of the pianoforte works, London; H. C. Colles, *The Chamber Music of Brahms*, London; Robert Haven Schaufier, *The Unknown Brahms; Johannes Brahms' Heimatbekenntnis in Briefen an seine Hamburger Verwandten*, ed. Kuet Stephenson, Hamburg; Joseph Müller-Blattau, *Johannes Brahms*, Potsdam.

BIOGRAPHY: Mary Tibaldi Chiesi, *Schubert*, Milan; Edward J. Dent, *Ferruccio Busoni*, London; Albert Schweitzer, *Out of My Life and Thought*, tr. O. T. Campion, New York and London; Charles Sanford Terry, *J. S. NADIR SHAH GHAZI. King of Afghanistan, died by assassination in Kabul, Nov. 8, 1933. He was born at Dehradun, Apr. 10, 1880, and was known until his coronation as Mohammed Nadir Khan. Entering the Afghan Army, he rapidly advanced through the grades to general and in the brief Third Afghan War against the British, in 1919, was commander-in-chief of the Afghan forces. After acting as Minister of War during 1922-24 he was appointed Minister to France but resigned that post in 1926 on the grounds of ill health. He made his residence in France, however, until the revolt against King Amanullah, who had given offense to Moslem sensibilities by inaugurating drastic social, economic, and religious reforms based on Western models, led him to return. With two of his brothers he reached Bombay in February, 1929, and entered Afghanistan from Peshawar in March, to relieve another brother, Sirdar Shah Mahmud Khan, who was holding out against the usurper, Amir Habibullah. His final defeat of Habibullah at Kabul in October was accomplished only after three reverses.

After ascending the Afghan throne King Nadir not only restored peace by pacifying certain rebellious tribesmen but introduced a number of judicious reforms, organizing a regular army and effecting economies in government. The more important of these reforms, however, was the new constitution, promulgated in 1932, which provided for a bicameral legislature, the insurance of personal freedom and rights of property, compulsory elementary education, and the abolition of slavery. In the field of education he had founded the Kabul University, turning over for its use the palace built by Amanullah at Dar-ul-Aman. It was also his aim to build better roads, provide efficient telephone and telegraph systems, and develop the country's mineral resources. His assassination by Abdul Khaliq was in revenge for the execution the previous year of one of Khaliq's relatives, Ghulam Nabi Khan, a supporter of the deposed King Amanullah. NATIONAL ACADEMY OF DESIGN. A society of American artists, established in New York City in 1825 and incorporated in 1828 for the purpose of "the cultivation and extension of the arts of design." After 1906, when the Society of American Artists merged with it, its membership represented all art tendencies except what it deemed the ultra-radical. In 1933 there were 139 academicians: 101 painters, 29 sculptors, 7 architects, and 2 etchers. The associates numbered 165: 129 painters, 19 sculptors, 12 architects, and 5 etchers.

The academicians elected at the annual meeting in April, 1933, included William J. Glackens, Aldro T. Hibbard, Paul King, Nayley Lever, Spencer Nichols, C. Paul Jennewein, Albin Polasek, and John Taylor Arms. The new associates were Charles Curtis Allen, Stephen Bransgrove, Jay H. Connaway, Jerry Farnsworth, Abram Poole, Theodore Van Soelen, Catharine Morris Wright, Gleb Berujinsky, Arthur Heintzelman, and Troy Kinney. There were also elected to honorary membership Romano Romanelli, Italian sculptor; Ignacio Zuloaga y Zanora, Spanish painter; and Sir Reginald Blomfield, British architect.

Harry W. Watrous was president of the National Academy of Design in 1933; Charles C. Cur-

ran, corresponding secretary; and Charles S. Chapman, recording secretary. Headquarters are at Amsterdam Avenue and 109th Street, New York City, where there is also located the Academy's school of design. For an account of the Academy's exhibition of contemporary art, see ART EXHIBITIONS.

NATIONAL ACADEMY OF SCIENCES. A society incorporated in 1863 for the purpose of investigating, examining, experimenting, and reporting upon any subject of science or art, whenever called upon by any department of the United States government. The membership is limited to 300 active members and 50 foreign associates. New members are elected by the academy on nominations from its 11 sections: Mathematics, astronomy, physics, engineering, chemistry, geology and paleontology, botany, zoology and anatomy, physiology and biochemistry, pathology and bacteriology, and anthropology and psychology.

At the annual meeting held in Washington, Apr. 24-26, 1933, the following new members were elected: Oswald Theodore Avery, Harold Delos Babcock, Thomas Barbour, Alphonse Raymond Dochez, Bernard Ogilvie Dodge, Eugene Floyd DuBois, Griffith Conrad Evans, Bancroft Gherardi, Herbert Eugene Ives, Walter Richard Miles, Samuel Alfred Mitchell, Linus Pauling, Joseph Fels Ritt, and Henry Clapp Sherman.

There were presented also the following medals: The Alexander Agassiz Medal for Oceanography to Albert Defant of Berlin, Germany, for his studies on atmospheric and oceanic circulation and his notable contributions to theoretical oceanography; the Public Welfare Medal to William Hallock Park of New York City, for his work as head of the research laboratories of the New York City department of health and as a pioneer and leader both in research and in the application of scientific discovery to the prevention of disease; the Henry Draper Medal to V. M. Slipher of Flagstaff, Ariz., in recognition of his spectroscopic researches; the Mary Clark Thompson Medal and accompanying honorarium of \$200 to Francis Arthur Bather of Wimbledon, England, for his distinguished services in the fields of paleontology and geology; and the John J. Carty Medal and Award for the Advancement of Science to John J. Carty, in whose honor the award was established for his distinguished accomplishments in the field of electrical engineering, particularly as they have influenced the development of electrical communication. Because of the death of Dr. Carty on Dec. 27, 1932, a posthumous presentation was made to his son.

The academy's autumn meeting was held in Cambridge, Mass., Nov. 20-22, 1933, upon invitation of the Massachusetts Institute of Technology. On this occasion the Comstock Prize, amounting to \$3500, was presented to Percy Williams Bridgman of Harvard University for his investigations leading to increased understanding of the electrical constitution of matter.

The scientific papers read at these meetings by academicians or by persons introduced by them were incorporated in the annual report of the president of the academy to the Congress of the United States. The *Proceedings*, issued monthly, were devoted to condensed reports of the most recent achievements in scientific research work by members of the academy and its agent, the National Research Council, or by persons introduced by members.

The officers in 1933 were: William Wallace Campbell, president; Arthur L. Day, vice-president; Fred E. Wright, home secretary; Robert A. Millikan, foreign secretary; Arthur Keith, treasurer. The academy building is at 2101 Constitution Avenue, Washington, D. C.

NATIONAL BANKS. See BANKS AND BANKING.

NATIONAL CHILD LABOR COMMITTEE. See CHILD LABOR.

NATIONAL CIVIC FEDERATION, THE. A movement organized in 1900 to seek the solution of some of the great problems related to social and industrial progress. It provides especially for the discussion of questions of national import, aids in the crystallization of enlightened public opinion, and promotes legislation when desirable.

Early in 1933 the organization held a conference upon the "Tragic Conditions of the Worker and the Farmer," attended by leaders from among farmer, labor, industrial, financial, and professional groups. This resulted in the appointment of a National Committee on Economic Recovery to aid in establishing a spirit of mutual trust and forbearance among these divergent interests and to find a *modus vivendi* to point the way toward safe and stable living conditions for every citizen. Immediately after Inauguration Day it issued a statement, "Stand by the President in His War Against Depression," to each member of Congress and leaders of public opinion throughout the United States.

In view of its experience of more than 30 years with questions related to capital and labor, the federation gave to the National Recovery Administration the benefit of its participation in labor difficulties, especially with reference to the "right" of collective bargaining under the National Industrial Recovery Act. Its interpretation showed clearly that, while the workers under that law have a right to organize and to select their own representatives to present their demands to the employer, the employer has the right to decline such demands, including the closed shop, and that the workers have the right to decline to accept unsatisfactory counter-proposals made by the employer, including the open shop. The relation of a trade union agreement between a corporation and its "company union" under the collective bargaining clause, arising in connection with the establishment of the various codes, was developed.

The federation's programme in opposition to the recognition of the Soviet government, until all its subversive propaganda is withdrawn, was continued, as well as its endeavor to obtain federal legislation to have restored to the Department of Justice the power to deal with efforts to overthrow the government by force and violence. The American section of the International Committee to Combat the World Menace of Communism conducted an educational campaign to enlighten the public upon the activities of the Communists.

The federation circulated an evaluation of our achievements under the competitive system, industrially, socially, and politically, revealing shortcomings and remedies to be sought and analyzing the proposal for a "new social order." The inquiry into the operation of compulsory

unemployment insurance funds, foreign, and domestic, was pursued.

The offices of the federation in 1933 were: Elihu Root, honorary president; Matthew Woll, acting president; Ralph M. Easley, chairman, executive council; Samuel McRoberts, treasurer; Ellis Searles, secretary, Archibald E. Stevenson, chairman, department on subversive movements; James W. Gerard, chairman, commission on industrial inquiry; William R. Willcox, chairman, industrial welfare department; Joseph P. Ryan, chairman, committee on Russian affairs; John Hays Hammond, chairman, department on active citizenship; Miss Maude Wetmore, chairman woman's department; Gertrude Beeks Easley, secretary, executive council; and Mrs. Coffin Van Rensselaer, executive secretary, woman's department. Headquarters are at 570 Lexington Avenue, New York City.

NATIONAL EDUCATION ASSOCIATION OF THE UNITED STATES. An organization of persons actively engaged in educational work and of others interested in education, formed in Philadelphia in 1857 under the name of the National Teachers' Association and incorporated in 1907 under its present name. Its enrollment as of Jan. 1, 1933, was 207,418.

The association consisted in 1933 of 23 departments, devoted to the special problems of method, organization, and course of study in nearly every type of educational work. These departments, each of which had its own officers, were as follows: Administrative women in education; adult education; art education; business education; classroom teachers; deans of women; educational research; elementary school principals; kindergarten-primary education; lip reading; rural education; school health and physical education; science instruction; secondary education; secondary school principals; social studies; special education; superintendence; supervisors and directors of instruction; supervisors and teachers of home economics; teachers colleges; visual instruction; and vocational education. There were also more than 15 standing and special committees actively at work on professional problems.

The association's seventy-first annual meeting was held in Chicago, Ill., July 1-7, 1933. The theme of this convention was "Evaluating American Education." Most of the important addresses consisted of discussions of the educational crisis brought about by the economic depression. There were held, in addition to the general session, meetings of the representative assembly composed of delegates from State and local educational associations, the departments of the association, and the National Council on Education and other allied organizations, at which the progress of the year in education was reviewed.

The association's department of superintendence held its winter convention in Minneapolis, Minn., Feb. 26-27, 1933. The subject of the *Yearbook*, prepared for presentation at this meeting, was "Educational Leadership." The *Journal of the National Education Association* is the organization's monthly publication. It issues also an annual volume of *Proceedings*, research bulletins, and reports on its activities. The officers elected for 1933-34 were: President, Jessie Gray,

Philadelphia; secretary, J. W. Crabtree, Washington; and treasurer, Henry Lester Smith, Bloomington, Ind. Headquarters are at 1201 Sixteenth Street, N.W., Washington.

NATIONAL KINDERGARTEN ASSOCIATION. An organization founded and incorporated in New York City in 1909, with the object of helping to secure the advantages of kindergarten education for all of the nation's children. The association is supported entirely by private subscription which has amounted annually, in recent years, to approximately \$45,000. During 1932, however, it dropped to \$30,000, and in 1933, to less than \$20,000. This fund is used for the purpose of promoting a knowledge of and an interest in the value of the kindergarten as an integral part of the public school system. Field secretaries are employed in 47 States for the purpose of keeping this matter before the public and assisting parents in having classes organized for their children.

The association has been instrumental in securing the establishment to date of 1960 kindergartens. Where no adequate provision has been made in the school laws for the maintenance of kindergartens, the association has worked to stimulate an effort to secure the enactment of improved laws and has been instrumental in obtaining their passage in 16 States. In this it has cooperated with such State organizations as the Congress of Parents and Teachers, Federation of Women's Clubs, Woman's Christian Temperance Union, American Association of University Women, Federation of Labor, and Chamber of Commerce. From 1928 to 1932, through the generosity of its members, the association was able to set aside a fund from which 52 communities, which could not otherwise have opened kindergartens, received financial assistance. Since 1912 it has cooperated with the National College of Education in Evanston, Ill., which has trained students from every section of the country. It has also published and distributed extensively leaflets on methods and value of kindergarten extension.

The association's officers are: Major Bradley Martin, president; Hon. P. P. Claxton, honorary president; Mrs. Henry Phipps, first vice-president; Mrs. Charles Cary Rumsey, second vice-president; Mrs. Roger C. Aldrich, secretary; Miss Bessie Locke, executive secretary; and Julian M. Gerard, treasurer. Headquarters are at 8 West Fortieth Street, New York City.

NATIONAL LABOR BOARD. See *LABOR ARBITRATION AND CONCILIATION*.

NATIONAL MUNICIPAL LEAGUE. An organization, founded in 1894 and incorporated in 1923, whose aim is to promote efficient and democratic government throughout the United States. Among its committees active in 1933 in developing sound principles of governmental

methods, whether municipal, county, State, or national, were those on new municipal programme, model administrative code, model State constitution, citizens' organization for municipal activity, citizens' participation in city government, county government, municipal standards, selection of the judiciary, model special assessments law, and constructive economy in government. In connection with the latter there was begun in April, 1933, a general movement, sponsored by 50 national organizations, for the formation of local citizens' councils concerned with the reduction of costs in government but at the same time financing necessary services.

The thirty-ninth annual meeting of the league was held in Atlantic City, N. J., Nov. 9-11, 1933. Its theme was "The Part of Local Government in Recovery." Coöperating in this conference were the National Association of Civic Secretaries, the Proportional Representation League, and the Governmental Research Association. The officers elected for 1933-34 were: President, Murray Seasongood, Cincinnati; first vice-president, Harold W. Dodds, Princeton, N. J.; second vice-president, Miss Belle Sherwin, Washington; treasurer, Carl H. Pforzheimer; and secretary and editor of the *National Municipal Review*, Howard P. Jones. Headquarters are at 309 East Thirty-fourth Street, New York City.

NATIONAL RECOVERY ACT. See UNITED STATES under *Administration*; INSURANCE; CHILD LABOR; BUSINESS REVIEW; IRON AND STEEL; FERTILIZERS; COAL; WOMEN IN INDUSTRY.

NATIONAL RECREATION ASSOCIATION. An association organized in 1906, under the name of the Playground and Recreation Association of America, for the purpose of uniting in a national movement the efforts made in various parts of the United States to provide safe and adequate areas where children might play under experienced leadership. In recent years, however, its work has expanded to include the community as a whole, a staff of field workers being maintained to assist cities in organizing year-round programmes for adults as well as for children.

The association carries on its work through such services as physical education, music, drama, park recreation, recreation for girls and women and for institutions, a bureau of colored work, and, in coöperation with the United States Department of Agriculture, a service to rural leaders. The National Recreation School, which it maintains, is a graduate school for the training of recreation executives. Its official magazine is *Recreation*, a monthly. The officers in 1933 were: President, Joseph Lee; treasurer, Gustavus T. Kirby; and secretary, Howard S. Braucher. Headquarters are at 315 Fourth Avenue, New York City.

NATIONAL RESEARCH COUNCIL. An organization of American scientists, originally established in 1916 by the National Academy of Sciences for the purpose of coördinating the research facilities of the United States for work on war problems involving scientific knowledge and reorganized in 1918 as a permanent body for the general encouragement of research in the natural sciences. It has the formal recognition and co-operation of 80 national scientific and technical societies, its membership being composed mainly of appointed representatives of these societies.

The activities of the council are conducted by seven divisions of the science and technology group and four divisions of the general rela-

tionships group. The science and technology group consists of divisions representing physics, mathematics, and astronomy; engineering and industrial research; chemistry and chemical technology; geology and geography; the medical sciences; biology and agriculture; and anthropology and psychology. The general relationships group consists of federal, foreign, State, and educational relations divisions. Each division has a chairman and from 12 to 40 members.

In 1933 there was created by executive order of the President a Science Advisory Board to act through the machinery and under the jurisdiction of the National Academy of Sciences and the National Research Council in the appointment of committees to deal with specific problems in the various departments of the government. Among the major undertakings of the council during the year were the administration of about 140 post-doctorate fellowships; the issuing of a series of research monographs in the physical sciences, including several parts of a treatise upon *The Physics of the Earth*; the editing of an *Annual Survey of American Chemistry* and the *Annotated Bibliography of Economic Geology*; and the sponsoring of such new research projects as land classification, corrosion resistance of iron pipe, survey of tropical diseases, and the relations between the basic sciences and psychiatry.

The general administrative officers of the council in 1933 were: Chairman, Isaiah Bowman, director, American Geographical Society, New York City; treasurer, Arthur Keith, geologist, United States Geological Survey; secretary emeritus, Vernon Kellogg, National Research Council. Headquarters are in the building of the National Academy of Sciences, 2101 Constitution Avenue, Washington, D. C.

NATIONAL SAFETY COUNCIL. A co-operative association, devoted to the conservation of human life through a continuous campaign of accident prevention in industry, on the highway, in the home, and elsewhere. In 1933 there were 4000 members, including corporations, firms, individuals, public officials, schools, Chambers of Commerce, clubs, and civic organizations. About 70 per cent of the members were industrial concerns. Affiliated with the national organization were 51 local councils in as many communities throughout the United States.

During 1933 the council's activities laid especial emphasis on the highway accident problem. A second annual National Inter-City Traffic Contest was held, in which approximately 300 municipalities, large and small, participated. Educational work was intensified among urban schools throughout the country, and valuable engineering studies were made in highway safety.

The council publishes the *National Safety News*, for industries; *Public Safety*, for public officials, police chiefs, etc.; *Safety Education*, for schools; *The Safe Worker* and *The Safe Driver*, for industrial employees. It issues also *Safe Practices* and *Health Practices* pamphlets for industry and carries on extensive work through 27 sections represented in the industrial division for the exchange of new ideas, new plans, and new practices among members.

The twenty-second annual Safety Congress was held in Chicago Oct. 2-6, 1933, with an attendance of approximately 4000 delegates and visitors. The officers elected were: President, J. E. Long, Albany; vice-president for public safety, Robert

I. Catlin, Hartford; vice-president for engineering, J. E. Culliney, Bethlehem, Pa.; vice-president for industrial safety, George H. Warfel, Omaha; vice-president for membership, R. T. Solensten, New York City; vice-president for local safety councils, Lew R. Palmer, New York City; vice-president for administration, C. W. Smith, Chicago; vice-president for health, Dr. Cassius H. Watson, New York City; vice-president for education, Albert W. Whitney, New York City; treasurer, William W. Worth, Chicago; managing director and secretary, W. H. Cameron, Chicago. Headquarters are at 20 North Wacker Drive, Chicago, Ill.

NATIONAL SCHOOL SURVEY. See EDUCATION IN THE UNITED STATES.

NATIONAL TRANSPORTATION COMMITTEE. See RAILWAYS.

NATURAL GAS. See Gas.

NAURU. An atoll in the Pacific 12 miles in circumference situated 166° E. longitude and 26 miles south of the Equator. It is administered under a mandate from the League of Nations by the British Empire. Area, 5396 acres; population (1932), 2316. Phosphate is the chief product and 245,165 tons were exported in 1931. Administrator in 1933, W. A. Newman.

NAVAL PROGRESS. The Washington Limitation of Naval Armaments Treaty of 1922 and the London Naval Treaty of 1930 exerted a profound influence on the naval construction of the last decade but they failed in their purpose of reducing the amounts annually expended for armament purposes. While some naval authorities struggled with "scrapping" puzzles and worked out the devious compensation problems involved, others prepared and put into effect cruiser building programmes which effectively changed the *status quo ante* in naval ratios. None the less the continued world-wide depression kept alive insistent demands for a reduction in armament expenditures in order that the economic burden might in some degree be lifted.

The high hopes for the success of the Geneva Disarmament Conference that met in February, 1932, were not altogether dispelled by the abortive attempts of that year. When the general commission of the disarmament conference, not wholly discouraged by wars on two distant continents and intenser nationalistic feeling in Europe, again took up its work in February, 1933, the naval authorities of the world continued to watch proceedings with keenest interest. In March, MacDonald went to Geneva with a compromise scheme based on all the proposals placed before the conference the preceding year. His proposal of some 10,000 words was notable for its definiteness in figures and among other things provided for: (a) Aircraft—500 each for France, Italy, England, United States, Russia, Japan, with a scheme for complete abolition of military craft; (b) Navies—in general, to hold the situation created by the Washington and London conferences until another conference in 1935; the smaller powers keeping to 1932 strength, and France and Italy coming into the London treaty. About the same time Mussolini offered his plan for a new concert of the four major powers of Western Europe. Plainly it called for a difficult operation—a revision of the Versailles Treaty which would at the same time satisfy Germany and secure the consent of France (see DISARMAMENT for further details). On March 27, after agreeing to use the British draft as a basis for discussion at the next meeting, the conference

adjourned for one month, but not before Japan had served notice of her increased needs arising from the situation in the Far East (with the suggestion that Manchoukuo would need a Navy).

In April Norman H. Davis, American ambassador at large, attempted to stir the conference into action by declaring that the success of the approaching London economic conference, and world recovery along with it, was dependent on their making real progress at Geneva. At this time, however, European animosities were much aroused by the triumph of militant nationalistic elements in Germany. By the latter part of May, however, reanimated by a message from President Roosevelt, and by the reasonable tone of Chancellor Hitler's speech on foreign policy and Ambassador Davis's promises of American coöperation to maintain peace it began to look as if there might be definite accomplishments. Difficulties ensued, however, among them being Japanese objections to the inclusion in the general treaty of the naval restrictions adopted at Washington and London, on the ground that these agreements were to run only until 1936, and were not matters to be submitted to all nations for ratification.

By the close of May it became evident that the time was too short for significant results that would influence economic negotiations in London, and the commission was adjourned to a date not later than July 3, but it was August before the commission reconvened. As a matter of fact, the chief problem of the conference in preceding months had been to resist Germany's demand to rearm. With responsibility in this matter more or less removed by the four power treaty, with Japan demanding increased naval allowance, and with no solutions reached in the world economic conference, it was indeed quite evident that there was no immediate prospect of progress in arms limitation. Prior to a formal reopening of the conference on October 16, America, France, England, and Italy reached a working agreement. The general plan was to leave in the background for the time being Japan's demand for naval increases and her objections to arms supervision and consultation agreements, and to seek first a settlement of the European problem, which in its essence was the question of Germany's demand for equality of armaments. The efforts were unsuccessful and Germany abruptly withdrew both from the conference and the League of Nations. Even before this, however, it had seemed to many observers that the conference was working amid ever-increasing difficulties. In a period of intensified nationalism, each nation was more suspicious of others, more unwilling to surrender any special advantage it might have. To reduce the instruments of national security at such a time seemed like putting the cart before the horse, or at least assuming unwarrantedly that the instruments of war were the causes of war. The conference had in fact been diverted from its original purpose of reduction of armaments to the question whether or not Germany should be allowed to rearm.

Upon Germany's withdrawal the conference again adjourned; the steering committee found it impossible in the existing European situation to do any constructive work and though further meetings were expected in 1934, the end of 1933 saw little prospect of any tangible accomplishments following the efforts of two years' labor.

As the year wore on and prospects of limitation of armaments diminished each of the larger naval powers took more effective steps to insure that

its naval forces could be relied upon to sustain its special interests in the world arena. The publicity given to the problems of the conference led to a more general appreciation of a fact well known to technicians that reduction in quantity of armament did not involve a proportionate reduction in the cost of armament. In fact the experience of the past decade had shown that it did not follow at all. In establishing limited tonnage quotas, artificial restrictions as to sizes of units, character of armament, etc. were also included in the restriction. Naval designers, constructors, and engineers incorporated in hull and machinery ingenious weight saving devices and adopted refinements in construction which would not be considered if normal methods of design and building had been followed. Such methods of construction naturally proved expensive. One of the most notable examples was the German *Deutschland* commissioned Apr. 1, 1933. Every scientific resource had been utilized to crowd into her as many elements of battle worthiness as possible within the limits of displacement laid down by the Versailles Treaty. As a result the cost per ton was approximately twice that which might have been expected for a vessel of her size.

A full description of this ship appeared in the INTERNATIONAL YEAR BOOK for 1931. Naval authorities of the United States, Great Britain, and Japan pointed out that under the restrictions of London and Washington treaties none of these great powers might build a ship to compete with the *Deutschland* and her 11-inch guns for the great naval powers might not put guns larger than 8-inch on cruisers.

She was, of course, much less powerful than existing battleships, but they had not the speed to overtake her if she were used as a raider.

As might have been predicted, the building of this small but powerful capital ship (three similar ones were to follow) produced repercussions throughout the naval world. France deemed it expedient, as a retort, to lay down the *Dunkerque* a battle cruiser, the first full-scale capital ship to be built anywhere for ten years. The building of these two ships vastly increased the probability that battleships would reappear in the building programmes of all great naval powers when existing treaties expire in 1936. Italy, during 1933, prepared tentative battleship designs and conducted tank experiments. These developments, together with Japan's announced unwillingness to continue existing ratios on expiration of current treaties will add to the difficulties of future limitation of arms conferences.

Naval opinion appeared to be becoming more or less unanimous on the general principles of armor protection. For example, there was perceptible and universal recoil from the "egg-shell" type of cruiser, packed with machinery and overloaded with guns, but devoid of armor capable of resisting serious blows. These, it was recognized, were not true fighting ships. So far as the demands of armament and speed permit, the latest 10,000-ton cruisers building carried armor over the most vulnerable sections, though it was not pretended that their plating would stand up to 8-in. gun attack. Turning to smaller cruisers of recent design, the majority of those had some armor on the water line, and in most cases the guns were mounted in twin or triple turrets which, though unable to resist direct hits, afford the crews protection from splinters. The open gun shield which proved such a death trap in the World War had

been discarded. It was, of course, impossible to give adequate armor defense to ships of high speed and moderate tonnage, but when, by sacrificing a few knots, an extra inch or two of steel could be interposed between enemy gunfire and the vitals of the ship and her personnel, the loss of speed was accepted. That principle appeared to govern current cruiser design in Great Britain and America, and it was noteworthy that France and Italy, which until recently placed speed before everything, were providing their latest ships with substantial protective plating. One proposition appeared to be indisputable—adequate armor protection was indispensable to any warship above the smaller cruiser category, and high speed was in no sense a substitute for such protection.

A curious commentary on the situation created by the London treaty was formed by the building in England of the destroyer *Vouge*, 1600 tons, for Portugal although the builders could not provide such ships for the Royal Navy. The limit of tonnage for destroyers to signatory powers being 1500 except for flotilla leaders (16 per cent of the whole) 1850 tons. The year before, Yugoslavia obtained from Yarrow's a fine flotilla leader of 2400 tons which was 550 tons more than the limit fixed for flotilla leaders of signatory powers. Nor are these isolated cases. France, who refused to sign the London treaty, had built six destroyers 2569 tons with 5.5-inch guns (5.1-inch is the treaty limit size) and had six more similar ships building. The United States, Great Britain, and Japan could have built such vessels, but if so, these ships would, by virtue of their size, have been reckoned with the cruiser allowance.

Other design matters also influenced naval construction. The United States, which had already laid down the maximum allowed number of 8-inch cruisers, announced her intention of building four light cruisers of 10,000 tons each to carry 6-inch guns. These would be larger than the 8500 ton Japanese cruisers *Mogami* and *Mikuma* laid down in 1931 and reported to have 15 6.1-inch guns in five triple turrets. Shortly after this announcement Great Britain modified her 1933-34 cruiser estimates from one modified *Leander* 7500 tons and three 5200 ton *Arethusas* to one *Arethusa* and two 9000-ton cruisers; thus keeping her tonnage within the allowed limit, but decreasing the number of new cruisers from four to three.

During the year both Japan and France laid down a number of 590-ton destroyers. These it was noted were below the limits of existing treaties which did not take into account destroyers of 600 tons or less. Another interesting development was the building of coastal motor boats. Such vessels were found of great service in the later stages of the World War when used in conjunction with other vessels or with aircraft. The French naval authorities ordered ten such craft, called *vedettes-torpilleurs* (or "V.T.B."), which have been allocated for service at the Channel bases. They were 22-ton vessels with motor-engines of 1100 h.p., speeds up to 48 knots, and able to carry two torpedoes each. The last British C.M.B.'s in service were 11-ton vessels, 55 ft. long, with 750 h.p. engines, speeds of from 38 to 40 knots, and armed either with four small guns and two depth charges or two torpedoes. Neither the United States of America nor Japan had any of these small vessels in service. Italy, however, had 42 on the effective list, which were between 11 and 30 tons, with engines up to 1800 h.p. and speeds up to 40 knots.

A summary of the existing situation in regard

to naval construction among the three leading powers follows:

During the period extending from the Washington conference to Mar. 4, 1933, the United States, the British Empire, and Japan each laid down its allowed quota of 8-inch gun cruisers, and, in addition, Japan and the United States each laid down one aircraft carrier. During this same period the United States dropped far behind Japan and the British Empire in the replacement of ships that became "overage." Japan laid down 6 light cruisers, 57 destroyers, and 40 submarines, a total of 103 replacements, and had projected 36 others, which would give her a full treaty strength navy of "underage" ships at the expiration of the treaty in 1936.

The British Empire had laid down 13 light cruisers, 45 destroyers, and 30 submarines, a total of 88 replacements, and had 28 others projected. Great Britain had pursued a uniform policy of laying down a certain number of ships each year, so she also would have a navy of approximate full treaty strength in 1936.

The United States during the same period started construction on only 8 destroyers and 6 submarines as replacements for "overage" vessels, but after March 4 the construction of 36 vessels—viz., 2 aircraft carriers, 2 8-inch gun cruisers, 4 light cruisers, 24 destroyers, and 4 submarines—was authorized. Even this programme would, however, leave the United States far from possessing a full treaty navy in 1936.

A compilation of the additional naval tonnage required by Great Britain, Japan, and the United States for treaty strength, to be laid down before Dec. 31, 1936, which included replacements permitted by the treaty for ships which would be overage in 1937, 1938, and 1939, indicated that Great Britain's additional naval construction for treaty strength would require the building of a total of 64 vessels, and Japan would be approximately at her full treaty strength. To bring the United States to treaty strength would require the construction of an additional 102 vessels.

The 64 vessels required by Great Britain for treaty strength consisted of two aircraft carriers, 34,100 tons (which might replace the three experimental ships, the *Furious*, *Eagle*, and *Hermes*); 15 light cruisers, 88,930 tons; 39 destroyers, 63,696 tons; 8 submarines, 9362 tons, or a total of 64 ships aggregating 197,628 tons. Great Britain had, in the past, maintained a uniform building policy and had appropriated for three or four cruisers, nine destroyers, and three submarines to be laid down each year, and if this policy were continued, approximate full treaty strength would be authorized by 1936. In this study there was listed 1540 tons under heavy cruisers required by Great Britain for treaty strength.

Of all the great powers, Japan alone would be up to maximum strength by the termination of the naval limitation agreement in 1936. The Japanese budget provided for a continuing building programme covering a period of years. The Japanese Diet this year authorized a programme, extending to 1936, which provided for every ship which Japan was permitted by treaty to lay down.

One hundred and two vessels of various classes were required by the United States to bring American seapower to treaty strength. See details under NAVAL PROGRESS, *United States*.

France and Italy did not ratify the London naval treaty and were not, therefore, included in this compilation.

ARGENTINA. The 3 submarines *Santa Fe*, *Salta*, and *Santiago del Estero*, ordered in Italy, left for Buenos Aires in February without escort and reached their destination forty days later. Characteristics: length 222 feet; displacement 865 tons surface, 1100 submerged; speed, 17.5 and 9 knots; radius, 6000 to 8500 miles; submerged, 20 hours at 4 knots; time to submerge 35 seconds; maximum depth, 330 feet; armament 8 torpedo tubes, one 105 mm gun, and one machine gun. Listening gear and salvage gear were provided. Rear Admiral Casal resigned as Minister of Marine as a result of conflict with other officers over disciplinary measures against certain warrant officers and sailors accused of fomenting discontent in the ranks. There had been several attempts at mutiny and other forms of insubordination, including a hunger strike against pay deductions. Admiral Casal accused certain officers of weakness in putting them down, while some cabinet members felt that he had been unnecessarily harsh.

The fleet was reorganized into five groups—Battle Squadron, Special Service Squadron, Auxiliary Service Ships, Inactive Ships, Naval Air Arm. The battle squadron included two battleships, two cruisers, nine destroyers divided into two flotillas, and the submarines mentioned above with their mother ship *Chaco*.

AUSTRALIA. In October, 5 men-of-war, from the Royal Navy, were lent to the Australian government to replace those sent out in 1919. They were *Stuart*, flotilla leader, and *Vampire*, *Vendetta*, *Voyager*, and *Waterhen*. Sir George Pearce, Minister of Defense, defined the government's naval policy as follows: "The keynote in the policy is cooperation with Great Britain and New Zealand. We aim to have 4 effective cruisers with requisite aircraft, 5 destroyers, and to improve the bases and equipment of the military air forces and coastal defenses. He added that the personnel of the Australian forces must be interchangeable with the Royal Navy, and that therefore identical ships and armaments were necessary. Such a proposal, he concluded, should be announced prior to the presentation of the budget.

BRAZIL. The government allocated \$3,500,000 a year for twelve years to build up their navy. The proposed ships would include 2 cruisers, one of 8000 and one of 5000 tons; 9 destroyers of 1600 tons each; 6 submarines of 850 tons; each; 2 cable layers of 250 tons and 150 tons; 6 mine sweepers and 3 tankers.

It was hoped that delivery of the more important units would be made in two to four years. Preference in bids was to be given to concerns willing to accept in payment goods of Brazilian production such as cocoa, rubber (not coffee), etc. At the end of the year contracts had not been awarded. It was announced, however, that Thornycroft had received an order for 6 oil-burning boilers to replace 18 coal burning boilers of the *Minas Geraes*. The boilers were to be shipped to Brazil for installation there. The new naval training ship *Almirante Saldanha* was ordered built in England. She was a four masted barquentine 3325 tons, with a six cylinder 1400 h.p. Diesel motor, carried 379 officers and men. Armament: four 4.5-inch guns, three 3-inch A.A., several quick-firers and a torpedo tube.

CHINA. As usual the Chinese Navy had difficulty in maintaining loyalty in the high command. During the summer six vessels deserted from the Tsingtao headquarters of the Chinese Northeast-

ern Squadron. They were cruisers *Haichi*, *Haishen*, training ship *Chaooh*, and three gunboats. The first three reached Canton where the officers were welcomed by the leaders of the Southwest Provincial Council, who at the same time were chary of accepting their services for fear of offending authorities at Nanking. Meantime cruisers *Yatsen*, *Haikyung*, and *Haichau* arrived from the north and anchored in Hong Kong waters, presumably in pursuit of the mutinous trio. No contest of arms resulted, however, and the fleeing vessels remained near Canton.

DENMARK. Although the Navy had been virtually reduced to a coast and fish patrol the government accepted a new training ship, the *Danmark*, that had accommodations for 120 boys. She was a three masted, full rigged steel ship equipped with 250 h.p. Diesel motor.

FINLAND. Descriptions of the gunboats *Wainamoinen* and *Ilmari* were given in the 1931 YEAR BOOK. Both were completed in 1933 and interest attached to them principally because they were the first naval craft with pure Diesel electric drive, and, apart from 2 submarines, the first naval vessel with Diesel engines supercharged on the Büchi system. The flexibility and overload capacity of Büchi turbo-charged Diesel engines, together with the economy in space and weight obtained with such machinery, were of particular advantage for this class of ship. The good maneuvering qualities and steering of the vessels were especially appreciated in the narrow waters of the Finnish coast. Moreover, with this type of drive, several economical speeds were possible, with a corresponding wide radius of action at each speed. The fact that, with the electric drive, the main engines were independent of the propeller shafts, and so were located in the most favorable position from all standpoints, gave a very satisfactory layout; no longer considerations of the main engines, but the military aspect of the case, was the deciding factor in arranging the subdivision of the ship, the main engines being located to best suit these requirements.

FRANCE. In spite of the fall of the franc, the economic crisis, frequent changes of ministries, in spite of everything, the reconstruction of naval material had gone steadily forward since the World War. Apart from battleships, nearly all of which had reached the age limit, France now had in each class of war craft a new group of homogeneous ships that were the equal of those constructed by any other country. In addition her construction of the capital ship *Dunkerque* (the first capital ship laid down by any power in the decade following the Washington conference) indicated that she did not expect to have her gains superseded in any naval field.

The sensational speed records advertised by Italian and French officers were questioned by many naval men; but the new destroyer *Oussard* with full crew, stores, and ammunition on board, en route from Brest to Toulon, steamed some hours at 42 knots, then at 43 and reached a top speed of 43.4 and the fuel consumption was relatively economical. In moderately rough weather she displayed the nautical and steaming qualities of a cruiser. Her sister-ship *Tartu* in really rough weather held her own with a 10,000 ton cruiser at high speed. There was in this respect a wide difference between the French 2500-ton *contretorpilleurs* (destroyer leaders) and the otherwise excellent 1400-ton *torpilleurs d'escadre* (torpedo boat destroyers) and, of course, with

the 1300-ton destroyers of most other navies. *Torpilleurs d'escadre* (torpedo boat destroyers) have their critics in the service, whereas the 2500-300-ton super-destroyers met with general approval. From the unending experiments with the *Epervier* and *Milan*, which had been for the last 4 years in hand at Lorient, speed was a question, not only of motor power, but also of sound workmanship and of all-round robustness.

Under the London treaty these ships over 1850 tons would be classed as cruisers, but as France did not sign that treaty, she was not limited in the size of her destroyers.

The naval budget for 1933 totaled 2840 million francs, a reduction of 375 million from 1932. The reduction included 43 million taken from new construction. The budget made no provision for laying down additional new construction. In fact no provision was made for the 7700-ton heavy cruisers authorized by the *Tranche* of 1932. Lack of credits, as well as other difficulties caused much delay in the work on the *Dunkerque*, progress on her being extraordinarily slow. Submarine progress was also unsatisfactory; the twelve units of the 1929, and 1930 programmes being held back pending improvements and experiments. The 6000-ton *Bertin*, launched in the spring, was considerably modified so that she be less of a mine layer than had been anticipated. Among the modifications was the installation of a 2-inch protective deck. On her displacement of less than 6000 tons the *Bertin* was expected to carry nine 6-inch guns in three triple turrets (one more than similar British and Italian cruisers carried). The scaplane installation on board promised to be rather cumbersome. The submarine mine layer *Diamant* was launched in May. Armament; one 75-mm gun, thirty-two mines, five torpedo tubes. The net layer *Gladiateur* was launched the month before. She was of 2330 tons, with speed of 20 knots; carried four 90-mm guns, and six machine guns, four of the latter for anti-aircraft work. The ship was a new type whose chief mission was assuring protection to ships at anchor by placing around them nets capable of stopping submarines. The English had a similar ship, the *Guardian* of 3050 tons, but it was interesting to note that the United States had no such type. Important vessels under construction or appropriated for are shown in the table on page 537.

GERMANY. Germany's withdrawal from the League of Nations and the Disarmament Conference, Hitler's determination to either secure a modification of the Treaty of Versailles so far as restrictions on Germany's armaments was concerned or to disregard the provisions therein, the general state of political and social unrest in Europe; these things together with the surprising material developments in the *Deutschland* and other recent craft combined to bring to the German Navy an amount of attention out of all proportion to its size. The government proceeded steadily with the programme for modernizing the Navy and replacing ships within the terms of the Treaty of Versailles (these limitations were: 6 armored ships, 10,000-tons; 6 light cruisers, 6000-tons; 12 destroyers, 800-tons; 12 torpedo boats, 200-tons. Replacements might be made for vessels over age—twenty years in case of battleships and cruisers and fifteen years for the torpedo craft). Of the replacements for armored ships, the *Deutschland* was commissioned April first, and the *Admiral Scheer* was launched the same day, while two others were scheduled to follow

shortly. Four reserve destroyers were scheduled for completion during 1934-36. Of the 6 cruisers, 5 had been completed since 1925, while 12 of the 16 destroyers were new. The vessels were not only new in building, but their designs showed a marked advance on anything attempted elsewhere. The results of the extended trials of the *Deutschland* with her internal combustion engines were closely guarded but conservative reports gave her top speed as upwards of 26 knots, and her cruising radius, in excess of 16,000 miles at 12 to 15 knots. Her armor protection was superior to that of any post-war cruiser while her six 11-inch and eight 6-inch guns gave her an offensive power equalled only by capital ships. The larger guns had a muzzle velocity of 3180 foot seconds. She carried four 30-foot range finders whose accuracy at very long ranges was reported to be quite remarkable.

The new naval training ship *Gorch Fock* to replace the ill-fated *Niobe* was launched in the spring and put into service a few months later. She was a three-masted bark of 1500 tons, with auxiliary motors capable of yielding a speed of 8 knots (Germany, together with other naval powers except Great Britain and the United States clung to the sailing vessel as a training ship). Her crew numbered 250. An anti-submarine school was opened at Kiel in October. The hydrophone class was transferred there from the torpedo school.

The personnel of the navy included 13,500 non-commissioned officers and men, 9355 were Prus-

sians, and 2575 from southern or inland states. Only 290 were originally seamen, the greater number being technical workers and artisans.

GREAT BRITAIN. The accompanying table shows details of the navy estimates for 1933 as compared with 1932. It will be noted that the increase in expenditures was largely due to increased allotments for new construction. This in turn was due to the fact that normal expenditures in 1932 were deliberately retarded by the temporary expedient of deferring orders for the annual programme. (Great Britain unlike the United States had held to a regular orderly programme of new ship construction to replace ships as they become over age.)

I. Numbers	Estimates 1933	Estimates 1932
Number of officers, seamen, boys, and Royal Marines	90,300	91,410
Number of Royal Marine Police .	865	865
II. Effective Services	Pounds	Pounds
Wages, etc., of officers and men of the Royal Navy and Royal Marines, and civilians employed on fleet services	12,649,419	12,684,049

III. Non-Effective Services		
Non-effective services (naval and marine) officers	3,194,522	3,106,705
Non-effective services (naval and marine) men	4,914,350	4,746,350
Civil superannuation, compensation, allowances, and gratuities .	1,076,197	1,046,647
Total Non-effective Services . .	9,185,069	8,899,702
Grand total	55,600,446	52,853,312
Net Increase	3,093,700	

The new construction programme was about the usual size: 4 cruisers (later modified to 3 with total tonnage, however, unchanged), 1 leader, 8 destroyers, 3 submarines, and 5 sloops. Little money for this 1933 programme was expended, most of the expenditures going to the authorizations of previous years. It was noted that over half a million pounds was for the Singapore base. Thus far, four of the seven million estimated pounds for that base had been appropriated (New Zealand gave one million pounds spread over a number of years).

The 1930 building programme was very nearly finished and the 1931 programme was well advanced except for the cruiser *Amphion* whose keel was laid in June. This was two years and three months after the authorization, probably the longest delay that has ever occurred in starting construction of British warships. The submarine *Porpoise* of the 1930 programme, completed in March was the first mine laying submarine to be built in the Royal Navy since the war. The submarine *Thames* completed in 1932 attained sur-

face speed of 22.5 knots with her heavy oil engines. This marked her as the fastest submarine in the world. One of the newly authorized sloops was expected to have all Diesel engines—the first to be built for the British Navy.

It was interesting to compare the costs of recently completed English ships with the average contract prices for the 1933 American programme. American light cruisers \$11,075,000, *Lcander* £1,668,000, and *Achilles* £1,548,000; American destroyer leaders \$3,850,000. *Duncan* £314,000, and *Kempenfelt* £293,000.

While Great Britain gave ample consideration to the use of aircraft in naval warfare she counted very largely on having them in carriers, and chose to put only one on each cruiser rather than three or four per ship as in the American Navy. Her catapults applied their loads to points on the fuselage, a method which allowed either seaplanes or landplanes to be catapulted.

Important vessels under construction or appropriated for are shown in the accompanying table.

GREECE. The two destroyers *Psara* and *Spetsai* built in Italian yards were handed over to the Greek navy. Two other similar units had been in service for some time. The first official friendly visit of a Greek warship to a Turkish port was made in July when the training ship *Ares* with eighty midshipmen arrived at Istanbul and was cordially received by Turkish authorities.

ITALY. For the first time in some years, the Italian navy estimates for 1933-34 showed a reduction. About 180 million lire, or \$9,500,000 had been saved. The standard of expenditure, however,

was still much higher than formerly, and double that of 10 years ago. The following figures illustrate the growth in cost:—1922-23, 611 million lire; 1923-24, 773; 1924-25, 925; 1925-26, 980; 1926-27, 1040; 1927-28, 1218; 1928-29, 1151; 1929-30, 1211; 1930-31, 1584; 1931-32, 1573; 1932-33, 1574. The 10 years of the Fascist régime witnessed a remarkable growth in the power and efficiency of the Italian fleet, and if expenditure had been heavy, there was ample to show for it. Admiral Sirianni, the Minister of Marine, was able to announce during the debate in the Chamber on the navy estimates that 7 10,000-ton 8-inch gun cruisers were practically ready. In service, or in course of construction, were 12 cruisers of from 5000 to 7000 tons; 12 flotilla leaders, 25 destroyers, 54 submarines, 4 experimental torpedo boats, 1 submarine destroyer, 4 mine layers, 1 seaplane carrier, and 2 training ships.

On December 19, during trials in the Tyrrhenian Sea, the cruiser *Bolzano* reached a speed of 38 knots, 2 knots above her designed speed. The *Bolzano* was the seventh and last of the 10,000-ton cruisers with 8-in. guns. They fell into two categories, 3 of the *Trento* type, which include the *Bolzano*, with 150,000 h.p. and 36 knots; and 4 of the *Zara* type with 95,000 h.p. and 32 knots. The armament was the same in both types, eight 8-in. and sixteen 3.9-in. A.A. guns. The cruiser *Armando Diaz* held her trials but results were not made public. Work was started on the 7000-ton cruisers *Garibaldi* and *Duca Abruzzi*. During the year submarines *Naiade*, *Sircna*, *Rubino*, *Galatea*, *Diamante*, *Topazio*, and *Anfitrite* were launched.

The Italians as a part of sound strategy as well as for economical reasons placed special emphasis on mining. Nearly all cruisers and destroyers carried mines as an obligatory part of their equipment. In addition a flotilla of mine layers 600-800 tons was created some years ago. The 10 vessels of the *Azio* class carried together over 8000 mines. The Italian mine-laying gunboats were intended for night work off neighboring coasts and were not well suited for other than Mediterranean conditions.

The building of the *Dunluerque*, aroused the liveliest interest in Italy, but no definite action to meet this new threat (?) was taken. Serious consideration was given to the question of refitting and modernizing the old battleships, and to the feasibility of converting one or more of them to aircraft carriers. The age of the ships, the expense of making necessary alterations, and the unsatisfactory results to be expected finally resulted in the abandonment of such plans. Important vessels under construction or appropriated are shown in the table on page 539.

JAPAN. The navy's budget for the fiscal year beginning April, 1933, was ¥372,000,000, of which ¥150,000,000 or more was for new construction (yen is normally worth approximately 50 cents). The budget estimates for 1934 called for ¥680,000,000 of which the greater portion was for new construction and modernization of capital ships. The second replenishment programme was designed to put Japan in possession of a navy up to the maximum strength permitted under the London treaty. It included the following ships:

1. Two light cruisers of 8500 tons each to be built at an estimated cost of ¥41,200,000.

2. Two aircraft carriers of 10,000 tons each, to be built at an estimated cost of ¥84,000,000. The tonnage allotted to Japan under the London Naval Treaty was

12,000; therefore one of the two new aircraft carriers will replace the *Hocho*.

3. Fourteen destroyers of 1400 tons each, to be built at an estimated cost of ¥94,080,000.

4. Six submarines, of both large and small types, with a total tonnage of 7500, to be built at an estimated cost of ¥40,500,000.

5. One mine layer of 5000 tons, to be built at an estimated cost of ¥12,000,000.

6. Eight torpedo boats to be built at an estimated cost of ¥50,000,000.

In addition to this, the programme included an expenditure reportedly totaling between ¥160,000,000 and ¥200,000,000 on the aerial arm of the Navy. This would go largely toward establishment of eight new flying units. Incidentally the naval air force was already being expanded from seventeen to thirty-one squadrons during the period 1931-38.

Naval headquarters stated that the Japanese building programme was in answer to the United States \$238,000,000 36-ship programme. In view, however, of the efforts of the past few years to bring the Japanese navy up to maximum strength and the public statements by responsible officials that the London and Washington treaties which expire in 1936 would not be renewed or extended on current ratios, it seemed probable that other considerations determined the programme to be presented. Japan lost no opportunity to let the world know that she was dissatisfied with the five-five-three naval ratio and that she attached little importance to treaties that provided for maintenance of peace by other than force. The budget mentioned was by far the largest in the history of the empire and promised to stretch her resources to the limit.

The death of Admiral Count Yamamoto in December seemed likely to have some potent influences on Japanese naval policies of the future.

Minister of the Navy during the Russo-Japanese war, and acknowledged leader of the powerful Satsuma clan that dominated the navy he had continued to exert his will on the policies of the navy.

The Navy office announced reestablishment of a naval base at Port Arthur. It was also learned that the famous cruiser *Aso* was sunk by 8-inch gun fire in a target practice of some new cruisers. In August the Emperor reviewed the strongest fleet that has ever saluted a ruler of Japan. There were present 161 vessels of 850,000 tons, and these had with them 180 aircraft. To stimulate public interest 7000 civilians were invited to the review, including the chiefs of young men's associations, and five Imperial Princes acted as hosts at luncheon.

Important vessels under construction or appropriated for are shown in the accompanying table.

NETHERLANDS. The crew of the battleship *De Zeven Provinciën* in the East Indies mutinied and for a time held complete sway over the ship. The *Aldebaron* followed the battleship for three days but the mutinous crew felt safe behind their big guns and forced the smaller vessel to keep clear. Bombing planes sent to quell the mutiny were obliged to make use of their explosives. Twenty-odd men, including the leaders of the mutiny were killed before the ship surrendered. Twenty-eight Dutch and 184 native members of the crew were brought to trial. The ship was not seriously injured by the bombing.

NEW ZEALAND. A number of officers were lent to the New Zealand government for about three years for service in the New Zealand division of the Royal Navy. The Dominion government, while it maintained two cruisers, a training ship, a mine-sweeping trawler, and an oiler, drew the officer personnel and one-third of the ratings on loan from the Royal Navy. There were also, however, the New Zealand divisions of the Royal Naval Reserve and Royal Naval Volunteer Reserve.

POLAND. The estimates for 1933-34 amounted to a net total of approximately \$3,000,000, which was a small increase as compared with the previous

year. Detailed statements showed that the sum assigned for the construction of floating units was nearly double, while there had been a very large saving on that included in the 1932-33 estimates for building, port installations and repairs. An order was placed in France for the construction of a mine layer that was also to be used as a training ship.

The Polish fleet consisted of 2 destroyers, 3 submarines, 5 torpedo boats, 2 gunboats, 1 survey vessel, and 3 training ships. In addition there was the Pinsk River Flotilla of 6 river monitors, 8 river scouts, 1 transport, and 2 motor boats.

PORTUGAL. In October President Carmona held in Cascaes Bay the first review of the Portuguese fleet for many years. The government appeared to be intent on putting its navy on a footing more worthy of its historical past and the needs of its colonial empire. Recruiting was being accelerated, and although Portugal was a conscript country, volunteers were being called for and given preference. Work on the building programme of 1930 was progressing satisfactorily. There seemed to be no fear of a return to the old system whereby there were actually more admirals in the Portuguese Navy than there were ships—as happened in 1918, when there were twenty-seven admirals on the active list, and about half that number of ships.

The keels of the sloops *Bartolomeu Dias* and *Alfonso D'Albuquerque* were laid in England. Characteristics: 2000 tons, two sets reduction turbines, 21 knots. Armament four 4.7-inch guns, two 3-inch anti-aircraft guns; equipment for mine laying, provisions for forty mines. Paravanes and depth charges throwers were also to be part of the equipment.

SPAIN. The difficulties that beset the Spanish Navy for some years continued during 1933. Inactivity in port, reduced personnel, and lack of money prevented the maintenance of an efficient organization. Officials at Ferrol and Cartagena shipyards reported that none of the eleven men-of-war that had been under construction since 1928 would be ready for another five years and many Spanish naval officers feared that the ships would be obsolete before being completed.

SOUTH AFRICA. This country's short-lived navy was on the verge of disappearance. The mine sweeper *Protea*, and *Sonneblom* were to be handed back to the Royal Navy, while the *Protea*, the principal naval unit was sold for use as a pleasure vessel. The Minister of Defense planned upon placing reliance for defense entirely upon coastal defenses and aircraft. South African naval volunteers were to be trained in the British service.

SWEDEN. The announcement that the Department of Defense was asking for an increase of over \$4,000,000 in the estimates for new construction, in order to build a cruiser, 4 vedette boats, and 2 submarines was not unexpected for Sweden had recently been showing increased interest in her navy. Only two of the nine armored ships had been completed since the war, the *Drottning Victoria* and the *Gustav V*, both in 1921; and of the other seven, four were about thirty years old. Of the sixteen submarines on the list, ten had been completed since the war, the last in 1930, but the other six were due for replacement. The vedette ship *Karparen* was launched in the early summer. She was the second of four such ships; the first of the series, the *Jagaren*, was launched in December, 1932; *Vaktayen* and the *Snappahnen* were to follow. The cruiser aircraft-carrier

Gotland was launched in September. Equipped with catapult she will carry eight planes. There were also minelaying equipment and storage for one hundred mines. Characteristics: 4500 tons, 33,000 horse power, twenty-seven knots. Armament: six 4-inch, four 3-inch anti-aircraft; machine guns and six 21-inch torpedo tubes.

UNITED STATES. The naval appropriation bill for the fiscal year 1934 carried \$308,669,562. This was aside from the allotment of \$238,020,000 under the Industrial Recovery Act. The latter fund was for immediate construction of 32 vessels in a 3-year building programme in addition to the 17 that were already under construction. A further allotment of \$9,362,000 was made for naval airplanes. Contracts were let for all these expenditures.

Nearly a third of the total built tonnage of the American Navy on Dec. 31, 1933, consisting of 372 vessels, aggregating 1,038,660 tons, was over-age. On that date the total built under-age tonnage was composed of 84 vessels, totaling 708,580 tons. This left in the possession of the navy a total of 288 vessels over-age, the tonnage of which amounted to 330,110. The 372 vessels of the Navy, over-age and under-age, by classes, were as follows: Fifteen capital ships, 455,400 tons; 3 aircraft carriers, 77,500 tons; 11 class A cruisers, 100,000 tons; 10 class B cruisers, 70,500 tons; 251 destroyers, 267,470 tons; and 82 submarines, 67,790 tons.

The 84 vessels built and under-age on Dec. 31, 1933, included 14 capital ships, 429,300 tons; 2 aircraft carriers, 66,000 tons; 10 class A cruisers, 92,650 tons; 10 class B cruisers, 70,500 tons; 3 destroyers, 3570 tons; and 45 submarines, 46,530 tons. The navy was woefully weak in under-age destroyer strength, for on December 31, 1933, of the 251 destroyers built but three were under-age on that date. Nearly half of the submarine tonnage built was over-age, for of the 82 vessels built of this class but 45 were under-age.

To offset some of the over-age tonnage, there was building and appropriated for a total of 52 vessels, aggregating 222,060 tons. By classes, this construction was as follows: Three aircraft carriers, 53,800 tons; 7 class A cruisers, 70,000 tons; 4 class B cruisers, 40,000 tons; 32 destroyers, 50,800 tons; and 6 submarines, 7460 tons. Although the compilation shows that more destroyers were being built than any other class of vessels, these 32 destroyers will hardly improve the destroyer situation, in view of the fact that 248 of these vessels were already over-age.

Under the treaty, however, the United States was authorized to lay down 102 additional vessels before Dec. 31, 1936, the termination of that international naval construction agreement. These vessels will aggregate 207,030 tons and by classes were as follows: One aircraft carrier, 15,200 tons; 1 class A cruiser, 10,000 tons; 5 class B cruisers, 47,100 tons; 65 destroyers, 99,200 tons; and 30 submarines, 35,530 tons. The single class A cruiser was authorized, but not appropriated for, and under the provisions of the treaty may not be laid down before Jan. 1, 1935. The 5 class B cruisers were authorized, but no appropriations had been made for this construction. With the exception of 3 of the five class B cruisers, all of the 102 vessels were replacements for existing vessels becoming over-age.

Upon the announcement that the class B cruisers to be laid down would be of 10,000 tons displacement diplomatic representations were made

to the government urging that no 6-inch gun cruisers be built that were larger than those already in commission. The United States, however, could not see its way clear to alter the delayed programme or to suspend construction on the projected ships.

The only ship completed during the year was the heavy cruiser *Portland*. However, modernization work on the *New Mexico* and the *Mississippi* was finished. The airship *Macon* was also completed and participated in several exercises with the fleet. There was no gain in the number of airships, however, for the *Akron*, was wrecked in a storm earlier in the year. Among those lost was Admiral Moffett, Chief of the Naval Bureau of Aeronautics. One of the unusual features of the *Macon* was the provision for habitually carrying planes in a hangar within the ship, and an ingenious arrangement for discharging them and receiving them through a hook arrangement while the parent ship was in mid-air.

Naval administrative authorities were much concerned over failure to receive appropriations for additional officers and men to man the new ships under construction. The active fleet was al-

ready undermanned and they felt that it would take longer to provide and properly train efficient personnel than it would to build the ships.

The entire fleet remained concentrated on the Pacific Coast but it was officially announced that nearly all units would make a cruise of several months' duration to the Atlantic during 1934.

The Marine Expeditionary Forces that had been maintained at Quantico, Va., and San Diego, Calif., were given the designation of Fleet Marine Force and placed under the immediate jurisdiction of the Commander-in-Chief, United States Fleet.

Important vessels under construction are shown in the table in the first column.

UNION OF SOVIET SOCIALIST REPUBLICS (RUSSIA). Information regarding the Soviet's naval activities was meagre and generally unreliable but utterances by prominent Soviet naval authorities indicated increased interest in the Baltic and a determination to strengthen the navy there to meet emergencies. Shipyards at Leningrad did considerable work preparing the fleet for manoeuvres. While authentic public information was not available in regard to the size of the operating forces, it was generally believed that the fleet consisted of 3 battleships, 4 cruisers, 2 mine layers, 17 destroyers, and 29 submarines. All, however, were probably old ships. The Communist Youth Congress voted to undertake "patronage" of the navy and since then the Baltic and Black Sea Fleets are reported to have been fully reequipped.

YUGOSLAVIA. The training ship *Jadran*, built in Germany and presented to the Yugoslavian Navy by the "Jadranska Straza" (The Adriatic Guard) of the Yugoslavian Navy League, reached Spltato in the early fall and was incorporated into the fleet.

NAVIES. See NAVAL PROGRESS.

NAVIGATION. See SHIPBUILDING; SHIPPING; NAVAL PROGRESS; SAFETY AT SEA.

NAZIS. See GERMANY, AUSTRIA, DANZIG, SAAR, DENMARK, NETHERLANDS, and SWEDEN under *History*; JEWS; FASCISM.

NEBRASKA. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 1,377,963, as against 1,296,372 in 1920. Omaha, the chief city, had (1930) 214,006 inhabitants; Lincoln, the capital, 75,933.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1933	10,431,000	234,698,000	\$70,409,000

* Tons.

FINANCE. State expenditures in the year ended June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$13,799,477 (of which \$1,160,492 was for local education);

for interest on debt, \$9892; for permanent improvements, \$11,633,573; total, \$25,442,842 (of which \$14,065,864 was for highways, \$3,739,403 being for maintenance and \$10,326,461 for construction). Revenues were \$23,561,756. Of these, property and special taxes furnished 26.0 per cent; departmental earnings and compensation to the State for officers' services, 8.8; sale of licenses, 38.3 (in which was included a gasoline sale tax that produced \$7,008,371). Funded debt outstanding on June 30, 1932, totaled \$237,500, against which were no sinking-fund assets. On an assessed valuation of \$2,875,864,394 the State levied in the year ad-valorem taxes of \$6,193,980.

EDUCATION. The difficulty of providing public revenue on the usual scale for the schools may be accepted as explaining the reported fact that over a hundred measures adverse to the public-school interests were introduced in the year's legislative session. That number of measures, however, were killed, being strongly opposed by the advocates of continued support for education. It was reported at the end of 1933 that no public school in the State had been closed for lack of public support. For the school year ending July 1, 1933, the number of persons of school-going age in the State was estimated at 419,401. There were enrolled in the public schools 321,468 pupils. Of these, 240,185 were in common schools or elementary grades; in high schools, 75,283. The year's expenditures for public elementary and high-school education totaled \$20,765,390. Salaries of teachers averaged, by the year, \$1309 for men and \$1120 for women in cities and villages; in rural schools, \$598 for men and \$590 for women. The averages for the year 1933-34 were estimated as lower by from \$20 to \$70.

CHARITIES AND CORRECTIONS. The 17 custodial and eleemosynary institutions of the State were operated in 1933 under the direction of the State Board of Control. This board was composed of three members, appointed by the Governor for terms of six years, the terms ending in rotation at two-year intervals. The board had full jurisdiction over the institutions in its charge. The number of inmates of all these institutions on Dec. 1, 1933, was 7710. The separate institutions, with the numbers of their respective inmates on that date, were: Institution for Feeble-Minded, Beatrice, 1203; Girls' Training School, Geneva, 190; Soldiers' and Sailors' Home, Grand Island, 228; Hastings State Hospital, Ingleside, 1500; State Industrial School, Kearney, 193; Hospital for Tuberculous, Kearney, 153; Lincoln State Hospital, Lincoln, 1225; Orthopedic Hospital, Lincoln, 104; State Penitentiary, Lincoln, 924; Nebraska Industrial Home, Milford, 71; Soldiers' and Sailors Home, Milford, 114; School for the Blind, Nebraska City, 49; Norfolk State Hospital, Norfolk, 1022; School for the Deaf, Omaha, 207; Reformatory for Women, York, 47; Home for Dependent Children, Lincoln, 110; Reformatory for Men, Lincoln, 370.

LEGISLATION. The Legislature met in regular session on January 3. It dealt with the troubles of the State banking system by passing a law transferring the power to appoint and supervise receivers for suspended banks from the courts to the Governor; the office of banking commissioner was abolished; that of superintendent of banks was created and endowed with power to supervise State banks, trust companies, and divers other institutions doing financial business

under State laws. The writing of insurance on property in the State was restricted by law to agents operating in the State, receipts from taxes on all premiums on insurance thereafter written being thus assured.

Provision was made for eventual State action with regard to the repeal of the Federal Eighteenth Amendment, by a State convention of 101 pledged delegates, to be nominated and elected on an allotment of one to each district for the election of representatives in the Legislature; the popular election of these delegates was to be in December, 1934. The sale of beer containing up to 3.2 per cent of alcohol was rendered lawful, subject to an excise tax by the barrel and to license tax on sellers.

POLITICAL AND OTHER EVENTS. Banks in the State were closed by proclamation on March 4. The greater part were allowed to reopen some ten days later in accordance with Federal arrangements for reopening banking institutions. The United States Supreme Court refused in May to review a decision of a lower court that had held the State's law for the guarantee of bank deposits unconstitutional. Senator Robert B. Howell died on March 11; Governor Bryan appointed William H. Thompson, a former justice of the State supreme court, on May 24 to fill the State's vacant place in the United States Senate.

There was much agitation among farmers early in the year against foreclosures. Foreclosure sales were stopped by threats of violence. Governor Bryan demanded in February that creditors cease foreclosing.

OFFICERS. The chief officers of the State, during 1933, were: Governor, Charles W. Bryan; Lieutenant-Governor, Walter H. Jurgensen; Secretary of State, Harry R. Swanson; Auditor, William B. Price; Treasurer, George E. Hall; Attorney General, Paul F. Good; Superintendent of Public Instruction, C. W. Taylor.

Judiciary. Supreme Court: Chief Justice, Charles A. Goss; Associate Justices, William B. Rose, James R. Dean, Edward E. Good, George A. Eberly, L. B. Day, Bayard H. Paine.

NEBRASKA, UNIVERSITY OF. A State institution of higher education in Lincoln, Nebr., founded in 1869. The enrollment for the autumn of 1933 was 5076. These students were distributed as follows: Agriculture 395, arts and sciences 1588, business administration 576, dentistry 73, engineering 481, graduate college 387, law 181, medicine 343, nursing 119, pharmacy 72, and Teachers College 900. There were 1853 students enrolled in the summer session of 1933 of whom 721 were men and 1132 were women. The faculty numbered 316 full time. The permanent endowment fund amounted to \$960,927. The library contained 275,865 volumes, Chancellor, Edgar A. Burnett, D.Sc.

NECROLOGY. The following list contains the names of notable persons who died in 1933. Articles will be found in this volume, in their alphabetical order, on those whose names are given below without other text.

Abbott, Lawrence Fraser, died Feb. 7, 1933.
Abo-Eatab, The Rt. Rev. Emmanuel, Syro-American ecclesiastic, died in Brooklyn, N. Y., May 29, 1933. He was born in Damascus, Syria, in 1890, and attended a Syrian theological seminary. At the age of 19, under the authority of the Holy Orthodox Catholic and Apostolic Church, he was sent to the United States to assist in establishing Syrian churches of the Greek rite on the North American continent. After serving as deacon for six years, he was made arch-deacon for the Brooklyn

(N. Y.) Diocese, and in 1927 was consecrated Bishop of Montreal, with jurisdiction over the churches of Canada and the eastern United States. At the time of his death he was also pastor of the Syrian Orthodox Cathedral of St. Nicholas in Brooklyn.

Aborn, Milton. American impresario, died in New York City, Nov. 12, 1933. He was born at Marysville, Calif., May 18, 1864, and began his theatrical career at the age of 21. After appearing in comic opera for two seasons, he became stage director and leading comedian in the B. F. Keith Comic Opera Co., playing in Boston, New York, and Philadelphia. In 1895 he organized his own company and toured with it for five years. He afterwards organized with his brother Sargent the Aborn Light Opera Co. and managed a circuit of 12 repertory companies which played both grand and comic opera. In 1913 Mr. Aborn was selected by Otto H. Kahn as director of the Century Opera Co., one of the few attempts at subsidized opera in English in the United States. When this project was abandoned in 1915 he began the staging of grand and comic opera revivals in New York and other cities. The most noteworthy were those of Gilbert and Sullivan's and Victor Herbert's operettas.

Abruzzi, Prince Luigi Amedeo Giuseppe Maria Ferdinando Francesco, Duke of the, died Mar. 18, 1933.

Adams, Thomas Sewall, died Feb. 8, 1933.

Adler, Felix, died Apr. 24, 1933.

Adly, Yeghen Pasha. Egyptian statesman, died in Paris, France, Oct. 22, 1933. Born in 1865, he was educated in France and began his career in 1885 as private secretary to Nubar Pasha, Premier and Foreign Minister. Three years later he entered the provincial administration, rising to governor of Cairo in 1902. In 1913 he was appointed vice-president of the Legislative Assembly, and the following year received from Rushdy Pasha the portfolio of Foreign Affairs. He held the latter post for seven years. On becoming Premier in 1921 he headed a delegation which visited London in August of that year to demand of the British government enlarged powers of self-government and virtually complete independence. The conference failed because the Egyptians felt that the maintenance of British troops constituted pure and simple occupation of their country. They objected also to the plan for controlling the foreign policy of the country through the British High Commissioner who must be consulted before Egypt could enter into an agreement with a foreign power. Adly Pasha resigned the premiership at the close of 1921, but accepted this office again in June, 1926, retaining it until constant opposition of the Wafdists forced his resignation the following spring. He acted as head of a neutral government for three months in 1929, making way after the Wafdist victory in the national election for Nuhass Pasha.

Adorée, Renée (Renée de la Fontaine). French-American motion picture actress, died at Sunland, Calif., Oct. 5, 1933. Born in Lille, France, about 1900, she began her career at the age of 10 as a circus performer. A few years later she joined a company of pantomimists and on the outbreak of the World War was appearing as a ballet dancer in Brussels. Fleeing from there with other refugees she landed in England where she played in a number of musical comedies. She then embarked for the United States and was seen in New York in *Oh Uncle, O What a Girl*, and *The Dancer and Sunny*. She began her motion picture career in 1921 when she was given a part in the picture *The Strongest*. It was in 1925, however, when she played the rôle of Mélisande in *The Big Parade* that she attained her greatest success. She later had leading parts in *La Bohème*, *Mr. Wu*, *The Corsicans*, *The Pagan*, *Redemption*, etc. Her last picture was *Call of the Flesh* in which she supported Ramon Novarro in 1930.

Aguero Betancourt, Aristides de, died June 21, 1933. Aiken, E. Clarence American lawyer, died at Auburn, N. Y., July 6, 1933. He was born at Scipio, Cayuga Co., N. Y., May 6, 1856, and was graduated from the University of Rochester in 1877. Admitted to the New York bar in 1879, he practiced thereafter in Auburn and was mayor of that city from 1906 to 1907 and president of its Chamber of Commerce from 1909 to 1912. From 1915 to 1931, while State Deputy Attorney General, Mr. Aiken had charge of appeals in Workmen's Compensation cases, being responsible for the increase in the maximum payment of compensation from \$20 to \$25 as a result of his testimony before the State Industrial Survey Commission in 1926.

Albert, François, died Nov. 23, 1933.

Aldrich, Perley Dunn. American baritone, died in Philadelphia, Pa., Nov. 20, 1933. Born at Blackstone, Mass., Nov. 6, 1863, he attended the New England Conservatory, studying also with Sbrighia in Paris, and in 1885 was appointed professor of music at the University of Kansas. From 1889 to 1891 he was at the Utica Conservatory and from 1891 to 1903 taught singing in Rochester. He then removed to Philadelphia where on the organization of the Curtis Institute of Music in 1924 he was appointed head of the vocal department. After relinquishing that post he continued his private teaching in

Philadelphia and New York City. Mr. Aldrich was director of the Motette choir and former director of the Little Opera Company (Opéra-Comique). Besides giving many unique recitals, he composed about 25 songs and the cantatas *La Belle Dame sans Merci* (1895) and *Sleeping Wood Nymph* (1896).

Allen, Frederic Winthrop. American banker, died in New York City, Nov. 25, 1933. He was born at Walpole, Mass., May 26, 1877, and was graduated from Yale University in 1900. Entering the employ of the Simmons Hardware Co. of St. Louis, Mo. in 1901, he rose to the position of assistant secretary and director. In 1910, he was elected vice-president of the Mechanics and Metals National Bank of New York, holding that post until 1915 when he became a member of the banking firm of Lee, Higginson and Co. He was chairman of the board of directors of the North American Reassurance Co., the American Enka Corp., and the Dunlop Tire and Rubber Co., and a director of numerous other financial and industrial concerns, including the Chase National Bank, International Telephone and Telegraph Co., International Investment Co., International Match Co., and Shell Union Oil Co. For a time after Ivar Kreuger's suicide in 1932 Mr. Allen was president of the International Match Co. It was under his direction that thrift and war savings stamps were sold in New York City during the World War.

Allen, Brig.-Gen. James, U. S. A., Ret. American soldier, died in Washington, D. C., Feb. 19, 1933. He was born at La Porte, Ind., Feb. 13, 1849, and was graduated from the United States Military Academy in 1872. His first service was with the 3d Cavalry on Indian campaigns in the West, where he rose from 2d lieutenant to captain. In 1890 he entered the Signal Corps, served with distinction in the Spanish-American War and in the Filipino insurrection, and became chief signal officer in 1906, retiring in 1913 with the rank of brigadier-general. He directed the laying of the first submarine cables for telegraph and telephone lines from Seattle to Hawaii and from Seattle to Alaska, and in 1908, in signing the contracts for the construction of the first army aeroplanes after the successful trial flights by Orville Wright at Fort Myer, Va., founded the Army Air Service.

Allen, Percy Stafford, died June 16, 1933.

Almon, Edward Berton American congressman and lawyer, died in Washington, D. C., June 22, 1933. He was born at Moulton, Lawrence Co., Ala., Apr. 18, 1860, and was graduated from the University of Alabama in 1883. Admitted to the Alabama bar in 1883, he began his practice in Tusculumbia. From 1892 to 1896 he served in the Senate of the Alabama Legislature. He was a Presidential Elector in 1896, and two years later became judge of the 11th Judicial Circuit of Alabama, holding office until 1906. In 1910 he was again elected to the Alabama Legislature, and served as Speaker of the House of Representatives in the following year. Almon sponsored the bill that resulted in the creation of the State Highway Commission. He represented the eighth district of Alabama in the House of Representatives where, as chairman of the Committee on Roads, he helped to obtain the allotment of \$400,000,000 for highway construction under the public works programme of the Industry Control Bill. Also, he was one of the chief sponsors of the Federal government's hydro-electric power plant at Muscle Shoals, Ala.

Ames, Adelbert, died Apr. 13, 1933.

Anderson, Rear Admiral Edwin Alexander, U. S. N., Ret., died Sept. 23, 1933.

Anderson, John G. American golfer, died in Columbus, Ohio, June 15, 1933. He was born at Clinton, Mass., Apr. 22, 1884, and was graduated from Amherst in 1905, receiving an M.A. from Columbia University in 1915. In 1907 and 1911 he won the golf championship of Massachusetts. In 1913, and again in 1915, he reached the finals in the national amateur matches losing the first to Jerome D. Travers and the second to Robert Gardner. He won the French amateur title in 1924 and again in 1926, and in 25 years of golf was credited with 53 titles in sectional, district, and national play and with seven "holes-in-one."

Anderson, Melville Best, died June 22, 1933.

Angelopoulos, The Rt. Rev. Christos. Greco-American ecclesiastic, died in Atlantic City, N. J., Jan. 8, 1933. He was born at Argos, Greece, Mar. 22, 1867, and was trained for priesthood at the theological seminary of the Orthodox Eastern Church at Tripoli, Greece. After ordination in 1894, he was sent in 1903 to the United States to assist in the organization of churches of the Greek rite, ultimately becoming archimandrite of the archdiocese of North and South America. Under his influence 14 monastic communities, congregations, and schools were organized in the eastern United States, among them being the Church of St. Spyridon in New York City.

Anglin, Francis Alexander, died Mar. 2, 1933.

Apponyi, Albert, Count, died Feb. 7, 1933.

Arbuckle, Roscoe Conkling, "Fatty." American motion picture comedian, died in New York City, June 29, 1933. Born at Smith Center, Kan., Mar. 24, 1887, he started

his screen career in 1913, being featured in several Mack Sennett productions. In 1917 he became associated with Joseph M. Schenck of the Famous Players Lasky Corporation for the release of his own comedies through that company. From 1920 to 1921 he served as vice-president and director of the Comique Film Corporation. To innate humor and great bulk may be attributed his great popularity which waned when he was accused of causing the death of Virginia Rappe in 1921. On being placed on trial, two of the juries disagreed and he was acquitted by the third. This tragedy led to the banning from the screen of the pictures in which he had taken part. Among his popular films were *His Wife's Mother*, *A Reckless Romeo*, *His Wedding Night*, *Moonshine*, *The Sheriff*.

Armitage, Sir Cecil Hamilton, died Mar. 10, 1933.

Arnold, Harold De Forest, American physicist, died at Summit, N. J., July 10, 1933. He was born at Woodstock, Conn., Sept. 3, 1883, and was graduated from Wesleyan University in 1906, receiving the Ph.D. degree from Chicago University five years later. From 1911 to 1924 he was associated with the Western Electric Co., New York City, as research engineer, and after 1925 was director of research for the Bell Telephone Laboratories. As a result of his development of the three-electrode high vacuum thermionic tube, Dr. Arnold received the John Scott medal in 1928. He served as captain in the Signal Corps of the United States Reserves during the World War and won renown for his invention of a submarine-detector apparatus.

Ashton, William Easterly, American physician and surgeon, died in Philadelphia, Pa., Mar. 30, 1933. He was born in Philadelphia, June 5, 1859, and was educated at the University of Pennsylvania medical school and at Jefferson Medical College, serving on the faculty of the latter institution for eight years after receiving his degree in 1884. From 1892 to 1916 he was gynecologist to the hospital and professor of gynecology at the Medical-Chirurgical College and, thereafter, professor of gynecology at the graduate school of medicine of the University of Pennsylvania. In 1917, with the rank of major, he was attached to the 309th Field Artillery of the 78th Division as regimental surgeon, and took part in the St. Mihiel and Meuse-Argonne offensives, receiving the Distinguished Service Cross in 1918. Dr. Ashton was the inventor of various surgical instruments and was the author of *Essentials of Obstetrics* (1888) and of the textbook *The Practice of Gynecology* (1905).

Austin, Oscar Phelps, American statistician, died in New York City, Jan. 6, 1933. Born at Newark, Ill., in 1848, he received a public school education and served for several years as reporter, editor, and Washington correspondent for metropolitan dailies. In 1898 he was appointed chief of the Bureau of Statistics of the Treasury Department, and when that bureau was merged in 1912 with the Bureau of Foreign and Domestic Commerce of the Department of Commerce and Labor, became its assistant chief. From 1903 to 1914 he served also as professor of commerce and statistics at George Washington University. In 1914 he moved to New York City when until 1925 he was statistician of the foreign trade department of the National City Bank. For 32 years Mr. Austin had been a member of the board of trustees of the National Geographic Society, serving as the secretary of the society after 1904. He was also the author of a series of historical novels for boys, including *Uncle Sam's Secrets*, *Uncle Sam's Soldiers*, *Uncle Sam's Children*, and *Uncle Sam's Boy at War*, and served as statistical editor of the *New International Encyclopedia*.

Aylesworth, Barton Orville, American educator, died in Denver, Colo., July 1, 1933. Born at Athens, Ill., Sept. 5, 1860, he was graduated from Eureka College in 1879. Ten years later he was elected president of Drake University, serving in that capacity until 1897. He then assumed the pastorate of the Central Church of Christ in Denver, but in 1899 returned to the educational field as president of the faculty and professor of political economy and logic at the Colorado State Agricultural College. On his resignation in 1909 he took up the fight for woman suffrage, being an organizer and lecturer for the National American Woman Suffrage Association.

Aznar, Admiral Juan Bautista, died Feb. 19, 1933.

Babbitt, Irving, died July 15, 1933.

Babbott, Frank Lusk, American manufacturer and philanthropist, died in Brooklyn, N. Y., Dec. 7, 1933. Born at Waterville, N. Y., Aug. 14, 1854, he was graduated with the A.B. degree from Amherst College in 1878, receiving two years later the LL.B. degree from Columbia University. In 1883 he embarked upon his industrial career with the Chelsea Jute Mills, later becoming a director and officer of that organization. On his retirement in 1901 he interested himself in various civic and educational enterprises. During 1902-04 he was vice-president of the New York Board of Education, having previously served for seven years as a member of the Brooklyn Board of Education. He was also president of the Packer Collegiate Institute after 1911 and of the Brooklyn Institute of Arts and Sciences during 1920-28. As vice-president of the Brooklyn Art Commission after 1920, Mr. Babbott was especially interested in the devel-

opment of the Brooklyn Museum, donating many valuable objects to its Oriental and Renaissance collections. He received the decoration of Chevalier of the Legion of Honor from the French government in 1925, while the Danish government in 1929 made him a commander, second degree, of the Order of Dannebrog. In 1932 he received the award of the Neighborhood Club of Brooklyn for his services toward advancing the city's cultural and civic life.

Baetjer, Frederick Henry, American röntgenologist, died July 17, 1933, in Baltimore, Md., where he was born Aug. 7, 1874. He was graduated from Johns Hopkins University with the M.D. degree in 1901, and later took a post-graduate course at the University of Berlin. During 1901-02 he was resident house officer of the Johns Hopkins Hospital. In 1903 he began his private practice in Baltimore and was consulting röntgenologist of the Union Memorial Hospital, the Church Home and Infirmary, Hospital for the Women of Maryland, the Children's Hospital School, and professor of röntgenology and röntgenology at Johns Hopkins University and Hospital. Not only a pioneer but also a martyr to science, Dr. Baetjer suffered the loss of all of his fingers and serious injury to an eye.

Bailey, Edgar Henry Summerfield, American chemist, died at Lawrence, Kan., June 1, 1933. Born at Middlefield, Conn., Sept. 17, 1848, he was graduated from Yale University in 1873, receiving the Ph.D. degree from the Illinois Wesleyan University 10 years later. He studied also at the Universities of Straßburg and Leipzig. After serving as instructor in chemistry at Lehigh University from 1874 to 1883, he was called to the University of Kansas as professor of chemistry and metallurgy acting also after 1900 as director of its chemical laboratory. At the time of his death he was professor emeritus. Dr. Bailey had been chemist for the Kansas State Board of Agriculture after 1885 and had served in the same capacity on the State Board of Health in 1899. For the Kansas Geological Survey he wrote reports on gypsum and mineral waters. He was also the author of *Laboratory Guide to Study of Qualitative Analysis* (with H. P. Cady, 1901); *Sanitary and Applied Chemistry* (1906); *The Source, Chemistry, and Use of Food Products* (1914); *Laboratory Experiments on Food Products* (1915); and *Food from Afar* (with H. S. Bailey, 1922).

Baines, Sir Frank British architect, died at St. Keverne, Cornwall, England, Dec. 26, 1933. He was born in 1877 and was tutored privately. Previous to his appointment in 1927 as architectural consultant with the Imperial Chemical Industries, Ltd., he had been director of the Office of Works, supervising the preservation of the royal palaces, Houses of Parliament, and various public and historic buildings. Among the palaces which he restored were Hampton Court and Westminster Hall. In 1929 he was commissioned to remodel Olympia, London's exhibition hall, and in 1932 visited Istanbul as adviser to Mustapha Kemal on the modernization of that city. He was created a member of the Royal Victorian Order in 1911, being dubbed Commander in 1923 and Knight Commander in 1928. Knighthood was conferred on him in 1918.

Baird, Dorothea, British actress and welfare worker, died at Broadstairs, Kent, England, Sept. 24, 1933. At the age of 18 she made her stage début and for 18 years thereafter was associated with the theatre. In 1895 she created the rôle of Trilby in the dramatization of Du Maurier's novel at the Haymarket Theatre, London. She acted as understudy to Ellen Terry in Shakespearean productions, and was with Seymour Hicks in *A Court Scandal*. Among her later rôles were Mrs. Darling in *Peter Pan*, Sophia in *Olivia*, Margaret in *The Wedding Guest*, and Acte in *Nero*. In 1896 she was married to Henry Brodribb Irving, son of Sir Henry Irving, and toured with her actor husband in America and Australia. On her retirement from the stage in 1912 she served as honorary secretary of the National Baby Week Council and of other organizations interested in the welfare of women and children.

Baker, Benjamin, American economist and editor, died at Hartsdale, N. Y., July 4, 1933. Born at Melrose, Mass., May 18, 1872, he was graduated from Harvard in 1897. He began his career as a special writer for the *Boston Transcript* with which he remained for almost two decades. During 1906-08, however, he was in Washington, as editor of the *Navy Magazine*, which treated of naval and other governmental affairs. In 1916 he moved to New York where he served as editor of *Russia*, a trade publication. After the failure of this magazine the following year, Mr. Baker became a free lance writer for newspapers and magazines, contributing particularly to the *Independent*. He was also a produce market reporter for the *Journal of Commerce*. In 1925, three years after he became associated with the *Annalist*, he was made its editor, winning international renown for his comments on financial affairs.

Baker, Elbert H., American newspaper man, died in Cleveland, Ohio, Sept. 26, 1933. Born at Norwalk, Ohio, July 25, 1854, he received a public school education, and began his newspaper career as an advertising solicitor.

tor on the Cleveland *Herald* in 1877. From 1882 to 1897 he was advertising manager for the Cleveland *Leader*. On acquiring with Charles E. Kennedy a leasehold on the Cleveland *Plain Dealer*, he served as its general manager from 1898 to 1920. When Liberty E. Holden died in 1913 he was elected president of the Plain Dealer Publishing Co., retaining that office until 1929 when he became chairman of the board of directors. He was also joint owner with his son, Frank S. Baker, of the Tacoma (Wash.) *Ledger* and the Tacoma *News-Tribune*, and with his son, Alton Baker, of the Eugene (Ore.) *Register-Guard*. Mr. Baker had been a director of the Associated Press after 1916 and of the American Newspaper Publishers Association during 1907-24, holding the office of president of the latter organization during 1912-14. He was one of the staunchest advocates among American publishers of an unbiased presentation of political and other news. He was also keenly interested in Cleveland's civic development, backing in 1925-29 the construction of the City Hall, County Court House, Public Auditorium, Federal Building, Main Library, Federal Reserve Bank Building, and Plain Dealer Building on the Mall, the heart of Cleveland's business section.

Baker, Sam (uel) A. American educator and administrator, died at Jefferson City, Mo., Sept. 16, 1933. Born at Patterson, Wayne Co., Mo., Nov. 7, 1874, he attended the Cape Girardeau (Mo.) State Teachers College and the Missouri Wesleyan College and began his career as a teacher in 1895 at Bethel, Mo. After serving as superintendent of schools at Piedmont, Mo., he was chosen in 1899 principal of the Jefferson City high school and in 1905 of the Joplin high school. From 1910 to 1913 he was superintendent of schools at Richmond, and from 1913 to 1919 at Jefferson City. In the latter year he was chosen State superintendent of the schools of Missouri, holding the office until 1923 when he entered politics. He was elected governor of Missouri for the term 1925-28. In June, 1927, he commissioned Charles A. Lindbergh a colonel in the Missouri National Guard.

Baldwin, Evelyn Briggs American Arctic explorer, died in Washington, D. C., Oct. 25, 1933. Born at Springfield, Mo., July 22, 1862, he was graduated from Northwestern College, Naperville, Ill., in 1885. After teaching in the public schools of Kansas, he was appointed in 1892 observer in the United States Weather Bureau. Subsequently he became an inspector-at-large in the Signal Corps of the United States Army. During 1893-94 he was meteorologist of the Peary Expedition to North Greenland, and in a similar capacity accompanied in 1898 the Walter Wellman Expedition to Franz-Josef Land. He built and named Fort McKinley and discovered and explored Graham Bell Land in May, 1899. In 1901 he organized the Baldwin-Ziegler Polar Expedition, which sailed under his command for the discovery of the North Pole via Franz-Josef Land. The expedition returned in 1902, having deposited several caches of provisions in Franz-Josef Land as bases for a proposed dash to the North Pole and three "safety stations" on the northeast coast of Greenland for use on the return march. Baldwin wrote, for periodicals, several articles dealing with Arctic life.

Baldwin, Leonard De Witt American lawyer and philanthropist, died in Brooklyn, N. Y., Jan. 25, 1933. He was born near Cortland, N. Y., in 1866, and graduated from Cornell University in 1892. Upon admission to the bar he and his brother, Arthur J. Baldwin, opened a law office in North Tonawanda, N. Y., and in 1897 removed to New York City. In 1903 the firm of Griggs, Baldwin and Baldwin was established and continued thereafter as specialists in corporation law. In 1928 the brothers jointly gave \$1,500,000 to Drew University (formerly Drew Theological Seminary), of which \$1,000,000 was for endowment and \$500,000 for the erection of new buildings. The college of liberal arts, which was added to this institution, was named Brothers College in their honor.

Balg, Gerhard Hubert, died Sept. 28, 1933.

Ball, Lewis Heisler, died Oct. 18, 1933.

Bancroft, Hugh. American lawyer and publisher, died at Cohasset, Mass., Oct. 17, 1933. Born in Cambridge, Mass., Sept. 13, 1879, he was graduated from Harvard University in 1897 and the following year served during the Spanish-American War as 1st lieutenant and adjutant with the 6th Massachusetts Infantry. He received the LL.B. degree from Harvard in 1901 and on his admittance to the Massachusetts bar, became assistant district attorney for Middlesex County in 1902 and district attorney in 1907. After 1908 he was junior partner of the Boston law firm of Stone, Dallinger, and Bancroft. From 1911 to 1914 he was chairman of the board of directors of the Port of Boston. Mr. Bancroft then turned to the financial publishing field, serving as president of the Boston News Bureau Co., and of Dow, Jones and Co., publishers of the *Wall Street Journal*. He published also *Barron's Weekly* and the *Philadelphia Financial Journal* and at the time of his death was president of the Financial Press Companies of America. In 1909, after being promoted through the various ranks of the Massachusetts

Volunteer Militia, he was retired as major general. He wrote *Inheritance Taxes for Investors* (1911) and *Inheritance Taxes* (with A. W. Blakemore, 1912).

Barry-Doyle, The Rt. Rev. Mgr. Richard, died Mar. 8, 1933.

Barton, George Hunt. American geologist, died in Cambridge, Mass., Nov. 25, 1933. Born at Sudbury, Mass., July 8, 1852, he was graduated from the Massachusetts Institute of Technology in 1880. He served as assistant in drawing at the latter institution during 1880-81 and then went to Honolulu as an assistant on an Hawaiian government survey during the next two years. It was here that he obtained a working knowledge of volcanoes. He then returned to the Massachusetts Institute of Technology as an assistant professor of geology, holding the same post until 1904 at the University of Boston. He was also connected with the United States Geological Survey as an assistant geologist and in 1896 was a member of Peary's sixth expedition to Greenland. After 1904 Professor Barton was director of the Teachers' School of Science, an extension unit of Harvard College. He lectured on geology at Boston University in 1915 and at Wellesley College during 1921-22. He was honorary president of the Children's Museum of Boston, and wrote *Outline of Elementary Lithology* (1900).

Basewood, Herbert, died June 5, 1933.

Beach, Charles Lewis. American educator, died at Storrs, Conn., Sept. 15, 1933. He was born at White-water, Wis., Apr. 6, 1866, and was graduated from the University of Wisconsin in 1886. From 1896 to 1906 he served successively as instructor and professor of dairy husbandry at the Connecticut Agricultural College. He was then called to the University of Vermont as professor of dairy husbandry and director of the Vermont Experimental Station. In 1908 he returned to the Connecticut Agricultural College as its president, retaining that office until his retirement as president emeritus in 1928. During his administration the student enrollment was increased from 200 to 500. The institution was later renamed the Connecticut State College.

Beach, Harlan Page, died Mar. 4, 1933.

Beard, Lina (Mary Caroline). American author and illustrator, died at Flushing, N. Y., Aug. 13, 1933. Born in Cincinnati, Ohio, in 1853, she attended Wesleyan College, Cincinnati, and the Art Students League, New York City. In 1910 she founded the Girl Pioneers of America, the equivalent for girls of the Boy Scouts of America, established by her brother, Daniel Carter Beard, from whose programme that of the Girl Scouts, Camp Fire Girls of America, and other movements for the 'teen-age girl was developed. In addition to writing and illustrating numerous articles and short stories for magazines and newspapers, she was the author of *Recreation for Girls*, *Things Worth Doing*, *Mother Nature's Toy Shop*, *What a Girl Can Make and Do*, *An Outdoor Book for Girls*, and *Girl Pioneers of America Manual*.

Beaton, Sir George Thomas. British surgeon, died in Glasgow, Feb. 18, 1933. He was born at Trincomalee, Ceylon, May 26, 1848, and was educated at King William's College, Isle of Man, at Clare College, Cambridge, and at the University of Edinburgh. His offices included that of consulting surgeon to the Glasgow Western Infirmary, senior surgeon of the Glasgow Cancer Hospital, former examiner in surgery to the University of Edinburgh, and honorary physician to Queen Mary. He was knighted in 1907, and was also an officer of the French Legion of Honor and of the Order of the Crown of Belgium, and an honorary associate of the Order of St. John of Jerusalem. Besides a number of monographs on the origin and nature of cancer, Sir George wrote *Ambulance Handbook: The Red Cross and the Right to Use It as a Distinctive Badge*; and *The Knights Hospitallers in Scotland and Their Priory at Torphichen*.

Bechtel, Warren A., died Aug. 28, 1933.

Behn, Hernand, died Oct. 7, 1933.

Bell, John C. American lawyer and Congressman, died at Grand Junction, Colo., Aug. 12, 1933. He was born at Sewanee, Tenn., Dec. 11, 1851, and attended private schools in that State. Following his admission to the Tennessee bar in 1874, he removed to Colorado and began his practice at Sagache, where for two years (1874-76) he was county attorney. He then removed to Lake City, where he was county clerk for several years and was elected mayor in 1885. He next practiced law in Montrose, being appointed judge of the seventh judicial district of Colorado in 1888. From 1893 to 1903 he was a Democratic member of the House of Representatives from the old second Colorado district, his most important work being in connection with land reclamation and reforestation and in obtaining appropriations for the Uncompahgre irrigation project in Colorado which, it is said, resulted in the drawing up of the Federal Reclamation Code. After his defeat for reelection to Congress in 1902 Mr. Bell resumed his law practice in Montrose, serving during 1913-15 as judge of the Colorado Court of Appeals. He wrote *The Pilgrim and the Pioneer* (1905).

Bell, Robert Anning. British painter, died Nov. 27, 1933, in London where he was born Apr. 14, 1863. He received his art education at the Westminster School of

Art, the Royal Academy Schools, and in the atelier of Aimé Morot, the French historical and portrait painter. The influence of Morot was exhibited in Bell's famous canvas, "Mary in the House of Elizabeth," in the Tate Gallery. He was also represented by figure paintings and landscapes in the National Gallery of British Art in London, the Luxembourg in Paris, the National Gallery of New South Wales in Sydney, and the Liverpool and Bradford Art Galleries. It was in the field of decorative art, however, especially stained-glass and mosaic work, that Bell achieved his greatest reputation. The last stained glass which he designed was the Shakespeare memorial window in the Manchester Reference Library. Notable examples of his mosaic work were the tympanum over the main entrance and the altar-piece of the Lady Chapel in Westminster Cathedral and the panels in St. Stephen's Hall in the House of Parliament. For many years he was professor of design at the Royal College of Art in South Kensington and of decorative art at the Glasgow School of Art. He was elected an associate of the Royal Academy in 1914 and an academican in 1922.

Belmont, Alva E. Smith, died Jan. 26, 1943.

Benedict, Alfred Barnum, American lawyer, died in Cincinnati, Ohio, Oct. 16, 1933. Born in Rochester, N. Y., Apr. 2, 1856, he was graduated from the University of Cincinnati with the A.B. degree in 1878 and the LL.B. degree from the Cincinnati Law School in 1880. Upon his admittance to the Ohio bar in the latter year, he practiced in Cincinnati. In 1897 he was appointed professor of law at the Cincinnati Law School and on the reorganization of this school as the College of Law of the University of Cincinnati in 1918 was made dean. He complied with Rufus B. Smith *Statute Law of Ohio* (1890).

Benson, Stella, died Dec. 7, 1933.

Berger, Francesco, died Apr. 26, 1933.

Berget, Alphonse, Baron French scientist, died in Paris, Dec. 29, 1933. Born at Schlestadt, Department of Bas-Rhin, Nov. 24, 1860, he attended the Faculty of Sciences of the University of Paris and soon after obtaining his degree of Doctor of Physical Sciences was appointed professor at the Oceanographic Institute. On the jubilee of Foucault's invention of the gyroscope in 1902 he demonstrated at the Panthéon in the presence of a group of ministers and savants the rotation of the earth on its axis by the diurnal rotation plane of oscillation of a long pendulum with a heavy weight. In 1910 he headed the International Commission for the Scientific Exploration of the Mediterranean. Professor Berget's works, many of which were published under the pseudonym Tiger, include *Leçons de physique générale* (1899); *Physique du globe et météorologique* (1904, crowned by the Academy of Sciences); *Les Problèmes de l'atmosphère* (1914); *La Vie et la mort du globe* (1917, crowned by the Academy of Sciences); *Les Problèmes de l'Océan* (1920); *Le Ciel* (1923); *L'Aviation* (1924); *L'Air* (1927), and *Leçons d'océanographie physique* (1931).

Besant, Annie, died Sept. 20, 1933.

Bethell, Union Noble died Jan. 13, 1933.

Bevan, Anthony Ashley, British Orientalist, died at Stapleford, near Cambridge, England, Oct. 16, 1933. He was born at Barnet, Hertfordshire, May 19, 1859, and attended Trinity College, Cambridge, and the University of Strassburg. Until a short time before his death he acted as Lord Almoner lecturer in Arabic at Cambridge University and was a Fellow of Trinity College. His publications include *A Short Commentary on the Book of Daniel* (1892); *The Nakā'id of Jarir and al-Farazdaq* (3 vols., 1905-12); and an essay on Historical Methods in the Old Testament in the *Cambridge Biblical Essays* (1909). He contributed to the *Encyclopædia of Religion and Ethics* and the *Encyclopædia Biblica* and prepared a supplementary volume to Sir Charles Lyall's edition of the *Mufaddaliyat*.

Biggers, Earl Derr, died Apr. 5, 1933.

Biles, Sir John Harvard, died Oct. 27, 1933.

Billings, Sherrard American educator, died at Groton, Mass., May 9, 1933. He was born at Quincy, Mass., Apr. 21, 1859, and was graduated from the Episcopal Theological School at Cambridge in 1884. The same year, with Endicott Peabody and William Amory Gardner, two fellow students, he organized the Groton School for boys, of which he was senior master at his death.

Birrell, Augustine, died Nov. 20, 1933.

Bisling, Henry Singlewood, American painter, died at Ledyard, Conn., Nov. 25, 1933. Born in Philadelphia, Pa., Jan. 31, 1849, he attended the Pennsylvania Academy of Fine Arts and later studied under F. de Vullieffroy in Paris and J. H. L. de Haas in Brussels. Specializing in the painting of animals and of pastoral scenes, he scored an immediate success for the clarity and accuracy of his work. He received a third class medal at the Paris Salon in 1891 and on his return to the United States the following year was the recipient of the Temple Gold Medal awarded by the Pennsylvania Academy of Fine Arts. He received also medals from the World's Columbian Exposition in 1893 and the Paris Exposition Universelle of 1900, and in 1902 was made a Chevalier of

the French Legion of Honor. His summers were generally spent at Etaples, France, or Zwolle, the Netherlands, where he drew inspiration for his rural subjects. His work is found in art galleries in Berlin, Paris, Nantes, and Mülhausen, as well as in the Pennsylvania Academy of Fine Arts in Philadelphia.

Black, Maj.-Gen. William Murray, U. S. A., Ret., died Sept. 24, 1933.

Blake, Henry Nichols, American jurist, died Nov. 29, 1933, in Boston, Mass., where he was born June 5, 1838. He was graduated from the Harvard Law School in 1858 and on his admittance to the bar began his practice in Boston the following year. During the Civil War he fought with the 11th Massachusetts Volunteers, being promoted to the rank of captain. Mr. Blake then removed to Montana and from 1869 to 1871 was United States attorney for that territory. He was also a Supreme Court reporter during 1869-75, and district attorney for the first district of Montana during 1871-73 and again during 1884-86. Appointed to the Territory Supreme Court as an associate justice in 1875, he held that office until 1880. He then became a member of the Territorial Legislature, and in 1889, the year of Montana's admission to the Union, was chosen chief justice of the Supreme Court. He retained the latter post for four years. He was elected president of the Montana Bar Association in 1888.

Blodgett, Mary Eliza (Sherwood), American philanthropist, died in New York City, May 11, 1933. She was born at Greene, N. Y., Mar. 7, 1840, the daughter of John Hinman Sherwood, and removed to New York City with her parents in 1848. In 1870 she married J. Jarrett Blodgett, a Boston textile manufacturer, and at his death in 1888 turned over his estate to his other relative. From the fortune inherited from her father in 1885, Mrs. Blodgett made many donations to the Protestant Episcopal Church for religious, charitable, and educational purposes, the total being estimated at nearly \$3,000,000.

Boardman, Russell, American aviator, died in Indianapolis, Ind., July 3, 1933. Born near Middletown, Conn., Jan. 22, 1898, he had a colorful career that included motorcycling, auto-racing, speed-boating, and aviation. After he learned to pilot an airplane in 1921, he proceeded to set numerous records. He also entered the commercial field, taking over the management of the Hyannis Airport at Cape Cod and organizing the Boardman Aviation Corp., which operated seaplanes between Boston and Hyannis. In July, 1931, Russell Boardman and John Polando flew from New York to Istanbul in 49 hours and 19 minutes, establishing thereby a world's non-stop distance record. He was the victim of a speed-boat explosion and several airplane crashes, escaping all but the disaster which occurred on his take-off from the Indianapolis airport during the transcontinental air race. See AERONAUTICS.

Bond, Oliver James, American educator, died in Charleston, S. C., Oct. 1, 1933. Born at Marion, S. C., May 11, 1865, he was graduated from The Citadel (the military academy of the South), in 1886, receiving the Ph.D. degree from the Illinois Wesleyan University in 1895. After serving successively as assistant professor of mathematics and as professor of mechanical drawing and astronomy at The Citadel, he was chosen in 1908 president of the institution, succeeding greatly in re-establishing the prestige which it had had before the Civil War. On his retirement in 1931 Colonel Bond was made dean. He was the author of a novel, *Amzi* (1904).

Bonfilis, Frederick G., died Feb. 2, 1933.

Bonin-Longare, Lelio, Count Italian diplomat, died in Rome, Dec. 22, 1933. Born at Vicenza, in July, 1859, he was graduated in law from the University of Padua but abandoned that career for diplomacy. In 1884 he was appointed an attaché at the Italian embassy in Vienna and in 1887 went to Paris in the same capacity. In 1892 he was elected to the Italian Chamber as representative for Vicenza, and four years later became Under-Secretary of State in the Foreign Ministry. After serving as Minister to Belgium from 1904 to 1910 he became Ambassador to Spain. In 1917 he was transferred to France as Ambassador, remaining there until 1922. Count Lelio was a member of the Italian war debt commission to the United States in 1925, and the following year was appointed a member of the Italian delegation to the League of Nations. At the time of his death he was vice-president of the Italian Senate.

Bottomley, Horatio William, British journalist, died in London, May 26, 1933. Born Mar. 23, 1860, he attended Mason's College, Birmingham, and after some years spent in business turned to journalism, founding the *Financial Times* and the *Sun*. On the failure of the famous Hansard Union which involved a loss to shareholders of £1,000,000, he ably defended himself in the prosecution instituted by the Crown and won his acquittal. Bottomley then went to Australia where he made a fortune in the gold mining field. After his return to England he founded in 1906 the sensational *John Bull*, which by its sedulous cultivation of the popular majority, attained an enormous circulation. This periodical enabled him also to make

himself one of the most feared of Englishmen. In Parliament he represented South Harkney, as a Liberal, from 1906 to 1912 and again from 1918 to 1922. Bottomley's career was cut short in the latter year, however, when he was found guilty of misusing the great funds subscribed in various lotteries to his private patriotic organizations. Sentenced to penal servitude for seven years, he was paroled in 1927 and thereafter made his home at Hailsham, Sussex.

Bourne, Gilbert Charles, British zoologist and oarsman, died at Abingdon, England, Mar. 9, 1933. Born in 1861, he was educated at Eton and at New College, Oxford, receiving a B.A. degree in 1885 and an M.A. in natural science in 1888. He served for several years as director of the laboratory of the Marine Biological Association at Plymouth and then returned to Oxford where he was made Tutor and Fellow of New College and received the D.Sc. degree. From 1906 to 1921 he was Linacre professor of comparative anatomy and Fellow of Merton College, Oxford, and in 1924 became Fellow of Winchester College. He served after 1927 as a member of the Water Pollution Research Board and was chairman of the advisory committee on fisheries of the Development Commission. He was also elected a Fellow of the Royal Society and of the Linnæan Society. In 1898-99, as lieutenant-colonel, Dr. Bourne commanded the Oxford University Rifle Volunteers, and in 1903-06 the fourth battalion of the King's Shropshire Light Infantry. A keen oarsman in his college days, he coached the Oxford crew at varying periods from 1885 to 1927. His writings include *Introduction to the Study of the Comparative Anatomy of Animals* (1900) and *A Text-Book of Oarsmanship* (1925).

Bowker, Richard Rogers, died Nov. 12, 1933.

Bowser, William John, Canadian lawyer and administrator, died in Vancouver, B. C., Oct. 25, 1933. Born at Rexford, N. B., Dec. 3, 1867, he attended Dalhousie University and was admitted to the New Brunswick bar in 1890. The following year, however, he removed to British Columbia and on being admitted to its bar, practiced in Vancouver. He was created Queen's Counsel in 1900. Three years later he was elected to the Provincial Parliament as member for Vancouver, retaining this seat until 1924. In addition to serving as Minister of Finance in the provincial cabinet of Sir Richard McBride during 1909-10, he held the post of Attorney General from 1907 to 1916 and was himself premier during 1915-16. At the time of his death, he had again entered politics, being a candidate on the Independent-Nonpartisan ticket to represent Vancouver Centre and Victoria.

Brade, Sir Reginald Herbert, British statesman, died at Ockley, Surrey, England, Jan. 5, 1933. He was born Aug. 15, 1864, and was educated at St. Andrew's College, Bradford. His entire public career was spent in the War Office which he entered as clerk in 1884. After service as private secretary to Lords Sandhurst and Monckswell and to Powell Williams, he was Secretary of the War Office Council from 1901 to 1904. For the next 10 years he was Assistant Secretary in the War Office, and throughout the World War held the office of Secretary, resigning in 1920 on account of ill health. He received his knighthood in 1914, and was Commander in the French Legion of Honor and the Belgian Order of the Crown.

Brand, Charles Hillyer, American lawyer and Congressman, died at Athens, Ga., May 17, 1933. He was born at Loganville, Ga., Apr. 20, 1861, and graduated from the University of Georgia in 1881. Admitted to the Georgia bar in 1882, he began the practice of law at Lawrenceville. After serving as State Senator during 1894-95, he was elected solicitor general for the western judicial circuit of the State in 1896 and was reelected in 1900. In 1906 he was appointed judge of the Superior Court of Georgia and was elected three times, serving until 1917 when he was elected as a Democrat to the national House of Representatives. He represented the Eighth Georgia District in the 65th to 72d Congresses and was a member of the House's banking and currency committee.

Branson, Eugene Cunningham, American educator and sociologist, died at Chapel Hill, N. C., May 13, 1933. He was born at Moorehead City, N. C., Aug. 6, 1861, and was educated at Trinity College (later Duke University) and at the Peabody Normal College, Nashville, Tenn. He was successively principal of Raleigh high school, superintendent of schools at Wilson, N. C., and Athens, Ga., professor of pedagogy at the Georgia Normal and Industrial School, and from 1900 to 1912 president of the State Normal School of Georgia. After 1914 he was head of the department of rural economics and sociology at the University of North Carolina. In addition to various text-books on teaching methods, he wrote *County Government and County Officers in North Carolina* (1918) and *Farm Life Abroad* (1925).

Brayden, William Henry, Irish journalist, died in Dublin, Dec. 17, 1933. Born in 1865, he attended University College, Dublin, and began his career as a reporter in the gallery of the House of Commons during 1885-87. Three years later he became editor of the

Dublin *National Press*, but relinquished that position in 1892 to become editor of the *Freeman's Journal*, the official organ of Dublin Castle, the court of the Lord-Lieutenant of Ireland. He served in this capacity until 1916. During 1911-29, when he was a correspondent for the Associated Press, he dispatched to the United States news of important events in Ireland. Mr. Brayden was a member of the council of the Royal Dublin Society, a governor of the Royal Irish Academy of Music, and a trustee of the National Library of Ireland.

Breck, Joseph, American art director, died at Villars sur Ollon, Switzerland, Aug. 2, 1933. Born at Allston, Mass., Feb. 3, 1885, he was graduated from Harvard in 1907, studying art in Europe for a year, and doing graduate work at Harvard during 1908-09. He was then appointed assistant curator in the department of decorative arts at the Metropolitan Museum, New York City. In 1914 he accepted the appointment as director of the Minneapolis Society of Fine Arts, but in 1917 returned to the Metropolitan Museum as curator of the department of decorative arts and as assistant director. Mr. Breck installed the J. Pierpont Morgan collection of Romanesque, Gothic, and Renaissance art in the wing of the museum built for that purpose. His greatest work, however, was in the development of The Cloisters, the branch devoted to Gothic art which John D. Rockefeller, Jr., acquired for the museum from George Gray Barnard, the sculptor, in 1925 and of which he was made director in 1932. He was decorated by the Swedish government with the Royal Order of the North Star in 1927.

Bredin, R. Sloan, American painter, died in Philadelphia, Pa., July 17, 1933. He was born at Butler, Pa., Sept. 9, 1881, and attended the New York School of Fine Arts, studying under Chase, Beckwith, and Du Mond. He specialized in landscape, figure, and portrait painting and exhibited his work in various art centres of the United States. He was awarded the second Hallgarten Prize by the National Academy of Design in 1914 and the Maynard portrait prize by the same institution seven years later. He received also a bronze medal from the Panama-Pacific Exposition in San Francisco (1915), Vezin prize from the Salmagundi Club of New York (1923) and a bronze medal from the Sesqui-centennial Exposition in Philadelphia (1926). Mr. Bredin's most famous paintings are "By the River" and "Midsummer," the latter being on permanent exhibition in the Minneapolis Institute of Arts. Several of his murals may be seen in the New Jersey State Museum in Trenton. In 1921 he was elected an associate of the National Academy of Design.

Brémont, Abbé Henri, died Aug. 17, 1933.

Brewer, Robert Paine, American banker, died in Tulsa, Okla., June 14, 1933. He was born at Muskogee, Okla., Dec. 3, 1876, and graduated from Southwestern University in 1898. Shortly after graduation he went to Checotah, Okla., where he organized a local bank, became its assistant cashier and later its president. In 1902 he organized the First National Bank of Quinton, Okla., serving as cashier, manager, and later president. From 1908 to 1916 he was president of the First National Bank of McAlester, Okla. Mr. Brewer then went to Kansas City, Mo., as senior vice president of the Commerce Trust Co., where he remained until 1921 when he became chairman of the board and president of the Exchange National Bank of Tulsa. In 1924 he was made president of the First National Bank of Tulsa, remaining there until 1929 when he was called to New York to become a director and vice president of the Chatham Phoenix National Bank and Trust Co. Upon the merger of that bank in 1932 with the Manufacturers Trust Co., he became senior vice president of the latter.

Broderick, Sir John Joyce, British diplomat, died in London, June 2, 1933. Born Apr. 24, 1862, he was educated at Blackrock College, Dublin, and at the Royal University of Ireland. The first member of the British Commercial Diplomatic Service to be promoted to the rank of Ambassador, he began his diplomatic career by serving in various capacities from 1901 to 1908 in the British Customs Service. Entering the Consular Service, he was successively Vice-Consul and acting Consul General in New York City (1909-13) and Consul in Amsterdam, the Netherlands (1913-15). Retrained to New York City, he was acting Consul there for a short time and was then sent to the British Embassy in Washington where he was assistant commercial adviser (1915-19), commercial secretary (1919-20), and commercial counselor (1920-31). In 1931 he was appointed Minister to Cuba and was also Consul General there. A few months previous to his death announcement was made of his appointment as Ambassador to Argentina. Sir John was created a Knight Commander of the Order of the British Empire in 1927.

Brook, David, British Methodist minister, died in London, Mar. 23, 1933. He was born at Eiland, Yorkshire, England, Sept. 27, 1854, and was educated at Owens College, at the Free Methodist College in Manchester, and at Oxford University, where later he had the distinction of being the only Nonconformist minister to obtain the degree of Doctor of Civil Law. He served as

pastor of United Methodist Free Churches in London, Liverpool, Bristol, and other large cities of England, and previous to the formation of the United Methodist Church in 1907 by the union of the United Methodist Free Church, the Methodist New Connection, and the Bible Christians was president of the United Methodist Free Churches and of the National Council of Free Churches and moderator of the Federal Council of Free Churches. For some years he was also principal of United Methodist Colleges.

Browne, J(ohn) Lewis. American musician, died in Chicago, Ill., Oct. 23, 1933. Born in London, May 18, 1866, he was brought to the United States in childhood. He received his musical education under his father, William Browne, a distinguished organist, F. Archer, and S. P. Warren. He gained renown as an organ soloist at the Louisiana Purchase Exposition in St. Louis, and the Jamestown Tercentennial Exposition and made several hundred appearances in the larger cities of the United States. During 1908-10 he was organist at Wanamaker's Egyptian Hall in Philadelphia, and after 1912 was organist and choir-master at St. Patrick's Roman Catholic Church, Chicago. He was also supervisor of the theory department of the Fine Arts Conservatory of Music, and at the time of his death was director of music for the Chicago public school system. Dr. Browne was elected a distinguished member of the Royal Philharmonic Academy in Rome in 1914 and during 1916-19 was dean of the Illinois chapter of the American Guild of Organists. His opera *La Coreana*, which won recognition in the Sonzogno Concorso in Milan in 1902, was produced at the Chicago Playhouse in 1923. In addition to compositions for the organ, piano, and orchestra, he wrote more than 60 songs, both sacred and secular, and *Missa Solemnis*, *Ecce Sacerdos Magnus*, sung in the Vatican by Paulist Choristers in 1912, and *Missa Immaculatae Conceptionis*. The latter was written in honor of the 100th anniversary in 1921 of the establishment of the Diocese of Cincinnati.

Bruce, Philip Alexander. American historian, died at Charlottesville, Va., Aug. 16, 1933. He was born at Staunton Hill, Charlotte Co., Va., Mar. 7, 1856, and was graduated from the University of Virginia in 1876 and from Harvard with the LL.B. degree in 1879. Instead of practicing law, however, he devoted himself, with the exception of a brief period (1890-92) when he was associate editor of the *Richmond Times*, to historical research and writing. His greatest work was the series on colonial Virginia: *Economic History of Virginia in the Seventeenth Century* (1895); *Social Life of Virginia in the Seventeenth Century* (1907); *Institutional History of Virginia in the Seventeenth Century* (1910), and *History of Colonial Virginia, 1606-1764* (1923). He also wrote *The Plantation Negro as a Freeman* (1888), *Short History of the United States* (1903); *Rise of the New South* (1905); *Life of General Robert E. Lee* (1907); *Pocahontas and Other Sonnets* (1912); *Brave Deeds of Confederate Soldiers* (1916); *History of the University of Virginia* (1920-21); *Rebirth of the Old Dominion* (1929); and *The Virginia Plutarch* (1929). During 1892-98 Bruce was corresponding secretary of the Virginia Historical Society and was founder and editor of the society's quarterly, *The Virginia Historical Magazine*.

Brum, Baltasar Uruguayan statesman, died in Montevideo, Mar. 31, 1933. Born June 18, 1883, he attended the University of Montevideo from which he received the degree of Doctor of Jurisprudence in 1908, and practiced law for several years in Salto. In 1913 he was appointed Minister of Public Instruction, in 1915 of the Interior, and in 1916 of Foreign Affairs. While holding the latter portfolio he headed two important missions to Brazil and the United States. He was elected president of Uruguay in 1919, being the first executive to serve under Uruguay's amended constitution. This provided that the executive power should be vested in a president, elected for four years with control over the departments of foreign affairs, interior, war, and marine, and in a national administrative council, composed of six members from the majority party and three from the largest minority. Besides being a member of the National Council of Administration at the time of his death, Dr. Brum had been editor for the previous 10 years of *El País*, a Montevideo newspaper.

Brush, Edward Nathaniel, died Jan. 10, 1933.

Bryant, Lorinda Munson. American author, died in New York City, Dec. 13, 1933. Born at Granville, Ohio, Mar. 21, 1855, she was graduated from the Granville Female College in 1872 and three years later was married to Charles W. Bryant. After his death in 1886 she decided to take up his occupation, pharmacy, and attended the Chicago College of Pharmacy, becoming the first woman registered pharmacist in Ohio. From 1890 to 1899 she taught science at the Ogontz School near Philadelphia, and then removed to South Orange, N. J., where she was principal of the Montrose School until 1905. Mrs. Bryant then turned to writing and two years later published her first book, *Pictures and Their Painters*. Among her aids to the tourist were *What Pictures to See in Europe in One Summer* (1910); *Famous Pictures of*

Real Boys and Girls (1912); *What Sculpture to See in Europe* (1914); *What Pictures to See in America* (1915); *American Pictures and Their Painters* (1917); *Famous Pictures of Real Animals* (1918); and *French Pictures and Their Painters* (1922). She wrote also a number of books for children on celebrated sculpture, buildings, bridges, towers, American landmarks, European landmarks, legends, religious pictures, and animal pictures.

Buell, Marcus Darius. American theologian, died at Winter Park, Fla., Nov. 24, 1888. Born at Wayland, N. Y., Jan. 1, 1851, he was graduated from New York University in 1872 and later attended Cambridge, Berlin, and Heidelberg universities. Ordained to the Methodist Episcopal ministry in 1875, he held charges in Brooklyn, N. Y., until 1879 and in Hartford, Conn., until 1884. Dr. Buell was then called to the school of theology of Boston University where he held the chair of New Testament Greek and Exegesis until 1922, serving also as assistant dean from 1885 to 1889 and as dean from 1889 to 1904. After 1922 he was professor and dean emeritus of that institution. He lectured on Biblical subjects in China and Japan in 1916, and from 1912 to 1924 served as a trustee of the Board of Education of the Methodist Episcopal Church. He wrote *Studies in the Greek Text of the Gospel of Mark* (1890) and *Autographs of St. Paul* (1912).

Bundy, John Elwood. American landscape painter, died in Cincinnati, Ohio, Jan. 18, 1933. He was born in Guilford Co., N. C., May 1, 1853, and was mainly self-taught in art. From 1880 to 1888 he taught drawing and painting at Earlham College, Richmond, Ind. His preferred theme was woodland scenes and he was especially noted for his treatment of beeches. His paintings were exhibited in some of the most important galleries of the United States, including the Pennsylvania Academy of Fine Arts, the National Academy of Design, and the Art Institute of Chicago. Among his more notable canvases are "Blue Spring" and "Old Farm in Winter" in the Public Gallery, Richmond, Ind., and "Wane of Winter" and "Beech Woods in Winter," purchased by the Art Association of Indianapolis.

Burdick, Clinton De Witt. American financier, died in Brooklyn, N. Y., Apr. 11, 1933. He was born at Smyrna, N. Y., July 24, 1863, and was graduated from Wesleyan University in 1886. From 1887 until his death he was connected with the Title Guarantee and Trust Co., New York City, and ultimately became its president. He was also president and general manager of the Bond and Mortgage Guarantee Co., Brooklyn. He served on the board of directors of many commercial and philanthropic institutions, and was for 26 years a trustee and the treasurer of Wesleyan University.

Burgess, Brig.-Gen. Harry. American military engineer, died at Hot Springs, Ark., Mar. 18, 1933. He was born at Starkville, Miss., Feb. 22, 1872, and, after studying at the Mississippi Agricultural and Mechanical College, attended the United States Military Academy from which he was graduated in 1895. Commissioned 2d lieutenant in the Engineers Corps, he attended the United States Engineering School of Application and taught engineering at West Point from 1898 to 1900. He was successively in charge of improvement work on the Ohio River, at Louisville, 1900-04; of the New Orleans district of the Mississippi River Commission, 1904-07; of surveying and designing for the Muscle Shoals (Ala.) power development project, 1907-16; and of lake improvements and surveys at Detroit, 1916. During the World War he served as colonel with the 16th and 30th Engineers of the American Expeditionary Force and participated in the Lys defensive operations and in those for the Meuse-Argonne offensive. On his return to the United States in 1920 he was again assigned to the Mississippi River Commission as director of the Rock Island (Ill.) district and in 1922 became engineer of the 8th Corps Army Area, with headquarters at Fort Sam Houston, Texas. In 1924 General Burgess was appointed engineer in charge of maintenance of the Panama Canal, and four years later became Governor of the Canal Zone. He retired in 1932.

Burk, W(illiam) Herbert, died June 30, 1933.

Burleson, The Rt. Rev. Hugh Latimer, died Aug. 1, 1933.

Burmester, Willy. German violinist, died in Hamburg, Germany, Jan. 16, 1933. He was born in the same city, Mar. 16, 1869, and studied violin under Joachim. In 1890 he was connected with the Conservatory of Sonderhausen as professor and concert director. He then went to Weimar as an orchestral leader and after further study in Helsinki he settled in Berlin where he became a successful teacher. His first American appearance, in 1898, was with the Boston Symphony Orchestra in Carnegie Hall, New York City. Thereafter he toured the world several times before his second visit to the United States in 1923. Burmester was best known for the particular brilliancy of his renditions of the compositions of Paganini. He adapted for the violin numerous works of the old masters.

Burnham, Harry Lawson Webster Lawson, 1st Viscount, died July 20, 1933.

Bustamante, Daniel Sanchez de, died Aug. 5, 1933.

Butler, Lady (née Elizabeth Thompson). Irish painter, died at Gormanston Castle, Co. Meath, Oct. 2, 1933. Born in Lausanne, Switzerland, in 1851, she studied painting in Florence under Bellucci and on her return to England in 1878 became an annual exhibitor at the Royal Academy. Of special note were her military subjects, such as "Royal Artillery, Missing" (1873); "Roll Call" (1874), proclaimed "the picture of the year"; "Balacava" (1876); "Listed for the Connaught Rangers" (1879); "The Remnants of an Army; Defence of Rorke's Drift" (1881); "Scotland for Ever" (1881); "Tel-el-Kebir" (1885); "To the Front" (1889); "The Camel Corps" (1891); "Halt in a Forced March" (1892); "The Dawn of Waterloo" (1895); "Steady, the Drums and Fife" (1896); "The Morning of Talavera" (1898); "The Colors" (1899); "Tent-Pegging in India" (1902), and "Rescue of Wounded" (1905). These won high praise from military experts for their fidelity to detail and from art connoisseurs for their technical excellencies. In 1877 she was married to Lieut.-Gen. Sir William Francis Butler. She was the author of *Letters from the Holy Land* (1903); *From Sketchbook and Diary* (1909), and *An Autobiography* (1923).

Byers, Samuel Hawkins Marshall. American soldier, diplomat, and author, died in Los Angeles, Calif., May 24, 1933. He was born at Pulaski, Pa., July 3, 1838, the family moving to Iowa in 1852. He abandoned his law studies to enlist in the Union Army at the outbreak of the Civil War, and while a prisoner wrote the words of *Sherman's March to the Sea*. He escaped in time to rejoin General Sherman's staff and carried the message of victory in the Carolinas to General Grant and President Lincoln. From 1867 to 1884 he was American Consul in Zurich, Switzerland, he was then appointed Consul General to Italy, and was later returned to Switzerland in the same capacity, being retired by President Cleveland in 1887. Major Byers wrote many magazine articles and several volumes of verse. His most notable poetic work, *The Bells of Capistrano*, appeared in 1917. He also wrote *Switzerland and the Swiss* (1875); *The Happy Isles* (1884); *The March to the Sea* (1896); *Twenty Years in Europe* (1900); *With Fire and Sword* (1911); *A Layman's Life of Jesus* (1912); *The Pony Express and Other Poems* (1925); and *In Arcady* (1929).

Cahill, Marie. American actress, died in New York City, Aug. 23, 1933. Born in Brooklyn, N. Y., in 1874, she made her stage debut there in *Kathleen Mavourneen* in 1888. Her first New York appearance was the following year in *C. O. D.* After playing in Paris at the Galté and in London in *Morocco Bound* she returned to New York in 1897, appearing in minor rôles in musical comedies until she attained stardom in *The Wild Rose* (1902). This was followed by the popular *Sally in Our Alley* (1902), *Nancy Brown* (1903), and *Molly Moonshine* (1905). She created the rôle of Mary Montgomery in *Marrying Mary*, which ran during 1906-07, and played the part of Betty Barbeau in *The Boys and Betty* in 1908. Her later successes were in *Judy Forgot* (1910); *The Opera Ball* (1912), *Ninety in the Shade* (1915); *Just Around the Corner* (1919); and *Merry-Go-Round* (1927). Her last appearance on the stage was in the *New Yorkers* (1930). She was married to Daniel V. Arthur, her manager, in 1903.

Calmette, Leon Charles Albert, died Oct. 29, 1933.

Campbell, Admiral Sir Henry Hervey, died Feb. 12, 1933.

Campbell, James A. American manufacturer, died in Youngstown, Ohio, Sept. 20, 1933. Born in Ohiotown, Ohio, in 1854, he was educated at Hiram College and served his business apprenticeship in the coal and ice business. In 1890 he entered the iron and steel business as general superintendent of the Trumbull Iron Co. and seven years later was elected president of the Mahoning Iron Co. His next venture, after the merger of the latter company with the Republican Iron and Steel Co., was the organization in 1901 of the Youngstown Sheet and Tube Co. He served as its president from 1906 to 1930, watching its expansion through the operation of additional properties at South Chicago, Ill., and Indiana Harbor, Ind., and the increase in its capitalization from \$1,600,000 to \$300,000,000 in less than three decades. At the time of his death it ranked third among the steel companies of the United States. In 1930 Mr. Campbell was in favor of the merging of this company with the Bethlehem Steel Corp., but was forestalled by the minority stockholders and the decision handed down by Judge David S. Jenkins of the Youngstown Court of Common Pleas. He retired in 1932 with the title of chairman emeritus of the board of directors.

Canfield, George Folger. American lawyer and educator, died Nov. 15, 1933, in New York City where he was born Aug. 21, 1854. He was graduated from Harvard University in 1875 with the A.B. degree and received the LL.B. degree from the Law School of that institution five years later. He also attended the Universities of Göttingen and Heidelberg during 1875-77,

studying law and history. Upon his admittance to the New York bar in 1881, he began his practice in New York where he was at first associated with William N. Wilmer and Harlan F. Stone, later justice of the United States Supreme Court. After 1912 his partner was Herbert L. Satterlee. He was also a member of the law faculty of Columbia University, being lecturer from 1892 to 1894 and professor from 1894 to 1930. Mr. Canfield was president of the Atlanta and Charlotte Air Line Railway Co., vice-president of the Morris Plan Co., and a director of the Dun-Bradstreet Co. A leader in welfare activities, he was president for 22 years of the State Charities Aid Association.

Cannon, Frank Jenné, died July 25, 1933.

Carhart, Paul Worthington, died Oct. 27, 1933.

Carnegie, Hon. Sir Lancelot Douglas. British diplomat, died in London, Oct. 15, 1933. Born Dec. 26, 1861, he was educated at Eton and Christ Church, Oxford. He began his diplomatic career in 1887, being attached to the British embassies in Madrid, St. Petersburg, Berlin, Peking, Vienna, and Paris as counselor of embassy. He was ministerial envoy at Paris during 1911-13 and held the same post at Lisbon during 1913-24, being credited with securing the enlistment of 40,000 Portuguese troops with the British Expeditionary Forces in France during the World War. Troops were likewise dispatched to Africa so as to protect the Portuguese colonies on that continent. He maintained also the traditional friendliness of the two countries, despite the fact that Portuguese republican leaders resented the royal honors bestowed on ex-King Manoel and his mother during their exile in England. In 1924 he was made Ambassador, holding that post for four years. Sir Lancelot was decorated with the Grand Crosses of the Order of Christ and of the Order of San Tiago da Espada, and in 1916 was created Knight Commander of the Order of St. Michael and St. George, and in 1917 Knight of the Grand Cross of the Royal Victorian Order. After 1924 he was a Privy Councillor.

Carr-Cook, Madge. See Cook, Madge Carr.

Carrier-Belleuse, Pierre Albert Gérard, died Jan. 1, 1933.

Carter, George Robert. American administrator, died at Kailua, Oahu, T. H., Feb. 11, 1933. He was born in Honolulu, Dec. 28, 1866, and was graduated from Yale in 1888. His first business connection was with the Seattle National Bank, in whose employ he remained until 1895. In that year he returned to Honolulu and became connected with C. Brewer & Co., sugar factors, and other Hawaiian business houses, holding directorates in several until his retirement in 1913. Mr. Carter served in the Hawaiian Senate in 1901. While Secretary of the islands in 1902 he was appointed Governor by President Theodore Roosevelt and served in that capacity until 1907. He was the second Governor of the Territory.

Cermak, Anton Joseph, died Mar. 6, 1933.

Cerretti, Bonaventure, Cardinal, died May 8, 1933.

Chambers, Robert W. (William), died Dec. 16, 1933.

Chaplin, Sir (Francis) Drummond (Percy). British industrialist and legislator, died in Cape Town, South Africa, Nov. 16, 1933. Born Aug. 10, 1866, he attended Harrow and University College, Oxford, and in 1891 was admitted to Lincoln's Inn as a barrister. Six years later he went to South Africa where he served as correspondent for the *London Times*. During 1899-1900 he was representative for the *Morning Post* in St. Petersburg, but the following year returned to Johannesburg as manager of the Consolidated Goldfields of South Africa, Ltd. He became a prominent figure in the mining industry, serving also during 1905-06 as president of the Transvaal Chamber of Mines. On his election in 1907 to the Transvaal Legislative Assembly he made his entry into politics. During 1910-14 he was a member of the House of Assembly of the Union of South Africa and again during 1924-29. Sir Drummond won his greatest distinction, however, as administrator of Southern Rhodesia from 1914 to 1923 and of Northern Rhodesia from 1921 to 1923. He was also a director of the British South Africa Company, under whose administration these protectorates were. In addition to being a Knight of Grace of the Order of St. John, he was created Knight Commander of the Order of St. Michael and St. George in 1917 and Knight of the Grand Cross of the Order of the British Empire in 1923.

Chapman, John Jay, died Nov. 4, 1933.

Chase, Frederick Lincoln. American astronomer, died near Boulder, Colo., Nov. 8, 1933. Born at Boulder, Colo., June 28, 1865, he was educated at the University of Colorado and Yale University, receiving the Ph.D. degree from the latter in 1891. He became assistant astronomer at the Yale Observatory in 1891, serving for three years previous to his retirement in 1915 as acting director. Besides articles in the *Astronomical Journal*, he wrote "Helium Triangulation of the Victoria Comparison Stars" in *Annals of the Cape Observatory* (1897); and for *Transactions of the Yale University Observatory*, "Triangulation of the Principal Stars of the Cluster in Coma Berenices" (1896); "Parallax Investigations on 163 Stars Mainly of Large Proper Motion" (1906); "Parallax Investigations on 35 Selected Stars"

(1910); and "Parallax Investigations on 41 Southern Stars Mainly of Large Proper Motion" (1912).

Chastelain, Emile Louis Marie. French author, died in Paris, Nov. 26, 1933. Born in Montrouge, Department of the Seine, Nov. 25, 1851, he attended the French School in Rome, and after serving as a member of its faculty became secretary and then director of the Practical School of Higher Learning in Paris. He was also conservator of the library of the University of Paris. In addition to being made a Chevalier of the Legion of Honor, he was elected to membership in the Académie des Inscriptions et Belles-Lettres of the Institute de France, and at one time was laureate of that body. His works include *Les Secrets des vieilles reliures* (1906) and *Catalogue des reproductions de manuscrits qui se trouvent à la Bibliothèque de l'Université de Paris* (1910). He edited the *Revue de Philologie* and the *Revue des Bibliothèques*.

Chelmsford, Frederic John Napier Thesiger, 1st Viscount, died Apr. 2, 1933.

Chen, General Chung-Ming. Chinese military leader, died in Hongkong, Sept. 23, 1933. Born at Haifeng, Kwangtung, in 1875, he attended the Kwangtung Law School. After the Revolution he was appointed military governor of Kwangtung, being also appointed in 1913 Minister of War of the Southwestern Military Government. On the orders of Dr. Sun Yat-sen he succeeded in 1920 in overthrowing the Kwangsi militarists in Kwangtung and was rewarded the following year by being made civil governor of the province and commander-in-chief of the Kwangtung forces. In 1922, however, he was dismissed by Sun Yat-sen for insubordination and in retaliation drove out Dr. Sun and his associates from Canton. After meeting with reverses General Chen was forced into hiding at Waichow. He made two attempts to retake Canton but was finally severely routed by Chiang Kai-shek. After 1924 he lived in retirement in Dairen. In August, 1933, however, he was charged with conspiracy against the Nationalist government, by instigating uprisings in Fukien ports, and a warrant was issued for his arrest.

Chesterfield, Edwyn Francis Scudamore-Stanhope, 10th Earl of, British peer, died in London, Jan. 24, 1933. Born Mar. 15, 1854, he was educated at Eton and at Brasenose College, Oxford, and on the death of his father in 1887 succeeded to the title. Under Queen Victoria he served as treasurer to the Royal Household (1892-94) and as captain of the Corps of Gentlemen-at-Arms (1894-95). Under George V he was Lord Steward of the Royal Household (1910-15) and Master of the Horse (1915-22). He was created Knight of the Grand Cross of the Royal Victorian Order in 1911 and Knight of the Order of the Garter in 1914.

Chiara, Edward, died June 21, 1933.

Child, Clement Dexter. American physicist, died in Rochester, N. Y., July 15, 1933. Born at Madison, Ohio, May 15, 1868, he was graduated from the University of Rochester in 1890 and from Cornell University with the Ph.D. degree in 1897. He then attended the Universities of Berlin and Cambridge, and after 1898 was professor of physics at Colgate University. Dr. Child was the author of *Electric Arcs* (1913), which embodied the results of his research in that field. He was also an authority on X-rays and on electrical discharges caused by spraying flames and hot bodies with certain salts.

Childs, Arthur Edward. American electrical engineer and financier, died in Boston, Mass., Nov. 9, 1933. Born in Montreal, Quebec, Canada, Sept. 16, 1869, he was graduated from McGill University in 1888. Embarking upon his career as a wireman with the Canadian General Electric Co., he later became assistant to Dr. Coleman Sellers in the development of the water power of Niagara Falls. Coming to the United States in 1893, he was district engineer for the Westinghouse Electric and Manufacturing Co. of Philadelphia for two years and then removed to Boston where he was manager for the New England district of the Electric Storage Battery Co. In 1896 he organized the Light, Heat and Power Corp. which acquired plants in various cities of the eastern States. He held directorates in the New England Power Association, International Hydro-Electric System, and New England Power Engineering and Service Corp. Among the companies of which Mr. Childs was president were the Columbian National Life Insurance Co., American Investment Securities Co., Hotel Somerset Co., Massachusetts Lighting Companies, and Massachusetts Utilities Investment Co. In connection with the latter he was also chairman of the board of directors.

Clark, Charles W(alker). American copper magnate, died in New York City, Apr. 8, 1933. He was born at Deer Lodge, Mont., Nov. 3, 1871, and was graduated from Yale University in 1893. Thereafter he was identified with the mining interests of his father, William A. Clark (see vol. 5, the NEW INTERNATIONAL ENCYCLOPEDIA), and in 1922 became general manager of the United Verde Copper Co., at Jerome, Ariz., serving after 1921 as president of the corporation. Mr. Clark was an enthusiast in horse racing, and was at one time

president of the Golden Gate Thoroughbred Breeders Association of California.

Clark, L. Pierce. American physician, died in New York City, Dec. 3, 1933. He was born at Ingleisle, N. Y., June 15, 1870, and received his M.D. degree from the medical college of New York University in 1892. The year after his graduation he became consulting neurologist to the Manhattan State Hospital and the Craig Colony for Epileptics, holding both posts until his death. He served also for nearly 40 years as visiting neurologist to the Randalls Island Hospital and the School for Mental Defectives. Dr. Clark was president of the following organizations: New York Neurological Society (1911); New York Psychiatric Society (1916); National Association for the Study of Epilepsy (1919); and American Psychopathological Association (1923). Besides editing *Archives of Psychoanalysis* during 1926-27, he wrote *Clinical Studies in Epilepsy* (1900); *Diagnosis of Organic Nervous Diseases* (with Christian A. Herter, 1907); and *Neurological and Mental Diagnosis* (with A. Ross Diefendorf, 1908). During his latter years Dr. Clark became noted for his psychobiographies, including those of Lincoln, Alexander the Great, and other famous historic characters.

Clearwater, Alphonso Trumbour, died Sept. 23, 1933. Coffey, Robert Calvin. American surgeon, died near Portland, Ore., in an airplane crash, Nov. 9, 1933. He was born in Caldwell Co., N. C., Oct. 20, 1869. On graduating from the Kentucky School of Medicine in Louisville, in 1892, he started his medical practice at Moscow, Idaho, and from there removed to Portland, Ore., in 1900. He established the Dr. Robert C. Coffey Clinic and Hospital serving as its chief surgeon. He was connected in the same capacity with the Portland Surgical Hospital and held the chair of clinical surgery at the medical school of the University of Oregon. In addition to being a past president of the Western Surgical Association and the Pacific Coast Surgical Association, he was vice-president during 1911-12 of the American Medical Association. Dr. Coffey was best known for his contribution toward the eradication of cancer. In the field of abdominal surgery he devised the "hammock operation," and was credited with being the first surgeon to remove experimentally the head of the pancreas, implanting the remaining part into the intestine. He devised also a method of abdominal expansion or contraction. To Binnie's *Regional Surgery*, he contributed the chapter on "Diseases of the Pancreas."

Coffin, William Sloane, died Dec. 16, 1933.

Colgate, Gilbert. American manufacturer, died in New York City, Jan. 5, 1933. He was born at Orange, N. J., Dec. 15, 1858, a grandson of William Colgate who founded the soap works that has since achieved international fame. He was graduated from Yale in 1883, and entered Colgate & Co. In 1919 he became president of the company, and later was chairman of the board. Upon the organization of the Colgate-Palmolive-Peet Co., he was a director of the company. Mr. Colgate had also served as president of the Travelers Aid Society, the Child Welfare Association, the American Waldensian Aid Society, the Presbyterian Union, and the American Perfumers Association.

Collier, James William. American congressman, died in Washington, D. C., Sept. 28, 1933. Born near Vicksburg, Miss., Sept. 26, 1872, he was graduated from the University of Tennessee with the LL.B. degree in 1894. On his admission to the bar he practiced for a short time in Vicksburg. His political career began in 1895 on his election to the Mississippi House of Representatives. From 1899 to 1908 he acted as circuit clerk for Warren Co., resigning this office on his election as Democratic representative from the 8th Mississippi District to the 61st Congress. Through reelection he continued to represent this district until 1933 in each of the succeeding 12 congresses. He originated the bill authorizing 3.2 per cent beer and in 1932 was chairman of the House Ways and Means Committee. At the time of his death he was a member of the United States Tariff Commission.

Collins, Maj.-Gen. Edgar Thomas, U. S. A. American soldier, died in Washington, D. C., Feb. 10, 1933. He was born at Williamsport, Pa., Mar. 7, 1873, and was graduated from the United States Military Academy in 1897. During the Spanish-American War he participated in the engagements of El Caney and San Juan Hill, and at the siege of Santiago, and served in the Philippines throughout the insurrection, receiving his captaincy in 1902. On his graduation from the Army Staff College in 1911, he was assigned as inspector-general to the Wisconsin National Guard, and was transferred to duty in Panama with the 10th Infantry in 1913. During the World War General Collins served as chief of staff, first of the 78th Division at Camp Dix, N. J., then of the 85th Division at Camp Custer, Mich., and later of the 6th Army Corps in France, taking a prominent part in the St. Mihiel and Meuse-Argonne offensives, for which he was awarded the Distinguished Service Medal. In 1924 he was appointed brigadier-general, and in 1932 was promoted to the rank of major-general, having been

previously made assistant chief of staff for operations and training.

Connett, Albert Neumann, died Jan. 1, 1933.

Conway, Robert Seymour, died Sept. 28, 1933.

Cook, Madge Carr, British-American actress, died at Syosset, N. Y., Sept. 20, 1933. She was born in Yorkshire, England, June 28, 1856. After considerable success with a provincial touring company, she made her first London appearance in 1882 in *It's Never Too Late to Mend*, later appearing that year with Madame Ristori, as Lady Annie Burleigh in *Elizabeth*. She again went on tour in 1883, playing the rôle of Ellen in *Pluck* and later appearing with Charles Cartwright and Henry Hamilton in *Mothers* and *No Coronet*. She came to the United States in 1887, her greatest success being as Corsine in *The Beautiful Star* which played at Niblo's Gardens, New York, in 1891. The following year she joined Daniel Frohman's Lyceum stock company and played parts in *Americans Abroad*, *The Guardsmen*, and *A Sheep in Wolf's Clothing*. During 1896-97 Mrs. Cook appeared with T. D. Frawley's stock company in San Francisco and from there went to Honolulu with the same company. In 1900 she returned to New York as Mrs. Hunter in *The Climbers*, and three years later gained her greatest popularity through the rôle of Mrs. Wiggs in *Mrs. Wiggs of the Cabbage Patch*. She continued to appear in this play on the New York and London stage until shortly before her retirement in 1909. Her last rôle was that of Mrs. Jim in *If I Had Money*. Her first husband was Charles Robson, and her second, Augustus Cook.

Cook, William Wallace, American author, died July 20, 1933, at Marshall, Mich., where he was born Apr. 11, 1867. He received his education in the schools of Ottawa, Kan., Lafayette, Ind., and Cleveland, Ohio. Prior to 1900 he had been court reporter in Detroit and free lance contributor to various newspapers and magazines. His publications include mostly adventure stories for boys. They are *His Friend the Enemy* (1903); *Wilbur's Dan* (1904); *A Quarter to Four* (1909); *New Fiction Series* (1909-11); *Around the World in Eighty Hours* (1925); *As the Sparks Fly Upward* (1925-26); and *The Skylark* (1925-26). His *Plotto A New Method of Plot Suggestion for Writers of Creative Fiction* (1927) contained 1800 skeleton plots for stories.

Coolidge, Calvin, died Jan. 5, 1933.

Coolidge, Cora Helen, American educator, died in Pittsburgh, Pa., Mar. 12, 1933. She was born at Westminster, Mass., and was graduated from Smith College in 1892, studying later at the Universities of Chicago and Göttingen. From 1906 to 1917 Dr. Coolidge was dean of the Pennsylvania College for Women, returning in 1922 on her election as president. In the five-year interval she served in Washington as national chairman of the Bureau of Occupations.

Corbett, James J., died Feb. 18, 1933.

Correns, Karl, died Feb. 15, 1933.

Costa, Pasquale Mario, Italian composer, died in Monte Carlo, Sept. 27, 1933. He was born at Taranto, Italy, July 26, 1856, and attended the Naples Conservatory. During the '80s he removed to London where he soon became recognized as a composer of chamber music and popular songs, mostly in the Neapolitan dialect. Among these were *Luna Nova*, *Oje Carulli*, *Serenata Medievale*, *A Napolitana*, *Catalani*, *Un organetto suona per la vie* and *Scetate*. His greatest success, however, was the pantomime *L'Histoire d'un Pierrot*, produced in Paris in 1893 and reproduced in musical centres in all parts of the world. He wrote also three operettas. *Il Capitano Fracassa* (produced in Turin in 1909); *Posillipo* (in Rome, 1921); and *Scugnizza* (in Rome, 1923). During his declining years he made his home in Rome.

Cotton, Henry Andrews, died May 8, 1933.

Courtenay, William, American actor, died at Rye, N. Y., Apr. 20, 1933. He was born in Worcester, Mass., June 19, 1875, and attended Holy Cross College. He began his stage career in 1892, attracting notice after 1896 as a member of Richard Mansfield's company in such parts as Lorenzo in *The Merchant of Venice*, the Rev. Mr. Brudenell in *The Devil's Disciple*, and Reginald Courtney in *Beau Brummell*. After supporting Virginia Harned (whom he later married) in *Iris*, *Oamille*, and *The Light That Lies in Woman's Eyes*, he became recognized as one of the best portrayals of romantic rôles. Outstanding among these were the Duke of Charmance in *Arsène Lupin* (1909), Stephen Baird in *Ready Money* (1912), and Bishop Armstrong in *Romance* (1913). Mr. Courtenay's later engagements were in *Under Cover*, 1914, *Under Fire*, 1915; *Pals First*, 1917; *General Post*, 1917; *The Maid of the Mountains*, 1918; *Cuppy Rucks*, 1919; *Civilian Clothes*, 1920; *Honors Are Even*, 1921; and *The Harem*, 1924.

Coward, Edward Fales, American playwright, died at Oteora Park, N. Y., Aug. 28, 1933. Born in New York City, Sept. 6, 1862, he attended the Lyons Collegiate Institute and was graduated from Columbia with the LL.B. degree in 1883. During a long period of active interest in amateur dramatics he played more

than 200 parts. For two years he was dramatic editor and critic of the *New York Evening Sun*, and for more than six years, of the *New York World*. Among Mr. Coward's 80 acted plays and sketches were *Hearts Are Trumps*, a comedy, *King Stephen*, an historical drama in seven tableaux completed from John Keats' fragment, and *Klytemnestra*.

Cowdray, Weetman Harold Miller Pearson, 2nd Viscount, of Midhurst, British industrialist, died in London, Oct. 5, 1933. Born Apr. 18, 1882, he attended Rugby and Christ Church, Oxford, and from 1906 to 1918 was Liberal representative for the Eye Division of Suffolk in the House of Commons. He was also owner of the *Westminster Gazette*, the organ of the Liberal party, until its merger with the *Daily News* in 1928. On the death of his father in 1927 he not only succeeded to the title but acquired a controlling interest in S. Pearson and Son, Ltd., the public utility contracting firm founded by his great-grandfather in 1875.

Craib, William Grant, British educator, died at Kew, Surrey, England, Sept. 1, 1933. Born Mar. 10, 1882, he attended the University of Aberdeen and then went to India as officiating curator of the herbarium and library of the Royal Botanic Garden in Calcutta. On his return he was attached to the Royal Gardens at Kew as assistant for India. He was later called to the University of Edinburgh as lecturer on forest botany and Indian forest trees and at the time of his death held the Regius Professorship of Botany in the University of Aberdeen. He was also curator of the Cruickshank Botanic Garden at Old Aberdeen and a fellow of the Linnean Society, of the Royal Horticultural Society, and of the Royal Society of Edinburgh. He published several monographs on the flora of Siam, India, and southwest China.

Craig, Sir James, died July 12, 1933.

Crawley, Edwin Schofield, American educator, died at Chestnut Hill, Philadelphia, Pa., Oct. 17, 1933. Born in Philadelphia, July 31, 1862, he attended the University of Pennsylvania from which he received the B.S. degree in 1882 and the Ph.D. degree 10 years later. After serving as instructor in civil engineering at that institution during 1882-85, he was appointed instructor in mathematics in 1885, assistant professor in 1889 and Thomas A. Scott professor of mathematics in 1899, holding the latter chair until his retirement in 1933. Dr. Crawley's publications include *Elements of Plane and Spherical Trigonometry* (1889, 1896, 1907, 1914); *Tables of Logarithms* (1899); *Short Course in Plane and Spherical Trigonometry* (1902); *One Thousand Exercises in Trigonometry* (1914); *Analytic Geometry* (1918), and *Trigonometry* (1922). In the preparation of the latter two he was assisted by Prof. H. B. Evans.

Crim, John William Henry, died July 3, 1933.

Cruce, Lee, American lawyer and administrator, died in Los Angeles, Calif., Jan. 16, 1933. He was born in Crittenden Co., Ky., July 8, 1863, and attended Vanderbilt University. Admitted to the bar in 1887, he practiced in Ardmore, Indian Territory (later Oklahoma), until 1901 and then became associated with the Ardmore National Bank, of which he was successively cashier and president. In 1910 he was elected Governor of Oklahoma on the Democratic ticket serving until 1915. He was one of the first of several gubernatorial executives of the Southwest to oppose capital punishment.

Cruppi, Jean, died Oct. 17, 1933.

Cuno, (Carl Joseph) Wilhelm, died Jan. 3, 1933.

Currie, Sir Arthur William, died Nov. 30, 1933.

Curtis, Cyrus H(erman) K(otzschmar), died June 7, 1933.

Custer, Elizabeth Bacon, American writer, died in New York City, Apr. 4, 1933. She was born at Monroe, Mich., Apr. 6, 1842, and married General George A. Custer, famous Indian fighter, in 1864. She accompanied her husband through the closing campaigns of the Civil War and in many of his expeditions against the Indians. After his death in the battle of Little Big Horn in 1876, she wrote in defense of his memory, *Boots and Saddles, or Life with General Custer in Dakota* (1885); *Tenting on the Plains* (1887); and *Following the Gun* (1890).

Da Costa, (John) Chalmers, American surgeon, died in Philadelphia, Pa., May 16, 1933. He was born in Philadelphia, Nov. 15, 1863, was graduated from the Towne Scientific School of the University of Pennsylvania in 1882 and from Jefferson Medical College in 1885. In addition to his connection with several Philadelphia hospitals he served at different times on the surgical faculty of Jefferson Medical College, becoming in 1901 the first Samuel D. Gross professor of surgery. He was also after 1895, surgeon to the Philadelphia Hospital and after 1896 to St. Joseph's Hospital, and held the rank of Commander in the U. S. Naval Reserve. Dr. Da Costa's demonstrations of surgical practice and his addresses to his students received much attention in the medical field and attracted prominent surgeons of the world to see and to listen. His *Manual of Modern Surgery*, first written in 1895 and revised through ten editions to 1925, has been the authoritative work on the subject.

Dale, Porter Hinman, died Oct. 6, 1933.

D'Alte, Joseph Francis de Horta Michado de Franca, Viscount, Portuguese diplomat, died at Bar Harbor, Me., Oct. 3, 1933. Following in the steps of his brother, father, and grandfather before him, he chose a diplomatic career, serving first as Assistant Secretary of Foreign Affairs for Portugal in 1898. He assumed the title viscount some time before he came to the United States in 1902 in the capacity of Minister from Portugal. He retained the latter post for 31 years, the longest term of any envoy. On his resignation in May, 1933, he was made honorary Counselor of the Portuguese Legation.

Dalton, Charles, Canadian administrator, died at Charlottetown, P. E. I., Dec. 9, 1933. Born June 9, 1850, he attended Tighish Academy and was successively engaged as a farmer, merchant, and finally breeder of foxes, organizing in 1912 the Charles Dalton Silver-Black Fox Co. Elected to the Legislative Assembly in 1911 as representative for the First District, he served also in the government as Minister without Portfolio. He was reelected for the term 1915-19. In 1930 he was appointed Lieutenant-Governor of the province. A liberal donor to St. Dunstan's College and other Roman Catholic institutions, he was made in 1917 Knight Commander of the Order of St. Gregory the Great.

Dame, Frank Libby, American electrical engineer and public utility executive, died at Garden City, L. I., N. Y., Dec. 30, 1933. He was born in Boston, Mass., Mar. 21, 1867, and was graduated from the Massachusetts Institute of Technology in 1889. He began his career as engineer with the Portland (Ore.) office of the Westinghouse Co. During 1891-92 he was superintendent of the Vancouver (B. C.) Railway and Light Co., and during 1892-93 engineer with the local office of the General Electric Co. After having charge of the railway property of Tacoma, Wash., from 1893 to 1901, he became engineer for the General Electric Co. there. In 1909, on his election as vice-president of the Electric Bond and Share Co., he entered the financial field. He served until 1924 as an official of various public utility companies, including the Central States Electric Corp. Mr. Dame became president of the North American Co., in 1921, serving also during 1932-33 as chairman of the executive committee. At the time of his death he was chairman of the board of the Cleveland Electric Illuminating Co., North American Edison Co., and Wired Radio, Inc.; president of the Edison Securities Co., North American Utilities Securities Corp., and Western Power Corp.; and vice-president of the Union Electric Light and Power Co.

Dana, Richard Henry, American architect, died in New York City, Nov. 29, 1933. Born in Cambridge, Mass., Sept. 1, 1879, a descendant of the author of *Two Years before the Mast*, he was graduated from Harvard University in 1901 and from Columbia University in 1904, studying also during the next two years at the Ecole des Beaux Arts in Paris. Establishing his practice in New York City in 1906, he was associated until 1921 with Henry Murphy, thereafter pursuing the profession alone. During 1908-16 he lectured at the School of Architecture of Yale University. Among the buildings which Mr. Dana designed were the Loomis Institute at Windsor, Conn., the Dalton School in New York City, St. Margaret's School in Waterbury, Conn., and the Christian Science Church in Cambridge, Mass. He was also an authority on colonial architecture, contributing to such works as *Great Georgian Houses of America* (1933).

Davis, Arthur Powell, died Aug. 7, 1933.

Davis, Charles H(arold), died Aug. 5, 1933.

Davis, Stephen Brooks, died Feb. 24, 1933.

Dawson, Brig.-Gen. Sir Douglas (Frederick Rawdon), British soldier and diplomat, died in London, Jan. 19, 1933, where he was born Apr. 25, 1854. Educated at Eton, he joined the Coldstream Guards in 1874 and later attended the Army Staff College, being assigned to special service in the Egyptian campaign of 1882-83. He participated with the Mounted Infantry in the battles of Mahuta, Kassassin (where his horse was shot from under him), and Tel-el-Kebir and was in command of the forces in the capture of Cairo. In 1884 he served with the column, commanded by Sir Herbert Stewart, which was sent to the relief of Gordon at Khartum, and three years later received the Jubilee Medal for his bravery on that occasion. Entering the diplomatic service in 1890, Sir Douglas acted until 1901 as military attaché in various European capitals, including Vienna, Bucharest, Belgrade, Paris, Brussels, and Berne. In 1903 he became attached to the Royal Household as Master of Ceremonies and in 1907 became comptroller in the Lord Chamberlain's department. During the World War he was inspector of vulnerable points at the general headquarters of the Horse Guards. From 1920 to 1924 he was State Chamberlain. In addition to being a Knight Commander of the Bath he served as secretary to that Order and to the Order of the Garter. He wrote *A Soldier Diplomat* (1927).

Day, Rear Admiral Benjamin Franklin, U. S. N., Ret. American naval officer, died at Buena Vista, Va., July 3, 1933. Born at Plymouth, Ohio, Jan. 16, 1841, he at-

tended the United States Naval Academy from 1858 to 1861 and served during the Civil War with the West Gulf (1862-64) and North Atlantic blockading squadrons (1864-65), attaining the rank of lieutenant commander at its close. He was assigned to the *Tuscarora* (1865-68), *Contocook* (1868-70), *Ticonderoga* (1871), and *Congress* (1871-74). On being promoted to commander in 1876 he took charge of the *Manhattan*. He was stationed at the Norfolk Navy Yard during 1879-80 and served as lighthouse inspector of the eighth district during 1881-84. He then became commander of the *Mohican*. While on shore duty at the Boston Navy Yard during 1889-92 he was made captain. The last ships that he commanded were the *Boston* (1892-93) and the *Baltimore* (1894-96). During 1896-97 Admiral Day was president of the steel board, which played an important part in modernizing the navy, and during 1897-1900 was a member of the Naval Examining and Retiring boards. Commissioned rear admiral in 1899, he retired from active service the following year.

De Angella, Jefferson, died Mar. 20, 1933.

Decker, Rear Admiral Benton Clark, U. S. N., Ret. American naval officer, died at Riverside, Calif., Mar. 22, 1933. Born at Lima, N. Y., Dec. 28, 1867, he was graduated from the United States Naval Academy in 1887. He was appointed an ensign in 1889 and was promoted through the grades, reaching the rank of temporary rear admiral in 1918. During the World War he acted as naval attaché at Madrid, and was also in charge of the Intelligence Service of the United States Embassy. In 1919 he refused the award of the Navy Cross, saying it was not sufficient recognition for his service in counteracting German propaganda and in restraining Spain from entering the war against the Allies. Previous to his retirement in 1923, Admiral Decker had been stationed at the 1st Naval District in Boston. Congress conferred the regular rank of rear admiral on him in 1930.

Dering, Sir Herbert Guy, British diplomat, died at Tonbridge, Kent, May 29, 1933. Born Nov. 13, 1867, he attended Eton and in 1892 entered the diplomatic service as attaché at the British embassy in Berlin. Four years later he was transferred to Constantinople as third secretary and from there went to Peking in 1899 as second secretary, receiving a medal and clasp for his services in defending the British Legation during the Boxer Rebellion. Assigned to Washington in 1902, he was transferred from there to Stockholm in 1905 where he became first secretary of the British embassy. Advanced to diplomatic counselor in 1909, Sir Herbert served in that capacity at the British embassy in Rome from 1911 to 1915. While in Rome he represented Great Britain and her dominions on the Permanent Committee of the International Institute of Agriculture. After serving as Minister to Siam from 1915 to 1919, he became High Commissioner in Bulgaria for the year 1919-20 and served thereafter until his retirement from the diplomatic service in 1926 as Minister to Rumania. He received the Grand Cross of the Order of the Star of Rumania. In addition to being made a member of the Royal Victorian Order in 1908, he was created a Knight Commander of St. Michael and St. George in 1917 and a Knight Commander of the Indian Empire in 1919.

Dewey, Richard (Smith), American psychiatrist, died at La Canada, Calif., Aug. 4, 1933. Born at Forestville, N. Y., Dec. 6, 1845, he was graduated with the M. D. degree from the University of Michigan in 1869. During the Franco-Prussian War, he was a volunteer assistant surgeon at the field hospital at Pont à Mousson, France, and at the Reserve Hospital, Hesse-Cassel, Germany. Part of 1871 he spent in study under Virchow in Berlin. On his return to the United States in 1872 he was appointed assistant physician at the State Hospital for the Insane in Elgin, Ill. While medical superintendent of the State Hospital at Kankakee, Ill., during 1879-93 he introduced the detached ward or cottage plan in housing the insane. From 1895 to 1921 Dr. Dewey was head of the Milwaukee Sanitarium. He held also the chair of mental and nervous diseases at the Chicago Post-Graduate Medical School from 1893 to 1909. In 1896 he was president of the American Medico-Psychological Society (now the American Psychiatric Association).

Dewey, Stoddard, American newspaper correspondent, died in Paris, France, July 30, 1933. He was born in New York City, Apr. 20, 1853, and received his education at schools in France and Belgium. During the '80s he wrote on Italian matters for the *Speaker*, a London Liberal weekly later known as the *Nation*, and contributed to the *Westminster Review*, the *Atlantic Monthly*, and the *New York Tribune*. After 1892 he served as Paris correspondent to the *New York Evening Post* and the *Nation*, and after 1895 wrote on foreign financial matters for the *New York Journal of Commerce*. He served in 1892 as secretary to the United States Treasury Commission to France, Spain, and Portugal, and in 1897 compiled, under the title of *Tarif Relations between France and the United States*, statistical tables which were published in English and French and dis-

tributed to Congress and the French Parliament by the American Chamber of Commerce of Paris. In 1900 he made the necessary preparatory arrangements for 105 international congresses of learned societies which met in Paris and the following year received in recognition of his services the rosette of a Chevalier of the Legion of Honor. He wrote *Four French Adventurers* (1912) and lectured hundreds of times in camps of the American Expeditionary Forces during the World War. He was president of the Anglo-American Press Association in Paris in 1920 and in 1932 was raised to the rank of Officer of the Legion of Honor.

De Windt, Harry, died Dec. 1, 1933.

Dickens, Sir Henry Fielding, British jurist, died in London, Dec. 21, 1933. Born Jan. 16, 1849, a son of Charles Dickens, the novelist, he attended Trinity Hall, Cambridge, and in 1873 was admitted to the bar. His early practice was confined to the Kent Sessions and the Home Circuit. On his appointment as King's Counsel in 1892 he was made Recorder of Maidstone. In 1899 he removed to London where he was a bencher of the Inner Temple and from 1917 to 1932, Common Sergeant of the City of London. Knighthood was conferred on him in 1922. Sir Henry published *Memoirs of My Father* (1928), a delectable collection of anecdotes. After his death, his family decided to allow Charles Dickens's unpublished *Life of Our Lord*, which he had written for his own children, to be given to the children of the world.

Dickey, Paul, American playwright, died in New York City, Jan. 8, 1933. Born in Chicago, Ill. in 1884, he attended the University of Michigan. He began his career as an actor, appearing first with a Chicago vaudeville company, and later with Robert Edson in *Strongheart* and Henrietta Crossman in *Sham*. The World War interrupted his career and he served as a lieutenant in the air force, being assigned to a bombing squadron. On his return he served as stage director for the productions *Rose Marie* and *The Shannons of Broadway*. With Charles Goddard he wrote *The Ghost Breaker* (1913); *Miss Information* (1915); and *The Broken Wing* (1920), and with Mann Page *The Backslapper* (1924). After 1927 he spent most of his time in Hollywood as a scenario writer.

Dickie, James Francis, American clergyman and author, died in Detroit, Mich., May 28, 1933. Born at Kilmarnock, Scotland, Nov. 13, 1848, he was educated at Edinburgh and Berlin Universities. Ordained to the Presbyterian ministry in 1869, he served for two years as assistant pastor at St. Thomas' Church, Greenock, and then migrated to Canada where for eight years he was pastor of St. Andrew's Church, Berlin. In 1879 he was called to the Central Presbyterian Church of Detroit, Mich., where from 1887 to 1894 he was also lecturer on church history at the University of Michigan. His last pastorate was that of the American and British Union Church in Berlin, Germany. The edifice of the latter church was built with the funds which Dr. Dickie collected in America. On his retirement in 1909 he settled in Detroit. Dr. Dickie's publications include *Oberammergau and the Passion Play* (1900); *John Wüther- spoon, Patriot* (1902); *In the Kaiser's Capital* (1910); *Picturesque Germany* (1911); and *In the Balearic Isles* (1914).

Dillon, Emile Joseph, died June 9, 1933.

Dixon, James Main, died Sept. 27, 1933.

Doak, William Nuckles, died Oct. 23, 1933.

Dodd, Lee Wilson, died May 16, 1933.

Doddson, John Milton, American physician and editor, died in Chicago, Ill., Aug. 15, 1933. Born in Berlin, Wis., Feb. 17, 1859, he was graduated from the University of Wisconsin in 1880 and with the M.D. degree from Rush Medical College, Chicago, in 1882 and Jefferson Medical College, Philadelphia, in 1883. He also took a post graduate course in medicine at Berlin in 1896. In addition to his practice in Chicago he was connected with the Rush Medical College as lecturer and demonstrator of anatomy (1889-92); as professor of physiology and demonstrator of anatomy (1892-98); and after 1899 as professor of pediatrics. He held also the post of dean at Rush Medical College and the University of Chicago from 1901 to 1924. Dr. Doddson was director of the Bureau of Health and Public Instruction of the American Medical Association; a major in the Medical Corps of the United States Army and medical aide to the governor of Illinois (1918-19); and editor for many years of *Hygien*, the health magazine.

Donald, Sir Robert, died Feb. 17, 1933.

Dougherty, Raymond Philip, American Assyriologist, died suddenly in New Haven, Conn., July 13, 1933. Born at Lebanon, Pa., Aug. 5, 1877, he was graduated from Lebanon Valley College, in 1897. After serving as principal of the normal department of Leander Clark College, Toledo, Iowa, he was ordained in 1904 to the ministry of the United Brethren in Christ and for the next 10 years was a missionary for that denomination in its West African district. In addition to serving as principal of the Albert Academy in Freetown, Sierra Leone, he acted as American vice consul there for two terms

(1905-06 and 1912-18). On his return to the United States he studied for his Ph.D. degree at Yale University and in 1918 was appointed professor of Biblical literature at Goucher College. After 1926 Dr. Dougherty held the William M. Laffan chair of Assyriology and Babylonian literature at Yale University. He acted also during 1925-26 as annual professor at the American Schools of Oriental Research in Jerusalem and Baghdad, conducting during the latter year an archaeological survey in southern Babylonia (Iraq). He was curator of the Yale Babylonia collection, a member of the executive committee of the American Schools of Oriental Research, and chairman of the committee on Mediterranean antiquities of the American Council of Learned Societies. His publications include *Records from Erech, Time of Nabonidus* (1920); *The Shirkutu of Babylonian Deities* (1923); *Archives from Erech, Time of Nebuchadnezzar and Nabonidus* (1923); *Cuneiform Parallels to Solomon's Provisioning System* (1925); and *Nabonidus and Belshazzar* (1929).

Drake, Durant, died Nov. 25, 1933.

Duca, Ion Gheorghe, died Dec. 29, 1933.

Duff, Admiral Sir Alexander (Ludovic), British naval officer, died in London, Nov. 22, 1933. Born Feb. 20, 1862, he entered the navy about 1882 and in 1884 was made lieutenant of the royal yacht. Promoted through the ranks, he became assistant to the Third Sea Lord in 1905 and from 1911 to 1914 held the post of director of naval mobilization on the Admiralty War Staff. Assigned to the command of the Fourth Battle Squadron with the rank of rear admiral, he served with distinction at the battle of Jutland Bank in 1916. The following year he was appointed director of the Admiralty's anti-submarine division, which played a skillful part in averting further submarine destruction and in successfully bringing into port ships laden with food and munitions. During 1918-19 he acted as assistant chief of the Naval Staff, holding the rank of vice admiral and in 1921 was promoted to the rank of admiral. After the War Admiral Duff was in charge of the China squadron for three years as commander-in-chief. He retired in 1925. Besides being created Companion of the Bath in 1916, he was dubbed Knight Commander of the Bath in 1918, Knight Commander of the Royal Victorian Order in 1922; Knight of the Grand Cross of the Order of the British Empire in 1924; and Knight of the Grand Cross of the Order of the Bath in 1926. Among the decorations which he received from other countries were commander of the Legion of Honor (France); St. Stanislas, first class (Russia); Striped Tiger, first class (China); Rising Sun, second class (Japan); and the Distinguished Service Medal (U.S.A.).

Duffy, James O. G., American editor, lawyer, and author, died in Wilmington, Del., Jan. 9, 1933. He was born in Strabane, County Tyrone, Ireland, Jan. 4, 1864. After coming to the United States he began his newspaper career with the *Philadelphia Press*, serving successively as Sunday editor (1891-96); dramatic editor and critic (1893-1911); literary editor and principal reviewer (1896-1911), associate editor (1911-13); and dramatic and associate editor (1914-20). He was connected with the *Philadelphia Evening Bulletin* in the capacity of editorial writer after 1920. Admitted to the Pennsylvania bar in 1897 following his graduation from the law school of the University of Pennsylvania, he became general counsel for an allied group of corporations in 1900 and acted as consulting counsel from 1913 to 1918. Mr. Duffy was the author of the novels *Glass and Gold* (1901) and *Sting of Death* (1916), and the plays *Hohenzollern*, in collaboration with Cyrus Townsend Brady (1902), *The Golden Fleece* (1913); and *Brenda's Elopement* (1914).

Duke, Victor LeRoy, American educator, died at Redlands, Calif., Mar. 3, 1933. Born at Rosetta, Henderson Co., Ill., Feb. 11, 1874, he attended Shurtleff College, Alton, Ill., where following his graduation in 1897 he taught mathematics. In 1909 he accepted a professorship of mathematics at the newly-founded University of Redlands, and during 1912-15 also acted as dean of the liberal arts college. In 1915 he was elected the university's president. He served as president of the Southern California Baptist Convention during 1920-21 and of the board of education of the Northern Baptist Convention during 1928-30.

Dunn, The Most Rev. John Joseph, American Roman Catholic bishop, died Aug. 3, 1933, in New York City where he was born Sept. 1, 1870. He was graduated from St. Charles College, Ellicott City, Md., in 1890 and from St. Joseph's Provincial Seminary, Troy, N. Y., in 1896. Following his ordination in 1896 he served as curate at the Church of St. John the Evangelist in New York City. In 1904 he was appointed director of the New York branch of the Society for the Propagation of the Faith on Cardinal Farley's elevation to the archbishopric. Through all his promotions in ecclesiastical office, foreign missions remained a paramount issue with him. In 1914 he was made Chancellor, and seven years later was consecrated auxiliary bishop of the Archdiocese of New

York. On being named titular Bishop of Camuliana he was transferred to the Church of the Annunciation as irremovable rector. After 1922 he served as treasurer of the archdiocese, and as vice-president of the Catholic Charities of New York City. He was also the supreme spiritual director of the Holy Name Society and grand prior of the American chapter of the Knights of the Holy Sepulchre.

Dunwoody, Brig.-Gen. Henry Harrison Chase, U. S. A., Ret., died Jan. 1, 1933.

Easterbrook, Edmund Pepperell. American army chaplain, died at Fortress Monroe, Va., Jan. 18, 1933. Born at Torquay, England, Dec. 22, 1865, he attended the public college there and on coming to the United States studied at Drew Theological Seminary. Ordained to the ministry of the Methodist Episcopal Church in 1889, he was pastor for the next ten years of several Methodist Episcopal Churches in the Troy (N. Y.) Conference. During the Spanish-American War he served as chaplain with the United States Army and, on receiving a commission in the regular Army in 1900, was transferred to duty in the Philippines where he remained until ordered to join the Cuban Army of Occupation in 1905. During the World War he was detailed to a regiment of the United States Artillery and from 1919 to 1923 was senior chaplain of the American Forces in Germany. On his return to the United States Colonel Easterbrook was stationed at Fortress Monroe, Va., during 1923-27 and at Fort Sam Houston, Texas, during 1927-28. Appointed chief of chaplains of the United States Army, he served as such until his retirement in 1930. He was a member of the French Legion of Honor.

Eaton, James Shirley. American railway specialist, died at Warner, N. H., Aug. 13, 1933. Born in Nashville, Tenn., Aug. 1, 1868, he was graduated from Marietta College in 1889 and for several years was traveling auditor for the Southern Railway. He served as expert in the adaptation of the electric tabulating machine for railroad accounting, and from 1899 to 1903 was statistician for the Lehigh Valley Railroad. He then served for two years as railroad editor of the *Wall Street Journal* and was lecturer on railway transportation at New York University and Dartmouth College. During 1917-20 he was examiner for the Federal Trade Commission and during 1921-22 statistician and economist for the Bureau of Economics and Engineering of the National Association of the Owners of Railway Securities. He wrote *Railroad Operations* (1900); *Education for Efficiency in Railroad Service* (1910); and *Railroad Expense Handbook* (1911).

Edwards, William Franklin. American scientist, died at Englewood, N. J., Jan. 12, 1933. Born at Rock Island, Ill., Feb. 13, 1858, he was graduated from the University of Michigan in 1880. After serving for five years as instructor in chemistry at that institution, he was called to Washington University in St. Louis as professor of physics and chemistry. In 1897 he was elected president of the University of Washington in Seattle, continuing his research work, however, as professor of metallurgy. In 1900 he retired from the educational field to serve as director of research for the Guggenheim Foundation. He lectured on chemistry at Rice Institute during 1912-16 and then became director of research of the laboratory of four great automobile concerns in Detroit where steps were taken toward the development of high-strength alloy steels. After 1919 Dr. Edwards was director of research for the United States Testing Co., Inc., of New York. In this connection he conducted courses of study in rayon and silk testing.

Eland, John Shenton. British-American painter, died in New York City, Jan. 7, 1933. Born at Market Harborough, England, Mar. 4, 1872, he received his art education at the Royal Academy Schools and following the acceptance of his first picture in 1894 was an annual exhibitor at the Royal Academy. Previous to settling in the United States in 1914 he was for 11 years (1897-1908) principal of the Henry Blackburn School of Drawing for the Press. He was best known, however, for his portraits, among which were those of Princess Victoria of Schleswig-Holstein, Princess de Braganza, Cardinal Gibbons, the Duke of Hamilton, Mrs. Andrew Carnegie, and other prominent members of British, Continental and American society. His favorite medium was pastel (colored crayon on vellum), which he was said to have been the first to introduce. As an etcher, Mr. Eland won fame with the series entitled "Arcadian Rhythms." He wrote and illustrated *Flower Legends for Children* and *Willy Wind and Jock and the Cheeses*. Previous to his death he prepared *The Younger Generation* which contained reproductions of some of his portraits of children.

Elkin, William Lewis. American astronomer, died in New Haven, Conn., May 30, 1933. He was born in New Orleans, La., Apr. 29, 1855, and was educated at the Royal Polytechnic School in Stuttgart, Germany, and at the University of Strassburg, receiving his Ph.D. degree from the latter in 1880. During 1881-83 he was associated with Sir Daniel Gill at the Royal Observatory, Cape of Good Hope, investigating the parallaxes of southern stars. This work was supplemented in 1887-88 by

his determination, while astronomer of the Yale University, of the parallaxes of a number of the brightest northern stars. From 1896 to 1910 he was director of the Yale Observatory, retiring as emeritus in the latter year. Dr. Elkin received the Lalande prize from the Paris Academy of Sciences in 1908. He was said to have been the first astronomer to photograph meteor showers.

Ellerman, Sir John Reeves. British shipping magnate, died at Dieppe, France, July 17, 1933. Born May 15, 1862, he established a successful practice as an accountant but during the early '90s became interested in shipping, joining the firm of Frederick Leyland and Co. In 1893 he became chairman of the board of directors of the Leyland line and previous to the sale of its Atlantic services to the International Mercantile Marine in 1902 was its principal owner. He retained, however, control of its Mediterranean services and later acquired the Papsayanni, Westcott, Lawrance, and Wilson lines. At the time of his death he was controlling owner of the Ellerman and Bucknall lines, engaged in world-wide shipping, and of the City and Hall lines, whose routes were via the Mediterranean to Egypt and India. These lines represented a gross tonnage of 1,500,000 tons. Sir John was also owner of considerable real estate in London and at one time held controlling interests in numerous newspapers, including the *London Times* and Associated Newspapers, Ltd., and in the "quality" group of British periodicals, which numbered the *Illustrated London News*, *The Sketch*, *The Sphere*, *The Tatler*, and *Eve*. In addition to being created a baronet in 1905, he was made a Companion of Honor in 1921. He was reputed to be the richest man in England.

Emmons, Charles Demoss. American transportation official, died in New York City, Feb. 2, 1933. Born at Lafayette, Ind., Feb. 13, 1871, he was graduated from the Western University of Pennsylvania (now the University of Pittsburgh) with the C.E. degree in 1892. He began his career in the engineering department of the Pennsylvania Railroad, working there until 1901 when he became general superintendent of the Lafayette (Ind.) Street Railway Co. After 1903 he served successively as general manager of the Fort Wayne and Wabash Valley Street Railway Co. (1903-11) and of the Chicago, South Ben and Northern Indiana Railway Co. (1912-16), second vice-president and general manager of the Boston and Worcester Street Railway Co. (1916-18), and general manager of the Boston Elevated Railway Co. (1918-19). In 1919 he became president of the United Railways and Electric Co. of Baltimore, also holding the office of president of the Baltimore Coach Co., of the Baltimore, Halethorpe and Elkridge Railway Co., and of the Maryland Electric Railway. He was president after 1930 of the Hudson and Manhattan Railroad Co., between New York City and Hoboken, Jersey City, and Newark, N. J. During 1922-23 he was president of the American Electric Railway Association.

Erskine, Albert Russel. American automobile executive, died suddenly in South Bend, Ind., July 1, 1933. Born at Huntsville, Ala., Jan. 24, 1871, he received his education in public and private schools. He was connected with the American Cotton Co. as general auditor and manager from 1898 to 1904, first in its St. Louis office and then in its New York office. He was then elected treasurer of the Yale and Towne Co., manufacturers of locks, and in 1910 became vice-president of the Underwood Typewriter Co. The following year he joined the Studebaker Corp. as treasurer and member of the executive committee, rising to the vice-presidency in 1913 and the presidency in 1915. Mr. Erskine was also chairman of the board and president of the Pierce Arrow Motor Car Co.; director of the Federal Reserve Bank of the Seventh District (Chicago) during 1918-22; and president of the board of lay trustees of the University of Notre Dame.

Ewart, John S(kirving), died Feb. 21, 1933.

Fairchild, Blair, died Apr. 23, 1933.

Fairchild, Charles G. American educator, died at Roslyn Heights, L. I., N. Y., Jan. 20, 1933. Born at Berea, Ky., about 1845, he began his studies at Oberlin College, but left there on the outbreak of the Civil War to serve with the commissary department of the Union Army. After the war he resumed his studies at Oberlin and on his graduation became an instructor in Greek and Latin at Berea College, of which his father, Henry F. Fairchild, was president. Dr. Fairchild was called to Oberlin in 1870 as professor of physics and chemistry, holding the chair until his election in 1895 as president of Rollins College. In 1899 he returned to Oberlin as financial secretary in which position he remained until his retirement in 1927. He was a Congregational minister.

Farnam, Henry Walcott, died Sept. 5, 1933.

Farrington, Oliver Cummings, died Nov. 2, 1933.

Farrington, Wallace Rider, died Oct. 6, 1933.

Feisal, King of Iraq, died Sept. 8, 1933.

Fleming, Robert. British financier, died at Bridge of Orchy, Argyllshire, Scotland, July 31, 1933. Born in 1845, he began his career as a clerk in the employ of the Dundee banking firm of Baxter Bros. Sent to the

United States in 1870 on a business trip, he returned with the firm conviction that, due to the depreciation of United States currency as a result of the Civil War, that country was an important field for the investment of British capital. After serving as secretary of the Scottish American Investment Trust, he organized in 1888 the Investment Trust Corp. and the firm of Robert Fleming and Co., merchant bankers, 21 years later. Mainly due to his support the Atcheson, Topeka, and Santa Fe and the Denver and Rio Grande Railroads in the United States were reconstructed and the Cuba Railroad was completed. The Anglo-Persian Oil Co. was another important industrial development in which his firm was interested. Mr. Fleming served on the Financial Facilities Committee during the World War and was well known for his philanthropies.

Fletcher, Sir Walter Morley, died June 7, 1933.

Follett, Mary (Parker), American author and civic leader, died in Boston, Mass., Dec. 18, 1933. Born at Quincy, Mass., she was graduated from Radcliffe College in 1898 and studied also at the University of Paris and Newnham College, England. From 1900 to 1916 she was engaged principally in vocational guidance and civic education, establishing in the capacity of vice-president of the National Community Centre Association, social centres in Boston school buildings which were later administered by the city. She also represented the public on the Minimum Wage Commission in Massachusetts. Miss Follett wrote *The Speaker of the House of Representatives* (1896), *The New State* (1918), and *Creative Experience* (1924), the latter being considered one of the most stimulating books in the field of adult education. As an expert on personnel problems she contributed to *Scientific Foundation of Business Administrations* (1926); *Business Management as a Profession* (1927), and *Psychological Foundations of Management* (1927).

Ford, Simeon, American hotel proprietor, died at Rye, N. Y., Aug. 30, 1933. Born at Lafayette, Ind., Aug. 31, 1855, he studied for the bar but abandoned that career to go into hotel management with Samuel L. Shaw, his brother-in-law. From 1881 to 1914 he was owner of the Grand Union Hotel in New York City, being one of the few proprietors to acquire a national reputation for his hospitality. He was also president of the Official Hotel Red Book and Directory Co., of the Zealand Realty Co., and of the Apollinaris Agency. Widely known for his after-dinner speeches, he published some of these, together with addresses, as *A Few Remarks* (1903).

Fortescue, Sir John William, British historian, died at Cannes, France, Oct. 23, 1933. Born Dec. 28, 1859, he attended Harrow and Trinity College, Cambridge, of which he later became honorary fellow. He studied for the bar but soon abandoned that career to serve as private secretary to Sir William Robinson when the latter went to Barbados. On his return to England, he was praised for the articles he had contributed to *Macmillan's Magazine*, and was urged to write a history of his brother Lionel's regiment published as *History of the 17th Lancers* (1895). Its success led the Macmillan Co. to ask him to prepare a popular *History of the British Army*, on whose 13 volumes he was engaged between 1899 and 1929. His other works included *Dundonald* (1896), *The Story of a Red Deer* (1897); *The Drummer's Coat* (1899), *The County Lieutenancies and the Army* (1909); *The Three Pearls* (1916); *My Native Devon* (1924); *Wellington* (1925); *Six British Soldiers* (1928); *The Empire and the Army* (1928); *Historical and Military Essays* (1928), *A Short Account of Cannons in the British Army* (1928), *The Royal Army Service Corps* (vol. 1, 1930); *Following the Drum* (1931); and *Marlborough* (1932). Sir John served also as librarian at Windsor Castle from 1905 to 1926 being created in recognition for his service a member of the Royal Victorian Order in 1907, Commander in 1917, and Knight Commander in 1926.

Fortier, Samuel, died Aug. 18, 1933.

Foster, William Wilson, American clergyman and educator, died in Albany, N. Y., Feb. 22, 1933. He was born at Moriah, N. Y., July 27, 1849, and attended the Drew Theological Seminary. Ordained to the Methodist Episcopal ministry in 1873, he had charges at Puttsford, Vt. (1878-79); Castleton, Vt. (1876-78); Ft. Edward, N. Y. (1879-80); Lowell, Mass. (1880-82); Bennington, Vt. (1883-84); Albany, N. Y. (1885-87); North Adams, Mass. (1888-92); and Amsterdam, N. Y. (1893-97). From 1898 to 1909 he was president of Rust University, Holly Springs, Miss., and from 1909 to 1910 of Beaver College, Jenkintown, Pa. In 1910 Dr. Foster accepted a pastorate in Johnstown, N. Y., and two years later was elected president of Clark University, Atlanta, Ga. On relinquishing that post in 1918 he was called to the Embury M. E. Church at Cambridge, N. Y., where he remained until his retirement in 1921.

Fournier d'Albe, Edmund Edward, died July 7, 1933.

Fowler, Henry Watson, British lexicographer, died at Hinton St. George, Somersetshire, Dec. 28, 1933. Born Mar. 10, 1858, he attended Rugby and Balliol

College, Oxford and during 1882-99 was assistant master at Sedburgh. He then retired to his birthplace, emerging only to serve as a private with the British Expeditionary Force in France during 1915-16. With his brother, F. G. Fowler, he published in 1906 *The King's English*; in 1911 *The Concise Oxford Dictionary of Current English*; and in 1924 *The Pocket Oxford Dictionary*. The aim of the latter two, adapted from the great *Oxford English Dictionary*, was to present as vivid a picture as the small dictionary could be made to give of the English that was being spoken and written at the time. Mr. Fowler later published *On Grammatical Inversions* (1922); *A Dictionary of Modern English Usage* (1926); *Some Comparative Values* (1929); *If Wishes Were Horses* (1929); and *Rhymes of Darby to Joan* (1931).

Fowler, William Hope, British radiologist, died in Edinburgh, Oct. 5, 1933. Born in 1876, he received the M.B. and Ch.B. degrees from the University of Edinburgh in 1897, being later appointed Heriot Research Fellow. Connected with the Royal Infirmary of Edinburgh from the days of his early practice, he served successively as resident house surgeon and non-resident house physician, clinical assistant in the medical electricity department, assistant medical electrician (1901-11), and radiologist (1911-26). During the World War he was consulting radiologist to the Admiralty and member of the War Office X-Ray Commission. At the time of his death Dr. Fowler was serving as consulting radiologist to the Royal Infirmary in Edinburgh and Perth; as radiologist to the Bangour Hospital; and as honorary radiologist to the Royal (Dick) Veterinary Hospital, Edinburgh. He lectured also on radiology at Surgeons' Hall, Edinburgh and for his brilliant and self-sacrificing work in this field was made in 1933 a Commander of the Royal Victorian Order.

François, Gen. Hermann von, German army officer and writer, died in Berlin, May 15, 1933. Born in Luxemburg, Jan. 31, 1856, he attended the Glogau gymnasium and then entered the Wahlstatt cadet corps. After receiving his commission as lieutenant of the regiment guard in 1889 he was promoted through the ranks to general at the outbreak of the World War. He rendered his most distinguished service as commander of the Seventh Army Corps before Verdun. True to his Junker traditions, General von François maintained a staunch anti-republican attitude after the war and was one of the principal advocates of guerrilla tactics in retaliation for the French occupation of the Ruhr. He wrote *Verwaltungsgeneralstabreisen* (1910); *Der Feldverpflegungsdienst bei den hohen Kommandobehörden* (2 vols., 1913); *Zusammenbruch grosser Heere* (1918); *Marneschlacht und Tannenberg* (1920); and *Gorlice 1915* (1922).

Franz, Shepherd Ivory, died Oct. 14, 1933.

Fraser, Abel McIver, American clergyman and educator, died at Staunton, Va., Nov. 18, 1933. Born at Sumter, S. C., June 14, 1856, he was graduated from Davidson College in 1876 and from the Columbia Theological Seminary in 1880. He was ordained to the ministry of the Presbyterian Church in the United States in 1881, serving successively as pastor at Walnut Hill and Bethel, Ky. In 1893 he became pastor of the First Presbyterian Church at Staunton, Va., remaining there until his retirement as pastor-emeritus in 1929. From 1923 to 1929 he was also president of Mary Baldwin College. He had previously declined on three occasions the office of president of the Columbia Theological Seminary. Dr. Fraser served as moderator of the Synod of Virginia in 1903 and as moderator of the General Assembly of the Presbyterian Church (South) in 1919. During 1919-22 he was chairman of that denomination's committees on closer relations with other churches and with other Presbyterian bodies.

Fraser, Donald, British missionary, died in Glasgow, Aug. 20, 1933. Born at Lochgilphead, June 1, 1870, he attended Glasgow University and the Free Church Theological College, and was one of the founders of the Student Christian Movement, traveling among the colleges of Great Britain, the Continent, America, and South Africa. In 1896 he went to Nyassaland as a member of the Livingstonia Mission where during the next 30 years he did notable work among the native Ngoni. He established also the Loudon Mission, named for Livingstone's medical associate, who rendered him valuable assistance during his early years in the mission field. In 1922 Dr. Fraser was elected moderator of the United Free Church and after conducting missionary campaigns in various parts of the British Empire, was chosen in 1925 joint foreign mission secretary of the United Free Church. He was also after 1929 chaplain to the King in Scotland, one of the few ministers outside the Church of Scotland to receive this honor.

Fraser, William Alexander, died Nov. 10, 1933.

Frontin, André Paulo Gustavo de, Brazilian engineer and statesman, died Feb. 15, 1933, in Rio de Janeiro, where he was born Sept. 17, 1860. He was graduated from the Polytechnicum of Rio de Janeiro with the C.E. degree in 1876 and the M.E. degree one year later. After

serving as chief resident engineer of the Franca Reservoir, borough of Santa Theresa, Rio de Janeiro, he became chief engineer of the city's water works, gaining special recognition in 1899 when he succeeded in spite of a serious drought in maintaining the city's water supply. As director of the Central Railroad of Brazil, a position to which he was twice appointed. Dr. de Frontin made many improvements in the line, such as the provision of double-track facilities for mountain tunnels. In 1896 he served as a member of the Rio de Janeiro Sanitation Commission, and in 1904 was chief of the commission which built the Avenida Rio Branco, the city's principal business thoroughfare. He represented the Federal District in the Senate in 1917, 1918, and 1920 and sat in the Chamber of Deputies in 1919. He was a papal count.

Fry, Alfred Brooks, died Dec. 4, 1933.

Fry, Franklin Foster, American clergyman, died in New York City, Dec. 13, 1933. Born at Carlisle, Pa., Nov. 1, 1864, he was graduated from Muhlenberg College in 1885 and from the Philadelphia Theological Seminary three years later. Following his ordination to the Lutheran ministry, he was made pastor of Grace Church at Bethlehem, Pa., in 1890. In 1901 he was transferred to the Church of the Reformation in Rochester, N. Y., where he remained until 1927. He then became executive secretary of the Board of American Missions of the United Lutheran Church in America, in whose organization he had played an important part. He served also as president of the Lutheran Synod of New York, and had held the same office in the Rochester Federation of Churches. In 1923 he was American delegate to the first world convention of Lutherans held at Eisenach, Germany.

Gallatin, Francis Dawson, American lawyer, died Dec. 23, 1933, in New York City where he was born Sept. 2, 1870. On his graduation from Columbia University in 1891 he spent several years in travel in Europe and South America, serving also during 1901-03 as attaché at the American embassy in Constantinople (later Istanbul). On his return to the United States he attended the law schools of Columbia and New York Universities, and after his admittance to the New York bar in 1909 became a member of the firm of Fay, Rubin and Gallatin. Previous to his service as commissioner of parks for the borough of Manhattan during 1919-27, he was for a short time a city magistrate. He held also the office of president of the park board of New York City. On his resignation in 1927 Mr. Gallatin resumed his law practice and proceeded to carry out plans for the construction of a \$1,000,000 building to house the Museum of the City of New York. This museum, which he had suggested and had helped to found in 1923, was the first of its kind in the United States.

Galloway, George, British theologian, died at Exmouth, England, Mar. 1, 1933. Born Nov. 11, 1861, he was educated at Madras College and the Universities of St. Andrews, Edinburgh, Göttingen, and Berlin. Licensed by the presbytery of Cupar in 1888, he was appointed assistant at St. Columba's Church, London, the following year and in 1891 became minister of Kelton parish, serving until 1915. He was then called to the University of St. Andrews where he acted as principal and primarius professor of theology at St. Mary's College, and as dean of the faculty of divinity. He was also philosophical examiner at St. Andrews during 1897-99 and again during 1910-11 and examiner for Part II of the Cambridge Theological Tripos in 1925 and 1926. The Baird lectures which he delivered during 1916-17 were later published as *The Idea of Immortality: Its Development and Value* (1919). His other works include: *Studies in the Philosophy of Religion* (1904); *Principles of Religious Development* (1909); *The Philosophy of Religion* (1914, the publication of which in the *International Theological Library* series made his reputation); *Religion and Modern Thought* (1922); *Faith and Reason in Religion* (1927); and *Religion and the Transcendent* (1930).

Galeworthy, John, died Jan. 31, 1933.

Gardner, Frederick Dozier, American administrator, died in St. Louis, Mo., Dec. 18, 1933. Born at Hickman, Ky., Nov. 6, 1869, he received a public school education. Upon his removal to St. Louis at the age of 17 he entered the employ of the St. Louis Coffin Co., becoming in 1899 sole owner of that concern which was later rated as one of the largest of its kind in the world. In 1898 he established the Memphis Coffin Co. and at the time of his death controlled four such organizations. In 1913 he entered politics serving as a member of the Board of Freeholders of St. Louis until 1915, and assisting in the drafting of the charter of that city. In November, 1916, he was elected Democratic Governor of Missouri for the term ending Dec. 31, 1920. His administration was noteworthy in that the State debt was cleared and a surplus of more than \$3,000,000 was accumulated in the treasury. There were also effected improvements in the State's penal and charitable institutions and its educational system and the construction of many miles of highway.

Geibel, Adam, American composer and organist, died at Germantown, Pa., Aug. 8, 1933. Born near Frankfort-on-the-Main, Germany, Sept. 15, 1855, he became blind at the age of nine days through a physician's mistake. Brought to the United States by his parents in 1862, he was graduated from the Pennsylvania Institution for the Instruction of the Blind in 1874. He studied harmony, counterpoint, orchestration, and composition under Dr. David D. Wood and received the Mus.D. degree from Temple University in 1911. After 1885 he was organist and Bible class teacher at the John B. Stetson Mission in Philadelphia. In 1897 he organized the music publishing firm of Geibel and Lehman, and in 1906 became president of the Adam Geibel Music Co. He composed the cantatas *The Nativity* (1904); *The Incarnation* (1907); *Light Out of Darkness* (1910); *Immanuel* (1910); *The Lord of Glory* (1911); *The Light of Life* (1914); *Resurrexit* (1917); *Heavenly Story* (1917); *Light and Glory* (1923); and arranged *Geibel's Collection of Part Songs* (for men's voices, 1906) and *Geibel's Collection of Part Songs* (for women's voices, 1906). He wrote also for the Sesquicentennial Exposition held in Philadelphia in 1926 *Sesquicentennial Ode* (for orchestra, organ, and chorus), and the Sunday-school songs, "Stand Up, Stand Up, for Jesus" and "Let the Gospel Light Shine Out."

Gémier, Firmin, died Nov. 26, 1933.

George, Stefan, died Dec. 4, 1933.

German, William Manley, died Mar. 31, 1933.

Gilbert, Clinton Wallace, American journalist, died in Washington, D. C., May 17, 1933. He was born at Hiltzville, L. I., N. Y., July 25, 1871, and was graduated from the University of Rochester in 1891. In this same year he began his newspaper career as a reporter for the *New York Press*, later being associated with other New York newspapers. He was associate editor of the *New York Tribune* from 1913 to 1918, when he became Washington correspondent of the *Philadelphia Evening Public Ledger* and covered the Versailles Peace Conference for this paper. He was a weekly contributor to *Collier's*, first under the title "The Gentleman at the Keyhole," and later under his own name. Besides numerous magazine articles, he wrote *The Mirrors of Washington* (in part, 1921, 1925); *Behind the Mirrors* (1922); *You Take Your Choice* (1924). The first two books were published anonymously.

Gilmore, George William, died Aug. 22, 1933.

Gilson, Roy Rolfe, American author and clergyman, died at Salisbury, Md., Aug. 2, 1933. Born at Clinton, Iowa, Aug. 12, 1875, he was graduated from the Benton Harbor (Mich.) College in 1895. He served for 15 years in various capacities on the staffs of the *Grand Rapids Herald*, the *Detroit Tribune and News*, and the *New York Commercial Advertiser*. During this period he also wrote several novels of an idyllic nature, including *When Love Is Young* (1901); *In the Morning Glow* (1902); *The Flower of Youth* (1904); *Miss Primrose* (1906); *Katrina* (1906); *The Wistful Years* (1909); *Ember Light* (1911); and *The Legend of Jerry Ludd* (1913). Mr. Gilson then decided to enter the ministry, being ordained a deacon in the Protestant Episcopal Church in 1913 and a priest the following year. He served as rector of several parishes of New Hampshire and Maine, and at the time of his death was rector of St. Peter's Church, Salisbury, Md.

Girdner, John Harvey, American surgeon, died at Islip, L. I., N. Y., Oct. 27, 1933. Born at Cedar Creek, Greene Co., Tenn., Mar. 8, 1856, he was graduated from Tusculum College, Tenn., in 1876, receiving the M.D. degree from the medical college of New York University three years later. During his early practice he was associated with Dr. Frank Hamilton, the distinguished surgeon, and with him attended President Garfield during the latter's 80-day struggle for life after he was shot by Charles J. Guiteau on July 2, 1881. He later became lecturer on surgery at the New York Post-Graduate Medical School and Hospital, and on anatomy at New York University. Dr. Girdner was said to be the first surgeon to succeed in grafting skin from a dead body onto a living one. He invented also the telephonic bullet probe, used widely before the discovery of the X-ray, and the phymosis forceps. Besides being a contributor to medical journals and various periodicals he wrote *NewYorkitis* (1909).

Gleason, Kate, American mechanical engineer, died Jan. 9, 1933, in Rochester, N. Y., where she was born Nov. 25, 1865. After attending the Sibley College of Mechanical Engineering at Cornell University she became associated with her father in the management of the Gleason Works, Inc., manufacturers of machine tools, serving for 25 years (1890-1915) as its secretary and treasurer. The firm owed its expansion during this period largely to the demand for automobile gears, and in recognition of her achievement as a gear designer Miss Gleason was elected in 1914 the first woman member of the American Society of Mechanical Engineers. In 1914 she was appointed receiver in bankruptcy for a Rochester machine shop, whose business she successfully reestablished, and during 1917-19 was president of the First

National Bank of East Rochester. She was the first woman in the United States to hold either of these offices.

Goff, Guy Despard, died Jan. 7, 1933.

Gómez, Don Juan Gualberto. Cuban journalist and revolutionist, died at Managua, near Havana, Mar. 5, 1933. He was born at Santa Ana, Province of Matanzas, July 12, 1854, and received his education in Paris, France. On his return to Cuba he edited the Havana newspaper *La Discusión*. Later going to Madrid, Spain, he spent several years there as editor of *El Pueblo*, *El Progreso*, and *La Tribuna*. The campaign for Cuban independence which he conducted with José Julián Martí in 1895 ended with his imprisonment in Morocco. Upon the formation of the Cuban republic, after the Spanish-American War, Gómez rose to political prominence. He bitterly opposed, however, any interference upon the part of the United States into Cuban affairs and, as a delegate to the Constitutional Assembly, fought against the adoption of the Platt Amendment. Elected a senator in 1912 he served until 1925. He was a supporter of President Gerardo Machado on the latter's election in 1924, but later withdrew from the Liberal party and joined the Nationalistas, who formed part of the opposition to Machado's despotic régime.

Gorham, Frederic Poole. American biologist and educator, died at Gloucester, R. I., June 4, 1933. Born in Providence, R. I., Apr. 29, 1871, he was graduated from Brown University in 1893, continuing with special studies in bacteriology at the Harvard Medical School. After serving as instructor in biology at Brown he became assistant professor in 1899 and associate professor in 1901. In 1913 he was made professor of bacteriology. He was also bacteriologist for the Providence Health Department after 1899, and bacteriologist and biologist for the Rhode Island Shellfish Commission after 1913. He successively held the offices of secretary, vice-president, and president (1911) of the Society of American Bacteriologists and published *Laboratory Course in Bacteriology* (1897).

Gorson, Aaron Henry. American painter, died in New York City, Oct. 11, 1933. Born in Kovno, Latvia, Russia, July 2, 1872, he came to the United States in 1889, attending the Pennsylvania Academy of Fine Arts in Philadelphia and studying later in Paris at the Académie Julian. On his return to the United States he opened a studio in Philadelphia and after making a study of the Pittsburgh steel industry decided to depict its operations. His work was exhibited at the Carnegie Institute, Corcoran Art Gallery, Pennsylvania Academy of Fine Arts, Art Institute of Chicago, and St. Louis Art Museum and was included in the permanent exhibitions of the Newark Museum and the Worcester Art Museum. Perhaps his most noted painting was that of "Tapping Steel at the Ford Plant," which was exhibited at the National Academy of Design and the Grand Central Art Galleries in New York City.

Gould, Edwin. American capitalist, died near Oyster Bay, N. Y., July 12, 1933. Born in New York City, Feb. 25, 1866, he studied for a time at Columbia College and then having displayed his financial acumen through his Wall Street operations, became associated with his father, Jay Gould. He served as secretary of the St. Louis, Arkansas and Texas Railroad from 1888 until it was reorganized as the St. Louis Southwestern in 1891, and afterward as vice-president, president and chairman of the board. In 1926 when he sold control of this railroad to the Rock Island System, he was senior vice-president. Mr. Gould organized also the Continental Match Co. in 1894 (consolidated with the Diamond Match Co. in 1899) and was president of the Bowling Green Trust Co. until its merger with the Equitable Trust Co. In addition he served as vice-president of the American Writing Paper Co., president of the Five Boroughs Realty Co., and director in many railroad and other corporations, including the Pine Bluff Arkansas River Railroad and the Paragould Southeastern Railroad. He established the Edwin Gould Foundation for Children and was prominent in the New York National Guard, serving as major of ordnance with the 1st Brigade during the World War.

Graves, William Phillips. American surgeon, died in Boston, Mass., Jan. 25, 1933. He was born at Andover, Mass., Jan. 29, 1870, and was graduated from Yale in 1891, receiving his medical degree from Harvard in 1899. In 1900 he began his practice in Boston, and served after 1907 as surgeon-in-chief of the Free Hospital for Women. From 1911 to 1933 he was professor of gynecology at the Harvard Medical School. He was president of the American Gynecological Society in 1931 and an honorary fellow of the British College of Obstetricians and Gynecologists, the first American to be thus honored. Besides many contributions to medical journals, his works include *Graves' Gynecology* (5 eds., 1916) and *Female Sex-Hormonology* (1931).

Greenleaf, James Leal. American landscape architect, died at Stamford, Conn., Apr. 15, 1933. He was born at Kortright, Delaware Co., N. Y., July 30, 1857, and was graduated from the Columbia University school of mines in 1880. Chosen special agent for the tenth United

States Census, Mr. Greenleaf made a survey during 1880-82 of water power in the Northwest. He then became an engineering instructor at Columbia, and later adjunct professor of civil engineering, serving until 1894. After engaging in private engineering practice he turned in the late '90s to landscape architecture, beautifying many large estates in the suburban area of New York City. In 1918 President Wilson appointed him a member of the National Commission of Fine Arts, and in this capacity he not only made suggestions concerning the landscape possibilities of the national parks but after the World War supervised the landscaping of the American cemeteries in France. In 1927 he retired from active practice. Mr. Greenleaf was a fellow of the American Society of Landscape Architects (president, 1924-27) and an associate member of the National Academy of Design.

Gregg, Hilda Caroline (Pen-name Sydney C. Grier). British novelist, died at Eastbourne, England, June 22, 1933. Born in Gloucestershire, England, June 20, 1868, she attended the University of London and for some years was engaged in teaching. Her tales of romantic adventure in various parts of the world include *In Furthest Ind* (1894); *His Excellency's English Governess* (1896); *An Uncrowned King* (1896); *Peace with Honour* (1897); *A Crowned Queen* (1898); *Like Another Helen* (1899); *Kings of the East* (1900); *The Warden of the Marches* (1901); *The Prince of the Captivity* (1902); *The Advanced-Guard* (1903); *The Great Proconcul* (1904); and *For Triumph or Truth* (1904). The *Letters of Warren Hastings to his Wife* which she edited in 1905 were received with interest. She later published *The Power of the Keys* (1907); *The Heritage* (1908); *The Path to Honour* (1909); *The Prize* (1910); *The Keepers of the Gate* (1911); *Writ in Water* (1913); *The Rearguard* (1915); *The Kingdom of Waste Lands* (1917); *The Princess's Tragedy* (1918); *Berenger of Bander* (1919); *The Strong Hand* (1920); *The Flag of the Adventurer* (1921); *Out of Prison* (1922); and *Two Strong Men* (1923).

Gregory, Thomas T(ingey) C(raven). American lawyer, died suddenly near Napa, Calif., June 5, 1933. Born at Suisun, Calif., Oct. 4, 1878, he was graduated from Stanford University in 1899. After studying law at that institution he became district attorney of Solano Co., Calif., in 1903, continuing in that capacity until 1907 when he began private practice in San Francisco. During the World War he served as a captain in the 144th Field Artillery with the American Expeditionary Forces in France. He was later associated with Herbert Hoover in the American Relief Administration, acting as director of the Administration's central European division, with headquarters in Vienna, as assistant to the director of relief of the Supreme Economic Council, and as American member of the Interallied Commission for the Austro-Hungarian and Yugoslavian empires. In addition to feeding the hungry millions of central and southeastern Europe, Mr. Gregory reinstated economic interchanges by establishing his own system of telephone and telegraph communications and by helping to form an interallied railway mission which later proved effective in stemming in Hungary the growing bolshevist and royalist forces, as represented respectively by Béla Kun and the Archduke Joseph. On his return to the United States in 1920 he became interested in commercial aviation, helping to found the Western Air Express and serving as its chief attorney until it became affiliated with the General Motors Co. He held directorates also in the General Aviation Co., Midcontinent Air Express and Varney Air Lines, and was president of the Bay Transport Co. and vice-president of the Pacific Dock and Terminal Co.

Gregory, Thomas Watt, died Feb. 25, 1933.

Grey of Fallodon, Edward Grey, 1st Viscount, died Sept. 7, 1933.

Grier, Sydney C. See Gregg, Hilda Caroline.

Griffin, Rear Admiral Robert Stanislaus, U.S.N., Ret., died Feb. 21, 1933.

Guerlac, Othon Goepp. Franco-American educator, died at Ithaca, N. Y., Jan. 16, 1933. He was born in St. Louis, Mo., Oct. 4, 1870, and was educated in France, receiving the degrees of M.A., 1893, and LL.B., 1897, from the University of Paris. For a time he served in the French Army, returning to the United States about 1904 to become assistant professor of French at Cornell University. At the outbreak of the World War Professor Guerlac was summoned to France, being mobilized in the 89th Territorial Regiment. He was later transferred to the Foreign Office as an attaché in the press bureau and as a member of the French High Commission visited the United States during 1917-19. On his discharge in the latter year he was made a Chevalier of the Legion of Honor and resumed his connection with Cornell University as professor of Romance languages and literature. Professor Guerlac contributed to American and French periodicals, and for 10 years was a correspondent of *Le Temps*, Paris. He edited *Selections from Standard French Authors* (1905), Anatole France's *Le Livre de Mon Ami* (1905), and E. Pailleron's *L'Étincelle* (1906)

and compiled *Les Citations Françaises* (1931). In 1903 he translated into French *Up from Slavery* (*L'Autobiographie d'un Nègre*) by Booker T. Washington.

Guinan, Mary Louise Cecelia (Texas). American night club hostess, died in Vancouver, B. C., Canada, Nov. 5, 1933. Born on a ranch near Waco, Tex., about 1882, she began her career at the age of 14 as a broncho rider in a circus. She later joined a vaudeville troupe and played minor rôles with various stock companies. During the early days of the movies she appeared as heroine in Western "thrillers" and finally drifted to New York City where, after spending several years in the choruses of various musical comedies, she established in 1923 that novel form of entertainment, the night club. As hostess, or mistress of ceremonies, she made use of a vernacular all her own, her so-called "wise-cracks" spreading from coast to coast. Among the revues which she produced were *Padlocks of 1927* and *Too Hot for Paris*, the latter being staged after the French Labor Ministry's refusal in 1931 to permit her to proceed to Paris and open a night club there. She was starred in 1928 in the motion picture, *Queen of the Night Clubs*.

Gulick, Louis Mason. American marine officer, died in Peiping, China, Dec. 23, 1933. Born in Florence, Italy, May 27, 1879, he was brought to the United States in childhood. After active service in the Spanish-American War he enlisted with the marines in 1899, rising to the rank of colonel in 1920. After serving as commanding officer of the American Legation Marine Guard in Peking in 1908, he participated in the capture of Vera Cruz in 1914 and during the World War was attached to the 2d Marine Brigade which participated so effectively in the Meuse-Argonne offensive of 1918. After the War Colonel Gulick was again sent to Peking as commandant of the marine detachment at the American Legation and on his return to the United States attended the Naval and Army War Colleges, graduating from the former in 1923 and the latter in 1925. In 1927 he was ordered to Nicaragua where, as commander of the 5th Regiment of Marines, he succeeded in putting down the revolt led by Gen. Augustino C. Sandino who had refused to accept the American plan of holding an impartial election. In 1928 he took command of the 1st Marine Brigade stationed at Port-au-Prince, Haiti from 1929 to 1931 he commanded the Marine Barracks at the Navy Yard in Philadelphia. At his retirement in May, 1933, he was stationed for a third time at the American Legation in Peking (Peiping). He received the United States Navy Cross and the Nicaraguan Medal of Merit.

Hadik, János, Count Hungarian statesman, died in Budapest, Dec. 10, 1933, aged 70. A landed proprietor most of his life, with the exception of the years 1906-09 when he was Under-Secretary of State in the Ministry of the Interior, he did not enter upon a government career until 1917 when he was appointed Minister of Food Supplies in the cabinet of Count Tisza, Premier of the Hungarian ministry. For a short period in 1918 he served as Prime Minister. Count Hadik was president of the National Agricultural Society and a delegate to the International Economic Conference of 1927. He was also a member of the Consultative Economic Committee of the League of Nations.

Haldeman, Isaac Massey. American clergyman, died in New York City, Sept. 27, 1933. He was born at Concordville, Pa., Feb. 13, 1845, attended the West Chester (Pa.) Academy and served with the emergency corps of the 29th Pennsylvania Regiment during the Civil War, participating in the Battle of Gettysburg and other engagements. Ordained to the Baptist ministry in 1870, he was pastor of the Brandywine Baptist Church at Chadd's Ford, Pa., from 1871 to 1875, being transferred in the latter year to the Delaware Avenue Baptist Church in Wilmington, Del., where he remained until 1884. He was then called to the First Baptist Church in New York City, holding that pastorate until his death. Dr. Haldeman gained a strong following among those who accepted a literal interpretation of the Scriptures, attacking with fervor the Modernist wing of his denomination and its spirit of liberalism. He wrote *Christian Science in the Light of Holy Scriptures* (9th edit. 1909); *The Signs of the Times* (1911); *How to Study the Bible* (9th edit., 1912); *Christ, Christianity and the Bible* (1912); and *Ten Sermons on the Second Coming* (1916).

Hale, Louise Closser, died July 26, 1933.

Hall, Fred, British Labor leader, died at Barnsley, Yorkshire, England, Apr. 18, 1933. Born in 1855, he started work at the age of nine in a Staffordshire coal mine, later removing to Yorkshire. In 1898 he was appointed treasurer of the Yorkshire Miners' Association, and from 1904 to 1919 held the office of agent for that organization. After 1906 he represented the Normanton division of Yorkshire in Parliament and in 1919 became Deputy Chief Whip of the Laborites. He served also as Lord Commissioner of the Treasury in the first Labor government of 1924.

Hallett, Sir Frederic. British medical administrator, died at Abingdon, Berkshire, England, Feb. 6, 1933. Born May 25, 1860, he was educated at Westminster and on the continent. In 1877 he entered the Royal Col-

lege of Surgeons as junior clerk and in 1882 was made assistant secretary. In 1886 he organized the examinations of the Conjoint Board of the Royal Colleges of Physicians and Surgeons and was appointed the board's first secretary, holding that position for 41 years. He assisted also in 1902 in founding the Imperial Cancer Research Fund, of which he was secretary until his retirement in 1932. Sir Frederic visited the United States in 1912 at the invitation of the Carnegie Foundation for the Advancement of Teaching to explain the methods of the Conjoint Board in conducting practical and clinical examinations in medicine and surgery. During the World War he was honorary secretary of the Statutory Committee of Reference, responsible for deciding which staff members of the London hospitals could be spared for service at the front. He was knighted in 1928 and was also made an officer of the Order of the British Empire.

Hand, John Pierce. Bermuda publicist, died in Hamilton, Bermuda, Jan. 13, 1933. He was born in Portsmouth, N. H., in 1883, but spent most of his life in British possessions, becoming a British subject in 1909. After attending St. Patrick's Hall in St. John's, Newfoundland, he entered the employ of a Bermuda commission firm, eventually settling in Hamilton where he became proprietor of three large hotels. As a member of the Bermuda Trade Development Board after 1922, he was especially active in stimulating Bermuda's tourist traffic which, through the cooperation of the Furness and other steamship lines, rose to more than 70,000 a year. He served also as president of the Bermuda Chamber of Commerce (1917-21), as chairman of the government Board of Trade (1919-22), and as member of the Board of Agriculture (1925-26) and of the Board of Health (1928-29). Appointed to his Majesty's Executive Council of Bermuda in 1921, Mr. Hand was a delegate in 1925 to the conference to develop trade among Canada, Bermuda, and the British West Indies, and in 1932 to the Empire Parliamentary Association, a preliminary to the Ottawa Conference. At the time of his death he was a member of the Colonial Parliament. He was made a member of the Order of the British Empire in 1918 and a Companion of the Order of St. Michael and St. George in 1927.

Hansbrough, Henry Clay, died Nov. 16, 1933.

Hardinge, Sir Arthur Henry, died Dec. 29, 1933.

Harker, Lizzie Watson. British novelist, died at Cirencester, England, Apr. 14, 1933. Born in Gloucester, she was educated at Cheltenham Ladies' College and started her career by writing short stories for *Outlook* and other magazines, and published her first novel, *A Romance of the Nursery*, in 1902. Considered one of the best modern writers on child life and romantic middle-age, she scored with *Miss Everance* and *Mr. Wycherly* (1908); *Allegra* (1919); *The Bridge Across* (1921); *The Really Romantic Age* (1922); *Concerning Tod and Peter* (1923); *The Broken Bow* (1924); *Hilda Ware* (1926); and *Black Jack House* (1929). With F. R. Pryor she wrote the plays *Her Proper Pride* and *Maragold*. The former was performed by John Drinkwater's Repertory Company in Birmingham in 1917, while the latter was at the Kingsway Theatre, London, during 1927-28. She was the widow of Prof. James Allen Harker of the Royal Agricultural College, Cirencester.

Harlan, James Elliott. American educator, died at Mt. Vernon, Ia., Dec. 13, 1933. Born in Muskingum Co., Ohio, June 25, 1845, he served as a private in Co. D of the 44th Iowa Infantry during the last year of the Civil War. On being graduated from Cornell College in 1869 he was appointed superintendent of public schools in Cedar Rapids, Ia., but in 1873 returned to Cornell as alumni professor of mathematics and astronomy, holding that chair until 1909. He served also as vice-president from 1881 to 1908, as chairman of the executive committee after 1883, and as financial secretary from 1893 to 1914. Elected president of the institution in 1908, Dr. Harlan succeeded during his six-year administration in increasing the endowment to more than \$900,000, while the student body at the time of his resignation numbered 750.

Harris, Walter B. British journalist and adventurer, died at Malta, Apr. 4, 1933. Born Aug. 26, 1866, he was educated at Harrow and Cambridge. During the early '80s he aroused admiration for his successful penetration, often in disguise, of the fanatical areas of Morocco, then closed to foreigners. In 1887, when he accompanied the mission of Sir William Kirby-Green to Marrakesh, he made his first contribution to the *London Times*, acting thereafter as its Morocco correspondent. Mr. Harris received several Moroccan decorations for his services to that country, including the promotion of British interest in Moorish art and architecture. He was also a member of the Académie des Sciences Coloniales and an officer of the Legion of Honor. He published: *The Land of an African Sultan, Travels in Morocco* (1888-89); *A Journey Through the Yemen and Some General Remarks about That Country* (1893); *Taflet, the Narrative of a Journey to the Oases of the Northwest Sahara* (1895); *Danovitch, and Other Stories* (1895); *From Batum to Bagdad* (1896); *Morocco*

That Was (1921); *France, Spain, and the Rif* (1927); and *East for Pleasure* (1929).

Harrold, Orville. American tenor, died at Norwalk, Conn., Oct. 23, 1933. He was born in Delaware Co., Ind., about 1878 and received a public school education. While appearing in vaudeville and musical comedy in New York City he was discovered by Oscar Hammerstein who urged him to prepare for opera. He then studied under Oscar Saenger and made his debut in 1907 at the Manhattan Opera House as Canio in *Pagliacci*. He appeared also during 1908-10 in various rôles at the Philadelphia Opera House, and when Hammerstein was obliged to abandon both the Manhattan and Philadelphia projects went to England where he was leading tenor at the impresario's London Opera House. He appeared during 1913-15 with the Century Opera Co., of which Milton Aborn (q.v.) was director. In 1919 Mr. Harrold was engaged by Giulio Gatti-Casazza, impresario of the Metropolitan Opera House, who considered his voice "one of the finest tenor voices America had ever produced." His most successful rôles were Wagnerian. After his retirement in 1924 he devoted himself to concerts.

Hart, George Overbury ("Pop"). American painter, died in New York City, Sept. 9, 1933. He was born at Cairo, Ill., May 10, 1868. Although he attended the Art Institute of Chicago and the Julien Academy in Paris for a few months, he was mainly self-taught in art. Choosing water color as his medium, he traveled extensively into remote parts of the world, such as the South Sea Islands, Egypt, the Caribbean, and Mexico for subjects for his sketches. Most of his life, however, was devoted to the more practical art of sign painting, and it was not until he had passed 50 that he gained public recognition. Almost over night there sprang up a "Pop" Hart cult that delighted in his remarkably suggestive drawing, drama of movement, and eye for significant detail. Outstanding among his water colors were "Court-yard, New Orleans" in the Metropolitan Museum of Art, New York City, "Old French Market, New Orleans" in the Brooklyn Museum; and "Carnival Scene, West Indies" in the Harrison Gallery, Los Angeles. About 1922 Mr. Hart turned to the medium of the lithograph, receiving a bronze medal for "Springtime, New Orleans" which was exhibited at the Sesquicentennial Exposition in Philadelphia in 1926. He was also awarded a prize for his water color landscape "Santo Domingo," which was exhibited at the Brooklyn Museum during 1923-24. In addition to the museums mentioned, his water colors, etchings, and lithographs are on permanent exhibition at the Smithsonian Institution in Washington, Art Institute of Chicago, Cleveland Museum, Cincinnati Museum, Newark Museum, Rochester Memorial Gallery, New York Public Library, National Museum of Mexico, and the South Kensington and British Museums in London. He was president of the Brooklyn Society of Etchers during 1925-26.

Haskell, Charles Nathaniel. American administrator, died in Oklahoma City, Okla., July 5, 1933. He was born in Putnam Co., Ohio, Mar. 13, 1860. After studying for the bar he was admitted in 1880 and began his practice at Ottawa, Ohio. In 1888 he became engaged in railway construction, this work carrying him in 1901 to Muskogee, Indian Territory. There he was active in interesting the Indians in the organization of single Statehood for their Territory and as a member of the Constitutional Convention was largely responsible for the terms of Oklahoma's constitution. Following the State's admission to the Union he was elected its first governor, on the Democratic ticket, for the term 1907-11. He was also instrumental, despite the protest of the citizens, in having the capital moved from Guthrie to Oklahoma City. He later organized and was chairman of the board of the Middle States Oil Corp. After the loss of his fortune in Wall Street Mr. Haskell returned in 1929 to Muskogee where he assumed the presidency of the Municipal Gas Co.

Haskell, Eugene Elwin. American civil engineer, died at Hamburg, N. Y., Jan. 28, 1933. He was born at Holland, Erie Co., N. Y., May 10, 1855, and was graduated in civil engineering from Cornell University in 1879. Appointed a member of the Mississippi River Commission for the St. Louis district in 1880, he was transferred in 1885 to the United States Coast and Geodetic Survey in Washington. There he distinguished himself through his invention of the Haskell current meter, used in making soundings off the Atlantic coast. From 1893 to 1906 he was stationed in Detroit, directing for the United States Lake Survey a survey of the Great Lakes basin. He then became dean of the college of civil engineering at Cornell University, retiring in 1921 as professor emeritus of hydraulic engineering. Dean Haskell also served during 1906-15 as a member of the American Section of the International Waterways Commission and during 1924-25 of the engineering board of review of the Sanitary District of Chicago.

Hatch, Edward, Jr. American merchant and sanitation expert, died at Willboro, N. Y., Jan. 24, 1933. He was born at Camden, N. J., May 28, 1858, and received his education at the Adelphi Academy and the Columbia

University school of mines. From 1889 to 1911 he was associated with the firm of Lord and Taylor, New York City, of which his father was president. For 20 years (1906-26) Mr. Hatch, as chairman of the pollution and sewerage committee of the New York Merchants' Association, devoted his efforts to insuring the purity of the city's water supply and an adequate disposal of its waste. From 1903 to 1910 he also conducted a successful campaign against the pollution of Lake Champlain by Vermont pulp mills, and subsequent to 1910 he sponsored the fight of the American Civic Association for the extermination of the house fly. In 1922 he presented to the New York Zoological Society the Four Brothers Islands in Lake Champlain, noted as a breeding ground for sea gulls and resting place for migratory birds. Mr. Hatch wrote many pamphlets on subjects dealing with sanitation.

Haugen, Gilbert N. American congressman, died at Northwood, Ia., July 18, 1933. Born in Rock Co., Wis., Apr. 21, 1859, he received a common school education and then removed to Northwood, where he became engaged in real estate promotion and banking. He served in the 25th and 26th General Assemblies of the Iowa Legislature. In 1888 he was elected Republican representative from the Fourth Iowa District to the 56th Congress and was reelected to each succeeding Congress. A staunch champion of farm relief, he acted during several terms as chairman of the House's committee on agriculture and was the author of the Haugen Packer Control and Stockyards Act.

Hawkins, Sir Anthony Hope (Pen name, Anthony Hope), died July 8, 1933.

Hay, Marion E. American administrator, died in Spokane, Wash., Nov. 21, 1933. Born in Adams Co., Wis., Dec. 9, 1865, he attended the district schools and the Bayless Commercial Business College, Dubuque, Ia. In 1888 he removed to Washington Territory, being engaged in the mercantile business with Charles Grutt at Davenport for two years. Previous to his removal to Spokane in 1908, he resided at Wilbur where he served as mayor for two terms. In Spokane the real estate firm, of which he was president, became incorporated as the M. E. and E. T. Hay, Big Bend Land Co. He was chairman of the Republican County Central Committee of Lincoln Co., Wash., from 1898 to 1902. In 1908 Mr. Hay was elected lieutenant-governor of Washington, and one year later on the death of Samuel C. Cosgrove succeeded to the governorship for the term ending 1913. His administration was marked by the adoption in 1910 of a constitutional amendment giving suffrage to women. There was also carried at the election of 1912 a measure providing for State-wide prohibition.

Hayden, Warren Sherman. American banker, died in Cleveland, Ohio, Mar. 14, 1933. He was born at Danbury, Conn., Oct. 20, 1870. On his graduation from Hiram College in 1892, he became a bond salesman with Lamprecht Bros. and Co. of Cleveland and was later appointed manager of the bond department. In 1903 he formed with Otto Miller the investment firm of Hayden, Miller and Co., which was influential throughout the mid-West. Mr. Hayden was president of the Cleveland Union Terminal Co. and a director in many railroads and corporations, among them being the New York Central Railroad and the New York and Harlem Railroad. He was also president of the Investment Bankers Association of America during 1917-18. In recognition of the financial advice and support which he gave to the Cleveland Community Fund, the Cleveland Chamber of Commerce conferred on him in 1932 its medal for conspicuous public service.

Heppenheimer, William Christian. American banker, died Sept. 16, 1933, in New York City where he was born Mar. 27, 1860. He received his L.L.B. degree from Columbia University in 1880 and upon his admittance to the New York bar the following year began his practice in New York City as a member of the firm of Russ and Heppenheimer. On his admittance to the New Jersey bar in 1883, he removed his practice to Jersey City. In 1895 he began his banking career by organizing the People's Safe Deposit and Trust Co., of which he was president. It was followed by the Trust Company of New Jersey in 1900 and the Bergen and Lafayette Trust Co. in 1902. In 1913 all three, together with the Carteret Trust, were consolidated under the single title, The Trust Company of New Jersey. He retained the presidency until 1929 when he became chairman of the board of directors. Mr. Heppenheimer's political career dated from 1887 when he was elected to the New Jersey General Assembly, serving as speaker in 1890. The following year he became comptroller of the treasury of New Jersey for a three-year term. In 1897 he was appointed president of the board of finance of Jersey City and served as city treasurer from 1898 to 1901. After 1928 he was a member of the Port of New York Authority which was concerned during the next five years with the construction of the Kill van Kull and other bridges linking New York and New Jersey. Mr. Heppenheimer was prominent in the New Jersey National Guard, attaining the rank of brigadier-general, as inspector-general dur-

ing 1889-95, and serving during the World War as chairman of the district board of New Jersey. He was also a past president and director of the New Jersey State Chamber of Commerce, chairman of the board of the Jersey City Chamber of Commerce, and past president of the New Jersey Bankers Association.

Herr, Herbert Thacker, died Dec. 19, 1933.

Hershey, Amos Shurtle. American political scientist, died at Madison, Ind., June 12, 1893. Born at Hershey, Pa., July 11, 1867, he was graduated from Harvard in 1892 and received the Ph.D. degree from the University of Heidelberg in 1894. On the faculty of Indiana University he served as assistant professor of political science during 1895-1900, as associate professor of European history and politics during 1900-05, and as professor of political science and international law after 1905. In 1914 he became head of the University's newly-created department of political science, and in 1920 was lecturer on government at Harvard University. He was also a member during 1918-19 of the American Commission to Negotiate Peace in Paris. Dr. Hershey wrote *The International Law and Diplomacy of the Russo-Japanese War* (1907); *The Essentials of International Public Law* (1912); *Modern Japan* (with Frank M. Anderson, 1919); *Handbook for the Diplomatic History of Europe, Asia, and Africa, 1870-1914* (1918); and *The Essentials of International Law and Organization* (1927).

Hess, Alfred Fabian, died Dec. 5, 1933.

Herts, Henry B. American architect, died in New York City, Mar. 27, 1933. He was born in the same city Jan. 23, 1871, and was graduated from the School of Mines, Columbia University, in 1893. Subsequently he spent seven years in Europe, studying at the École des Beaux Arts in Paris and at the Universities of Rome and Heidelberg. In 1900 he returned to New York City and organized the firm of Herts and Tallent, with which he remained until 1912. He designed several New York theatres embodying the principle of cantilever arch construction, which makes possible the building of balconies without supporting pillars. Among these are the New Amsterdam, Fulton, Shubert, Booth, and Longacre and in Brooklyn the Academy of Music. Mr. Herts was also the architect of the Polo Grounds, the baseball field owned by the New York Giants of the National League. For a time he served as an architect for the Playground Commission of New York City and aided the Fire Department in drafting part of the building code. He designed the Rice Memorial Playfield in Pelham Bay Park, and was consultant on the design of Yeshiva College. He designed the Ochs Memorial Chapel in Chattanooga, Tenn., which was completed in 1928. Shortly before his return to the United States in 1900 he exhibited his paintings in Paris, but the press of his architectural duties prevented his continuing work along this line.

Hibben, John Grier, died May 16, 1933.

Hickey, The Most Rev. William Augustine. American Roman Catholic bishop, died in Providence, R. I., Oct. 4, 1933. Born in Worcester, Mass., May 13, 1869, he was graduated from Holy Cross College in 1890, later attending the Seminary of St. Sulpice in Paris and St. John's Seminary at Brighton, Mass. Ordained to the priesthood in 1893, he served as assistant at various Roman Catholic churches in Massachusetts until 1903 when he became pastor of St. Aloysius Church at Gilbertville. In 1917 he was transferred to St. John's Church at Clinton, Mass. Consecrated coadjutor bishop of the diocese of Providence, R. I., in 1919, he was elevated two years later to the bishopric. In 1931 he declined the Archbishopric of St. Paul, Minn. As president of the Providence College Corp., Bishop Hickey inaugurated the ambitious building and endowment programme of that institution so that by 1933 it had an enrollment of more than 700 students. He was also president of La Salle Academy, St. Xavier's Academy, Rhode Island Catholic Orphan Asylum, and St. Vincent de Paul Infant Asylum.

Hillemecher, Paul Joseph Wilhelm. French composer, died at Versailles, Aug. 13, 1933. Born in Paris, Nov. 29, 1852, he studied with Bazin and was awarded the Prix de Rome for his cantata *Judith* in 1876. With his brother, Lucien, he received in 1882 the Prix de la Ville de Paris for their *Légende symphonique, Loreley*. The brothers collaborated on almost all of their compositions, signing the single name P. L. Hillemecher. Their symphonic works included *Héro et Léonore* (1894) and *La Cinquantaine* (1898). For the opera they wrote *Le Drac* (1886); *Saint Mégrin* (1886); *Le Régiment qui passe* (1886); *Aventure d'Arlequin* (1888); *Orsola* (1902); and *Othello* (1907). Among their oratorios were *La Passion* and *Sainte Geneviève* (1887). The only noteworthy work that Paul Hillemecher produced after his brother's death in 1909 was *Fra Angelico*, which was given at the Opera Comique in 1924.

Hillquit, Morris, died Oct. 7, 1933.

Hind, Arthur. American manufacturer and philatelist, died in Miami, Fla., Mar. 1, 1933. He was born in Bradford, England, Feb. 4, 1856, and came to the United States about 1898, establishing the Hind, Harrison Plush Co. He achieved distinction as a stamp collector in 1922

when he paid almost \$35,000 for the only known cent British Guiana stamp, 1856 issue. It was said to be the highest price ever paid for a postage stamp at public sale. His entire collection was estimated to be worth more than \$1,000,000. Mr. Hind was a Fellow of the Royal Philatelic Society of London and of the Collectors' Club of New York.

Hinkler, Herbert John Louis, died Jan. 8, 1933.

Hodgkin, Henry Theodore. British medical missionary and author, died in Dublin, Irish Free State, Mar. 26, 1933. Born at Darlington, England, Apr. 21, 1877, he attended King's College, Cambridge, and received his medical training at St. Thomas's Hospital, London. In 1905 he was sent to Chengtu, West China, as a medical missionary by the Friends Foreign Mission Association and on his return to London in 1910 served for 10 years as secretary of that society. From 1922 to 1929 he was again in China as secretary of the National Christian Council, with headquarters in Shanghai. In 1930 he came to the United States, helping to found at Wallingford, Pa., the Pendle Hill Graduate School, a Quaker institution for social and religious research. At the time of his death he was director of this school. Dr. Hodgkin wrote *Helps to the Study of the Epistles to the Hebrews* (1902); *Message and Mission of Quakerism* (with N. C. Braithwaite, 1912); *The Way of the Good Physician* (1915); *Friends beyond Seas* (1916); *Lay Religion* (1919); *China in the Family of Nations* (1923); *Christian Revolution* (1923); *The Way of Jesus* (1924); *Personality and Progress* (1929); *Jesus Among Men* (1930); and *Living Issues in China* (1932).

Hollick, Charles Arthur, died Mar. 11, 1933.

Holmes, Thomas Rice Edward. British historian, died in London, Aug. 4, 1933. Born in Co. Westmeath, Ireland, May 24, 1855, he was educated at Christ Church, Oxford, and became a school-master, teaching successively at Lincoln Grammar School (1878-80), Blackheath Proprietary School (1880-85), and St. Paul's School (1886-1909). On his retirement from the latter position he received a civil-list pension and was made an honorary life-member of the Old Pauline Club. He was also honorary vice-president of the Royal Historical Society, a fellow of the British Academy, and a member of the councils of the Classical Association (1903-06) and the Roman Society (1910-14). Dr. Holmes wrote an excellent *History of the Indian Mutiny* (1883) and *Four Famous Soldiers* (1889), but was even better known for his studies of Julius Caesar—*Cæsar's Conquest of Gaul* (1899), *Ancient Britain and the Invasions of Julius Cæsar* (1907), and an English version of *Cæsar's Commentaries on the Gallic War* (1908). Parts of the works on Caesar's campaigns in Gaul and Britain were translated into German as *Cæsars Feldzüge in Gallien und Britannien*, by W. Schott and Felix Rosenberg (Leipzig, 1913). He edited also with introduction and notes, *Cæsar's Commentarii de Bello Gallico* (1914). His later works included *The Roman Republic and the Founder of the Empire* (3 vols., 1923) and *The Architect of the Roman Empire* (2 vols., 1931).

Holmes, William Henry, died Apr. 20, 1933.

Hoogewerff, Rear Admiral John Adrian, U.S.N., Ret., died Feb. 13, 1933.

Howard, Henry. Australian-American clergyman, died in London, England, June 29, 1933. Born in Melbourne, Australia, Jan. 21, 1859, he attended Wesley College there and after his ordination to the Australasian Methodist Church about 1880 held pastorates in various parts of Australia for 40 years. His longest pastorate was in Adelaide where he remained 19 years. During 1921-26 he preached at the Hampstead Wesleyan Church, London, and after 1926 was co-pastor of the Fifth Avenue Presbyterian Church, New York City. In both these pulpits Dr. Howard distinguished himself for his tolerance, vigor, and spirituality. He wrote *The Raiment of the Soul* (1907); *The Summits of the Soul* (1910); *A Prince in the Making* (1915); *The Love That Lifts* (1919); *The Church Which Is His Body* (1923); *The Peril of Power* (1925); *The Threshold* (1926); *The Beauty of Strength* (1926); *Fast Hold on Faith* (1927); *Where Wisdom Hides* (1928); *The Shepherd Psalm* (1930); and *The Defeat of Fear* (1931).

Howell, Robert Beecher, died Mar. 11, 1933.

Hoynes, William. American lawyer and educator, died at South Bend, Ind., Mar. 28, 1933. He was born near Callan, County Kilkenny, Ireland, Nov. 8, 1846, and was brought to the United States by his parents in early childhood. Enlisting with the 20th Wisconsin Volunteer Infantry in 1862, he participated in the siege and capture of Vicksburg during the Civil War. Discharged from service on account of a wound, he later reenlisted with Co. D of the 2d Wisconsin Cavalry, with which he served throughout the War. After attending Notre Dame University and receiving the LL.B. degree from the University of Michigan in 1872 he became engaged in journalism being successively editor during the next 10 years of the New Brunswick (N. J.) *Daily Times* and the Peoria (Ill.) *Daily Transcript*. He also practiced law for a short time in Chicago, and in 1883 became professor of law and dean of the law faculty at Notre Dame

University. On his retirement as dean emeritus in 1918 the law building, then under construction, was named in his honor. In 1912 he was named a Knight of the Order of St. Gregory by Pope Pius X.

Hulbert, Archer Butler, died Dec. 24, 1933.

Hunt, Leigh S. J. American iron magnate, died at Las Vegas, Nev., Oct. 5, 1933. Born near Columbia City, Ia., about 1854, he received a public school education and after serving as teacher and principal became president of the Iowa State Agricultural College. In 1885 he entered the publishing field as owner and editor of the Seattle (Wash.) *Post-Intelligencer*, becoming interested at the same time in the development of iron ore mining and real estate operations in Seattle and Everett. When the fortune which he had amassed was swept away in the panic of 1893 Mr. Hunt went to Korea where he organized the Oriental Consolidated Mines, developing these properties on a large scale through the introduction of American machinery. He later went to the Anglo-Egyptian Sudan where, after obtaining large concessions from the British and Egyptian authorities he was credited with introducing the raising of cotton. The adventures which he recounted on his return inspired Pres. Theodore Roosevelt's African hunting trip of 1909-10. At the time of his death he was engaged in various mining enterprises near Boulder Dam.

Hurley, Edward Nash, died Nov. 14, 1933.

Huxley, Leonard. British editor and author, died at Hampstead, England, May 3, 1933. Born Dec. 11, 1860, the son of Thomas Henry Huxley, he was educated at University College School, St. Andrews University, and Balliol College, Oxford. Appointed assistant master at Charterhouse, in 1884, he held that position until 1901 when he entered the editorial field as reader for Smith, Elder and Co. He later became editor of the *Cornhill Magazine*, founded by that company. Dr. Huxley's most important works were *Life of Huxley* (1900), *Thomas Henry Huxley, a Character Sketch* (1920), and *Charles Darwin* (1921), in which he told anew his father's bold championship of Darwin's doctrine of organic evolution. He published also *Life of Sir Joseph Hooker* (1918), and *Anniversaries and Other Poems* (1920), translated Hausstrath's *New Testament Times*, part II, and *Time of the Apostles* (1895), and edited *Scott's Last Expedition* (1913); *Jane Welsh Carlyle, Letters to Her Family* (1924); and *Letters to Her Sister, from Elizabeth Barrett Browning* (1929). He was the father of Julian Huxley, the biologist, and Aldous Huxley, the novelist.

Hyde, Edwin Francis. American lawyer, banker, and music patron, died Mar. 18, 1933, in New York City, where he was born June 23, 1842. On graduating from the New York Free Academy (later the College of the City of New York) in 1861, he enlisted in the Civil War with the 22d New York Regiment, serving for a short time at Harper's Ferry, Va. He then attended the Columbia University law school and, on his admission to the bar in 1863, practiced in New York City as a consultant in corporation and banking litigation. In 1886 he was elected vice-president of the Central Trust Co. Mr. Hyde acted also from 1888 to 1901 as president of the Philharmonic Society of New York, being largely responsible for the orchestra's practice in inviting distinguished foreign musicians as guest conductors and concert artists. After his retirement in 1919 he devoted himself to the American Bible Society of which he had been a manager since 1894, serving as vice-president until 1924 and as president until 1930.

Ibañez, Maximiliano, died Dec. 27, 1933.

Ingenohl, Admiral Friedrich von, died Dec. 19, 1933.

Innes, Robert Thorburn Axton, died Mar. 13, 1933.

Irgoyen, Hipolito, died July 3, 1933.

Jatho, Karl. German aviator, died Dec. 8, 1933, in Hanover, Germany, where he was born Feb. 3, 1873. After attending the Hanover Real gymnasium he became interested in automobile racing and then in 1893 turned to the new experimental science of aviation. He was said to have been the first to construct in 1899 a biplane driven by a gasoline motor, and claimed to have made the first successful mechanical air flight of 25 kilometers on Aug. 18, 1903, four months before the one made by Orville and Wilbur Wright at Kitty Hawk, N. C., on December 17 of that year. The next successful flights which he conducted were in 1906 in a machine which, by shifting the angle of inclination of the body, utilized both planes as elevators in rising from the ground. In 1913 Herr Jatho established the Hanover Aeroplane Works, which during the next few years specialized in the development of steel monoplanes. He founded also at Hanover one of the earliest flying schools in Germany. In 1933 the National Socialists erected a monument to mark the site of his first flight.

Jay, Peter Augustus, died Oct. 18, 1933.

Jennings, Walter. American capitalist, died on Jekyll Island, near Brunswick, Ga., Jan. 8, 1933. He was born in San Francisco, Calif., Sept. 14, 1858, and was graduated from Yale University in 1880, taking his law degree at Columbia University in 1882. After practicing law for a few months he entered the em-

ploy of the Pratt Manufacturing Co., an affiliate of the Standard Oil Co. in New York City, and in 1886 went to its Oil City (Pa.) offices. In 1903 Mr. Jennings became a director of the Standard Oil Co. of New Jersey, and served as its secretary during 1908-11. From 1908 to 1919 he was also president of the National Fuel Gas Co.

Jerram, Admiral Sir (Thomas Henry) Martyn, died Mar. 19, 1933.

Johnson, Edwin S. American banker, lawyer, and United States Senator, died at Platte, S. D., July 19, 1933. Born near Spencer, Ind., Feb. 26, 1857, he attended the public schools of Osceola, Ia., and in 1876, became associated with his father in the clothing business. Removing to Grandview, S. D., in 1884, he established with his brother Homer the Citizens' Bank and two years later the Citizens' State Bank at Armour, Johnson Bros. Co. later opened banks at Geddes, S. D., and Horning, Ia., but in 1902 disposed of all these interests so as to concentrate on their real estate and loan business. In the meantime Edwin Johnson had been admitted to the South Dakota bar, serving as State's attorney for Douglas Co., during 1892-94. He was elected to the Senate of the South Dakota Legislature in 1894 on the Republican ticket but after 1896 pledged allegiance to the Democratic party, serving from 1904 to 1916 as member of the Democratic National Committee. In the latter year he was elected to the United States Senate. During his term he was active on such committees as agricultural and forestry, Indian affairs, public lands, and woman suffrage and was an advocate of the Eighteenth Amendment.

Johnson, Elias Finley. American judge, died at Palo Alto, Calif., July 31, 1933. Born at Van Wert, Ohio, June 24, 1861, he attended the National University, Lebanon, Ohio, and was graduated with the LL.B. degree from the University of Michigan in 1890. He served on the faculty of the University of Michigan as assistant and instructor in law (1890-94), assistant professor (1894-95), and professor (1895-1901). In 1901 he was appointed judge of the Supreme Court of the Philippine Islands, serving in Manila until his retirement in 1932. He was also interested in educational matters, being a member of the Michigan State Board of Education (1897-1901), and of the Board of Regents of the University of the Philippines. He was the author of *Johnson on Bills and Notes* and edited the second edition of *Norton on Bills and Notes* and the third edition of *Bass on Code Pleading*.

Johnston, Maj.-Gen. William Hartshorne, U.S.A., Ret., died Feb. 20, 1933.

Joly, John, died Dec. 8, 1933.

Jones, Sir Robert, died Jan. 15, 1933.

Jones, T(homas) Sambola. American editor, jurist, and diplomat, died in Baton Rouge, La., May 15, 1933. He was born at Jackson, La., Oct. 5, 1859, attended Centenary College, and received the LL.B. degree from Tulane University in 1880. Instead of practicing law he was appointed superintendent of schools in Baton Rouge and in 1886 became editor of *The State Journal*. He also edited *The Louisiana Educator* from 1888 to 1892. In 1901 he was appointed judge of the Inferior Criminal Court of Baton Rouge, on whose bench he sat for 10 years. Mr. Jones thrice served in the House of Representatives of the Louisiana Legislature, being elected in 1912, 1916, and 1924. In 1918 President Wilson appointed him Minister to Honduras. On his resignation in 1920 he was commended by the State Department for the part which he played in protecting American interests despite a pending revolution.

Julian, Camille, died Dec. 12, 1933.

Kajanus, Robert, died July 6, 1933.

Kellaway, Frederick George, died Apr. 13, 1933.

Kelly, James Edward. American sculptor, died May 25, 1933, in New York City, where he was born July 30, 1855. He studied at the National Academy of Design and at first devoted himself to wood engraving, being known principally until 1881 as an illustrator for *Scribner's*, *St. Nicholas*, *Harper's*, and other magazines. This tendency was carried over into his sculpture which, while full of spirit and often excellent in portraiture, was essentially illustration in bronze. He won the designation "the sculptor of American history" by his works, which include: "Sheridan's Ride" (1878); "Paul Revere" (1882); Monmouth Battle Monument (1883-85), with five historical panels, "Grant at Fort Donelson" (1886); the 6th New York Cavalry Monument at Gettysburg (1890); "Call to Arms" (1891); a colossal figure for the Troy (N. Y.) Soldiers' Monument; Gen. John Buford Monument at Gettysburg (1895); a colossal monument to commemorate the defense of New Haven (1909); "Leather Stocking and the Last of the Mohicans" (1926); "Destruction of the Bridge at Princeton in 1777" (1928); and "Isaac Sears Striking the First Blow for Liberty in 1770" (1931). Mr. Kelly executed a series of bronze busts from sittings given by 40 generals of the Civil War, including Grant, Sherman, Sheridan, and Hancock, and a similar series for the Spanish-American

War, including heads or panels of Roosevelt, Wheeler, Wood, Dewey, Sampson, Hobson, and others. Among his equestrian statues commemorating these conflicts were "General Sherman" and "Colonel Roosevelt at San Juan Hill." He executed also the bronze reliefs, "Battle of Harlem Heights" at Columbia University, "Washington at Valley Forge" on the Sub-Treasury Building in New York City, and "Cassius Rodney Declaring for Independence" and "Rodney's Arrival at Independence Hall" in Wilmington, Del. His friend, Thomas A. Edison sat for him on several occasions, the first being in 1879 when he designed a relief of the inventor with the first phonograph.

Kelly, Thomas Hughes. American capitalist and philanthropist, died in Paris, Jan. 22, 1933. He was born in New York City in 1865, and was graduated from Seton Hall College in 1888, and Columbia University law school in 1891. Although he never practiced, his legal knowledge proved useful in the handling of the property left him by his father, Eugene Kelly, founder of the banking firm of Eugene Kelly and Co. Mr. Kelly was a Papal Chamberlain for thirty years, serving under every Pope after Leo XIII. He was deeply interested in the Irish cause and in 1916 attempted, with the aid of Mrs. Kelly and Joseph Smith, to carry \$50,000 to the sufferers in the revolt, but they were unable to land. In 1932 the Irish Free State government offered him the post of Minister to Vatican City, but he refused. With his mother and a brother he was the donor of the Lady Chapel in St. Patrick's Cathedral, New York City. Among the papal honors bestowed upon him were the Grand Cross of the Holy Sepulchre, the rank of Prince of the Holy Roman Empire, and knighthood in the Orders of St. Gregory and of Malta.

Kemble, Edward Windsor. American illustrator, died at Ridgefield, Conn., Sept. 19, 1933. Born in Sacramento, Calif., Jan. 18, 1861, he studied a short time at the Art Students League, New York City, but was mainly self taught. During the '80s he began to draw for the *Daily Graphic*, then for the *Century*, *Life*, *Collier's*, *Harper's Weekly*, and other magazines, and rapidly made a name with his caricatures, sketches of old New England life, and Negro subjects. The latter were his specialty for many years. Volumes treating the various activities of "Kemble's Coons" appeared in 1898, 1899, and 1900, under the titles of *Comical Coons*, *A Coon Alphabet*, *Coon Calendar*, *Coontown's 400* and *A Pickaninny Calendar*. Among other books of drawings which he published were *Rosemary*, *Virginia Creeper*, and *Billy Goat and Other Comicalities*. He illustrated also *Uncle Tom's Cabin*, *Huckleberry Finn*, *Pudd'nhead Wilson*, and *Knickerbocker's History of New York*, being as clever in his delineation of Dutch burghers and adolescent youths of the frontier as he was in portraying the Negro.

Kendrick, John Benjamin, died Nov. 8, 1933.

Kenyon, William Squire, died Sept. 9, 1933.

Kester, Paul. American dramatist, died near Peekskill, N. Y., June 20, 1933. Born at Delaware, Ohio, Nov. 2, 1870, he achieved recognition with the production in 1892 of his first play, *The Countess Koudine*, starring Mrs. Fiske. He was especially noted for his adaptation to the stage of various novels, among which were *Guy Mannering* (1898); *When Knighthood was in Flower* (1901); *The Cavalier* (1902); *Dorothy Vernon of Haddon Hall* (1903); *Beak House (Lady Dedlock)*, (1923); and *Tom Sawyer* (1931). He wrote also *Sweet Nell of Old Drury* (1900); *Queen Flametta* (1902); *Mademoiselle Mars* (1903); *Friend Hannah* (1906); *Lily, the Bill Topper* (1910); *The Love of a King* (1917); and *The Woman of Bronze* (1920). Among the notable actors and actresses who starred in his plays were Madame Modjeska, Alexander Salvini, Madame Janauschek, Julia Neilson, Fred Terry, Ada Rehan, Julia Marlowe, E. H. Sotherton, Annie Russell, Marie Tempest, and Margaret Anglin.

Kilgour, Joseph. American actor, died at East Islip, L. I., N. Y., Apr. 20, 1933. He was born at Ayr, Ont., Canada, July 11, 1863. His first appearance in New York was in *Noabe*, Nov. 14, 1895. Mr. Kilgour supported Mrs. Fiske, Henrietta Crossman, and Mrs. Leslie Carter. His greatest success was with Frances Starr in *The Earliest Way*, produced by David Belasco in 1909. He specialized in portrayals of stage millionaires. His last appearance was in *Young Sinners* in Boston in 1930.

King, Brig.-Gen. Charles, U.S.A., Ret., died Mar. 17, 1933.

King, Maj.-Gen. Edward Leonard, U.S.A. American soldier, died at Fort McPherson, near Atlanta, Ga., Dec. 27, 1933. Born at Bridgewater, Mass., Dec. 5, 1878, he was graduated from the United States Military Academy in 1898 and after receiving his commission as second lieutenant with the 9th Cavalry was promoted through the grades to the rank of brigadier-general in 1922, and major-general in 1931. He served in the Spanish-American War, and while participating in the suppression of the Philippine Insurrection acted as aide-de-camp to Maj.-Gen. Henry W. Lawton. During

the World War he was chief of staff of the 28th Division of the American Expeditionary Forces, recruited from the Pennsylvania National Guard, which participated in the Marne defensive and Aisne-Marne offensive, and later commanded the 65th Infantry Brigade of the 29d Division in the Somme and Meuse-Argonne operations. He remained overseas with the American Army of Occupation in Germany for a year. On his return to the United States in 1919 he was assigned to the Naval War College as instructor and two years later was transferred to the Army War College as director. In 1923 he was detailed commandant of the Cavalry School at Fort Riley, Kan., and in 1925 of the General Service Schools at Fort Leavenworth. Appointed assistant chief of staff of the War Department in 1929, General King remained in Washington until 1932, when he became commander of the Fourth Corps Area. He received the Distinguished Service Cross for his exploits in the Philippines and the Distinguished Service Medal for his bravery in the World War. The French Government also conferred on him the Croix de Guerre with palm and the decoration of officer of the Legion of Honor.

King, Stoddard. American writer, died in Spokane, Wash., June 13, 1933. He was born at Jackson, Wis., Aug. 19, 1889, and after completing his high school education was a reporter for three years (1907-10) on the *Spokane Spokesman-Review*. He then entered Yale University, from which he was graduated in 1914. After serving for a short time as associate editor of *Harper's Weekly*, he returned to the *Spokesman-Review* in 1916 as editorial writer and conductor of a column entitled "Facetious Fragments." Stoddard King acquired a national reputation as a humorist on the lecture platform and through his books: *What the Queen Said* (1926), *Grand Right and Left* (1927), *Listen to the Mocking Bird* (1928); and *The Raspberry Tree* (1930). He also wrote the lyrics of songs, the best known of which was the war-time *There's a Long, Long Trail*.

King, William Joseph Harding. British explorer, died at Luppitt, Devonshire, England, Oct. 3, 1933. Born Apr. 28, 1869, he attended Jesus College, Cambridge. His explorations were confined almost entirely to the North African deserts. In 1900 and again in 1908 he traveled through the western Sahara, and from 1909 to 1912 explored the central portions of the Libyan Desert, contributing to the *Royal Geographical Journal* and other periodicals valuable papers on the sand dunes and ethnology of the region. With Orin Bates he conducted an archaeological expedition to Marmarica in 1913. Six years later he received the Gill Memorial from the Royal Geographic Society, of which he was a Fellow. He wrote *A Search for the Masked Twareke* (1903) and *Mysteries of the Libyan Desert* (1925).

Klauber, Adolph. American journalist and theatrical producer, died Dec. 7, 1933, in Louisville, Ky., where he was born Apr. 29, 1879. After attending the University of Virginia he began his career in 1900 as a reporter on the *New York Commercial Advertiser*, going over the following year to the *New York Tribune*. In 1904 he became Sunday editor of the *New York Times*. His interest in the theatre was stimulated not only by his early experience as a stock company actor but by his long service from 1906 to 1918 as dramatic critic for the *New York Times*. In 1919 Mr. Klauber made his first venture in the theatrical field, producing *Nightly Night*, a farce. He brought to Broadway from the Provincetown Theatre in Greenwich Village such early plays of Eugene O'Neill's as *The Emperor Jones* and *Diff'rent*, both produced in 1921, and was associated with his wife, Jane Cowl, in the production of her successes, *Lulu Time* and *Smilin' Through*. Assisted by Archibald and Edgar Selwyn he starred Miss Cowl in 1923 in *Romeo and Juliet*, *Pelleas and Melisande*, and *Antony and Cleopatra*. His last productions were *The Depths* (1925) and *Diversion* (1928).

Knight, Charles Landon. American editor and congressman, died in Akron, Ohio, Sept. 26, 1933. Born in Baldwin Co., Ga., June 18, 1867, he was graduated from Columbia University in 1889, receiving the LL.B. degree from that institution the following year. Admitted to the West Virginia bar, he practiced at Bluefield, where he mainly represented large coal interests. In 1896, however, he abandoned the law in favor of journalism being connected with the *Philadelphia Times* as chief editorial writer until 1900. After removing to Springfield, Ohio, he served as assistant editor and then editor-in-chief of the *Woman's Home Companion*. In 1902 he purchased with Maj. T. J. Kirkpatrick the *Akron Beacon Journal* and later acquired the *Massillon (Ohio) Evening Independent*. He relinquished his editorial duties in 1931 but over a period of three decades had exerted an influence on Ohio political thought, opposing as a supporter of Theodore Roosevelt and his Progressive platform, the election of Woodrow Wilson in 1912, the entry of the United States into the World War, and after the War, the proposed membership of that country in the League of Nations. Mr. Knight served several times on the Ohio Republican Central Committee

and was a delegate to the Republican National Conventions of 1916 and 1924. Elected to the 67th Congress in 1920 as representative from the 14th Ohio District, he continued his militant advocacy of Republican policies. In 1926 he served as Ohio commissioner for the Philadelphia Sesqui-centennial Exposition.

Koch, Felix John. American traveler and writer, died Dec. 27, 1933, in Cincinnati, Ohio, where he was born Jan. 15, 1882. After his graduation from the University of Cincinnati in 1904, he made his hobby, photography, a life profession in illustrating the articles which he wrote on strange, odd, and curious things. He visited also remote parts of the world in his effort to secure unique material, gaining thereby the sobriquet of "the Queer Corners Man." The valuable collection of photographs which Mr. Koch took as a witness of such important events as the coronation of George V, the investiture of the Prince of Wales, the Balkan Wars, the Mexican Revolution, the Dayton flood, and the Scopes trial were to go to the United States government and to the Cincinnati Historic Society after his death. He secured also for the War Department photographic records of American homeland activities during the World War. He was a member of the National Editorial Association, and once served as president of the Cincinnati branch of the American Folklore Society.

Kohut, George Alexander. Jewish scholar and author, died in New York City, Dec. 31, 1933. Born at Stuhlweissenburg, Hungary, Feb. 11, 1874, he was brought to the United States in childhood, later attending Columbia University and the Jewish Theological Seminary of America. From 1897 to 1900 he served as rabbi of the Congregation Emanu-El in Dallas, Tex., and during 1906-07 of the Sinai Congregation at Mount Vernon, N. Y. In 1909 he founded the Kohut School for Boys in New York City, serving for nine years thereafter as its principal. He then established the Columbia Grammar School for Boys, of which he was executive director at the time of his death. He was also executive director of the Children's University School and of the Dalton High School, New York City, from 1924 to 1926. Among the institutions which he established for the furtherance of Jewish cultural traditions were the Jewish Institute of Religion in New York City, the Society for the Furtherance of Jewish Learning in Berlin, and, in honor of his father, the Alexander Kohut Memorial Foundation, with subsidiary foundations at Yale University and at the Rabbinical Seminaries in Vienna and Budapest. Dr. Kohut served as editor of *Helpful Thoughts, The Jewish Home, New Era Illustrated Magazine*, and *Young Israel*. His publications included *The Court Jew Lippold* (1893), *Early Jewish Literature in America* (1895), *Erza Sides and the Jews* (1902), *Breide the Still Waters* (1912), *A Hebrew Anthology* (1915), and *Royal Hebraists* (1927).

Kotz, Daniel. American landscape painter, died at Park Ridge, N. J., Sept. 17, 1933. Born near South Bend, Ind., Mar. 21, 1848, he studied under Henry F. Spread and came to be well known for his depictions of autumn and winter scenes of the Pascack Valley of northern New Jersey. In such works as "Early Morning," "The Blizzard," "Beechwoods," "Clearing Up," "Corner of the Garden," and "Snowclad Hills," he showed a deep understanding of nature in all her varying moods. He was one of the founders of the Chicago Art League.

Kress, Brig.-Gen. John Alexander, U.S.A., Ret. American soldier, died in Washington, D. C., July 4, 1933. Born in Tioga Co., Pa., Nov. 4, 1839, he entered the United States Military Academy in 1858 but resigned in October, 1861, a few months after the outbreak of the Civil War to join the 25th New York Volunteer Infantry as 1st lieutenant and to serve as aide-de-camp to Gen. James S. Wadsworth. He rose to the rank of major of the 94th New York Volunteers in July, 1862, and a few months later to that of lieutenant colonel, commanding a regiment in the battle of Fredericksburg. On his transfer to the Ordnance Department he was commissioned chief ordnance officer of the Department of the James and inspector-general of the 25th Army Corps. After the War General Kress was assigned to arsenals in Rock Island, Ill. (1865); Pittsburgh, Pa. (1867); Vancouver, Wash. (1871); San Antonio, Tex. (1882); Indianapolis, Ind. (1883); St. Louis, Mo. (1886); Benicia, Calif. (1887); and again in St. Louis, Mo. (1890). In 1898 he was appointed chief ordnance officer of the United States Army, serving the same year after the outbreak of the Spanish-American War as chief ordnance officer of the 1st Army Corps and later as chief ordnance officer with the Cuban Army of Occupation. In 1899 he resumed command of the St. Louis Powder Depot, retiring in 1903 with the rank of brigadier-general.

Krobatin, Alexander. Count von. Austrian army officer and statesman, died in Vienna, Dec. 28, 1933. Born at Olmutz, Moravia, Sept. 12, 1849, he attended the Vienna Polytechnic Institute and in 1869 entered the Austrian army as a lieutenant of artillery. He held the

post of commandant of the Artillery Cadets School in Vienna, for several years and then in 1896 entered the government service as head of one of the War Office departments. He was commissioned a major-general in 1900 and four years later, after gaining recognition as a munitions expert, became chief of that section. In 1905 he was promoted to the rank of field marshal lieutenant and in 1910 became master of ordnance. Appointed Minister of War in 1912, he distinguished himself also in the field on the outbreak of the World War as commander of the Fourth Army on the Eastern Front. In 1917 he relinquished this portfolio to assume command as field marshal of the Tenth Army, operating in the Tyrol and Corinthia against the Italian forces.

Kurz, Selma. Austrian coloratura soprano, died in Vienna, May 10, 1933. Born at Biala, Galicia, in 1877, she made her debut at the Opera in Frankfort-on-Main in 1898. The following year she was engaged by Gustav Mahler, director of the Vienna Hofoper, to whom she owed her great advance, eventually becoming leading prima donna. Extensive leaves of absence enabled her to appear as guest at Covent Garden, London, the Paris Opera, and other leading European opera houses. In 1921 she made a coast-to-coast concert tour of the United States, arousing great enthusiasm everywhere through the natural beauty of her voice and the perfection of her art. Her husband was Dr. Halban, a Viennese physician.

Kyle, Melvin Grove, died May 25, 1933.

Lardner, Ring(gold) W(ilmer), died Sept. 25, 1933.

Laughlin, James Laurence, died Nov. 28, 1933.

Lee, David Russell. American educator, died at Evanston, Ill., Oct. 18, 1933. He was born at Hamilton, Ont., Canada, Aug. 20, 1869. Following his graduation from Albion College in 1895, he was ordained to the ministry of the Methodist Episcopal Church, successively holding charges at Robinson, Mich. (1897-98), Pentwater (1898-1900), and Grand Rapids (1901-03). He then resumed his studies, receiving the A.M. degree from Indiana University in 1905 and the Ph.D. degree from the University of Wisconsin in 1907. Called to Central College at Fayette, Mo., as professor of Greek and Latin in 1907, Dr. Lee remained there until 1909 when he became professor of classical literature at the University of Chattanooga. From 1916 to 1932 he was professor of Greek at the University of Tennessee. Dr. Lee was president of the Tennessee Philological Association during 1911-12 and its secretary during 1915-18. He served also in 1915 on the Rhodes Oxford Scholarship Committee for Tennessee. He was the author of *Child Life, Adolescence and Marriage in the Greek New Comedy and in the Plays of Plautus* (1920).

Lee, Elisha, died Aug. 6, 1933.

Leete, Alfred Chew. British illustrator and cartoonist, died in London, June 7, 1933. Born at Thorpe Achurch, Northamptonshire, in 1882, he attended the grammar school at Weston-super-Mare and began drawing for reproduction at the age of 15. Although self-taught, he acquired a bold technique and humorous touch that insured a welcome for his work by the leading periodicals. His most famous cartoon was the Kitchener cartoon, "Your King and Country Need You," used for recruiting purposes during the World War.

Legge, Alexander, died Dec. 3, 1933.

Lemieux, Sir François Xavier. Canadian jurist, died in Quebec, July 18, 1933. Born at Lévis, Que., Apr. 9, 1851, he was educated at Lévis College, the Quebec Seminary, and Laval University. After reading law with Gilbert La Rue, he became an attorney in 1872, conducting the defense in several well-known criminal cases, among which were those of Louis Riel, leader in 1884 of the rebellion of certain French half-breeds living near the forks of the Saskatchewan who attempted to force the government to settle their claims to certain land grants, and of Honoré Mercier, former premier of Quebec, who was tried in 1892 on charges of corruption in connection with the Baie de Chaleur Railway Scandal. During this period he was also prominent in the Nationalist movement in Quebec and sat in the Legislature as representative for Lévis from 1883 to 1894. In 1897 Lemieux was appointed puisne judge of the Superior Court of Arthabaska, being transferred to Sherbrooke in 1898 and to Quebec City in 1906. From 1911 to 1915 he was acting chief justice of the Superior Court of the Province of Quebec and after 1915 chief justice. Knighthood was conferred on him by King George in 1915. He was also a commander of the Papal Order of St. Gregory the Great.

Lévy, Raphaël-Georges, died Dec. 9, 1933.

Levygus, Georges Jean Claude, died Sept. 2, 1933.

Liaputcheff, Andreas, died Nov. 6, 1933.

Lilienthal, Gustav. German aviation pioneer, died in Berlin, Feb. 1, 1933. Born at Anklam, Prussia, Oct. 9, 1849, he attended the gymnasium there. During the '90s with his brother Otto, he attempted to develop a flying machine based on exact imitation of the flight of birds. His brother was killed in 1896 in one of their biplane glider experiments, but they succeeded in constructing a machine that, without propelling motors and screws, was able, if started from a height, to sail several hun-

dred feet even against the wind and to make turns to the right or left with considerable certainty. Gustav was later employed by the British government as an aviation adviser in both England and Australia but kept up his experimental work in Berlin.

Lindsay, Maj.-Gen. William Bethune. Canadian soldier and engineer, died in Toronto, Ont., June 27, 1933. Born at Strathroy, Ont., Nov. 3, 1880, he attended the Royal Military College at Kingston, and from 1900 to 1904 served as assistant engineer in the Department of Marine and Fisheries of the Dominion government. He then joined the Royal Canadian Engineers, organizing and training on the outbreak of the World War the 1st Canadian Divisional Engineers. Overseas he served as major and commanding officer of the 2nd Field Company of Canadian Engineers at Ypres, Festubert, and Givenchy, and in 1915 was commissioned lieutenant-colonel and Chief Royal Engineer of the 1st Canadian Division, designing the first plank road which was built by the Canadian Engineers in France. The following year he became chief engineer of the Canadian Army Corps with the rank of brigadier-general and in 1918 general commanding officer of all the Canadian engineer troops with the rank of major-general. In recognition of his services General Lindsay was made a Companion of the Order of St. Michael and St. George in 1916, of the Distinguished Service Order in 1918, and of the Bath in 1919. After his retirement in 1920 he resided at the Toronto Military Institute. He was a member of the Engineering Institute of Canada and of the Institution of Royal Engineers.

Lippitt, Henry Frederick. American manufacturer and former senator, died Dec. 28, 1933 in Providence, R. I., where he was born Oct. 12, 1856. After his graduation from Brown University in 1878, he became associated with the Manville Co., cotton manufacturers starting as a day operator in the bleaching and dyeing department and eventually being promoted to general manager. On the merger of the Manville Co. with the Jenckes Spinning Co. in 1923 he was elected president of the new organization, known as the Manville-Jenckes Co., and at the time of his death was chairman of the board of directors. Appointed United States Senator from Rhode Island in 1911 to fill the unexpired term of Nelson W. Aldrich, he failed of reelection in 1916 largely because of his intimate connection with the large manufacturing interests. He was continually demanding a higher tariff for "protective" purposes and was also an advocate of military preparedness. In 1889 he was president of the New England Cotton Manufacturers' Association, and at the time of his death vice-president of the Cotton Textile Institute, Inc.

Lively, Daniel O'Connell. American humanitarian, died at White Plains, N. Y., Nov. 30, 1933. Born at Galveston, Tex., Sept. 14, 1868, he was mainly self-educated, being engaged until 1904 as a cowboy, newspaper reporter, agricultural and livestock editor, and stockyard and oil operator. After engaging in the wholesale merchandise business in Panama for five years, he resumed his stockyard operations in Portland, Ore. In connection with the Panama Pacific International Exposition of 1915 he acted as chief of the department of live stock and as commissioner to South America. After the entry of the United States into the World War he was active in promoting the third and fourth Liberty Loans, and then decided to make a more vital contribution by going to Russia in the interests of the American Red Cross, General Pershing conferring on him at this time the military title of major. He was later transferred to Siberia, serving as chairman of the American Committee for the Repatriation of Prisoners of War and saving from starvation thousands of White Russian refugees. While in the Orient Major Lively was appointed Far East commissioner for the United States Department of Agriculture. Returning to the United States in 1924, he served as manager during the next four years of the State Chamber of Commerce of Washington. He then became national director of the China Famine Relief, raising in the United States over a period of four years \$1,650,000 for this purpose and on several occasions personally carrying supplies to the starving inhabitants of China's famine-stricken or flooded interior. He was also interested in the White Cross Anti-Narcotic Association, holding the office of vice-president in 1928.

Liveright, Horace Brisbin. American publisher and theatrical producer, died in New York City, Sept. 24, 1933. Born at Osceola Mills, Pa., Dec. 10, 1886, he attended the public schools of Philadelphia. After engaging in bond salesmanship for many years he established in 1911 a small company for the manufacture and sale of paper products. In 1917 Albert Boni interested him in starting *The Modern Library*, a collection of reprints of books that have lived down the ages or that the publishers felt would continue to live. On the incorporation of the firm as Boni and Liveright the following year he became president and during the 12 years that he was engaged in the publishing business helped to stimulate the interest of the reading public

in the works of Eugene O'Neill, Theodore Dreiser, Hendrik Van Loon, Ben Hecht, Emil Ludwig, and Ernest Hemingway. He retired in 1930, the firm, however, continuing under the name of Liveright, Inc., until its bankruptcy. In 1924 Mr. Liveright entered the theatrical field, producing during the next three years *The Firebrand*, *Hamlet in Modern Dress*, *An American Tragedy*, *Dracula*, and *The Dagger and the Rose*. He was also president of the Stonelea Players and the Authors' Royalties Co. and was a member of the executive committee of the Committee of 48. In 1924 he successfully opposed State censorship in the form of Justice Ford's Clean Books Bill before the New York General Assembly, and in his constant altercations with the Society for the Suppression of Vice, became noted for his tolerant stand on sex and other controversial subjects peculiar to general literature.

Lloyd, Nelson McAllister. American journalist and author, died at Mifflintown, Pa., Feb. 1, 1933. He was born in Philadelphia, Dec. 18, 1872. On his graduation from Pennsylvania State College in 1892 he joined the staff of the New York *Evening Sun*, remaining with that paper for 17 years and serving for a time as city editor. He was a contributor of numerous short stories and historical sketches to magazines, and published *The Chronic Loafer* (1900); *A Drone and a Dreamer* (1901); *The Soldier of the Valley* (1904); *The Robberies Company, Ltd.* (1906); *Six Stars* (1906); and *David Malcolm* (1913). He was also a member of the National Institute of Arts and Letters.

Lock, Walter. British theologian, died in London, Aug. 13, 1933. Born July 14, 1846, he was educated at Marlborough College and at Corpus Christi College, Oxford and became a fellow of Magdalen College in 1869. On the founding of Keble College in 1870 he was appointed tutor serving later as subwarden (1880-97), and as warden (1897-1920). During 1895-1919 he was also Dean Ireland's Professor of the Exegesis of Holy Scripture and during 1896-1919 a member of the Hebdomadal Council. In 1919 he was appointed canon of Christ Church and Lady Margaret Professor of Divinity, holding the latter incumbency until his retirement as professor-emeritus in 1928. Dr. Lock published a biography of John Keble (1892), annotated editions of *The Christian Year* (1895), and *Lyra Innocentium* (1899); *St. Paul the Master Builder* (1899); *The Bible and Christian Life* (1905); and *Oxford Memories* (1932). He was also general editor of the *Westminster Commentaries on the Revised Version*.

Loeb, James, died May 27, 1933.

Lord, Chester Sanders, died Aug. 1, 1933.

Lord, Livingston C. American educator, died at Charleston, Ill., May 15, 1933. He was born at Killingworth, Conn., Aug. 27, 1851 and was graduated from the State Normal School in New Britain, Conn., in 1871. After acting as principal in Terryville, Conn., Winnebago City, Minn., and Mankato, Minn., Dr. Lord was appointed in 1879 superintendent of schools at St. Peter, Minn. In 1888 he was elected president of the State Normal School at Moorhead, Minn., and in 1899 was called to the Eastern Illinois State Normal School at Charleston, Ill., in the same capacity. He held the latter position at the time of his death. He was president of the Minnesota Educational Association in 1880 and of the Illinois State Teachers Association in 1905.

Lounsbury, Ralph Reed. American lawyer and educator, died at Black Mountain, N. C., Oct. 16, 1933. He was born at Meriden, Conn., Nov. 3, 1871. On his graduation from Yale University in 1894 he was engaged in journalism, serving as State editor of the *Hartford Courant* in 1894 and as associate editor of the *Bridgeport Standard* during 1895-97. While serving as news editor of the *Chicago Daily News* he decided to attend the Chicago-Kent College of Law, receiving the LL.B. degree in 1900. On his admittance to the Illinois bar in the latter year, Mr. Lounsbury opened an office in Chicago and practiced there for 18 years. He then removed to New York City where as a member of the firm of Lounsbury, Ely and Fain he specialized in corporation law, being counsel for several national trade organizations. On his retirement in 1930 he was called to Rollins College as professor of government and political science and director of the Institute of Statesmanship. At the time of his death he was holding the positions of secretary and professor of government and public law at the newly established Black Mountain College. Mr. Lounsbury was active in politics after his removal to New York City, being a member of the Republican County Committee of Westchester Co. from 1922 to 1930 and a delegate to the New York State Republican Convention of 1924. He had also been a speaker for the Republican party in most of the national campaigns after 1896 and lectured on politics, the Constitution, and other subjects of national interest.

Lovatt, Maj.-Gen. Simon Joseph Fraser, 14th Baron. British soldier, died near Chipping Norton, Oxfordshire, England, Feb. 18, 1933. Born Nov. 25, 1871, he attended Magdalen College, Oxford, and succeeded to the title

on the death of his father in 1887. At the beginning of the Boer War he organized the corps of Lovat's Scouts which played a prominent part in suppressing the guerrilla tactics of that conflict. On his return to England in 1908 he raised two yeomanry regiments, which formed part of the Highland Territorial Mounted Brigade and of which he was lieutenant colonel. He served also as aide-de-camp to King Edward and to King George. During the World War, as brigadier-general, he commanded the Highland Territorial Mounted Brigade in the Gallipoli campaign and served later in France and Belgium. During 1927-28 Lord Lovat was Parliamentary Under-Secretary of State for Dominion Affairs, and during 1927-29 chairman of the Overseas Settlement Committee. At the time of his death he held the rank of honorary major-general in the Territorial Army. He was created a Knight of the Order of the Thistle in 1915, Knight Commander of St. Michael and St. George in 1919, and Knight of the Grand Cross of the Royal Victorian Order in 1922.

Lowell, James Arnold, died Nov. 30, 1933.

Luke, George Benjamin, died Oct. 29, 1933.

Lunacharsky, Anatol Vasilievitch, died Dec. 26, 1933. Lyster, Brig-Gen. Theodore Charles, U.S.A., Ret. American army surgeon, died in Los Angeles, Calif., Aug. 6, 1933. Born at Fort Larned, Kan., July 10, 1875, he was graduated from the University of Michigan with the Ph.B. degree in 1897 and the M.D. degree in 1899. Commissioned 1st lieutenant with the Medical Corps of the United States Army in 1900, he was appointed in 1904 chief of the eye, ear, nose, and throat clinic in the hospital at Ancon, Canal Zone. In 1911 he was transferred to the Philippines as chief of eye service at the University of the Philippines and two years later during the American occupation of Vera Cruz, Mexico, was chief health officer for the American troops. On the entry of the United States into the World War he was appointed chief of aviation and professional services in the Surgeon-General's Office, serving in France during the winter of 1917-18. On his retirement with the rank of colonel in 1919 Dr. Lyster became a director of yellow fever elimination research at the Rockefeller Foundation in New York City. After 1920 he was engaged in private practice in Los Angeles. He received the Distinguished Service Medal in 1919 and in 1930 was commissioned brigadier-general by special act of Congress.

Macia y Llusca, Francisco, died Dec. 25, 1933.

Maciel Olegario, Brazilian statesman, died at Bello Horizonte Sept. 5, 1933. Born in 1855, he was graduated from the Polytechnic School in 1878. Two years later he was elected provincial deputy and in 1889, upon the downfall of Dom Pedro II, was elected to the new State Legislature. As a member of the National Assembly he helped to draft the constitution of the republic and from 1890 to 1910 represented the State of Minas Geraes in the Federal Congress. An able engineer as well as statesman, he served during 1914-18 as inspector-general of railway services and five years later was elected vice-governor of Minas Geraes, succeeding to the post of governor on the death of Raul Soares in 1924. He was again returned to the State Legislature in 1926, serving for several years as president of its Senate. Elected governor of Minas Geraes in 1930, Dr. Maciel was one of the few provincial officials who during the civil war of 1932 supported Getulio Vargas, head of the provisional government established in November, 1930. The causes of the war lay primarily in the rivalry between São Paulo and Minas Geraes, the two most important States, for the control of the Federal government. After the defeat of the Paulista forces in October, 1932, Dr. Maciel was the only State governor to retain his office. Federal interventors or provisional governors being named in all the other States. In recognition of the services he had rendered he was buried with the honors of a president of the republic.

McCaleb, Ella, American educator, died in Poughkeepsie, N. Y., Jan. 9, 1933. She was born in Mount Pleasant, Pa., Apr. 23, 1856, and was graduated from Vassar College in 1878. After teaching at Clifton Springs, N. Y., and at the Home and Day School in Detroit, she returned to her alma mater in 1885 as secretary to President Taylor. In 1893 Miss McCaleb was appointed secretary of the college and in 1919 was named the first dean, holding the latter office until her retirement in 1923.

McConnell, Ira Welch, died Jan. 8, 1933.

McCumber, Porter James, died May 18, 1933.

McGeehan, William O'Connell, American journalist, died at Sea Island Beach, near Brunswick, Ga., Nov. 29, 1933. Born in San Francisco, Calif., Nov. 22, 1879, he attended Stanford University but left on the outbreak of the Spanish-American War to serve in the Philippines with the 1st California Volunteers. His newspaper career began in 1900 as a reporter on the San Francisco *Oakland*. After going over to the San Francisco *Post*, on which he acted successively as city editor and managing editor, he removed in 1914 to New York City and for a year contributed to the *Evening Journal's* sports column "Right Cross." He next became connected with the New York *Tribune* as sports editor, serving during 1921-

22 as its managing editor. From 1922 until the merger of the paper with the *Tribune* in 1924 he acted as sports editor of the New York *Herald*. It was in connection with the *Herald* that Mr. McGeehan started the column "Down the Line." He continued it for the New York *Herald Tribune*, coining many words, phrases, and epithets that added a satirical touch to this type of writing. He was also one of the sincerest advocates among sports writers of clean sport, holding aloof from professional promotion of any sort. Among his other assignments was the famous Scopes trial held at Dayton, Tenn., in 1925.

McGiffert, Arthur Cushman, died Feb. 25, 1933.

McGlothlin, William Joseph, American clergyman and educator, died at Gastonia, N. C., May 28, 1933. He was born near Gallatin, Tenn., Nov. 29, 1867, and was graduated from Bethel College in 1889 and from the Southern Baptist Theological Seminary in 1894, receiving the Ph.D. degree from the University of Berlin in 1901. He was ordained to the Baptist ministry in 1891, and in 1893 joined the faculty of the Southern Baptist Theological Seminary as a tutor in Hebrew and Old Testament. The following year he became instructor, in 1896 assistant professor, and in 1900 professor, directing also the correspondence work during 1915-19. In 1919 he was elected president of Furman University, Greenville, S. C., and in 1930 was president of the Southern Baptist Convention. Dr. McGlothlin wrote many articles for religious periodicals, and published *What Is Essential Baptist Doctrine?* (1906); *Kentucky Baptists, the Seminary and 'Athen Immersion'* (1908); *A Guide to the Study of Church History* (1908); *Baptist Confessions of Faith* (1910); *A Vital Ministry* (1913); *Infant-baptism in History* (1915); *The Course of Christian History* (1917); *History of Furman University* (1926). He contributed also to *Hastings's Dictionary of Religion and Ethics* and the *International Bible Dictionary*.

McGovern, Patrick, American contractor, died in Great Neck, L. I., N. Y., Feb. 22, 1933. Born in County Cavan, Ireland, in 1871, he came to the United States at the age of 20 and worked for several years as a laborer in Boston. On the discovery of gold in the Klondike in 1896 he joined the Alaska gold rush, but his failure to make his fortune caused him to return to Boston. This experience, however, had equipped him with considerable practical engineering knowledge and he entered the contracting business, working on the construction of part of the Boston subway. In 1908 he removed to New York City where his most important achievement as a subway contractor was the construction at a cost of \$22,000,000 of the 53d Street twin tunnels of the municipal subway system, extending under the East River from Manhattan to Long Island City. He constructed also a section of the Philadelphia subway. After 1929 he was engaged in the construction for the New York Board of Water Supply of a supplementary pressure tunnel, extending from the Hill View Reservoir in Yonkers to Hamilton Avenue, Brooklyn, and costing \$43,000,000. Mr. McGovern figured in frequent disputes with labor organizations over wage rates. In April, 1932, he was summoned before a Federal grand jury where in an income-tax investigation he refused to testify in regard to certain monies which he was alleged to have paid during 1928-30 to labor leaders. Sentenced to serve a 60-day term for contempt of court, he appealed in vain to the higher courts and on Nov. 30, 1932, entered the Federal house of detention.

McKenny, Charles, American educator, died at Ypsilanti, Mich., Sept. 24, 1933. Born at Dimondale, Mich., Sept. 5, 1860, he was graduated from the Michigan Agricultural College with the B.S. degree in 1881 and from Olivet College with the A.B. degree in 1889. He served on the faculty of the latter institution for the next seven years, first as instructor in English and history and then as professor of history. During 1896-1900 he was principal of the State Normal School at Mt. Pleasant, Mich., and during 1900-12 president of the State Normal School in Milwaukee. As president of the Michigan State Normal College at Ypsilanti from 1912 to 1933, Dr. McKenny was responsible for the student enrollment being doubled and for improvements in the physical plant. He was president of the National Society for the Study of Education (1908-10) and of the Association of American Teachers Colleges (1917-19). In addition to editing the *American Schoolmaster* he wrote *The Personality of the Teacher* (1910).

McLean, Rear Admiral Ridley, U.S.N., American naval officer, died in San Francisco, Calif., Nov. 12, 1933. Born at Pulaski, Tenn., Nov. 10, 1872, he attended the University of Tennessee and was graduated from the United States Naval Academy in 1894. Commissioned an ensign in 1896, he served on the battleships *Indiana* and *Oregon* and during the Spanish-American War was assigned to the ammunition ship *Armeria*. He was also active in the Philippine Insurrection. An ordnance specialist, Admiral McLean acted as assistant inspector of target practice with the Atlantic Fleet from 1903 to 1906 and as fleet gunnery officer from 1906 to 1909. After being detailed to the General Board of the Navy Department

during the next two years he was assigned in 1911 to the battleship *Florida* as navigator, 1st lieutenant, and executive officer. In 1913 he became judge-advocate-general of the United States Navy but in 1916 returned to sea duty as commander of the *Columbia*. On the entry of the United States into the World War Admiral McLean was made chief of staff of Battleship Force One and the following year commander of the battleship *New Hampshire* which acted as escort to convoys and after the Armistice assisted in transporting back to the United States the troops of the American Expeditionary Force. After commanding the battleship *Arkansas* during 1922-24 he was appointed director of naval communications. Promoted to the rank of rear admiral in 1927, he commanded the Submarine Divisions of the United States Battle Fleet until 1929 and then was made budget officer of the Navy Department. At the time of his death he commanded Division Three of the Battle Fleet, his flagship being the *Nevada*. He wrote *Bluejacket's Manual* (1902).

MacLennan, Frank Pitts American publisher, died at Topeka, Kan., Nov. 18, 1933. He was born at Springfield, Ohio, Mar. 1, 1855, and was graduated from the University of Kansas in 1875. From the position of mail boy in 1877 he rose to the post of editor and part owner of the *Emporia Daily News* in 1880, remaining in the latter capacity until 1885. He then bought the *Topeka State Journal*, whose circulation he increased tenfold within five years after its purchase. In editorial policy the paper was free from all political alliances, allowing its owner wider scope not only in politics but in other controversial matters. He was also vice-president of the Associated Press during 1910-11 and a director of that organization after 1919. Outside the newspaper field Mr. MacLennan served as president of the Kansas Hotel Co., which he had helped to organize for the purpose of providing Topeka with additional convention accommodations. He was also one of the organizers and a past president of the Kansas Reserve State Bank. He wrote *A Kansan in New York* (1918); *Four Weeks with the Navy* (1924); and *A Tale of the Great Sea* (1925).

MacMechan, Archibald McKellar, Canadian educator, died in Halifax, N. S., Aug. 7, 1933. Born June 21, 1862, he attended Hamilton Collegiate Institute and the University of Toronto, being graduated from the latter in 1884. After serving as Modern Language master at the Galt Collegiate Institute during 1885-86 he attended Johns Hopkins University, from which he received the Ph.D. degree in 1889. He was then called to Dalhousie University as George Munro professor of English language and literature, which chair he retained until his retirement in 1931. He was honored by several American institutions in being requested to teach at their summer sessions. Among these were Chicago, Columbia, Northwestern, and Harvard universities. He was president of the Nova Scotia Historical Society during 1907-09 and in 1916 was elected a Fellow of the Royal Society of Canada. Dr. MacMechan edited Carlyle's *Sartor Resartus* (1896) and *Heroes and Hero-Worship* (1900) and *Nova Scotia Archives*, vols. ii and iii. He published also *The Porter of Bagdad* (1901); *Poems of Tennyson* (1907); *The Life of a Little College* (1914); *Sagas of the Sea* (1923); *Old Province Tales* (1924); *The Book of Ultima Thule* (1927); *There Go the Ships* (1928); and *Red Snow on Grand Pré* (1931). To Canada and its Provinces (vols. xii and xiv), he contributed *Nova Scotia under English Rule, 1713-1915* and to *Chronicles of Canada, The Winning of Responsible Government* (1915).

McMillan, Sir Daniel Hunter, Canadian soldier and administrator, died in Winnipeg, Man., Apr. 14, 1933. Born at Whitch, Ont., Jan. 14, 1846, he joined the militia in 1864, serving during the Fenian Raid of Irish-American invaders on the Niagara frontier (1866), with Col. Garnet Wolseley's expedition against the Red River French and Indian half-breeds (1870), and during the Northwest Rebellion (1885), being promoted to lieutenant-colonel of the Ninety-Fifth Regiment of Manitoba Grenadiers. In 1870 he settled in Winnipeg where he engaged in the grain business, and in 1887 was elected the first president of the Winnipeg Grain and Produce Exchange. He subsequently became identified with several financial and insurance corporations, such as the Great West Life Assurance Co. and the Toronto General Trusts Corp. Sir Daniel served as a Liberal member of the Manitoba Legislature for 20 years (1880-1900), representing Centre Winnipeg, and during the latter eleven was Provincial Treasurer in the Manitoba government. Appointed Lieutenant-Governor of the province in 1900, he filled the post so successfully that the Governor-General extended his term until 1911. In 1902 he was created Knight Commander of St. Michael and St. George. McMillin, Benton, died Jan. 8, 1933.

McNeill, John, British clergyman, died at Frinton-on-Sea, near London, Apr. 19, 1933. He was born at Houston, Renfrewshire, Scotland, July 7, 1854, the son of a quarry foreman. He worked as a railway employee from 1869 to 1877, and then studied for the ministry at Edinburgh and Glasgow universities and at the Free

Church Divinity Hall in Glasgow. Following his ordination to the Presbyterian ministry, he preached during 1886-89 at the McCrie-Roxburgh Free Church, Edinburgh, and then for three years at the Regent Square Presbyterian Church, London. In 1892 he joined Dwight L. Moody as a revival preacher in Aberdeen and during the next 16 years conducted mission services in different parts of the world. Among the Presbyterian pastorates which he held after 1908 were Christ's, London, St. George's, Liverpool; Cook's, Toronto, Canada; Central, Denver, Colo.; and Fort Washington, New York City.

Maddox, Ernest Edmund, British ophthalmologist, died in London Nov. 10, 1933. Born in 1860, he received the M.D. degree from the University of Edinburgh, being appointed in 1884 Syme Surgical Fellow. In connection with the Edinburgh Royal Infirmary he served as resident physician and assistant ophthalmic surgeon and was also ophthalmoscopic tutor at the University's medical school. Later removing to Bournemouth, he was appointed consulting ophthalmic surgeon to the Royal Victoria and the West Hampshire Hospitals. Dr. Maddox's great contribution was the orthoptic training of squint in children, inventing for this purpose the chiroscope. He was also considered one of the leading authorities on heterophoria or latent deviation of the eyes. In 1899 the British Medical Association awarded him its Middlemore Prize for the most important contributions to ophthalmology made during the preceding three years, and in 1921 he received the Doane Memorial Medal from the Oxford Ophthalmological Congress. He served as vice-president of the ophthalmic section of the British Medical Association in 1929 and as president in 1931. Among his publications were *The Clinical Use of Prisms and the Decentering of Lenses*, which ran into five editions; *Tests and Studies of the Ocular Muscles*, and *Golden Rules of Refraction*. He invented a safety device for dangerous cataract extraction.

Maddox, William Arthur, American educator, died suddenly at Davis Junction, Ill., Aug. 10, 1933. Born in Richmond, Va., Feb. 24, 1883, he was graduated from the College of William and Mary in 1904, and received the Ph.D. degree from Columbia University in 1917. After serving as grammar and high school principal in Portsmouth, Va., he held the post of superintendent of schools in Henrico Co., Va., from 1907 to 1910. For the next three years he was professor of psychology and principal of the training school at the State Normal College, Farmville, Va. In 1913 he was appointed director of teacher training at the State Normal School, Oswego, N. Y., and in 1916 assistant professor of education at Teachers College, Columbia University. After 1919 Dr. Maddox was president of Rockford College. He held also the office of president of the Federation of Illinois Colleges during 1925-26. He wrote *The Free School Idea in Virginia Before the Civil War* (1918) and the chapter, "Development of Method," in *Twenty-five Years of American Education* (1924).

Magnus, Sir Philip, British educator, died at Chilworth, Surrey, Aug. 29, 1933. He was born in London, Oct. 7, 1842, and was educated at University College, London. In 1880 he organized the City and Guilds of London Institute, serving as its secretary until 1888. He then became superintendent and secretary of the Institute's department of technology, in which position he remained until 1915. He was a member of the Royal Commission on Technical Instruction during 1881-84, of the London School Board during 1890-91, and of the Senate of London University during 1898-1931 and also a governor of the Royal Grammar School at Guilford, the Northampton Polytechnic, and other institutions. From 1906 to 1922 he was Unionist Member of Parliament for London University. Sir Philip wrote *Educational Aims and Efforts* (1880-1910); *Industrial Education* (1888); and various textbooks on mechanics, including *Lessons in Elementary Mechanics and Hydrostatics and Pneumatics*. Knighthood was conferred on him in 1886, and in 1917 he was created a baronet.

Main, Arthur Elwin, American theologian, died at Alfred, N. Y., Jan. 29, 1933. He was born at Adams Centre, N. Y., Aug. 23, 1846, and was graduated from the University of Rochester in 1869 (A.M., 1870) and from the Rochester Theological Seminary in 1872. Following his ordination to the Seventh Day Baptist ministry, he was pastor at Ashaway, R. I., until 1880. He then became corresponding secretary of the Seventh Day Baptist Missionary Society, holding this position until his election in 1893 as president of Alfred University. From 1895 to 1901 he served successively as a missionary in Rhode Island and as pastor at Plainfield, N. J. In 1901 Dr. Main returned to Alfred University as dean and professor of theology in the theological seminary. He founded the *Helping Hand* in 1885 and published *Bible Studies on the Sabbath Question* (1910) and *The New Psychology, Behaviorism, and Christian Experience* (1931).

Makins, Sir George Henry, died Nov. 2, 1933.

Malmberg, Aino Finnish feminist and author, died in Helsingfors, Feb. 8, 1933. She was born 67 years ago.

In 1888 when the University of Helsingfors opened its doors to women, Mme. Malmberg was a member of the first class. In 1910 she was exiled from Russia and until 1930 made her home in London. Between 1912 and 1918 she frequently visited the United States, lecturing on Finland and pleading the cause of Finnish independence. During the World War she was a pacifist, and was a member of Henry Ford's Peace Ship expedition in 1916. She wrote many articles for the press, and was the official translator of George Bernard Shaw's works into Finnish. Her publications include two volumes of sketches, *People of Power* and *The Powerless Ones*, and an Australian travel book.

Maloney, Thomas J. American business executive and philanthropist, died at Teaneck, N. J., Jan. 18, 1933. He was born at Covington, Ky., July 12, 1859, where as a boy he worked in the tobacco fields. In 1885 he joined the P. Lorillard Co. as superintendent of manufacture. When this concern was merged with the American Tobacco Co. in 1900, he became a vice-president. Following the dissolution of the so-called tobacco trust in 1911, Mr. Maloney became president of the reorganized Lorillard Company, retiring in 1924. In addition to being a director of the Emigrant Industrial Savings Bank of New York, he was chairman of the board of directors of the Hudson County National Bank of New Jersey. Noted for his Catholic benefactions, he gave \$250,000 in 1928 to Georgetown University for cancer research, and in 1931 made gifts amounting to more than \$1,000,000 to the diocese of Newark, N. J. He also made donations to the cause of Irish freedom. In 1924 he was created a Knight of the Order of St. Gregory the Great. He was later made Private Chamberlain of the Cape and Sword.

Manhart, Franklin Pierce American theologian and educator, died at Selinsgrove, Pa., Sept. 13, 1933. Born at Catawissa, Pa., Aug. 30, 1852, he was graduated from the Missionary Institute at Selinsgrove in 1875 and from the Pennsylvania College at Gettysburg in 1877. Following his ordination to the Lutheran ministry in 1878, he held pastorates at Bloomsburg, Pa. (1881-89) and in Philadelphia (1889-93). For the next two years he served as superintendent of the Missionary Institute and when it was renamed the Susquehanna University became its president. In 1896 he founded the Deaconess Motherhouse in Baltimore, serving as its head until 1904 when he was appointed dean of the theological department at Susquehanna University. He was acting in this capacity at the time of his death. Dr. Manhart held the offices of secretary of the General Synod of the Lutheran Church in the United States from 1902 to 1922, president from 1922 to 1926, and secretary again after 1926. He was also president of the Lutheran Historical Society of the United States after 1911, vice-president of the Inner Mission Board from 1913 to 1918, and director of the Lutheran Publication Board from 1892 to 1930. His principal work was *Present Day Lutheranism* (1910).

Marbury, Elisabeth, died Jan. 22, 1933.

Markle, John American coal operator, died in New York City, July 10, 1933. He was born at Hazelton, Pa., Dec. 15, 1858. On his graduation from Lafayette College in 1880 he became general superintendent of the mines operated by G. B. Markle and Co., in which his father had a controlling interest. He later became president of that company and of its successor, the Jeddo-Highland Coal Co., one of the largest independent anthracite-coal firms in Pennsylvania. Mr. Markle represented the independent operators in the negotiations with President Roosevelt in the settlement of the anthracite coal strike of 1902. During the '80s he aroused admiration for his resourcefulness in constructing the Jeddo tunnel, used to drain certain flooded mines. He was also president of the Sprague Electric Co. (later merged with the General Electric Co.), the Wilkes-Barre and Hazleton Railroad, and the Industrial Finance Corp. After his retirement in 1926 he devoted himself to various philanthropic enterprises, medical, educational, and social welfare, founding for this purpose the John and Mary R. Markle Foundation.

Marling, Sir Charles Murray, died Feb. 16, 1933.

Marr, John Edward. British geologist, died in Cambridge, England, Oct. 2, 1933. Born in Lancashire June 14, 1857, he attended St. John's College, Cambridge, of which after receiving the Sc.D. degree he was made a Fellow. He held the Woodwardian chair of geology at that institution from 1917 to 1930. Prominent in the British Association for the Advancement of Science, he served in 1896 as president of its Section C (geology) and from 1896 to 1902 as a member of its council. He was also a member of the council of the Royal Society from 1904 to 1906 and in 1930 received the society's Royal Medal. Dr. Marr wrote *Principles of Stratigraphical Geology* (1898); *Scientific Study of Scenery* (1900); and *Deposition of the Sedimentary Rocks* (1929). He was also an authority on the geology of the Lake District and of Cumberland, Westmorland, and North Lancashire.

Marsh, Daniel Brand, died Sept. 22, 1933.

Marsh, Richard. British turfman, died in London,

May 20, 1888. He was born near Dover, Dec. 31, 1851. Beginning his racing career as a jockey, he eventually turned to race-horse training, and in 1892 became royal trainer for King Edward VII., retiring from the Royal Stable in 1924. During the period that he was trainer for the Duke of York (later George V.), his greatest triumph on the turf was in 1900 when Diamond Jubilee won the "Triple Crown"—the Derby, the Two Thousand Guineas, and the St. Leger. His other two Derby winners were Jeddah, which won at 100 to 1 in 1898 in the Larnock colors, and King Edward's Nunoin, winner in 1909. In June, 1921, King George, in his birthday honors, appointed him a member of the Royal Victorian Order, Fifth Class. In 1925 he published his reminiscences, *A Trainer to Two Kings*.

Marshall, (Davis) Edward, died Feb. 24, 1933.

Martin, Fernando Wood. American chemist, died at Lynchburg, Va., Mar. 22, 1933. He was born at Volga, W. Va., May 5, 1863. On his graduation from Chaddock College in 1886 he became professor of natural science there and acted also as lecturer on chemistry and toxicology at the Quincy (Ill.) Medical College during 1889-90. He next held the chair of natural science at Fort Worth (Texas) University. In 1893 he became professor of chemistry at Randolph-Macon Woman's College and from 1894 to 1907 also served as vice-president of that institution. He retired in 1929 as professor emeritus. In addition to contributing to scientific and educational journals, Dr. Wood wrote *Qualitative Analysis with the Blow Pipe* (1903); *Text-Book on Inorganic Chemistry* (1903); *Qualitative Analysis* (1907); *Introduction to Anthropology* (1913); and *Essentials of Organic Chemistry* (1915).

Martin, Guy Hart American lawyer, died in Spokane, Wash., Mar. 20, 1933. He was born at Lancaster, Ia., Aug. 31, 1866. Following his apprenticeship as a law clerk he was admitted to the Iowa bar in 1892 and began to practice at Spencer. In addition to serving as attorney for various railroads he held the office of prosecuting attorney for Clay Co. from 1894 to 1899. In 1907 he removed to Sandpoint, Ida., where he practiced until his appointment by President Harding in 1923 as district attorney for the Canal Zone. The following year President Coolidge named him district judge for the Canal Zone. In 1920 he was called to Washington as special assistant to the United States Attorney-General, and in 1931 was appointed an attorney in the Court of Claims division.

Marye, George Thomas American banker and ambassador, died in Washington, D. C., Sept. 2, 1933. Born in Baltimore, Md., Dec. 13, 1849, he attended schools in Florence, Italy; Darmstadt, Germany; Paris, France; and Barcelona, Spain, and studied law at Trinity College, Cambridge, being graduated from the latter in 1872. He then returned to the United States and upon his admittance to the California bar in 1875 began his practice in San Francisco. He soon abandoned this profession, however, to become junior partner in his father's banking firm of George T. Marye and Son, with headquarters in San Francisco and a branch office at Virginia City, Nev., recording his impressions of the formative period in the history of the two States in a biography of his father, *From '49 to '83 in California and Nevada* (1923). He himself helped as a member of the board of freeholders to draft in 1883 a charter for the city and county of San Francisco. On his father's death in 1892 he retired from the banking business but remained in California until 1904 when he removed to Washington. He was active, however, in California politics, serving as Democratic presidential elector in 1888 and from that date until 1893 as chairman of the executive committee of the Democratic State Central Committee. Shortly before the outbreak of the World War Mr. Marye was appointed ambassador to Russia and during his two-year service also had charge of the diplomatic interests of Germany and Austria-Hungary in that country, caring in particular for German and Austrian war prisoners. As a result of his early banking experience he urged the establishment in Russia of branch offices of prominent American banks. Following his resignation in 1916 he received from the Czar the decoration of the Order of St. Alexander Nevsky. He rendered an account of his ambassadorship in *Nearing the End in Imperial Russia* (1929).

Mason, Alfred Bishop. American lawyer and author, died in Florence, Italy, Jan. 26, 1933. He was born in Bridgeport, Conn., Feb. 23, 1851, and was graduated from Yale in 1871. The following year he became an editorial writer on the *Chicago Tribune* and studied law in his spare time, being admitted to the Illinois bar in 1875. In addition to his practice as a corporation lawyer, he was a railroad executive, serving as vice-president of the Jacksonville, Tampa and Key West Railroad during 1883-89, and president of the Vera Cruz and Pacific Railroad in Mexico during 1898-1902 and of the Cauca Railroad in Colombia during 1905-07. Mr. Mason was active in the National Civil Service Reform movement and supported Henry George's fight for the single tax, being president of the Metropolitan Single Tax Club.

He was also one of the founders of the Provident Loan Society. His most noted publications were the series of boys' books: *Tom Strong, Washington's Scout* (1911); *Tom Strong, Boy Captain* (1913); *Tom Strong, Junior* (1915); *Tom Strong, Third* (1916); and *Tom Strong, Lincoln's Scout* (1919). He also published *Primer of Political Economy* (1875) and translated and edited Van Holst's *Constitutional History of the United States* (1876) and *Constitutional Law of the United States* (1887). His last works were the novel *A Duchess and Her Daughter* (1929) and *Horace Walpole's England* (1930).

Massingham, Dorothy. British actress and playwright, died suddenly in London, Mar. 30, 1933. She was born in the same city, Dec. 12, 1889, and studied for the stage at the Academy of Dramatic Art, making her first appearance at the Liverpool Repertory Theatre, February, 1912, as Kalleis in *The Perplexed Husband*. Her first London appearance was as Claire in *Great Catherine* at the Vaudeville Theatre, Nov. 18, 1913. After appearing in various roles with the Repertory Theatre Company of Birmingham during 1917-19 she returned to the London stage, appearing in *Fanny's First Play* (1921), *Loyalties* (1922), *The Philanderer* (1924), *The Assignment* (1925), and *Uncle Vanya* (1926). She then joined the Old Vic Company, appearing during 1926-27 in various Shakespearean roles, and in 1928 became a member of the New Shakespeare Company at Stratford-on-Avon, with which she toured in the United States and Canada during 1928-29, and again during 1931-32. Miss Massingham wrote the plays *Glass Houses* (1918); *The Goat* (1921); *Washed Ashore* (1922); *Not in Our Stars* (1924); and *The Lake* (with Murray Macdonald, 1933).

Matson, Roderick Nathaniel. American lawyer, died at Cheyenne, Wyo., Feb. 14, 1933. He was born near Ira, N. Y., Nov. 1, 1871, and was graduated from Franklin College, New Athens, Ohio, in 1894 and from Syracuse University with the LL.B. degree in 1897. Admitted to the New York bar in 1897, he practiced in Syracuse as a member of Matson and Kennedy for three years. In 1901 the firm moved to Cheyenne, Wyo. Elected to the Wyoming House of Representatives in 1903, Mr. Matson resigned in 1905 on his appointment as judge of the First Judicial District of Wyoming. The following year he was elected to this office for a six-year term. Resuming his law practice with Matson and Kennedy in 1913, he practiced alone during 1921-28 and then became a member of Matson and Swainson. In 1926 Mr. Matson served on the commission appointed by the State Department to organize the United States exhibit at the International Exposition in Seville, Spain. He was president of the Wyoming State Bar Association during 1921-22 and chairman for Wyoming of the National Hoover-Curtis Lawyers Association in 1928. On Feb. 9, 1933, five days before his death, he was nominated by President Hoover as Minister to Greece.

Mauray, Dabney Herndon, died May 11, 1933.

Mauran, John Lawrence. American architect, died at Peterboro, N. H., Sept. 23, 1933. Born at Providence, R. I., Nov. 19, 1866, he attended Massachusetts Institute of Technology, becoming associated in 1890 with the architectural firm of Shepley, Rutan and Coolidge, in Boston. Two years later he was sent to their Chicago office to work on plans for the Chicago Public Library and the Art Institute of Chicago. Following his transfer to St. Louis in 1893 he became the firm's St. Louis partner. In 1900 he became a member of the firm of Mauran, Russell and Garden, known after its reorganization in 1911 as Mauran, Russell and Crowell. This firm designed the St. Louis Union Trust Co. Building, New Bank of Commerce Building, Butler Brothers Buildings (in St. Louis and Dallas), Railway Exchange, St. Louis Country Club, Skin and Cancer Hospital, Children's Hospital, Federal Reserve Bank, and Southwestern Bell Telephone Office Building. Mr. Mauran was president of the American Institute of Architects during 1916-18, having previously served as treasurer during 1913-15 and as president of its St. Louis chapter during 1902-04. He was also United States delegate to the Sixth International Congress of Architects held in Madrid in 1904. Appointed chairman of the Public Buildings Commission of St. Louis in 1904, he served as member of the board of the National Commission of Fine Arts in 1930. During the World War he was a member of the committee on contracts of the Council of National Defense and of the sub-committee on industrial safety of the War Industries Board.

Mawbey, Admiral Henry Lancelot. British naval officer, died in London June 4, 1933. Born June 17, 1870, he received his naval education on the British training ship, the *Britannia*. During the World War he was captain of the battleships *Dominion* and *Agincourt* of the Grand Fleet. He was also appointed aide-de-camp to King George in 1918. On his promotion to the rank of rear-admiral in 1919 his first command was that of the Reserve Fleet at the Nore, the *Indefatigable* being his flagship. In 1920 he was detailed to the East Indies station

at Bombay, directing from there during the next two years at the instance of the Indian government the Royal Indian Marine. He retired in 1924 with the rank of vice-admiral, and in 1928 was listed as a retired admiral. He was created a Companion of the Bath in 1920 and a Commander of the Royal Victorian Order two years later. He held also the decoration of the Japanese Order of the Sacred Treasure, third class, and was an officer of the French Legion of Honor.

Mayo-Robson, Sir Arthur William, died Oct. 12, 1933.

Melchior, Carl Joseph, died Dec. 30, 1933.

Meldrim, Peter W. (Iltberger). American lawyer, died Dec. 13, 1933, at Savannah, Ga., where he was born Dec. 4, 1848. He was graduated from the University of Georgia with the A.B. degree in 1868 and with the LL.B. degree the following year, and on his admittance to the Georgia bar engaged in practice at Savannah as a member of the firm of Garrard and Meldrim. After 1909 he practiced alone. On the bench he served as judge of the Superior Court of Chatham Co. and at the time of his death was presiding judge of the Eastern Judicial Circuit of Georgia. He was president of the American Bar Association during 1914-15, succeeding William H. Taft, and was a past president of the Georgia Bar Association. Judge Meldrim's political career consisted of service in the Georgia General Assembly, both the House of Representatives and the Senate, and as mayor of Savannah. In 1908 when he was chairman of the Georgia delegation to the Democratic National Convention in Denver, he displayed characteristics of courage and tenacity by consistently defying the forces supporting a third nomination for the presidency for William Jennings Bryan. Judge Meldrim was active as well in the military field, having participated during the Civil War in the attempt to stay Sherman's march to the sea and later becoming commander of the 1st Regiment of the Georgia Cavalry with the rank of colonel. He rose to the rank of brigadier-general with the Georgia National Guard and during the World War helped to organize and command the Georgia State Guard. He was also commander of the Georgia division of Confederate Veterans with the rank of major-general. As chairman after 1891 of the Commission on the Georgia State Industrial School for Colored Persons, he directed his efforts toward the extension of educational opportunities, both industrial and agricultural, for the Negroes of the State.

Mellon, Richard Beatty, died Dec. 1, 1933.

Menardos, Simos, died July 23, 1933.

Mikhailovitch, Alexander, Grand Duke of Russia. Russian naval officer and author, died at Roquebrune, Cap Martin, France, Feb. 26, 1933. Born at Tiflis, Apr. 1, 1866, son of the Grand Duke Michael Mikhailovitch, a cousin of Nicholas II, he spent his youth in the Caucasus where his father was Viceroy and on joining the Imperial Navy as a lieutenant first came to the United States in 1893 to represent Alexander II at the World's Columbian Exposition in Chicago. On his return in 1894 he married the Czar's daughter, the Grand Duchess Xenia. He rapidly rose through the ranks of the Russian Marine to admiral, editing a monthly periodical entitled *The Sea and Its Life* and translating into Russian the works of the American naval authority, Rear Admiral Alfred T. Mahan. He also founded the first Russian air force and was made aide-de-camp to Nicholas II. After the downfall of the Romanoffs he made his home in Paris but visited the United States in 1928 on a lecture tour. Some of his books were *Spiritual Education* (1930); *Union of Souls* (1931); *Once a Grand Duke* (1932); *Twilight of Royalty* (1932); and posthumously *The Evil Emperors* (1934).

Miller, Edward Furber. American engineer and educator, died at Newton Centre, Mass., June 12, 1933. He was born in Somerville, Mass., Jan. 18, 1866. On his graduation from the Massachusetts Institute of Technology in 1886 he joined the faculty of that institution as instructor in mechanical engineering, serving after 1892 as professor of steam engineering. He was also in charge of the department of mechanical engineering after 1911 and at the time of his death was director of the engineering laboratories. During the World War Professor Miller established several schools for the training of engineer officers for the Emergency Fleet operated by the United States Shipping Board. After the War he was instrumental in establishing at the Massachusetts Institute of Technology an ordnance school and was commissioned a colonel in the Auxiliary Reserve of the United States Army, serving after 1930 as assistant district chief of ordnance. He patented a safety valve, improved the life-saving equipment used in the Lyle gun, and studied extensively the problem of smoke abatement. His publications include *Steam Boilers* (with Cecil H. Peabody, 1897); *Problems in Thermodynamics and Heat Engineering* (with W. C. Berry and J. C. Riley, 1911); and *Notes on Heat Engineering* (1931).

Miller, Kempton Blanchard. American electrical engineer, died at Pasadena, Calif., Nov. 22, 1933. He was born in Boston, Mass., Aug. 14, 1870, and was graduated from the engineering college of Cornell University in

1898. After acting as an assistant examiner in the United States Patent Office at Washington, he became in 1896 chief engineer for the Western Telephone Construction Co. of Chicago and in 1899 engineer for the Kellogg Switchboard and Supply Co. As a member of the firm of McMeen and Miller from 1904 to 1918, he designed and built several hydro-electric plants in Oregon and California but rendered his greatest service as a consultant on telephonic design, construction, and installation. For several years (1913-18) he was chief engineer for the Central Union Telephone Co., operating in Illinois, Ohio, and Indiana. He had also designed the fire-alarm telegraph system used in New York City and had served as arbitrator in many controversies pertaining to public utility properties. A Fellow of the American Institute of Electrical Engineers, he wrote *American Telephone Practice* (1904) and *Telephone Theory and Practice* (1930).

Mizner, Addison. American architect, died in Palm Beach, Fla., Feb. 5, 1933. He was born at Benicia, Calif., Dec. 12, 1872, and received his higher education at the University of Guatemala, where his father, Lansing B. Mizner, was United States Minister, and at the University of Salamanca, Spain. On his return to the United States in 1893 he studied architecture under Willis Polk in San Francisco, later becoming his partner. Especially noted for the introduction of a novel type of Spanish mission architecture, Mr. Mizner designed many of the palatial hotels, and clubs at Santa Barbara, Calif., and Palm Beach, Fla. He was also known as "the father of the Florida renaissance" for the part which he played in the State's post-war real estate development. He was a brother of Wilson Mizner (q.v.). In 1932 he published the first volume of his memoirs entitled *The Many Mizners*.

Mizner, Wilton. American playwright, died in Los Angeles, Calif., Apr. 3, 1933. He was born at Benicia, Calif., Mar. 19, 1876, and was educated at the National Institute in Guatemala and at Santa Clara College in California. In 1897, with his brother Addison Mizner (q.v.), he joined the gold rush to the Klondike, absorbing during his three-year stay "local color" for his future plays and stories. In 1906 considerable excitement was caused by his marriage to Mrs. Charles T. Yerkes, widow of the traction magnate, who was 15 years his senior. Subsequently they were divorced. In 1907 Mr. Mizner produced his first play, *The Girl in the Dark*. It was followed by *The Only Law* (later renamed *The Double Cross*), which he wrote in collaboration with Paul Armstrong. The authors achieved their greatest success in 1910 with *The Deep Purple*. In 1912 they wrote *The Greyhound*. Mr. Mizner then turned to short story writing and at the time of his death was one of the better known Hollywood scenarists.

Modi, Sir Jivanji Jamshedji. Oriental scholar, died in Bombay, India, Mar. 28, 1933. He was born at Colaba, near Bombay, Oct. 23, 1854, and was educated at Elphinstone College and the University of Bombay, receiving the B.A. degree from the latter in 1877. For many years he served as secretary of the Par-ee Panchayat of Bombay from which post he propagated knowledge of the origin, literature, and teaching of Zoroastrianism. In 1903 he published *Translations from the Pahlavi* (the language in which the Zoroastrian teachings were originally recorded) of Aryadgar-zairan, of Bundehsh, and of Jamasp. *Asiatic Papers* and *Anthropological Papers*, which he read during 1905-17 before the Bombay branch of the Royal Asiatic Society, were noteworthy, and in 1918 he received that society's Campbell Medal. He published also *The Parsees at the Court of Akbar and Dastur Meherji Rana* (1903), *A Few Events in the Early History of the Parsees* (1905), *Moral Extracts from Zoroastrian Books* (1914), *The Religious Ceremonies and Customs of the Parsees* (1922); *Gama Oriental Institute Papers* (1928); and *Oriental Conference Papers* (1932).

Moffett, Rear Admiral William Adger, U.S.N., died Apr. 4, 1933.

Moir, Sir Ernest William, died June 15, 1933.

Monahan, Michael. American editor and author, died in New York City, Nov. 22, 1933. Born at Mallow, Co. Cork, Ireland, Apr. 6, 1865, he was educated privately and at the age of 15 came to the United States. He began his newspaper career as a reporter for the *Albany Press* in 1887 and later became its editor. After holding editorial posts on the *Albany Argus* and other newspapers, he removed to Denver, Colo., and during 1893 was engaged in similar work there. On his return to Albany he served during 1896-1900 as secretary to two mayors of that city, John Boyd Thacker and Thomas J. Van Alstyne. In 1903 he founded the magazine *Papyrus* (later renamed *The Phoenix*) at Mt. Vernon, N. Y., with which he was associated until 1916. Mr. Monahan was noted as a lecturer on various phases of Irish culture. Besides contributing articles to various periodicals, he wrote *Benigna Vera* (1904); *Palms of Papyrus* (1908, 1909); *Adventurer in Life and Letters* (1910); *Heinrich Heine* (1911); *Novae Hibernia* (1914); *At the Sign of the Van* (1914); *New Adven-*

tures (1917); *Dry America* (1921); and *An Attic Dreamer* (1922).

Montes, Ismael, died Nov. 18, 1933.

Moody, William Revell. American educator, died at East Northfield, Mass., Oct. 12, 1933. Born in Chicago, Ill., Mar. 25, 1869, he was graduated from Yale University in 1891. On the death of his father, Dwight L. Moody, the evangelist, in 1899 he succeeded to the presidency of the Northfield Seminary for Girls and the Mount Hermon Schools for Boys. During his administration he succeeded in increasing the endowment funds of the schools and in securing gifts for the construction of additional buildings. A notable feature of these schools, which were primarily designed for students of limited means, was that in return for devoting so many hours each day to work about the premises they should pay only half of their tuition. Mr. Moody tendered his resignation as president about 1927, but continued his work as director of the General Conference of Christian Workers, founded also by his father, and was interested in the other Northfield summer conferences, such as the Foreign Missionary and Sunday School Workers. He served for several years as editor of the *Record of Christian Work* and wrote a biography of his father entitled *The Life of Dwight L. Moody* (1900).

Moore, George, died Jan. 21, 1933.

Morgan, Rear Admiral Casey Bruce, U.S.N., Ret., died Aug. 17, 1933.

Morgan, Harry Hays, died Mar. 19, 1933.

Morris, Sir Daniel, died Feb. 9, 1933.

Morse, Brig.-Gen. Benjamin Clarke, U.S.A., Ret. American soldier, died in San Diego, Calif., Apr. 16, 1933. He was born at Macon, Mo., Oct. 15, 1859. On his graduation from the United States Military Academy in 1884, he was assigned to the 23d Infantry as second lieutenant, and during 1890-94 taught military science and tactics and was commandant of the cadets at the Agricultural and Mechanical College of Texas. He participated in the Spanish-American War and the Philippine Insurrection. After acting during 1900-01 as personal aide to Maj.-Gen. William R. Shafter, commanding general of the Department of California, he became assistant adjutant-general (1901) and acting adjutant-general (1902) of that department. General Morse served in the Moro campaign in the Philippines during 1903-04 and was recalled to Cuba during the second occupation of that island from 1906 to 1909. On his return to the United States General Morse was appointed professor of military science and tactics and commandant of the cadets at the University of Illinois. He participated in the occupation of Vera Cruz, Mexico, in April, 1914, and on the entry of the United States into the World War, was stationed at Camp Custer, Mich., as commander of the 169th Brigade, with the rank of brigadier-general. On his discharge from the National Army in 1918 he was sent to the Canal Zone as colonel of the 33d Infantry. He retired in 1920, the rank of brigadier-general being conferred on him by congressional action in 1930.

Morse, Charles Wyman, died Jan. 12, 1933.

Morton, Maj.-Gen. Charles Gould, U.S.A., Ret. American soldier, died in San Francisco, Calif., July 18, 1933. He was born at Cumberland, Me., Jan. 15, 1861. On his graduation from the United States Military Academy in 1883 he was commissioned a second lieutenant in the Army and saw service during the ensuing years on the frontier, in the Philippines, in Panama, and on the Texas border. On his promotion to brigadier-general in 1916 he was made commander of the 10th Division. On the entry of the United States into the World War he became commander of the 29th Division (which included the National Guards of New Jersey, Virginia, and Maryland) with the rank of major-general. This division rendered its greatest service in the Meuse-Argonne operations and the third Battle of Verdun. General Morton receiving in recognition of his bravery, in leading it, the Distinguished Service Medal and the Croix de Guerre with two palms. He was also made a commander of the French Legion of Honor. After the War he was in command of the Hawaiian Department (1919-21) and of the Ninth Corps Area (1922-25). He retired in January of the latter year.

Moskowitz, Belle Linder Israels, died Jan. 2, 1933.

Mosley, Lady Cynthia Blanche. British politician, died in London, May 16, 1933. She was born Aug. 23, 1898, the daughter of the Marquess Curzon of Kedleston, and received a private education. During the World War she was employed as a clerk in the War Office, and in 1920 was married to Sir Oswald Mosley. She sympathized with her husband's change in political views from Conservative to Independent and after his conversion to Socialism in 1924 joined the Labor party with him. Following her election as Labor representative for Stoke in 1929, she sat in Parliament with him. When her husband introduced Fascism into Great Britain in 1931 they both resigned and during the next two years were politically eclipsed. Sir Oswald, however, continued to develop his new project, the British Union of Fascists, which by

the end of 1933 numbered 500,000 blackshirt members.

Motzkin, Leo, died Nov. 7, 1933.

Muir, Maj.-Gen. Charles Henry, U.S.A., Ret., died Dec. 8, 1933.

Muldoon, William. American boxing official, died at Purchase, N. Y., June 3, 1933. Born at Belfast, N. Y., May 25, 1845, he enlisted at the outbreak of the Civil War with the Federal Army and served throughout the conflict. After the war he came to New York where he was engaged in various occupations until his entrance about 1870 into the wrestling ring. He later served for six years in the New York Police Department, perfecting the Greco-Roman style of wrestling in his encounters with other champions of the department. About 1878 he took up wrestling professionally and was engaged in important bouts with Edwin Bibby, the English wrestler, Evan "Strangler" Lewis, and "Professor" Sebastian Miller, finally laying claim to the heavyweight championship after a match with Clarence Whistler in 1883. Muldoon later became the trainer of such prominent boxing figures as John L. Sullivan, "Kid" McCoy, and Jack Dempsey, being noted for the Spartan rules which he imposed. In 1921 Gov. Nathan Miller appointed him chairman of the New York Boxing Board and in this capacity as "Iron Duke" of wrestling he was responsible of many humanitarian regulations of the sport. Reappointed a member of the board by Gov. Alfred Smith, he continued to serve until 1929. On Gene Tunney's retirement from the ring in 1928 he joined with him in providing the Muldoon-Tunney trophy, emblematic of the world's heavyweight championship.

Munro, Dana Carleton, died Jan. 13, 1933.

Murayama, Ryuhei. Japanese publisher, died in Tokyo, Nov. 24, 1933. Born at Wakayama, Apr. 3, 1850, he started as a merchant in Osaka in the early '70s and from the first showed a desire to follow the example of the West, his shop being stocked with merchandise from the United States and other countries. His success led to the purchase of the Osaka *Asahi*, through which he carried out his ideas of transforming Japanese journalism from a narrow, provincial point of view to a national one. In 1888 he became the proprietor of the Tokyo *Asahi* which, thanks to his shrewd business management, succeeded in spite of the boycott raised by 18 rival journals in becoming as influential as its sister publication. Mr. Murayama once represented Osaka-fu in the Diet and was active in the Liberal movement. At the time of his death he was a member of the House of Peers.

Murphy, Emily Ferguson Canadian jurist and author, died at Edmonton, Alta., Oct. 27, 1933. Born at Cookstown, Ont., in 1868, she attended the Bishop Strachan School in Toronto and in 1887 was married to Arthur Murphy. Removing to Edmonton in 1904, she was appointed three years later magistrate in and for the Province of Alberta and judge of the juvenile court of that city. In 1931 she resigned these positions to devote more of her time to literary work. Under the pen-name of Janey Canuck, Mrs. Murphy had published *Janey Canuck in the West* (1910); *Open Trails* (1912); *Seeds of Pine* (1914); *The Black Candle* (1922); *Little Canadian Cousins of the Canadian Northwest* (1923); and *Bishop Bompas* (1929). She was also a frequent contributor to Canadian, English, and American magazines. From 1913 to 1920 she served as president of the Canadian Women's Press Club, and from 1926 to 1929 as its historian. She was also honorary secretary of the Society of Women Journalists of England (1913-20), member of the Imperial Press Conference (1920), and member of the executive committee of the Canadian Authors' Association (1922-27). In 1914 she was decorated a Lady of Grace of the Order of St. John of Jerusalem.

Murphy, Thomas Edward. American clergyman and educator, died in Brooklyn, N. Y., Dec. 14, 1933. Born in New York City, Jan. 27, 1856, he attended the College of St. Francis Xavier there and in 1875 became a member of the Society of Jesus, serving his novitiate at Sault-au-Récollet, Quebec. After studying philosophy at Woodstock College he was appointed in 1882 professor of Latin and Greek at Georgetown University. In 1887 he returned to Woodstock to study theology and in 1890 was ordained priest in the Roman Catholic Church. From 1891 to 1893 he served as vice-president of Georgetown University and was then called to the College of St. Francis Xavier as its president. In 1900 Father Murphy became prefect of studies at Holy Cross College, Worcester, Mass., and in 1906 was chosen president of that institution. On his resignation in 1911 he accepted the pastorate of St. Ignatius' Church, in Brooklyn.

Murray, Sir David, died Nov. 14, 1933.

Muto, Nobuyoshi, Baron. Japanese soldier, died at Changchun, Manchuria, July 27, 1933. He was born in Tokyo in 1870 and on his graduation from the Military Staff College in 1893 was commissioned a sub-lieutenant in the Japanese Army, being promoted through the grades to colonel in 1911. Four years later he was made commander of a regiment of the Imperial Guards. He acted also for several years as inspector general of

military education. Previous to Japan's recognition of Manchoukuo in September, 1932, Baron Muto was sent as the Emperor's ambassador to act as "godfather" of the new state, comprising three provinces carved out of Manchuria, and as governor of the Kwantung Leased Territory. During the next year, as commander-in-chief of the Japanese Army in Manchuria, he directed the manoeuvres in the province of Jehol. The rank of Field Marshal was conferred on him for his successful conduct of that campaign. His elevation to the peerage was posthumous.

Nadir Shah Ghazi, died Nov. 8, 1933.

Nelson, Charles Alexander, died Jan. 12, 1933.

Nevin, George Balch. American composer, died at Easton, Pa., Apr. 17, 1933. Born at Shippensburg, Pa., Mar. 15, 1859, he attended Lafayette College, of which he was later appointed member of the visiting committee for the department of music. He was especially noted for his sacred compositions, many of which were adapted through the Braille system of musical notation for the use of the blind. Outstanding among these were: *Arise! Shine! for Thy Light Is Come*; *The Heavenly Voice*; *Jesus Word of God Incarnate*; *O Lord God, to Whom Vengeance Belongeth*; *At the Sepulchre*; *God Will Make All Things Right*; *Into the Woods My Master Went*; *The Words on the Cross*; *The Saving Victim*; *The Master's Garden*; *The Crown of Life*; *The Angel of the Dawn*; *The Incarnation*; *The Adoration*; and *The Crucified*. In addition he wrote the secular songs: *My Bonnie Lass She Smileth*; *It Was a Lover and His Lass*; *O Little Mother of Mine*; *When the Kye Came Home*; and *George Washington Processional*. During the War he organized "The Victory Drummers," a group of 40 men about 60 years of age, who played at patriotic rallies.

New, Clarence Herbert. American author and editor, died in Brooklyn, N. Y., Jan. 8, 1933. Born in New York City Nov. 14, 1862, he attended the Brooklyn Polytechnic Institute and after extensive traveling became first a foreign correspondent and then a construction engineer. In 1895 he was editor of *Truth*, and from 1897 to 1910 manager of the *New York and London Literary Press*. He was also editor during 1913-14 of *Real Life*. Especially noteworthy were the magazine serials of his adventures: *Culpeper Zandt—War Correspondent* (1900-02); *Memoirs of the International Bureau* (1907-08); *An Agent of the Government* (1908-09); *Deep Water Men and the Glowing Ember* (1920-21); and after 1909 *Adventures of a Diplomatic Free Lance*, said to be the longest continuous series with the same leading characters ever published. Under the pseudonym of Culpeper Zandt Mr. New published the series *Mysteries of the Sea* (1911-12; 1914-18), *Galt, M.D.* (1926-27), and *Mysteries of Today* (1928-29), and under that of Stephen Hopkins (Orcutt, *Buccaneers Limited* (1927-28) and *Deep Water Life* (1929).

Newell, Lyman Churchill. American chemist and educator, died at Brookline, Mass., Dec. 13, 1933. Born at Pawtucket, R. I., Sept. 18, 1867, he was graduated from Brown University in 1890, receiving the Ph.D. degree from Johns Hopkins University in 1895. After teaching chemistry at the Pawtucket High School during 1890-92, the Somerville (Mass.) High School during 1895-98, and the Normal School at Lowell, Mass., during 1898-1904, he was called to Boston University as professor of chemistry, serving at the time of his death as head of that department. Dr. Newell was especially interested in the evolution of chemistry since the days of the alchemists, serving as historian of the Northeastern Section of the American Chemical Society and as chairman of the society's committee for the collection of historical data. For his contributions in this field he received from Glessen University its Justus von Liebig Medal. Among the chemistry text-books which he published were: *Experimental Chemistry* (1900); *Descriptive Chemistry* (1903); *Inorganic Chemistry for Colleges* (1909); *General Chemistry* (1914); *Practical Chemistry* (1922); and *Brief Course in Chemistry* (1929).

Ngag-Wang Lobsang Thubden Gya-Tsho, The Dalai Lama of Tibet, died Dec. 17, 1933.

Nitobe, Inazo, died Oct. 15, 1933.

Noailles, Anna Elisabeth, Comtesse de, died Apr. 30, 1933.

Noetzi, Fred A., died May 24, 1933.

Oberhoffer, Emil, died May 22, 1933.

O'Brien, Thomas James, died May 19, 1933.

Odenbach, Frederick Louis, died Mar. 15, 1933.

Oliver, Frank. Canadian journalist and statesman, died in Ottawa Mar. 31, 1933. Born in Peel Co., Ont., in 1853, he migrated in early manhood to Winnipeg and later to Edmonton where in 1880 he founded the *Bulletin*, one of the influential newspapers of the Canadian Northwest. Entering politics as a Liberal, Oliver served as a member of the Northwest Council (1883-88) and of its successor, the Northwest Legislative Assembly (1888-96). In 1896 he was elected to the House of Commons for Alberta as an Independent Liberal, being reelected in 1900, 1904, 1908, and 1911. From 1905 to 1911 he was Minister of the Interior and Superintendent General

of Indian Affairs in the administration of Sir Wilfrid Laurier, continuing the progressive immigration policy initiated by his predecessor, Sir Clifford Sifton, which did so much to procure for the Canadian Northwest a large number of superior agricultural settlers. He was also a member of the Royal Canadian Conservation Commission in 1909. On relinquishing the editorship of the *Edmonton Bulletin* in 1923 Oliver was appointed member of the Board of Railway Commissioners for Canada and after 1928 was special advisory officer to that body.

Orrego Luco, Augusto. Chilean physician and statesman, died Aug. 26, 1933, in Valparaiso where he was born May 2, 1848. On his graduation from the medical school of the University of Valparaiso in 1873 he started his practice and the following year was appointed professor of anatomy at the institution. From 1891 to 1907 he held the chair of mental diseases, acting also as director of the medical school from 1891 to 1896. Dr. Orrego Luco's political career started in 1876 on his election as Deputy from Santiago to the National Congress. Ten years later he was chosen president of the Chamber. On the election of President Errázuriz in 1896 he was made Minister of the Interior and the following year Minister of Public Instruction. He again held the latter portfolio in President Sanfuentes's cabinet of 1916. Dr. Orrego Luco won recognition also as a journalist, editing the reviews *La Revista Chilena* and *Revista de Santiago*, to which he contributed both political and psychological articles. In 1896 he was president of the Chilean Press Association. He was a member of the French Academy of Sciences and of the Royal Spanish Academy.

Ottley, Robert Lawrence. British theologian, died in London Feb. 2, 1933. He was born at Richmond, Yorkshire, Sept. 2, 1856, and was educated at King's School, Canterbury, and at Pembroke College, Oxford, of which he became honorary fellow in 1905. He was appointed tutor at Christ Church, Oxford, in 1881, vice principal of Cuddesdon (theological) College in 1886, divinity dean of Magdalen College, Oxford, in 1890, principal of Pusey House in 1893, and rector of Winterbourne Bassett in 1897. After 1903 he was canon of Christ Church, Oxford, and regius professor of moral and pastoral theology. Dr. Ottley wrote *Lancelot Andreues* (1893), *The Doctrine of the Incarnation* (1895), *Aspects of the Old Testament* (Bampton Lectures, 1897); *The Hebrew Prophets* (1898); *Short History of the Hebrews to the Roman Period* (1901); *The Grace of Life* (1903); *The Religion of Israel* (1905); *Christian Ideas and Ideals* (1909); *The Rule of Faith and Hope* (1911); *The Rule of Life and Love* (1913); *The Rule of Work and Worship* (1915); *Christian Morals* (1915), and *Studies in the Confessions of St. Augustine* (1919).

Pachmann, Vladimir de. Russian pianist, died in Rome, Italy, Jan. 7, 1933. Born in Odessa July 27, 1848, he first studied the violin and theory under his father, Vincent de Pachmann, a professor in the University of Odessa and a friend of Beethoven, Weber, and other musicians. Subsequently he was sent to the Vienna Conservatory where he studied the piano under Dachs and harmony under Bruckner. Returning to Odessa in 1869, he made his debut there as a pianist, and during the next decade, while assiduously perfecting his art, played occasionally at the Gewandhaus in Leipzig, Bosendorfer's Salon in Vienna, the Salle Erard in Paris, and St. James's Hall in London. In 1882 he went to London, and in 1891 traveled in the United States, making subsequent extended tours. De Pachmann's superlative interpretation of the works of Chopin and Mozart, especially in their tonal beauty and romantic poetry, won him his great reputation, but his eccentricities of performance, which increased as he advanced in years, frequently marred his playing of other composers, especially Beethoven. In 1925, after his eighth tour of the United States, he retired from the concert platform. Among the honors bestowed on him was membership in the Order of the Danebrog of Denmark (1885) and the Beethoven Medal from the London Philharmonic Society (1916).

Page, Robert Newton. American congressman, died at Aberdeen, N. C., Oct. 3, 1933. He was born at Cary, N. C., Oct. 26, 1859. After attending the Cary High School and the Bingham School, he began his career in the lumber business in 1880, eventually becoming a manufacturer. In 1890 he branched out into the transportation field, serving during the next 12 years as treasurer of the Aberdeen and Ashboro Railroad Co. In 1903 he took his seat in the 58th Congress as Democratic representative from the seventh North Carolina district, continuing to represent that constituency until his resignation in 1916 because of the government's preparedness policy from which he foresaw the entry of the United States into the World War. On his return to private life Mr. Page was chosen president of the Citizens Bank and Trust Co. at Southern Pines, N. C., where he was also closely identified with the development of Pinehurst as a winter resort. From 1927 to 1933 he was president of the Page Trust Co. of Raleigh. He was a brother of

Walter Hines Page, Ambassador to the Court of St. James's during the World War period.

Painlevé, Paul, died Oct. 29, 1933.

Pakenham, Admiral Sir William Christopher, died July 28, 1933.

Palmer, George Herbert, died May 7, 1933.

Parker, James Southworth. American congressman, died in Washington, Dec. 19, 1933. Born at Great Barrington, Mass., June 3, 1867, he attended Cornell University and taught for several years at St. Paul's School at Concord, N. H. On removing to Salem, N. Y., where he engaged in farming and horse breeding, he decided to enter politics, being elected to the Assembly of the New York Legislature in 1904, 1905, and in the four successive elections after 1908. Elected to the 63d Congress as Republican representative from the 29th New York district in 1913, Mr. Parker continued to represent that constituency during the next 20 years. His most important committee assignment was chairman of the Committee on Interstate and Foreign Commerce. In this connection he sponsored in 1926 the measure abolishing the Railroad Labor Board, leaving the settlement of labor disputes to the parties involved but providing a board of mediation to intervene at the request of either party and if necessary to postpone strikes. In 1931 he introduced in the House the measure recommending that railroad holding companies be put under the jurisdiction of the Interstate Commerce Commission. He advocated also the use of dirigibles in oceanic air mail service to foreign countries.

Parkhurst, Charles Henry, died Sept. 8, 1933.

Parsons, Albert Ross. American musician, died at Mount Kisco, N. Y., June 14, 1933. Born at Sandusky, Ohio, Sept. 16, 1847, he received private instruction on the piano and organ in Buffalo and New York City and then studied in Germany during 1867-72 at the Royal Conservatory in Leipzig, Tausig's High School of the Pianoforte in Berlin, and Kullak's New Academy of Music in Berlin. After his return to the United States in 1873 he was active as an organist and was also vice-president and director of the piano department of the Metropolitan College of Music in New York City. From 1893 to 1914 he was president of the American College of Musicians of the University of the State of New York. Mr. Parsons translated Wagner's philosophic study *Beethoven* and wrote *Science of Pianoforte Practice, The Principles of Expression Applied to the Pianoforte, Teaching Reform, and The Virtuoso Handling of the Piano*. Among his compositions were the songs *The Night Has a Thousand Eyes* and *Break, Break*. Prominent as an Egyptologist, he published *New Light from the Great Pyramid* (1893).

Patel, Vithalbhaj Javerbhaj. Indian Nationalist leader, died in Geneva, Switzerland, Oct. 22, 1933. Born at Karamsed, Gujarat, about 1873, he studied for the bar and for many years practiced in Bombay. In 1912 he was elected to the Bombay Assembly from Gujarat and five years later was sent to Delhi to represent that body in the Imperial Assembly. There he promoted the Bombay Primary Education Act. He represented the Indian National Congress before the Joint Select Committee of the British Parliament which was appointed in 1919 to consider the Government of India Act in which were embodied certain constitutional changes for the extension of India's self-government, drawn up by Edwin S. Montagu, Secretary of State for India, and Viscount Chelmsford (q.v.), the Viceroy. On his return to India Patel participated in Gandhi's non-cooperation movement, including the tax strike of Gujarat landowners. His election as Lord Mayor of Bombay followed. He lost this post, however, when he refused to receive Lord Reading, the newly-appointed Viceroy. In 1923 he was returned to the Legislative Assembly as member for Bombay City and was chosen deputy-leader of the Swarajist party. Two years later he was appointed president of the Assembly and served in that capacity until 1930. In the latter year he was imprisoned for six months for leading the second civil disobedience demonstration in Bombay. In 1931 he attended the first Indian Round Table Conference in London, but on his return was again arrested because while passing through other European countries he had continually denounced British rule in India. At the time of his death he was living in exile in Switzerland.

Paton, Thomas Bugard. American lawyer, died at Forest Hills, L. I., N. Y., Mar. 28, 1933. Born in New York City May 7, 1861, he attended Columbia University and on being admitted to the New York bar in 1883 began his practice in New York City. He later edited the law department of the *Journal of Banking* and in 1889 founded the *Banking Law Journal*, of which he was editor for 19 years. After 1908 Mr. Paton was general counsel for the American Bankers Association, sponsoring for that organization many statutes relating to banking practice which have been adopted by various States. The opinions on banking law, which he prepared for members of the Association, were published under the title of *Paton's Digest*.

Paulus, Francis Petrus. American painter, died Feb. 3, 1933, in Detroit, Mich., where he was born Mar. 18, 1862. After attending the Pennsylvania Academy of Fine Arts, he went to Europe studying at the Royal Academy in Munich under Loefft and at the École des Beaux-Arts in Paris under Bonnat. On his return to the United States in 1889 he served as instructor in drawing and painting at the Detroit Institute of Arts and six years later was appointed associate director of the Detroit Art Academy. He directed also during 1896-98 the Ann Arbor Art School. In 1903 he again went abroad, setting up his studio in Bruges, Belgium, where he later founded an art school. Among scenes of the quaint medieval town which Mr. Paulus painted were "Alley in Bruges," at the Herron Art Institute, Indianapolis; "Low Tide," "Fish Market," "Shimmering Sea," and "Old Bridge, Bruges," at the Detroit Institute of Arts and "Old Canal, Bruges," at the McGregor Library, Highland Park, Mich. His etchings were exhibited at the New York Public Library, Library of Congress, Oakland (Calif.) Museum, Musée Moderne in Bruges, and the Royal Academy of Fine Arts in Munich.

Peek, Frank William, Jr., died July 26, 1933.

Peralta, Frances (Phyllis Partington). American dramatic soprano, died in New York City Dec. 22, 1933. Born in Manchester, England, she was brought to the United States in childhood and obtained her preliminary musical education in San Francisco, later going to New York City where she studied voice under Victor Maurel. In 1913 she was understudy to Marguerite Sylva in Lehár's operetta *Gypsy Love*, and upon Miss Sylva's inability to continue with the second act at the New York première stepped into the rôle and created a sensation. After this event she went to Italy for further study and entered grand opera under the name of Frances Peralta. On her return to the United States she was associated successively with the Boston Opera Co., Chicago Civic Opera Co., and St. Louis Opera Co. Previous to joining the Metropolitan Opera Co. in 1921 Miss Peralta toured the United States for three years with Antonio Scotti's company. She made her début with the Metropolitan as Elena in Boito's *Mefistofele* and was one of that company's members who sang in Italian opera at Baden-Baden, Germany, in 1926. Among the operas in her repertoire were *Aida*, *La Forza del Destino*, *William Tell*, *Il Trovatore*, *Mona Lisa*, *Andrea Chénier*, *Tosca*, *Don Carlos*, and *Cavalleria Rusticana*. After her retirement in 1930 she made only a few concert appearances.

Perdue, William Egerton. Canadian jurist, died in Winnipeg, Man., Jan. 17, 1933. Born near Brampton, Ont., June 20, 1850, he was graduated from the University of Toronto in 1873. He served as head master of the Brampton High School for two years and then became legal editor and reporter on the Toronto *Globe*. Admitted to the Ontario bar in 1879, Justice Perdue began his practice in Toronto but in 1882 removed to Winnipeg where he practiced until his appointment in 1903 as puisne judge of the Court of King's Bench for Manitoba. Transferred to the Provincial Court of Appeal in 1906, he was elevated 12 years later to the chief justiceship of that court. He resigned in 1930. For some years he was president and treasurer of the Law Society of Manitoba.

Perkins, George Henry. American educator, died at Burlington, Vt., Sept. 12, 1933. Born in Cambridge, Mass., Sept. 25, 1844, he was graduated from Yale University in 1867, receiving the Ph.D. degree from that institution in 1869. Joining the faculty of the University of Vermont, in 1869, he served until 1898 as professor of zoology, botany, and geology and after that date as professor of geology. He was also from 1898 to 1933 vice-president and dean of the College of Arts and during Pres. Guy Potter Benton's leave of absence during the World War was acting president of the institution. In addition to serving as entomologist for the State of Vermont from 1880 to 1895, Dr. Perkins was State geologist after 1898. Some of his publications were *A Flora of Vermont* (1888); *Reports on Injurious Insects* (1880-91); *Reports on the Marble, Slate and Granite Industries of Vermont* (1898).

Peterson, Olof August, died Nov. 12, 1933.

Peynado, Francisco J. Dominican lawyer and diplomat, died in Paris, France, Jan. 1, 1933. Born at Puerto Plata, Dominican Republic, Oct. 4, 1867, he studied for the bar and during his 40-year practice in Santo Domingo established an international reputation. Appointed Minister to the United States in 1913, he was especially prominent during his five-year residence in Washington in the affairs of the Pan American Union, participating in the first Pan American Financial Congress and the second Pan American Scientific Congress of 1915 and serving as a member of the Union's governing board. In 1922 he was co-author with Charles E. Hughes, then Secretary of State of the United States, of the Hughes-Peynado Plan which resulted in the establishment of a provisional government and the gradual withdrawal of the American military administration. While acting as Secretary of State for Foreign Affairs in 1929 Señor

Peynado was Dominican member of the commission which helped to draft the treaty settling the boundary dispute with Haiti. Previous to his death he had been Minister of Justice.

Phillips, Charles. American editor, poet, and playwright, died in Minneapolis, Minn., Dec. 29, 1933. Born at New Richmond, Wis., Nov. 20, 1880, he attended De La Salle College, Toronto, and began his newspaper career in 1901 as managing editor of the St. Paul *Northwestern Chronicle*. In 1903 he removed to Washington where for three years he edited the *New Century*. After editing the *Republican Voice* at New Richmond during 1906-07 he went to San Francisco where he was editor and manager of the *Monitor* until 1915. During the World War he served in France with the Knights of Columbus and after the War was stationed for three years with the American Red Cross in Poland, recording his impressions in *The New Poland* (1923). On his return to the United States in 1924 he became professor of English literature at the University of Notre Dame. In addition to being associate literary editor of the *Catholic World Magazine* Professor Phillips was founder and co-editor of *Pan, Poetry and Youth*. Among his poems were *Back Home* (1913) and *High in Her Tower* (1927). He wrote also the dramas, *The Divine Friend* (produced by Margaret Anglin in 1915), *Tarcisus* (1917), and *The Shepherd of the Valley* (1918); a novel, *The Doctor's Wooing* (1926); and a biography, *Young Lincoln* (1929).

Pichon, Stephen, died Sept. 18, 1933.

Pickford, Jack. American motion picture actor, died in Neuilly, France, Jan. 3, 1933. Born in Toronto, Ont., Canada, Aug. 18, 1896, he attended the St. Francis Military Academy in New York City and had experience as a child actor on both the legitimate stage and in motion pictures. After attaining stardom about 1919 some of his better known films were *The Bat*, *Brown of Harvard*, *Exit Smiling*, *All Square*, and *Gang War*. After making the last picture in 1927 he was obliged to retire on account of ill health. He was a brother of Mary Pickford, the famous screen star. His real name was John C. Smith, but like his sister he adopted for professional purposes his mother's maiden name.

Piez, Charles. American engineer, died in Washington, D. C., Oct. 2, 1933. Born in Mayence, Germany, Sept. 24, 1866, he was graduated from the School of Mines of Columbia University in 1889 and began his career with the Link Belt Engineering Co. of Philadelphia, rising from engineer-draftsman to chief engineer, general superintendent, and general manager. On the merger of this company in 1906 with the Link Belt Machinery Co. of Chicago and the Ewart Manufacturing Co. of Indianapolis he was elected president of the greater Link Belt Co., manufacturers of elevating and conveying machinery, with headquarters in Chicago, and from 1924 until his death was chairman of the board of directors. On the entry of the United States into the World War Mr. Piez was appointed vice-president and general manager of the Emergency Fleet Corp. of the United States Shipping Board. Made director general on Charles M. Schwab's resignation in December, 1918, he directed during the next six months the corporation's huge building programme for which \$3,000,000,000 had been appropriated. As chairman of the Illinois Workmen's Compensation Commission in 1911 he had shown special interest in framing labor legislation for that State. He had also served as president of the Illinois Manufacturers Association (1911-13 and 1924-25) and of the American Society of Mechanical Engineers (1929-30).

Pinedo, Francesco, Marchese, died Sept. 2, 1933.

Platt, Charles Adams, died Sept. 12, 1933.

Pollak, Egon. Czech orchestral conductor, died June 14, 1933, in Prague, where he was born May 5, 1879. He attended the University of Göttingen and received his musical education at the Prague Conservatory where he studied with Karl Křtitl. In 1900 he made his début at the Prague Opera, conducting Flotow's *Marta*. That same year he was made conductor at the Royal Landestheatre in Prague. Called to the Bremen Stadttheatre as chief conductor in 1906, he held the same position at the Leipzig Stadttheatre from 1910 to 1912 and at the Frankfurt Opera from 1912 to 1914. The next year he was guest conductor of the Wagnerian cycle at Covent Garden, London, and the Théâtre des Champs Élysées, Paris. On coming to the United States in 1915 Mr. Pollak was associated with the Chicago Civic Opera Company, but on account of the anti-German feeling that was aroused by the entry of the United States into the World War returned to Hamburg in 1917 where he was general musical director of the Stadttheatre. However, he was invited in 1930 to conduct at the first season's performances in the new Chicago Opera House. He was stricken while conducting Beethoven's *Fidelio* at the Deutsches Theatre in Prague.

Porter, Arthur Kingsley. American archæologist, died by drowning off the Donegal Coast of Ireland July 8, 1888. Born at Stamford, Conn., Feb. 6, 1888, he was graduated from Yale University in 1904 and studied

architecture at Columbia University during the next two years. After several years of travel and study in Europe he became lecturer on the history of art at Yale University in 1915 and assistant professor two years later. In 1920 he was called to Harvard University as professor in the history of art, holding after 1924 the William Dorris Boardman chair of fine arts. Professor Porter was requested by the French government to advise on the restoration of damaged monuments after the War and served during 1923-24 as exchange professor at French and Spanish universities. Among his best-known works were: *Medieval Architecture* (2 vols., 1908); *The Construction of Gothic and Lombard Vaults* (1912); *Lombard Architecture* (4 vols., 1915-17, awarded the Grande Médaille de Vermeil by the French Archaeological Society); *Romanesque Sculpture of the Pilgrimage Roads* (10 vols., 1925); *Spanish Romanesque Sculpture* (2 vols., 1928); and *The Crosses and Culture of Ireland* (1931). He was a fellow of the Medieval Academy of America, the American Academy of Arts and Sciences, and the Royal Irish Society of Antiquaries.

Porter, Holbrook Fitz-John, died Jan. 25, 1933.

Porter, Jermain Gildersleeve, American astronomer, died in Cincinnati, Ohio, Apr. 14, 1933. Born in Buffalo, N. Y., Jan. 8, 1852, he was graduated in 1873 from Hamilton College, to which, after a year at the University of Berlin and the Royal Observatory, he returned as assistant professor of astronomy, receiving the Ph.D. degree in 1878. Dr. Porter then became associated with the United States Coast and Geodetic Survey but in 1884 returned to his astronomical work as director of the Cincinnati Observatory and professor of astronomy at the University of Cincinnati. In 1894 he received the *Astronomical Journal* comet prize and from 1899 to 1905 acted as observer for the International Latitude Service. He retired as professor emeritus in 1931. His publications included, besides numerous catalogues of stars and nebulae, *Our Celestial Home* (1888); *Charts and Measures of Nebulae* (1891); *Historical Sketch of Cincinnati Observatory* (1893); *The Stars in Song and Legend* (1901); *Variation of Latitude* (1908); *All-American Time* (1918); and *How to Find the Stars and Planets* (1920).

Prall, William, American clergyman and author, died in New York City Mar. 22, 1933. Born in Paterson, N. J., Apr. 6, 1853, he was graduated from Heidelberg University with the Ph.D. degree in 1878 and from Columbia University with the LL.B. degree in 1875. Admitted to the New Jersey bar in 1876, he practiced in Paterson for 10 years. During this period he served also for one term (1883-84) in the New Jersey Assembly, drafting and securing the enactment of the Free Public Library Law. In 1885 he was elected the first president of the Paterson Free Library. Dr. Prall then decided to enter the ministry, being ordained a deacon in the Protestant Episcopal Church in 1887 and a priest the following year. He served successively as rector of the Church of the Holy Communion, South Orange, N. J. (1887-91), of St. John's Church, Detroit, Mich. (1891-1900), and of St. Paul's Church, Albany, N. Y. (1900-06). An authority on the French Protestants, from which stock he was descended, he published *The Origin of the Church of the Huguenots* (1924), *The Edict of Nantes* (1925), *The Revocation of the Edict of Nantes* (1926); and *Huguenot Settlements in America* (1928). He was also the author of *Omne Christianity* (1885); *The State and the Church* (1900); *Court of Alexander III* (1910); and *Some Half-Forgotten Worthies of New Netherlands* (1925).

Price, Eli Kirk, American lawyer, died Jan. 24, 1933, in Philadelphia, Pa., where he was born in 1860. He was graduated from the University of Pennsylvania with the LL.B. degree in 1883 and upon his admittance to the Pennsylvania bar the same year began his practice in Philadelphia. In addition to his profession Mr. Price devoted much of his time to beautifying the city of Philadelphia and, although continually opposed because of the enormous expense involved, realized his wish in the development of the Parkway, created through the demolition of hundreds of old buildings so that the city's business centre might be directly linked by a grand boulevard with Fairmount Park. This project included also the erection of various cultural units, such as the Pennsylvania Museum, Free Library of Philadelphia, Rodin Museum, and Franklin Institute. In recognition of his efforts he received in 1929 the Philadelphia Civic Award of \$10,000 founded by Edward Bok. After 1925 Mr. Price was president of the Pennsylvania Museum and School of Industrial Art. He held also the offices of president of the City Parks Association and vice-president of the Fairmount Park Commission. The French Society of Architects conferred on him its Beaux-Arts medal, while the French government made him a member of the Legion of Honor and the Italian government a member of the Order of the Crown of Italy.

Purinton, Daniel Boardman, American educator, died at Morgantown, W. Va., Nov. 27, 1933. He was born in Preston Co., Va., Feb. 15, 1850. On his graduation

from West Virginia University in 1873 he taught in its preparatory department until 1878 and then joined the faculty as professor of logic. In 1880 he was made professor of mathematics and in 1885 of metaphysics. He had served also during 1881-82 as vice-president and acting president. In 1890 Dr. Purinton was elected president of Denison University but 11 years later was recalled to West Virginia University, serving as president until his retirement in 1912. He wrote *Christian Theism* (1889).

Putnam, Eben, died Jan. 22, 1938.

Radford, Robert, British concert and operatic basso, died in London, Mar. 1, 1933. Born at Nottingham, May 13, 1874, he received his musical education at the Royal Academy of Music under Frederic King, Alberto Randegger, and Battison Haynes. He made his debut in 1899 at the Norwich Musical Festival and after 1906 appeared at most of the leading festivals, including those of Birmingham, Leeds, Sheffield, and Bristol, and at the Chappell Ballad Concerts and the Hallé Concerts in Manchester. His voice was ideally suited to the oratorios of Haydn and Handel and after 1906 he was principal bass soloist at all the Handel Festivals held in the Crystal Palace, London. Mr. Radford was also principal basso with the Royal Opera at Covent Garden and for some time with the Beecham Opera Co., his repertoire including *Boris Godunov*, *Ivan the Terrible*, *Mephistopheles*, *Sarastro*, *Ossin*, *Louise*, and many Wagnerian operas. He was one of the founders of the British National Opera Co. in 1921, and after 1928 was professor of singing at the Royal Academy of Music.

Rainsford, William Stephen, American clergyman, died in New York City, Dec. 17, 1933. Born in Dublin, Ireland, Oct. 30, 1850, he took his degree at St. John's College, Cambridge, in 1872, and then following his ordination in the Church of England was curate of St. Giles's Church, Norwich, until 1876. In the latter year he came to the United States to serve as acting rector of Holy Trinity Protestant Episcopal Church, New York City, and subsequently conducted evangelistic services in other cities of the United States and Canada. From 1878 to 1882 he was assistant rector of St. James's Cathedral, Toronto. Dr. Rainsford was then called to St. George's Church, New York City, which under his direction developed great institutional activity especially in ministering to the needs, both physical and spiritual, of an engulfing tenement population. In this work he was ably supported by J. Pierpont Morgan, senior warden of the vestry. After his retirement from the ministry in 1906 he became known as an African lion hunter, his experiences being recounted in *The Land of the Lion* (1909). In his later days he became a pronounced Modernist on theological matters, seeking from Bishop Greer of the Diocese of New York divestment from all ecclesiastical rank in 1912. Dr. Rainsford published also *The Reasonableness of Faith, and Other Addresses* (1891), *Seven Last Words on the Cross* (1894); *A Preacher's Story of His Work* (1901); *The Reasonableness of the Religion of Jesus* (1908); and *The Story of a Varied Life* (1922).

Ranfurly, Uchter John Mark Knox, Fifth Earl of, British administrator, died in London, Oct. 1, 1933. Born Aug. 14, 1856, he received his education at Harrow and Trinity College, Cambridge. After serving for two years as Lord-in-waiting to Queen Victoria, he was appointed in 1897 Governor and Commander-in-Chief of New Zealand, his seven-year administration being marked by the passage of some of the most radical legislation enacted by the colonial government. On his retirement in 1904 he was reputed to have been the most popular governor New Zealand ever had. Lord Ranfurly was director of the Ambulance Department of the British Red Cross during the World War, receiving in recognition of these services the decorations of Knight of Justice of the Order of St. John of Jerusalem in England and Officer of the French Legion of Honor. He was also created Knight Commander of the Order of St. Michael and St. George (1897); Knight of the Grand Cross of St. Michael and St. George (1901); and Privy Councillor of Ireland (1905).

Ranjitsinhji Vibhaji, Maharaja Jamsheeb of Nawanagar, Indian statesman, died at Jamnagar, Nawanagar, India, Apr. 2, 1933. Born at Sarodar, Sept. 10, 1872, he was adopted about 1880 by his uncle, Shri Vibhaji, Jam Sahab of Nawanagar, as his successor. He received his education at the Rajkumar College and at Trinity College, Cambridge, and while in England made a name for himself as an expert cricket player, being champion batsman for All England in 1896 and again in 1900. In 1906 he ascended the throne of Nawanagar and succeeded in effecting many improvements in the government during the next quarter of a century so that the revenue was more than trebled. In addition he improved communications by constructing a state railway from Rajkot to Tamnagar, built up a seaport at Bedi Bundar, developed irrigation works, and provided better sanitation for the urban centres. During the early part of the World War he served in France on Sir John French's

staff, sent to the front several squadrons of Lancers, and lent his house at Staines, Middlesex, as a hospital for wounded soldiers. On the formation of the League of Nations Ranjitsinhji twice represented India at the Assembly and was a delegate to the Indian Round-Table Conferences held in London in 1930 and 1931. In connection with the Chamber of Princes he served as pro-chancellor for several years and in 1932 was chosen chancellor. He was created Knight Commander of the Star of India in 1917, Knight of the Grand Cross of the Order of the British Empire in 1919, and Knight Grand Commander of the Star of India in 1923.

Rasmussen, Knud, died Dec. 21, 1933.

Reber, Samuel, died Apr. 16, 1933.

Rees-Davies, Sir Colin. British colonial jurist, died at Bournemouth, Feb. 1, 1933. Born in Pembrokeshire, May 15, 1867, he attended Eton and studied for the bar at the Inner Temple, being admitted as a solicitor in 1891. Removing to the Bahamas in 1901, he joined the bar there and two years later was appointed acting chief justice. In 1907 he was transferred to British Honduras where in addition to being attorney general and member of the executive and legislative councils, he served as acting colonial secretary during 1908-09 and as acting chief justice in 1908, 1909 and 1912. Sir Colin was next sent to British Guiana as solicitor-general of that colony and was also on several occasions acting attorney-general. In 1917 he was appointed chief justice of the Bermuda Islands and president of the legislature council. After declining the posts of chief justice of Grenada, British Honduras, and the Leeward Islands, he accepted in 1923 that of first puisne judge of Trinidad and Tobago and during the year previous to his retirement in 1926 was acting chief justice. Knighthood was conferred on him in 1920.

Renaud, Maurice Arnaud. French operatic baritone, died in Paris, Oct. 17, 1933. Born in Bordeaux in 1861, he received his musical education at conservatories in Paris and Brussels, making his debut in the latter city in 1883. Seven years later he appeared at the Opéra Comique in Paris. In 1891 he made his debut at the Paris Opera and sang there until 1902. During this period he appeared also at Covent Garden, London, La Scala in Milan, and San Carlo at Lisbon. Brought to the United States by Oscar Hammerstein in 1906 he sang in various French and Italian operas at the Manhattan Opera House in New York City, his most successful rôle being that of Athanée in *Thaïs* in which he appeared with Mary Garden. After the closing of the Manhattan Opera House in 1910 he joined the Boston Opera Company, and through the courtesy of the latter returned to New York City for several appearances with the Metropolitan Opera Company. On the outbreak of the World War he returned to France and promptly enlisted in the Army, receiving several citations and the Croix de Guerre with palms and stars for his bravery under fire. During the course of his career which ended in 1919, Renaud sang in more than 60 operas. Outstanding in his repertoire were *L'Africaine*, *Faust*, *Les Huguenots*, *William Tell*, *Samson and Delilah*, *Othello*, *Hamlet*, *Aida*, *Don Juan*, *Lohengrin*, *Tannhäuser*, and *The Flying Dutchman*.

Reno, Conrad. American lawyer, died at Daytona Beach, Fla., May 7, 1933. Born at Mt. Vernon, Ala., Dec. 28, 1859, he attended Lehigh University, the Harvard Law School, and Boston University, receiving his LL.B. degree from the latter in 1883. Following his admission to the Massachusetts bar, he practiced in Boston during the next 29 years. He gained special recognition for the part which he played in drafting the Public Service Tri-Partnership Bill of 1907, which called for the regulation of rates and charges, dividends and wages in public service corporations; the Railroad Tri-Partnership Bill of 1908; the Gas Tri-Partnership Bill of 1909; and the Business Tri-Partnership Bill of 1911. Later for Congress he drafted the Interstate Railroad Capital-and-Labor Partnership Bill (1921) and the Coal Partnership Bill (1922). Mr. Reno was a leader in Theodore Roosevelt's Progressive revolt of 1912, and in the campaign of 1932, the People's party candidate for President. He wrote *State Regulation of Wages* (1891); *Non-Residents and Foreign Corporations* (1892); *Employer's Liability Acts* (1896-1903); and *History of the Judicial System of New England* (1900).

Renton, Sir Alexander Wood. British jurist, died in London, June 17, 1933. Born at Auchtermuchty, Fifeshire, Scotland, June 24, 1861, he was educated at the University of Edinburgh and studied law at Gray's Inn in London. After his admission to the bar in 1885 he practiced on the Oxford circuit. In 1901 he went to Mauritius where he was procurer and advocate-general and for a few months served as puisne justice of the Supreme Court. Appointed justice of the Supreme Court of Ceylon in 1906, he was promoted in 1914 to chief justice. Knighthood was conferred on him in 1915 and previous to his retirement three years later he was a bencher of Gray's Inn. Sir Alexander then entered on his career as an arbitrator, serving as vice-president of

the Egyptian Riots Indemnities Commission in 1919, chairman of the Salaries Commission for Ceylon in 1921, and chairman of the Irish Compensation Commission in 1923 and of the Irish Grants Committee during 1926-30. In addition to publishing the valuable *Law and Practice of Insanity* (1896) he edited the *Encyclopedia of English Law* (13 vols., 1897) and, with G. G. Phillimore, *The Comparative Law of Marriage and Divorce* (1910).

Renwick, William Whetten. American architect, died at Short Hills, N. J., Mar. 15, 1933. Born at Lennox, Mass., Oct. 30, 1864, he was graduated from Stevens Institute of Technology in 1885. After studying architecture under his uncle, James Renwick, in New York, he became associated with him in designing such well known New York churches as St. Patrick's Roman Catholic Cathedral and for the Protestant Episcopal communion, St. Bartholomew's Church, All Saints' Church, and Grace Church. He later pursued the profession alone. As a specialist in ecclesiastical architecture and decoration, Mr. Renwick was said to have invented the mural decorative process known as "fresco-relief" and designed the Cathedral of St. Peter and St. Paul in Indianapolis and St. Aloysius's Roman Catholic Church in New York City. At the time of his death he was devoting himself to country house designing and its accompanying landscape architecture.

Restarick, The Rt. Rev. Henry Bond. American Protestant Episcopal bishop, died in Honolulu, T. H., Dec. 8, 1933. Born in Somersetshire, England, Dec. 26, 1854, he attended King James Collegiate School at Bridgewater, and after coming to the United States was enrolled in Griswold College at Davenport, Iowa. On his graduation in 1882 he was ordained to the priesthood of the Protestant Episcopal Church and served during the next 20 years as rector of St. Paul's Church, San Diego, Calif. In 1902 he was elected and consecrated first Missionary Bishop of the District of Honolulu. During his 18-year incumbency of this office Bishop Restarick made also a valuable contribution to historical knowledge of the Hawaiian Islands, serving as president of the Hawaiian Historical Society and in 1923 as a member of the Commission for the Sesquicentennial Celebration of the Discovery of Hawaii. He edited the *Hawaiian Church Chronicle* from 1907 to 1920 and again after 1930, and in addition to several devotional works wrote *Hawaii from the Viewpoint of a Bishop* (1924); *Gaetano Did Not Discover Hawaii* (1929), and *Sun Yat Sen, Liberator of China* (1931).

Reuterdaahl, Arvid. American physicist and educator, died in Minneapolis, Minn., Jan. 13, 1933. Born in Sweden, Feb. 15, 1876, he was brought by his parents to the United States in 1882. On his graduation from Brown University in 1897 he began his career as an instructor in mathematics there. In 1904 he accepted a call to Colby College as professor of physics but the following year removed to Spokane, Wash., where until 1915 he was engaged in practice as an engineer. Reuterdaahl then held for two years the chair of theoretical and applied mechanics at the Kansas City Polytechnic Institute, but it was while serving as dean of the department of engineering and architecture at the College of St. Thomas in St. Paul, Minn., that he startled academic circles with various facts disputing the truth of Einstein's theory of relativity and bringing to their attention in *Einstein and the New Science* (1921) the work of various scientific forerunners. After 1922 he was president of Ramsey Institute of Technology in St. Paul. In 1923 the Academy of Nations awarded to Reuterdaahl a Doctorate in Science in recognition of his promulgation of the theory of septad-constants as set forth in *The Synthesis of Number Space-Time and Energy and a Physical Basis for Planck's and Rydberg's Constants*. He wrote also *Theory and Design of Reinforced Concrete Arches* (1908); *Scientific Theism versus Materialism, The Space-Time Potential* (1920); *History of Thought* (1925), and *The God of Science* (1928).

Rhodes, Frederick Leland. American electrical engineer, died at Short Hills, N. J., Mar. 18, 1933. He was born in Boston, Mass., Oct. 25, 1870. On his graduation from the Massachusetts Institute of Technology in 1892 he began his career with the American Bell Telephone Co. Later under John J. Carty, chief engineer of the American Telephone and Telegraph Co., he served as a member of the research staff of the Bell Telephone Laboratories, helping in the solution of many of the problems connected with long distance telephony. In 1912 he accompanied General Carty to the Pacific Coast, the experiments which they conducted resulting three years later in the opening of the first transcontinental telephone line between New York and San Francisco. An outside plant development engineer for the American Telephone and Telegraph Co. from 1919 to 1932, Rhodes continued his important work in connection with the standardization of materials, apparatus, and practices in underground and overhead wire systems. He was a fellow of the American Institute of Electrical Engineers and served at one time as chairman of its board of examiners. He wrote *Beginnings of Telephony* (1929).

Richer, Paul Marie Louis Pierre. French neurologist, sculptor, and author, died in Paris, Dec. 17, 1938. Born at Chartres, Feb. 17, 1849, he was educated at the University of Paris, beginning his medical career in 1879. The publication two years later of *Études cliniques sur l'hydro-épilepsie ou grand hystérie*, which was crowned by the Institute, secured his appointment as director of the laboratory connected with the Salpêtrière clinic of nervous diseases. In 1903 he became professor of anatomy at the École Nationale des Beaux Arts and was thereafter perhaps better known for his connection with art. He published *Anatomie artistique* (1890) which was crowned by the Academy of Fine Arts and by the Academy of Sciences; *Canon des proportions du corps humain* (1893); *Physiologie artistique de l'homme en mouvement* (1895); *L'Art et la médecine* (1902); and *Nouvelle anatomie artistique du corps humain* (3 parts, 1906-21). As a sculptor, Richer acquired his greatest fame as designer of monuments to his colleagues, Pasteur, Arloing, and Mangan, and of statues of athletes. In 1900 he received a bronze medal at the Exposition Universelle in Paris. A member of the Academy of Medicine and of the Academy of Fine Arts of the French Institute, he served in 1907 as president of the Society of the History of Medicine. He was later appointed inspector-general of public instruction and an officer of the Legion of Honor.

Rickards, Maj.-Gen. George Collins, U.S.A., Ret. American soldier, died at Oil City, Pa., Jan. 15, 1933. Born in Philadelphia, Pa., Aug. 25, 1860, he attended the public schools of Franklin, Pa., and was engaged in the hardware business at Oil City from 1882 to 1915. His military career was in connection with the National Guard of Pennsylvania which he joined in 1877, and with which he served during the Spanish-American War as lieutenant-colonel and then colonel of the 16th Infantry. He also saw action with this regiment in Puerto Rico and on the Mexican border during 1916-17. When it was reorganized as the 112th Infantry on the entry of the United States into the World War he was made commander, accompanying it to France. After the reorganization of the 28th Division he became commander of the 56th Brigade which participated in the battles of Château-Thierry, Champagne-Marne, Aisne-Marne, Fismes, Oise-Aisne, and Meuse-Argonne. On his return General Rickards received the Long Service Medal of Pennsylvania and the Distinguished Service Medal and in 1921 was appointed by President Harding chief of the Militia Bureau of the War Department with the rank of major-general. He was the first National Guardsman of this rank to be associated with the War Department. On his retirement in 1925 he urged the establishment of the Militia Bureau under an Assistant Secretary of War rather than under the General Staff. For some time he was an executive officer of the Polk State School at Polk, Pa. In 1927 he was elected and in 1931 reelected Register of Wills, Recorder of Deeds, and Clerk of the Orphans' Court of Venango Co., Pa.

Ricker, George Alfred Joy. American civil engineer, died in Washington, D. C., Nov. 2, 1933. Born at Portsmouth, N. H., June 30, 1863, he attended the Massachusetts Institute of Technology and began his career in 1881 as transit man with the Erie Railroad. After a year's service with the Northern Pacific Railway as topographer and locating engineer, he established his private practice in Buffalo in 1887. From 1890 to 1908 he was chief engineer in the construction of the Niagara Gorge Railroad. He served also as resident engineer for the Buffalo Creek Railroad (1887-97); chief engineer for the Buffalo Traction Co. (1895-99), the Buffalo and Dewey Electric Railway (1900-03), Niagara Gorge Power Co. (1901-08); and construction engineer of the Twin Lakes (Colo.) Land and Water Co. (1898). In 1913 Mr. Ricker gave up his practice to accept the appointment of First Deputy Commissioner of Highways in New York State, supervising in this capacity the construction of more than 2500 miles of roads, including the Storm King Highway along the Hudson River. The next step in his career was that of consulting engineer in Albany, N. Y., where he edited for the New York State Automobile Association during 1915-16 its official magazine, *Motordom*. In 1916 he went to Chicago to serve as highway engineer for the Portland Cement Association and two years later became district engineer for that company in Washington. He resumed private practice in that city in 1930 and at the time of his death was a member of the board of consulting engineers of the Reconstruction Finance Corporation.

Rigdon, Jonathan. American educator, died at Danville, Ind., Dec. 30, 1933. He was born at Rigdon, Ind., Dec. 22, 1858. On his graduation from the Central Normal College at Danville, Ind., in 1886, he remained at that institution as professor of philosophy, acting also as president during 1897-1900. He then studied for his Ph.D. degree at Boston University, serving in the meantime (1904-06) as professor of ethics and philosophy at Clark College, Worcester, Mass. In 1908 Dr. Rigdon founded and was president until 1916 of the Winona College at Winona Lake, Ind. Recalled to Central Nor-

mal College in 1918, he again served as president of that institution until his retirement in 1929. Among his publications were: *Grammar for Beginners* (1891); *Outline of Psychology* (1892); *College Ideals* (1915); *Science and Religion* (1926); and *The Art of Speaking* (1932).

Riley, (Isaac) Woodbridge. American philosophical scholar, died at Cape May, N. J., Sept. 2, 1893. He was born in New York City, May 20, 1869, and was educated at Yale University, receiving the A.B. degree in 1892 and the Ph.D. degree in 1902. During 1902-04 he served as acting professor of philosophy at the University of New Brunswick and then for three years held the Johnston research scholarship at Johns Hopkins University. After 1908 he was professor of philosophy at Vassar College. As associate editor of the *Psychological Bulletin* from 1903 to 1907, he published *The Founder of Mormonism: A Psychological Study of Joseph Smith, Jr.* (1892); *American Philosophy: The Early Schools* (1907); *American Thought from Puritanism to Pragmatism* (1915); *Le Génie Américain* (1921); *The Faith, Falsity, and Failure of Christian Science* (joint author, 1925); *From Myth to Reason* (1926); *Men and Morals* (1929); and *The Meaning of Mysticism* (1930).

Robb, William Luspensard. American electrical engineer, died at Troy, N. Y., Jan. 26, 1933. Born at Saratoga, N. Y., May 9, 1861, he was graduated from Columbia University in 1880, receiving the Ph.D. degree from the University of Berlin three years later. During the Spanish-American War he was connected with the submarine mine service. He later served as consulting engineer for the Hartford Electric Light Co., the New York Shipbuilding Co., the General Electric Co., and the General Railway Signal Co. After 1902 he was professor of electrical engineering and physics at the Rensselaer Polytechnic Institute and head of the electrical engineering department.
